16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	<p>The proposed development of a residential site has scope to have a positive effect on the vitality and viability of Biddulph and the wider District. Overall, this has been assessed as having a positive effect on this Objective.</p>	+
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	<p>The development of this site could encourage investment in people and infrastructure through developer contributions although this would be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	+
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	<p>The site is within 500m of local employment provision and, as such, would provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>Summary of overall assessment and likely significant effects:</p> <p>The proposed delivery of circa 100 dwellings should have a significant positive effect. The site is also accessible to areas of employment which is likely to have a positive effect. However, the greenfield nature of this site and its location outside of the settlement boundary, coupled with its potential ecological value and relationship to the Biddulph Valley Way could have a negative effect.</p>

SOCIAL			
<p>1. To improve community cohesion and the quality of where people work and live.</p>	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	<p>The site borders the settlement boundary of Biddulph but is outside of the boundary. The development of this site, a greenfield site that is set within the open countryside, could be expected to have an effect on Green Infrastructure and environmental quality. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-
<p>2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to clubs, services and facilities.</p>	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>As noted, the site is outside of the settlement boundary of Biddulph. The site would be within 800m of a wide range of services and facilities but not within 400m of the town centre of Biddulph. It should be noted that education facilities and services within the town have adequate supply at present but it is expected to be outstripped by future demand. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>3. To improve health and reduce health inequalities.</p>	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The location of this site, on the border of the settlement boundary, should provide residents with good access to the open countryside and help to support healthy lifestyles. Similarly, the site is within 1,200m of a GP surgery and is close to the Biddulph Valley Way. It should be noted that supply for health care services and facilities currently falls short of demand and this is expected to worsen in the future without additional investment. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>4. To minimise opportunities for crime and reduce the fear of crime.</p>	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	<p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development would include aspects of good design which would help</p>	+

5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? Offer opportunities to enable people to meet their needs within their existing communities? Offer opportunities to ensure that people can afford their housing? 	<p>to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.</p> <p>Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 85 dwellings, and therefore also provide a quantum of affordable housing on site. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> Offer opportunities to minimise impacts on existing traffic congestion? Support the use of public transport? Support safe walking and cycling? Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>As noted previously, the site is within 800m of the town centre of Biddulph and 1,200m of a GP surgery and within the open countryside which should reduce the need to travel within the town. Similarly, the site is within 500m of a bus stop. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? Offer opportunities to increase energy efficiency? Offer opportunities to increase the use of renewable energy? Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	<p>The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However, the site is within 800m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
8. To improve air quality.	<ul style="list-style-type: none"> Offer opportunities to minimise emissions of airborne pollutants? Offer opportunities to remove air pollutants (e.g. by trees)? 	<p>The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.</p>	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Deliver development directed towards areas of least flood risk? Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? 	<p>As the site is located outside of a flood zone 2 or 3 area it can be considered that the site would not be subject to risk from flooding. However there are considered to be existing surface water issues on site. The development of this site could lead to an increase in</p>	+

SA Objective	Assessment Criteria - Does the site (BD138c)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 	wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.	
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	The site is within 1,000m of Biddulph Valley Way (Whitemoor) (LNR), the nearest designated asset, and, as such, is considered that development is likely to have limited effect on this asset. Ecological assessment is required. Overall, this site has been assessed as having a neutral effect on this Objective, however the exact effects are uncertain.	0/?
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> Help safeguard the best and most versatile agricultural land? Deliver development that helps to minimise the loss of greenfield land? Offer opportunities to reduce land contamination / instability? Deliver development that helps reduce the amount of derelict land? Offer opportunities to protect notable geological and geomorphological features? 	As noted, this site has been assessed as being on greenfield land. However, the land has also been indicated on Natural England's predictive map of Best and Most Versatile land as being predictive "urban" land so development of this site may not result in the loss of best and most versatile land. Overall, this site has been assessed as having a neutral effect on this Objective.	0
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> Offer opportunities to reduce waste generation? Offer opportunities to maximise the re-use of existing buildings? Offer opportunities to increase the use of building materials from sustainable sources? 	As per the previous objective, the development of this site would not enable the re-use or loss of existing buildings. However, there is scope that development could use sustainable materials and increase the demand for local resources. Overall, this site has been assessed as having a neutral effect on this Objective.	0
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Offer opportunities to protect and reinforce the character and appearance of the district's towns and 	The site is within 700m of one grade II* listed asset, the Church of St. Lawrence and Coffin Lids and Benches and three grade II listed assets. Dependent on proposal specific information, there is limited scope that development of this site could lead to the deterioration of the setting of these heritage assets. Overall, this site has been assessed as having a neutral effect on this Objective, however the exact effects are uncertain.	0/?

SA Objective	Assessment Criteria - Does the site (BD138c)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<p>villages and maintain and strengthen local distinctiveness and sense of place?</p>		
<p>14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>The site would avoid development within 1,000m of protected sites and would reduce external pressures on these sites. Given the location of the site within the important landscape setting to the settlement, it is considered that there would be scope for effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-
<p>15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.</p>	<ul style="list-style-type: none"> ● Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? ● Offer opportunities to help support tourism and the visitor economy? 	<p>The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
ECONOMIC			
<p>16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy</p>	<ul style="list-style-type: none"> ● Deliver development that helps to safeguard shops and services in existing centres? ● Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	<p>The proposed development of a residential site has scope to have a positive effect on the vitality and viability of Biddulph and the wider District. Overall, this has been assessed as having a positive effect on this Objective.</p>	+
<p>17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth</p>	<ul style="list-style-type: none"> ● Help provide a balanced portfolio of employment land in sustainable locations? ● Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	<p>The development of this site could encourage investment in people and infrastructure through developer contributions although this would be limited. SA Objective	Assessment Criteria - Does the site (OC050)...?	Commentary on likely nature of effects of site allocation	Overall assessment
heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> heritage assets (designated and non-designated assets) along with their settings? Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	that development of this site could lead to the deterioration of this heritage asset and its setting. Overall, this site has been assessed as having a positive effect on this Objective, however the exact effects are uncertain.	
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Deliver development that maximises re-use of brownfield land? Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	The site would be more than 1,250m of Thorncliffe Moor SSSI and would not increase external pressures on these sites. Given the location of the site, it is considered that effects on landscape character and the setting of the Peak District National Park are likely. Proposal specific information is required to assess the impact on the South West Peak National Character Area. Overall, this site has been assessed as having a significant negative effect on this Objective.	--
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? Offer opportunities to help support tourism and the visitor economy? 	A mixed use of this site in line with Core Strategy policy may support investment in culture and tourism. Overall, this site has been assessed as having a positive effect on this Objective.	+
ECONOMIC			
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed mixed use development of a site close to the village centre of Blackshaw Moor has scope to have a positive effect on the vitality and viability of Blackshaw Moor and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.	+
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site could encourage investment in people and infrastructure through developer contributions although this would be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.	0

SA Objective	Assessment Criteria - Does the site (OC050)...?	Commentary on likely nature of effects of site allocation	Overall assessment
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	Mixed use development may support some employment opportunities. Overall, this site has been assessed as having a positive effect on this Objective.	+
<p>Summary of overall assessment and likely significant effects:</p> <p>The proposed delivery of some housing and extra care units is considered to have a positive effect, as could the site's accessibility to areas of open space and possible contribution to investment in tourism. However the site is inaccessible to services and facilities which is likely to have a significant negative effect, as is the potential impact on landscape character and the setting of the Peak District National Park. Similarly the proximity to an SBI is likely to lead to negative effects.</p>			
<p>Blythe Bridge and Forsbrook</p> <p>Northern Gateway Opportunity Site (Identified in Core Strategy as Policy SS8 Blythe Bridge Regional Investment Site) - potential mixed use including residential</p>			
SA Objective	Assessment Criteria - Does the site (Northern Gateway Opportunity Site)...?	Commentary on likely nature of effects of site allocation	Overall assessment
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> Make a positive contribution towards community cohesion? Offer opportunity to improve neighbourhood quality? Offer opportunity to provide open space and support Green Infrastructure? Risk unacceptable light and noise pollution? Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	Large scale opportunity site located on greenfield land either side of the A50 to the south of Blythe Bridge and inside the settlement boundary. Development could be expected to have an effect on Green Infrastructure and environmental quality. Overall, this site has been assessed as having a negative effect on this Objective	-
<p>SOCIAL</p>			

SA Objective	Assessment Criteria - Does the site (Northern Gateway Opportunity Site)...?	Commentary on likely nature of effects of site allocation	Overall assessment
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>The site is located on the edge of the village, it is around 1,000m of the village centre and the range of services and facilities that can be found here that could serve prospective residents or users of the site. Depending on site specific proposals, a mixed use scheme might deliver improved access to jobs and services for existing and new residents. It should be noted that the current supply of educational and community services and facilities is currently exceeding demand and is expected to do so for the foreseeable future. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> Help improve health or access to health facilities? Help promote healthy lifestyles? Help to reduce health inequalities? Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The location of this site should provide residents with good access to areas of open space which should help to support healthy lifestyles. Similarly, the site is within 1,000m of a GP surgery. There is opportunity for the site to contribute to the development of green infrastructure to support health and well-being. It should be noted that the current supply of health care services and facilities is currently exceeding demand and is expected to do so for the foreseeable future. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> Deliver development that reduces actual levels of crime? Deliver development that helps to reduce fear of crime? 	<p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development would include aspects of good design which would help to minimise crime and the fear of crime. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? Offer opportunities to enable people to meet their needs within their existing communities? Offer opportunities to ensure that people can afford their housing? 	<p>Based on initial masterplan proposals for this site, it is considered that the site could accommodate circa 360 dwellings and therefore also provide a quantum of affordable housing on site. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> Offer opportunities to minimise impacts on existing traffic congestion? Support the use of public transport? Support safe walking and cycling? Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>As noted previously, the site is within 1,000m of the village centre of Blythe Bridge and Forsbrook as well as being adjacent to areas of open space. Whilst the site is within 500m of a bus stop and 1,200m of a train station, allocation is not likely to contribute to helping minimise an increase in car journeys. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-

SA Objective	Assessment Criteria - Does the site (Northern Gateway Opportunity Site)...?	Commentary on likely nature of effects of site allocation	Overall assessment
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? Offer opportunities to increase energy efficiency? Offer opportunities to increase the use of renewable energy? Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 1,000m of the village centre and the nearest main service centre is Cheadle 5 miles away. The location of the site is likely to encourage journeys being made by car. Overall, this site has been assessed as having a negative effect on this Objective.	-
8. To improve air quality.	<ul style="list-style-type: none"> Offer opportunities to minimise emissions of airborne pollutants? Offer opportunities to remove air pollutants (e.g. by trees)? 	The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Deliver development directed towards areas of least flood risk? Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 	The western boundary of the site is adjacent to a flood zone 2 and 3 area and, as such, it may be considered that the site would need to address risk from flooding. The development of a greenfield site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. The development could also be expected to lead to an increased water demand within the District. Overall, this site has been assessed as having a neutral effect on this objective, however the exact effects are uncertain.	0/?
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	The site is more than 4,000m from Coyney Woods (LNR), the nearest designated asset, and, as such, is considered to have no effect on this asset. There are a number of ponds and mature trees on site. Ecological assessment is required. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.	-/?
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> Help safeguard the best and most versatile agricultural land? Deliver development that helps to minimise the loss of greenfield land? 	As noted, this site has been assessed as being on greenfield land. However, the land has also been indicated on Natural England's predictive map of Best and Most Versatile land as having a "High" (over 60% area bmv) of being predictive BMV land so development of	--

SA Objective	Assessment Criteria - Does the site (Northern Gateway Opportunity Site)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> Offer opportunities to reduce land contamination / instability? Deliver development that helps reduce the amount of derelict land? Offer opportunities to protect notable geological and geomorphological features? 	<p>this site may result in the loss of best and most versatile land. Overall, this site has been assessed as having a significant negative effect on this Objective.</p>	
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> Offer opportunities to reduce waste generation? Offer opportunities to maximise the re-use of existing buildings? Offer opportunities to increase the use of building materials from sustainable sources? 	<p>As per the previous objective, the development of this site would not enable the re-use or loss of existing buildings. However, there is scope that development could use sustainable materials and increase the demand for local resources. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>There is one designated heritage asset (Grade II listed) within 500m of the site. Dependent on proposal specific information, there is limited scope that development of this site could lead to the deterioration of this heritage asset and its setting. Overall, this site has been assessed as having a neutral effect on this Objective, however the exact effects are uncertain.</p>	0/?
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Deliver development that maximises re-use of brownfield land? Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>The site would be more than 4,000m of Coyney Woods (LNR). Given the location of the site, it is considered that there could be effects on landscape character. The northern part of the site is within the important landscape setting to settlement. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? Offer opportunities to help support tourism and the visitor economy? 	<p>The proposed residential and mixed use of this site provides scope for investment in culture and tourism within the district and the increased population of both the village and District may have a positive effect. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
ECONOMIC			

SA Objective	Assessment Criteria - Does the site (Northern Gateway Opportunity Site)...?	Commentary on likely nature of effects of site allocation	Overall assessment
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed development of a residential and mixed use site with a good strategic location considered to have regional significance has scope to have a positive effect on the vitality and viability of the wider District. Overall, this has been assessed as having a significant positive effect on this Objective.	++
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site could encourage investment in people and infrastructure and is considered an excellent employment location for premium uses. Overall, this site has been assessed as having a positive effect on this Objective.	+
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	This is a large site with good access to the strategic road network with opportunity to provide both new homes and employment opportunities, including for premium uses. Overall, this site has been assessed as having a positive effect on this Objective.	+
<p>Page 203</p> <p>Summary of overall assessment and likely significant effects:</p> <p>The proposed delivery of circa 360 dwellings is considered to have a significant positive effect. Similarly, the site's good strategic location (with regional significance) has scope to have a positive effect on the vitality and viability of the wider District and could encourage investment in people, jobs and infrastructure. However, the development of greenfield land, partly within the important landscape setting to the settlement, and indicated on the predictive map of Best and Most Versatile land as an area where more than 60% of the land is likely to be BMV, is assessed as having a significant negative effect, similarly the potential ecological value of the site and the effects on climate change resulting from the likelihood of the location supporting journeys made by car are assessed as negative.</p>

The existing Thomas Bolton operation on site should be safeguarded. Overall, this site has been assessed as having a positive effect on this Objective.</p>	<p>+</p>
<p>Summary of overall assessment and likely significant effects:</p>			

SA Objective	Assessment Criteria - Does the site (OC001)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<p>The proposed delivery of a mixed use development including the potential for housing, employment, leisure and tourist-related retail and accommodation is considered to have a significant positive effect, as could the site's accessibility to areas of open space and possible contribution to investment in tourism. Re-development of a previously developed site, now under-used, is also considered to have positive effects. However the site is inaccessible to services and facilities which is likely to have a significant negative effect, as is the potential impact on landscape character and heritage assets. Similarly the proximity to a SSSI and SBI and proposals for development on land in Flood Zones 2 and 3 are likely to lead to negative effects.</p>		

Werrington and Cellarhead

WE042 WE043: Land off Tregaron Court/Langton Court

SA Objective	Assessment Criteria - Does the site (WE042/WE043)...?	Commentary on likely nature of effects of site allocation	Overall assessment
SOCIAL			
1. To improve community cohesion and the quality of life for all people who work and live.	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	<p>The development of this site, a greenfield site that is set outside of the settlement boundary, could be expected to have an effect on Green Infrastructure and environmental quality. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>The site is located within 800m of the village centre and the range of services and facilities that can be found here that could serve prospective residents of the site. It should be noted that the current supply of educational services and facilities currently exceeds demand and is expected to do so for the foreseeable future. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+

SA Objective	Assessment Criteria - Does the site (WE042/WE043) ...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>3. To improve health and reduce health inequalities.</p>	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The location of this site should provide residents with good access to areas of open space which should help to support healthy lifestyles. Similarly, the site is within 800m of a GP surgery. It should be noted that the current supply of health care services and facilities currently falls short of demand and the situation is likely to worsen in the future. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>4. To minimise opportunities for crime and reduce the fear of crime.</p>	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	<p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development would include aspects of good design which would help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>5. To ensure adequate quality and provision of a range of home types to meet local needs in appropriate locations and including affordable / social /extra care housing.</p>	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	<p>Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 105 dwellings and therefore also provide a quantum of affordable housing on site. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
<p>6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.</p>	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? ● Support the use of public transport? ● Support safe walking and cycling? ● Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>As noted previously, the site is within 800m of the village centre of Werrington and Cellarhead and a GP surgery as well as being adjacent to an area of open space which should reduce the need to travel within the village. Similarly, the site is within 500m of a bus stop. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
ENVIRONMENTAL			
<p>7. To minimise contributions to climate change and consider climate change adaptation.</p>	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? 	<p>The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 800m of the village centre and could reduce the need to travel. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+

SA Objective	Assessment Criteria - Does the site (WE042/WVE043) ...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> Offer opportunities to increase the use of renewable energy? Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 		
8. To improve air quality.	<ul style="list-style-type: none"> Offer opportunities to minimise emissions of airborne pollutants? Offer opportunities to remove air pollutants (e.g. by trees)? 	<p>The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.</p>	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Deliver development directed towards areas of least flood risk? Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 	<p>As the site is located outside of a flood zone 2 or 3 area it can be considered that the site would not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. The development could also be expected to lead to increased water demand within the District. Overall, this site has been assessed as having a positive effect on this objective.</p>	+
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is within 500m from Wetley Moor SSSI, the nearest designated asset, and, as such, is considered to have an effect on this asset. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain. Ecological survey is required.</p>	-/?
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> Help safeguard the best and most versatile agricultural land? Deliver development that helps to minimise the loss of greenfield land? Offer opportunities to reduce land contamination / instability? 	<p>As noted, this site has been assessed as being on greenfield land. However, the land has also been indicated on Natural England's predictive map of Best and Most Versatile land as having a "moderate" likelihood (20- 60% area bmv) of being predictive BMV land so development of this site may result in the loss of best and most versatile</p>	-

SA Objective	Assessment Criteria - Does the site (WE042/WE043) ...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> Deliver development that helps reduce the amount of derelict land? Offer opportunities to protect notable geological and geomorphological features? 	land. Overall, this site has been assessed as having a negative effect on this Objective.	
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> Offer opportunities to reduce waste generation? Offer opportunities to maximise the re-use of existing buildings? Offer opportunities to increase the use of building materials from sustainable sources? 	As per the previous objective, the development of this site would not enable the re-use or loss of existing buildings. However, there is scope that development could use sustainable materials and increase the demand for local resources. Overall, this site has been assessed as having a neutral effect on this Objective.	0
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	The site is within 100m of the grade II listed asset Ash Hall. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of the setting of this historical heritage assets. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.	-/?
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Deliver development that maximises re-use of brownfield land? Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	The site would be within 500m of Wetley Moor SSSI and would increase external pressures on this sites. The site is within the area considered to be important landscape setting to the settlement. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a significant negative effect on this Objective.	--
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? Offer opportunities to help support tourism and the visitor economy? 	The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the village and wider district. However, the increased population of both the village and District may have a positive effect. Overall, this site has been assessed as having a positive effect on this Objective.	+
ECONOMIC			

SA Objective	Assessment Criteria - Does the site (WE042/WE043) ...?	Commentary on likely nature of effects of site allocation	Overall assessment
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> ● Deliver development that helps to safeguard shops and services in existing centres? ● Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed development of a residential site with good access to the village centre of Werrington and Cellarhead has scope to have a positive effect on the vitality and viability of Werrington and Cellarhead and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.	+
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> ● Help provide a balanced portfolio of employment land in sustainable locations? ● Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site could encourage investment in people and infrastructure through developer contributions although this would be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.	0
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> ● Help meet the employment needs of local people? ● Help increase economic activity levels? ● Improve physical accessibility to jobs? ● Support higher income levels for local residents? 	The site is over 1,500m from existing areas of employment within the village or District and, as such, would fail to provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a significant negative effect on this Objective.	--
<p>Page Note</p> <p>Summary of overall assessment and likely significant effects:</p> <p>The proposed delivery of circa 105 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities and areas of open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which would have a significant negative effect, as would the site's proximity to designated assets. Similarly, the development of greenfield land with the potential for loss of best and most versatile agricultural land and the site's proximity to historic assets is assessed as having a negative effect.</p>			

Table 12.321

Appraisal of alternative housing requirement options

13 Appraisal of alternative housing requirement options

- 13.1** The matrices below set out the likely significant effects on sustainability of the alternative options considered by the Council for a housing requirement. The assessments are based on the methodology proposed and consulted on in the SA Scoping Report and use the SA Framework also developed through consultation as part of the SA Scoping stage.
- 13.2** As part of the SA appraisal of options, consideration has been given to effects on sustainability over time (in the short, medium and long term) along with any cumulative impacts of implementing each option and possible mitigation measures where appropriate.
- 13.3** In comparing options with one another, consideration has also been given to the geographical scale of effect, whether any identified effects would be permanent or temporary, reversible or irreversible and the assumptions made, or justification for the assessment recorded.
- 13.4** Definitions of significance are provided in Section 3 Appraisal Methodology.

Scoring of options

Score	
++	The requirement will have a very positive impact on the sustainability objective
+	The requirement will have a slightly positive impact on the sustainability objective
0	The requirement will have a negligible or neutral impact on the sustainability objective. A recorded neutral effect does not necessarily mean that there will be no effect at the project level, but shows that at this strategic level there are no identifiable effects.
-	The requirement will have a slightly negative impact on the sustainability objective
--	The requirement will have a very negative impact on the sustainability objective
i	The outcome could be dependent on implementation, or more detail is required to make an assessment
?	The impact of an issue cannot be predicted at this stage

Table 13.1 Scoring of options

13.5 Different components within an option may generate varying impacts. This is indicated by "/".

Key to Table

- ST: Short term = 0 - 5 years
- MT: Medium term = 5 - 10 years
- LT: Long term = over 10 years

February 2017 Alternatives appraisal
Housing Requirement Option 1

SA Objective		Option 1: 235 new homes each year				Justification; cumulative effects / mitigation measures
		Decision making criteria		Time-frame		
		ST	MT	LT	SOCIAL	
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> Will it make a positive contribution towards community cohesion? Will it improve neighbourhood quality? Will it ensure that there is adequate open space and support Green Infrastructure? Will it minimise light and noise pollution? Will it ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	?	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. There is a balance between loss of countryside as a result of development and provision of new, accessible open space as part of new developments. This requirement may offer the least opportunity for associated benefits such as new or enhanced community facilities to be delivered as a result of new development.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Community cohesion and local environmental quality are more dependent on design and location of new development than on the overall housing requirement. Mitigation measures: Local Plan policies to ensure that good standards of amenity and open space and Green Infrastructure are delivered as part of new housing development.</p>
	<ul style="list-style-type: none"> Will it remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / 	?	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this option will deliver the least housing growth of the four options considered and thus the least opportunity to improve accessibility to key services and facilities. Despite this, lower levels of housing growth will enable a focus of growth</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Equality of opportunity for all persons will be improved by any measure that has the effect of improving overall accessibility to jobs, services and facilities. Mitigation measures: Local Plan policies to ensure that new developments are brought forward in sustainable locations.</p>
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.						

Option 1: 235 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
	<ul style="list-style-type: none"> belief, sex and sexual orientation? Will it help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 				on small urban extensions and small sites within the existing settlement boundary which is likely to help minimise the distance people need to travel.	
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> Will it improve health or access to health facilities? Will it promote healthy lifestyles? Will it reduce health inequalities? Will it provide opportunities to participate in leisure and recreational activities including access to the countryside? 	?/-	?/-	?/-	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this option will deliver the least housing growth of the four options considered and thus the least opportunity to improve health infrastructure, including opportunities for walking and cycling. In the long term there could be a deterioration in health through lack of investment in health-care, leisure and physical recreational facilities. There is a balance between loss of countryside as a result of development and provision of improved opportunities to access the countryside as part of new developments.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Investment in new infrastructure keeps pace with growth. More housing growth offers more opportunities to invest in new health-care facilities, including new or improved opportunities for walking and cycling. Mitigation measures: Local Plan policies to ensure that new developments deliver opportunities to increase take up of sustainable transport choices and improvements to healthy travel networks, including increased opportunities for access to the countryside.</p>
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> Will it reduce actual levels of crime? Will it reduce fear of crime? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the implementation of relevant Local Plan policies.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Good design will help minimise opportunities for crime and reduce the fear of crime. Mitigation measures: Local Plan policies to ensure that new developments are well designed, creating safe places and reducing opportunities for anti-social behaviour.</p>

Option 1: 235 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> Will it provide an appropriate mix of housing to enable all needs to be met? Will it enable people to meet their needs within their existing communities? Will it ensure that people can afford their housing? 	+	+	+	<p>This option represents the lower end of the recommended OAN range (1) and by meeting the full demographically-assessed need for housing in the District will have a direct, long-term, positive effect on this SA objective. The requirement is expected to enable the delivery of a range of housing types and tenures, making a contribution to meeting community needs. However the impact of this option on the SA objective is less significant than under all other options. This option is likely to make the least contribution to addressing the needs of an ageing population or ensuring that problems of affordability can be satisfactorily addressed, risking adverse outcomes for older people and those who still need to access the housing market.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Household projections suggest a considerable growth in the number of older people. The SHMA (2) identified a critical affordable housing need. Objectively assessed housing need for the District is between 235dpa and 330dpa. This option will meet the objectively assessed housing need of the plan area but fails fully to address affordable housing need, or offer maximum opportunity for investment in meeting the housing needs of older people. Mitigation measures: Wider initiatives of the Council should be supported to help deliver additional affordable homes.</p>
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> Will it minimise impacts on existing traffic congestion? Will it support the use of public transport? Will it support safe walking and cycling? Will it protect and improve access to the natural environment and support Green Infrastructure? 	?/+	?/+	?/+	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this requirement could have a positive effect on minimising the impact of new development on existing traffic congestion and could offer support for the use of sustainable forms of transport through delivering most new development close to town and village centres. The option could support priorities and provisions identified in the SMDC integrated transport strategy (3), including the proposed Local Transport Packages for Leek, Cheadle and Biddulph.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Lower levels of growth are likely to generate fewer new car journeys, resulting in less impact on existing congestion. Lower levels of growth will maximise the proportion of new development delivered close to existing centres, facilitating use of sustainable forms of transport. Higher levels of growth will allow most investment in support for sustainable transport. Mitigation measures: Local Plan policies to ensure that developments are brought forward in sustainable locations; support safe walking and cycling and improve access to the natural environment.</p>
ENVIRONMENTAL						

Option 1: 235 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Will it reduce emissions of greenhouse gases particularly CO₂? Will it increase energy efficiency? Will it increase the use of renewable energy? Will it ensure new development is in accessible locations in order to reduce the need for car use and / or encourage sustainable forms of transport? 	-	-	-	<p>There is some uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of developments and the implementation of Local Plan policies. However this option is likely to result in the smallest overall increase in carbon emissions from the energy consumption and emissions arising from construction and use of new development and associated car journeys.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Even if individual properties are built to high environmental performance standards and delivered in sustainable locations, the total increase in number of dwellings and car journeys is likely to increase energy use and associated greenhouse gas emissions. Mitigation measures: Local Plan policies to ensure that high environmental design standards are supported and that developments are brought forward in accessible locations that support the use of sustainable forms of transport.</p>
8. To improve air quality.	<ul style="list-style-type: none"> Will it minimise emissions of airborne pollutants? Will it maximise the removal of air pollutants (e.g. by trees)? 	?	?	?/-	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However as this option represents the lowest level of growth, it is likely to give rise to the lowest level of new emissions of airborne pollutants associated with additional car journeys. In the long-term there is some potential for development to be delivered within 500m of an identified area of poor air quality.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Identified areas of poor air quality include the Cellarhead junction (between the A52 and A520); Ball Haye Street, Leek (a primary link road from Leek A53 to the A523 Macclesfield and Buxton Road) and Broad Street, Leek (a primary link road from Stoke on Trent)⁽⁴⁾. The total increase in number of dwellings and car journeys is likely to increase emission of airborne pollutants. There is a risk that air quality may deteriorate in areas of existing low quality. Mitigation measures: Local Plan policies to ensure that developments include appropriate landscaping to aid removal of air pollutants.</p>
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Is new development directed towards areas of least flood risk? Will it reduce risk of flooding eg by 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Development - at whatever overall scale - will be permitted only where schemes meet development plan requirements for management of flood risk.</p>

Option 1: 235 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
	<p>encouraging the integration of mitigation measures such as SuDS into new development?</p> <ul style="list-style-type: none"> Will it protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Will it encourage water efficiency and demand management? 				<p>the SFRA⁽⁵⁾ confirms that there are few locations in which development would significantly increase fluvial flood risk elsewhere, due to the majority of potentially suitable sites for development being located within Flood Zone 1, with only a few sites partially within Flood Zone 2 or 3. This option requires the least peripheral development proposed on agricultural (greenfield) land on the outskirts of settlements, and thus poses the lowest risk of all options to increase surface water flood risk within towns or villages and further downstream as a result of increased surface water runoff and reduced infiltration.</p>	<p>Mitigation measures: Local Plan policies to ensure that new developments are directed towards areas of least flood risk and incorporate SuDS wherever possible.</p>
<p>10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs</p>	<ul style="list-style-type: none"> Will it protect and promote effective management of the district's sites of ecological and nature conservation importance? Will it help contribute to Staffordshire Biodiversity Action Plan objectives? Will it help deliver networks of biodiversity and green infrastructure? 	?	?/+	?/++	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However as it proposes the lowest level of growth, this option is likely to provide most overall, long-term protection for biodiversity and natural networks. There will however be the lowest level of new investment and associated opportunities to deliver biodiversity enhancement or the extension of GI networks as part of schemes. Given it will lead to the lowest recreational and other urbanising pressures on the closest European sites, of all options considered, this option is also likely to afford most protection for the integrity of European sites. However the HRA of the Local Plan will ensure that Local Plan policies and allocations will not result in adverse effects on European designated sites.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for biodiversity and for sites of ecological and nature conservation importance, but the higher the level of growth, the greater the need to allocate sites in the countryside, on the periphery of settlements, including potentially requiring Green Belt release and potentially sites within the zone of influence of European designated sites. Mitigation measures: Local Plan policies to ensure conservation and enhancement of biodiversity and that any development proposal is not permitted to have an adverse effect on the integrity of a European site.</p>

Option 1: 235 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> Will it safeguard the best and most versatile agricultural land? Will it minimise the loss of greenfield land? Will it reduce land contamination / instability? Will it reduce the amount of derelict land? Will it protect notable geological and geomorphological features? 	?	?/+	?/++	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However as it proposes the lowest level of growth, this option is likely to provide most overall, long-term protection for the best and most versatile agricultural land.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for the best and most versatile agricultural land and geological resources, but the higher the level of growth, the greater the need to allocate agricultural (greenfield) sites. Mitigation measures: Local Plan policies to ensure protection and enhancement of geologically important sites.</p>
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> Will it reduce waste generation? Will it maximise the re-use of existing buildings? Will it increase the use of building materials from sustainable sources? 	?	?	?	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will encourage the re-use of existing buildings wherever possible. Mitigation measures: Local Plan policies to support waste minimisation.</p>
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> Will it ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Will it protect and reinforce the character and appearance of the district's towns and villages and maintain and 	?	?/+	?/++	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However with the lowest level of growth proposed, of all options considered, this option is most likely to result in protection of cultural and historic heritage assets (designated and non-designated) along with their settings.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for heritage and archaeological assets along with their settings. However the higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of altering the character of settlements and resulting in deterioration of cultural and historic heritage assets (designated and non-designated assets) or their settings that could not be reasonably mitigated. Mitigation</p>

Option 1: 235 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures

	strengthen local distinctiveness and sense of place?					<p>measures: Local Plan policies to support protection and enhancement for the character of towns / villages; heritage and archaeological assets along with their settings.</p>
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Will it protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Will it promote development on brownfield land? Will it safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	?	?/+	?/++	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. The Landscape and Settlement Character Assessment Study⁽⁶⁾ offers guidance to help ensure new development required in the District takes place in locations that are compatible with the unique quality of the Staffordshire Moorlands landscape and in sympathy with the setting of a particular settlement. The HEA⁽⁷⁾ identified that (within each of the study areas) historic character had been retained and that beyond the present extent of the built areas, a dispersed settlement pattern was still predominant. With the lowest level of growth proposed, of all options considered, this option is the most likely to result in the protection of the character and appearance of the landscape, including historic landscapes, and other natural assets and resources.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for landscape character and natural assets. However the higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of resulting in an adverse effect on the character of landscapes, including historic landscapes, that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement of the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. With the lowest level of growth proposed, of all options considered, this option is the least likely to result in a long-term, adverse impact on local distinctiveness, potentially leading to an associated long-term positive impact on tourism and the visitor economy. However, this is</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: The higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of congestion and an adverse effect on the character and appearance of landscapes, towns and villages that together may detract from the further development of local distinctiveness and could result in long-term negative impacts on tourism and the visitor</p>

Option 1: 235 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
					balanced by the option also providing the least opportunity for investment in culture and tourism that could result in long-term negative effects on the local economy.	economy. Counter to this, higher levels of growth provide the most opportunities for investment that may support tourism and the visitor economy. Mitigation measures: Local Plan policies to support tourism and the visitor economy.
ECONOMIC						
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	+	+	+	Under this option, the population of the district is projected to increase by 2,567 from 2014 to 2031. The population growth predicted arises from high levels of net in-migration which counteracts a significant decrease in population expected from natural change resulting in an excess of deaths over births. The increase in spending in the local economy this is likely to generate should result in benefits to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. Although since this option provides for the lowest level of growth, the benefits would be lowest of all options considered.	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Residents of new developments will support their local retail, leisure and service provision. Mitigation measures: Local Plan policies to support town and village centres.
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	-	--	--	This option is likely to lead to a decline in the labour force of 2,141 (2014-2031) and job losses of 1,579 over the same period. This is likely to result in a significant negative effect on business, the local economy and local employment through a lack of encouragement for investment in business and infrastructure.	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: A local labour supply will help to deliver economic growth across the plan area. Mitigation measures: Local Plan policies to support sustainable economic growth.

Option 1: 235 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Will it meet the employment needs of local people? Will it increase economic activity levels? Will it improve physical accessibility to jobs? Will it support higher income levels for local residents? 	-	--	--	It is projected that the number of people aged over 65 in the District will increase by 39% by 2031. The oldest age groups (75-84 and 85+) would see the most substantial increases of 69% and 134% respectively ⁽⁸⁾ . Under this option, the ageing profile of the population is likely to contribute to a declining labour force and job losses which could undermine economic stability in the long term. The option is likely to have a negative effect on the local economy and local employment.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Whilst there is not a direct causal relationship between job growth and housing needs, the two are nevertheless fundamentally related. Ensuring a sufficient supply of homes within easy access of employment is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
<p>Summary of significant effects:</p> <p>This option proposes the delivery of 235 new dwellings per year (2014-2031). It will have a direct, long-term positive effect on the SA objective to ensure provision of homes to meet local needs since it represents the lower end of the recommended objectively assessed housing need range. However being the lower end of the range, the option makes the least contribution to all options considered to addressing affordable housing need and the needs of an ageing population. Predicted population growth of around 2,500 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages including helping to safeguard local shops and services. However since this option provides for the lowest level of growth, these benefits would be lowest of all options considered. This option is likely to lead to a decline in the labour force of 2,141 and the loss of 1,579 jobs (2014 - 2031). This is likely to undermine economic stability in the long term and lead to a significant negative effect on business, the local economy and local employment through a lack of encouragement for investment in business and infrastructure. As the lowest growth option, requiring the lowest number of site allocations, by comparison with other options considered, this alternative is likely to result in minor positive effects on SA objectives relating to the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets. The lower level of growth is also likely to minimise the negative effects on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new dwellings and associated car journeys. The lower level of growth is also likely to help enable a focus of new development on small urban extensions and small sites within existing settlement boundaries resulting in minor positive effects on minimising the distance people need to travel to access key services and facilities and increasing the opportunities for use of sustainable forms of transport. However since this option proposes the lowest level of growth, it is also likely to result in the lowest level of investment in community facilities, including Green Infrastructure and other measures that help to reduce health inequalities, leading to minor negative effects on the SA objective relating to supporting health improvements.</p>

February 2017 Housing Requirement Option 2

SA Objective		February 2017 Option 2: 260 new homes each year				Justification; cumulative effects / mitigation measures
		Decision making criteria		Time-frame		
		ST	MT	LT	SOCIAL	
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> Will it make a positive contribution towards community cohesion? Will it improve neighbourhood quality? Will it ensure that there is adequate open space and support Green Infrastructure? Will it minimise light and noise pollution? Will it ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. There is a balance between loss of countryside as a result of development and provision of new, accessible open space as part of new developments. This requirement may offer fewer opportunities than options 3 and 4 for achieving associated benefits of investment, such as new or enhanced community facilities, but there would be more opportunities than under option 1.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Community cohesion and local environmental quality are more dependent on design and location of new development than on the overall housing requirement. Mitigation measures: Local Plan policies to ensure that good standards of amenity and open space and Green Infrastructure are delivered as part of new housing development.</p>
	<ul style="list-style-type: none"> Will it remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? Will it help to minimise the distance people 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this option will deliver more growth than under option 1, but less growth than proposed under options 3 or 4 and thus some opportunity to improve accessibility to key services and facilities. Lower levels of housing growth may enable a focus of growth on small urban extensions and small sites within the existing settlement boundary which is likely to help minimise the distance people need to travel.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Equality of opportunity for all persons will be improved by any measure that has the effect of improving overall accessibility to jobs, services and facilities. Mitigation measures: Local Plan policies to ensure that new developments are brought forward in sustainable locations.</p>
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> Will it help to minimise the distance people 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this option will deliver more growth than under option 1, but less growth than proposed under options 3 or 4 and thus some opportunity to improve accessibility to key services and facilities. Lower levels of housing growth may enable a focus of growth on small urban extensions and small sites within the existing settlement boundary which is likely to help minimise the distance people need to travel.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Equality of opportunity for all persons will be improved by any measure that has the effect of improving overall accessibility to jobs, services and facilities. Mitigation measures: Local Plan policies to ensure that new developments are brought forward in sustainable locations.</p>

February 2017 Option 2: 260 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
3. To improve health and reduce health inequalities.	<p>need to travel to access education, employment, shopping and other key services and facilities.</p> <ul style="list-style-type: none"> Will it improve health or access to health facilities? Will it promote healthy lifestyles? Will it reduce health inequalities? Will it provide opportunities to participate in leisure and recreational activities including access to the countryside? 	?	?/-	?/-	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this option will deliver more growth than under option 1, but less growth than proposed under options 3 or 4 and thus some opportunity to improve health infrastructure, including opportunities for walking and cycling. In the long term there could be a deterioration in health through lack of investment in health-care, leisure and physical recreational facilities. There is a balance between loss of countryside as a result of development and provision of improved opportunities to access the countryside as part of new developments.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Investment in new infrastructure keeps pace with growth. More housing growth offers more opportunities to invest in new health-care facilities, including new or improved opportunities for walking and cycling. Mitigation measures: Local Plan policies to ensure that new developments deliver opportunities to increase take up of sustainable transport choices and improvements to healthy travel networks, including increased opportunities for access to the countryside.</p>
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> Will it reduce actual levels of crime? Will it reduce fear of crime? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the implementation of relevant Local Plan policies.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Good design will help minimise opportunities for crime and reduce the fear of crime. Mitigation measures: Local Plan policies to ensure that new developments are well designed, creating safe places and reducing opportunities for anti-social behaviour.</p>
5. To ensure adequate quality and provision of a range of house types to meet local needs in	<ul style="list-style-type: none"> Will it provide an appropriate mix of housing to enable all needs to be met? 	+	+	++	<p>This option represents the job stabilisation scenario⁽¹⁾ and is mid-way within the full objectively assessed needs range. By meeting the full assessed need for housing in the District, this option will have a direct, long-term, positive effect</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Household projections suggest a considerable growth in the number of older people. The SHMA⁽²⁾ identified a critical affordable</p>

February 2017 Option 2: 260 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> Will it enable people to meet their needs within their existing communities? Will it ensure that people can afford their housing? 			LT	on the SA objective. The requirement is expected to enable the delivery of a range of housing types and tenures, making a contribution to meeting community needs. While the impact of this option on the SA objective is greater than that under option 1, it is less significant than under options 3 and 4. Whilst this option is likely to contribute to addressing the needs of an ageing population and ensuring that problems of affordability can be addressed, there is a greater risk of adverse outcomes for older people and those who still need to access the housing market than under options 3 and 4.	housing need. Objectively assessed housing need for the District is between 235dpa and 330dpa. This option will meet the objectively assessed housing need of the plan area but fails fully to address affordable housing need, or offer maximum opportunity for investment in meeting the housing needs of older people. Mitigation measures: Wider initiatives of the Council should be supported to help deliver additional affordable homes.
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car	<ul style="list-style-type: none"> Will it minimise impacts on existing traffic congestion? Will it support the use of public transport? Will it support safe walking and cycling? Will it protect and improve access to the natural environment and support Green Infrastructure? 	?/+	?/+	?/++	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However since it proposes a lower level of growth than under options 3 and 4, in comparison with other alternatives considered, this requirement could have a long-term positive effect on minimising the impact of new development on existing traffic congestion and could offer support for the use of sustainable forms of transport through delivering new development close to town and village centres. The option could support priorities and provisions identified in the SMDC integrated transport strategy (3) , including the proposed Local Transport Packages for Leek, Cheadle and Biddulph.	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Lower levels of growth are likely to generate fewer new car journeys, resulting in less impact on existing congestion. Lower levels of growth will maximise the proportion of new development delivered close to existing centres, facilitating use of sustainable forms of transport. Higher levels of growth will allow most investment in support for sustainable transport. Mitigation measures: Local Plan policies to ensure that developments are brought forward in sustainable locations; support safe walking and cycling and improve access to the natural environment.</p>

ENVIRONMENTAL

February 2017 Option 2: 260 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Will it reduce emissions of greenhouse gases particularly CO₂? Will it increase energy efficiency? Will it increase the use of renewable energy? Will it ensure new development is in accessible locations in order to reduce the need for car use and / or encourage sustainable forms of transport? 	-	-	--	<p>There is some uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of developments and the implementation of Local Plan policies. However since it proposes a lower level of growth than under options 3 and 4, in comparison with other alternatives considered, this requirement is likely to result in a lower overall increase in carbon emissions from the energy consumption and emissions arising from construction and use of new development and associated car journeys. In the long-term there is likely to be a more significant negative impact than under option 1 since this proposes lower growth.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Even if individual properties are built to high environmental performance standards and delivered in sustainable locations, the total increase in number of dwellings and car journeys is likely to increase energy use and associated greenhouse gas emissions. Mitigation measures: Local Plan policies to ensure that high environmental design standards are supported and that developments are brought forward in accessible locations that support the use of sustainable forms of transport.</p>
8. To improve air quality.	<ul style="list-style-type: none"> Will it minimise emissions of airborne pollutants? Will it maximise the removal of air pollutants (e.g. by trees)? 	?	?/-	?/-	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However since it proposes a lower level of growth than under options 3 and 4, in comparison with other alternatives considered, this requirement is likely to give rise to lower levels of new emissions of airborne pollutants associated with additional car journeys. In the medium and long-term there is likely to be a more significant negative impact than under option 1 and some potential for development to be delivered within 500m of an identified area of poor air quality.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Identified areas of poor air quality include the Cellarhead junction (between the A52 and A520), Ball Haye Street, Leek (a primary link road from Leek A53 to the A523 Macclesfield and Buxton Road) and Broad Street, Leek (a primary link road from Stoke on Trent)⁽⁴⁾. The total increase in number of dwellings and car journeys is likely to increase emission of airborne pollutants, there is a risk that air quality may deteriorate in areas of existing low quality. Mitigation measures: Local Plan policies to ensure that developments include appropriate landscaping to aid removal of air pollutants.</p>
9. To reduce flood risk, protect and	<ul style="list-style-type: none"> Is new development directed towards areas of least flood risk? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made:</p>

		ST	MT	LT		
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	?	?	?	resources. Positive impacts are not as significant as under option 1.	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: The higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of congestion and an adverse effect on the character and appearance of landscapes, towns and villages that together may detract from the further development of local distinctiveness and could result in long-term negative impacts on tourism and the visitor economy. Counter to this, higher levels of growth provide the most opportunities for investment that may support tourism and the visitor economy. Mitigation measures: Local Plan policies to support tourism and the visitor economy.</p>
ECONOMIC						
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	+	+	++		<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Residents of new developments will support their local retail, leisure and service provision. Mitigation measures: Local Plan policies to support town and village centres.</p> <p>This option assumes that the number of jobs in the District remains at its 2014 level over the plan period and since there is an ageing population, there would be a need for growth in the labour force, in-migration and ultimately housing of 259dpa to 2031. Creating a labour force large enough to support job stabilisation would result in a population increase of 6,339 (2014-31). The increase in spending in the local economy this is likely to generate should result in benefits to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. Although since this option proposes a lower level of growth</p>

February 2017 Option 2: 260 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	+	+	+	<p>than under options 3 and 4, in comparison with other alternatives considered, this requirement is likely to result in less significant benefits. Benefits would be more significant than under option 1.</p> <p>This option represents the level at which the District's economy would stabilise, ie there would be zero job growth 2014 - 2031. This is likely to result in a minor positive effect on business, the local economy and local employment.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Helping to stem the decline of working age residents in the District would achieve a more balanced population structure and reduce potential future economic difficulties and the demands of services associated with an ageing population and a more limited supply of labour. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
18. To encourage and support a high and sustainable level of employment	<ul style="list-style-type: none"> Will it increase economic activity levels? Will it improve physical accessibility to jobs? Will it support higher income levels for local residents? 	0	0	+	<p>Whilst this option is to maintain the 2014 level of jobs in the District over the plan period, a fall in the labour force of 127 is predicted. This is likely to lead to a long term minor positive impact on the local economy and local employment.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Whilst there is not a direct causal relationship between job growth and housing needs, the two are nevertheless fundamentally related. Ensuring a sufficient supply of homes within easy access of employment is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
<p>Summary of significant effects:</p> <p>This option proposes the delivery of 260 new dwellings per year. Since it is within the recommended, full objectively assessed housing need range, the housing requirement would have a direct, long-term positive effect on the SA objective to ensure provision of homes to meet local needs. This positive effect is likely to be more significant than under option 1. However being closer to the lower end of the range than options 3 and 4, the option makes less of a contribution than options 3 and 4 to addressing affordable housing need and the needs of an ageing population. Predicted population growth of around 6,300 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages, including help to safeguard local shops and services. Under this option, these benefits are likely to be more significant than under option 1 and less significant than under options 3 and 4. This</p>						

SA Objective	February 2017 Option 2: 260 new homes each year				Justification; cumulative effects / mitigation measures	
	Decision making criteria	Time-frame				Nature of effect; Comments
		ST	MT	LT		
					<p>option is expected to maintain the 2014 level of jobs in the district over the plan period. This is likely to result in a long term minor positive impact on business, the local economy and local employment. This compares favourably with the impacts on this objective likely under option 1, where significant negative impacts on SA objectives for supporting employment and economic growth are likely since housing delivery below 260dpa would potentially result in a reduction in jobs. However the positive impacts on economic growth under this option are less significant than those likely to result under options 3 and 4. Option 2 requires the second lowest number of site allocations of the four options considered, and consequently this alternative is likely to result in comparatively more positive effects on SA objectives relating to the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets than options 3 and 4. Positive effects on these objectives are slightly less under this option than under option 1. The lower level of growth under option 2 compared with options 3 and 4 is also likely to minimise the negative effects on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new dwellings and associated car journeys. The lower level of growth is also likely more likely under option 2 than options 3 and 4 to enable a focus of new development on small urban extensions and small sites within existing settlement boundaries resulting in minor positive effects on minimising the distance people need to travel to access key services and facilities and increasing the opportunities for use of sustainable forms of transport. Benefits under option 2 in this regard are not likely to be as great as under option 1. However since option 2 proposes the second lowest level of growth of the four options considered, it is likely to result in a lower level of investment than under options 3 and 4 in community facilities, including Green Infrastructure and other measures that help to reduce health inequalities, leading to possible minor negative effects on the SA objective relating to supporting health improvements. These negative effects are not likely to be as significant as under option 1.</p>

February 2017 Housing requirement Option 3

SA Objective		February 2017 Option 3: 330 new homes each year				Justification; cumulative effects / mitigation measures
		Decision making criteria		Time-frame		
		ST	MT	LT	SOCIAL	
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> Will it make a positive contribution towards community cohesion? Will it improve neighbourhood quality? Will it ensure that there is adequate open space and support Green Infrastructure? Will it minimise light and noise pollution? Will it ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	?	?/+	?/+	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. There is a balance between loss of countryside as a result of development and provision of new, accessible open space as part of new developments. This requirement may offer more opportunities than options 1 and 2 for achieving associated benefits of investment, such as new or enhanced community facilities, but there would be less opportunities than under option 4.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Community cohesion and local environmental quality are more dependent on design and location of new development than on the overall housing requirement. Mitigation measures: Local Plan policies to ensure that good standards of amenity and open space and Green Infrastructure are delivered as part of new housing development.</p>
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> Will it remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? Will it help to minimise the distance people 	?	?/+	?/+	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this option will deliver more growth than under options 1 and 2 (but less growth than proposed under option 4) and consequently there is opportunity to improve accessibility to key services and facilities through delivering more investment into the rural areas. However under this option it is less likely than under options 1 and 2 that the focus of growth could be delivered as small urban extensions and small sites within existing settlement boundaries and this may</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Equality of opportunity for all persons will be improved by any measure that has the effect of improving overall accessibility to jobs, services and facilities. Mitigation measures: Local Plan policies to ensure that new developments are brought forward in sustainable locations.</p>

February 2017 Option 3: 330 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
	need to travel to access education, employment, shopping and other key services and facilities.				increase the distance that some people would need to travel in order to access key services and facilities.	
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> Will it improve health or access to health facilities? Will it promote healthy lifestyles? Will it reduce health inequalities? Will it provide opportunities to participate in leisure and recreational activities including access to the countryside? 	?	?/+	?/+	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this option will deliver more growth than under options 1 and 2 (but less growth than proposed under option 4) and consequently there is opportunity to improve health infrastructure, including opportunities for walking and cycling. In the long term there could be an indirectly positive effect on health through enabling investment in health-care, leisure and physical recreational facilities. There is a balance between loss of countryside as a result of development and provision of improved opportunities to access the countryside as part of new developments.	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Investment in new infrastructure keeps pace with growth. More housing growth offers more opportunities to invest in new health-care facilities, including new or improved opportunities for walking and cycling. Mitigation measures: Local Plan policies to ensure that new developments deliver opportunities to increase take up of sustainable transport choices and improvements to healthy travel networks, including increased opportunities for access to the countryside.</p>
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> Will it reduce actual levels of crime? Will it reduce fear of crime? 	?	?	?	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the implementation of relevant Local Plan policies.	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Good design will help minimise opportunities for crime and reduce the fear of crime.</p> <p>Mitigation measures: Local Plan policies to ensure that new developments are well designed, creating safe places and reducing opportunities for anti-social behaviour.</p>
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate	<ul style="list-style-type: none"> Will it provide an appropriate mix of housing to enable all needs to be met? Will it enable people to meet their needs within 	+	++	++	This option represents the level of housing growth necessary to provide a sufficiently large labour force to support the average level of job growth projected by two forecasting houses: Oxford Economics and Experian ⁽¹⁾ . This option represents the upper end of	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Household projections suggest a considerable growth in the number of older people. The SHMA⁽²⁾ identified a critical</p>

February 2017 Option 3: 330 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
<p>locations and including affordable / social /extra care housing.</p>	<ul style="list-style-type: none"> their existing communities? Will it ensure that people can afford their housing? 				<p>the objectively assessed housing need range. By meeting the full assessed need for housing in the District, this option will have a direct, medium and long-term, positive effect on the SA objective. The requirement is expected to enable the delivery of a range of housing types and tenures, making a significant contribution to meeting community needs. While the impact of this option on the SA objective is greater than that under options 1 and 2, it is less significant than under option 4. As the upper end of the OAN range, this option is likely to make a significant contribution to addressing the needs of an ageing population and ensuring that problems of affordability can be addressed.</p>	<p>affordable housing need. Objectively assessed housing need for the District is between 235dpa and 330dpa. This option will meet the objectively assessed housing need of the plan area and address both affordable housing need and the housing needs of older people. Mitigation measures: Wider initiatives of the Council should be supported to help deliver additional affordable homes.</p>
<p>strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car</p>	<ul style="list-style-type: none"> Will it minimise impacts on existing traffic congestion? Will it support the use of public transport? Will it support safe walking and cycling? Will it protect and improve access to the natural environment and support Green Infrastructure? 	?	?	?/-	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However since it proposes a higher level of growth than under options 1 and 2, in comparison with other alternatives considered, this requirement could have a long-term negative effect on minimising the impact of new development on existing traffic congestion. Due to the extent of sites that are likely to be allocated under this option, it is less likely than under options 1 and 2 that a high proportion of new development can be delivered close to town and village centres, possibly resulting in a lower use of sustainable forms of transport. The option is likely to support priorities and provisions identified in the SMDC integrated transport strategy (3), including the proposed Local Transport Packages for Leek, Cheadle and Biddulph.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Lower levels of growth are likely to generate fewer new car journeys, resulting in less impact on existing congestion. Lower levels of growth will maximise the proportion of new development delivered close to existing centres, facilitating use of sustainable forms of transport. Higher levels of growth will allow most investment in support for sustainable transport. Mitigation measures: Local Plan policies to ensure that developments are brought forward in sustainable locations; support safe walking and cycling and improve access to the natural environment.</p>

ENVIRONMENTAL

February 2017 Option 3: 330 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Will it reduce emissions of greenhouse gases particularly CO₂? Will it increase energy efficiency? Will it increase the use of renewable energy? Will it ensure new development is in accessible locations in order to reduce the need for car use and / or encourage sustainable forms of transport? 	-	--	--	<p>There is some uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of developments and the implementation of Local Plan policies. However since it proposes a higher level of growth than under options 1 and 2, in comparison with other alternatives considered, this requirement is likely to result in a higher overall increase in carbon emissions from the energy consumption and emissions arising from construction and use of new development and associated car journeys. Impacts are likely to be less significant than under option 4.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Even if individual properties are built to high environmental performance standards and delivered in sustainable locations, the total increase in number of dwellings and car journeys is likely to increase energy use and associated greenhouse gas emissions. Mitigation measures: Local Plan policies to ensure that high environmental design standards are supported and that developments are brought forward in accessible locations that support the use of sustainable forms of transport.</p>
8. To improve air quality.	<ul style="list-style-type: none"> Will it minimise emissions of airborne pollutants? Will it maximise the removal of air pollutants (e.g. by trees)? 	?	?/-	?/-	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However since it proposes a higher level of growth than under options 1 and 2, in comparison with other alternatives considered, this requirement is likely to give rise to higher levels of new emissions of airborne pollutants associated with additional car journeys. In the medium and long-term there is likely to be a more significant negative impact than under options 1 and 2 and some potential for development to be delivered within 500m of an identified area of poor air quality. Impacts are likely to be less significant than under option 4.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Identified areas of poor air quality include the Cellarhead junction (between the A52 and A520); Ball Haye Street, Leek (a primary link road from Leek A53 to the A523 Macclesfield and Buxton Road) and Broad Street, Leek (a primary link road from Stoke on Trent) (4). The total increase in number of dwellings and car journeys is likely to increase emission of airborne pollutants, there is a risk that air quality may deteriorate in areas of existing low quality. Mitigation measures: Local Plan policies to ensure that developments include appropriate landscaping to aid removal of air pollutants.</p>
9. To reduce flood risk, protect and	<ul style="list-style-type: none"> Is new development directed towards areas of least flood risk? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made:</p>

February 2017 Option 3: 330 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
enhance water sources.	<ul style="list-style-type: none"> Will it reduce risk of flooding eg by encouraging the integration of mitigation measures such as SuDS into new development? Will it protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Will it encourage water efficiency and demand management? 				<p>location of development and the implementation of Local Plan policies. However the SFRA (5) confirms that there are few locations in which development would significantly increase fluvial flood risk elsewhere, due to the majority of potentially suitable sites for development being located within Flood Zone 1, with only a few sites partially within Flood Zone 2 or 3. Since it proposes a higher level of growth than under options 1 and 2, in comparison with other alternatives considered, this requirement is likely to result in more peripheral development proposed on agricultural (greenfield) land on the outskirts of settlements, and thus result in more risk of surface water flood risk within towns or villages and further downstream as a result of increased surface water runoff and reduced infiltration. Although in the long-term there is likely to be a less significant impact than under option 4.</p>	<p>Development - at whatever overall scale - will be permitted only where schemes meet development plan requirements for management of flood risk. Mitigation measures: Local Plan policies to ensure that new developments are directed towards areas of least flood risk and incorporate SuDS wherever possible.</p>
<p>To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs</p>	<ul style="list-style-type: none"> Will it protect and promote effective management of the district's sites of ecological and nature conservation importance? Will it help contribute to Staffordshire Biodiversity Action Plan objectives? Will it help deliver networks of biodiversity and green infrastructure? 	?	?/-	?/-	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. Since it proposes a higher level of growth than under options 1 and 2, in comparison with other alternatives considered (with the exception of the highest growth option 4) this requirement is less likely to provide long-term protection for biodiversity and natural networks. However in comparison with options 1 and 2, there is likely to be a higher level of new investment and associated opportunities to deliver biodiversity enhancement or the extension of GI networks as part of schemes (but less opportunity than under option 4). Given that in comparison with options 1 and 2, this requirement is likely to lead to increased recreational and other urbanising pressures on the closest European sites,</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for biodiversity and for sites of ecological and nature conservation importance, but the higher the level of growth, the greater the need to allocate sites in the countryside, on the periphery of settlements, including sites potentially requiring Green Belt release or within the zone of influence of European designated sites. Mitigation measures: Local Plan policies to ensure conservation and enhancement of biodiversity and that any development proposal is not permitted to have an adverse effect on the integrity of a European site.</p>

		ST	MT	LT		
heritage and archaeological assets along with their settings.	<p>heritage assets (designated and non-designated assets) along with their settings?</p> <ul style="list-style-type: none"> Will it protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 				higher level of growth than under options 1 and 2, in comparison with other alternatives considered (with the exception of the highest growth option 4) this requirement is likely to result in less protection of cultural and historic heritage assets (designated and non-designated) along with their settings. Negative impacts are not as significant as under option 4.	assets along with their settings. However the higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of altering the character of settlements and resulting in deterioration of cultural and historic heritage assets (designated and non-designated assets) or their settings that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement for the character of towns / villages; heritage and archaeological assets along with their settings.
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Will it protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Will it promote development on brownfield land? Will it safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	?	?	?/-	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. The Landscape and Settlement Character Assessment Study (6) offers guidance to help ensure new development required in the District takes place in locations that are compatible with the unique quality of the Staffordshire Moorlands landscape and in sympathy with the setting of a particular settlement. The HEA (7) identified that (within each of the study areas) historic character had been retained and that beyond the present extent of the built areas, a dispersed settlement pattern was still predominant. Since it proposes a higher level of growth than under options 1 and 2, in comparison with other alternatives considered (with the exception of the highest growth option 4) this requirement is less likely to result in the protection of the character and appearance of the landscape, including historic landscapes, and other natural assets and resources. Negative impacts are not as significant as under option 4.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for landscape character and natural assets. However the higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of resulting in an adverse effect on the character of landscapes, including historic landscapes, that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement of the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>

		ST	MT	LT		
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the Local Plan policies. However since it proposes a higher level of growth than under options 1 and 2, in comparison with other alternatives considered (with the exception of the highest growth option 4) this requirement is more likely to result in a long-term, adverse impact on local distinctiveness, and this may lead to a long-term negative impact on tourism and the visitor economy. The significance is less than under option 4. The negative impacts are balanced by the requirement also providing more opportunity than under options 1 and 2 for investment in culture and tourism and this may result in medium term positive effects on the local economy.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: The higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of congestion and an adverse effect on the character and appearance of landscapes, towns and villages that together may detract from the further development of local distinctiveness and could result in long-term negative impacts on tourism and the visitor economy. Counter to this, higher levels of growth provide the most opportunities for investment that may support tourism and the visitor economy. Mitigation measures: Local Plan policies to support tourism and the visitor economy.</p>
ECONOMIC						
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	+	++	++	<p>This option combines the job growth projected by Oxford Economics and Experian and incorporates partial catch up headship rates. It represents the "unconstrained" potential of the area based on its existing business base, mix of sectors and inherent economic qualities. There would need to be significant in-migration needed to support an increase in the size of the labour force sufficient to support the forecast job growth. This would equate to population growth of 8,471, household growth of 5,376 and a dwelling need of 329pa. The increase in spending in the local economy this would generate is likely to result in benefits to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. Since this option proposes a higher level of growth than under options 1 and 2, in comparison with other alternatives</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Residents of new developments will support their local retail, leisure and service provision. Mitigation measures: Local Plan policies to support town and village centres.</p>

February 2017 Option 3: 330 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	+	+	++	considered (with the exception of the highest growth option 4) this requirement is likely to result in significant benefits for the economies of existing centres. Benefits however are likely to be less significant than under option 4.	
18. To encourage and support a high and sustainable level of employment	<ul style="list-style-type: none"> Will it meet the employment needs of local people? Will it increase economic activity levels? Will it improve physical accessibility to jobs? Will it support higher income levels for local residents? 	+	+	++	<p>This option is based on modelled job growth of an additional 870 jobs (794 FTEs) in the District 2014-2031 (51 annually). Although this seems modest, it is set within the context of a decline in jobs forecast under the 2014-based SNPP baseline. Job growth (while modest) is likely to result in long-term positive effects on business, the local economy and local employment.</p> <p>This option represents the level of housing growth necessary to provide a sufficiently large labour force to support an average of the Oxford Economics and Experian job growth forecasts for the District 2014-2031; a labour force increase of 981. This is likely to allow for the economic potential of the district to be realised and result in medium and long term positive impacts on the local economy and local employment.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Helping to reverse the decline of working age residents in the District would achieve a more balanced population structure and reduce potential future economic difficulties and the demand of services associated with an ageing population and a more limited supply of labour. Mitigation measures: Local Plan policies to support sustainable economic growth.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Whilst there is not a direct causal relationship between job growth and housing needs, the two are nevertheless fundamentally related. Ensuring a sufficient supply of homes within easy access of employment is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
<p>Summary of significant effects:</p> <p>This option proposes the delivery of 330 new dwellings per year. Since it is the upper end of the recommended objectively assessed housing need range, the housing requirement would have a direct, long-term positive effect on the SA objective to ensure provision of homes to meet local needs. This positive effect is likely to be more significant than under options 1 and 2. As the upper end of the range, the option is likely to make a significant contribution to addressing affordable housing need and the needs of an ageing population. Predicted population growth of around 8,500 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages, including help to safeguard local shops and</p>

		ST	MT		
					<p>services. Under this option, these benefits are likely to be more significant than under options 1 and 2, but less significant than under option 4. This option is based on expected job growth of 870 and a labour force increase of 981 in the district 2014-2031. This is likely to allow for the economic potential of the district to be realised and lead to medium and long term positive impacts on the local economy and local employment. Option 3 requires the second highest number of site allocations of the four options considered, and consequently this alternative is likely to result in comparatively more negative effects on SA objectives relating to the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets than options 1 and 2. Negative effects on these objectives are slightly less under this option than under option 4. The higher level of growth under option 3 compared with options 1 and 2 is also likely to result in negative effects on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new dwellings and associated car journeys. Due to the extent of sites that are likely to be allocated under this option, it is less likely than under options 1 and 2 that a high proportion of new development can be delivered close to town and village centres, resulting in negative effects on minimising the distance people need to travel to access key services and facilities and reducing the opportunities for use of sustainable forms of transport. Negative effects under option 3 in this regard are not likely to be as great as under option 4. However since option 3 proposes the second highest level of growth of the four options considered, it is likely to result in a higher level of investment than under options 1 and 2 in community facilities, including Green Infrastructure and other measures that help to reduce health inequalities, leading to possible minor positive effects on the SA objective relating to supporting health improvements. These positive effects are not likely to be as significant as under option 4.</p>

		ST	MT	LT		
SOCIAL						
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> Will it make a positive contribution towards community cohesion? Will it improve neighbourhood quality? Will it ensure that there is adequate open space and support Green Infrastructure? Will it minimise light and noise pollution? Will it ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	?	?	?/+	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. There is a balance between loss of countryside as a result of development and provision of new, accessible open space as part of new developments. This requirement is likely to offer the most opportunity for associated benefits such as new or enhanced community facilities to be delivered as a result of new development.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Community cohesion and local environmental quality are more dependent on design and location of new development than on the overall housing requirement. Mitigation measures: Local Plan policies to ensure that good standards of amenity and open space and Green Infrastructure are delivered as part of new housing development.</p>
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> Will it remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? Will it help to minimise the distance people 	?	?	?/+	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this option will deliver the highest level of housing growth of the four options considered and thus the greatest opportunity to improve accessibility to key services and facilities through delivering more investment into the rural areas. However, this level of new housing development is not likely to enable growth to be focused on small urban extensions and small sites within the existing settlement boundaries, which may result in increasing the distance people need to travel.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Equality of opportunity for all persons will be improved by any measure that has the effect of improving overall accessibility to jobs, services and facilities. Mitigation measures: Local Plan policies to ensure that new developments are brought forward in sustainable locations.</p>

Option 4: 450 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
3. To improve health and reduce health inequalities.	<p>need to travel to access education, employment, shopping and other key services and facilities.</p> <ul style="list-style-type: none"> ● Will it improve health or access to health facilities? ● Will it promote healthy lifestyles? ● Will it reduce health inequalities? ● Will it provide opportunities to participate in leisure and recreational activities including access to the countryside? 	?	?	?/+	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this option will deliver the highest level of housing growth of the four options considered and thus present the most opportunities to improve health infrastructure, including opportunities for walking and cycling. In the long term there could be an improvement in health through increased investment in health-care, leisure and physical recreational facilities. There is a balance between loss of countryside as a result of development and provision of improved opportunities to access the countryside as part of new developments.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Investment in new infrastructure keeps pace with growth. More housing growth offers more opportunities to invest in new health-care facilities, including new or improved opportunities for walking and cycling. Mitigation measures: Local Plan policies to ensure that new developments deliver opportunities to increase take up of sustainable transport choices and improvements to healthy travel networks, including increased opportunities for access to the countryside.</p>
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Will it reduce actual levels of crime? ● Will it reduce fear of crime? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the implementation of relevant Local Plan policies.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Good design will help minimise opportunities for crime and reduce the fear of crime. Mitigation measures: Local Plan policies to ensure that new developments are well designed, creating safe places and reducing opportunities for anti-social behaviour.</p>
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations	<ul style="list-style-type: none"> ● Will it provide an appropriate mix of housing to enable all needs to be met? ● Will it enable people to meet their needs within 	++	++	++	<p>This option exceeds the upper end of the recommended OAN range ⁽¹⁾ and by meeting the full, objectively assessed need for housing in the District, it will have a direct, long-term, positive effect on this SA objective. The requirement is expected to enable the delivery of a range of</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Household projections suggest a considerable growth in the number of older people. The SHMA ⁽²⁾ identified a critical affordable housing need. Objectively assessed housing need for the</p>

SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
and including affordable / social /extra care housing.	<ul style="list-style-type: none"> their existing communities? Will it ensure that people can afford their housing? 			LT	housing types and tenures, making a significant contribution to meeting community needs. The impact of this option on the SA objective is more significant than under all other options. This option is likely to make the most contribution to addressing the needs of an ageing population and ensuring that problems of affordability can be satisfactorily addressed, improving outcomes for older people and those who still need to access the housing market.	District is between 235dpa and 300dpa. This option will meet the objectively assessed housing need of the plan area and will go further than any other option considered towards addressing affordable housing need and offering opportunities for investment in meeting the housing needs of older people. Mitigation measures: Wider initiatives of the Council should be supported to help deliver additional affordable homes.
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car	<ul style="list-style-type: none"> Will it minimise impacts on existing traffic congestion? Will it support the use of public transport? Will it support safe walking and cycling? Will it protect and improve access to the natural environment and support Green Infrastructure? 	?/-	?/-	?/-	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this requirement is likely to have a negative effect on minimising the impact of new development on existing traffic congestion. Due to the number of site allocations that would be required, it is likely that some new development would be delivered remote from town and village centres, making the use of sustainable forms of transport less likely. The option could support priorities and provisions identified in the SMDC integrated transport strategy (3), including the proposed Local Transport Packages for Leek, Cheadle and Biddulph.	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Lower levels of growth are likely to generate fewer new car journeys, resulting in less impact on existing congestion. Lower levels of growth will maximise the proportion of new development delivered close to existing centres, facilitating use of sustainable forms of transport. Higher levels of growth will allow most investment in support for walking and cycling initiatives. Mitigation measures: Local Plan policies to ensure that developments are brought forward in sustainable locations; support safe walking and cycling and improve access to the natural environment.
ENVIRONMENTAL						
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Will it reduce emissions of greenhouse gases particularly CO₂? Will it increase energy efficiency? 	--	--	--	There is some uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of developments and the implementation of Local Plan policies. However this option is likely to result in the greatest overall increase in carbon emissions from the energy	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Even if individual properties are built to high environmental performance standards and delivered in sustainable locations, the total increase in number of dwellings and car

Option 4: 450 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
	<ul style="list-style-type: none"> Will it increase the use of renewable energy? Will it ensure new development is in accessible locations in order to reduce the need for car use and / or encourage sustainable forms of transport? 				consumption and emissions arising from construction and use of new development and associated car journeys.	<p>journeys is likely to increase energy use and associated greenhouse gas emissions.</p> <p>Mitigation measures: Local Plan policies to ensure that high environmental design standards are supported and that developments are brought forward in accessible locations that support the use of sustainable forms of transport.</p>
8. To improve air quality.	<ul style="list-style-type: none"> Will it minimise emissions of airborne pollutants? Will it maximise the removal of air pollutants (e.g. by trees)? 	?	?/-	--	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However as this option represents the highest level of housing growth, it is likely to give rise to the highest level of new emissions of airborne pollutants associated with additional car journeys. In the medium-term there is potential for development to be delivered within 500m of an identified area of poor air quality.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Identified areas of poor air quality include the Cellarhead junction (between the A52 and A520); Ball Haye Street, Leek (a primary link road from Leek A53 to the A523 Macclesfield and Buxton Road) and Broad Street, Leek (a primary link road from Stoke on Trent)⁽⁴⁾. The total increase in number of dwellings and car journeys is likely to increase emission of airborne pollutants. There is a risk that air quality may deteriorate in areas of existing low quality. Mitigation measures: Local Plan policies to ensure that developments include appropriate landscaping to aid removal of air pollutants.</p>
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Is new development directed towards areas of least flood risk? Will it reduce risk of flooding eg by encouraging the integration of mitigation measures such as SuDS into new development? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However the SFRA⁽⁵⁾ confirms that there are few locations in which development would significantly increase fluvial flood risk elsewhere, due to the majority of potentially suitable sites for development being</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Development - at whatever overall scale - will be permitted only where schemes meet development plan requirements for management of flood risk. Mitigation measures: Local Plan policies to ensure that new developments are directed towards areas</p>

Option 4: 450 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
	<ul style="list-style-type: none"> Will it protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Will it encourage water efficiency and demand management? 				located within Flood Zone 1, with only a few sites partially within Flood Zone 2 or 3. This option requires the most peripheral development proposed on agricultural (greenfield) land on the outskirts of settlements, and thus poses the greatest risk of all options to increase surface water flood risk within towns or villages and further downstream as a result of increased surface water runoff and reduced infiltration.	of least flood risk and incorporate SuDS wherever possible.
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> Will it protect and promote effective management of the district's sites of ecological and nature conservation importance? Will it help contribute to Staffordshire Biodiversity Action Plan objectives? Will it help deliver networks of biodiversity and green infrastructure? 	?/-	?/--	?/--	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However as it proposes the highest level of housing growth, of all options considered, this option is likely to provide least overall, long-term protection for biodiversity and natural networks. There will however be the greatest level of new investment and associated opportunities to deliver biodiversity enhancement or the extension of GI networks as part of schemes. Given it will lead to the highest recreational and other urbanising pressures on the closest European sites, of all options considered, this option is also likely to afford least protection for the integrity of European sites. However the HRA of the Local Plan will ensure that Local Plan policies and allocations will not result in adverse effects on European designated sites.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for biodiversity and for sites of ecological and nature conservation importance, but the higher the level of growth, the greater the need to allocate sites in the countryside, on the periphery of settlements, including potentially requiring Green Belt release and potentially sites within the zone of influence of European designated sites. Mitigation measures: Local Plan policies to ensure conservation and enhancement of biodiversity and that any development proposal is not permitted to have an adverse effect on the integrity of a European site.</p>
11. To safeguard the best and most versatile agricultural land; improve soil and land resources;	<ul style="list-style-type: none"> Will it safeguard the best and most versatile agricultural land? Will it minimise the loss of greenfield land? 	?/-	?/--	?/--	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for the best and most versatile agricultural land and</p>

Option 4: 450 new homes each year

		ST	MT	LT		
and protect and enhance geological resources.	<ul style="list-style-type: none"> Will it reduce land contamination / instability? Will it reduce the amount of derelict land? Will it protect notable geological and geomorphological features? 				as it proposes the highest level of housing growth of all options considered, this option is likely to provide least overall, long-term protection for the best and most versatile agricultural land.	geological resources, but the higher the level of growth, the greater the need to allocate agricultural (greenfield) sites. Mitigation measures: Local Plan policies to ensure protection and enhancement of geologically important sites.
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> Will it reduce waste generation? Will it maximise the re-use of existing buildings? Will it increase the use of building materials from sustainable sources? 	?	?	?	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies.	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will encourage the re-use of existing buildings wherever possible. Mitigation measures: Local Plan policies to support waste minimisation.
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> Will it ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Will it protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	?/-	?/-	?/-	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However with the highest level of housing growth proposed, of all options considered, this option is least likely to result in protection of cultural and historic heritage assets (designated and non-designated) along with their settings.	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for heritage and archaeological assets along with their settings. However the higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of altering the character of settlements and resulting in deterioration of cultural and historic heritage assets (designated and non-designated assets) or their settings that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement for the character of towns / villages; heritage and archaeological assets along with their settings.

Option 4: 450 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Will it protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Will it promote development on brownfield land? Will it safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	?/-	?/-	?/-	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. The Landscape and Settlement Character Assessment Study (6) offers guidance to help ensure new development required in the District takes place in locations that are compatible with the unique quality of the Staffordshire Moorlands landscape and in sympathy with the setting of a particular settlement. The HEA (7) identified that (within each of the study areas) historic character had been retained and that beyond the present extent of the built areas, a dispersed settlement pattern was still predominant. With the highest level of housing growth proposed, of all options considered, this option is the least likely to result in the protection of the character and appearance of the landscape, including historic landscapes, and other natural assets and resources.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for landscape character and natural assets. However the higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of resulting in an adverse effect on the character of landscapes, including historic landscapes, that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement of the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. With the highest level of housing growth proposed, of all options considered, this option is the most likely to result in a long-term, adverse impact on local distinctiveness, potentially leading to an associated long-term negative impact on tourism and the visitor economy. However, this is balanced by the option also providing the most opportunity for investment in culture and tourism that could result in long-term positive effects on the local economy.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: The higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of congestion and an adverse effect on the character and appearance of landscapes, towns and villages that together may detract from the further development of local distinctiveness and could result in long-term negative impacts on tourism and the visitor economy. Counter to this, higher levels of growth provide the most opportunities for investment that may support tourism and the visitor economy. Mitigation measures: Local</p>

ECONOMIC						
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	++	++	++	<p>This option uses the scenario based on past trends job growth but incorporating partial catch up headship rates. Modelling the level of housing needed were historic job growth trends set to continue over the plan period indicates there would need to be an increase in the population of 13,697 in the district 2014-31. The increase in spending in the local economy this is likely to generate should result in significant benefits to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. However these benefits should be treated with caution since the SHMA December 2016 update notes that the population growth would primarily be achieved by very significant levels of net inward migration counteracting natural change and this is likely to require a step change in migration above the level that may be achievable in the district.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Residents of new developments will support their local retail, leisure and service provision. To achieve the 450dpa that would be required based on a continuation of past job growth rates would require a 6-fold increase in net population growth compared to the 2014-based SNPP and would require more than 10,000 additional migrants from elsewhere across the UK/abroad to move into the district. Mitigation measures: Local Plan policies to support town and village centres.</p>
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	++	++	++	<p>This projection estimates that there could be an increase in the labour force of 3,746 2014-31 (220pa). This is likely to result in a significant positive effect on business, the local economy and local employment. However these benefits should be treated with caution since SHMA December 2016 update notes that the population growth would primarily be achieved by very significant levels of net inward migration counteracting natural change and this is likely to require a step change</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: A local labour supply will help to deliver economic growth across the plan area. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>

2080

Option 4: 450 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Will it meet the employment needs of local people? Will it increase economic activity levels? Will it improve physical accessibility to jobs? Will it support higher income levels for local residents? 	++	++	++	in migration above the level that may be achievable in the district.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Whilst there is not a direct causal relationship between job growth and housing needs, the two are nevertheless fundamentally related. Ensuring a sufficient supply of homes within easy access of employment is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
<p>Summary of significant effects:</p> <p>This option proposes the delivery of 450 new dwellings per year. It will have a direct and significant positive effect on the SA objective to ensure provision of homes to meet local needs since it exceeds the upper end of the recommended objectively assessed housing need range. This option should make the greatest contribution of all options considered to addressing affordable housing need and the needs of an ageing population. Predicted population growth of around 13,700 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages, including helping to safeguard local shops and services. The past trends scenario provides employment growth in the district of 3,038 jobs 2014-31 (179pa) and an increase in the labour force of 3,746 2014-31 (220pa). As a result, the option is likely to have a significant positive effect on the local economy and local employment. However, these predicted positive effects should be treated with caution, since the SHMA December 2016 update notes that the population growth required to underpin this job growth would primarily be achieved by inward migration as opposed to natural change. To achieve the 450dpa that would be required based on a continuation of past job growth rates would require a 6-fold increase in net population growth compared to the 2014-based SNPP and would require more than 10,000 additional migrants from elsewhere across the UK/abroad to move into the district.</p>

Will it promote healthy lifestyles? 	?/-	?/-	?/-	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this option will deliver the least housing growth of the four options considered and thus the least	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Investment in new infrastructure keeps pace with growth. More housing growth offers more opportunities to invest in new health-care facilities, including new or improved opportunities for walking and</p>

January 2016 Option 1: 250 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
	<ul style="list-style-type: none"> Will it reduce health inequalities? Will it provide opportunities to participate in leisure and recreational activities including access to the countryside? 				<p>opportunity to improve health infrastructure, including opportunities for walking and cycling. In the long term there could be a deterioration in health through lack of investment in health-care, leisure and physical recreational facilities. There is a balance between loss of countryside as a result of development and provision of improved opportunities to access the countryside as part of new developments.</p>	<p>cycling. Mitigation measures: Local Plan policies to ensure that new developments deliver opportunities to increase take up of sustainable transport choices and improvements to healthy travel networks, including increased opportunities for access to the countryside.</p>
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> Will it reduce actual levels of crime? Will it reduce fear of crime? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the implementation of relevant Local Plan policies.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Good design will help minimise opportunities for crime and reduce the fear of crime. Mitigation measures: Local Plan policies to ensure that new developments are well designed, creating safe places and reducing opportunities for anti-social behaviour.</p>
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> Will it provide an appropriate mix of housing to enable all needs to be met? Will it enable people to meet their needs within their existing communities? Will it ensure that people can afford their housing? 	+	+	+	<p>This option represents the lower end of the recommended OAN range (1) and by meeting the full demographically-assessed need for housing in the District will have a direct, long-term, positive effect on this SA objective. The requirement is expected to enable the delivery of a range of housing types and tenures, making a contribution to meeting community needs. However the impact of this option on the SA objective is less significant than under all other options. This option is likely to make the least contribution to addressing the needs of an ageing population or ensuring that problems of affordability can be satisfactorily addressed, risking adverse outcomes for older people and those who still need to access the housing market.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Household projections suggest a considerable growth in the number of older people. The SHMA (2) identified a critical affordable housing need. Objectively assessed housing need for the District is between 250dpa and 440dpa. This option will meet the objectively assessed housing need of the plan area but fails fully to address affordable housing need, or offer maximum opportunity for investment in meeting the housing needs of older people. Mitigation measures: Wider initiatives of the Council should be supported to help deliver additional affordable homes.</p>

January 2016 Option 1: 250 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> Will it minimise impacts on existing traffic congestion? Will it support the use of public transport? Will it support safe walking and cycling? Will it protect and improve access to the natural environment and support Green Infrastructure? 	?/+	?/+	?/+	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this requirement could have a positive effect on minimising the impact of new development on existing traffic congestion and could offer support for the use of sustainable forms of transport through delivering most new development close to town and village centres. The option could support priorities and provisions identified in the SMDC integrated transport strategy ⁽³⁾, including the proposed Local Transport Packages for Leek, Cheddle and Biddulph.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Lower levels of growth are likely to generate fewer new car journeys, resulting in less impact on existing congestion. Lower levels of growth will maximise the proportion of new development delivered close to existing centres, facilitating use of sustainable forms of transport. Higher levels of growth will allow most investment in support for sustainable transport. Mitigation measures: Local Plan policies to ensure that developments are brought forward in sustainable locations; support safe walking and cycling and improve access to the natural environment.</p>
ENVIRONMENTAL						
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Will it reduce emissions of greenhouse gases particularly CO₂? Will it increase energy efficiency? Will it increase the use of renewable energy? Will it ensure new development is in accessible locations in order to reduce the need for car use and / or encourage sustainable forms of transport? 	-	-	-	<p>There is some uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of developments and the implementation of Local Plan policies. However this option is likely to result in the smallest overall increase in carbon emissions from the energy consumption and emissions arising from construction and use of new development and associated car journeys.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Even if individual properties are built to high environmental performance standards and delivered in sustainable locations, the total increase in number of dwellings and car journeys is likely to increase energy use and associated greenhouse gas emissions. Mitigation measures: Local Plan policies to ensure that high environmental design standards are supported and that developments are brought forward in accessible locations that support the use of sustainable forms of transport.</p>

January 2016 Option 1: 250 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
8. To improve air quality.	<ul style="list-style-type: none"> Will it minimise emissions of airborne pollutants? Will it maximise the removal of air pollutants (e.g. by trees)? 	?	?	?/-	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However as this option represents the lowest level of growth, it is likely to give rise to the lowest level of new emissions of airborne pollutants associated with additional car journeys. In the long-term there is some potential for development to be delivered within 500m of an identified area of poor air quality.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Identified areas of poor air quality include the Cellarhead junction (between the A52 and A520); Ball Haye Street, Leek (a primary link road from Leek A53 to the A523 Macclesfield and Buxton Road) and Broad Street, Leek (a primary link road from Stoke on Trent) (4). The total increase in number of dwellings and car journeys is likely to increase emission of airborne pollutants. There is a risk that air quality may deteriorate in areas of existing low quality. Mitigation measures: Local Plan policies to ensure that developments include appropriate landscaping to aid removal of air pollutants.</p>
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Is new development directed towards areas of least flood risk? Will it reduce risk of flooding eg by encouraging the integration of mitigation measures such as SuDS into new development? Will it protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Will it encourage water efficiency and demand management? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However the SFRA (5) confirms that there are few locations in which development would significantly increase fluvial flood risk elsewhere, due to the majority of potentially suitable sites for development being located within Flood Zone 1, with only a few sites partially within Flood Zone 2 or 3. This option requires the least peripheral development proposed on agricultural (greenfield) land on the outskirts of settlements, and thus poses the lowest risk of all options to increase surface water flood risk within towns or villages and further downstream as a result of increased surface water runoff and reduced infiltration.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Development - at whatever overall scale - will be permitted only where schemes meet development plan requirements for management of flood risk. Mitigation measures: Local Plan policies to ensure that new developments are directed towards areas of least flood risk and incorporate SuDS wherever possible.</p>

January 2016 Option 1: 250 new homes each year

		ST	MT	LT		
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> Will it protect and promote effective management of the district's sites of ecological and nature conservation importance? Will it help contribute to Staffordshire Biodiversity Action Plan objectives? Will it help deliver networks of biodiversity and green infrastructure? 	?	?/+	?/++	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However as it proposes the lowest level of growth, this option is likely to provide most overall, long-term protection for biodiversity and natural networks. There will however be the lowest level of new investment and associated opportunities to deliver biodiversity enhancement or the extension of GI networks as part of schemes. Given it will lead to the lowest recreational and other urbanising pressures on the closest European sites, of all options considered, this option is also likely to afford most protection for the integrity of European sites. However the HRA of the Local Plan will ensure that Local Plan policies and allocations will not result in adverse effects on European designated sites.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for biodiversity and for sites of ecological and nature conservation importance, but the higher the level of growth, the greater the need to allocate sites in the countryside, on the periphery of settlements, including potentially requiring Green Belt release and potentially sites within the zone of influence of European designated sites. Mitigation measures: Local Plan policies to ensure conservation and enhancement of biodiversity and that any development proposal is not permitted to have an adverse effect on the integrity of a European site.</p>
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> Will it safeguard the best and most versatile agricultural land? Will it minimise the loss of greenfield land? Will it reduce land contamination / instability? Will it reduce the amount of derelict land? Will it protect notable geological and geomorphological features? 	?	?/+	?/++	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However as it proposes the lowest level of growth, this option is likely to provide most overall, long-term protection for the best and most versatile agricultural land.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for the best and most versatile agricultural land and geological resources, but the higher the level of growth, the greater the need to allocate agricultural (greenfield) sites. Mitigation measures: Local Plan policies to ensure protection and enhancement of geologically important sites.</p>

January 2016 Option 1: 250 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> Will it reduce waste generation? Will it maximise the re-use of existing buildings? Will it increase the use of building materials from sustainable sources? 	?	?	?	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will encourage the re-use of existing buildings wherever possible.</p> <p>Mitigation measures: Local Plan policies to support waste minimisation.</p>
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> Will it ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Will it protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	?	?/+	?/++	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However with the lowest level of growth proposed, of all options considered, this option is most likely to result in protection of cultural and historic heritage assets (designated and non-designated) along with their settings.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for heritage and archaeological assets along with their settings. However the higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of altering the character of settlements and resulting in deterioration of cultural and historic heritage assets (designated and non-designated assets) or their settings that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement for the character of towns / villages; heritage and archaeological assets along with their settings.</p>
14. To protect and enhance the character and appearance of the landscape including historic landscape assets and other natural resources.	<ul style="list-style-type: none"> Will it protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Will it promote development on brownfield land? Will it safeguard protected sites and 	?	?/+	?/++	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. The Landscape and Settlement Character Assessment Study ⁽⁶⁾ offers guidance to help ensure new development required in the District takes place in locations that are compatible with the unique quality of the Staffordshire Moorlands landscape	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for landscape character and natural assets. However the higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of resulting in an adverse effect on the character of landscapes, including historic landscapes, that could not be reasonably mitigated. Mitigation measures:</p>

January 2016 Option 1: 250 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> ● provide opportunities for the enhancement of the natural environment identified in the NCA profiles? ● Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	?	?	?	<p>and in sympathy with the setting of a particular settlement. The HEA (7) identified that (within each of the study areas) historic character had been retained and that beyond the present extent of the built areas, a dispersed settlement pattern was still predominant. With the lowest level of growth proposed, of all options considered, this option is the most likely to result in the protection of the character and appearance of the landscape, including historic landscapes, and other natural assets and resources.</p> <p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. With the lowest level of growth proposed, of all options considered, this option is the least likely to result in a long-term, adverse impact on local distinctiveness, potentially leading to an associated long-term positive impact on tourism and the visitor economy. However, this is balanced by the option also providing the least opportunity for investment in culture and tourism that could result in long-term negative effects on the local economy.</p>	<p>Local Plan policies to support protection and enhancement of the character and appearance of the landscape including historic landscape and other natural assets and resources.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: The higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of congestion and an adverse effect on the character and appearance of landscapes, towns and villages that together may detract from the further development of local distinctiveness and could result in long-term negative impacts on tourism and the visitor economy. Counter to this, higher levels of growth provide the most opportunities for investment that may support tourism and the visitor economy. Mitigation measures: Local Plan policies to support tourism and the visitor economy.</p>
ECONOMIC						

January 2016 Option 1: 250 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	+	+	+	Under this option, the population of the district is projected to increase by 2,882 to 2031. The population growth predicted arises from high levels of in-migration counteracted by natural change resulting from an excess of deaths over births. The increase in spending in the local economy this is likely to generate should result in benefits to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. Although since this option provides for the lowest level of growth, the benefits would be lowest of all options considered.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Residents of new developments will support their local retail, leisure and service provision. Mitigation measures: Local Plan policies to support town and village centres.</p>
17. To strengthen, regenerate and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	-	--	--	This option is likely to lead to the loss of 2,075 jobs over the plan period. This is likely to result in a significant negative effect on business, the local economy and local employment through a lack of encouragement for investment in business and infrastructure.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: A local labour supply will help to deliver economic growth across the plan area. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Will it meet the employment needs of local people? Will it increase economic activity levels? Will it improve physical accessibility to jobs? Will it support higher income levels for local residents? 	-	--	--	It is projected that the number of people aged over 65 in the District will increase by 39% by 2031. The oldest age groups (75-84 and 85+) would see the most substantial increases of 69% and 134% respectively. Under this option, the ageing profile of the population is likely to result in a reduction in the labour force, with the working age population expected to decline by 4,058 by 2031. Taking into account overall economic activity rates of individual age groups, this option	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Whilst there is not a direct causal relationship between job growth and housing needs, the two are nevertheless fundamentally related. Ensuring a sufficient supply of homes within easy access of employment is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>

SA Objective	January 2016 Option 1: 250 new homes each year					Justification; cumulative effects / mitigation measures
	Decision making criteria	Time-frame			Nature of effect; Comments	
		ST	MT	LT		
					indicates that the labour force would decline by 2,075 over the plan period. The option is likely to have a negative effect on the local economy and local employment.	
<p>Summary of significant effects:</p> <p>This option proposes the delivery of 250 new dwellings per year. It will have a direct, long-term positive effect on the SA objective to ensure provision of homes to meet local needs since it represents the lower end of the recommended objectively assessed housing need range. However being the lower end of the range, the option makes the least contribution of all options considered to addressing affordable housing need and the needs of an ageing population. Predicted population growth of around 2,800 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages including helping to safeguard local shops and services. However since this option provides for the lowest level of growth, these benefits would be lowest of all options considered. This option is likely to lead to the loss of 2,075 jobs over the plan period. This is likely to result in a significant negative effect on business, the local economy and local employment through a lack of encouragement for investment in business and infrastructure. As the lowest growth option, requiring the lowest number of site allocations, by comparison with other options considered, this alternative is likely to result in minor positive effects on SA objectives relating to the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets. The low level of growth is also likely to minimise the negative effects on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new dwellings and associated car journeys. The low level of growth is also likely to help enable a focus of new development on small urban extensions and small sites within existing settlement boundaries resulting in minor positive effects on minimising the distance people need to travel to access key services and facilities and increasing the opportunities for use of sustainable forms of transport. However since this option proposes the lowest level of growth, it is also likely to result in the lowest level of investment in community facilities, including Green Infrastructure and other measures that help to reduce health inequalities, leading to minor negative effects on the SA objective relating to supporting health improvements.</p>

January 2016 Housing Requirement Option 2

SA Objective		January 2016 Option 2: 320 new homes each year					Justification; cumulative effects / mitigation measures
		Decision making criteria		Time-frame		Nature of effect; Comments	
		ST	MT	LT			
SOCIAL							
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> Will it make a positive contribution towards community cohesion? Will it improve neighbourhood quality? Will it ensure that there is adequate open space and support Green Infrastructure? Will it minimise light and noise pollution? Will it ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	?	?	?	?	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. There is a balance between loss of countryside as a result of development and provision of new, accessible open space as part of new developments. This requirement may offer fewer opportunities than options 3 and 4 for achieving associated benefits of investment, such as new or enhanced community facilities, but there would be more opportunities than under option 1.	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Community cohesion and local environmental quality are more dependent on design and location of new development than on the overall housing requirement. Mitigation measures: Local Plan policies to ensure that good standards of amenity and open space and Green Infrastructure are delivered as part of new housing development.
	2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> Will it remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? Will it help to minimise the distance people 	?	?	?	?	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this option will deliver more growth than under option 1, but less growth than proposed under options 3 or 4 and thus some opportunity to improve accessibility to key services and facilities. Lower levels of housing growth may enable a focus of growth on small urban extensions and small sites within the existing settlement boundary which is likely to help minimise the distance people need to travel.

January 2016 Option 2: 320 new homes each year

		ST	MT	LT		
3. To improve health and reduce health inequalities.	<p>need to travel to access education, employment, shopping and other key services and facilities.</p> <ul style="list-style-type: none"> Will it improve health or access to health facilities? Will it promote healthy lifestyles? Will it reduce health inequalities? Will it provide opportunities to participate in leisure and recreational activities including access to the countryside? 	?	?/-	?/-	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this option will deliver more growth than under option 1, but less growth than proposed under options 3 or 4 and thus some opportunity to improve health infrastructure, including opportunities for walking and cycling. In the long term there could be a deterioration in health through lack of investment in health-care, leisure and physical recreational facilities. There is a balance between loss of countryside as a result of development and provision of improved opportunities to access the countryside as part of new developments.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Investment in new infrastructure keeps pace with growth. More housing growth offers more opportunities to invest in new health-care facilities, including new or improved opportunities for walking and cycling. Mitigation measures: Local Plan policies to ensure that new developments deliver opportunities to increase take up of sustainable transport choices and improvements to healthy travel networks, including increased opportunities for access to the countryside.</p>
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> Will it reduce actual levels of crime? Will it reduce fear of crime? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the implementation of relevant Local Plan policies.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Good design will help minimise opportunities for crime and reduce the fear of crime. Mitigation measures: Local Plan policies to ensure that new developments are well designed, creating safe places and reducing opportunities for anti-social behaviour.</p>
5. To ensure adequate quality and provision of a range of house types to meet local needs in	<ul style="list-style-type: none"> Will it provide an appropriate mix of housing to enable all needs to be met? 	+	+	++	<p>This option represents the job stabilisation / past trends job growth scenario (1). It is also broadly aligned with the requirement identified in the adopted Core Strategy (300dpa). By meeting the full assessed need for housing in the District, this</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Household projections suggest a considerable growth in the number of older people. The SHMA (2) identified a critical affordable</p>

January 2016 Option 2: 320 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> Will it enable people to meet their needs within their existing communities? Will it ensure that people can afford their housing? 				option will have a direct, long-term, positive effect on the SA objective. The requirement is expected to enable the delivery of a range of housing types and tenures, making a contribution to meeting community needs. While the impact of this option on the SA objective is greater than that under option 1, it is less significant than under options 3 and 4. Whilst this option is likely to contribute to addressing the needs of an ageing population and ensuring that problems of affordability can be addressed, there is a greater risk of adverse outcomes for older people and those who still need to access the housing market than under options 3 and 4.	housing need. Objectively assessed housing need for the District is between 250dpa and 440dpa. This option will meet the objectively assessed housing need of the plan area but fails fully to address affordable housing need, or offer maximum opportunity for investment in meeting the housing needs of older people. Mitigation measures: Wider initiatives of the Council should be supported to help deliver additional affordable homes.
6.4 strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> Will it minimise impacts on existing traffic congestion? Will it support the use of public transport? Will it support safe walking and cycling? Will it protect and improve access to the natural environment and support Green Infrastructure? 	?/+	?/+	?/++	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However since it proposes a lower level of growth than under options 3 and 4, in comparison with other alternatives considered, this requirement could have a long-term positive effect on minimising the impact of new development on existing traffic congestion and could offer support for the use of sustainable forms of transport through delivering new development close to town and village centres. The option could support priorities and provisions identified in the SMDC integrated transport strategy (3), including the proposed Local Transport Packages for Leek, Cheadle and Biddulph.	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Lower levels of growth are likely to generate fewer new car journeys, resulting in less impact on existing congestion. Lower levels of growth will maximise the proportion of new development delivered close to existing centres, facilitating use of sustainable forms of transport. Higher levels of growth will allow most investment in support for sustainable transport. Mitigation measures: Local Plan policies to ensure that developments are brought forward in sustainable locations; support safe walking and cycling and improve access to the natural environment.
ENVIRONMENTAL

		Decision making criteria		Time-frame		
		ST	MT	LT		
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Will it reduce emissions of greenhouse gases particularly CO₂? Will it increase energy efficiency? Will it increase the use of renewable energy? Will it ensure new development is in accessible locations in order to reduce the need for car use and / or encourage sustainable forms of transport? 	-	-	- -	<p>There is some uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of developments and the implementation of Local Plan policies. However since it proposes a lower level of growth than under options 3 and 4, in comparison with other alternatives considered, this requirement is likely to result in a lower overall increase in carbon emissions from the energy consumption and emissions arising from construction and use of new development and associated car journeys. In the long-term there is likely to be a more significant negative impact than under option 1 since this proposes lower growth.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Even if individual properties are built to high environmental performance standards and delivered in sustainable locations, the total increase in number of dwellings and car journeys is likely to increase energy use and associated greenhouse gas emissions. Mitigation measures: Local Plan policies to ensure that high environmental design standards are supported and that developments are brought forward in accessible locations that support the use of sustainable forms of transport.</p>	
	<ul style="list-style-type: none"> Will it minimise emissions of airborne pollutants? Will it maximise the removal of air pollutants (e.g. by trees)? 	?	?/-	?/-	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However since it proposes a lower level of growth than under options 3 and 4, in comparison with other alternatives considered, this requirement is likely to give rise to lower levels of new emissions of airborne pollutants associated with additional car journeys. In the medium and long-term there is likely to be a more significant negative impact than under option 1 and some potential for development to be delivered within 500m of an identified area of poor air quality.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Identified areas of poor air quality include the Ceilarth junction (between the A52 and A520); Bail Haye Street, Leek (a primary link road from Leek A53 to the A523 Macclesfield and Buxton Road) and Broad Street, Leek (a primary link road from Stoke on Trent)⁽⁴⁾. The total increase in number of dwellings and car journeys is likely to increase emission of airborne pollutants, there is a risk that air quality may deteriorate in areas of existing low quality. Mitigation measures: Local Plan policies to ensure that developments include appropriate landscaping to aid removal of air pollutants.</p>	
9. To reduce flood risk, protect and	<ul style="list-style-type: none"> Is new development directed towards areas of least flood risk? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made:</p>

villages and other heritage and archaeological assets along with their settings.	<p>cultural and historic heritage assets (designated and non-designated assets) along with their settings?</p> <ul style="list-style-type: none"> Will it protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 				implementation of Local Plan policies. However since it proposes a lower level of growth than under options 3 and 4, in comparison with other alternatives considered, this requirement is likely to result in protection of cultural and historic heritage assets (designated and non-designated) along with their settings. Positive impacts are not as significant as under option 1.	protection for heritage and archaeological assets along with their settings. However the higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of altering the character of settlements and resulting in deterioration of cultural and historic heritage assets (designated and non-designated assets) or their settings that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement for the character of towns / villages; heritage and archaeological assets along with their settings.
14: To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Will it protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Will it promote development on brownfield land? Will it safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	?	?/+	?/+	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. The Landscape and Settlement Character Assessment Study ⁽⁶⁾ offers guidance to help ensure new development required in the District takes place in locations that are compatible with the unique quality of the Staffordshire Moorlands landscape and in sympathy with the setting of a particular settlement. The HEA ⁽⁷⁾ identified that (within each of the study areas) historic character had been retained and that beyond the present extent of the built areas, a dispersed settlement pattern was still predominant. Since it proposes a lower level of growth than under options 3 and 4, in comparison with other alternatives considered, this requirement is likely to result in the protection of the character and appearance of the landscape, including historic landscapes, and other natural assets and	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for landscape character and natural assets. However the higher the level of site growth, the greater the number of site allocations that will be made, increasing the risk of resulting in an adverse effect on the character of landscapes, including historic landscapes, that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement of the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>

January 2016 Option 2: 320 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	?	?	?	resources. Positive impacts are not as significant as under option 1.	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: The higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of congestion and an adverse effect on the character and appearance of landscapes, towns and villages that together may detract from the further development of local distinctiveness and could result in long-term negative impacts on tourism and the visitor economy. Counter to this, higher levels of growth provide the most opportunities for investment that may support tourism and the visitor economy. Mitigation measures: Local Plan policies to support tourism and the visitor economy.</p>
ECONOMIC						
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	+	+	++	<p>This option assumes that the number of jobs in the District remains at its current (2012) level over the plan period and since there is an ageing population, there would be a need for growth in the labour force, in-migration and ultimately housing. Creating a labour force large enough to support jobs would result in a population increase of 7,901. The increase in spending in the local economy this is likely to generate should result in benefits to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. Although since this option proposes a lower level of growth than under options 3 and 4, in comparison with</p>	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Residents of new developments will support their local retail, leisure and service provision.</p> <p>Mitigation measures: Local Plan policies to support town and village centres.</p>

January 2016 Option 2: 320 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	+	+	+	<p>other alternatives considered, this requirement is likely to result in less significant benefits. Benefits would be more significant than under option 1.</p> <p>This option is likely to lead to zero additional jobs (or a marginal increase from the 10% uplift for affordable housing) and is expected to help stem the decline of working age residents in the District. This is likely to result in a minor positive effect on business, the local economy and local employment.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Helping to stem the decline of working age residents in the District would achieve a more balanced population structure and reduce potential future economic difficulties and the demands of services associated with an ageing population and a more limited supply of labour. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Will it meet the employment needs of local people? Will it increase economic activity levels? Will it improve physical accessibility to jobs? Will it support higher income levels for local residents? 	0	0	+	<p>This option is expected to maintain the current number of jobs in the District. This is likely to result in a long term minor positive impact on the local economy and local employment.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Whilst there is not a direct causal relationship between job growth and housing needs, the two are nevertheless fundamentally related. Ensuring a sufficient supply of homes within easy access of employment is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
<p>Summary of significant effects:</p> <p>This option proposes the delivery of 320 new dwellings per year. Since it is within the recommended objectively assessed housing need range, the housing requirement would have a direct, long-term positive effect on the SA objective to ensure provision of homes to meet local needs. This positive effect is likely to be more significant than under option 1. However being closer to the lower end of the range than options 3 and 4, the option makes less of a contribution than options 3 and 4 to addressing affordable housing need and the needs of an ageing population. Predicted population growth of around 7,900 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages, including help to safeguard local shops and services. Under this option, these benefits are likely to be more significant than under option 1 and less significant than under options 3 and 4. This option is expected to maintain the current number of jobs in the district over the plan period. This is likely to result in a long term minor positive impact on business, the local economy and</p>						

SA Objective	January 2016 Option 2: 320 new homes each year				Justification; cumulative effects / mitigation measures	
	Decision making criteria	Time-frame				Nature of effect; Comments
		ST	MT	LT		
					<p>local employment. This compares favourably with the impacts on this objective likely under option 1, where significant negative impacts on SA objectives for supporting employment and economic growth are likely. However the positive impacts on economic growth under this option are less significant than those likely to result under options 3 and 4. Option 2 requires the second lowest number of site allocations of the four options considered, and consequently this alternative is likely to result in comparatively more positive effects on SA objectives relating to the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets than options 3 and 4. Positive effects on these objectives are slightly less under this option than under option 1. The lower level of growth under option 2 compared with options 3 and 4 is also likely to minimise the negative effects on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new dwellings and associated car journeys. The lower level of growth is also likely more likely under option 2 than options 3 and 4 to enable a focus of new development on small urban extensions and small sites within existing settlement boundaries resulting in minor positive effects on minimising the distance people need to travel to access key services and facilities and increasing the opportunities for use of sustainable forms of transport. Benefits under option 2 in this regard are not likely to be as great as under option 1. However since option 2 proposes the second lowest level of growth of the four options considered, it is likely to result in a lower level of investment than under options 3 and 4 in community facilities, including Green Infrastructure and other measures that help to reduce health inequalities, leading to possible minor negative effects on the SA objective relating to supporting health improvements. These negative effects are not likely to be as significant as under option 1.</p>

		ST	MT	LT		
3. To improve health and reduce health inequalities.	<p>need to travel to access education, employment, shopping and other key services and facilities.</p> <ul style="list-style-type: none"> Will it improve health or access to health facilities? Will it promote healthy lifestyles? Will it reduce health inequalities? Will it provide opportunities to participate in leisure and recreational activities including access to the countryside? 	?	?/+	?/+	increase the distance that some people would need to travel in order to access key services and facilities.	
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> Will it reduce actual levels of crime? Will it reduce fear of crime? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this option will deliver more growth than under options 1 and 2 (but less growth than proposed under option 4) and consequently there is opportunity to improve health infrastructure, including opportunities for walking and cycling. In the long term there could be an indirectly positive effect on health through enabling investment in health-care, leisure and physical recreational facilities. There is a balance between loss of countryside as a result of development and provision of improved opportunities to access the countryside as part of new developments.</p> <p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the implementation of relevant Local Plan policies.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Investment in new infrastructure keeps pace with growth. More housing growth offers more opportunities to invest in new health-care facilities, including new or improved opportunities for walking and cycling. Mitigation measures: Local Plan policies to ensure that new developments deliver opportunities to increase take up of sustainable transport choices and improvements to healthy travel networks, including increased opportunities for access to the countryside.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Good design will help minimise opportunities for crime and reduce the fear of crime. Mitigation measures: Local Plan policies to ensure that new developments are well designed, creating safe places and reducing opportunities for anti-social behaviour.</p>
5. To ensure adequate quality and provision of a range of house types to meet local needs in	<ul style="list-style-type: none"> Will it provide an appropriate mix of housing to enable all needs to be met? 	+	++	++	<p>This option represents the Oxford Economics Job Growth scenario (1). This option represents to upper end of the objectively assessed housing need range. By meeting the full assessed need for housing in the District, this option will have a direct, medium and</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Household projections suggest a considerable growth in the number of older people. The SHMA (2) identified a critical</p>

January 2016 Option 3: 440 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
<p>appropriate locations and including affordable / social /extra care housing.</p>	<ul style="list-style-type: none"> Will it enable people to meet their needs within their existing communities? Will it ensure that people can afford their housing? 			LT	<p>long-term, positive effect on the SA objective. The requirement is expected to enable the delivery of a range of housing types and tenures, making a significant contribution to meeting community needs. While the impact of this option on the SA objective is greater than that under options 1 and 2, it is less significant than under option 4. As the upper end of the OAN range, this option is likely to make a significant contribution to addressing the needs of an ageing population and ensuring that problems of affordability can be addressed.</p>	<p>affordable housing need. Objectively assessed housing need for the District is between 250dpa and 440dpa. This option will meet the objectively assessed housing need of the plan area and address both affordable housing need and the housing needs of older people. Mitigation measures: Wider initiatives of the Council should be supported to help deliver additional affordable homes.</p>
<p>6ND strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.</p>	<ul style="list-style-type: none"> Will it minimise impacts on existing traffic congestion? Will it support the use of public transport? Will it support safe walking and cycling? Will it protect and improve access to the natural environment and support Green Infrastructure? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However since it proposes a higher level of growth than under options 1 and 2, in comparison with other alternatives considered, this requirement could have a long-term negative effect on minimising the impact of new development on existing traffic congestion. Due to the extent of sites that are likely to be allocated under this option, it is less likely than under options 1 and 2 that a high proportion of new development can be delivered close to town and village centres, possibly resulting in a lower use of sustainable forms of transport. The option is likely to support priorities and provisions identified in the SMDC integrated transport strategy ⁽³⁾, including the proposed Local Transport Packages for Leek, Cheadle and Biddulph.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Lower levels of growth are likely to generate fewer new car journeys, resulting in less impact on existing congestion. Lower levels of growth will maximise the proportion of new development delivered close to existing centres, facilitating use of sustainable forms of transport. Higher levels of growth will allow most investment in support for sustainable transport. Mitigation measures: Local Plan policies to ensure that developments are brought forward in sustainable locations; support safe walking and cycling and improve access to the natural environment.</p>

ENVIRONMENTAL

		ST	MT	LT		
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	?	?	?	<p>other natural assets and resources. Negative impacts are not as significant as under option 4.</p> <p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However since it proposes a higher level of growth than under options 1 and 2, in comparison with other alternatives considered (with the exception of the highest growth option 4) this requirement is more likely to result in a long-term, adverse impact on local distinctiveness, and this may lead to a long-term negative impact on tourism and the visitor economy. The significance is less than under option 4. The negative impacts are balanced by the requirement also providing more opportunity than under options 1 and 2 for investment in culture and tourism and this may result in medium term positive effects on the local economy.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: The higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of congestion and an adverse effect on the character and appearance of landscapes, towns and villages that together may detract from the further development of local distinctiveness and could result in long-term negative impacts on tourism and the visitor economy. Counter to this, higher levels of growth provide the most opportunities for investment that may support tourism and the visitor economy. Mitigation measures: Local Plan policies to support tourism and the visitor economy.</p>
ECONOMIC						
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	+	++	++	<p>This option uses Oxford Economics projections of future employment growth in the district. It represents the "unconstrained" potential of the area based on its existing business base, mix of sectors and inherent economic qualities. To support the increase in jobs projected by the model, the total population would need to grow by 13,393 over the plan period. The increase in spending in the local economy this would generate is likely to result in benefits to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. Since this option proposes a higher level of growth than under</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Residents of new developments will support their local retail, leisure and service provision. Mitigation measures: Local Plan policies to support town and village centres.</p>

January 2016 Option 3: 440 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
17. To strengthen, diversify and promote sustainable economic growth	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	+	+	++	<p>options 1 and 2, in comparison with other alternatives considered (with the exception of the highest growth option 4) this requirement is likely to result in significant benefits for the economies of existing centres. Benefits however are likely to be less significant than under option 4.</p> <p>This option is based on modelled job growth of an additional 2,250 jobs over the plan period. This is likely to result in long-term positive effects on business, the local economy and local employment.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Helping to reverse the decline of working age residents in the District would achieve a more balanced population structure and reduce potential future economic difficulties and the demand of services associated with an ageing population and a more limited supply of labour. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Will it meet the employment needs of local people? Will it increase economic activity levels? Will it improve physical accessibility to jobs? Will it support higher income levels for local residents? 	+	+	++	<p>This option is expected to deliver sufficient labour force levels to support the Oxford Economics job growth projections, a labour force increase of 1,549. This is likely to allow for the economic potential of the district to be realised and result in medium and long term positive impacts on the local economy and local employment.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Whilst there is not a direct causal relationship between job growth and housing needs, the two are nevertheless fundamentally related. Ensuring a sufficient supply of homes within easy access of employment is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
<p>Summary of significant effects:</p> <p>This option proposes the delivery of 440 new dwellings per year. Since it is the upper end of the recommended objectively assessed housing need range, the housing requirement would have a direct, long-term positive effect on the SA objective to ensure provision of homes to meet local needs. This positive effect is likely to be more significant than under options 1 and 2. As the upper end of the range, the option is likely to make a significant contribution to addressing affordable housing need and the needs of an ageing population. Predicted population</p>						

SA Objective	January 2016 Option 3: 440 new homes each year				Justification; cumulative effects / mitigation measures
	Decision making criteria	Time-frame		Nature of effect; Comments	
		ST	MT		
					<p>growth of around 13,400 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages, including help to safeguard local shops and services. Under this option, these benefits are likely to be more significant than under options 1 and 2, but less significant than under option 4. This option is based on expected job growth of 2,250 in the district over the plan period. This is likely to allow for the economic potential of the district to be realised and result in medium and long term positive impacts on the local economy and local employment. Option 3 requires the second highest number of site allocations of the four options considered, and consequently this alternative is likely to result in comparatively more negative effects on SA objectives relating to the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets than options 1 and 2. Negative effects on these objectives are slightly less under this option than under option 4. The higher level of growth under option 3 compared with options 1 and 2 is also likely to result in negative effects on objectives relating to climate change contributions and air quality that are likely to be allocated under this option, it is less likely than under options arising from construction and use of new dwellings and associated car journeys. Due to the extent of sites that are likely to be allocated under this option, it is less likely than under options 1 and 2 that a high proportion of new development can be delivered close to town and village centres, resulting in negative effects on minimising the distance people need to travel to access key services and facilities and reducing the opportunities for use of sustainable forms of transport. Negative effects under option 3 in this regard are not likely to be as great as under option 4. However since option 3 proposes the second highest level of growth of the four options considered, it is likely to result in a higher level of investment than under options 1 and 2 in community facilities, including Green Infrastructure and other measures that help to reduce health inequalities, leading to possible minor positive effects on the SA objective relating to supporting health improvements. These positive effects are not likely to be as significant as under option 4.</p>

SA Objective		January 2016 Option 4: 520 new homes each year					Justification; cumulative effects / mitigation measures
		Decision making criteria		Time-frame		Nature of effect; Comments	
		ST	MT	LT			
SOCIAL							
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> Will it make a positive contribution towards community cohesion? Will it improve neighbourhood quality? Will it ensure that there is adequate open space and support Green Infrastructure? Will it minimise light and noise pollution? Will it ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	?	?	+/+	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. There is a balance between loss of countryside as a result of development and provision of new, accessible open space as part of new developments. This requirement is likely to offer the most opportunity for associated benefits such as new or enhanced community facilities to be delivered as a result of new development.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Community cohesion and local environmental quality are more dependent on design and location of new development than on the overall housing requirement. Mitigation measures: Local Plan policies to ensure that good standards of amenity and open space and Green Infrastructure are delivered as part of new housing development.</p>		
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> Will it remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? Will it help to minimise the distance people 	?	?	+/+	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this option will deliver the highest level of housing growth of the four options considered and thus the greatest opportunity to improve accessibility to key services and facilities through delivering more investment into the rural areas. However, this level of new housing development is not likely to enable growth to be focused on small urban extensions and small sites within the existing settlement boundaries, which may result in increasing the distance people need to travel.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Equality of opportunity for all persons will be improved by any measure that has the effect of improving overall accessibility to jobs, services and facilities. Mitigation measures: Local Plan policies to ensure that new developments are brought forward in sustainable locations.</p>		

January 2016 Option 4: 520 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> ● Will it improve health or access to health facilities? ● Will it promote healthy lifestyles? ● Will it reduce health inequalities? ● Will it provide opportunities to participate in leisure and recreational activities including access to the countryside? 	?	?	?/+	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this option will deliver the highest level of housing growth of the four options considered and thus present the most opportunities to improve health infrastructure, including opportunities for walking and cycling. In the long term there could be an improvement in health through increased investment in health-care, leisure and physical recreational facilities. There is a balance between loss of countryside as a result of development and provision of improved opportunities to access the countryside as part of new developments.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Investment in new infrastructure keeps pace with growth. More housing growth offers more opportunities to invest in new health-care facilities, including new or improved opportunities for walking and cycling. Mitigation measures: Local Plan policies to ensure that new developments deliver opportunities to increase take up of sustainable transport choices and improvements to healthy travel networks, including increased opportunities for access to the countryside.</p>
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Will it reduce actual levels of crime? ● Will it reduce fear of crime? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the implementation of relevant Local Plan policies.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Good design will help minimise opportunities for crime and reduce the fear of crime. Mitigation measures: Local Plan policies to ensure that new developments are well designed, creating safe places and reducing opportunities for anti-social behaviour.</p>
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations	<ul style="list-style-type: none"> ● Will it provide an appropriate mix of housing to enable all needs to be met? ● Will it enable people to meet their needs within 	++	++	++	<p>This option exceeds the upper end of the recommended OAN range⁽¹⁾ and by meeting the full, objectively assessed need for housing in the District, it will have a direct, long-term, positive effect on this SA objective. The requirement is expected to enable the delivery of a range of</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Household projections suggest a considerable growth in the number of older people. The SHMA⁽²⁾ identified a critical affordable housing need. Objectively assessed housing</p>

January 2016 Option 4: 520 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
and including affordable / social /extra care housing.	<ul style="list-style-type: none"> their existing communities? Will it ensure that people can afford their housing? 				housing types and tenures, making a significant contribution to meeting community needs. The impact of this option on the SA objective is more significant than under all other options. This option is likely to make the most contribution to addressing the needs of an ageing population and ensuring that problems of affordability can be satisfactorily addressed, improving outcomes for older people and those who still need to access the housing market.	need for the District is between 250dpa and 440dpa. This option will meet the objectively assessed housing need of the plan area and will go further than any other option considered towards addressing affordable housing need and offering opportunities for investment in meeting the housing needs of older people. Mitigation measures: Wider initiatives of the Council should be supported to help deliver additional affordable homes.
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> Will it minimise impacts on existing traffic congestion? Will it support the use of public transport? Will it support safe walking and cycling? Will it protect and improve access to the natural environment and support Green Infrastructure? 	?/-	?/-	?/-	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However this requirement is likely to have a negative effect on minimising the impact of new development on existing traffic congestion. Due to the number of site allocations that would be required, it is likely that some new development would be delivered remote from town and village centres, making the use of sustainable forms of transport less likely. The option could support priorities and provisions identified in the SMDC integrated transport strategy (3), including the proposed Local Transport Packages for Leek, Cheadle and Biddulph.	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Lower levels of growth are likely to generate fewer new car journeys, resulting in less impact on existing congestion. Lower levels of growth will maximise the proportion of new development delivered close to existing centres, facilitating use of sustainable forms of transport. Higher levels of growth will allow most investment in support for walking and cycling initiatives. Mitigation measures: Local Plan policies to ensure that developments are brought forward in sustainable locations; support safe walking and cycling and improve access to the natural environment.
ENVIRONMENTAL						
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Will it reduce emissions of greenhouse gases particularly CO₂? Will it increase energy efficiency? 	--	--	--	There is some uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of developments and the implementation of Local Plan policies. However this option is likely to result in the greatest overall increase in carbon emissions from the energy	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Even if individual properties are built to high environmental performance standards and delivered in sustainable locations, the total increase in number of dwellings and car

January 2016 Option 4: 520 new homes each year

14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Will it protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Will it promote development on brownfield land? Will it safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	?/-	?/-	?/-	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. The Landscape and Settlement Character Assessment Study⁽⁶⁾ offers guidance to help ensure new development required in the District takes place in locations that are compatible with the unique quality of the Staffordshire Moorlands landscape and in sympathy with the setting of a particular settlement. The HEA⁽⁷⁾ identified that (within each of the study areas) historic character had been retained and that beyond the present extent of the built areas, a dispersed settlement pattern was still predominant. With the highest level of housing growth proposed, of all options considered, this option is the least likely to result in the protection of the character and appearance of the landscape, including historic landscapes, and other natural assets and resources.</p>	<p>villages; heritage and archaeological assets along with their settings.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for landscape character and natural assets. However the higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of resulting in an adverse effect on the character of landscapes, including historic landscapes, that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement of the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. With the highest level of housing growth proposed, of all options considered, this option is the most likely to result in a long-term, adverse impact on local distinctiveness, potentially leading to an associated long-term negative impact on tourism and the visitor economy. However, this is balanced by the option also providing the most opportunity for investment</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: The higher the level of growth, the greater the number of site allocations that will be made, increasing the risk of congestion and an adverse effect on the character and appearance of landscapes, towns and villages that together may detract from the further development of local distinctiveness and could result in long-term negative impacts on tourism and the visitor economy. Counter to this, higher levels of growth provide the most</p>

					in culture and tourism that could result in long-term positive effects on the local economy.	opportunities for investment that may support tourism and the visitor economy. Mitigation measures: Local Plan policies to support tourism and the visitor economy.
ECONOMIC						
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	++	++	++	<p>This option uses the scenario based on job creation figures set out in the Council's ELR(8). To underpin a level of job growth based on projecting increasing growth in targeted industrial sectors in line with regional averages there would need to be an increase in the population of 17,202 in the district over the plan period. The increase in spending in the local economy this is likely to generate should result in significant benefits to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. However these benefits should be treated with caution since the 2012-based SNHP update notes that the population growth would primarily be achieved by inward migration as opposed to natural change and this would require a step change in migration above the level that is likely to be achievable in the district.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Residents of new developments will support their local retail, leisure and service provision. Mitigation measures: Local Plan policies to support town and village centres.</p>
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or minimise the loss or 	++	++	++	<p>This option is based on an objective forecast of how the district could perform in economic terms based on the nature of its economy and current expectations of future national and regional economic performance. This projection estimates that there could be a total (net additional) job growth of around 3,878 over the plan period. This is likely to result in a significant positive effect on business, the local economy and local employment. However these benefits should be</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: A local labour supply will help to deliver economic growth across the plan area. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>

January 2016 Option 4: 520 new homes each year						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
18 To encourage and support a high and stable level of employment	<p>displacement of existing businesses?</p> <ul style="list-style-type: none"> ● Will it meet the employment needs of local people? ● Will it increase economic activity levels? ● Will it improve physical accessibility to jobs? ● Will it support higher income levels for local residents? 	++	++	++	<p>treated with caution since the 2012-based SNHP update notes that the population growth required to underpin this job growth would primarily be achieved by inward migration as opposed to natural change and this would require a step change in migration above the level that is likely to be achievable in the district.</p> <p>This option is based on a scenario factoring in increased economic growth in the key sectors in line with the regional average and provides unconstrained employment growth in the district of 3,878 jobs over the course of the plan period. The option is likely to have a significant positive effect on the local economy and local employment. However these benefits should be treated with caution since the 2012-based SNHP update notes that the population growth required to underpin this job growth would primarily be achieved by inward migration as opposed to natural change. Net migration would need to increase from +7,373 to +20,645 - over 13,000 net additional in migrants to achieve the required population level (all other assumptions remaining constant). This is considered to be at odds with what may be reasonably expected to occur in the district.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Whilst there is not a direct causal relationship between job growth and housing needs, the two are nevertheless fundamentally related. Ensuring a sufficient supply of homes within easy access of employment is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
<p>Summary of significant effects:</p> <p>This option proposes the delivery of 520 new dwellings per year. It will have a direct and significant positive effect on the SA objective to ensure provision of homes to meet local needs since it exceeds the upper end of the recommended objectively assessed housing need range. This option should make the greatest contribution of all options considered to addressing affordable housing need and the needs of an ageing population. Predicted population growth of around 17,000 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages, including helping to safeguard local shops and services. This option is based on an objective forecast of how the district could perform in economic terms based on the nature of its economy and current expectations of future national and regional economic performance and provides unconstrained employment growth in the district of 3,878 jobs over the plan period. As a result, the option is likely to have a significant positive effect on the local economy and local employment. However these predicted positive effects should be treated with caution, since the 2012-based SNHP update notes that the population growth required to underpin this job growth would primarily be achieved by inward</p>						

SA Objective	January 2016 Option 4: 520 new homes each year				Justification; cumulative effects / mitigation measures

		ST	MT	LT		
					<p>migration as opposed to natural change. Net migration would need to increase from +7,373 to +20,645 - over 13,000 net additional in migrants to achieve the required population level (all other assumptions remaining constant). This is considered to be at odds with what may be reasonably expected to occur in the district. As the highest growth option, requiring the highest number of site allocations, by comparison with other options considered, this alternative is likely to result in significant negative effects on SA objectives relating to the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets. The high level of housing growth is also likely to result in negative effects on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new dwellings and associated car journeys. This level of new housing development is not likely to enable growth to be focused on small urban extensions and small sites within the existing settlement boundaries, which may result in increasing the distance people need to travel to access key services and facilities and makes the use of sustainable forms of transport less likely. However since this option proposes the highest level of growth, it is likely to result in the highest level of investment in community facilities, including Green Infrastructure and other measures that may help to reduce health inequalities, leading to positive effects on the SA objective relating to supporting health improvements.</p>

16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	+	+	+	Ensuring a sufficient supply of employment land is likely to enable local businesses to expand and a positive contribution being made to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. However as it proposes the lowest allocation of new employment land of all options considered, this option is likely to lead to least overall, long-term support for the vitality and viability of the district's towns and villages.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Employees of expanding and incoming businesses will support their local retail, leisure and service provision. Mitigation measures: Local Plan policies to support town and village centres.</p>
17. To strengthen, regenerate and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	+	+	++	<p>This option would help to meet previously identified needs to revitalise current poor quality stock; help address the imbalance of the portfolio in terms of the size of properties available and meet continued demand for B2 floorspace (particularly from indigenous companies). However as it proposes the lowest allocation of new employment land of all options considered, this option is likely to lead to least overall, long-term support for strengthening, modernising and diversifying the district economy.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: A local supply of employment land will help to deliver economic growth across the plan area. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Will it meet the employment needs of local people? Will it increase economic activity levels? Will it improve physical accessibility to jobs? Will it support higher income levels for local residents? 	+	+	-	<p>The labour supply scenario forecasts workforce jobs to be 35,485 in 2031 (a decline of 1,637 since 2014). As it proposes the lowest allocation of new employment land of all options considered, this option is likely to lead to least overall, long-term support for encouraging a high and stable level of employment.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Ensuring a sufficient supply of employment land is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
Summary of significant effects:						

SA Objective	Option 1: 13 hectares to 2031 (gross)				Justification; cumulative effects / mitigation measures
	Decision making criteria	Time-frame		Nature of effect; Comments	
		ST	MT		
	<p>This option is based on labour supply projections and proposes the delivery of 13ha of employment land to 2031 (gross). This option represents the lower end of the range and as such may provide less opportunities than under all other options to ensure that there is sufficient local supply of employment land in the district for its businesses to expand and grow. However it is still likely to lead to a positive effect on the local economy and local employment through helping to meet previously identified needs to revitalise current poor quality stock; help address the imbalance of the portfolio in terms of the size of properties available and meet continued demand for B2 floorspace (particularly from indigenous companies). However as it proposes the lowest allocation of new employment land of all options considered, this option is likely to lead to least overall, long-term support for strengthening, modernising and diversifying the district economy. The labour supply scenario forecasts workforce jobs to be 35,485 in 2031 (a decline of 1,637 since 2014), of all options considered, this option is likely to lead to least overall, long-term support for encouraging a high and stable level of employment. Ensuring a sufficient supply of employment land is likely to enable local businesses to expand and make a positive contribution to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. However this option makes the least positive contribution to this of all options considered. The option is considered likely to lead to negative effects on meeting housing need since the scenario projects the amount of new jobs needed to match the future working-age population and how much employment space would be needed to accommodate these jobs. The demographic scenarios identified in the emerging SHMA result in a need for 170dpa and 196dpa and housing supply at this level is not considered sufficient to meet objectively assessed need. Further negative effects are likely to result on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new employment space and associated car journeys. Since the option represents the lowest allocation of new employment land there is less opportunity to deliver employment close to where people live, potentially increasing the distance people need to travel to access key services and facilities and making the use of sustainable forms of transport less likely. In addition, this option offers least opportunity to address the high levels of out commuting from the district, leading to negative effects predicted for the objective to reduce the number of journeys made by car. Uncertain effects are recorded on a number of SA objectives including those relating to community cohesion, the protection of biodiversity, the character of towns, villages and heritage assets and their settings; and landscape character and natural assets as the effect will be dependent on the location of employment land allocations and the implementation of Local Plan policies.</p>				

Table 14.1 Assessment Table for Option 1: 13 hectares

1. 2014 Air Quality Progress Report for Staffordshire Moorlands District Council In fulfillment of Part IV of the Environment Act 1995 Local Air Quality Management; SMDC; November 2014

Option 2: 16 hectares

SA Objective		Option 2: 16 hectares 2014 - 2031 (gross)					Justification; cumulative effects / mitigation measures
		Decision making criteria		Time-frame		Nature of effect; Comments	
		ST	MT	LT	SOCIAL		
1. To improve community cohesion and the quality of life for people who live...	<ul style="list-style-type: none"> Will it make a positive contribution towards community cohesion? Will it improve neighbourhood quality? Will it ensure that there is adequate open space and support Green Infrastructure? Will it minimise light and noise pollution? Will it ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	?	?	?	?	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of employment land allocations and the implementation of Local Plan policies.	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Community cohesion and local environmental quality are more dependent on design and location of new development than on the overall employment land requirement. Mitigation measures: Local Plan policies to ensure that good standards of amenity and open space and Green Infrastructure are delivered as part of new employment development.
	2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> Will it remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? Will it help to minimise the distance people need to travel to access education, employment, shopping and... 	?	?	?	?	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of employment land allocations and the implementation of Local Plan policies. This option is lower-mid range and as such may provide more opportunity than option 1, but less opportunity than under options 3 and 4 to allocate employment space across the district and thus help to minimise the distance people may need to travel to access jobs.

Option 2: 16 hectares 2014 - 2031 (gross)						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> other key services and facilities. Will it improve health or access to health facilities? Will it promote healthy lifestyles? Will it reduce health inequalities? Will it provide opportunities to participate in leisure and recreational activities including access to the countryside? 	?	?	?	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of employment land allocations and the implementation of Local Plan policies. However this option is lower-mid range and as such may provide more opportunity than option 1, but less opportunity than under options 3 and 4 to allocate employment space across the district and thus deliver associated opportunities to increase take up of sustainable transport choices and support improvements to healthy travel networks.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: The more hectares of employment land allocated, the more opportunities are provided for increasing healthy travel networks. Mitigation measures: Local Plan policies to ensure that new employment developments deliver opportunities to increase take up of sustainable transport choices and improvements to healthy travel networks.</p>
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> Will it reduce actual levels of crime? Will it reduce fear of crime? 	?	?	?	There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the implementation of relevant Local Plan policies.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Good design will help minimise opportunities for crime and reduce the fear of crime. Mitigation measures: Local Plan policies to ensure that new employment developments are well designed, creating safe places and reducing opportunities for anti-social behaviour.</p>
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> Will it provide an appropriate mix of housing to enable all needs to be met? Will it enable people to meet their needs within their existing communities? Will it ensure that people can afford their housing? 	+	+	++	This option is based on demand-led projections. For this scenario it has been assumed that the district's overall job growth will stabilise over the coming years (ie zero job growth post 2014). To ensure labour supply to meet the job stabilisation forecasts, higher levels of housing delivery will be required. Overall the demand-led projections	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Whilst there may not be a direct causal link between housing and employment land requirements, there is nevertheless a need to ensure that the two dovetail together to avoid any unsustainable outcomes. Mitigation measures: The Local Plan may need to set out a strong policy intervention</p>

Option 2: 16 hectares 2014 - 2031 (gross)						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> Will it minimise impacts on existing traffic congestion? Will it support the use of public transport? Will it support safe walking and cycling? Will it protect and improve access to the natural environment and support Green Infrastructure? 	?/+	?/+	?/++	are considered likely to lead to positive effects on this SA objective, particularly in the long term.	to ensure that the housing implications of the preferred employment land requirement are addressed. Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Reducing out commuting will help to reduce the number of journeys made by car overall. Mitigation measures: Local Plan policies to ensure that employment developments are brought forward in sustainable locations and support safe walking and cycling.
ENVIRONMENTAL						
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Will it reduce emissions of greenhouse gases particularly CO₂? Will it increase energy efficiency? Will it increase the use of renewable energy? Will it ensure new development is in accessible locations in order to reduce the need for car use and / or encourage sustainable forms of transport? 	-	-	--	There is some uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of developments and the implementation of Local Plan policies. However this option is lower-mid range and as such is likely to lead to more impacts than option 1, but less than under options 3 and 4, in terms of overall increase in carbon emissions from the energy consumption and emissions arising from construction and use of new development and associated car journeys.	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Even if employment developments are built to high environmental performance standards and delivered in sustainable locations, the total increase in employment opportunity and related car journeys is likely to increase energy use and associated greenhouse gas emissions. Mitigation measures: Local Plan policies to ensure that high environmental design standards are supported and that developments are brought forward in accessible locations that support the use of sustainable forms of transport.

Option 2: 16 hectares 2014 - 2031 (gross)						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
8. To improve air quality.	<ul style="list-style-type: none"> Will it minimise emissions of airborne pollutants? Will it maximise the removal of air pollutants (e.g. by trees)? 	?	?/-	?/-	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However as this option is lower-mid the employment land requirement range, it is likely to lead to more impacts than option 1, but fewer impacts than under options 3 and 4 in relation to new emissions of airborne pollutants associated with additional car journeys. In the long-term there is potential for development to be delivered within 500m of an identified area of poor air quality.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Identified areas of poor air quality include the Cellarhead junction (between the A52 and A520); Ball Haye Street, Leek (a primary link road from Leek A53 to the A523 Macclesfield and Buxton Road) and Broad Street, Leek (a primary link road from Stoke on Trent)⁽¹⁾. The allocation of new employment land and car journeys from increased local employment opportunities is likely to increase emission of airborne pollutants. There is a risk that air quality may deteriorate in areas of existing low quality. Mitigation measures: Local Plan policies to ensure that developments include appropriate landscaping to aid removal of air pollutants.</p>
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Is new development directed towards areas of least flood risk? Will it reduce risk of flooding eg by encouraging the integration of mitigation measures such as SuDS into new development? Will it protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Will it encourage water efficiency and demand management? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However the SFRA⁽²⁾ confirms that there are few locations in which development would significantly increase fluvial flood risk elsewhere, due to the majority of potentially suitable sites for development being located within Flood Zone 1, with only a few sites partially within Flood Zone 2 or 3. This option is lower-mid range, and thus poses more risk than option 1, but less risk than under options 3 and 4 to increase surface water flood risk within towns or villages and further downstream as a result of increased surface water runoff and reduced infiltration.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Development will be permitted only where schemes meet development plan requirements for management of flood risk. Mitigation measures: Local Plan policies to ensure that new developments are directed towards areas of least flood risk and incorporate SuDS wherever possible.</p>

Option 2: 16 hectares 2014 - 2031 (gross)							
SA Objective	Decision making criteria			Time-frame		Nature of effect; Comments	Justification; cumulative effects / mitigation measures
	ST	MT	LT	ST	LT		
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> Will it protect and promote effective management of the district's sites of ecological and nature conservation importance? Will it help contribute to Staffordshire Biodiversity Action Plan objectives? Will it help deliver networks of biodiversity and green infrastructure? 	?	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for biodiversity and for sites of ecological and nature conservation importance. Mitigation measures: Local Plan policies to ensure conservation and enhancement of biodiversity and that any development proposal is not permitted to have an adverse effect on the integrity of a European site.</p>	
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> Will it safeguard the best and most versatile agricultural land? Will it minimise the loss of greenfield land? Will it reduce land contamination / instability? Will it reduce the amount of derelict land? Will it protect notable geological and geomorphological features? 	?	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However as this option is lower-mid range, it is likely to lead to less opportunity than option 1, but more opportunity than under options 3 and 4, to offer long-term protection for geological resources.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for geological resources including the best and most versatile agricultural land. Mitigation measures: Local Plan policies to ensure protection and enhancement of geologically important sites.</p>	
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> Will it reduce waste generation? Will it maximise the re-use of existing buildings? Will it increase the use of building materials from sustainable sources? 	?	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will encourage the re-use of existing buildings wherever possible. Mitigation measures: Local Plan policies to support waste minimisation.</p>	

Option 2: 16 hectares 2014 - 2031 (gross)						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> Will it ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Will it protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However as this option is lower-mid range, it is likely to lead to less opportunity than option 1, but more opportunity than under options 3 and 4, to offer long-term protection for the character of settlements along with heritage assets and their settings.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for heritage and archaeological assets along with their settings. Mitigation measures: Local Plan policies to support protection and enhancement for the character of towns / villages; heritage and archaeological assets along with their settings.</p>	
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Will it protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Will it promote development on brownfield land? Will it safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. The Landscape and Settlement Character Assessment Study⁽³⁾ offers guidance to help ensure new development required in the District takes place in locations that are compatible with the unique quality of the Staffordshire Moorlands landscape and in sympathy with the setting of a particular settlement. The HEA⁽⁴⁾ identified that (within each of the study areas) historic character had been retained and that beyond the present extent of the built areas, a dispersed settlement pattern was still predominant. However as this option is lower-mid range, it is likely to lead to less opportunity than option 1, but more opportunity than under options 3 and 4, to offer long-term protection for landscape character and other natural assets.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for landscape character and natural assets. Mitigation measures: Local Plan policies to support protection and enhancement of the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>	

Option 2: 16 hectares 2014 - 2031 (gross)						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However as this option is lower-mid range, it is likely to lead to more opportunity than option 1, but less opportunity than under options 3 and 4, to offer long-term support for sustainable tourism.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: A thriving district with a robust cultural and visitor economy will require sufficient supply of local employment land. Mitigation measures: Local Plan policies to support tourism and the visitor economy.</p>
ECONOMIC						
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	+	+	++	<p>Ensuring a sufficient supply of employment land is likely to enable local businesses to expand and a positive contribution being made to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. However as this option is lower-mid range, it is likely to lead to more opportunity than option 1, but less opportunity than under options 3 and 4, to offer long-term support for the vitality and viability of the district's towns and villages.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Employees of expanding and incoming businesses will support their local retail, leisure and service provision. Mitigation measures: Local Plan policies to support town and village centres.</p>
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	+	+	++	<p>This option would help to meet previously identified needs to revitalise current poor quality stock; help address the imbalance of the portfolio in terms of the size of properties available and meet continued demand for B2 floorspace (particularly from indigenous companies). However as this option is lower-mid range, it is likely to lead to more opportunity than option 1, but less opportunity than under options 3 and 4, to offer long-term support for strengthening, modernising and diversifying the district economy.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: A local supply of employment land will help to deliver economic growth across the plan area. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>

Option 2: 16 hectares 2014 - 2031 (gross)						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Will it meet the employment needs of local people? Will it increase economic activity levels? Will it improve physical accessibility to jobs? Will it support higher income levels for local residents? 	+	+	+	For this scenario it has been assumed that the district's overall job growth will stabilise over the coming years, ie zero job growth post 2014. To maintain an overall zero job growth it is assumed that B-class job growth will reduce by 433 to 2031. This option is lower-mid range and is likely to lead to more opportunity than option 1, but less opportunity than under options 3 and 4, to offer long-term support for encouraging a high and stable level of employment.	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Ensuring a sufficient supply of employment land is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
<p>Summary of significant effects:</p> <p>This option is based on a demand-led projection and proposes the delivery of 16ha of employment land 2014 to 2031 (gross). This job stabilisation scenario provides a lower-mid range employment land requirement option and as such may provide more opportunity than option 1, but less opportunity than under options 3 and 4 to ensure that there is sufficient local supply of employment land in the district for its businesses to expand and grow. However the option is likely to lead to a positive effect on the local economy and local employment through helping to meet previously identified needs to revitalise current poor quality stock; help address the imbalance of the portfolio in terms of the size of properties available and meet continued demand for B2 floorspace (particularly from indigenous companies). As lower-mid-range, this option is likely to lead to more opportunity than under option 1, but less opportunity than under options 3 and 4, to offer long-term support for strengthening, modernising and diversifying the district economy. The scenario assumes that the district's overall job growth will stabilise over the coming years, ie zero job growth post 2014 and the option is likely to lead to more opportunity than option 1, but less opportunity than under options 3 and 4, to offer long-term support for encouraging a high and stable level of employment. Ensuring a sufficient supply of employment land is likely to enable local businesses to expand and make a positive contribution to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. The option makes a more positive contribution to this than option 1, but less of a positive contribution than is likely under options 3 and 4. The option is considered likely to lead to positive effects on meeting housing need since to ensure labour supply meets the job stabilisation forecast, higher levels of housing delivery will be required and this is likely to lead to meeting objectively assessed need. Negative effects are likely to result for objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new employment space and associated car journeys. Since the option is lower-mid range, there is more opportunity to deliver employment close to where people live than under option 1 but less opportunity than under options 3 and 4, influencing the distance people need to travel to access key services and facilities and impacting on the likelihood of people being enabled to use sustainable forms of transport. In addition, the option offers some opportunity to address the high levels of out commuting from the district, leading to less significant negative effects than under option 1, but more negative impacts than under options 3 and 4 predicted for the objective to reduce the number of journeys made by car. Uncertain effects are recorded on a number of SA objectives including those relating to community cohesion, the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets as the effect will be dependent on the location of employment land allocations and the implementation of Local Plan policies.</p>

		ST	MT	LT		
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	+	++	++	Ensuring a sufficient supply of employment land is likely to enable local businesses to expand and a positive contribution being made to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. This option is upper-mid range and as such may lead to higher impacts than under options 1 and 2 but less impact than option 4 in relation to overall, long-term support for the vitality and viability of the district's towns and villages.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Employees of expanding and incoming businesses will support their local retail, leisure and service provision. Mitigation measures: Local Plan policies to support town and village centres.</p>
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	+	++	++	This option would help to meet previously identified needs to revitalise current poor quality stock; help address the imbalance of the portfolio in terms of the size of properties available and meet continued demand for B2 floorspace (particularly from indigenous companies). However this option is upper-mid range and as such may lead to higher impacts than under options 1 and 2 but less impact than option 4 in relation to overall, long-term support for strengthening, modernising and diversifying the district economy.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: A local supply of employment land will help to deliver economic growth across the plan area. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Will it meet the employment needs of local people? Will it increase economic activity levels? Will it improve physical accessibility to jobs? Will it support higher income levels for local residents? 	+	+	++	The past trends job growth scenario suggests growth in office FTE jobs (B1a) but declining FTE jobs in industrial (B1c/B2) and warehousing (B8) land use. Consideration of past take up rates suggests limited prospects for growth in the B-class employment sectors. The practical physical constraints and relative inaccessibility of certain areas and the current lack of viability of employment development schemes suggests that realistically an upsurge in large developments in the district is unlikely for the foreseeable future. However this option	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Ensuring a sufficient supply of employment land is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>

Option 3: 25 hectares 2014 to 2031 (gross)						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
					is upper-mid range and as such may lead to higher impacts than under options 1 and 2 but less impact than option 4 in relation to overall, long-term support for encouraging a high and stable level of employment.	
<p>Summary of significant effects:</p> <p>The option is based on demand-led projections informed by past take up rates and past trends, proposing the delivery of 25ha of employment land to 2031 (gross). This option is upper-mid range and as such may provide more opportunities than under options 1 and 2, but less opportunity than option 4 to ensure that there is sufficient local supply of employment land in the district for its businesses to expand and grow. This option is likely to lead to a significantly positive effect on the local economy and local employment through helping to meet previously identified needs to revitalise current poor quality stock; help address the imbalance of the portfolio in terms of the size of properties available and meet continued demand for B2 floorspace (particularly from indigenous companies). As this option is upper-mid range it may provide more opportunities than under options 1 and 2, but less opportunity than option 4 to lead to overall, long-term support for strengthening, modernising and diversifying the district economy. The past trends job growth scenario suggests growth in office FTE jobs (B1a) but declining FTE jobs in industrial (B1c/B2) and warehousing (B8) land use. Consideration of past take up rates suggests limited prospects for growth in the B-class employment sectors. The practical physical constraints and relative inaccessibility of certain areas and the current lack of viability of employment development schemes suggests that realistically an upsurge in large developments in the district is unlikely for the foreseeable future. However as this option is upper-mid range it may provide more opportunities than under options 1 and 2, but less opportunity than option 4 to lead to long-term support for encouraging a high and stable level of employment. Ensuring a sufficient supply of employment land is likely to enable local businesses to expand and make a positive contribution to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. This option makes a more positive contribution to this than options 1 and 2, but less of a contribution than option 4. The option is also considered likely to lead to positive effects on meeting housing need. Past trends in FTE job growth over the period 2014-2031 were considered (2,609) in addition to past take up rates of employment sites in the district, reflecting market demand. To ensure labour supply is sufficient to support the net land requirement produced by this approach (around 3ha - 3.9ha to 2031) high levels of housing delivery will be required, likely to be considered sufficient to meet objectively assessed need. Since the option is upper-mid range, there is most opportunity to deliver employment close to where people live than under options 1 and 2, potentially reducing the distance people need to travel to access key services and facilities and making the use of sustainable forms of transport more likely, however the option offers less of a positive contribution to this than option 4. In addition, this option offers more opportunity than options 1 and 2 to address the high levels of out-commuting from the district, leading to positive effects predicted for the objective to reduce the number of journeys made by car; although the significance is less than under option 4. However negative effects are likely to result on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new employment space and associated car journeys, these effects are likely to be greater than under options 1 and 2, but less significant than under option 4. Uncertain effects are recorded on a number of SA objectives including those relating to community cohesion, the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets as the effect will be dependent on the location of employment land allocations and the implementation of Local Plan policies.</p>						

Table 14.3 Assessment Table for Option 3: 25 hectares

There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However as it proposes the greatest allocation of new employment land of all options considered, this option is likely to lead to least overall, long-term protection for the character of settlements along with heritage assets and their settings.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for heritage and archaeological assets along with their settings. Mitigation measures: Local Plan policies to support protection and enhancement for the character of towns / villages; heritage and archaeological assets along with their settings.</p>

Option 4: 27 hectares 2014 to 2031 (gross)						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Will it protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Will it promote development on brownfield land? Will it safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. The Landscape and Settlement Character Assessment Study⁽³⁾ offers guidance to help ensure new development required in the District takes place in locations that are compatible with the unique quality of the Staffordshire Moorlands landscape and in sympathy with the setting of a particular settlement. The HEA⁽⁴⁾ identified that (within each of the study areas) historic character had been retained and that beyond the present extent of the built areas, a dispersed settlement pattern was still predominant. However as it proposes the greatest allocation of new employment land of all options considered, this option is likely to lead to least overall, long-term protection for landscape character and other natural assets.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for landscape character and natural assets. Mitigation measures: Local Plan policies to support protection and enhancement of the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	?	?	?	<p>There is uncertainty as to the nature of the effect and level of significance as this will be dependent on the location of development and the implementation of Local Plan policies. However as it proposes the greatest allocation of new employment land of all options considered, this option is likely to lead to most overall, long-term support for sustainable tourism.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: A thriving district with a robust cultural and visitor economy will require sufficient supply of local employment land. Mitigation measures: Local Plan policies to support tourism and the visitor economy.</p>
ECONOMIC						

Option 4: 27 hectares 2014 to 2031 (gross)						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	+	++	++	Ensuring a sufficient supply of employment land is likely to enable local businesses to expand and a positive contribution being made to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. As it proposes the greatest allocation of new employment land of all options considered, this option is likely to lead to most overall, long-term support for the vitality and viability of the district's towns and villages.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Employees of expanding and incoming businesses will support their local retail, leisure and service provision. Mitigation measures: Local Plan policies to support town and village centres.</p>
17. To strengthen, improve and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	++	++	++	<p>This option would help to meet previously identified needs to revitalise current poor quality stock; help address the imbalance of the portfolio in terms of the size of properties available and meet continued demand for B2 floorspace (particularly from indigenous companies). However as it proposes the greatest allocation of new employment land of all options considered, this option is likely to lead to most overall, long-term support for strengthening, modernising and diversifying the district economy.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: A local supply of employment land will help to deliver economic growth across the plan area. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Will it meet the employment needs of local people? Will it increase economic activity levels? Will it improve physical accessibility to jobs? Will it support higher income levels for local residents? 	++	++	++	<p>This scenario represents a combination of Oxford Economics and Experian job growth forecasts. Whilst both projections indicate growth over the plan period, the projected scales vary considerably. OE suggest a net growth of +228 jobs 2014 - 2031 whilst Experian projections forecast +1,300 over the same period. A key difference between them relates to the projections for manufacture of machinery and equipment and of transporting equipment with OE projections suggesting a decline of -427 FTE jobs for these two sectors and Experian projections suggesting a growth of 1,676 FTE jobs net. Given the presence of successful companies in the district</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Ensuring a sufficient supply of employment land is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>

Option 4: 27 hectares 2014 to 2031 (gross)					
SA Objective	Decision making criteria			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
	ST	MT	LT		
				<p>specialising in these advanced manufacturing sectors, the NLP report considers there is merit in taking forward a combination of the two job growth scenarios providing a net increase of 435 B-Class FTE jobs 2014-2031 (794 FTEs in total). The report notes that allocation of this level of employment land would require policy intervention and close monitoring to ensure that the associated scale of job growth is realistic. However as it proposes the greatest allocation of new employment land of all options considered, this option has the potential to lead to most overall, long-term support for encouraging a high and stable level of employment.</p>	
<p>Summary of significant effects:</p> <p>The option is based on demand-led projections informed by Oxford Economics and Experian job growth forecasts, proposing the delivery of 27ha of employment land to 2031 (gross). This option represents the upper end of the range and as such may provide more opportunities than under all other options to ensure that there is sufficient local supply of employment land in the district for its businesses to expand and grow. This option is likely to lead to a significantly positive effect on the local economy and local employment through helping to meet previously identified needs to revitalise current poor quality stock; help address the imbalance of the portfolio in terms of the size of properties available and meet continued demand for B-Class floorspace (particularly from indigenous companies). The scenario represents a combination of Oxford Economics (OE) and Experian job growth forecasts. Whilst both projections indicate growth over the plan period, the magnitude of this varies considerably. OE suggest a net growth of +228 jobs 2014 - 2031 whilst Experian projections forecast +1,300 over the same period. A key difference between them relates to the projections for manufacture of machinery and equipment and of transport equipment with OE projections suggesting a decline of -427 FTE jobs for these two sectors and Experian projections suggesting a growth of 1,676 FTE jobs net. Given the presence of successful companies in the district specialising in these advanced manufacturing sectors, the NLP report considers there is merit in taking forward a combination of the two job growth scenarios providing a net increase of 435 B-Class FTE jobs 2014-2031 (794 FTEs in total). The report notes that allocation of this level of employment land would require policy intervention via the emerging Local Plan and close monitoring to ensure that the associated scale of job growth is realistic. However as it proposes the greatest allocation of new employment land of all options considered, this option has the greatest potential to lead to overall, long-term support for strengthening, modernising and diversifying the district economy and encouraging a high and stable level of employment. Ensuring a sufficient supply of employment land is likely to enable local businesses to expand and make a positive contribution to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. This option makes the most positive contribution to this of all options considered. The option is also considered likely to lead to positive effects on meeting housing need. To ensure labour supply is sufficient to support the net land requirement produced by this approach (around 6.5ha 2014 to 2031) significant levels of housing delivery will be required, likely to be considered sufficient to meet objectively assessed need. Since the option represents the greatest allocation of new employment land there is most opportunity to deliver employment close to where people live, potentially reducing the distance people need to travel to access key services and facilities and making the use of sustainable forms of transport more likely. In addition, this option offers most opportunity to address the high levels of out-commuting from the district, leading to positive effects predicted for the objective to reduce the number of journeys made by car. However negative effects are likely to result on objectives relating to climate change contributions and air quality that are</p>					

SA Objective	Option 4: 27 hectares 2014 to 2031 (gross)				Justification; cumulative effects / mitigation measures	
	Decision making criteria	Time-frame				Nature of effect; Comments
		ST	MT	LT		
	<p>associated with energy consumption and emissions arising from construction and use of new employment space and associated car journeys. Uncertain effects are recorded on a number of SA objectives including those relating to community cohesion, the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets as the effect will be dependent on the location of employment land allocations and the implementation of Local Plan policies.</p>

Appraisal of alternative development approaches for Cheadle

15 Appraisal of alternative development approaches for Cheadle

15.1 The matrices below set out the likely significant effects on sustainability of the three alternative options considered by the Council for a development approach for Cheadle. The assessments are based on the methodology proposed and consulted on in the SA Scoping Report and use the SA Framework also developed through consultation as part of the SA Scoping stage.

15.2 As part of the SA appraisal of options, consideration has been given to effects on sustainability over time (in the short, medium and long term) along with any cumulative impacts of implementing each option and possible mitigation measures where appropriate.

15.3 In comparing options with one another, consideration has also been given to the geographical scale of effect, whether any identified effects would be permanent or temporary, reversible or irreversible and the assumptions made, or justification for the assessment recorded.

15.4 Definitions of significance are provided in Section 3 Appraisal Methodology.

15.5 Scoring of options is as set out in Table 8.1.

Option 1: Northern Focus

SA Objective	Option 1 : Northern Focus						Justification; cumulative effects / mitigation measures
	Decision making criteria	Time-frame			Nature of effect; Comments	Geographical scale; Local Plan area; Effects: Permanent; Assumptions made: Community cohesion and local environmental quality are dependent on the design and tenure mix, as well as the location of new development. Mitigation measures: Local Plan policies to ensure that good standards of amenity and open space and Green Infrastructure are delivered as part of new housing development.	
		ST	MT	LT			
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> Will it make a positive contribution towards community cohesion? Will it improve neighbourhood quality? Will it ensure that there is adequate open space and support Green Infrastructure? 	+/-	+/-	+/-	Development of the sites comprising the "northern focus" include sites both within and outside the existing settlement boundary. The option could enable the delivery of a new school, and this is likely to result in positive effects on this objective. However sites CH002A, CH002B, CH006, CH009, CH024 and CH129 are within 100m of Cecilly Brook LNR or Hales Hall Pool LNR; sites CH73B and CH081 are within 200m of Cecilly Brook LNR		
SOCIAL							

Option 1 : Northern Focus						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs services and facilities.	<ul style="list-style-type: none"> Will it minimise light and noise pollution? Will it ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? Will it remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? Will it help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	+	++	++	<p>and Hales Hall Pool LNR respectively and it is considered that this is likely to result in a negative effect arising from the potential for adverse impacts on the District's GI network. Overall the assessment against this objective is considered to be mixed and uncertain as in addition it will be partly dependent on the implementation of Local Plan policies.</p> <p>This option could enable the delivery of new development in good proximity to a wide range of services and facilities. Sites CH009, CH013 and CH015 are within 400m of the town centre; sites CH001, CH002A, CH002B, CH006, CH020, CH024 and CH073B are within 800m of the centre. Sites CH004 and CH129 are within 1,200m of the town centre. Of this option, only sites CH080, CH081 and CH132 are more than 1,200m from the centre. This is likely to result in very positive effects on improving access to jobs, services and facilities which could be expected to contribute to the advancement of equality of opportunity.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Equality of opportunity for all persons will be improved by any measure that has the effect of improving overall accessibility to jobs, services and facilities. Mitigation measures: Local Plan policies to help ensure that the needs of all members of the community can be addressed by helping to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities.</p>
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> Will it improve health or access to health facilities? Will it promote healthy lifestyles? Will it reduce health inequalities? Will it provide opportunities to participate in leisure and recreational 	+	+	++	<p>This option could enable the delivery of new development in proximity to a range of healthcare facilities (eg within 1,200m from a GP surgery and open space). Development on the edge of settlement may offer opportunities to enable improved recreational access to the countryside. Overall this option has been assessed as having a positive effect on this objective in the medium and long term.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Delivering new homes in proximity to existing healthcare services and open space will have a positive effect on health. Mitigation measures: Local Plan policies to ensure that new developments deliver opportunities to increase take up of sustainable transport choices and improvements to healthy travel</p>

Option 1: Northern Focus						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> activities including access to the countryside? Will it reduce actual levels of crime? Will it reduce fear of crime? 	?	?	?	<p>There is uncertainty as to the nature of effect and level of significance as this will be dependent on the implementation of Local Plan policies.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Good design will help minimise opportunities for crime and reduce the fear of crime. Mitigation measures: Local Plan policies to ensure that new developments are well designed, creating safe places and reducing opportunities for anti-social behaviour.</p>	<p>networks, including increased opportunities for access to the countryside.</p>
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> Will it provide an appropriate mix of housing to enable all needs to be met? Will it enable people to meet their needs within their existing communities? Will it ensure that people can afford their housing? 	+	++	++	<p>The sites comprising the northern focus option are a range of sizes, four are large enough to yield over 100 homes each, a further three are each expected to yield 50 or more homes. This could be expected to help enable the delivery of a range of types and tenures, making a significant contribution to meeting the needs of the whole community. This option has been assessed as having a very positive effect on this objective in the medium and long term.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Larger sites offer the most potential to deliver a range of types and tenures of new homes. Mitigation measures: Wider initiatives of the Council should be supported to help deliver additional affordable homes.</p>	
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> Will it minimise impacts on existing traffic congestion? Will it support the use of public transport? Will it support safe walking and cycling? Will it protect and improve access to the natural environment and support Green Infrastructure? 	+	+	++	<p>All the sites comprising this option could deliver development within 500m of a bus stop and this is likely to result in a positive effect from supporting the use of public transport. Ten of the fifteen sites making up the option are within the settlement boundary and all but one (CH004) are within 800m of the town centre, this could be expected to support the delivery of new development in close proximity to a wide range of services and facilities, helping to support the use of walking and cycling. Five sites are outside the existing</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Development delivered close to existing services and facilities will help to reduce the number of journeys made by car. Mitigation measures: Local Plan policies to ensure that developments support safe walking and cycling and improve access to the natural environment.</p>	

Option 1 : Northern Focus					
SA Objective	Decision making criteria	Time-frame			Justification; cumulative effects / mitigation measures
		ST	MT	LT	
					settlement boundary, two within 1,200m of the centre and three sites (CH080, CH081 and CH132) over 1,200m from the centre and its services and facilities. Overall this option has been assessed as having a long term positive effect on this objective.
ENVIRONMENTAL					
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Will it reduce emissions of greenhouse gases particularly CO₂? Will it increase energy efficiency? Will it increase the use of renewable energy? Will it ensure new development is in accessible locations in order to reduce the need for car use and / or encourage sustainable forms of transport? 	-	-	-	<p>Development of the sites comprising this option could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. All the sites comprising this option could deliver development within 500m of a bus stop. Ten of the fifteen sites making up the option are within the settlement boundary and all but one of these are within 800m of the town centre, this could be expected to support the delivery of new development in close proximity to a wide range of services and facilities, helping to support the use of walking and cycling. Five sites are outside the existing settlement boundary, two within 1,200m of the centre and three sites (CH080, CH081 and CH132) over 1,200m from the centre and its services and facilities. Whilst this may help to reduce the need to travel by car, overall this option has been assessed as having a negative effect on this objective.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Even if individual properties are built to high environmental performance standards and delivered in sustainable locations, the total increase in number of dwellings and car journeys is likely to increase energy use and associated greenhouse gas emissions. Mitigation measures: Local Plan policies to ensure that high environmental design standards are supported and that developments are brought forward in accessible locations that support the use of sustainable forms of transport.</p>
8. To improve air quality.	<ul style="list-style-type: none"> Will it minimise emissions of airborne pollutants? Will it maximise the removal of air pollutants (e.g. by trees)? 	-	-	--	<p>This option includes site CH015 which is an edge of town centre site within 100m of a candidate Air Quality Management Area. This</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: The main areas identified in the District as being of poor air quality are the Cellarhead junction (between the A52 and A520); Ball</p>

Option 1: Northern Focus						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Is new development directed towards areas of least flood risk? Will it reduce risk of flooding eg by encouraging the integration of mitigation measures such as SuDS into new development? Will it protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Will it encourage water efficiency and demand management? 	--	--	--	<p>option has been assessed as having a negative effect on this objective.</p> <p>Haye Street, Leek (a primary link road from Leek A53 to the A523 Macclesfield and Buxton Road) and Broad Street, Leek (a primary link road from Stoke on Trent)⁽¹⁾. The increase in number of dwellings and car journeys across Cheadle is likely to increase emission of airborne pollutants. There is a risk that air quality may deteriorate in areas of existing low quality. Mitigation measures: Local Plan policies to ensure that developments include appropriate landscaping to aid removal of air pollutants and provide support for the Cheadle Transport Package⁽²⁾.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Development will be permitted only where schemes meet development plan requirements for management of flood risk. Mitigation measures: Local Plan policies to ensure that new developments are directed towards areas of least flood risk and incorporate SuDS wherever possible.</p>	
					<p>This option includes sites CH002a, CH006, CH020, CH080, CH081 and CH132 all of which are partly located within a flood zone 3 area. It can be considered that this option is likely to result in the development of sites subject to risk from flooding. Development of sites could be expected to lead to an increase in wastewater and reduction of natural drainage. Mitigation measures are possible however. Overall this option has been assessed as having a significant negative effect on this objective.</p>	

Option 1 : Northern Focus						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> Will it protect and promote effective management of the district's sites of ecological and nature conservation importance? Will it help contribute to Staffordshire Biodiversity Action Plan objectives? Will it help deliver networks of biodiversity and green infrastructure? 	--	--	--	This option includes sites CH002a and CH024 which border Cecilly Brook Local Nature Reserve, one of the most important sites for water voles in Staffordshire (water voles are a protected species). In addition sites CH002b, CH006 and CH009 are within 100m of the Reserve. CH129 is within 100m of Hales Hall Pool LNR. Sites CH073b and CH081 are within 200m of one of these Reserves. There is potential for development to result in disturbance of habitats, either singly or in combination with other sites. A number of these sites have the potential to support protected species ⁽³⁾ due to the proximity of the mosaic of stream habitats and presence of species rich hedgerows. Overall this option has been assessed as having a significant negative effect on this objective.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for biodiversity and for sites of ecological and nature conservation importance, but the cumulative impact of the development of a number of sites which border, or are in close proximity to, a Local Nature Reserve pose risks of disturbance that could not be reasonably mitigated. Mitigation measures: Local Plan policies to ensure impacts on biodiversity are minimised and proposals provide net gains in biodiversity where possible.</p>
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> Will it safeguard the best and most versatile agricultural land? Will it minimise the loss of greenfield land? Will it reduce land contamination / instability? Will it reduce the amount of derelict land? Will it protect notable geological and geomorphological features? 	--	--	--	This option includes sites CH001, CH002A, CH002B, CH004, CH006, CH009, CH024, CH073B, CH080, CH081 CH129 and CH132 that are assessed as Agricultural Land Classification (ALC) Grade 3 land, so the proposal could result in the loss of best and most versatile agricultural land.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Further work is required to establish the quality of agricultural land at site specific level and the proportion of Grade 3 land classified as Grade 3a. Mitigation measures: Local Plan policies to ensure protection and enhancement of geologically important sites.</p>
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> Will it reduce waste generation? 	?	?	?	There is uncertainty as to the nature of effect and level of significance as this will be	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will encourage the</p>

Option 1 : Northern Focus						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> Will it maximise the re-use of existing buildings? Will it increase the use of building materials from sustainable sources? Will it ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Will it protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	-	-	--	<p>dependent on the implementation of Local Plan policies.</p> <p>This option includes sites CH009, CH013, CH015, CH024, CH080 and CH081 that are assessed as sites within 400m of one or more grade II listed assets. Site CH015 is within 400m of 24 grade II listed assets; CH013 is within 400m of 38 grade II listed assets and one grade 1 listed asset. Dependent on proposal specific information, there is scope that this option could lead to the deterioration of the setting of designated heritage assets. This option has been assessed as having an overall negative effect on this objective although the exact nature of effects are uncertain.</p>	<p>re-use of existing buildings wherever possible. Mitigation measures: Local Plan policies to support waste minimisation.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for heritage and archaeological assets along with their settings. However options that include a number of sites in close proximity to designated heritage assets increases the risk of development resulting in harm or loss to the significance of a designated heritage asset that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement for the character of towns / villages; heritage and archaeological assets along with their settings.</p>
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Will it protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Will it promote development on brownfield land? Will it safeguard protected sites and provide opportunities for the enhancement of the natural environment 	-	-	--	<p>This option includes a number of greenfield sites outside the current development boundary: CH073B, CH080, CH081, CH129 and CH132 that are assessed as having potential for effects on landscape character if developed, although the exact nature of effects are uncertain as they are dependent on proposal specific information. It should be noted that none of the above sites fall within the area identified as "important landscape setting to settlement"⁽⁴⁾. Overall this option has been assessed as having a negative effect on this objective.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for landscape character and natural assets. However options that include a number of sites that contribute to the current landscape setting to the settlement increases the risk of resulting in an adverse effect on the character of landscapes, including historic landscapes, that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement of the character</p>

Option 1 : Northern Focus						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> identified in the NCA profiles? Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	+	+	+	<p>This option envisages locating the focus of growth to the north of the town. Delivery of a new school in the north of Cheadle could be expected to ease some pressure on peak time journeys to school that are currently concentrated in the south west of the town and this may help support opportunities for investment in culture and tourism that could result in positive effects on the local economy.</p>	<p>and appearance of the landscape including historic landscape and other natural assets and resources.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Proposals that have a positive effect on the town centre are likely to result in support for tourism and the visitor economy. Mitigation measures: Local Plan policies to support tourism and the visitor economy.</p>
ECONOMIC						
16. To safeguard the viability and vitality of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	+	+	+	<p>The majority of sites comprising this option are located within 1,200m of the town centre and the wide range of key services and facilities that can be found here. Sites CH080, CH081 and CH132 are more than 1,200m away from the town centre which could result in existing services and facilities being inaccessible for new residents of developments here. Overall the proposal has been assessed as having a minor positive effect on this objective.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Development of residential sites with good access to the town centre is likely to result in a positive effect on the vitality and viability of Cheadle as residents of new developments could be expected to support their local retail, leisure and service provision. Mitigation measures: Local Plan policies to support town and village centres.</p>
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or 	0	0	0	<p>Developments of the sites comprising this option could encourage investment in people and infrastructure through developer contributions although this would be limited. This proposal has been assessed as having a neutral effect on this objective.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: A local labour supply will help to deliver economic growth across the plan area. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>

Option 1 : Northern Focus						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> ● minimise the loss or displacement of existing businesses? ● Will it meet the employment needs of local people? ● Will it increase economic activity levels? ● Will it improve physical accessibility to jobs? ● Will it support higher income levels for local residents? 	+	+	+	<p>The proposal could facilitate residential development within 30 minutes travel time of existing employment provision. This proposal has been assessed as having a positive effect on this objective.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Ensuring a sufficient supply of homes within easy access of employment is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
<p>Summary of significant effects:</p> <p>Sites comprising the option "northern focus" are located both within and outside the existing settlement boundary. The sites are a range of sizes, four are large enough to yield over 100 homes each, a further three are each expected to yield 50 or more homes. This could be expected to help enable the delivery of a range of types and tenures, making a significant contribution to meeting the housing needs of the whole community. A further positive effect of the option is the opportunity it provides for the delivery of a new school. A new school in the north of Cheadle could be expected to ease some pressure on peak time journeys to the existing schools that are concentrated in the south west of the town. This is likely to result in positive effects on the town centre and may help support opportunities for investment in culture and tourism with positive effects on the local economy. All the sites comprising this option could deliver development within 500m of a bus stop and all but three sites are within 1,200m of the town centre with its wide range of key services and facilities. This is likely to result in positive effects on: improving access to jobs, services and facilities (which in turn is likely to advance equality of opportunity), improving access to health care, helping to safeguard the vitality and viability of the town centre, providing support for walking and cycling and reducing the need to travel by car. However sites CH080, CH081 and CH132 are more than 1,200m away from the town centre, so this option could result in existing services and facilities being inaccessible for residents of some new developments. There is potential for the cumulative impacts of development to result in the disturbance of habitats (and their connectedness) and of protected species that could not be reasonably mitigated. The option includes sites CH002a and CH024 which border Cecily Brook Local Nature Reserve (LNR), one of the most important sites for water voles (a protected species) in Staffordshire. In addition, sites CH002b, CH006 and CH009 are within 100m of the Reserve. CH129 is within 100m of Hales Hall Pool LNR. Sites CH073b and CH081 are within 200m of one of these Local Nature Reserves. This option is also likely to result in the development of sites subject to risk from flooding, the option includes sites CH002a, CH006, CH020, CH080, CH081 and CH132 all of which are partly located within a flood zone 3 area. Dependent on proposal specific information, there is scope that the cumulative impact of development under this option may result in harm or loss to the significance of designated heritage assets. Sites CH009, CH013, CH015, CH024, CH080 and CH081 are within 400m of one or more grade II listed assets. Site CH015 is within 400m of 24 grade II listed assets; CH013 is within 400m of 38 grade II listed assets and one grade 1 listed asset. Likely negative effects on landscape character have also been identified, sites</p>

SOCIAL						
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> Will it make a positive contribution towards community cohesion? Will it improve neighbourhood quality? Will it ensure that there is adequate open space and support Green Infrastructure? 	+/-	+/-	+/-	Development of the sites comprising the "south-western focus" include sites both within and outside the existing settlement boundary. The option could help support the delivery of a southern link road between A522 Tean Road and A521 Delphouse Road, which could result in positive effects on this objective. However sites CH002A, CH002B, CH006, CH009 and CH024 are within 100m of Cecily Brook LNR and it is considered that this is likely to result in a negative effect arising from the potential for	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Community cohesion and local environmental quality are dependent on the location of new development. Mitigation measures: Local Plan policies to ensure that good standards of amenity and open space and Green Infrastructure are delivered as part of new housing development.</p>

Option 2: South-Western Focus						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
	<ul style="list-style-type: none"> Will it minimise light and noise pollution? Will it ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 				<p>adverse impacts on the District's GI network. Overall the assessment against this objective is considered to be mixed and uncertain as in addition it will be partly dependent on the implementation of Local Plan policies.</p>	
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> Will it remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? Will it help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	+	++	++	<p>This option could enable the delivery of new development in good proximity to a wide range of services and facilities. Sites CH009, CH013 and CH015 are within 400m of the town centre; sites CH001, CH002A, CH002B, CH006, CH020 and CH024 are within 800m of the centre. Sites CH004 and sites CH085A, B, C and D are within 1,200m of the town centre. Of this option, only sites CH093 and CH128 are more than 1,200m from the centre. This is likely to result in very positive effects on improving access to jobs, services and facilities which could be expected to contribute to the advancement of equality of opportunity.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Equality of opportunity for all persons will be improved by any measure that has the effect of improving overall accessibility to jobs, services and facilities. Mitigation measures: Local Plan policies to help ensure that the needs of all members of the community can be addressed by helping to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities.</p>
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> Will it improve health or access to health facilities? Will it promote healthy lifestyles? Will it reduce health inequalities? Will it provide opportunities to participate in leisure and 	+	+	++	<p>This option could enable the delivery of new development in proximity to a range of healthcare facilities (eg within 1,200m from a GP surgery and open space). Development on the edge of settlement may offer opportunities to enable improved recreational access to the countryside. Overall this option has been assessed as having a positive effect on this objective in the medium and long term.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Delivering new homes in proximity to existing healthcare services and open space will have a positive effect on health. Mitigation measures: Local Plan policies to ensure that new developments deliver opportunities to increase take up of sustainable transport choices and improvements to healthy travel networks,</p>

Option 2: South-Western Focus						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
	recreational activities including access to the countryside?					including increased opportunities for access to the countryside.
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> Will it reduce actual levels of crime? Will it reduce fear of crime? 	?	?	?	There is uncertainty as to the nature of effect and level of significance as this will be dependent on the implementation of Local Plan policies.	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Good design will help minimise opportunities for crime and reduce the fear of crime. Mitigation measures: Local Plan policies to ensure that new developments are well designed, creating safe places and reducing opportunities for anti-social behaviour.</p>
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations including affordable / social / extra care housing.	<ul style="list-style-type: none"> Will it provide an appropriate mix of housing to enable all needs to be met? Will it enable people to meet their needs within their existing communities? Will it ensure that people can afford their housing? 	+	++	++	The sites comprising the south-western focus option are a range of sizes, five are large enough to yield over 100 homes each, a further two are expected to yield 50 or more homes. This could be expected to help enable the delivery of a range of types and tenures, making a significant contribution to meeting the needs of the whole community. This option has been assessed as having a very positive effect on this objective in the medium and long term.	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Larger sites offer the most potential to deliver a range of types and tenures of new homes. Mitigation measures: Wider initiatives of the Council should be supported to help deliver additional affordable homes.</p>
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> Will it minimise impacts on existing traffic congestion? Will it support the use of public transport? Will it support safe walking and cycling? Will it protect and improve access to the natural environment and 	+	+	++	All the sites comprising this option could deliver development within 500m of a bus stop and this is likely to result in a positive effect from supporting the use of public transport. Ten of the sixteen sites making up the option are within the settlement boundary (and all but one within 800m from the town centre) which could be expected to support the delivery of new development in close proximity to a wide range of services and facilities, helping to support the use of walking and cycling. Six sites are outside the existing	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Development delivered close to existing services and facilities will help to reduce the number of journeys made by car.</p> <p>Mitigation measures: Local Plan policies to ensure that developments support safe walking and cycling and improve access to the natural environment.</p>

Option 2: South-Western Focus						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
	support Green Infrastructure?				settlement boundary, four of these within 1,200m of services and facilities and two - CH093 and CH128 - more than 1,200m. Overall this option has been assessed as having a long term positive effect on this objective.	
ENVIRONMENTAL						
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Will it reduce emissions of greenhouse gases particularly CO₂? ● Will it increase energy efficiency? ● Will it increase the use of renewable energy? ● Will it ensure new development is in accessible locations in order to reduce the need for car use and / or encourage sustainable forms of transport? 	-	-	-	Development of the sites comprising this option could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. All of the sites comprising this option could deliver development within 500m of a bus stop. Ten of the sixteen sites making up the option are within the settlement boundary (and all but one of these within 800m from the town centre) which could be expected to support the delivery of new development in close proximity to a wide range of services and facilities, helping to support the use of walking and cycling. Six sites are outside the existing settlement boundary, four of these within 1,200m of services and facilities and two - CH093 and CH128 - more than 1,200m. Whilst this may help reduce the need to travel by car, overall this option has been assessed as having a negative effect on this objective.	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Even if individual properties are built to high environmental performance standards and delivered in sustainable locations, the total increase in number of dwellings and car journeys is likely to increase energy use and associated greenhouse gas emissions.</p> <p>Mitigation measures: Local Plan policies to ensure that high environmental design standards are supported and that developments are brought forward in accessible locations that support the use of sustainable forms of transport.</p>
8. To improve air quality.	<ul style="list-style-type: none"> ● Will it minimise emissions of airborne pollutants? ● Will it maximise the removal of air pollutants (e.g. by trees)? 	-	-	--	This option includes site CH015 which is an edge of town centre site within 100m of a candidate Air Quality Management Area. This option has been assessed as having a negative effect on this objective.	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: The main areas identified in the District as being of poor air quality are the Cellarhead junction (between the A52 and A520); Ball Haye Street, Leek (a primary link road from Leek A53 to the A523 Macclesfield and Buxton Road) and Broad Street, Leek (a</p>

		ST	MT	LT		
<p>the plan's policies and proposals on European Sites and SSSIs</p> <p>11. To safeguard the best and most versatile agricultural land, improve soil and land resources, and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> ecological and nature conservation importance? Will it help contribute to Staffordshire Biodiversity Action Plan objectives? Will it help deliver networks of biodiversity and green infrastructure? 	--	--	--	<p>protected species). In addition sites CH002b, CH006 and CH009 are within 100m of the Reserve. There is potential for development to result in disturbance of habitats, either singly or in combination with other sites. A number of these sites have the potential to support protected species (S) due to the proximity of the mosaic of stream habitats and presence of species rich hedgerows. Overall this option has been assessed as having a significant negative effect on this objective.</p>	<p>ecological and nature conservation importance, but the cumulative impact of the development of a number of sites which border, or are in close proximity to, a Local Nature Reserve pose risks of disturbance that could not be reasonably mitigated. Mitigation measures: Local Plan policies to ensure impacts on biodiversity are minimised and proposals provide net gains in biodiversity where possible.</p>
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> Will it safeguard the best and most versatile agricultural land? Will it minimise the loss of greenfield land? Will it reduce land contamination / instability? Will it reduce the amount of derelict land? Will it protect notable geological and geomorphological features? Will it reduce waste generation? Will it maximise the re-use of existing buildings? Will it increase the use of building materials from sustainable sources? 	--	--	--	<p>This option includes sites CH001, CH002A, CH002B, CH004, CH006, CH009, CH024, CH085A, B, C and D, CH093 and CH128 that are assessed as Agricultural Land Classification (ALC) Grade 3 land, so the proposal could result in the loss of best and most versatile agricultural land.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Further work is required to establish the quality of agricultural land at site specific level and the proportion of Grade 3 land classified as Grade 3a. Mitigation measures: Local Plan policies to ensure protection and enhancement of geologically important sites.</p>
		?	?	?	<p>There is uncertainty as to the nature of effect and level of significance as this will be dependent on the implementation of Local Plan policies.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will encourage the re-use of existing buildings wherever possible. Mitigation measures: Local Plan policies to support waste minimisation.</p>

Option 2: South-Western Focus						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> Will it ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Will it protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	-	-	--	<p>This option includes sites CH009, CH013, CH015, CH024, CH085C, CH085D, CH093 and CH128 that are assessed as sites within 400m of one or more grade II listed assets. Site CH015 is within 400m of 24 grade II listed assets; CH013 is within 400m of 38 grade II listed assets and one grade 1 listed asset. Dependent on proposal specific information, this option could lead to the deterioration of the setting of designated heritage assets. This option has been assessed as having an overall negative effect on this objective although the exact nature of effects are uncertain.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for heritage and archaeological assets along with their settings. However options that include a number of sites in close proximity to designated heritage assets increases the risk that the cumulative impact of development may result in harm or loss to the significance of designated heritage assets that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement for the character of towns / villages; heritage and archaeological assets along with their settings.</p>
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Will it protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Will it promote development on brownfield land? Will it safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	-	-	--	<p>This option includes a number of greenfield sites outside the current development boundary: CH085A, B, C and D, CH093 and CH128 that are assessed as having potential for effects on landscape character if developed, although the exact nature of effects are uncertain as they are dependent on proposal specific information. It should be noted that none of the above sites fall within the area identified as "important landscape setting to settlement"⁽⁴⁾. The overall impact of development of site CH093 on the purposes of the Green Belt was assessed as moderate and of site CH128 as limited⁽⁵⁾; with the report recommendation that the Council consider both sites for Green Belt release under exceptional circumstances. Overall this option has been assessed as having a negative effect on this objective.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for landscape character and natural assets. However options that include a number of sites that contribute to the current landscape setting to the settlement increases the risk of resulting in an adverse effect on the character of landscapes, including historic landscapes, that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement of the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>

Option 2: South-Western Focus						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	0	0	-	<p>This option envisages locating the focus of growth to the south west of the town, close to existing school sites. If this resulted in more journeys to school being made on foot, this could lead to positive effects. However if additional journeys to key sites such as schools are principally made by car, focusing development around the existing cluster of schools may exacerbate congestion at peak times due to the concentration of journeys to school into one area of the town. This may have a neutral or long-term negative effect on the further development of sustainable tourism and local distinctiveness.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Proposals that have a positive effect on the town centre are likely to result in support for tourism and the visitor economy. Mitigation measures: Local Plan policies to support tourism and the visitor economy.</p>
ECONOMIC						
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	+	+	+	<p>The County Council assessment of travelling conditions in Cheadle notes that there are significant delays along Leek Road and Froghall Road (in bound) that can be related to capacity constraints at the Leek Road / High Street / Tape Street junction between 8am and 9am. However, over the majority of Cheadle's road network journey times are considered to be reliable and delays relatively modest. A further transport study was commissioned to assess impacts of additional housing and employment land provision on the highway network. Whilst the study predicted that the impacts of planned new development would still enable the overall network in Cheadle to generally remain operating within capacity, a number of further actions were recommended. In addition the County Council has proposed a study to consider the potential impacts on town centre traffic levels of a southern link road between A522 Tean Road</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Development of residential sites with good access to the town centre is likely to result in a positive effect on the vitality and viability of Cheadle as residents of new developments could be expected to support their local retail, leisure and service provision. Mitigation measures: Local Plan policies to support town and village centres.</p>

Option 2: South-Western Focus					
SA Objective	Decision making criteria	Time-frame			Justification; cumulative effects / mitigation measures
		ST	MT	LT	
Nature of effect; Comments					
					and A521 Delphouse Road. Sites comprising this option may provide the opportunity to deliver a southern link road. The majority of sites comprising this option are located within 1,200m of the town centre and the wide range of key services and facilities that can be found here. Only sites CH093 and CH128 are more than 1,200m away from the town centre which could result in existing services and facilities being inaccessible for new residents of developments here. Overall the proposal has been assessed as having a minor positive effect on this objective.
17. To strengthen, improve and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	0	0	0	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: A local labour supply will help to deliver economic growth across the plan area. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Will it meet the employment needs of local people? Will it increase economic activity levels? Will it improve physical accessibility to jobs? Will it support higher income levels for local residents? 	+	+	+	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Ensuring a sufficient supply of homes within easy access of employment is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.</p>

SA Objective		Option 2: South-Western Focus				Justification; cumulative effects / mitigation measures
		Decision making criteria		Time-frame		
		ST	MT	LT		
<p>Summary of significant effects:</p> <p>Sites comprising the option "south western focus" are located both within and outside the existing settlement boundary. The sites are a range of sizes, five are large enough to yield over 100 homes each, a further two are expected to yield 50 or more homes. This could be expected to help enable the delivery of a range of types and tenures, making a significant contribution to meeting the housing needs of the whole community. A further positive effect of the option is the opportunity it provides for the delivery of a southern link road to help relieve traffic congestion in the town centre. However focusing new development where there is an existing cluster of schools may exacerbate congestion at peak times from concentrating journeys to school into one area of town. Unless the new journeys to school are mainly made on foot, this may result in negative effects on the town centre. All of the sites comprising this option could deliver development within 500m of a bus stop and all but two are within 1,200m of the town centre with its wide range of key services and facilities. This is likely to result in positive effects on improving access to jobs, services and facilities (which in turn is likely to advance equality of opportunity), improving access to health care, helping to safeguard the vitality and viability of the town centre, providing support for walking and cycling and reducing the need to travel by car. However sites CH093 and CH128 are more than 1,200m away from the town centre, so this option could result in existing services and facilities being inaccessible for residents of some new developments. There is potential for the cumulative impacts of development to result in the disturbance of habitats (and their connectedness) and of protected species that could not be reasonably mitigated. The option includes sites CH002A and CH024 which border Chilly Brook Local Nature Reserve, one of the most important sites for water voles (a protected species) in Staffordshire. In addition, sites CH002B, CH006 and CH009 are within 100m of the Reserve. This option is also likely to result in the development of sites subject to risk from flooding, the option includes sites CH002A, CH006, CH020 and CH085B all of which are partly located within a flood zone 3 area; and sites CH085A and CH093 that are partly within flood zone 2. Dependent on proposal specific information, the cumulative impact of development under this option may result in harm or loss to the significance of designated heritage assets. Sites CH009, CH013, CH015, CH024, CH085C, CH085D, CH093 and CH128 are within 400m of one or more grade II listed assets. Site CH015 is within 400m of 24 grade II listed assets; CH013 is within 400m of 38 grade II listed assets and one grade 1 listed asset. Likely negative effects on landscape character have also been identified; sites CH085A, B, C and D, CH093 and CH128 are all greenfield sites outside the current development boundary, however none are within the area identified as "important landscape setting to settlement". Sites CH093 and CH128 have been recommended as appropriate to consider for release from the Green Belt under exceptional circumstances. The option has also been assessed as likely to result in minor negative effects in relation to loss of best and most versatile agricultural land, air quality and greenhouse gas emissions and energy consumption arising from construction and occupation of new developments.</p>

Option 3: Scattered approach

SA Objective		Option 3: Scattered approach					Justification; cumulative effects / mitigation measures	
		Decision making criteria		Time-frame				Nature of effect; Comments
		ST	MT	LT	SOCIAL			
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> Will it make a positive contribution towards community cohesion? Will it improve neighbourhood quality? Will it ensure that there is adequate open space and support Green Infrastructure? Will it minimise light and noise pollution? Will it ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	+/-	+/-	+/-	Development of the sites comprising the "scattered approach" include sites both within and outside the existing settlement boundary. Through the inclusion of site CH132, the option could enable the delivery of a new school and this is likely to result in positive effects on this objective. However sites CH002A, CH002B, CH006, CH009 and CH024 are within 100m of Cecilly Brook LNR and it is considered that this is likely to result in a negative effect arising from the potential for adverse impacts on the District's GI network. Overall the assessment against this objective is considered to be mixed and uncertain as in addition it will be partly dependent on the implementation of Local Plan policies.			<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Community cohesion and local environmental quality are dependent on the design and tenure mix, as well as the location of new development.</p> <p>Mitigation measures: Local Plan policies to ensure that good standards of amenity and open space and Green Infrastructure are delivered as part of new housing development.</p>
	2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> Will it remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? Will it help to minimise the distance people need to travel to access education, employment, shopping and 	+	++	++	This option could enable the delivery of new development in good proximity to a wide range of services and facilities. Sites CH009, CH013 and CH015 are within 400m of the town centre; sites CH001, CH002A, CH002B, CH006, CH020 and CH024 are within 800m of the centre. Sites CH004, CH075A, B and C, 85A and 85D are within 1,200m of the town centre. Of this option, only sites CH081, CH128 and CH132 are more than 1,200m from the centre. This is likely to result in very positive effects on improving access to jobs, services and facilities which could be		

Option 3: Scattered approach						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
	other key services and facilities.				expected to contribute to the advancement of equality of opportunity.	
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> Will it improve health or access to health facilities? Will it promote healthy lifestyles? Will it reduce health inequalities? Will it provide opportunities to participate in leisure and recreational activities including access to the countryside? 	+	+	++	This option could enable the delivery of new development in proximity to a range of healthcare facilities (eg within 1,200m from a GP surgery and open space). Development on the edge of settlement may offer opportunities to enable improved recreational access to the countryside. Overall this option has been assessed as having a positive effect on this objective in the medium and long term.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Delivering new homes in proximity to existing healthcare services and open space will have a positive effect on health. Mitigation measures: Local Plan policies to ensure that new developments deliver opportunities to increase take up of sustainable transport choices and improvements to healthy travel networks, including increased opportunities for access to the countryside.</p>
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> Will it reduce actual levels of crime? Will it reduce fear of crime? 	?	?	?	There is uncertainty as to the nature of effect and level of significance as this will be dependent on the implementation of Local Plan policies.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Good design will help minimise opportunities for crime and reduce the fear of crime. Mitigation measures: Local Plan policies to ensure that new developments are well designed, creating safe places and reducing opportunities for anti-social behaviour.</p>
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> Will it provide an appropriate mix of housing to enable all needs to be met? Will it enable people to meet their needs within their existing communities? Will it ensure that people can afford their housing? 	+	++	++	The sites comprising the scattered approach option are a range of sizes, three are large enough to yield over 100 homes each, a further six are each expected to yield 50 or more homes. This could be expected to help enable the delivery of a range of types and tenures, making a significant contribution to meeting the needs of the whole community. This option has been assessed as having a very positive effect on this objective in the medium and long term.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Larger sites offer the most potential to deliver a range of types and tenures of new homes. Mitigation measures: Wider initiatives of the Council should be supported to help deliver additional affordable homes.</p>

Option 3: Scattered approach						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> Will it minimise impacts on existing traffic congestion? Will it support the use of public transport? Will it support safe walking and cycling? Will it protect and improve access to the natural environment and support Green Infrastructure? 	+	+	++	<p>All the sites comprising this option could deliver development within 500m of a bus stop and this is likely to result in a positive effect from supporting the use of public transport. Ten of the eighteen sites making up the option are within the settlement boundary (and all but one within 800m from the town centre) which could be expected to support the delivery of new development in close proximity to a wide range of services and facilities, helping to support the use of walking and cycling. Eight sites are outside the existing settlement boundary, five of these are within 1,200m of services and facilities and three - CH081, CH128 and CH132 - more than 1,200m. Overall this option has been assessed as having a long term positive effect on this objective.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Development delivered close to existing services and facilities will help to reduce the number of journeys made by car. Mitigation measures: Local Plan policies to ensure that developments support safe walking and cycling and improve access to the natural environment.</p>
ENVIRONMENTAL						
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Will it reduce emissions of greenhouse gases particularly CO₂? Will it increase energy efficiency? Will it increase the use of renewable energy? Will it ensure new development is in accessible locations in order to reduce the need for car use and / or encourage sustainable forms of transport? 	-	-	-	<p>Development of the sites comprising this option could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. All of the sites comprising this option could deliver development within 500m of a bus stop. Ten of the eighteen sites making up the option are within the settlement boundary (and all but one of these within 800m from the town centre) which could be expected to support the delivery of new development in close proximity to a wide range of services and facilities, helping to support the use of walking and cycling. Eight sites are outside the existing settlement boundary, five of these within 1,200m of</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Even if individual properties are built to high environmental performance standards and delivered in sustainable locations, the total increase in number of dwellings and car journeys is likely to increase energy use and associated greenhouse gas emissions. Mitigation measures: Local Plan policies to ensure that high environmental design standards are supported and that developments are brought forward in accessible locations that support the use of sustainable forms of transport.</p>

Option 3: Scattered approach						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
8. To improve air quality.	<ul style="list-style-type: none"> Will it minimise emissions of airborne pollutants? Will it maximise the removal of air pollutants (e.g. by trees)? 	-	-	--	<p>services and facilities and three - CH081, CH128 and CH132 - more than 1,200m. Whilst this may help reduce the need to travel by car, overall this option has been assessed as having a negative effect on this objective.</p> <p>This option includes site CH015 which is an edge of town centre site within 100m of a candidate Air Quality Management Area. This option has been assessed as having a negative effect on this objective.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: The main areas identified in the District as being of poor air quality are the Cellarhead junction (between the A52 and A520); Ball Haye Street, Leek (a primary link road from Leek A53 to the A523 Macclesfield and Buxton Road) and Broad Street, Leek (a primary link road from Stoke on Trent)⁽¹⁾. The increase in number of dwellings and car journeys across Cheadle is likely to increase emission of airborne pollutants. There is a risk that air quality may deteriorate in areas of existing low quality. Mitigation measures: Local Plan policies to ensure that developments include appropriate landscaping to aid removal of air pollutants and provide support for the Cheadle Transport Package⁽²⁾.</p>
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Is new development directed towards areas of least flood risk? Will it reduce risk of flooding eg by encouraging the integration of mitigation measures such as SuDS into new development? Will it protect, maintain and improve the quality of water 	-	--	--	<p>This option includes sites CH002A, CH006, CH020, CH081 and CH132 all of which are partly located within a flood zone 3 area. Also site CH085A is partly within flood zone 2. It can be considered that this option is likely to result in the development of sites subject to risk from flooding. Development of sites could be expected to lead to an increase in wastewater and reduction of natural drainage. Mitigation measures are possible however. Overall this option has been</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Development will be permitted only where schemes meet development plan requirements for management of flood risk. Mitigation measures: Local Plan policies to ensure that new developments are directed towards areas of least flood risk and incorporate SuDS wherever possible.</p>

Option 3: Scattered approach						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
	<ul style="list-style-type: none"> resources and help contribute to the objectives of the Water Framework Directive? Will it encourage water efficiency and demand management? 				assessed as having a significant negative effect on this objective.	
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> Will it protect and promote effective management of the district's sites of ecological and nature conservation importance? Will it help contribute to Staffordshire Biodiversity Action Plan objectives? Will it help deliver networks of biodiversity and green infrastructure? 	-	--	--	This option includes sites CH002A and CH024 which border Cecilly Brook Local Nature Reserve, one of the most important sites for water voles in Staffordshire (water voles are a protected species). In addition sites CH002B, CH006 and CH009 are within 100m of the Reserve and sites CH075A, B and C are within 200-400m. There is potential for development to result in disturbance of habitats, either singly or in combination with other sites. A number of these sites have the potential to support protected species ³ due to the proximity of the mosaic of stream habitats and presence of species rich hedgerows. Overall this option has been assessed as having a significant negative effect on this objective.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for biodiversity and for sites of ecological and nature conservation importance, but the cumulative impact of the development of a number of sites which border, or are in close proximity to, a Local Nature Reserve pose risks of disturbance that could not be reasonably mitigated. Mitigation measures: Local Plan policies to ensure impacts on biodiversity are minimised and proposals provide net gains in biodiversity where possible.</p>
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> Will it safeguard the best and most versatile agricultural land? Will it minimise the loss of greenfield land? Will it reduce land contamination / instability? 	--	--	--	This option includes sites CH001, CH002A, CH002B, CH004, CH006, CH009, CH024, CH075A, B and C, CH081, CH085A and D, CH128 and CH132 that are assessed as Agricultural Land Classification (ALC) Grade 3 land, so the proposal could result in the loss of best and most versatile agricultural land.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Further work is required to establish the quality of agricultural land at site specific level and the proportion of Grade 3 land classified as Grade 3a. Mitigation measures: Local Plan policies to ensure protection and enhancement of geologically important sites.</p>

Option 3: Scattered approach						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
	<ul style="list-style-type: none"> Will it reduce the amount of derelict land? Will it protect notable geological and geomorphological features? 					
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> Will it reduce waste generation? Will it maximise the re-use of existing buildings? Will it increase the use of building materials from sustainable sources? 	?	?	?	There is uncertainty as to the nature of effect and level of significance as this will be dependent on the implementation of Local Plan policies.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will encourage the re-use of existing buildings wherever possible.</p> <p>Mitigation measures: Local Plan policies to support waste minimisation.</p>
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> Will it ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Will it protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	-	-	--	<p>This option includes sites CH009, CH013, CH015, CH024, CH075C, CH081, CH085D and CH128 that are assessed as sites within 400m of one or more grade II listed assets. Site CH015 is within 400m of 24 grade II listed assets; CH013 is within 400m of 38 grade II listed assets and one grade 1 listed asset. Dependent on proposal specific information, this option could lead to the deterioration of the setting of designated heritage assets. This option has been assessed as having an overall negative effect on this objective although the exact nature of effects are uncertain.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for heritage and archaeological assets along with their settings. However options that include a number of sites in close proximity to designated heritage assets increases the risk that the cumulative impact of development may result in harm or loss to the significance of designated heritage assets that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement for the character of towns / villages; heritage and archaeological assets along with their settings.</p>
14. To protect and enhance the character and appearance of the landscape including historic landscape and	<ul style="list-style-type: none"> Will it protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? 	--	--	--	<p>This option includes a number of greenfield sites outside the current development boundary: CH075A, B and C, CH081, CH085A and D, CH128 and CH132 that are</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for</p>

Option 3: Scattered approach						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
<p>other natural assets and resources.</p>	<ul style="list-style-type: none"> Will it promote development on brownfield land? Will it safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 				<p>assessed as having potential for effects on landscape character if developed, although the exact nature of effects are uncertain as they are dependent on proposal specific information. Sites CH075A, B and C lie in the area identified as "important landscape setting to settlement"⁽⁴⁾; and are described as small scale landscape with strong vegetation to field boundaries. The overall impact of development of site CH128 on the purposes of the Green Belt was assessed as limited⁽⁵⁾, with the report recommendation that the Council consider this site for Green Belt release under exceptional circumstances. Overall this option has been assessed as having a negative effect on this objective.</p>	<p>landscape character and natural assets. However options that include a number of sites that contribute to the current landscape setting to the settlement increases the risk of resulting in an adverse effect on the character of landscapes, including historic landscapes, that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement of the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>
<p>To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.</p>	<ul style="list-style-type: none"> Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	0	0	-	<p>This option envisages small scale extensions to the periphery of the town. The option includes site CH132 which may help to deliver a new school to the north and this could be expected to ease some pressure on peak time journeys to school currently concentrated in the south west of the town. A positive impact on the town centre may help to support opportunities for investment in the visitor economy. However the option also includes sites comprising a small scale extension to the south west that may contribute to "school-run" congestion in this part of the town. Unlike the south-west focus option, the scattered approach may not deliver the necessary sites to enable a potential link road. Overall this option has been assessed as having a neutral or long-term negative effect on the further</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Proposals that have a positive effect on the town centre are likely to result in support for tourism and the visitor economy. Mitigation measures: Local Plan policies to support tourism and the visitor economy.</p>

Option 3: Scattered approach						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
					development of sustainable tourism and local distinctiveness.	
ECONOMIC						
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	+	+	+	<p>The County Council assessment of travelling conditions in Cheadle notes that there are significant delays along Leek Road and Froghall Road (in bound) that can be related to capacity constraints at the Leek Road / High Street / Tape Street junction between 8am and 9am⁽⁶⁾. However, over the majority of Cheadle's road network journey times are considered to be reliable and delays relatively modest. A further transport study⁽⁷⁾ was commissioned to assess impacts of additional housing and employment land provision on the highway network. Whilst the study predicted that the impacts of planned new development would still enable the overall network in Cheadle to generally remain operating within capacity, a number of further actions were recommended. In addition the County Council has proposed a study to consider the potential impacts on town centre traffic levels of a southern link road between A522 Tean Road and A521 Delphouse Road. Although the option includes sites CH128 and CH085A and D, this may be insufficient development in this part of the town to provide opportunity to deliver a southern link road. The majority of sites comprising this option are located within 1,200m of the town centre and the wide range of key services and facilities that can be found here. Only sites CH081, CH128 and CH132 are more than 1,200m away from the town centre which</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Development of residential sites with good access to the town centre is likely to result in a positive effect on the vitality and viability of Cheadle as residents of new developments could be expected to support their local retail, leisure and service provision. Mitigation measures: Local Plan policies to support town and village centres.</p>

Option 3: Scattered approach						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
					could result in existing services and facilities being inaccessible for new residents of developments here. Overall the proposal has been assessed as having a minor positive effect on this objective.	
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	0	0	0	Developments of the sites comprising this option could encourage investment in people and infrastructure through developer contributions. This proposal has been assessed as having a neutral effect on this objective.	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: A local labour supply will help to deliver economic growth across the plan area. Mitigation measures: Local Plan policies to support sustainable economic growth.
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Will it meet the employment needs of local people? Will it increase economic activity levels? Will it improve physical accessibility to jobs? Will it support higher income levels for local residents? 	+	+	+	The proposal could facilitate residential development within 30 minutes travel time of existing employment provision. This proposal has been assessed as having a positive effect on this objective.	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Ensuring a sufficient supply of homes within easy access of employment is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.
Summary of significant effects:						
<p>Sites comprising the option "scattered approach" are located both within and outside the existing settlement boundary. The sites are a range of sizes, three are large enough to yield over 100 homes each, a further six are each expected to yield 50 or more homes. This could be expected to help enable the delivery of a range of types and tenures, making a significant contribution to meeting the housing needs of the whole community. A further positive effect of the option is the opportunity it provides for the delivery of a new school. A new school in the north of Cheadle could be expected to ease some pressure on peak time journeys to the existing schools that are concentrated in the south west of the town. However this option also includes some sites comprising a small scale extension to the south west, where there is an existing cluster of schools and this may contribute to "school run congestion" issues in this part of the town. All of the sites comprising this option could deliver development within 500m of a bus stop and all but three are within 1,200m of the town centre with its wide range of key services and facilities. This is likely to result in positive effects on: improving access to jobs, services and facilities (which in turn is likely to advance equality of opportunity), improving access to health care, helping to safeguard the vitality and viability of the town centre, providing support for walking and cycling and reducing the need to travel by car. However sites</p>						

SA Objective	Option 3: Scattered approach				Justification; cumulative effects / mitigation measures
	Decision making criteria	Time-frame		Nature of effect; Comments	
		ST	MT		
	<p>CH081, CH128 and CH132 are more than 1,200m away from the town centre, so this option could result in existing services and facilities being inaccessible for residents of some new developments. There is potential for the cumulative impacts of development to result in the disturbance of habitats (and their connectedness) and of protected species that could not be reasonably mitigated. The option includes sites CH002A and CH024 which border Cecilly Brook Local Nature Reserve, one of the most important sites for water voles (a protected species) in Staffordshire. In addition, sites CH002B, CH006 and CH009 are within 100m of the Reserve. This option is also likely to result in the development of sites subject to risk from flooding, the option includes sites CH002A, CH006, CH020, CH81 and CH132 all of which are partly located within a flood zone 3 area; and site CH085A that is partly within flood zone 2. Dependent on proposal specific information, the cumulative impact of development under this option may result in harm or loss to the significance of designated heritage assets. Sites CH009, CH013, CH015, CH024, CH075C, CH081, CH085D, and CH128 are within 400m of one or more grade II listed assets. Site CH015 is within 400m of 24 grade II listed assets; CH013 is within 400m of 38 grade II listed assets and one grade 1 listed asset. Likely negative effects on landscape character have also been identified; sites CH075A, B and C, CH081, CH085A and D, CH128 and CH132 are all greenfield sites outside the current development boundary; sites CH075A, B and C lie in the area identified as "important landscape setting to settlement, where impacts may be most significant. Site CH128 has been recommended as appropriate to consider for release from the Green Belt under exceptional circumstances. The option has also been assessed as likely to result in minor negative effects in relation to loss of best and most versatile agricultural land, air quality and greenhouse gas emissions and energy consumption arising from construction and occupation of new developments.</p>

		ST	MT	LT		
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> ● race, religion / belief, sex and sexual orientation? Will it help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. ● Will it improve health or access to health facilities? ● Will it promote healthy lifestyles? ● Will it reduce health inequalities? ● Will it provide opportunities to participate in leisure and recreational activities including access to the countryside? 	0	+	++	<p>centre. This is likely to result in very positive effects on improving access to jobs, services and facilities which could be expected to contribute to the advancement of equality of opportunity.</p> <p>This option could enable the delivery of new development in proximity to a range of healthcare facilities (eg within 1,200m from a GP surgery and open space). Development on the edge of settlement may offer opportunities to enable improved recreational access to the countryside. Overall this option has been assessed as having a positive effect on this objective in the medium and long term.</p>	<p>minimise the distance people need to travel to access education, employment, shopping and other key services and facilities.</p> <p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Delivering new homes in proximity to existing healthcare services and open space will have a positive effect on health. Mitigation measures: Local Plan policies to ensure that new developments deliver opportunities to increase take up of sustainable transport choices and improvements to healthy travel networks, including increased opportunities for access to the countryside.</p>
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Will it reduce actual levels of crime? ● Will it reduce fear of crime? 	?	?	?	<p>There is uncertainty as to the nature of effect and level of significance as this will be dependent on the implementation of Local Plan policies.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Good design will help minimise opportunities for crime and reduce the fear of crime. Mitigation measures: Local Plan policies to ensure that new developments are well designed, creating safe places and reducing opportunities for anti-social behaviour.</p>
5. To ensure adequate quality and provision of a range	<ul style="list-style-type: none"> ● Will it provide an appropriate mix of 	+	++	++	<p>The sites comprising the north-south cluster option are a range of sizes, three are large enough to yield over 100 homes each, a further</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Larger sites offer the most potential to</p>

Option 4: North-South clusters with small sites scattered through town						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> housing to enable all needs to be met? Will it enable people to meet their needs within their existing communities? Will it ensure that people can afford their housing? 				four are expected to yield 50 or more homes. This could be expected to help enable the delivery of a range of types and tenures, making a significant contribution to meeting the needs of the whole community. This option has been assessed as having a very positive effect on this objective in the medium and long term.	deliver a range of types and tenures of new homes. Mitigation measures: Wider initiatives of the Council should be supported to help deliver additional affordable homes.
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car	<ul style="list-style-type: none"> Will it minimise impacts on existing traffic congestion? Will it support the use of public transport? Will it support safe walking and cycling? Will it protect and improve access to the natural environment and support Green Infrastructure? 	+	+	++	All the sites comprising this option could deliver development within 500m of a bus stop and this is likely to result in a positive effect from supporting the use of public transport. Eight of the fourteen sites making up the option are within the settlement boundary (and all but two within 800m from the town centre) which could be expected to support the delivery of new development in close proximity to a wide range of services and facilities, helping to support the use of walking and cycling. Overall this option has been assessed as having a long term positive effect on this objective.	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Development delivered close to existing services and facilities will help to reduce the number of journeys made by car. Mitigation measures: Local Plan policies to ensure that developments support safe walking and cycling and improve access to the natural environment.
ENVIRONMENTAL						
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Will it reduce emissions of greenhouse gases particularly CO₂? Will it increase energy efficiency? Will it increase the use of renewable energy? Will it ensure new development is in accessible locations in order to reduce the need 	-	-	-	Development of the sites comprising this option could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. All of the sites comprising this option could deliver development within 500m of a bus stop. Eight of the fourteen sites making up the option are within the settlement boundary (and all but two of these within 800m from the town centre) which could be expected to support the delivery of new development in close proximity to a wide range	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Even if individual properties are built to high environmental performance standards and delivered in sustainable locations, the total increase in number of dwellings and car journeys is likely to increase energy use and associated greenhouse gas emissions. Mitigation measures: Local Plan policies to ensure that high environmental design standards are supported and that

Option 4: North-South clusters with small sites scattered through town						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
	for car use and / or encourage sustainable forms of transport?				of services and facilities, helping to support the use of walking and cycling. Whilst this may help reduce the need to travel by car, overall this option has been assessed as having a negative effect on this objective.	developments are brought forward in accessible locations that support the use of sustainable forms of transport.
8. To improve air quality.	<ul style="list-style-type: none"> Will it minimise emissions of airborne pollutants? Will it maximise the removal of air pollutants (e.g. by trees)? 	-	-	--	This option includes site CH015 which is an edge of town centre site within 100m of a candidate Air Quality Management Area. This option has been assessed as having a negative effect on this objective.	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: The main areas identified in the District as being of poor air quality are the Cellarhead junction (between the A52 and A520); Ball Haye Street, Leek (a primary link road from Leek A53 to the A523 Macclesfield and Buxton Road) and Broad Street, Leek (a primary link road from Stoke on Trent)⁽¹⁾. The increase in number of dwellings and car journeys across Cheadle is likely to increase emission of airborne pollutants. There is a risk that air quality may deteriorate in areas of existing low quality.</p> <p>Mitigation measures: Local Plan policies to ensure that developments include appropriate landscaping to aid removal of air pollutants and provide support for the Cheadle Transport Package⁽²⁾.</p>
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Is new development directed towards areas of least flood risk? Will it reduce risk of flooding eg by encouraging the integration of mitigation measures such as SuDS into new development? 	-/?	-/?	-/?	This option includes sites CH002A, CH020, CH085A and CH85B where small areas of flood zones 2 or 3 at the edge of each site have been excluded from the boundary of each proposed allocation (these areas could however form part of open space / surface water mitigation). However it can be considered that this option is likely to result in the development of sites subject to some remaining risk from flooding. Development of sites could be expected to lead	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Development will be permitted only where schemes meet development plan requirements for management of flood risk.</p> <p>Mitigation measures: Local Plan policies to ensure that new developments are directed towards areas of least flood risk and incorporate SuDS wherever possible.</p>

Option 4: North-South clusters with small sites scattered through town						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
	<ul style="list-style-type: none"> Will it protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Will it encourage water efficiency and demand management? 			LT	to an increase in wastewater and reduction of natural drainage. Mitigation measures are possible however. Overall this option has been assessed as having an uncertain effect on this objective.	
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> Will it protect and promote effective management of the district's sites of ecological and nature conservation importance? Will it help contribute to Staffordshire Biodiversity Action Plan objectives? Will it help deliver networks of biodiversity and green infrastructure? 	-	--	--	This option includes sites CH002A and CH024 which border Cecilly Brook Local Nature Reserve, one of the most important sites for water voles in Staffordshire (water voles are a protected species). In addition site CH002B is within 100m of the Reserve. There is potential for development to result in disturbance of habitats, either singly or in combination with other sites. Sites have the potential to support protected species due to the proximity of the mosaic of stream habitats and presence of species rich hedgerows. Overall this option has been assessed as having a significant negative effect on this objective.	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for biodiversity and for sites of ecological and nature conservation importance, but the cumulative impact of the development of a number of sites which border, or are in close proximity to, a Local Nature Reserve pose risks of disturbance that could not be reasonably mitigated.</p> <p>Mitigation measures: Local Plan policies to ensure impacts on biodiversity are minimised and proposals provide net gains in biodiversity where possible.</p>
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> Will it safeguard the best and most versatile agricultural land? Will it minimise the loss of greenfield land? Will it reduce land contamination / instability? 	-	-	-	This option includes sites CH001, CH013, CH020, CH0132, CH085A, B, C and D and CH128 indicated on the predictive map of Best and Most Versatile (BMV) agricultural land as partly or wholly within an area where 20 - 60% of the land is likely to be BMV; whilst parts of sites CH085A, B and C are indicated on the predictive map of Best and Most Versatile agricultural land as within an area where over 60% of the land is likely to	<p>Geographical scale: Local Plan area;</p> <p>Effects: Permanent; Assumptions made: Local Plan policies to ensure protection and enhancement of geologically important sites.</p>

Option 4: North-South clusters with small sites scattered through town						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
	<ul style="list-style-type: none"> Will it reduce the amount of derelict land? Will it protect notable geological and geomorphological features? 				be BMV and overall this is likely to have a negative effect.	
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> Will it reduce waste generation? Will it maximise the re-use of existing buildings? Will it increase the use of building materials from sustainable sources? 	?	?	?	There is uncertainty as to the nature of effect and level of significance as this will be dependent on the implementation of Local Plan policies.	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will encourage the re-use of existing buildings wherever possible. Mitigation measures: Local Plan policies to support waste minimisation.</p>
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> Will it ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Will it protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	-/?	-/?	-/?	<p>This option includes sites CH013, CH015, CH024, CH085C, CH085D and CH128 that are assessed as sites within 400m of one or more grade II listed assets. Site CH015 is within 400m of 24 grade II listed assets; CH013 is within 400m of 38 grade II listed assets and one grade 1 listed asset. Dependent on proposal specific information, this option could lead to the deterioration of the setting of designated heritage assets. This option has been assessed as having an overall negative effect on this objective although the exact nature of effects are uncertain.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for heritage and archaeological assets along with their settings. However options that include a number of sites in close proximity to designated heritage assets increases the risk that the cumulative impact of development may result in harm or loss to the significance of designated heritage assets that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement for the character of towns / villages; heritage and archaeological assets along with their settings.</p>

Option 4: North-South clusters with small sites scattered through town						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
14. To protect and enhance the character and appearance of the landscape including historic landscape assets and other natural resources.	<ul style="list-style-type: none"> Will it protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Will it promote development on brownfield land? Will it safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	-/?	-/?	-/?	<p>This option includes a number of greenfield sites outside the current development boundary: CH085A, B, C and D, CH128 and CH132 that are assessed as having potential for effects on landscape character if developed, although the exact nature of effects are uncertain as they are dependent on proposal specific information. It should be noted that none of the above sites fall within the area identified as "important landscape setting to settlement"⁽⁴⁾. The overall impact of development of site CH128 on the purposes of the Green Belt was assessed as limited⁽⁵⁾; with the report recommendation that the Council consider the site for Green Belt release under exceptional circumstances. Overall this option has been assessed as having an uncertain negative effect on this objective.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Policies in the Local Plan will provide protection for landscape character and natural assets. However options that include a number of sites that contribute to the current landscape setting to the settlement increases the risk of resulting in an adverse effect on the character of landscapes, including historic landscapes, that could not be reasonably mitigated. Mitigation measures: Local Plan policies to support protection and enhancement of the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	+	+	++	<p>This option envisages locating two main clusters of development, one to the north and one to the south of the town, providing some development close to existing school sites in the south and delivering land for the provision of a new school in the north. This may result in more journeys to school being made on foot, which is likely to lead to positive effects. Avoiding focusing development around the existing cluster of schools and enabling delivery of a new school to the north, may avoid exacerbating congestion at peak times due to the existing concentration of journeys to school into one area of the town. This may help support opportunities for investment in culture and tourism that are likely to lead to long-term positive effects on sustainable tourism and local distinctiveness.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Proposals that have a positive effect on the town centre are likely to result in support for tourism and the visitor economy. Mitigation measures: Local Plan policies to support tourism and the visitor economy.</p>
ECONOMIC						

Option 4: North-South clusters with small sites scattered through town						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Will it safeguard shops and services in existing centres? Will it safeguard and improve the retail, leisure and service provision? 	+	+	+	<p>The County Council assessment of travelling conditions in Cheadle notes that there are significant delays along Leek Road and Froghall Road (in bound) that can be related to capacity constraints at the Leek Road / High Street / Tape Street junction between 8am and 9am⁽⁶⁾. However, over the majority of Cheadle's road network journey times are considered to be reliable and delays relatively modest. A further transport study⁽⁷⁾ was commissioned to assess impacts of additional housing and employment land provision on the highway network. Whilst the study predicted that the impacts of planned new development would still enable the overall network in Cheadle to generally remain operating within capacity, a number of further actions were recommended. This study was updated in April 2017⁽⁸⁾ and provides a package of mitigation measures. In addition the County Council has proposed a study to consider the potential impacts on town centre traffic levels of a southern link road between A522 Tean Road and A521 Delphouse Road. Sites comprising this option may provide the opportunity to deliver a southern link road. The majority of sites comprising this option are located within 1,200m of the town centre and the wide range of key services and facilities that can be found here. Only sites CH132 and CH128 are more than 1,200m away from the town centre which could result in existing services and facilities being inaccessible for new residents of developments here. Overall the proposal has been assessed as having a minor positive effect on this objective.</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Development of residential sites with good access to the town centre is likely to result in a positive effect on the vitality and viability of Cheadle as residents of new developments could be expected to support their local retail, leisure and service provision. Mitigation measures: Local Plan policies to support town and village centres. Developers of strategic sites should be required to liaise with SCC and bus operators through the planning process to ensure developments have good access to public transport provision.</p>
17. To strengthen, modernise and	<ul style="list-style-type: none"> Will it provide a balanced portfolio of employment 	0	0	0	<p>Developments of the sites comprising this option could encourage investment in people and</p>	<p>Geographical scale: Local Plan area; Effects: Permanent; Assumptions made:</p>

Option 4: North-South clusters with small sites scattered through town						
SA Objective	Decision making criteria	Time-frame			Nature of effect; Comments	Justification; cumulative effects / mitigation measures
		ST	MT	LT		
diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> land in sustainable locations? Will it provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 			LT	infrastructure through developer contributions. This proposal has been assessed as having a neutral effect on this objective.	A local labour supply will help to deliver economic growth across the plan area. Mitigation measures: Local Plan policies to support sustainable economic growth.
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Will it meet the employment needs of local people? Will it increase economic activity levels? Will it improve physical accessibility to jobs? Will it support higher income levels for local residents? 	+	+	+	The proposal could facilitate residential development within 30 minutes travel time of existing employment provision. This proposal has been assessed as having a positive effect on this objective.	Geographical scale: Local Plan area; Effects: Permanent; Assumptions made: Ensuring a sufficient supply of homes within easy access of employment is a central element of an efficiently functioning economy. Mitigation measures: Local Plan policies to support sustainable economic growth.

Summary of significant effects:

Sites comprising the option "north-south clusters with small scattered sites" are located both within and outside the existing settlement boundary. The sites are a range of sizes, three are large enough to yield over 100 homes each, a further four are expected to yield 50 or more homes. This could be expected to help enable the delivery of a range of types and tenures, making a significant contribution to meeting the housing needs of the whole community. A further positive effect of the option is the opportunity it provides for the delivery of a southern link road to help relieve traffic congestion in the town centre. In addition, enabling a cluster of new development to the south where there are existing school sites whilst also providing land for a new school to the north of the town is expected to spread journeys to school and help to avoid exacerbating congestion at peak times and this is likely to lead to positive effects on the town centre. All of the sites comprising this option could deliver development within 500m of a bus stop and all but two are within 800m of the town centre with its wide range of key services and facilities. This is likely to result in further positive effects on: improving access to jobs, services and facilities (which in turn is likely to advance equality of opportunity), improving access to health care, helping to safeguard the vitality and viability of the town centre, providing support for walking and cycling and reducing the need to travel by car. However sites CH128 and CH132 are more than 1,200m away from the town centre, so this option could also result in existing services and facilities being less accessible for residents of some new developments. This option (in comparison with other options) minimises potential for the cumulative impacts of development to result in the disturbance of habitats (and their connectedness) and of protected species that could not be reasonably mitigated. Whilst the option includes sites CH002A and CH024 which border Cecilly Brook Local Nature Reserve, one of the most important sites for water voles (a protected species) in Staffordshire, sites CH006 and CH009 (within 100m of the Reserve) are not identified as preferred options. This option is also less likely than previous options to result in the development of sites subject to risk from flooding - the option includes sites CH002A, CH020, CH085A and CH85B where small areas of flood

SA Objective	Option 4: North-South clusters with small sites scattered through town				Justification; cumulative effects / mitigation measures	
	Decision making criteria	Time-frame				Nature of effect; Comments
		ST	MT	LT		
	<p>zones 2 or 3 at the edge of each site have been excluded from the boundary of each proposed allocation. Dependent on proposal specific information, the cumulative impact of development under this option may result in harm or loss to the significance of designated heritage assets. Site CH015 is within 400m of 24 grade II listed assets; CH013 is within 400m of 38 grade II listed assets and one grade 1 listed asset. Likely negative effects on landscape character have also been identified; sites CH085A, B, C and D, CH128 and CH132 are all greenfield sites outside the current development boundary, however none are within the area identified as "important landscape setting to settlement". The option has also been assessed as likely to result in minor negative effects in relation to loss of best and most versatile agricultural land, air quality and greenhouse gas emissions and energy consumption arising from construction and occupation of new developments.</p>

Appraisal of preferred option policies

16 Appraisal of preferred option policies

16.1 The methodology used to appraise policies in the Local Plan was drawn from that set out in the SA Scoping report and based on the SA Framework. These appraisals were carried out on initial policy drafts in November and December 2016.

Scoring of options

Score	
++	The allocation will have a very positive impact on the sustainability objective
+	The allocation will have a slightly positive impact on the sustainability objective
0	The allocation will have a negligible or neutral impact on the sustainability objective. A recorded neutral effect does not necessarily mean that there will be no effect at the project level, but shows that at this strategic level there are no identifiable effects.
-	The allocation will have a slightly negative impact on the sustainability objective
--	The allocation will have a very negative impact on the sustainability objective
i	The outcome could be dependent on implementation, or more detail is required to make an assessment
?	The impact of an issue cannot be predicted at this stage

Table 16.1 Scoring of options

16.2 Different components within an option may generate varying impacts. This is indicated by "/".

	10	<p>The policy seeks to make effective use of previously developed land and to secure development that protects and enhances the natural and historic environment. Significance of effect is dependent on implementation of the policy.</p>	i	i	i	<p>Likelihood/certainty of effect occurring: Uncertain</p> <p>Geographical scale of effect: Local Plan area</p> <p>Temporary / Permanent Assumptions made: Any impacts on biodiversity will be managed through the planning application process and using other policies in this Local Plan.</p>

SA Framework		Preferred Option Policy: SS1 Development Principles					
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation		
		Nature of Effect	ST	MT	LT	Justification for assessment	
Scope for protecting and enhancing habitats of importance for nature conservation, with creation of new habitats where possible; The risk of adverse effects on historic assets; Need for better quality facilities for tourists including serviced accommodation and improved evening economy in towns.	11 Safeguard geological resources including the best and most versatile agricultural land	The policy seeks to make effective use of previously developed land and to secure development that protects and enhances the natural and historic environment. Significance of effect is dependent on implementation of the policy.	i	i	i	i	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Local Plan area Temporary / Permanent: Permanent Assumptions made: Any impacts on geological resources will be managed through the planning application process and using other policies in this Local Plan.
	12 Minimise the use of non-renewable resources	Policy requires development that secures effective use of resources including making best use of existing buildings.	+	+	+	+	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Local Plan area Temporary / Permanent: Permanent Assumptions made: Principles enforced at planning application stage will implement policy intentions.
	13 Protect and enhance character of towns / villages; heritage assets and their settings	Policy requires development that maintains the distinctive character of the District's towns and villages and their settings.	++	++	++	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent: Permanent Assumptions made: Principles enforced at planning application stage will implement policy intentions.
	14 Protect and enhance character / appearance of landscape including historic landscape and other natural assets	Policy requires development that protects and enhances the natural and historic environment of the District.	++	++	++	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent: Permanent Assumptions made: Principles enforced at planning application stage will implement policy intentions.

		ST	MT	LT	
<p>Summary of significant effects of policy: Policy SS1 Development Principles expects development to contribute positively to the social, economic and environmental improvement of the District in partnership with other agencies and services. All proposals for development will be considered in the context of the District-wide spatial strategy. Significant positive effects include the likelihood of improvements to the social and environmental quality of the neighbourhood and improved access to jobs, services and facilities. Policy intent is to secure a mix of types and tenures of quality, affordable homes, including starter homes and this could make a significant contribution to meeting the needs of the whole community. Further positive effects are likely to result from the intentions to maintain the distinctive character of the District's towns and villages and their settings; to protect and enhance the natural and historic environment of the District and to create sustainable, self-sufficient settlements encouraging a strong, prosperous and diverse economy. Whilst no significant negative effects were predicted, a number of policy improvements were identified as follows:</p> <p>Mitigation: The policy could make reference to enhancement of the District's GI network and to the needs of older people, including for extra care provision. The policy should seek to mitigate the impacts of climate change through supporting delivery of renewable and low carbon forms of energy. The location of identified areas of poor air quality should be a factor in considering preferred locations for new development and the delivery of significant soft landscape features should be required to help maximise the removal of air pollutants where necessary. The Policy could refer to strengthening links between rural areas and towns by sustainable forms of transport.</p>

Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
<p>retain and develop a local workforce;</p> <p>Maintaining the vitality and viability of the towns and protection of the towns as service centres;</p> <p>Measures to encourage people to shop in the area;</p> <p>Enhancement of local distinctiveness;</p> <p>Protection of the retail function in the heart of the town centres.</p>						
<p>Summary of significant effects of policy: Policy SS6 Leek Area Strategy seeks to consolidate the role of Leek as the principal service centre and a market town and to support its regeneration. Policy intent is to increase the range of available and affordable house types, especially for first time buyers and older people and this is likely to make a significant contribution to meeting the housing needs of the whole community. Further positive effects are likely to result from the intentions to create employment growth and increase the diversity of employment opportunities; strengthen the role of Leek as a principal service and retailing centre for the District and to promote Leek's special character and heritage. Significant positive effects also include the likelihood of improvements to the social and environmental quality of neighbourhoods and improved access to jobs, services and facilities. Whilst no significant negative effects were predicted, a number of policy improvements were identified as follows:</p>						

SA Framework		SS6 Leek Area Strategy				
Summary of Baseline Situation	SA Objective	Predicted Effects		Assumptions and mitigation		
		Nature of Effect	ST	MT	LT	Justification for assessment
<p>Mitigation: The policy should refer to the District's GI Strategy and to strengthening links between rural areas and the town by sustainable forms of transport. The policy should seek to mitigate the impacts of climate change through supporting delivery of renewable and low carbon forms of energy. The policy should also refer to taking opportunities to enhance the character and appearance of the landscape, including the historic landscape, paying particular attention to the quality of the urban / rural interface.</p>

Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation
		Nature of Effect	ST	MT	LT
<p>Enhancement of local distinctiveness;</p> <p>Protection of the retail function in the heart of the town centres.</p>					
<p>Summary of significant effects of policy: Policy SS7 Biddulph Area Strategy seeks to enhance the role of Biddulph as a significant service centre and a market town and to support its regeneration. Policy intent is to increase the range of available and affordable house types, especially for first time buyers, families and older people and this is likely to make a significant contribution to meeting the housing needs of the whole community. Further positive effects are likely to result from the intentions to create employment growth and increase the diversity of employment opportunities; strengthen the role of Biddulph as a significant service and retailing centre for the District and to improve the image and identity of Biddulph and strengthen its role as a visitor destination. Significant positive effects also include the likelihood of improvements to the social and environmental quality of neighbourhoods and improved access to jobs, services and facilities. Whilst no significant negative effects were predicted, a number of policy improvements were identified as follows:</p> <p>Mitigation: The policy should refer to the District's GI Strategy, in particular to supporting measures to encourage walking and cycling, improving and creating pedestrian and cycle links in the town and to increasing access into the countryside by foot, cycling and horse riding. The policy should seek to mitigate the impacts of climate change through supporting delivery of renewable and low carbon forms of energy. The policy should also refer to taking opportunities to enhance the character and appearance of the landscape, including the historic landscape, paying particular attention to the quality of the urban / rural interface and to increasing tourist opportunities for visitors.</p>

		Nature of Effect	ST	MT	LT	Justification for assessment
<p>Summary of significant effects of policy: Policy SS9 Rural Areas establishes a development requirement for the rural areas defined as larger villages, smaller villages and other rural areas and ensures that development in the rural areas reflects the spatial strategy. Positive effects are noted as follows. The policy categorises villages based on their population, services, facilities and capacity for development and this is likely to contribute to maintaining and strengthening local distinctiveness and sense of place. The policy also seeks to deliver the employment land necessary to provide sufficient local employment opportunities in the villages and to enhance and diversify employment provision at existing employment sites in the rural areas and this is likely to facilitate the delivery of new employment opportunities. Whilst no significant negative effects were predicted, a number of policy improvements were identified as follows:</p>						
<p>Mitigation: Option 2 for the policy should make clear that "local" infrastructure includes social infrastructure.</p>

		Nature of Effect	ST	MT	LT	Justification for assessment	
and improved evening economy in towns.	14 Protect and enhance character / appearance of landscape including historic landscape and other natural assets	Policy seeks to protect and enhance the setting of individual settlements and this is likely to help protect landscape character.	+	+	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Larger villages Temporary / Permanent Assumptions made: Principles enforced at planning application stage will implement policy intentions. Mitigation: Policy could refer to taking opportunities to enhance the character and appearance of the landscape, including the historic landscape, paying particular attention to the edge of settlements.	
	15 Encourage sustainable tourism, cultural heritage and local distinctiveness	Ensuring that new development reflects and enhances each village's special character and heritage is likely to lead to indirect positive effects on the visitor economy.	+	+	+	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Larger villages Temporary / Permanent Assumptions made: Protecting and enhancing the character and heritage of settlements will help to support tourism.	
	16 Safeguard vitality of towns and sustain vibrant rural economy	Policy intent is to retain and enhance the role of larger villages as rural service centres and this is likely to contribute to the safeguarding and improvement of community facilities available to the rural areas.	+	+	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Larger villages Temporary / Permanent Assumptions made: Principles enforced at planning application stage will implement policy intentions.	
Economic Need to address Meeting local employment needs to achieve self-sufficient communities; Initiatives to encourage further employment development and retention / expansion of existing businesses;	17 Sustainable economic growth and diversification of the economy	Policy intent is to meet limited employment needs and this is likely to lead to a strengthened and more diversified economy.	+	+	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Larger villages Temporary / Permanent Assumptions made: Principles enforced at planning application stage will implement policy intentions.	
	18 High and stable level of employment	Policy supports enabling small scale new employment development and improving the use of existing employment areas and this is likely to facilitate the delivery of new employment opportunities.	+	+	++	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Larger villages Temporary / Permanent Assumptions made: Principles enforced at planning application stage will implement policy intentions.	

SA Framework		SS10 Larger Villages Area Strategy			
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation
		Nature of Effect	ST	MT	LT
<p>Diversification of the economic base to improve employment opportunities;</p> <p>Safeguarding good quality employment sites from development for other uses;</p> <p>Provision of relevant employment sites, training and support to help retain and develop a local workforce;</p> <p>Maintaining the viability of the towns and protection of the towns as service centres;</p> <p>Measures to encourage people to shop in the area;</p>					

SA Framework		SS10 Larger Villages Area Strategy				
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
<p>Enhancement of local distinctiveness;</p> <p>Protection of the retail function in the heart of the town centres.</p>						
<p>Summary of significant effects of policy:</p> <p>Policy SS10 Larger Villages Area Strategy identifies the larger villages and seeks to retain and enhance their role as rural service centres, providing for the bulk of the local housing needs on the rural areas and also for limited employment needs of a scale and type appropriate to each settlement having regard to local needs, infrastructure capacity and character. Policy intent is to increase the range of available and affordable house types, especially for first time buyers and families and this is likely to make a significant contribution to meeting housing needs. Further positive effects are likely to result from the intentions to enable small scale new employment development and improve the use of existing employment areas; retain and enhance the role of rural areas as rural service centres and to ensure that new development reflects and enhances each village's special character and heritage. Whilst no significant negative effects were predicted, a number of policy improvements were identified as follows:</p> <p>Mitigation: The policy should support environmental enhancements, including the improvement and creation of Local Green Spaces. It should refer to the District's GI Strategy and improving pedestrian and cycle links through the villages and to surrounding towns and villages and into the countryside, as well as to meeting the needs of older people, including with extra care housing. Policy could refer to taking opportunities to enhance the character and appearance of the landscape, including the historic landscape, paying particular attention to the edge of settlements.</p>

SA Framework		SS12 Other Rural Areas Strategy				
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
<p>Summary of significant effects of policy: Policy SS12 Other Rural Areas Strategy identifies the other rural areas as comprising the countryside and the green belt outside settlement boundaries and including those small settlements and dispersed developments not identified in policies SS10 and SS11. Policy intent is that these areas will provide only for development which has an essential need to be located in the countryside, supports rural diversification, contributes to sustainability of the rural areas, promotes sustainable tourism or enhances the countryside. Significant positive effects include enhancing and conserving the quality of the countryside, including recognising and conserving the special quality of the landscape in the Peak District National Park and limiting uses which generate a substantial number of regular trips in areas that are not well served by public transport - as this is likely to help to reduce the number of journeys made by car. Further positive effects are likely to result from encouraging measures which protect and enhance the biodiversity and geological resources, as well as the heritage of the district. Also, from measures to sustain the rural economy and enhance tourist opportunities. Whilst no significant negative effects were predicted, a policy improvement was identified as follows:</p> <p>Mitigation: The policy should refer to the District's GI Strategy and improving pedestrian and cycle links, including into the countryside, as well as improving opportunities for related leisure activities such as horse riding.</p>

Measures to encourage people to shop in the area;	Enhancement of local distinctiveness;	Protection of the retail function in the heart of the town centres.			
Enhancement of local distinctiveness;					
Protection of the retail function in the heart of the town centres.					
<p>Summary of significant effects of policy: Policy SS13 Churnet Valley Strategy manages development according to the aims of the strategy for the Churnet Valley and the Churnet Valley Masterplan SPD. Policy intent is enable the Churnet Valley to provide a strong focus for sustainable rural regeneration across the district and this may help to advance equality of opportunity as well as to enhance the vitality and viability of the area's towns and villages. Further positive effects for health and for reducing the need for car use are likely to result from the intentions to enhance and develop links to strategic footpaths, cycle and horse riding routes and to improve connectivity and accessibility to and within the Churnet Valley by all forms of sustainable transport. In addition support for measures to protect and enhance the biodiversity, landscape character and heritage assets of the valley are all likely to lead to additional positive effects. Whilst no significant negative effects were predicted, a number of policy improvements were identified as follows:</p>					
<p>Mitigation: The policy should refer to the District's GI Strategy and to meeting the needs of older people, including with extra care housing. The policy should seek to mitigate the impacts of climate change through supporting delivery of renewable and low carbon forms of energy. The policy should also refer to taking opportunities to enhance the character and appearance of the landscape, including the historic landscape, paying particular attention to the quality of the urban / rural interface and to increasing tourist opportunities for visitors.</p>

<p>Safeguarding good quality employment sites from development for other uses;</p> <p>Provision of relevant employment skills, training and support to help retain and develop a local workforce;</p> <p>Maintaining the vitality and viability of the towns and protection of the towns as service centres;</p> <p>Measures to encourage people to shop in the area;</p> <p>Enhancement of local distinctiveness;</p> <p>Protection of the retail function in the heart of the town centres.</p>					

SA Framework		SS14 Northern Gateway Opportunity Site			
Summary of Baseline Situation	SA Objective	Predicted Effects		Assumptions and mitigation	
		Nature of Effect	ST	MT	LT
<p>Summary of significant effects of policy:</p> <p>Policy SS14 Northern Gateway Opportunity Site supports the development of a Regional Investment Site for high quality employment development at this location and in line with the Northern Gateway. This is a large site (the northern area is approximately 19.28 ha and the southern area is approximately 29.3 ha) on the south-eastern outskirts of Blythe Bridge. The A50 runs through the middle of the site from the north-west to the south-east. The site as a whole is extensively surrounded by farm land to the east, south and west and by housing and built environment to the north. However, it is effectively isolated from the wider landscape because it is encircled by major roads (the A50 and A521) to the north and east, Cresswell Lane to the south and the Crewe to Derby railway line to the west. The river Blithe runs adjacent to the railway line further to the west. The majority of the site consists of uniform, improved grassland used for pasture. This habitat is common and widespread both locally and throughout the UK. Policy intent is to deliver high quality employment development and this is likely to encourage investment in businesses, people and infrastructure leading to a strengthened and more diversified economy, and facilitating the delivery of new employment opportunities. Further positive effects for minimising disadvantages are likely as a result of the site serving a regional need for employment and potentially other community requirements as this may help to advance equality of opportunity and address community need. However potentially significant negative effects on climate change were predicted as the proposal could significantly increase the need to travel by less sustainable forms of transport, increasing road traffic and congestion. Also the site is partially located within a mineral consultation area - bedrock sand. A number of policy improvements were identified as follows:</p> <p>2 Mitigation: The policy should require measures to improve connectivity and accessibility to the site by sustainable transport means having regard to the GI strategy. The policy should also seek to mitigate the impacts of climate change through supporting delivery of renewable and low carbon forms of energy and should support measures to enhance, protect and interpret landscape character. In addition, appropriate consultation will need take place to ensure sand resources are safeguarded from unnecessary sterilisation by non-mineral development.</p>

<p>Enhancement of local distinctiveness;</p> <p>Protection of the retail function in the heart of the town centres.</p>						
<p>Summary of significant effects of policy:</p> <p>Policy SS15 Planning Obligations and Community Infrastructure Levy provides clarity regarding the Council's approach to developer contributions. The policy could enable the provision of new, or the significant enhancement of existing, community facilities and services and this is likely to make a positive contribution towards community cohesion and the quality of where people work and live. Further positive effects on health and the supply of new homes to meet need were identified, as developer contributions may help to ensure the delivery of an appropriate quantity and quality of open space, sport and recreation facilities and an increase in the supply of affordable homes. No policy improvements were identified.</p>

<p>retain and develop a local workforce;</p> <p>Maintaining the vitality and viability of the towns and protection of the towns as service centres;</p> <p>Measures to encourage people to shop in the area</p> <p>Enhancement of local competitiveness;</p> <p>Protection of the retail function in the heart of the town centres.</p>						
<p>Summary of significant effects of policy:</p> <p>Policy SD1 Sustainable Use of Resources sets out a range of measures in relation to the sustainable use of resources and measures to address climate change. These include encouragement to be given to development on previously developed land and a requirement for major developments to demonstrate consideration given to energy efficiency, water conservation, sourcing of construction materials, site orientation and integration of micro-renewables. Significant positive effects on minimising contributions to climate change are predicted to arise from the policy requirement that all development should adapt to climate change and encouragement for the re-use of construction or construction waste materials. Further positive effects are likely to result from the support for development that is located to minimise energy needs as this is likely to result in the location of development in proximity to existing services and facilities.</p> <p>Whilst no significant negative effects were predicted, a policy improvement was identified as follows:</p>

SA Framework		Preferred Option Policy: SD3 Sustainability Measures in Development			
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation
		Nature of Effect	ST	MT	LT
<p>Provision of relevant employment skills, training and support to help retain and develop a local workforce;</p> <p>Maintaining the vitality and viability of the towns and protection of the towns as service centres;</p> <p>Measures to encourage people to shop in the area;</p> <p>Enhancement of local distinctiveness;</p> <p>Protection of the retail function in the heart of the town centres.</p>					
<p>Summary of significant effects of policy: Policy SD3 Sustainability Measures in Development supports a number of measures which can improve the sustainability of new or existing development, including exceeding thermal efficiency or water conservation standards, contributing to District Heating networks or the installation of micro-renewables. Significant positive effects on minimising contributions to climate change are predicted to arise from the policy intent to support further carbon- or water-saving measures. No significant negative effects were predicted however a policy improvement was identified as follows:</p>

Scope for protecting and enhancing habitats of importance for nature conservation, with creation of new habitats where possible;	12 Minimise the use of non-renewable resources	This objective will be addressed by other policies in the Local Plan.	0	0	0	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Local Plan area Permanent / Assumptions made: Any impacts on non-renewable resources will be managed through the planning application process and using other policies in this Local Plan.
	13 Protect and enhance character of towns / villages; heritage assets and their settings	This objective will be addressed by other policies in the Local Plan.	0	0	0	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Permanent / Assumptions made: Any impacts on townscape character and heritage will be managed through the planning application process and using other policies in this Local Plan.
	14 Protect and enhance character / appearance of landscape including historic landscape and other natural assets	This objective will be addressed by other policies in the Local Plan. In exceptional circumstances developments outside the settlement boundary may be supported where a rural location can be justified.	0	0	0	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Permanent / Assumptions made: Any impacts on landscape character and natural assets will be managed through the planning application process and using other policies in this Local Plan.
The risk of adverse effects on historic assets; Need for better quality facilities for tourists including serviced accommodation and improved evening economy in towns.	15 Encourage sustainable tourism, cultural heritage and local distinctiveness	This objective will be addressed by other policies in the Local Plan.	0	0	0	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Permanent / Assumptions made: Any impacts on sustainable tourism and the cultural economy will be managed through the planning application process and using other policies in this Local Plan.
	16 Safeguard vitality of towns and sustain vibrant rural economy	Policy will help ensure that there is a choice of sustainably located employment sites and this is likely to lead to significant enhancement of the vitality and viability of the District's towns	++	++	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Permanent / Assumptions made: Principles enforced at planning application stage will implement policy intentions.

SA Framework		Preferred Option Policy: E1 New Employment Development				
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
Meeting local employment needs to achieve self-sufficient communities; Initiatives to encourage further employment development and regeneration / expansion of existing businesses;	17 Sustainable economic growth and diversification of the economy	and villages, contributing to the safeguarding and improvement of shops and services.				
		Policy supports proposals that help to maintain or enhance an appropriate range of employment premises and sites across the District and this is likely to encourage investment leading to a strengthened and more diversified economy.	++	++	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Permanent Assumptions made : Principles enforced at planning application stage will implement policy intentions.
Diversification of the economic base to improve employment opportunities; Safeguarding good quality employment sites from development for other uses; Provision of relevant employment skills, training and support to help retain and develop a local workforce;	18 High and stable level of employment	Policy proposes local labour agreements where appropriate to contribute towards training programmes and employment support and access schemes and this is likely to contribute to meeting the employment needs of local people.	+	++	++	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Local Plan area Permanent Assumptions made : Principles enforced at planning application stage will implement policy intentions.

SA Framework		Preferred Option Policy: E1 New Employment Development				
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
Maintaining the vitality and viability of the towns and protection of the towns as service centres;						
Measures to encourage people to shop in the area;						
Enhancement of local distinctiveness;						
Protection of the retail function in the heart of the town centres.						
<p>Summary of significant effects of policy: Policy E1 New Employment Development will ensure that there is a choice of sustainably located employment sites, attractive to developers and operators and appropriate to market needs. In order to ensure that the local workforce and businesses benefit from new development, the policy also proposes local labour agreements where appropriate to contribute towards training programmes and employment support and access schemes. Significant positive effects on advancing equality of opportunity; safeguarding the vitality of towns and sustaining a vibrant rural economy are predicted to result. Further positive effects on sustainable economic growth, diversification of the economy and high and stable level of employment were identified. There is potential for negative effects on contribution to climate change arising from policy support for new business developments, as this is likely to result in greater energy use.</p>

Measures to encourage people to shop in the area;	Enhancement of local distinctiveness; Protection of the retail function in the heart of the town centres.				
Enhancement of local distinctiveness;					
Protection of the retail function in the heart of the town centres.					
<p>Summary of significant effects of policy: Policy E2 Employment Allocations ensures allocation of sufficient employment land to support the housing requirement. Significant positive effects on advancing equality of opportunity and safeguarding the vitality of towns are predicted to result. Further positive effects on sustainable economic growth, diversification of the economy and high and stable level of employment were identified. There is potential for negative effects on contribution to climate change arising from the allocation of sites for new business developments, as this is likely to result in greater energy use.</p>

Need to address						

SA Framework		Preferred Option Policy: E5 Rural Economy				
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
Meeting local employment needs to achieve self-sufficient communities; Initiatives to encourage further employment development and retention / expansion of existing businesses; Diversification of the economic base to improve employment opportunities; Safeguarding good quality employment sites from development for other uses; Provision of relevant employment skills, training and support to help retain and develop a local workforce;	17 Sustainable economic growth and diversification of the economy	Encouraging rural economic diversification is likely to encourage investment leading to a strengthened and more diversified economy.	++	++	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent: Assumptions made : Principles enforced at planning application stage will implement policy intentions.
	18 High and stable level of employment	Economic development in the rural areas is likely to contribute to meeting the employment needs of local people.	+	++	++	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Local Plan area Temporary / Permanent: Assumptions made : Principles enforced at planning application stage will implement policy intentions.

SA Framework		Preferred Option Policy: E5 Rural Economy				
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
Maintaining the vitality and viability of the towns and protection of the towns as service centres;						
Measures to encourage people to shop in the area;						
Enhancement of local distinctiveness;						
Protection of the retail function in the heart of the town centres.						
<p>Summary of significant effects of policy: Policy E5 Rural Economy aims to support the rural economy, enable appropriate rural economic diversification and meet the needs of rural communities whilst seeking to protect the countryside from inappropriate development. Significant positive effects on advancing equality of opportunity are likely to result from support for the rural economy. Further positive effects on reducing the number of journeys made by car and sustainable economic growth, diversification of the economy, and high and stable level of employment were identified. There is potential for negative effects on contribution to climate change arising from new development, as this is likely to result in greater energy use.</p> <p>Mitigation: Policy should amend the definition of appropriate development to include avoidance of harm to local landscape character or appearance, including the historic landscape; as well as to non-designated historic assets.</p>

Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
<p>Maintaining the vitality and viability of the towns and protection of the towns as service centres;</p> <p>Measures to encourage people to shop in the area;</p> <p>Enhancement of local distinctiveness;</p> <p>Protection of the retail function in the heart of the town centres.</p>						
<p>Summary of significant effects of policy: Policy H3 Affordable Housing identifies thresholds for an affordable housing target of 33% in towns and the larger villages; in or on the edge of smaller villages, small schemes for 100% affordable housing will be permitted on suitable rural exception sites; the policy also sets a starter homes target. Significant positive effects on ensuring the supply of new homes to meet local needs are likely to result from provision of affordable housing. Further positive effects on enhancing the vitality and viability of the District's towns and villages and supporting stable levels of employment were also identified. There is potential for negative effects on contribution to climate change arising from new development, as this is likely to result in greater energy use. No mitigation measures were identified.</p>

		Nature of Effect	ST	MT	LT
<p>Maintaining the vitality and viability of the towns and protection of the towns as service centres;</p> <p>Measures to encourage people to shop in the area;</p> <p>Enhancement of local distinctiveness;</p> <p>Protection of the retail function in the heart of the town centres.</p>					
<p>Summary of significant effects of policy: Policy H4 Rural Housing recognises that the re-use of rural buildings for commercial purposes is preferable to that of residential uses and establishes criteria for re-use, the policy also recognises the need to safeguard rural buildings considered to be of particular merit in terms of their contribution to local character or heritage and the need to deliver affordable homes. Positive effects on ensuring the supply of new homes to meet local needs are likely to result from provision of affordable housing, provision of rural housing is also likely to benefit the development of sustainable communities and community cohesion. Further positive effects on helping sustain the rural economy were identified from helping to meet rural housing need. There is potential for negative effects on contribution to climate change arising from new development, as this is likely to result in greater energy use; and from a likely increased use of private transport. Policy improvements were identified as follows:</p> <p>Mitigation: Policy should require housing to remain affordable for successive occupiers in perpetuity and include a requirement for sites to be adequately served by existing services and facilities.</p>

		Nature of Effect	ST	MT	LT	Justification for assessment
Meeting local employment needs to achieve self-sufficient communities; Initiatives to encourage further employment development and retention / expansion of existing businesses; Diversification of the economic base to improve employment opportunities; Safeguarding good quality employment sites from development for other uses; Provision of relevant employment skills, training and support to help retain and develop a local workforce;	17 Sustainable economic growth and diversification of the economy	Policy supports development in the town centres and this is likely to lead to significant positive effects.	+	++	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent ; Assumptions made : Principles enforced at planning application stage will deliver policy objectives.
	18 High and stable level of employment	Policy supports development in the town centres and this is likely to lead to significant positive effects.	+	+	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent ; Assumptions made : Principles enforced at planning application stage will deliver policy objectives.

SA Framework		TCR1 Development in the Town Centres				
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
Maintaining the vitality and viability of the towns and protection of the towns as service centres;	Measures to encourage people to shop in the area;	Enhancement of local distinctiveness;				
Protection of the retail function in the heart of the town centres.						
<p>Summary of significant effects of policy: Policy TCR1 Development in the Town Centres seeks to maintain the vitality and viability of town centres by supporting measures that lead to the enhancement and regeneration of the shopping and town centre environment, promoting their tourism potential and maintaining local distinctiveness by supporting proposals that help to retain and attract independent retailers. Significant positive effects were predicted for Improving access to jobs, services and facilities. Further positive effects were identified for maintaining the vitality and viability of the towns, protecting the towns as service centres, promoting sustainable economic growth and diversification of the economy and on supporting high and stable levels of employment.</p> <p>Mitigation: Whilst no significant negative effects were predicted, the appraisal notes that the Policy might be improved by including a reference to helping strengthen links between rural areas and towns, including by sustainable forms of transport, in order to help sustain a vibrant rural economy also. The policy should encourage proposals that deliver high quality public spaces and require active ground floor frontages to be maintained and created within town centres with appropriate town centre uses.</p>

SA Framework		DC1 Design Considerations			
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation
		Nature of Effect	ST	MT	LT
<p>Safeguarding good quality employment sites from development for other uses;</p> <p>Provision of relevant employment skills, training and support to help retain and develop a local workforce;</p> <p>Maintaining the vitality and viability of the towns and protection of the town centres;</p> <p>Measures to encourage people to shop in the area;</p> <p>Enhancement of local distinctiveness;</p> <p>Protection of the retail function in the heart of the town centres.</p>					

SA Framework		DC1 Design Considerations			
Summary of Baseline Situation	SA Objective	Predicted Effects		Assumptions and mitigation	
		Nature of Effect	ST	MT	LT
<p>Summary of significant effects of policy:</p> <p>Policy DC1 Design Considerations includes measures to promote locally distinctive, creative and sensitive design solutions to delivering new development, including incorporating sustainable construction techniques and design concepts to reduce the impact of development. Significant positive effects include the likelihood of improvements to the social and environmental quality of neighbourhoods and positive impacts on health and well-being. The policy seeks to promote the maintenance, enhancement, restoration and re-creation of biodiversity and geological heritage where appropriate and this could make a significant contribution to the protection of natural assets, although the significance of effect is dependent on implementation of the policy. Further positive effects are likely to result from the policy intent to deliver well designed development and high quality built environment and public realm as this is likely to lead to investment in business, people and infrastructure, resulting in a strengthened and more diversified economy, more vibrant town and village centres and sustained levels of employment. Whilst no significant negative effects were predicted, a number of policy improvements were identified as follows:</p> <p>Mitigation: Policy should include a requirement for developments to be well integrated for car, pedestrian and cycle use as well as other sustainable transport links. It should also seek to mitigate the impacts of climate change through supporting delivery of renewable and low carbon forms of energy and include a requirement for the creation of healthy environments (to address potential impacts of air pollution). The Policy should require development that secures the effective use of resources, including making best use of existing buildings, and that retains the distinctive character of the landscape (including historic landscape) with any change managed positively.</p>		ST	MT	LT	Justification for assessment

16.2.6 Sustainable Communities

Preferred Option Policy C1 Creating Sustainable Communities

SA Framework		C1 Creating Sustainable Communities				
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	
<p>Social: Need to address: Implications of an increasingly ageing population; Meeting identified housing need, including the need for affordable homes and provision of an appropriate mix of house types and tenures; Reducing health inequalities; Opportunities to improve the health of older people through appropriate housing and access to community facilities and services;</p>	1 Community cohesion and neighbourhood quality	Policy intent is to ensure that new development contributes to the creation of safe, livable and mixed communities.	++	++	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent: Permanent Assumptions made: Principles enforced at planning application stage will implement policy intentions.
	2 Improving access to jobs, services and facilities	Policy intent is to ensure that new development contributes to the creation of communities with good access to jobs and key services including recreation facilities.	+	++	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent: Permanent Assumptions made: Principles enforced at planning application stage will implement policy intentions.
	3 Improve health and reduce health inequalities	Policy intent is to ensure that new development contributes to the creation of communities with good access to key services. Creation of sustainable communities is likely to lead to improvements in health and well-being in the long term.	+	+	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent: Permanent Assumptions made: Principles enforced at planning application stage will implement policy intentions. Mitigation: Policy should clarify that community infrastructure includes health services.
	4 Minimise opportunities for crime and reduce fear of crime	Policy requires proposals to incorporate features and layouts that will help to reduce crime and fear of crime.	++	++	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent: Permanent Assumptions made: Design principles enforced at planning application stage will implement policy intentions.

SA Framework		C1 Creating Sustainable Communities				
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
Quantity, quality and accessibility of sports and recreation facilities, including open space; Any shortfall in school places; Creation of accessible and safe public and private environments; Modal shift away from journeys by car; Measures that reduce the need to travel; Accessibility for those without a car is maintained and improved.	5 Ensure supply new homes to meet local needs including affordable / social / extra care	This SA Objective will be addressed through other policies in the Local Plan.	0	0	0	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent Assumptions made: Any impacts on housing supply will be managed through the planning application process and using other policies in this Local Plan.
	6 Reduce number of journeys made by car	The policy requires major new development to be accessible by a choice of means of transport.	+	++	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent Assumptions made: Design principles enforced at planning application stage will implement policy intentions.
Environmental Need to address:	7 Minimise contributions to climate change, consider climate change adaptation	More information is required in order to assess the impact of the policy on greenhouse gas emissions and energy consumption.	i/-	i/-	i/-	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Local Plan area Temporary / Permanent Assumptions made: New

SA Framework		C1 Creating Sustainable Communities				
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
Climate change as a key sustainability issue;						development will lead to an increase in energy use and carbon emissions. Energy efficiency of new build development will be addressed at planning application stage and through building regulations.
Use of areas in flood zone 1 and away from sources of risk;	8 Improve air quality	More information is required to assess how the delivery of new development under this policy would impact on air quality targets and the performance of identified areas of poor air quality.	i	i	i	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Local Plan area Temporary / Permanent: Assumptions made: No Air Quality Management Areas have been declared in the district.
Support for the re-use of construction or construction waste materials;	9 Reduce flood risk, protect and enhance water sources	All new development will address flood risk mitigation / adaptation.	i	i	i	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Local Plan area Temporary / Permanent: Assumptions made: The impact of new development on flood risk will be managed through the planning application process and using other policies in this Local Plan.
Retention of the distinctive character of the landscape with any change managed positively;	10 Conserve and enhance biodiversity	This objective will be addressed by other policies in the Local Plan.	0	0	0	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Local Plan area Temporary / Permanent: Assumptions made: Any impacts on biodiversity will be managed through the planning application process and using other policies in this Local Plan.
Requirement to carry out an Appropriate Assessment of land use plans affecting Natura 2000 sites (HRA);	11 Safeguard geological resources including the best and most versatile agricultural land	This objective will be addressed by other policies in the Local Plan.	0	0	0	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Local Plan area Temporary / Permanent: Assumptions made: Any impacts on geological resources will be managed through the planning application process and using other policies in this Local Plan.
Scope for protecting and enhancing habitats						

SA Framework		C1 Creating Sustainable Communities				
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
<p>of importance for nature conservation, with creation of new habitats where possible;</p> <p>The risk of adverse effects on historic assets;</p> <p>Need for better quality facilities for tourists including serviced accommodation and improved evening economy in towns.</p>	12 Minimise the use of non-renewable resources	This SA Objective will be addressed through other policies in the Local Plan.	0	0	0	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Local Plan area Temporary / Permanent: Permanent Assumptions made: Any impacts on non-renewable resources will be managed through the planning application process and using other policies in this Local Plan.
	13 Protect and enhance character of towns / villages; heritage assets and their settings	Retention of community facilities will help to prevent buildings falling into disrepair and any associated negative impacts on the built environment through empty buildings.	+	+	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent: Permanent Assumptions made: Principles enforced at planning application stage will implement policy intentions.
	14 Protect and enhance character / appearance of landscape including historic assets and other natural assets	This objective will be addressed by other policies in the Local Plan.	0	0	0	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent: Permanent Assumptions made: Principles enforced at planning application stage will implement policy intentions.
	15 Encourage sustainable tourism, cultural heritage and local distinctiveness	Retaining and enhancing community facilities will contribute towards the District's tourism attraction and help to maintain the visitor economy.	+	+	+	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent: Permanent Assumptions made: Tourism would be negatively impacted by a reduction in community facilities.
	16 Safeguard vitality of towns and sustain vibrant rural economy	New community facilities, particularly in smaller villages and other rural areas is likely to contribute to their viability.	+	+	++	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent: Permanent Assumptions made: Principles enforced at planning application stage will implement policy intentions.
	Economic Need to address					

SA Framework		C1 Creating Sustainable Communities				
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
Meeting local employment needs to achieve self-sufficient communities;	17 Sustainable economic growth and diversification of the economy	Overall the effect has been assessed as neutral.	0	0	0	Likelihood/certainty of effect occurring: Likely Geographical scale of effect: Local Plan area Temporary / Permanent Assumptions made: Any impacts on the local economy will be managed through the planning application process and using other policies in this Local Plan.
Initiatives to encourage further employment development and retention / expansion of existing businesses;	18 High and stable level of employment	Overall the effect has been assessed as neutral.	0	0	0	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Local Plan area Temporary / Permanent Assumptions made: Any impacts on local employment will be managed through the planning application process and using other policies in this Local Plan.
Diversification of the economic base to improve employment opportunities;	18 High and stable level of employment	Overall the effect has been assessed as neutral.	0	0	0	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Local Plan area Temporary / Permanent Assumptions made: Any impacts on local employment will be managed through the planning application process and using other policies in this Local Plan.
Securing good quality employment sites from development for other uses;	18 High and stable level of employment	Overall the effect has been assessed as neutral.	0	0	0	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Local Plan area Temporary / Permanent Assumptions made: Any impacts on local employment will be managed through the planning application process and using other policies in this Local Plan.
Provision of relevant employment skills, training and support to help retain and develop a local workforce;	18 High and stable level of employment	Overall the effect has been assessed as neutral.	0	0	0	Likelihood/certainty of effect occurring: Uncertain Geographical scale of effect: Local Plan area Temporary / Permanent Assumptions made: Any impacts on local employment will be managed through the planning application process and using other policies in this Local Plan.

SA Framework		C1 Creating Sustainable Communities				
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
<p>Maintaining the vitality and viability of the towns and protection of the towns as service centres;</p> <p>Measures to encourage people to shop in the area;</p> <p>Enhancement of local distinctiveness;</p> <p>Protection of the retail function in the heart of the town centres.</p>						
<p>Summary of significant effects of policy: Policy C1 Creating Sustainable Communities supports proposals which protect, retain or enhance existing community facilities in towns and villages and includes measures to resist proposals that involve the loss of local facilities. There is a requirement to incorporate the infrastructure required as a result of any scheme or to make provision for financial contributions. Significant positive effects for community cohesion, neighbourhood quality and access to services are anticipated from the policy intent to ensure that new development contributes to the creation of safe, livable and mixed communities with good access to jobs and key services including recreation facilities. Further positive effects are likely to arise from new community facilities, particularly in smaller villages and other rural areas contributing to the viability of communities. Creation of sustainable communities is likely to lead to improvements in health and well-being in the long term. No significant negative effects were predicted however a policy improvement was identified as follows.</p> <p>Mitigation: Policy should clarify that community infrastructure includes health services.</p>

	17	Sustainable economic growth and diversification of the economy	Policy intent is to contribute to the diversification of the local economy and tourist development through provision of new facilities as part of the GI network. Overall the effect has been assessed as largely neutral.	0	0/+	0/+	<p>Likelihood/certainty of effect occurring: Likely</p> <p>Geographical scale of effect: Local Plan area</p> <p>Temporary / Permanent Assumptions made: Development of high quality and multi-functional GI network will attract visitors and provide recreation opportunities.</p>
	18	High and stable level of employment	Overall the effect has been assessed as neutral.	0	0	0	<p>Likelihood/certainty of effect occurring: Uncertain</p> <p>Geographical scale of effect: Local Plan area</p> <p>Temporary / Permanent Assumptions made: Development of high quality and multi-functional GI network will attract visitors and provide recreation opportunities.</p>

SA Framework		C3 Green Infrastructure				
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
<p>support to help retain and develop a local workforce;</p> <p>Maintaining the vitality and viability of the towns and protection of the towns as service centres;</p> <p>Measures to encourage people to shop in the area;</p> <p>Enhancement of local distinctiveness;</p> <p>Protection of the retail function in the heart of the town centres.</p>						
<p>Summary of significant effects of policy: Policy C3 Green Infrastructure is supported by a Green Infrastructure strategy and recognises that the District's wide range of existing and potential green infrastructure assets will benefit from a strategic approach ensuring that adequate protection is given to key features; areas are identified where new linkages and assets need to be created and guidance and management is provided for development that may impact on such areas. Significant positive effects on a wide range of SA objectives were identified, including for health and well-being; creating and maintaining high quality local neighbourhoods and improving connectivity to a range of facilities via helping to establish or improve green travel links. Further positive effects on biodiversity and geodiversity are likely to arise from support for the creation of new wildlife habitats; enhancement of existing sites and creating links between them. Use of green infrastructure for effective flood risk and waterways management is likely to result in positive effects on water quality and climate change adaptation. Development of a high quality and multi-functional GI network that attracts visitors and provides recreation opportunities is also likely to have positive effects on sustainable economic growth and diversification of the economy. No significant negative effects were predicted however policy improvements were identified as follows:</p>						

SA Framework		C3 Green Infrastructure				
Summary of Baseline Situation	SA Objective	Predicted Effects			Assumptions and mitigation	
		Nature of Effect	ST	MT	LT	Justification for assessment
<p>Mitigation: Policy should require support for improving green travel links to existing and new services and facilities, as well as formal and informal recreation opportunities, and should refer to support for the development of ecological networks in line with the GI strategy. The Policy should also explicitly include geodiversity as a green infrastructure asset.</p>

9 Appendix 2: Equality Action Plan	61

Introduction

1 Introduction

1.1 The purpose of this report is to show how the Council has complied with the Public Sector Equality Duty (set out in the Equality Act 2010)⁽¹⁾ in the assessment of Staffordshire Moorland's emerging Local Plan. The broad purpose of the Equality Duty is to integrate consideration of equality and good relations into the day-to-day business of public authorities.

1.2 The Equality Impact Assessment (EqIA) has considered the impact, or likely impact, of the development strategy, policies and proposals outlined in the Local Plan on different equality groups, including women, people from ethnic minorities and those with disabilities. The findings of the assessment have been summarised to provide an overall assessment of the Staffordshire Moorlands Local Plan Preferred Options July 2017.

1.3 An EqIA is a tool to assist public authorities with assessing the impact, or likely impact, of their policies and functions on people who share a relevant protected characteristic. It assists authorities with identifying adverse outcomes and steps that can be taken to mitigate adverse effects. EqIAs help public authorities meet the requirements of their equality duties and to identify active steps to promote equality.

1.4 One of the 12 core planning principles set out in paragraph 17 of the National Planning Policy Framework (NPPF) is that local planning authorities should take account of and support local strategies to improve health, social and cultural wellbeing for all, and deliver sufficient community and cultural facilities to meet local needs. It is considered that the EqIA can help inform this process by understanding the needs of different community groups and how planning policies and decisions can affect them.

1.5 The Council's Statement of Community Involvement, adopted in April 2016, details Staffordshire Moorlands District Council policy and guidance on public consultation, with a commitment to promoting equal opportunities.

1.6 This report:

- Identifies the Council's actions under the Equality Duty that will affect or influence the Local Plan;
- Provides baseline information on issues and needs related to each equality group;
- Considers key equality issues of the Local Plan;
- Sets out an appropriate methodology and framework for the EqIA assessment; and
- Documents the results of the appraisal of the Local Plan Preferred Options July 2017.

1.7 Please note that this Equality Impact Assessment Report has been prepared alongside the Local Plan Preferred Options July 2017 and its findings have been used to help inform the preferred options policies and proposals. As work continues to refine the policies and proposals set out in the Staffordshire Moorlands Local Plan, the Equality Impact Assessment will be updated to ensure its appraisal of the Local Plan contributes to the final document. The final Equality Impact Assessment report will be published alongside the adopted Local Plan.

Stages of Local Plan Preparation

Public Sector Equality Duty

2 Public Sector Equality Duty

2.1 The Equality Act 2010 places duties on the Council; it requires all councils to publish information about their compliance with the Act. Information and guidance about the Act can be found at the Equalities and Human Rights website:

<https://www.equalityhumanrights.com/en/advice-and-guidance/equality-act-guidance>

2.2 The Equality Duty does not impose a legal requirement to conduct an EqIA. However, it is considered that the EqIA is an important tool in demonstrating that the Local Plan decision making process has involved recognition of the three aims of the Equality Duty. These are to:

- Eliminate unlawful discrimination;
- Advance equality of opportunity; and
- Foster good relations.

2.3 The EqIA is a tool for systematically testing out new plans, policies and developments and reviewing services to make sure that actual or potential barriers have been identified and removed and opportunities to promote equality are maximised. The scope of the EqIA follows the scope of the Equality Duty, covering the following protected characteristics: race, disability, gender, gender reassignment, age, sexual orientation, religion or belief, pregnancy and maternity and social deprivation. People with these characteristics are considered under the Act to be "protected groups".

Staffordshire Moorlands District Council and the Equality Duty

2.4 In April 2010 Staffordshire Moorlands published "Bringing People Together" - its joint strategy for community cohesion and inclusion in High Peak and Staffordshire Moorlands. The strategy shows how Staffordshire Moorlands District Council will go about achieving community cohesion and social inclusion for the benefit of all residents.

2.5 The Strategy notes that effective community cohesion leads to stable and well integrated communities with residents who feel that people from different backgrounds get on well together. The strategy is based on the desire to build safer and stronger neighbourhoods and is linked to a shared vision for the alliance between Staffordshire Moorlands and High Peak Borough Council to deliver key services that will improve the quality of people's lives in the two authorities and deliver greater value for money.

2.6 Staffordshire Moorlands Equality and Diversity Policy was approved in January 2015 and sets out how the Council will go about fulfilling its Equality Duty, detailing the expectations for how everyone working for, or involved at, the Council will work to achieve our aims⁽²⁾.

2.7 The Council has published its Equality and Diversity Scheme: Action Plan 2015 with Corporate Equality Objectives: 2015 -16. "Equality" refers to treating people fairly. "Diversity" refers to valuing people's differences. The Council considers that getting its approach to equality and diversity right will bring significant benefits for the communities the Council serves, its customers and workforce.

2.8 The equality action plan is reproduced in Appendix 2 of this Report.

The Staffordshire Moorlands Local Plan

3 The Staffordshire Moorlands Local Plan

3.1 The Local Plan, when it is fully adopted, will be the Development Plan for Staffordshire Moorlands and its policies will form the basis for planning decisions in the District. It sets out the vision, objectives, spatial strategy and policies for the development of Staffordshire Moorlands for the period up to 2031. This means that the Local Plan covers a range of matters including:

- How many new homes will be required and where they should be located;
- How much employment land is needed and where it should be provided;
- Protecting and improving important open areas and providing new ones;
- Provision of new transport infrastructure including roads, cycle routes and footpaths; and
- How town centres and community facilities in the District could be improved.

3.2 The Local Plan identifies overarching objectives for spatial planning in Staffordshire Moorlands. It will be used by everyone who wants to see how the District will change and what new development is envisaged over the next 15 years. The Local Plan also identifies sites that will accommodate most of the development intended.

3.3 This Report provides an account of the Equality Impact Assessment of the Staffordshire Moorlands Local Plan Preferred Options 2017.

Methodology

4 Methodology

4.1 Staffordshire Moorlands District Council has undertaken an Equality Impact Assessment of the emerging Local Plan in two stages:

- Stage 1: Initial Equality Impact Assessment.
- Stage 2: Full Equality Impact Assessment.

4.2 Baseline data is included at Appendix 1 of this report.

Initial Equality Impact Assessment

4.3 The Initial Equality Impact Assessment was carried out in July 2014 and is recorded in section 7 of this report. The format of the Initial Assessment was the completion of a standard proforma to screen the draft Local Plan at issues and options stage to help identify if there was a risk of any potential differential impact on any of the protected groups from implementing the provisions of the Plan.

4.4 The Initial Equality Impact Assessment concluded that there was potential for the emerging Local Plan to have a differential impact on identified equality groups and a full Impact Assessment would be required.

4.5 One of the key findings of the Initial EqIA was that not enough was known about some protected characteristic groups at a local level, and that further research was necessary before a full EqIA could be undertaken, in order to ensure that no issues were missed.

Full Equality Impact Assessment

4.6 In 2016 Staffordshire Moorlands District Council commissioned consultants Engaging Communities to speak to people about their experiences and needs in relation to the Council's responsibilities under the Equality Duty. The purpose of the research was to reflect the experiences of five protected characteristic groups - race, religion, disability, sexual orientation and gender reassignment- living in and around Staffordshire Moorlands and High Peak.

4.7 Focus groups were used in the first instance to gain insight from members of the protected characteristic groups. It was considered that the advantage of using focus groups was that it provided an opportunity to explore the attitudes, feelings, beliefs, experiences and reactions of participants in ways that are not feasible with other methods.

4.8 In addition to this, semi-structured interviews were carried out with some participants dependent on their preference. The informal atmosphere of a semi-structured interview was considered to encourage openness from participants and also offer the researcher flexibility to adjust the questions and change direction as an interview progressed.

4.9 This was a qualitative research project meaning that there were a small number of participants and the findings, whilst not statistically analysed, have been analysed by themes. There was a focus on five protected characteristic groups: race, religion, disability, sexual orientation and gender reassignment. However there was a reluctance amongst people from two protected characteristic groups in particular (race and religion) to take part in the research and this means that the findings have been more influenced by experiences of people from other characteristic groups.

4.10 Key findings from the research are set out in Table 6.1. Recommendations for future action by the Council were also included in the report. Those with a relevance to planning are as follows:

- Develop a programme of engagement with specific interest groups (e.g. race and religion) in order to engender trust and good relationships before embarking on any further research to establish needs; and
- Give consideration of the types of properties that are being developed in the locality and the make up of household types in those properties.

4.11 The District Council has previously forged links with community groups and people who fall within some of the protected characteristic groups - older people, younger people and those with disabilities. However, many of these groups no longer exist. Looking at the issues raised through the outreach work undertaken as part of the Council's Core Strategy preparation in 2007/8, it is very likely that these are still relevant now, so they have been included in Table 6.1.

4.12 Using the findings from the Engaging Communities research, and evidence from the EqlA of the Core Strategy, a full Equality Impact Assessment was undertaken in early 2017. This assessment took the issues and needs raised by the protected groups and assessed the Local Plan's preferred option policies and proposals against them to identify the nature of any likely impact. The results of this appraisal contributed to the plan making process by helping to refine the emerging Local Plan in readiness for public consultation held in July 2017.

4.13 The assessment tables are included at section 6 of this report. The conclusions are summarised at section 5.

4.14 Chapter 6 and in particular Table 6.1, show the needs and issues identified by the protected groups from research conducted by the Council and the relationship of these issues to the Local Plan. This table also records whether a health impact is likely.

4.15 The needs and issues raised by representatives of protected groups in Table 6.1 were then grouped and summarised into a number of key themes as follows. In order to address the key equality impacts identified, the Local Plan will need to:

- Deliver future housing according to the diversity of local needs, including new homes that are affordable and adaptable as well as extra care housing where needed.
- Provide access to employment opportunities, from all sectors of the economy and located close to where people live.
- Deliver safe and inclusive communities.
- Ensure appropriate levels of community infrastructure, including facilities for health and recreation, that are well located and readily accessible.

4.16 These key equality themes were used as criteria to assess the potential impact of the policies and objectives in the emerging Staffordshire Moorlands Local Plan. The results of the assessment are set out in Table 6.2.

Conclusions

5 Conclusions

5.1 The assessment tables set out in Chapter 6 have been used to help identify the main equality impacts arising from the policies and proposals of the Staffordshire Moorlands Local Plan. Overall, the assessment demonstrates that the Local Plan has addressed the key issues raised by different communities:

- Delivering future housing according to the diversity of local needs, including new homes that are affordable and adaptable as well as extra care housing where needed.
- Providing access to employment opportunities, from all sectors of the economy and located close to where people live.
- Delivering safe and inclusive communities.
- Ensuring appropriate levels of community infrastructure, including facilities for health and recreation, that are well located and readily accessible.

Housing Needs

5.2 Access to affordable housing including private rental fees is an issue for all equality groups. The main risks associated with the differential impacts identified include:

- Deterioration of rural communities as people are priced out of the housing market and are forced to move away from the area.
- Ageing of population as young people / first time buyers cannot afford housing in the Local Plan area and are forced to move away.
- Lack of secure and suitable accommodation for gypsies and travellers.
- Shortage of appropriate housing for older and disabled people through inflexible housing stock and a lack of suitably designed dwellings.
- Shortage of housing to meet the needs of disadvantaged communities and risk of further disadvantage by not introducing an appropriate mix of housing types and tenures into those disadvantaged areas.

5.3 These risks have been addressed in the Staffordshire Moorlands Local Plan as follows:

1. The **Spatial Vision** for the Staffordshire Moorlands includes: "emphasis on the promotion of sustainable communities with access to suitable housing and facilities and services". The visions for Biddulph and Cheadle in particular identify housing as a key theme. In Biddulph reference is made to a greater variety of housing types and tenures. In Cheadle a focus on growth in housing provision is included in the vision.
2. Local Plan **objective SO4** "To provide new housing that is affordable, desirable, well-designed and meets the needs of residents of the Moorlands".
3. **Policy SS1** 'Development Principles' includes reference to provision of a 'mix of house types and tenures of quality affordable homes'.
4. The Leek, Biddulph, Cheadle and Rural Areas Area Strategies (**Policies SS6 - SS9 inclusive**), all specifically mention affordable housing and house types to meet the needs of their populations.
5. **Policy H3 Affordable Housing**: The provision of affordable housing will be delivered through a number of detailed measures.

6. **Policy H5 Gypsy and Traveller Sites and Sites for Travelling Showpeople:** The Council will review the requirement to provide sites for gypsies and travellers and travelling showpeople through the use of evidence.
7. **Policy H1 New Housing Development:** New housing development should provide for a mix of housing sizes, types and tenure including a proportion of affordable housing, including starter homes, and where appropriate housing for special groups, to meet the needs and aspirations of the current and future population having regard to the Area Strategies. All development will be assessed according to the extent to which it provides for high quality, sustainable housing and to which it meets identified housing needs, having regard to the location of the development, the characteristics of the site and the economics of provision.

In addition:

- Housing for special groups, particularly for older people, should meet a genuine and proven housing need and demand and be of a scale and in a location which is appropriate to its needs.
- Housing proposals of 10 dwellings or more will be required to provide a mix of housing in terms of size, type and tenure on the site. The final mix will be negotiated with the developer based on housing needs as informed by the Strategic Housing Market Assessment and other relevant factors such as available supply and market demand.
- All housing development should be at the most appropriate density compatible with the site and its location, and with the character of the surrounding area.
- Residential development and redevelopment on unidentified (windfall) sites will be permitted within the development boundaries of towns and larger villages and limited infill permitted in smaller villages.
- All new dwellings should aim to provide flexible accommodation which is capable of future adaptation by seeking to achieve adequate internal space for the intended number of occupants in accordance with the Nationally Described Space standard and delivered to meet accessibility standards set out in the Optional Requirement M4(2) of Part M of the Building Regulations.
- All new dwellings must be of sufficient size to provide satisfactory levels of amenity for future occupiers of the dwellings whilst respecting the privacy and amenity of occupiers of existing dwellings.

Employment Opportunities

5.4 The availability of local employment opportunities from all sectors of the economy was identified as a key equality issue. The main risks associated with the differential impacts identified include:

- Decline in the financial security of communities through a lack of employment opportunities and access to work for all groups.

- Further financial deprivation resulting in a negative impact on the well-being of residents - putting pressure on social services - through a lack of accessible employment opportunities in deprived areas.
- Marginalisation of people with accessibility needs if employers fail to comply with equalities regulations that require employment opportunities to be accessible to disabled people.

5.5 These risks have been addressed in the Staffordshire Moorlands Local Plan as follows:

1. Local Plan **objective SO3**. "To develop and diversify in a sustainable manner the District's economy and meet local employment needs in the towns and villages".
2. **Policy SS1 'Development Principles'** includes "maintain the local economy and provide for a modest increase in jobs with an educated, skilled and flexible workforce".
3. The Leek, Biddulph, Cheadle Area Strategies (**Policies SS6 - SS8 inclusive**), all set out measures to create employment growth and increase the diversity of employment opportunities to meet existing and future needs. In the villages (**Policies SS10 - SS12**), measures are set out to meet limited employment needs to maintain the rural economy with emphasis on supporting the development of appropriate ICT and new means of communications to enable homeworking and small businesses reliant on e-technology.
4. **Policy E1 'New Employment Development'**, includes the wording "To ensure that the District's workforce is suitably skilled, the Council will, where appropriate, seek to enter into agreements with developers to contribute towards training programmes and employment support and employment access schemes".

Community Safety

5.6 Community safety is a significant issue for all groups and this highlights the importance of living in inclusive communities for their quality of life.

5.7 The main risks associated with the differential impacts identified include:

- Marginalisation - if communities are not designed to be inclusive.
- Reduced opportunities for social contact, for older and disabled people in particular, as a result of lack of appropriate local services, or the means of accessing those services and facilities.
- Discrimination from lack of ready access to essential community infrastructure such as that for health care.
- Build up of focused areas of disadvantage from the concentration of particular types of housing, e.g. Social rented, resulting in reduced interaction between different sectors of the community.
- Limited social interaction with an associated negative impact upon community cohesion as a consequence of people not feeling safe within their local area.

5.8 These risks have been addressed in the Staffordshire Moorlands Local Plan by:

1. **Spatial Objective SO6:** To maintain and promote sustainable regenerated rural areas and communities with access to employment opportunities, housing and services for all. **Spatial Objective SO10:** To deliver sustainable, inclusive, healthy and safe communities.

2. **Policy SS1 'Development Principles'** includes an expectation from the Council that "the development and use of land to contribute positively to the social, economic and environmental improvement of the Staffordshire Moorlands in terms of delivering, in partnership with other agencies and services ... a healthy, safe, attractive and well-maintained environment".
3. **Policy C1 'Creating Sustainable Communities'**: the Council will support proposals which protect, retain or enhance existing community facilities and only permit new development where the utility, transport and community infrastructure necessary to serve it is either available, or will be made available by the time it is needed. Development proposals will also be required to incorporate design features and layouts that will help to reduce crime and the fear of crime and support inclusive communities.
4. **Policy H1 'New Housing Development'**: Housing proposals of 10 dwellings or more will be required to provide a mix of housing in terms of size, type and tenure on the site. The final mix will be negotiated with the developer based on housing needs as informed by the Strategic Housing Market Assessment and other relevant factors such as available supply and market demand.
5. **Policy DC1 'Design Considerations'** requires all new development (amongst other things) to: be well designed and reinforce local distinctiveness by positively contributing to and complementing the special character and heritage of the area and incorporate "designing out crime" initiatives, as well as ensuring, where appropriate, equality of access and use for all sections of the community.

Access to Facilities

5.9 Ensuring appropriate levels of community infrastructure, including facilities for health and recreation, that are well located and readily accessible is a significant issue for all groups.

5.10 The main risks associated with the differential impacts identified include:

- Increased anti-social behaviour amongst younger members of the community without accessible facilities for sport and recreation and other "things to do".
- Discrimination in terms of physical access to buildings for disabled people. All public buildings including retail development needs to be accessible to wheelchair users and those with poor mobility.
- Isolation of rural communities and elderly residents though requirement for increased reliance on use of a private car, if essential services and facilities are not accessible by walking, cycling or by public transport.

5.11 These risks have been addressed in the Staffordshire Moorlands Local Plan by:

1. **Policy SS1 Development Principles** expects development to contribute positively to the social, economic and environmental improvement of the District in partnership with other agencies and services. All proposals for development will be considered in the context of the District-wide spatial strategy. Significant positive effects include the likelihood of improvements to the social and environmental quality of the neighbourhood and improved access to jobs, services and facilities.
2. **Policy SS15 Planning Obligations and Community Infrastructure Levy** provides clarity regarding the Council's approach to developer contributions. The policy could enable the provision of new, or the significant enhancement of existing, community

facilities and services and this is likely to make a positive contribution towards community cohesion and the quality of where people work and live.

3. **Policy E1 New Employment Development** will ensure that there is a choice of sustainably located employment sites, attractive to developers and operators and appropriate to market needs.
4. **Policy C1 Creating Sustainable Communities** supports proposals which protect, retain or enhance existing community facilities in towns and villages and includes measures to resist proposals that involve the loss of local facilities. There is a requirement to incorporate the infrastructure required as a result of any scheme or to make provision for financial contributions.
5. **Policy C2 Sport, Recreation and Open Space** provides continued protection from development for existing areas identified for recreational land and buildings including school playing fields and amenity space and supports the provision of new sport, recreation and open space facilities.
6. **Policy DC1 'Design Considerations'** requires all new development to be well designed, ensuring equality of access and use for everyone.
7. **Policy T1 Development and Sustainable Transport** supports development which reduces reliance on the private car for journeys, reduces the need to travel generally and helps to deliver more sustainable settlement patterns.

Assessment Tables

6 Assessment Tables

6.1 The table below sets out the needs and issues identified by the protected groups from research conducted by the Council and the relationship of these issues to the Local Plan. This table also records whether a health impact is likely.

Protected Group	Nature of Consultation	Needs / Issues raised	Links with Spatial Planning	Planning Policy - mitigation	Health Impact?
Race (including Gypsies & Travellers, Mixed Ethnic groups, Asian, Black and White Ethnic Groups)	Council commissioned research - 'Respecting All: the experiences of five protected characteristic groups under the equality duty' November 2016	The lack of secure and suitable accommodation is one of the principle inequalities that impact on Traveller's lives and that lack of accommodation has a profound effect on other aspects of their lives such as access to employment, education and health services.	Provision of land and / or appropriate policy for traveller site(s).	Policy H5 covers Gypsy and Traveller Sites and Sites for Travelling Showpeople	Y
		Fear of harassment / hate crime	Design of development - creation of cohesive and balanced communities.	Policy DC1 covering design considerations and Policy C1 covering the creation of sustainable communities through support for new facilities and resistance to the loss of existing facilities.	Y
Religion (including Christian, Muslim, Buddhist and Hindu)	Council commissioned research - 'Respecting All: the experiences of	Local communities perceived to be insular and not welcoming.	Design of development - creation of cohesive and balanced communities. Access to community centres and facilities.	Policy C1 covering the creation of sustainable communities through support for new facilities and resistance to the loss of existing facilities.	Y

Poverty (especially Biddulph East and Leek North)	Staffordshire Moorlands Locality Profile, published by Staffordshire County Council in October 2016	Access to employment opportunities	Provision of land for employment, particularly in areas of most need.	Policy SS3 to ensure that sufficient land, appropriately located, is made available for businesses.	Y
		Access to affordable housing options	Provision of land for housing, including affordable homes.	Policy H3 to maximise opportunities for delivery of affordable homes.	Y
		Access to community facilities including health services	Location of new developments close to existing facilities, including health services.	Area strategies (Policies SS6 - SS12 inclusive) to implement the spatial strategy, guiding development to where local services are available and the need for travel is minimised.	Y
Issues raised by people in equality groups 513	Council commissioned research - 'Respecting All: the experiences of five protected characteristic groups under the equality duty' November 2016	For those people living in Staffordshire Moorlands there was a sense that employment opportunities were centred more in Stoke-on-Trent and this in itself created barriers in terms of travel and also access to employment support and advice. Reference was made to the job centre in the town having closed down and that there had at one time been a 'peripatetic job centre bus.'	Provision of land for employment	Policy SS3 details future distribution of employment development in the Staffordshire Moorlands. More specifically, Policy SS14 'Northern Gateway Opportunity Site' promotes employment generating uses on this site.	N

Protected Group	Nature of Consultation	Needs / Issues raised	Links with Spatial Planning	Planning Policy - mitigation	Health Impact?
		Access to affordable housing including private rental fees.	Provision of land / policy measures to increase the supply of affordable homes	Policy H1 requires provision of a mix of housing sizes, types and tenure including a proportion of affordable housing. Policy H2 lists the proposed housing allocations in Leek, Biddulph, Cheadle and the rural areas.	Y

Table 6.1 Needs and Issues Identified by Protected Groups and the relationship to the Local Plan

1. Access in the planning policy context is the accessibility of a site to services and facilities NOT access to buildings e.g. By wheelchair - this is covered separately in Building Regulations

6.2 The needs and issues raised by representatives of protected groups - set out in the table above - have been grouped and summarised into a number of key themes as follows. In order to address the key equality impacts identified, the Local Plan should:

1. **Housing** - Deliver future housing according to the diversity of local needs, including new homes that are affordable and adaptable as well as extra care housing where needed.
2. **Employment** - Provide access to employment opportunities, from all sectors of the economy and located close to where people live.
3. **Community Safety** - Deliver safe and inclusive communities.
4. **Access to Facilities** - Ensure appropriate levels of community infrastructure, including facilities for health and recreation, that are well located and readily accessible.

6.3 These key equality themes have been used as criteria to assess the potential impact of the policies and objectives in the emerging Staffordshire Moorlands Local Plan. The results of the assessment are set out in the table below.

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
<p>Spatial Vision for Staffordshire Moorlands</p> <p style="text-align: center;">Page 2516</p>	<p>Positive for all equality groups</p>	<p>All residents will benefit from the spatial vision; of particular relevance to the key equality themes are:</p> <ul style="list-style-type: none"> ● Emphasis on the promotion of sustainable communities with access to suitable housing and facilities and services; ● Maintenance of the District's economy with a more flexible and pro-active approach to employment development and raising skills and opportunities; ● Meeting specific needs of younger and older people; ● Improving the diversity and quality of the District's natural and historic assets; and ● Improved town centres - welcoming, safe and appealing, quality and range of shops, services and facilities. <p>No references to health or the Green Infrastructure Strategy. These would be beneficial due to ageing population and childhood obesity problem.</p>
<p>Vision for Leek</p>	<p>Positive for all equality groups</p>	<p>All residents will benefit from the vision for Leek, of particular relevance to the key equality themes are:</p> <ul style="list-style-type: none"> ● Leek's role as an increasingly important civic and service centre for its population; ● Improvement of diversity of employment opportunities, facilities and services; and ● Regeneration of underused areas providing new development opportunities. <p>No references to open space or the Green Infrastructure Strategy both of which could help to improve health and more specifically the childhood obesity problem in parts of the town.</p>

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
<p>Vision for Biddulph</p>	<p>Positive for all equality groups</p>	<p>All residents will benefit from the vision for Biddulph, of particular relevance to the key equality themes are:</p> <ul style="list-style-type: none"> ● Biddulph's role as a significant service centre for its residents; ● Reducing levels of deprivation in Biddulph East; ● Improved town centre environment; ● Expanded local economy; and ● A greater variety of housing types and tenures. <p>No references to open space or the Green Infrastructure Strategy both of which could help to improve health and more specifically the childhood obesity problem in parts of the town.</p>
<p>Vision for Cheadle Page 2517</p>	<p>Positive for all equality groups</p>	<p>All residents will benefit from the vision for Cheadle, of particular relevance to the key equality themes are:</p> <ul style="list-style-type: none"> ● Cheadle will become a more sustainable settlement, better able to meet its own needs, enhancing and enlarging its role as a significant service centre for the local population; ● a focus on growth in housing and employment provision with significant complementary investment in the town's social and physical infrastructure; ● Improved town centre environment; ● Expanded local economy; and ● Improved local public and sustainable transport links.

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
Vision for Rural Areas	Positive for all equality groups	<p>No references to open space or the Green Infrastructure Strategy both of which could help to improve health and more specifically the childhood obesity problem in parts of the town.</p> <p>All residents will benefit from the vision for the rural areas, of particular relevance to the key equality themes are:</p> <ul style="list-style-type: none"> ● Larger villages to be the rural centres for services, facilities and jobs acting to sustain the rural areas; ● Smaller village communities to have a range of affordable housing opportunities to meet local needs and improved access to community services; ● Diverse local economy to provide a range of job opportunities and support agriculture; and ● Protection of District's heritage and landscape character. <p>No references to open space or the Green Infrastructure Strategy both of which could help to improve health and more specifically the childhood obesity problem in some rural wards.</p>
Aims & Objectives	Positive for all equality groups	<p>All residents will benefit from Strategic Aims and Objectives, of particular relevance to the key equality themes are:</p> <ul style="list-style-type: none"> ● SA2 (meeting the needs of our communities) and SA3 (encouraging a strong, prosperous and diverse economy); ● Most of the Objectives relate in some way to the key equality themes (SO3, SO4, SO5, SO6, SO7, SO10 and SO11).

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
Development Approach	Positive for all equality groups	Most of development to take place in larger settlements which will help to support their services and facilities. Also allows for development around the District including development in smaller settlements to meet local needs.
Policy SS1 Development Principles	Positive for all equality groups	<p>This policy expects the development and use of land to contribute positively to the social, economic and environmental improvement of the Staffordshire Moorlands. Of particular relevance to the key equality themes are references to:</p> <ul style="list-style-type: none"> ● A mix of house types and tenures of quality affordable homes; ● Quality local services; ● Easy access to jobs, services and facilities for all sections of the community; ● Increased economic prosperity; ● Healthy and safe environment; and ● Sustainable location of development.
Policy SS2 Presumption in Favour of Sustainable Development	Positive for all equality groups	This policy reflects the presumption in favour of sustainable development set out in national planning policy. Of particular relevance to the key equality themes are that 'development that improves the economic, social and environmental conditions in the area' will be approved.
Policy SS3 Future Provision and Distribution of Development	Positive for Young, Older, and those with disabilities. No differential impacts for other equalities groups.	The policy provides a framework to manage the scale of development within the plan area. New development is proposed to be distributed widely across the District.

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
Policy SS4 Strategic Housing Development	Potential Negative Impact Identified	<p>The policy provides for at least 6080 dwellings over the period 2012 to 2031 at an overall average annual development rate of 320 dwellings. A potentially negative impact on delivering future housing according to local needs.</p> <p>The February 2017 update to the Strategic Housing Market Assessment (SHMA) has recommended a range for the District's objectively assessed need of between 235 to 330 new dwellings per year over the plan period. This policy may not fully address the problem of affordable housing need.</p>
Policy SS5 Town	No differential impacts identified	<p>This policy (along with Policies SS9-SS12 inclusive) identifies the settlement hierarchy and applies the development rates set out in Policy SS3.</p>
Policy SS6 Leek Area Strategy	Positive for all equality groups	<p>The policy seeks to consolidate the growth of Leek by (amongst other things):</p> <ul style="list-style-type: none"> meeting the town's housing and community needs (making specific reference to increasing the range of available and affordable house types, especially for first time buyers and older people; and increasing and improving the provision of educational, health and community facilities and enabling further shared use of facilities.), and creating employment growth and increasing the diversity of employment opportunities to meet existing and future needs. <p>There are no references to reducing levels of deprivation in Leek North. There are no specific references to delivering safe and inclusive communities or helping to tackle the childhood obesity problem (e.g. Through implementation of the Green Infrastructure Strategy).</p>

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
<p>Policy SS7 Biddulph Area Strategy</p>	<p>Positive for all equality groups</p>	<p>The policy seeks to enhance the role of Biddulph by (amongst other things):</p> <ul style="list-style-type: none"> ● increasing the range of available and affordable house types, (including starter homes) especially for first time buyers, families and older people; including extra care housing; ● Requiring sites within the urban area to be in locations across the town which have good accessibility to services and facilities with encouragement being given to previously developed (brownfield) sites; ● supporting the retention and growth of existing businesses within the town and providing opportunities for new enterprises and businesses by promoting further development; ● increasing the provision of educational, health and community facilities including a new school and new food store and improving public transport connections to the town centre. Also, protecting, increasing and improving the provision and accessibility of open space, sport and recreational facilities. <p>There are no specific references to delivering safe and inclusive communities or helping to tackle the childhood obesity problem (e.g. Through implementation of the Green Infrastructure Strategy).</p>
<p>Policy SS8 Cheadle Area Strategy</p>	<p>Positive for all equality groups</p>	<p>The policy seeks to expand the role of Cheadle by (amongst other things):</p> <ul style="list-style-type: none"> ● increasing the range of available and affordable house types and higher market housing, especially for first time buyers and families; ● supporting the retention and growth of JCB and other existing businesses within the town and improving and intensifying the use of existing employment areas at New Haden/Brookhouses; ● providing additional educational, health and community facilities, including a new primary school to serve north Cheadle;

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
<p>Policy SS9 Rural Areas</p>	<p>Positive for all equality groups</p>	<ul style="list-style-type: none"> ● protecting, increasing and improving the provision and accessibility of open space, sport and recreational facilities; ● improving pedestrian and cycle links across the town and into the countryside and improving public transport links between the town and other main settlements. <p>There are no references to the housing needs of older people in Cheadle when baseline information shows that Cheadle South East has a high proportion of lone pensioner households and the population growth of the District will be skewed towards older people by 2025.</p> <p>There are no specific references to delivering safe and inclusive communities or helping to tackle the childhood obesity problem (e.g. Through implementation of the Green Infrastructure Strategy).</p>
		<ol style="list-style-type: none"> 1. Housing - Deliver future housing according to the diversity of local needs, including new homes that are affordable and adaptable as well as extra care housing where needed. 2. Employment - Provide access to employment opportunities, from all sectors of the economy and located close to where people live. 3. Community Safety - Deliver safe and inclusive communities. 4. Access to Facilities - Ensure appropriate levels of community infrastructure, including facilities for health and recreation, that are well located and readily accessible. <p>There are specific references to helping to tackle the childhood obesity problem.</p>

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
<p>Policy SS10 Larger Villages Area Strategy</p>	<p>Positive for all equality groups</p>	<p>Policy lists villages categorised as 'larger villages' in the hierarchy and seeks to retain and enhance their roles as rural service centres. They are intended to provide for the bulk of the local housing needs of the rural areas and also for limited employment needs. This would have a positive impact on the key equality theme of delivering future housing according to the diversity of local needs, providing access to employment opportunities, from all sectors of the economy and located close to where people live and ensuring appropriate levels of community infrastructure.</p>
<p>Policy SS11 Smaller Villages Area Strategy</p>	<p>Positive for all equality groups</p>	<p>Policy lists villages categorised as 'smaller villages' in the hierarchy and seeks to protect and enable services and facilities which are essential to sustain rural living including housing which meets a need (including affordable housing) and small scale employment development/ diversification. This would have a positive impact on the key equality theme of delivering future housing according to the diversity of local needs, providing access to employment opportunities, from all sectors of the economy and located close to where people live and ensuring appropriate levels of community infrastructure.</p>
<p>Policy SS12 Other Rural Areas Strategy</p>	<p>Positive for all equality groups</p>	<p>Policy seeks to restrict new development in the open countryside. It allows for meeting local housing needs, local community facility needs and sustaining the rural economy, supports the enhancement and conservation of the countryside and identifies major developed areas for regeneration. Positives - essential need rural housing, rural economy, community facilities, limiting high travel uses not well served by public transport, uses on major developed sites e.g. Extra care on anzio.</p>
<p>Policy SS13 Churnet Valley Strategy</p>	<p>Positive for all equality groups</p>	<p>Policy identifies the Churnet Valley for sustainable tourism and rural regeneration. It seeks to facilitate more visitors to the area, through supporting increased visitor accommodation and attractions as well as enhancing and protecting the landscape character and heritage</p>

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
Policy SS14 Northern Gateway Opportunity Site	Positive for all equality groups	<p>assets of the area. The policy also supports measures to improve connectivity and accessibility to and within the Churnet Valley by sustainable transport. This would have a positive impact on the key equality theme of employment - increased activity in the tourism industry is likely to lead to an increased number and type of jobs created in rural parts of the District (e.g. part time and full time work). If connectivity is improved to and within the Churnet Valley, this would have a positive impact on the 'access to facilities' theme. The wider community would also share these positive impacts (NB the policy emphasises that any development should be of an appropriate scale with high design standards to enhance the heritage, landscape and biodiversity of the area).</p> <p>Policy identifies a large site at Blythe Bridge for a mixed use development scheme, with the principle use being for employment and employment generating uses and also the possibility of some residential development. This would have a positive impact on the key equality theme of access to employment opportunities and is likely to have a positive impact (subject to further detail) on the access to facilities theme and the delivery of future housing theme. Development of this area with a focus on economic uses will also have a positive impact on the wider community.</p> <p>There are no references to the Green Infrastructure Strategy (with its links to health benefits and helping to tackle the obesity problem).</p>
Policy SS15 Planning Obligations and Community Infrastructure Levy	No differential impacts identified	Policy provides guidance on developer contributions. No differential impacts were identified.

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
Policy SD1 Sustainable Use of Resources	Positive in particular for those on low incomes	Policy relates to strategies for mitigation and adaption to climate change. Improvements to energy efficiency will benefit everyone, but in particular there will be a positive impact for those on low incomes.
Policy SD2 Renewable/Low-Carbon Energy	No differential impacts identified	Policy relates to the consideration of renewable or low-carbon energy schemes. No differential impacts were identified.
Policy SD3 Sustainability Measures in Development	Positive in particular for those on low incomes	Policy relates to sustainability measures in new development. Improvements to energy efficiency in new developments will benefit everyone, but in particular there will be a positive impact for those on low incomes.
Policy SD4 Pollution	No differential impacts identified	Policy seeks to protect people and the environment from unsafe, unhealthy and polluted environments. Will help to deliver safe and inclusive communities.
Policy SD5 Flood Risk	No differential impacts identified	Policy seeks to manage flood risk. This should benefit all residents.
Policy E1	Positive for all equality groups	Policy seeks to deliver new business and industrial developments in sustainable locations that contribute towards the creation and retention of a wide range of jobs and training opportunities. This makes a positive contribution to addressing the key equality theme of

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
New Employment Development		providing access to local employment opportunities. Reference is made to the Council seeking agreements for contributions to employment support and employment access schemes which may have a particularly positive impact for young people, disabled people, women and those on low incomes.
Policy E2 Employment Allocations	Positive for all equality groups	Policy identifies new land to allocate for economic purposes, enabling the development of future business and industrial premises. Land is identified in each of the 3 main towns, Leek, Cheadle and Biddulph. The policy makes a positive contribution to addressing the key equality theme of providing access to local employment opportunities.
Policy E3 Existing Employment Areas	No differential impacts identified	Policy controls the circumstances under which the change of use of employment to non-employment uses will be permitted. This should benefit all residents.
Policy E4 Tourism & Cultural Development	No differential impacts identified	Policy seeks to control the location of new tourist developments in the Staffordshire Moorlands together with any impacts on the District's landscape, biodiversity and heritage. No differential impacts were identified.
Policy E5 Rural Economy	No differential impacts identified	Policy seeks to ensure that new development in the open countryside and in the Green Belt will be carefully controlled. Reference is made to prioritising the re-use of rural buildings for commercial enterprise.

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
Policy H1 New Housing Development	Positive for all equality groups	<p>Policy seeks to ensure that new housing development meets the identified housing needs of the local population. It makes reference to building a mix of housing sizes, types and tenure including affordable housing / starter homes and housing for special groups e.g. older people. It also refers to self-build housing plots. The policy also stipulates that all new dwellings should aim to provide flexible accommodation which is capable of future adaptation. Any housing sites not allocated in the Local Plan are required to have reasonable access by foot, cycle or public transport to existing services and community facilities. This has positive impacts on both the 'housing' and 'access to facilities' key equality themes as well as the community as a whole.</p> <p>The policy wording could be made clearer to show that disabled people including wheelchair users will be catered for.</p>
Policy H2 Housing Allocations	Positive for all equality groups	<p>Policy identifies suitable sites to meet the District's housing target set out in Policy SS3. This policy will have a positive impact on the key equality theme of 'housing' in particular delivering housing according to local needs.</p>
Policy H3 Affordable Housing	Positive for all equality groups	<p>Policy seeks to maximise the delivery of affordable housing in the District. This policy will have a positive impact on the key equality theme of 'housing' in particular delivering housing according to local needs as well as to the community as a whole.</p>
Policy H4 Rural Housing	Positive for all equality groups	<p>Policy enables affordable housing on rural sites that would not normally be released for housing development as well as housing for essential local needs, replacement dwellings, extensions, conversions and limited infilling. This will have a positive impact on the key equality theme of delivering future housing according to the diversity of local needs.</p>

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
<p>Policy H5 Gypsy & Traveller Sites and Sites for Travelling Show People</p>	<p>Positive for minority ethnic groups</p>	<p>The Council proposes to make provision for gypsies, travellers and travelling show people to be accommodated where evidence demonstrates a requirement. The list of criteria for selection of sites includes accessibility to community facilities. This will have positive impacts on the key equality theme of delivering safe and inclusive communities.</p>
<p>Policy TCR1 Development in the Town Centres</p>	<p>Positive for all equality groups</p>	<p>Policy seeks to protect and enhance the vitality and viability of the three town centres in the District by allowing appropriate retail, leisure, culture and business development. The policy refers to ensuring good access to the town centres by those using public transport, cycling or walking (key equality theme 'access to facilities'). The policy also reflects the importance of good design by committing to setting out design principles to improve and enhance the distinctive heritage of the town centres including minimising the risk of crime (to be implemented through the Council's forthcoming Design Guide SPD) which relates to key equality theme of delivering safe and inclusive communities.</p> <p>The policy wording could be made clearer to show that disabled people including wheelchair users will taken into consideration in the design of spaces in town centres.</p>
<p>Policy TCR2 Primary Shopping Frontages</p>	<p>No differential impacts identified</p>	<p>Policy identifies town centre boundaries and core retail frontages in each of the 3 towns that should be maintained to support the vitality and viability of the town centres. No differential impacts were identified.</p>
<p>Policy TCR3 Retailing and other Town Centre uses Outside Town Centres</p>	<p>Positive for all equality groups</p>	<p>Policy limits out of town centre development of town centre uses and ensures that the impact of larger schemes is assessed as part of the planning application process to protect the vitality and viability of town centres. Focusing retail development in town centres rather than sporadically makes access easier for all members of the community (key</p>

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
Policy DC1 Design Considerations	Positive for all equality groups	equality theme 'access to facilities'). The policy states that where development in the town centre is not possible sites outside Leek, Biddulph and Cheadle in highly accessible locations that are well connected to the town centre will be considered. Policy seeks to ensure that all development is well designed and contributes positively to a sense of place. Reference is made to creation of safe public and private environments in accordance with 'designing out crime' initiatives and the principles of active design. Reference is also made to ensuring equality of access and use for all sections of the community.
Policy DC2 The Historic Environment	No differential impacts identified	Policy seeks to safeguard and enhance the built and historic environment and ensure that developments contribute positively to its character. Will help to deliver well-being and a good quality of life through contributing to a high quality built environment. This should benefit all residents.
Policy DC3 Landscape & Settlement Setting	No differential impacts identified	Policy seeks to protect and enhance the landscape character of the Plan Area and the setting of settlements. Will help to deliver well-being and a good quality of life through contributing to a high quality natural environment. This should benefit all residents.
Policy DC4 Local Green Space	Positive for all equality groups	The policy seeks to identify and protect Local Green Space of value to the local community from inappropriate development. Positive impacts in relation to health and well being for all members of the community.

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
<p>Policy C1 Creating Sustainable Communities</p>	<p>Positive for all equality groups</p>	<p>This policy seeks to support proposals which protect, retain or enhance existing community facilities or provide new ones as well as resisting proposals including the loss of community facilities (subject to criteria). It also requires the timely provision of new infrastructure to support new developments and allows for the relocation of uses which are not compatible with their surroundings in terms of negative amenity. Of particular relevance to the equality themes, the policy expresses a preference for new facilities to be located within defined built up areas where they are most accessible. The policy also requires development proposals to incorporate high quality locally distinctive design features and layouts that will reduce crime and the fear of crime and support inclusive communities, particularly in terms of accessibility and functionality in line with the Council's Design SPD (key equality theme of delivering safe and inclusive communities).</p>
<p>Policy C2 Sport, Recreation and Open Space</p>	<p>Positive for all equality groups particularly younger people</p>	<p>This policy seeks to protect and enhance existing open spaces, sport and recreational buildings and land including playing fields in order to ensure their continued contribution to the health and well-being of local communities. This will have positive impacts on the key equality themes of ensuring good access to a range of community facilities, including for health and recreation and of delivering safe and inclusive communities.</p>
<p>Policy C3 Green Infrastructure</p>	<p>Positive for all equality groups</p>	<p>Policy sets out, through partnership working to develop, protect and enhance the networks of Biodiversity and Green Infrastructure. Will help to ensure opportunities for the key equality theme of access to facilities (including health), benefiting all residents.</p>
<p>Policy NE1 Biodiversity & Geological Resources</p>	<p>No differential impacts identified</p>	<p>Policy seeks to conserve and enhance biodiversity and geological resources of the plan area. This may have a positive impact on well-being and quality of life through contributing to a high quality natural environment. This should benefit all residents.</p>

Local Plan Reference	Nature of Likely Impact	Summary of Equality Impact
Policy T1 Development & Sustainable Transport	Positive for all equality groups	The policy seeks to manage development such that the need to travel is minimised. Policy refers to ensuring that major development is located in areas that are accessible by sustainable travel modes or can be made accessible as part of the proposal and requires travel plans for major schemes. This will have positive impacts for the key equality theme relating to access to facilities as well as for members of the community as a whole.
Policy T2 Other Sustainable Transport Measures	Positive for all equality groups	This policy encourages and supports measures which promote better accessibility, create safer roads, reduce the impact of traffic, or facilitate highway improvements. Of particular relevance, the policy supports physical improvements to public transport links and safeguards all existing disused railway lines, supporting their re-use for recreational purposes. The policy also refers to the Council working with its partners to promote the improvement/expansion of existing bus services and the provision of innovative sustainable transport services in the District, particularly those serving rural areas. Additionally, the policy supports and promotes the development of a network of safe walking, horse riding and cycling routes (including the National Cycle Network), connecting to transport interchanges, linking communities and recreational/tourist areas. This will have positive impacts for the key equality theme relating to access to facilities as well as for members of the community as a whole.

Table 6.2 Assessment of Equality Impacts

Recommendations

- 6.4** The following recommendations are made for improving the policies proposed for inclusion in the Local Plan preferred options July 2017.
- 1. Spatial Vision** - Make a reference to health and the Green Infrastructure Strategy. These would be beneficial due to ageing population and childhood obesity problem.
 - 2. Vision for Leek** - Make a reference to open space and the Green Infrastructure Strategy both of which could help to improve health and more specifically the childhood obesity problem in parts of the town.

3. **Vision for Biddulph** - Make a reference to open space and the Green Infrastructure Strategy both of which could help to improve health and more specifically the childhood obesity problem in parts of the town.
4. **Vision for Cheadle** - Make a reference to open space and the Green Infrastructure Strategy both of which could help to improve health and more specifically the childhood obesity problem in parts of the town.
5. **Vision for Rural Areas** - Make a reference to open space and the Green Infrastructure Strategy both of which could help to improve health and more specifically the childhood obesity problem in some rural wards.
6. **Policy SS4 'Strategic Housing Development'** - Ensure that housing requirement is set to address objectively assessed need.
7. **Policy SS6 'Leek Area Strategy'** - Include a reference to reducing levels of deprivation in Leek North, delivering safe and inclusive communities and helping to tackle the childhood obesity problem (e.g. Through implementation of the Green Infrastructure Strategy).
8. **Policy SS7 'Biddulph Area Strategy'** - Make reference to delivering safe and inclusive communities and helping to tackle the childhood obesity problem (e.g. Through implementation of the Green Infrastructure Strategy).
9. **Policy SS8 'Cheadle Area Strategy'** - Include reference to the housing needs of older people in Cheadle to reflect baseline information. Include reference to delivering safe and inclusive communities and helping to tackle the childhood obesity problem (e.g. Through implementation of the Green Infrastructure Strategy).
10. **Policy SS14 'Northern Gateway Opportunity Site'** - Include reference to the Green Infrastructure Strategy (with its links to health benefits and helping to tackle the obesity problem) within this policy or the relevant site specific policy.
11. **Policy H1 'New Housing Development'** - The policy wording could be made clearer to show that disabled people including wheelchair users will be catered for.
12. **Policy TCR1 'Development in the Town Centres'** - The policy wording could be made clearer to show that disabled people including wheelchair users will taken into consideration in the design of spaces in town centres.

Findings of Initial EqIA

7 Findings of Initial EqIA

Findings of Initial EqIA

7.1 This standard Staffordshire Moorlands Pro-forma for an Initial Equality Impact Assessment records the appraisal undertaken of the emerging Staffordshire Moorlands Local Plan at its early issues and options stage.

Assessment Description

Title of policy, practice, service or function being assessed	Options for Site Allocations for the Staffordshire Moorlands Local Plan
Officers conducting assessment	Regeneration Officer (Planning Policy)
Start Date for Assessment	10th July 2014
Date of assessment	10th July 2014
Reason for Assessment	<p>The Staffordshire Moorlands Local Plan is a statutory Council document which will include local policies to determine planning applications and allocate sites for future development up to 2031. The Plan is at a very early stage of production and no development options have yet been published. It is at this time that the Sustainability Appraisal (SA) Scoping Report is being produced to set out a framework for assessing the sustainability of the plan. The impact on equality is also considered at this time. The assessment at this stage will help to inform how equalities can be taken into account as part of the Local Plan production process.</p> <p>Note that this assessment covers the site allocations part of the Local Plan only.</p>
Equalities Lead Officer	Democratic & Community Services Manager

Table 7.1 Assessment Description

Assessment Overview

Assessment Detail	Assessment Response
Purpose, aims and objectives of the policy, practice, service or function under impact assessment.	To set out the Council's sites for future development covering the period to 2031.

Assessment Detail	Assessment Response
<p>Are there any other organisations involved in its implementation?</p>	<p>Yes (in terms of implementing development proposals in the plan) - the private sector - primarily the development industry, housing associations, other public sector bodies like the County Council, the health authority.</p>
<p>Main customer groups (beneficiaries) / stakeholders</p>	<p><u>Customer Groups:</u></p> <ul style="list-style-type: none"> ● Residents ● Local businesses & employees ● Visitors to the District ● Development industry & associated agents ● Parish & Town Councils ● Organisations representing different racial, ethnic, national, religious and disabled persons groups ● Anyone looking to make a planning application in the District. <p><u>Other stakeholders:</u></p> <ul style="list-style-type: none"> ● Elected District Councillors ● Central Government ● National bodies such as utility companies, Natural England, English Heritage & the Environment Agency ● All neighbouring Councils
<p>Which other District Council departments are affected by the policy, practice, service or function? Do any of the objectives directly support or hinder another activity?</p>	<ul style="list-style-type: none"> ● The Development Management Team who will be required to assess planning applications taking into account the contents of this document. ● The Property section as the plan is likely to include allocations relating to Council owned land and the policies also apply to such land. ● Legal Services insofar as their role in planning appeals. ● Regulatory Services - insofar as their planning enforcement role. ● Leisure / Countryside - links with sports pitches, natural environment designations and TPOs. <p>The plan will support the role of all of the above Council departments. It is not considered that the plan will hinder such activities.</p>
<p>Assessing relevance to the public sector Equality Duty</p>	<p>The Staffordshire Moorlands Local Plan (site allocations) is primarily relevant to the second aim of the general Equality Duty, though there is also a link with</p>

Assessment Detail	Assessment Response
<p>The general Equality Duty has three aims which require the District Council to have due regard to the need to:</p> <ul style="list-style-type: none"> • eliminate unlawful discrimination (both direct or indirect), harassment and victimisation; • advance equality of opportunity between all persons i.e. removing or minimising disadvantages suffered by protected groups; taking steps to meet the needs of people from protected groups where these are different from the needs of other people and encouraging people from protected groups to participate in public life or other activities where participation is disproportionately low; • foster good relations between all persons i.e. tackling prejudice and promoting understanding between people from different groups. <p>Which aims of the Equality Duty is the policy, practice, service or function relevant to?</p>	
<p>What evidence is already available or needed to help establish the impact of the policy, practice, service or function on protected groups? (Include consideration of relevant data and research available locally and nationally; monitoring information; performance information; previous consultation and engagement e.g. residents' surveys, satisfaction surveys, focus groups; access to services data; complements and complaints; previous equality assessments. When considering gaps, think about</p>	<p><u>Local Demographic data</u></p> <p>Collected from Government – census data from 2011 Census (Source: National statistics website)</p> <p>What it tells you - The characteristics of the local population at District, ward and parish level - age structure, male / female split, proportion of the population with disabilities, ethnicity, marital status and religion etc.</p> <p><u>Gaps:</u> There is a lack of knowledge about a number of the protected characteristic groups at a local level. In particular, gender reassignment, pregnancy and maternity and sexual orientation where there is no data on the proportion of people who fall into</p>

Assessment Detail	Assessment Response
<p>any additional monitoring arrangements needed and the need for further consultation).</p>	<p>these groups in the Staffordshire Moorlands. Pregnancy and maternity in particular is difficult to collect as it will change frequently.</p> <p>Although local data is available for age, disability, marriage, race, religion and sex, this merely covers how many people fit into each category and which parish / ward they live in.</p> <p><u>Equality Impact Assessment of Core Strategy (2014)</u></p> <p>Collected from: September 2007 – Initial Sustainability Appraisal; September 2008 – Preferred Options Sustainability Appraisal, May 2009 – Submission Version Sustainability Appraisal, August 2012 – Revised Submission Sustainability Appraisal - Council officers assessment undertaken as part of Sustainability Appraisal throughout Core Strategy production process. (Source: SMDC)</p> <p>What it tells you - Core Strategy spatial objectives have no negative impacts on equality. Impacts are either neutral or positive. The policies in the Local Plan will be based on those in the adopted Core Strategy.</p> <p><u>Indices of Multiple Deprivation</u></p> <p>Collected from: 2010 (published March 2011). (Source: National Statistics)</p> <p>What it tells you - Areas of deprivation across the area across different themes including income deprivation affecting children and older people.</p> <p><u>Equality Impact Assessment of Churnet Valley Masterplan (2014)</u></p> <p>Collected from: July 2013 – Council officer assessment undertaken as part of Sustainability Appraisal. (Source: SMDC)</p> <p>What it tells you - None of the Emerging Principles were identified as having negative impacts on equality. Impacts were identified as being either positive or neutral. There will be a specific Local Plan policy on the Churnet Valley.</p> <p><u>Equality Impact Assessment of the Statement of Community Involvement (2014)</u></p>

Assessment Detail	Assessment Response
	<p>Collected from: Undertaken in 2014 by a Council officer by completion of this matrix. (Source: SMDC)</p> <p>What it tells you - No negative impacts on protected groups were identified in the assessment. Impacts were mainly positive due to the nature of this document (i.e. how the Council will consult with the whole community on planning issues). A specific equalities section was included within the document.</p>
<p>Does the policy, practice, service or function have a positive or negative impact on people of a particular age such as children, young people, older people?</p> <p>Describe how and which</p>	<p><u>Positive Effects:</u></p> <p><i>Children</i> - The levels of development proposed will result in the need for new schools / extensions to schools in some parts of the District and specific sites are likely to be allocated in the plan to meet this need and ensure that children are able to go to a school close to where they live.</p> <p><i>Young people</i> – Generally has a positive impact as potential sites for housing and employment have been located in sustainable locations accessible by a choice of means of transport and are mainly focused around the towns. However, maintaining the viability of rural settlements is also a priority so sites are proposed in a large number of villages for housing which will give young people an opportunity to live within the area where they were raised. Also, a proportion of new housing will be affordable.</p> <p><i>Older people</i> – Housing will be located in sustainable locations close to services and facilities. Particular types of housing for older people - extra care schemes - may be specifically allocated in the plan but even if they are not, sites will be allocated which are suitable for such purposes and will help to meet the high demand for such accommodation in the towns.</p>
<p>Does the policy, practice, service or function have a positive or negative impact on people with disabilities including people with physical disabilities, sensory impairments, limiting long-term illnesses, learning disabilities or mental health difficulties?</p>	<p><u>Positive Effects:</u></p> <p>In terms of people with disabilities – generally positive as sites will be provided for new housing to meet demands within the District and this includes demand from those with disabilities. Housing and employment allocations will be in sustainable locations close to facilities and on public transport routes to ensure they are accessible to all. There</p>

Assessment Detail	Assessment Response
Describe how and which	will be an increased supply of new homes incorporating standards such as 'Building for Life' i.e. adaptable to suit all types of occupants, which can be more problematic with older housing stock.
Does the policy, practice, service or function have a positive or negative impact on any racial / minority ethnic groups ? Describe how and which	Considered to be the same as for the population as a whole i.e. meeting need for homes, new employment sites resulting in job opportunities, sites being located sustainably to allow access for all members of the community.
Does the policy, practice, service or function have a positive or negative impact on women or men including those living in particular communities? Describe how and which	Considered to be the same as for the population as a whole i.e. meeting need for homes, new employment sites resulting in job opportunities, sites being located sustainably to allow access for all members of the community.
Does the policy, practice, service or function have a positive or negative impact on pregnant women or people on maternity or paternity leave ? Please also consider any impacts on breastfeeding mothers . Describe how and which	Considered to be the same as for the population as a whole i.e. meeting need for homes, new employment sites resulting in job opportunities, sites being located sustainably to allow access for all members of the community.
Does the policy, practice, service or function have a positive or negative impact because of a person's marital status including civil partnership ? Describe how and which	Considered to be the same as for the population as a whole i.e. meeting need for homes, new employment sites resulting in job opportunities, sites being located sustainably to allow access for all members of the community.
Does the policy, practice, service or function have a positive or negative impact on people with a particular sexual orientation ? Describe how and which	Considered to be the same as for the population as a whole i.e. meeting need for homes, new employment sites resulting in job opportunities, sites being located sustainably to allow access for all members of the community.
Does the policy, practice, service or function have a positive or negative impact on people with particular religion or belief ? Describe how and which	Considered to be the same as for the population as a whole i.e. meeting need for homes, new employment sites resulting in job opportunities, sites being located sustainably to allow access for all members of the community.

Assessment Detail	Assessment Response
<p>Does the policy, practice, service or function have a positive or negative impact on trans people or people planning to or going through gender reassignment?</p> <p>Describe how and which</p>	<p>Considered to be the same as for the population as a whole i.e. meeting need for homes, new employment sites resulting in job opportunities, sites being located sustainably to allow access for all members of the community.</p>
<p>Does the policy, practice, service or function have a positive or negative impact on access for people in rural areas?</p> <p>Describe how and which</p>	<p>Generally positive as the allocations for housing will be spread extensively across the rural area giving people the opportunity to access new housing in their local area. Employment sites are proposed for allocation in a number of villages in the District providing access to land for small business opportunities and employment. New sites are being allocated in sustainable locations so that future occupants can access village facilities by a choice of means of transport.</p>
<p>Does the policy, practice, service or function have a positive or negative impact on other groups e.g. those experiencing deprivation or health inequalities?</p> <p>Describe how and which</p>	<p>Deprivation in this District tends to be in the towns and this is where the bulk of housing and employment development is proposed to take place which will give new employment opportunities and is likely to boost the economy of these areas. Also the only retail allocation will also be town based and consequently accessible to a deprived area. The sites selected for allocation will be spread throughout the towns including some within or adjoining deprived areas thereby helping to boost these areas and vary the social mix.</p> <p>Health inequalities – Again, most of the new development will take place in the towns in sustainable locations giving those with health problems the opportunity to be close to services and facilities.</p>
<p>If your policy, practice, service or function is partly or wholly provided by external organisations/agencies, please list any arrangements to ensure that they promote equality and diversity (Include this in your improvement plan)</p>	<p>N/A</p>
<p>Does your assessment show that a policy, practice, service or function may amount to potential adverse</p>	<p>No.</p>

Assessment Detail	Assessment Response
<p>impact between different protected groups? If yes please explain how the improvement plan is going to tackle this issue</p>	
<p>If an existing policy, practice, service or function, has it achieved its intended outcomes for the customer groups / stakeholders identified? If not, are there any equalities issues for protected groups?</p>	<p>N/A</p>
<p>If a new policy, practice, service or function, what factors <u>could</u> affect its intended outcomes from being achieved and are there any equalities issues for protected groups?</p>	<p>The overall intention of the new document will be to allocate sites for future development. As this is a statutory process where rigorous consultation and public examination takes place before the document can be adopted as Council policy, it is very unlikely that its overall intended outcomes (i.e. meeting the District's future housing needs) would not be achieved. Also, this document must undergo consultation in line with its Statement of Community Involvement which has been the subject of a separate Equalities Impact Assessment and has a specific equalities section which commits to engaging with hard to reach groups so that they are able to have their views considered as part of the process.</p> <p>Only positive impacts have been identified in the assessment above. There are no obvious negative impacts of the policy for protected groups based on the information the author had on the date the assessment was undertaken.</p>
<p>Can you think of any intentional or unintentional factors that could contribute to negative or differential impact?</p>	<p>No</p>
<p>Summarise the key issues resulting from this initial equality impact assessment and any measures identified to minimise or remove any adverse impact and promote equality of opportunity?</p>	<p>The key issue arising from this EIA is the limited local knowledge about protected characteristic groups on issues they have relating to planning and the built environment and other Council functions. Consequently, assessing the impact of any Council policy on these groups can be difficult.</p> <p>Actions:</p>

Assessment Detail	Assessment Response
	<ul style="list-style-type: none"> • Find out more about protected characteristic groups at a local level. Conduct general research to gather baseline information about protected groups at a local level. Need to fill in the gaps in knowledge in terms of: <ol style="list-style-type: none"> 1. proportions and distribution of each group within the District; and 2. particular issues and areas of difficulty each group has in relation to Council services. <p>Need adequate consultation so that protected groups are given the opportunity to become involved in the site allocations process. This is likely to involve outreach work.</p>
<p>From the information gathered above, does the policy, practice, service or function discriminate (either directly or indirectly) against any protected groups? Explain why?</p>	<p>No</p>
<p>Do you think this policy, practice, service or function should proceed to full EIA? Explain why</p>	<p>Yes, there is potential for the emerging Local Plan to have a differential impact on identified equality groups and it is important to ensure that this does not happen.</p>

Table 7.2 Assessment Overview

Appendix 1: Baseline Information

8 Appendix 1: Baseline Information

8.1 The Staffordshire Moorlands Locality Profile, published by Staffordshire County Council in October 2016 is a very useful reference for baseline information about the equality groups and equality issues.

Population

8.2 Around 97,900 people live in Staffordshire Moorlands. Based on the 2015 mid-year population estimates, the Staffordshire Moorlands population is made up as follows:

Age	%
under 5	4.6%
under 16	16.2%
16-64	59.9%
65+	23.9%
85+	2.7%

Table 8.1 Staffordshire Moorlands Age Profile

8.3 There are relatively fewer children aged under 16 and working age people (16-64) compared to England and more people aged 65 and over. The population is projected to have a small increase overall by 2025 but a much larger growth in people aged 65 and over (17%) and aged 85 and over (46%).

8.4 The proportion of Staffordshire Moorlands residents living in rural areas is 30.4%.

8.5 There are areas in Staffordshire Moorlands where families and communities face multiple issues such as unemployment or low incomes, low qualifications, poor housing, social isolation, ill-health (physical and/or mental) and poor quality of life. These wards are: Leek North, Biddulph East, Cheadle North East, Leek East, Caverswall, Cheadle South East and Churnet.

Race

8.6 The proportion of Staffordshire Moorlands residents from minority ethnic groups is 2.5% (2,400 people). This is the lowest of any Staffordshire Council area and significantly lower than the West Midlands (20.8%) and England (20.2%).

Ethnic Group	Number of People	%
White (including English, Welsh, Scottish, Northern Irish, Irish and other)	95,790	98.7%
White Gypsy or Irish Traveller ⁽¹⁾	35	0%
Mixed / Multiple Ethnic Groups	602	0.6%

Ethnic Group	Number of People	%
Asian / Asian British	502	0.5%
Black / African / Caribbean / Black British	120	0.2%
Other Ethnic Group	57	0%

Table 8.2 Ethnic Groups from 2011 Census

1. Romany gypsies and Irish travellers are recognised in law as distinct ethnic groups and legally protected from discrimination under the Equalities Act 2010

8.7 According to the 2011 Census, 99.1% of people living in Staffordshire Moorlands speak English. The other top languages spoken are Polish (0.3%).

Religion

8.8 The religious make up of Staffordshire Moorlands is 72.8% Christian, 19.3% No religion, 0.2% Muslim, 0.2% Buddhist, 0.1% Hindu. 6,575 people did not state a religion. (Source: 2011 Census)

Disability

8.9 According to the 2011 Census, 9.9% of Moorlands residents said their daily activities were limited a lot by a long term health problem or disability. This is slightly higher than the West Midlands figure of 9.1% and higher still than the figure for England as a whole at 8.3%. 11% of residents said that their daily activities were limited a little by a long term health problem or disability. This compares to 9.9% in the West Midlands and 9.3% in England.

8.10 Based on data from the 2011 Census, more residents in Staffordshire Moorlands provide unpaid care compared to the England average. This equates to around 12,600 people. In particular, 15% (3,100 people) of residents aged 65 and over provide unpaid care which is higher than the England average of 14%. When compared to CIPFA district comparators, Staffordshire Moorlands had some of the highest rates of residents providing unpaid care.

Sexual Orientation

8.11 Sexual orientation is whether a person's sexual attraction is towards their own sex, the opposite sex or to both sexes. The 2010/11 Integrated Household Survey estimates 1.5% of the UK population aged 18 and over are gay, lesbian or bisexual. The GP patient survey also asks about sexual orientation. From respondents who replied to the question on sexual orientation, just over 1.5% of Staffordshire and Stoke-on-Trent's population are gay, lesbian or bisexual compared with 1.9% across England. Whilst there will be a visible community of lesbian, gay and bisexual people in Staffordshire and Stoke-on-Trent, there will also be a significant invisible community. (Source: Staffordshire including the Moorlands & Stoke-on-Trent Partnership NHS Trust – 'Equality & Inclusion Data Analysis Report' March 2013).

Gender Reassignment

8.12 There is no clear consensus on how to define and enumerate the Trans population. However, it is likely that transsexual people represent only a small proportion of those who might be considered trans, estimates for the UK ranging between 1,550 and 5,000 (EHR). There is increasing recognition of the rights of transsexual and transgender service users and employees, with the Gender Recognition Act granting legal recognition of a changed gender for transsexual people.

8.13 Gender reassignment is the process of transitioning from one sex to another. Protection is provided where someone has proposed, started or completed a process to change their sex. In the UK, it is estimated that one in 4,000 people are receiving medical help for gender dysphoria. This equates to around 275 people in Staffordshire and Stoke-on-Trent.

8.14 However, there may be many more people with the condition who have yet to seek help. On average, men are diagnosed with gender dysphoria, five times more often than women. (Source: Staffordshire including the Moorlands & Stoke-on-Trent Partnership NHS Trust – ‘Equality & Inclusion Data Analysis Report’ March 2013). There is no locally specific data available for the Staffordshire Moorlands at the time of writing.

Older People

8.15 The rate of increase in the number of older people in Staffordshire Moorlands is faster than the England average equating to 1,300 additional residents aged 85 and over by 2025.

8.16 Life expectancy has increased but the number of years spent in good health has not. More older people than average have a limiting long term illness and this contributes to the number of years people spend in poor health towards the end of life. Men and women spend 15 and 18 years in poor health respectively.

8.17 There are more single pensioner households than average in the Staffordshire Moorlands.

8.18 Ten wards have higher proportions of households with lone pensioners: Alton, Bagnall & Stanley, Biddulph North, Biddulph South, Brown Edge and Endon, Cellarhead, Cheadle South East, Churnet, Leek East and Leek North.

Younger People

8.19 Health is a significant issue amongst children. Around 25% of children aged four to five in Staffordshire Moorlands have excess weight (overweight or obese) with rates being higher than average. Prevalence is higher in seven wards: Biddulph East, Biddulph South, Caverswall, Cheadle North East, Cheadle South East, Churnet and Leek North. Around 32% of children aged 10-11 (Year 6) have excess weight with rates being higher than average. Prevalence is particularly high in three wards: Cheadle South East, Leek North and Manifold. When compared to CIPFA district comparators, for both Reception and Year 6 children, Staffordshire Moorlands had some of the highest rates.

Gender

8.20 The Staffordshire Moorlands population has a fairly even male / female split. In 2011, 49.2% of the Staffordshire Moorlands population was male and 50.8% was female.

8.21 Overall life expectancy at birth in Staffordshire Moorlands is 80 years for men and 83 years for women, both similar to the national averages. When compared to CIPFA district comparators, life expectancy for women in Staffordshire Moorlands performs poorly.

8.22 Men and women living in the most deprived areas of Staffordshire Moorlands live three years and four years less than those living in less deprived areas.

8.23 Healthy life expectancy in Staffordshire Moorlands is 64 years for men and 65 years for women which is longer than average. Women in Staffordshire Moorlands spend more of their lives in poor health than men (18 years compared to 15). In addition, healthy life expectancy for men remains below retirement age which has significant long-term implications, for example, while men are expected to work later into their 60s many will not be healthy enough to do so.

Poverty

8.24 There are three lower super output areas (LSOAs) that fall within the most deprived national quintile in Staffordshire Moorlands, making up around 5% of the total population (4,500 people). These areas fall within Biddulph East and Leek North.

Health

8.25 A significant number of residents have excess weight, eat unhealthily and are inactive.

8.26 There is a higher proportion of residents in Staffordshire Moorlands with a limiting long-term illness compared to the national average, particularly amongst those aged 65 and over. When compared to CIPFA district comparators, Staffordshire Moorlands had some of the highest rates.

8.27 The number of people on depression, diabetes, dementia and hypertension registers in Staffordshire Moorlands is higher than the national average

Appendix 2: Equality Action Plan

9 Appendix 2: Equality Action Plan

9.1 The table below records Staffordshire Moorlands District Council and High Peak Borough Council's Equality and Diversity Scheme: Action Plan 2015-2016.

What do we want to achieve? (Equality Objectives)	What are we doing?
Knowing our communities	
To understand who lives in our communities and their needs.	Identifying Customer Relationship Management (CRM) data and customer information held within services and determining how this information can be monitored and used to influence service delivery.
Place shaping, leadership and commitment	
To clearly state our equality priorities and ensure that we have systems in place to achieve them.	Confirming the performance monitoring mechanisms for equalities linked to the service planning process for 2015/16 onwards.
Community engagement and satisfaction	
To ensure that we include those with 'protected characteristics' in our consultation and engagement processes.	Reviewing the consultation policy/strategy to ensure that mechanisms for reaching 'protected characteristic' groups are in place.
Responsive services and Customer care	
To ensure that equality performance actions are included in relevant service plans and monitored.	Ensure systematic completion of Equality Impact Assessments.
A modern and diverse workforce	
To ensure that our workforce reflects as far as possible the makeup of the community we serve	Reviewing the workforce balance as part of our workforce development strategy to put procedures in place to make the workforce more representative of our communities.

Table 9.1 Equality & Diversity Scheme: Action Plan 2015-2016

ADD03 Off Akemoor Lane

Local Plan Process

- Not included in the Options stage
- Site was suggested for consideration in the Green Belt Review
- Additional site included the Preferred Options consultation April 2016

Current Position

Site not taken forward into Preferred Options Local Plan as:

- An alternative Green Belt site exists adjacent to Wharf Road which will assist with bringing forward a large strategic mixed use regeneration site which is well related to the town centre and its key services and facilities.
- Uncertainty with land availability.
- A combination of high landscape sensitivity across the whole of the site and heritage issues with the northern part of the site.

Key Issues

- Green belt site – considered to be suitable for removal if exceptional circumstances are demonstrated.
- Would need access improvements – but could be achieved according to Highway Authority.
- Ownership issues - large area of land to south not registered, pockets of landowners who will not release their land. Nine (known) different owners.
- Whole of site is high landscape sensitivity.
- Heritage – Listed Building present in northern part of site - develop south of site only.
- Historic landfill may be a constraint.
- Ecology – further survey work along the brook recommended – potential for SBI / BAS designation.

Site Information

Greenfield/brownfield	Built up area boundary/countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Greenfield	Countryside Greenbelt	60	Approx 13.5	In multiple ownerships part of site is unregistered and owner not known. 1 owner agreed to development awaiting response from further 3 owners.	<ul style="list-style-type: none"> • Access from Akemoor Lane would need to be improved • Reasonable access to services & facilities • Listed building on site

ADD03 Off Akemoor Lane

Studies

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

Extended Phase 1 Habitat Survey 2016

Ecus Ltd conducted Phase 1 ecological survey (incorporating Local Wildlife Site Assessment) in 2016. It concluded that the habitats on site were considered to be of nature conservation value at the site level only and are not listed as an important habitat in the Staffordshire SBI guidelines. However, further surveys are recommended of the semi-natural broadleaved woodland present along the brook as this could qualify as an SBI under the Staffordshire guidelines.

Species recorded on site were common and widespread both at a county and national level and it is considered unlikely that the site significantly supported any notable protected species. Some species are listed as important in the Staffordshire SBI guidelines and therefore the site does currently qualify for consideration as an SBI or as a BAS under these criteria. However, prior to any future development the site should be checked again for signs of badger and activity surveys should be conducted to better determine use of the site by bats, especially along the eastern boundary. It would be necessary to conduct nesting bird checks before vegetation clearance or other disturbance during the bird breeding season.

Green Belt Review 2015

(Appraised sites according to their contribution to Green Belt Purposes)

Check Sprawl: Contribution

Maintain Separation: Limited contribution

Prevent Encroachment: Significant contribution

Preserve Setting: Moderate

Overall Impact on Green Belt Purposes: Moderate

This land is a continuation of development immediate to the north, and whilst it breaches the boundary of the disused railway line, is contained by Akemoor Lane and sits within the lower reaches of the slope, particularly in its northern reaches. The southern extent of this land is more difficult given rising landform and lack of a clear containing boundary. Advance planting/boundary treatment would almost certainly be required as part of a detailed masterplanning exercise which considers the development fit (in terms of location, building heights and densities) very carefully

Recommendation: Consider for release.

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results

Large site on the western edge of Biddulph, comprising agricultural land and two farmsteads (Moodystreet Farm and Hollylane) and sheds, enclosed by Akemoor Lane to the west. The site is located beyond the dismantled railway, which currently forms a strong, vegetated settlement edge and limit to development. The site is inter-visible with the Green Belt to the west. Development within the site would encroach on the surrounding countryside, and would adversely affect the existing settlement edge. Development of the site could potentially compromise the surrounding sensitive countryside, as there would be no clear limit to development beyond the site.

ADD03 Off Akemoor Lane

Site is of high landscape sensitivity. Please note that this study forms part of a wider evidence base to support SMDC's Local Plan. Therefore, the conclusions within this report will be weighed against other evidence when determining the overall suitability of a site for development.

Heritage Results

There is one Grade II Listed Building within the site. The setting of the asset contributes to the overall significance of it and would need special regard for its preservation. Development would be highly likely to cause adverse effects to its setting. Therefore, any development should be restricted to the southern part of the site only and mitigation should include the use of vegetation screening to reduce adverse effects to its setting. Whilst the HEA states that zone BBHECZ 18 cannot absorb significant change, development to the south of the site would be a small change to the zone as a whole, and with appropriate development, this could be accommodated on the site (Historic Environment Character Assessment 2010). **Site is suitable for development in heritage terms**, subject to suitable masterplanning; if development is restricted to the southern part of the site only and with appropriate screening.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of up to 300 dwellings is considered to have a significant positive effect. The site's location away from designated assets is likely to have a positive effect, as could the site's accessibility to services, facilities and areas of existing employment. However, the site's proximity to historic assets is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is considered to have a negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Biddulph.

Options Consultation July 2015

The site was not included in the Options stage it was suggested for consideration in the Green Belt Review and was an additional site added in at Preferred Options.

Initial Responses received

Statutory bodies/stakeholders

Historic England: Made no comments on individual sites recommended that a heritage impact assessment of sites is carried out. (This has since been undertaken).

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. Previous coal workings do not prevent

ADD03 Off Akemoor Lane

development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

Heritage England ADD03 - green belt release for housing with a possible school - It is not clear how the impact of the site allocation on the Grade II listed building Whitehouse Cottage and its setting has been considered. Further information on this is required. (The Council's Heritage Impact Study has now been published).

United Utilities, Severn Trent, Natural England, Network Rail; no site specific comments

SCC Highways – From a highways point of view, a Transport Assessment (TA) would be required. Junctions on the route to the bypass, on the bypass and beyond would need to be considered in the TA and likely improved. Akemoor Lane would need to be improved along its entire length (or at least towards Biddulph) – widen, reconstruct, drainage, road lighting etc. Third party Land may be required. Two access points on to Akemoor Lane to serve the development would suffice.

Developer/Agent/Owner – Awaiting response from 3 landowners re: part of area which is registered. One further landowner has agreed to release land. Unregistered area – landowner unknown.

Public response None – site was suggested for consideration in the Green Belt Review.

Council Comment

- The land in question is within the Green Belt. In order for Biddulph to accommodate new development, the Green Belt boundary will need adjustment as there are not enough sites in the existing settlement boundary to accommodate the level of development needed. The Council has recently completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact on the function of the Green Belt as a whole (as defined in government planning guidance). This study recommends considering this land for release from the Green Belt.
- Further investigations of this site have been undertaken. The land is in more than one ownership and owners have been contacted. At the time of writing, one owner has responded and indicated that they would be willing to release their land for development. Responses are awaited from the 3 other registered owners. Part of the land is unregistered.
- The Highway Authority considers that development in this area is likely to be feasible, subject to detailed design.

Preferred Options Consultation April 2016

Statutory bodies/stakeholders

Natural England: Natural England notes the proposed preferred site for allocation in Biddulph. We note that it is located close to and/or adjoining existing areas of open

ADD03 Off Akemoor Lane

space and green infrastructure. Suitable enhancements of existing open spaces' may be required together with appropriate management (and funding thereof) in order to allow these open spaces to function effectively during the local plan period. Similarly, the development of these preferred sites (if progressed) will need to include suitable multi-functional green infrastructure. Adopted local plan spatial objectives SO8 & 9 refer together with policies such as DC1 Design Considerations, DC3 landscape and settlement setting, and C3 Green Infrastructure.

Council Response

The Council has produced a Draft Green Infrastructure Strategy for consultation alongside the next draft version of the Local Plan. The strategy identifies green infrastructure corridors around the towns and lists particular issues in relation to that corridor which can be addressed as part of the relevant site policy and / or at the planning application stage. Similarly, a public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and new development in the vicinity could contribute towards this. The Council has also designated Local Green Spaces in line with criteria set out in the NPPF and the Council will seek to facilitate improvements to these areas where required.

Environment Agency: The following comments highlight sites where we consider there may be issues relating to contaminated land. ADD03: According to information held by the Environment Agency, this site is located above historic landfill sites. The local council, as lead regulator for these sites, should be contacted for further information.

Council Response

It is considered that although this matter will require more detailed investigation at the time a detailed scheme is being developed, it is an additional development cost rather than an issue which would prevent development from taking place.

Biddulph Neighbourhood Plan Working Group: ADD03 - Further investigation is required for this site. It needs to be put out for consultation and comments and see what is the response. Remove narrow northern strip and enter via Wharf Rd off roundabout, recommendation TBD.

Staffordshire Wildlife Trust: Site ADD03 has not been covered by the Extended Phase 1 Habitat Surveys.

Council Response

Ecus Ltd conducted Phase 1 ecological survey (incorporating Local Wildlife Site Assessment) in 2016. It concluded that the habitats on site were considered to be of nature conservation value at the site level only and are not listed as an important habitat in the Staffordshire SBI guidelines. However, further surveys are recommended of the semi-natural broadleaved woodland present along the brook as this could qualify as an SBI under the Staffordshire guidelines.

Species recorded on site were common and widespread both at a county and national level and it is considered unlikely that the site significantly supported any notable protected species. Some species are listed as important in the Staffordshire SBI guidelines and therefore the site does currently qualify for consideration as an SBI or as a BAS under these criteria. However, prior to any future development the site should be checked again for signs of badger and activity surveys should be

ADD03 Off Akemoor Lane

conducted to better determine use of the site by bats, especially along the eastern boundary. It would be necessary to conduct nesting bird checks before vegetation clearance or other disturbance during the bird breeding season. These requirements can be included in policy if the site is selected for development.

Developer/Agent/Owner: Only 1 responded to the consultation - I have considered the plans for the proposed development and I do not wish my land to be considered for the development within the greenbelt and countryside for 330 proposed homes and a school. No consultation responses received from other landowners.

Public response

Petition with 450 signatures objecting to development of ADD03/BD140

Petition with 361 signatures supporting a revised version of ADD03

Plus, individual comments.

Issues raised:

- Impact on BVW
- Ecology
- Highways
- Mining
- Flooding – surface water drainage
- Victoria Colliery and Childerplay
- Question need for housing and school
- Use brown field land first (including mills)
- Loss of Green Belt
- Residential amenity - disturbance from building work
- Resi amenity – noise from school
- Query housing numbers for site
- Devalue property
- Impact on Listed White House
- Impact on residents of Smokies Way – risk of it being used to drop off and pick up children from school
- Impact on Landscape
- Visual impact
- Loss of ancient trees
- Loss of hedgerows
- Loss of public footpath(s)
- Problem of pollution - burning rubbish from local farm
- Build in neighbouring authorities instead
- Reduce size of site (southern part only)
- Allocate smaller sites
- Empty houses are already available in Biddulph
- Lack of infrastructure (doctors etc)
- Poor marketing of consultation
- Consultation period too short
- Website not easy to use
- Sewage works over capacity
- Why was Site not included at site options stage?

ADD03 Off Akemoor Lane

- No employment
- Use Pennine Way instead
- Town centre needs improving
- Where will children play? (POS will be required as part of scheme)
- Need smaller not larger properties
- Agricultural land value
- Impact on air quality
- Housing density too high
- Viability
- Uncertainty over land ownership
- SHLAA record for site does not support inclusion

Council Response

- **Impact on Biddulph Valley Way (BVW) / Visual Impact**

The BVW is a very significant attribute in the town and part of a national Sustrans cycle route. Therefore, any development in the area would be built around it. The route is generally buffered by trees and hedgerows. All new development bordering the route would be required to provide pedestrian and cycle links on to it. The Council has produced a Green Infrastructure Strategy and the BVW is identified within this document. It is not considered that development in this location would impact on the enjoyment of the route and long ranging views (e.g. to Mow Cop) and the wider countryside would remain.
- **Ecology**

Ecus Ltd conducted Phase 1 ecological survey (incorporating Local Wildlife Site Assessment) in 2016. It concluded that the habitats on ADD03 were considered to be of nature conservation value at the site level only and are not listed as an important habitat in the Staffordshire SBI guidelines. Species recorded on site were common and widespread both at a county and national level and it is considered unlikely that the site significantly supported any notable protected species. [Some predevelopment species surveys recommended].
- **Highways**

The Highway Authority has no difficulties with the principle of development in this location. Improvements needed to the road network as a result of development would need to be identified through a Transport Assessment.
- **Mining**

The Council is aware of mining issues which affect a number of green field sites around Biddulph and investigative work will take place in these areas prior to the commencement of any development.
- **Flooding – surface water drainage**

The site is not within floodplain and the Environment Agency has not commented as such. If there is an existing issue with surface water drainage then new development would need to address this. An on site SUDs (Sustainable Urban Drainage) system would be required on this site if it were to be developed.

ADD03 Off Akemoor Lane

- **Victoria Colliery and Childerplay**
Sites at Victoria Colliery and Childerplay Road are within the Green Belt like ADD03. The Green Belt Review has considered the impact on the Green Belt the release of these sites for development would have. Only the Victoria Colliery site was identified as being suitable for consideration for Green Belt release (in exceptional circumstances). In reaching a decision on which sites to include in the Local Plan, the Council must balance evidence and Government policy.
- **Question need for housing and school**
The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change. Staffordshire County Council are the Education Authority and they look at the need for new schools in an area as a result of development. They consider that a new first school would be needed in Biddulph to accommodate the level of new housing development currently proposed. The location of this school would not be decided until the Council has firmed up its plans as to where the new housing development will take place in the town. (There are 2 options put forward as potential locations for a new school in the Preferred Option Sites and Boundaries Consultation booklet).
- **Use brown field land first (including mills)**
Brown field sites have been considered as part of the site selection process and it is agreed that the mills in the centre of Biddulph (particularly Yarn Mill and Minster Mill) would be appropriate for residential development. Albion Mill on Station Road is too small for an allocation of its own but if it is developed it would count towards Biddulph's housing needs. The Biddulph Neighbourhood Planning Group are currently working on a Town Centre Masterplan which includes looking at opportunities for redeveloping brownfield sites.
- **Loss of Green Belt**
In order for Biddulph to accommodate new development, the Green Belt boundary will need adjustment as there are not enough sites in the existing settlement boundary to accommodate the level of development needed. The Council has completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact on the function of the Green Belt as a whole (as defined in government planning guidance). This study recommends considering site ADD03 for release from the Green Belt.
- **Residential amenity - disturbance from building work / noise from school / parking during school drop-off and pick-up times**
Issues such as overlooking will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application. Problems arising from the construction period of any works, e.g. noise, dust, construction vehicles, hours of working (covered by Control of Pollution Acts)

ADD03 Off Akemoor Lane

are not material planning considerations nor is the possibility of noise from the school or parking issues.

- **Query housing numbers for site**
The Preferred Option Sites and Boundaries Consultation Document lists the site as accommodating 60 houses and a new first school. This is an indicative number and clearly if the Education Authority decided that the first school was not required in this location, the Council could decide to increase the number of houses on the site. There will be two further public consultations and a public examination before the plan is adopted so any changes made would be open to comment.
- **Devalue property**
Property values are not considered material in planning law.
- **Impact on Listed White House / Reduce size of site (southern part only)**
Heritage Impact of development on the site has been assessed in the Council's Heritage Impact Study (August 2016), the results for this site are: "There is one Grade II Listed Building within the site. The setting of the asset contributes to the overall significance of it and would need special regard for its preservation. Development would be highly likely to cause adverse effects to its setting. Therefore, any development should be restricted to the southern part of the site only and mitigation should include the use of vegetation screening to reduce adverse effects to its setting. Whilst the HEA states that zone BBHECZ 18 cannot absorb significant change, development to the south of the site would be a small change to the zone as a whole, and with appropriate development, this could be accommodated on the site (Historic Environment Character Assessment 2010). Site is suitable for development in heritage terms, subject to suitable masterplanning; if development is restricted to the southern part of the site only and with appropriate screening." The Council must balance this evidence against all the other evidence relating to this site and reach a decision on whether or not to include it as a development site in the Local Plan.
- **Impact on Landscape**
Landscape impact of development on the site has been assessed in the Council's Landscape Impact Study (August 2016), the results for this site are: "Large site on the western edge of Biddulph, comprising agricultural land and two farmsteads (Moodystreet Farm and Hollylane) and sheds, enclosed by Akemoor Lane to the west. The site is located beyond the dismantled railway, which currently forms a strong, vegetated settlement edge and limit to development. The site is inter-visible with the Green Belt to the west. Development within the site would encroach on the surrounding countryside, and would adversely affect the existing settlement edge. Development of the site could potentially compromise the surrounding sensitive countryside, as there would be no clear limit to development beyond the site. Site is of high landscape sensitivity." The Council must balance this evidence against all the other evidence relating to this site and reach a decision on whether or not to include it as a development site in the Local Plan.
- **Loss of ancient trees**
If development takes place on this site any protected trees would be preserved unless there are exceptional circumstances in which case re-

ADD03 Off Akesmoor Lane

planting would be required. Soft landscaping would be integrated into any scheme.

- **Loss of hedgerows**
If the site is developed hedgerows would be retained within the scheme layout wherever possible.
- **Loss of public footpath(s)**
Public footpaths can be maintained or re-directed. This issue would be considered at the planning application stage.
- **Problem of pollution - burning rubbish from local farm**
This matter is being dealt with separately by the Council.
- **Build in neighbouring authorities instead**
National planning guidance states that the Council should seek to meet the development needs of their area. Neighbouring authorities including Stoke and Newcastle Councils have their own development needs to meet.
- **Allocate smaller sites**
A range of sites are proposed in the plan both large and small to meet Biddulph's housing needs. It would be unrealistic to identify all small sites for Biddulph as the Council is required by the Government to demonstrate that sites they identify will actually be built and smaller sites tend to be less viable.
- **Empty houses are already available in Biddulph**
Need for additional housing stems from a number of factors, for example household formation, in-migration, linkages with future workforce, and other factors. The NPPF makes clear that housing projections are the starting point for assessing housing needs; however, these additional factors should also be taken in to account in Council SHMAs. The Council's own housing need assessments are set out in its evidence base on the website. Note that this already takes into consideration empty properties in the Moorlands.
- **Lack of infrastructure (doctors etc)**
National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the County Council to assess the impact of proposed development on school capacity, what additional capacity is needed and how this can be delivered.
- **Need to demonstrate exceptional circumstances to justify removal from the Green Belt**
If this site is selected as a housing allocation, exceptional circumstances will need to be demonstrated to justify its release from the Green Belt.
- **Poor marketing of consultation**
The consultation was widely publicised and included a flyer being sent to all households and businesses in the District through Royal Mail. High levels of

ADD03 Off Akemoor Lane

responses have been received by the Council from Biddulph residents which suggests that a significant number of residents knew about the consultation.

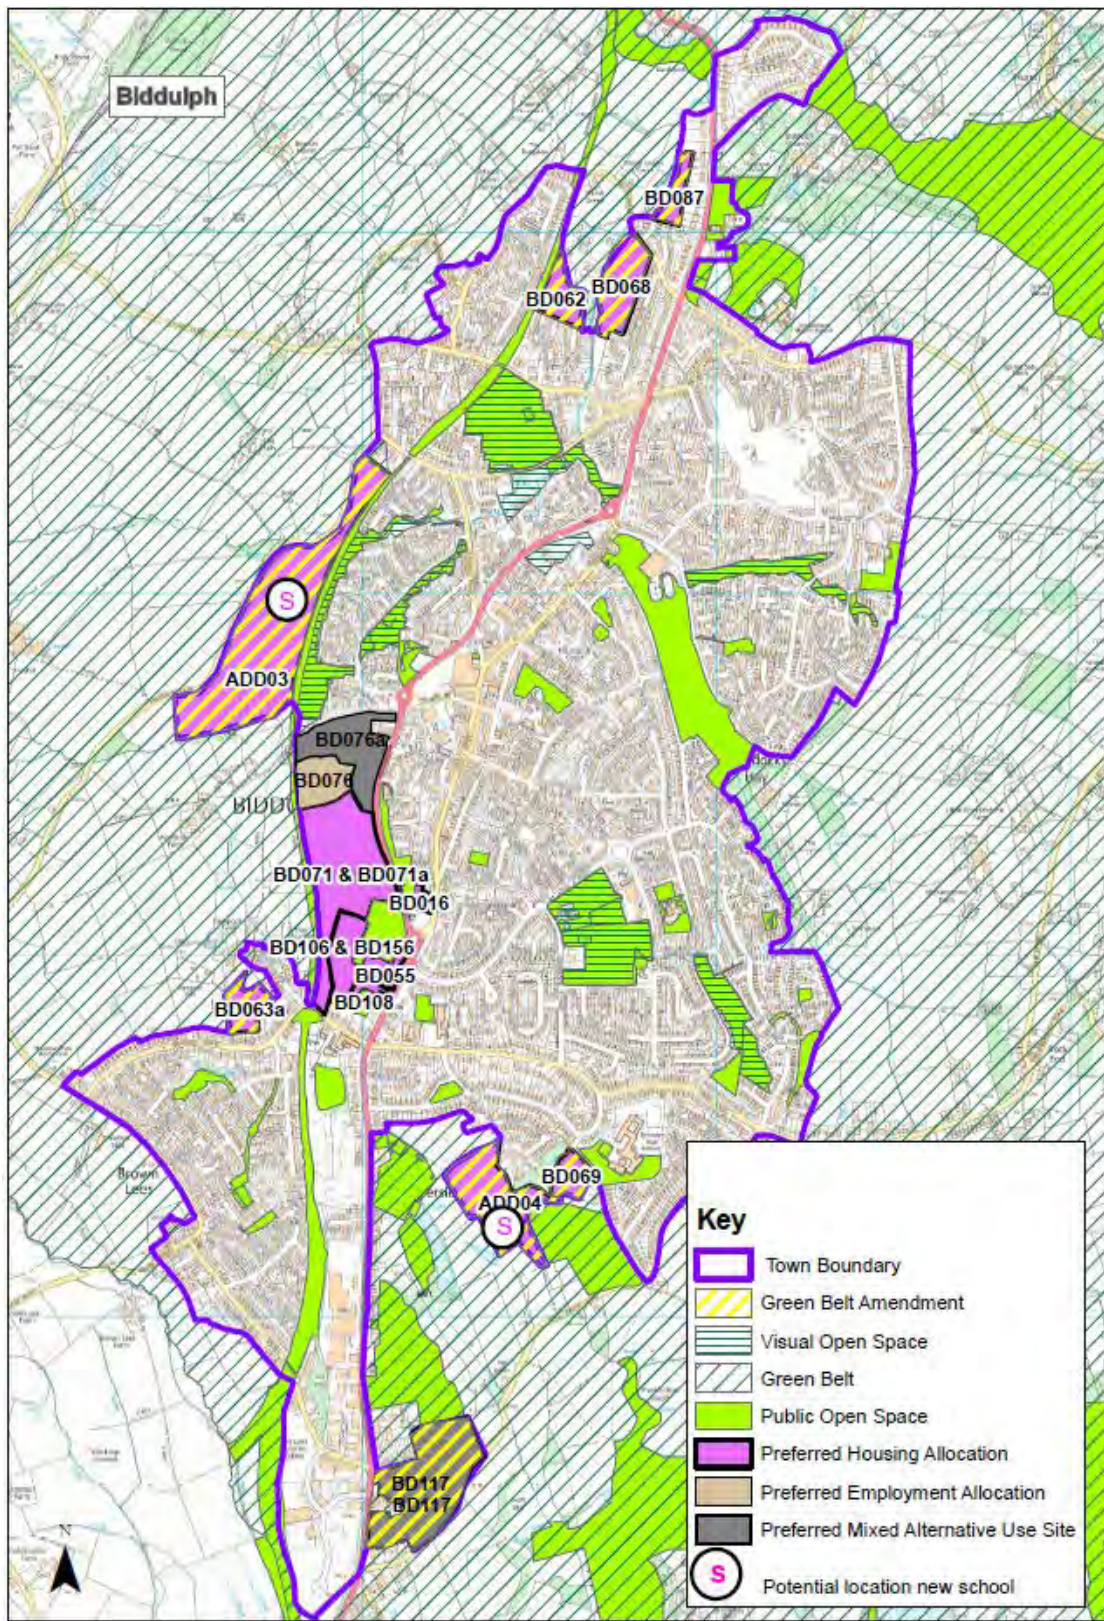

- **Consultation period too short**
The consultation period for planning documents at statutory stages is 6 weeks. This consultation was held over a longer time period.
- **Website not easy to use**
Responding on the Council's website by using the consultation portal was an option but there were other ways of responding too – by email, completing a form or letter.
- **Sewage works over capacity**
United Utilities has a statutory duty to provide capacity for new development so this is not a valid reason for development not to come forward in Biddulph.
- **Why was Site not included at Site Options Stage?**
The Local Plan production process, by its very nature, involves several stages of consultation at which point anyone can suggest further sites for inclusion in the plan and the Council decides on whether they are appropriate. This site was suggested as part of the site options consultation.
- **No employment**
New employment areas are also proposed for Biddulph in the draft Local Plan.
- **Increase in air pollution**
If the district council considered that a development may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts. In addition the district council continually monitors air quality across the district and regularly undertakes review and assessments of this data to identify areas where the traffic could have an unacceptable impact on local air quality.
- **Use Pennine Way instead**
This area was included at Site Options Stage but not taken forward due to the impact development in this location would have on the Green Belt (refer to the Council's Green Belt Review for details).
- **Town centre needs improving**
New development will help to support the town centre shops and facilities.
- **Where will children play?**
The Council requires open space to be integrated into developments of more than 20 houses including children's play facilities unless there is already adequate provision in the local area.
- **Need smaller not larger properties**
Any development on this site would not just be larger properties. There will be an affordable housing requirement which will need to be implemented including 'starter homes' which tend to be smaller units.

ADD03 Off Akemoor Lane

- **Agricultural land value**
The land has an agricultural classification of Grade 4 which means that it is poor quality.
- **Housing density too high**
The densities put forward are indicative at present. If the site were taken forward and the subject of a planning application the density would be an issue that anyone would have the opportunity to comment on.
- **Uncertainty over land ownership**
The Council is currently investigating land ownership issues in this area.
- **SHLAA record for site does not support inclusion**
The relevant SHLAA record, BD140, does not support development of this site giving the reasons of access and landscape character. Since the record was written, it has been established that access would not be an issue which would prevent development of the site. Recent evidence has shown that development of the site would have a high impact on landscape sensitivity. The Council must balance this evidence against all the other evidence relating to this site and reach a decision on whether or not to include it as a development site in the Local Plan.

Biddulph

ADD03 Off Akesmoor Lane

ADD04 off Mill Hayes Road

Local Plan Process

- Not included in the Options stage
- Site was suggested for consideration in the Green Belt Review
- Additional site included the Preferred Options consultation April 2016

Current Position

Site not taken forward into Preferred Options Local Plan as:

- An alternative Green Belt site exists adjacent to Wharf Road which will assist with bringing forward a large strategic mixed use regeneration site which is well related to the town centre and its key services and facilities.
- Harm of development to Knypersley Hall is a key issue – any harm would need strong justification.

Key Issues

- Green Belt – considered to be suitable for removal if exceptional circumstances are demonstrated.
- Significant impact on heritage assets – Knypersley Hall.
- High landscape sensitivity.
- Portion of southern part of site is a regionally important geological site so must be left undeveloped and may require a buffer.
- Presence of school playing fields, sports clubs and pool on site which would need to be retained.
- Access issues – For 100+ houses an access to Tunstall Road would be needed as a Mill Hayes Road access would not be adequate. The only way this could be achieved would be to go through BD117 employment / housing site.
- Ecology - Scattered mature trees in the northern area of the site, as well as pond 1, may qualify for SBI or BAS status dependent on further survey.

Site Information

Greenfield/brownfield	Built up area boundary/countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Greenfield	Countryside Green Belt	150	approx 4.4	Two landowners – both will release land for development	<ul style="list-style-type: none"> • Large site to south of Biddulph • Reasonably close to services & facilities • Site close to listed Knypersley Hall

Studies

Extended Phase 1 Habitat Survey 2016

Ecus Ltd conducted Phase 1 ecological survey (incorporating Local Wildlife Site Assessment) in 2016. It concluded that the improved grassland and species-poor hedgerow habitats on site were considered of nature conservation value at the site level only. These habitats are not listed as important habitats in the Staffordshire SBI guidelines.

ADD04 off Mill Hayes Road

Scattered mature trees in the northern area of the site, as well as pond 1, may qualify for SBI or BAS status dependent on further survey. The trees should be further assessed to determine whether they may be considered as 'veteran' and no tree works should be carried out until a detailed bat assessment has been undertaken to determine the presence/absence of bats roosts. In the first instance, the pond should be surveyed for newts. Additional pond surveys for invertebrates and mammals would be informative.

Species recorded on site were common and widespread both at a county and national level. No species listed as important in the Staffordshire SBI guidelines were recorded (although bullfinch and jay would score on the woodland bird index) and therefore no part of the site currently qualifies for consideration as an SBI or as a BAS under these criteria. However, it is possible that further survey of the pond would reveal the presence of notable protected species (i.e. great crested newt) and / or SBAP species.

Badger, bats and reptiles may use areas of the site and further survey for these species should be undertaken prior to any future development. It would be necessary to conduct nesting bird checks before vegetation clearance or other disturbance during the bird breeding season.

Green Belt Review 2015

(Appraised sites according to their contribution to Green Belt Purposes)

Check Sprawl: limited contribution

Maintain Separation: contribution

Prevent Encroachment: limited contribution

Preserve Setting: contribution

Overall Impact on Green Belt Purposes: Moderate

This is a significant area of land which cannot be readily subdivided because of an absence of clear internal boundaries. It is well contained physically and visually by Mill Hayes Road and whilst making a contribution to Green Belt purposes in respect of separation and setting, comprehensive masterplanning (which would retain existing open space and sports pitches) could yield a development which would help to reinforce wider Green belt function. See also BD069, BD117, BD131b.

Recommendation: Consider for release

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results

Site comprises land to the west and south of Knypersley Hall, including a large, open field which slopes down from the hall in the north of the site, and more undulating land in the south of the site containing a pond and scattered trees. The site is separated from the settlement edge by Knypersley Hall and agricultural land to the north. Development of the site could adversely affect the existing settlement form, particularly in the southern extent of the site. The northern section of the site has high visual prominence, particularly when viewed from Tunstall Road.

Site is of high landscape sensitivity. Please note that this study forms part of a wider evidence base to support SMDC's Local Plan. Therefore the conclusions within this report will be weighed against other evidence when determining the overall suitability of a site for development.

Heritage Results

ADD04 off Mill Hayes Road

There is one Grade II* and one Grade II Listed Building within close proximity to the site. The site contributes greatly to the setting of the Grade II* as a remnant of the parkland, which in turn, contributes to the overall significance of the asset. Development on the site would highly likely cause substantial adverse effects to the setting of the Grade II* Listed Building which would impact upon its overall significance. The HEA states that development is not deemed appropriate in the HLC zone BBHECZ 7 (Historic Environment Character Assessment 2010).

Site could not be developed without substantial heritage impacts. Please note that this study forms part of a wider evidence base to support SMDC's Local Plan. Therefore the conclusions within this report will be weighed against other evidence when determining the overall suitability of a site for development.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 1,070 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. However, the site's proximity to historic assets is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is assessed as having a negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Biddulph.

Options Consultation July 2015

The site was not included in the Options stage it was suggested for considered in the Green Belt Review and was an additional site added in at Preferred Options.

Initial responses received

Statutory bodies/stakeholders

Heritage England - green belt release for housing with a possible school - It is not clear how the impact of the site allocation on the Grade II* listed building Knypersley Hall, its associated Grade II listed buildings and the setting of all, individually and cumulatively, has been considered. Further information on this is required. (Since these comments were made, a Heritage Impact Assessment of this site has been produced).

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. Previous coal workings do not prevent development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

United Utilities, Severn Trent, Natural England, Network Rail; no site specific comments

ADD04 off Mill Hayes Road

SCC Highways – From a highways point of view, a Transport Assessment (TA) would be required. Creation of an access directly onto the A527 is preferred. Query whether a suitable point could be created at the southern end (e.g. through the SMDC car park?).

Developer/Agent/Owner – The land is in multiple ownerships and owners have been contacted. Responses are awaited from most parties. (Responses from landowners were later received).

Public response - None – site was suggested for consideration in the Green Belt Review.

Council Comment

- The land in question is within the Green Belt. In order for Biddulph to accommodate new development, the Green Belt boundary will need adjustment as there are not enough sites in the existing settlement boundary to accommodate the level of development needed. The Council has recently completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact on the function of the Green Belt as a whole (as defined in government planning guidance). This study recommends considering this land for release from the Green Belt.
- Further investigations within this area have been undertaken. The land is in multiple ownerships and owners have been contacted. At the time of writing, 2 owners who own adjoining pieces of land within this area have expressed an interest in releasing their land for development. This could yield up to 150 dwellings. However, the land concerned is adjacent to Knypersley Hall, a Listed Building which may act as a capacity constraint.
- The Council is commissioning a heritage impact assessment for all the sites selected by the Council as Preferred Options for development and this work will be done under the guidance of Heritage England. The work is expected to be completed this summer and will inform the Council as to which sites are appropriate to take forward into its final draft of the plan the 'Submission Version'.
- The Highway Authority's preference is for development to be accessed from the A527, though there may be an opportunity to access a smaller proportion of development via Harlech Drive.

Preferred Options Consultation April 2016

Statutory bodies/stakeholders

United Utilities Water Limited: (Summary) With regards to site references ADD04, BD069 and BD117, these sites appear likely to discharge to that area served by Severn Trent for the provision of wastewater services. It would be useful to confirm with the respective landowners the likely point of discharge to the wastewater network from these sites so that we can confirm the receiving wastewater infrastructure and therefore better understand the impact.

ADD04 off Mill Hayes Road

Council Response

Points of discharge to the wastewater network are a detail which can be confirmed at a later stage in the process once the sites have been allocated in the Local Plan and detailed development schemes become available at the planning application stage.

Natural England: Natural England notes the proposed preferred site for allocation in Biddulph. We note that it is located close to and/or adjoining existing areas of open space and green infrastructure. Suitable enhancements of existing open spaces' may be required together with appropriate management (and funding thereof) in order to allow these open spaces to function effectively during the local plan period. Similarly, the development of these preferred sites (if progressed) will need to include suitable multi-functional green infrastructure. Adopted local plan spatial objectives SO8 & 9 refer together with policies such as DC1 Design Considerations, DC3 landscape and settlement setting, and C3 Green Infrastructure.

Council Response

The Council has produced a Draft Green Infrastructure Strategy for consultation alongside the next draft version of the Local Plan. The strategy identifies green infrastructure corridors around the towns and lists particular issues in relation to that corridor which can be addressed as part of the relevant site policy and / or at the planning application stage. Similarly, a public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and new development in the vicinity could contribute towards this. The Council has also designated Local Green Spaces in line with criteria set out in the NPPF and the Council will seek to facilitate improvements to these areas where required.

Staffordshire County Council: ADD04 appears to partially affect a Local Geological / Geomorphological Sites (LoGS) which covers a geomorphological feature. Layout and design should avoid impacts on this feature in consultation with GeoConservation Staffordshire.

Likely to require junction and access improvements.

Council Response

Comments noted. Reference to the geological site will be included in the relevant site policy if this site is selected for development in the Local Plan.

Junction and access improvements can be incorporated into a planning application should this site be selected to take forward.

Staffordshire Wildlife Trust: Site ADD04 has not been covered by the Extended Phase 1 Habitat Surveys. (Note that this work has now been undertaken).

Heritage England: Map 4.5 Biddulph - ADD04 - green belt release for housing with a possible school - It is not clear how the impact of the site allocation on the Grade II* listed building Knypersley Hall, its associated Grade II listed buildings and the setting of all, individually and cumulatively, has been considered. Further information on this is required. (Note that this work has now been undertaken).

Biddulph Neighbourhood Plan Working Group: ADD04 - Further investigation is required for this site. It needs to be put out for consultation and comments and see

ADD04 off Mill Hayes Road

what is the response. It also needs to be properly defined on the map. How do you propose accessing this site? Recommendation TBD

Developer/Agent/Owner

No response received

Public Response

**Petition received with 114 signatures objecting to ADD04.
Plus, other individual responses.**

Issues raised:

- Exceptional circumstances for release from GB / Green Belt Review (inclusion of ADD04 is contrary to GBR)
- Use brownfield land instead
- No new infrastructure being planned in advance
- Heritage impact
- No GI Strategy exists
- No plans to develop sport and recreation in area
- Access / highways
- Not appropriate location for school
- Residential amenity for existing residents – noise from school
- Visual impact
- Loss of public footpaths
- Landscape impact
- Ecology
- Loss of hedgerows
- Site design
- Buffer needed around Knypersley Hall
- Drainage
- Air pollution
- Property values
- Parking permits needed for residents
- SHLAA id it as unsuitable
- Smaller area is poorly enclosed and incongruous
- Site in multiple ownerships
- Site did not appear in last consultation

Council Response

- **Exceptional circumstances for release from GB / Green Belt Review (inclusion of ADD04 is contrary to GBR)**
In order for Biddulph to accommodate new development, the Green Belt boundary will need adjustment as there are not enough sites in the existing settlement boundary to accommodate the level of development needed. The Council has completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact on the function of the Green Belt as a whole (as defined in government planning guidance). This study concludes that the overall impact of this area on Green Belt purposes is moderate. It states that: "This is a significant area of land which cannot be readily subdivided because of an absence of clear

ADD04 off Mill Hayes Road

internal boundaries. It is well contained physically and visually by Mill Hayes Road and whilst making a contribution to Green Belt purposes in respect of separation and setting, comprehensive masterplanning (which would retain existing open space and sports pitches) could yield a development which would help to reinforce wider Green belt function. It recommends considering site ADD04 for release from the Green Belt. If this site is selected as a housing allocation, exceptional circumstances will need to be demonstrated to justify its release from the Green Belt.

- **Use brownfield land instead**

Brown field sites have been considered as part of the site selection process and it is agreed that the mills in the centre of Biddulph (particularly Yarn Mill and Minster Mill) would be appropriate for residential development. Albion Mill on Station Road is too small for an allocation of its own but if it is developed it would count towards Biddulph's housing needs. The Biddulph Neighbourhood Planning Group are currently working on a Town Centre Masterplan which includes looking at opportunities for redeveloping brownfield sites.

- **Victoria Colliery and Childerplay are alternative locations for development.**

Sites at Victoria Colliery and Childerplay Road are within the Green Belt like ADD04. The Green Belt Review has considered the impact on the Green Belt the release of these sites for development would have. Only the Victoria Colliery site was identified as being suitable for consideration for Green Belt release (in exceptional circumstances). In reaching a decision on which sites to include in the Local Plan, the Council must balance evidence and Government policy.

- **No new infrastructure being planned in advance**

National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the County Council to assess the impact of proposed development on school capacity, what additional capacity is needed and how this can be delivered.

- **Heritage impact**

Heritage Impact of development on the site has been assessed in the Council's Heritage Impact Study (August 2016), the results for this site are: 'There is one Grade II* and one Grade II Listed Building within close proximity to the site. The site contributes greatly to the setting of the Grade II* as a remnant of the parkland, which in turn, contributes to the overall significance of the asset. Development on the site would highly likely cause substantial adverse effects to the setting of the Grade II* Listed Building which would impact upon its overall significance. The HEA states that development is not deemed appropriate in the HLC zone BBHECZ 7 (Historic Environment Character Assessment 2010). Site could not be developed without substantial heritage impacts'. It should be noted that this study forms part of a wider evidence base to support SMDC's Local Plan. Therefore the Council

ADD04 off Mill Hayes Road

will weigh this conclusion against other evidence when determining the overall suitability of the site for development.

- **No GI Strategy exists**
The Council has produced a Draft Green Infrastructure Strategy for consultation alongside the Preferred Options Local Plan.
- **No plans to develop sport and recreation in area**
The Council is undertaking a review of open space, sport and recreation facilities which includes an updated playing pitch strategy.
- **Access / highways**
From the Highway Authority's point of view, a Transport Assessment would be required at the planning application stage. Creation of an access directly onto the A527 is preferred though a limited amount of development could be accommodated using an access onto Harlech Drive. No concerns were raised by the Highway Authority about any localised traffic problems as a result of development here.
- **Not appropriate location for school**
Staffordshire County Council are the Education Authority and they look at the need for new schools in an area as a result of development. They consider that a new first school would be needed in Biddulph to accommodate the level of new housing development currently proposed. The location of this school would not be decided until the Council has firmed up its plans as to where the new housing development will take place in the town. (There are 2 options put forward as potential locations for a new school in the Preferred Option Sites and Boundaries Consultation booklet).
- **Residential amenity for existing residents – noise from school, parking problems**
Issues such as overlooking will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application. Problems arising from the construction period of any works, e.g. noise, dust, construction vehicles, hours of working (covered by Control of Pollution Acts) are not material planning considerations nor is the possibility of noise from the school or parking issues.
- **Visual impact / Site Design / Buffer around Knypersley Hall**
If this area is selected for development, the scheme would be designed to take into account its setting and heritage impact as well as any infrastructure and / or site constraints. A planning application would be required before any development could take place and this would be open for anyone to comment on.
- **Loss of public footpaths**
Public footpaths can be maintained or re-directed. This issue would be considered at the planning application stage.
- **Landscape impact / smaller area is poorly enclosed and incongruous**
Landscape impact of development on the site has been assessed in the Council's Landscape Impact Study (August 2016), the results for this site are:

ADD04 off Mill Hayes Road

'Site comprises land to the west and south of Knypersley Hall, including a large, open field which slopes down from the hall in the north of the site, and more undulating land in the south of the site containing a pond and scattered trees. The site is separated from the settlement edge by Knypersley Hall and agricultural land to the north. Development of the site could adversely affect the existing settlement form, particularly in the southern extent of the site. The northern section of the site has high visual prominence, particularly when viewed from Tunstall Road. Site is of high landscape sensitivity. Please note that this study forms part of a wider evidence base to support SMDC's Local Plan. Therefore the Council will weigh this conclusion against other evidence when determining the overall suitability of the site for development.

- **Ecology**

Ecus Ltd conducted Phase 1 ecological survey (incorporating Local Wildlife Site Assessment) in 2016. It concluded that the habitats on ADD04 were considered to be of nature conservation value at the site level only and are not listed as an important habitat in the Staffordshire SBI guidelines. Species recorded on site were common and widespread both at a county and national level and it is considered unlikely that the site significantly supported any notable protected species. [Some predevelopment species surveys recommended].

- **Loss of hedgerows**

Wherever possible hedgerows would be incorporated into any future development scheme.

- **Drainage**

The site is not within floodplain and the Environment Agency has not commented as such. If there is an existing issue with surface water drainage then new development would need to address this. An on site SUDs (Sustainable Urban Drainage) system would be required on this site if it were to be developed.

- **Air pollution**

If the district council considered that a development may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts. In addition the district council continually monitors air quality across the district and regularly undertakes review and assessments of this data to identify areas where the traffic could have an unacceptable impact on local air quality.

- **Property values**

Property values are not considered material in planning law.

- **SHLAA identifies site as unsuitable**

The relevant SHLAA record, BD131, covers a much larger area than ADD04 and does not support development of this larger area with the main reason being constraints from existing uses in the area, particularly the sports clubs. The SHLAA will be updated to reflect this smaller area and also the fact that since the record was written, recent evidence has emerged regarding landscape and heritage constraints. The Council must balance this evidence

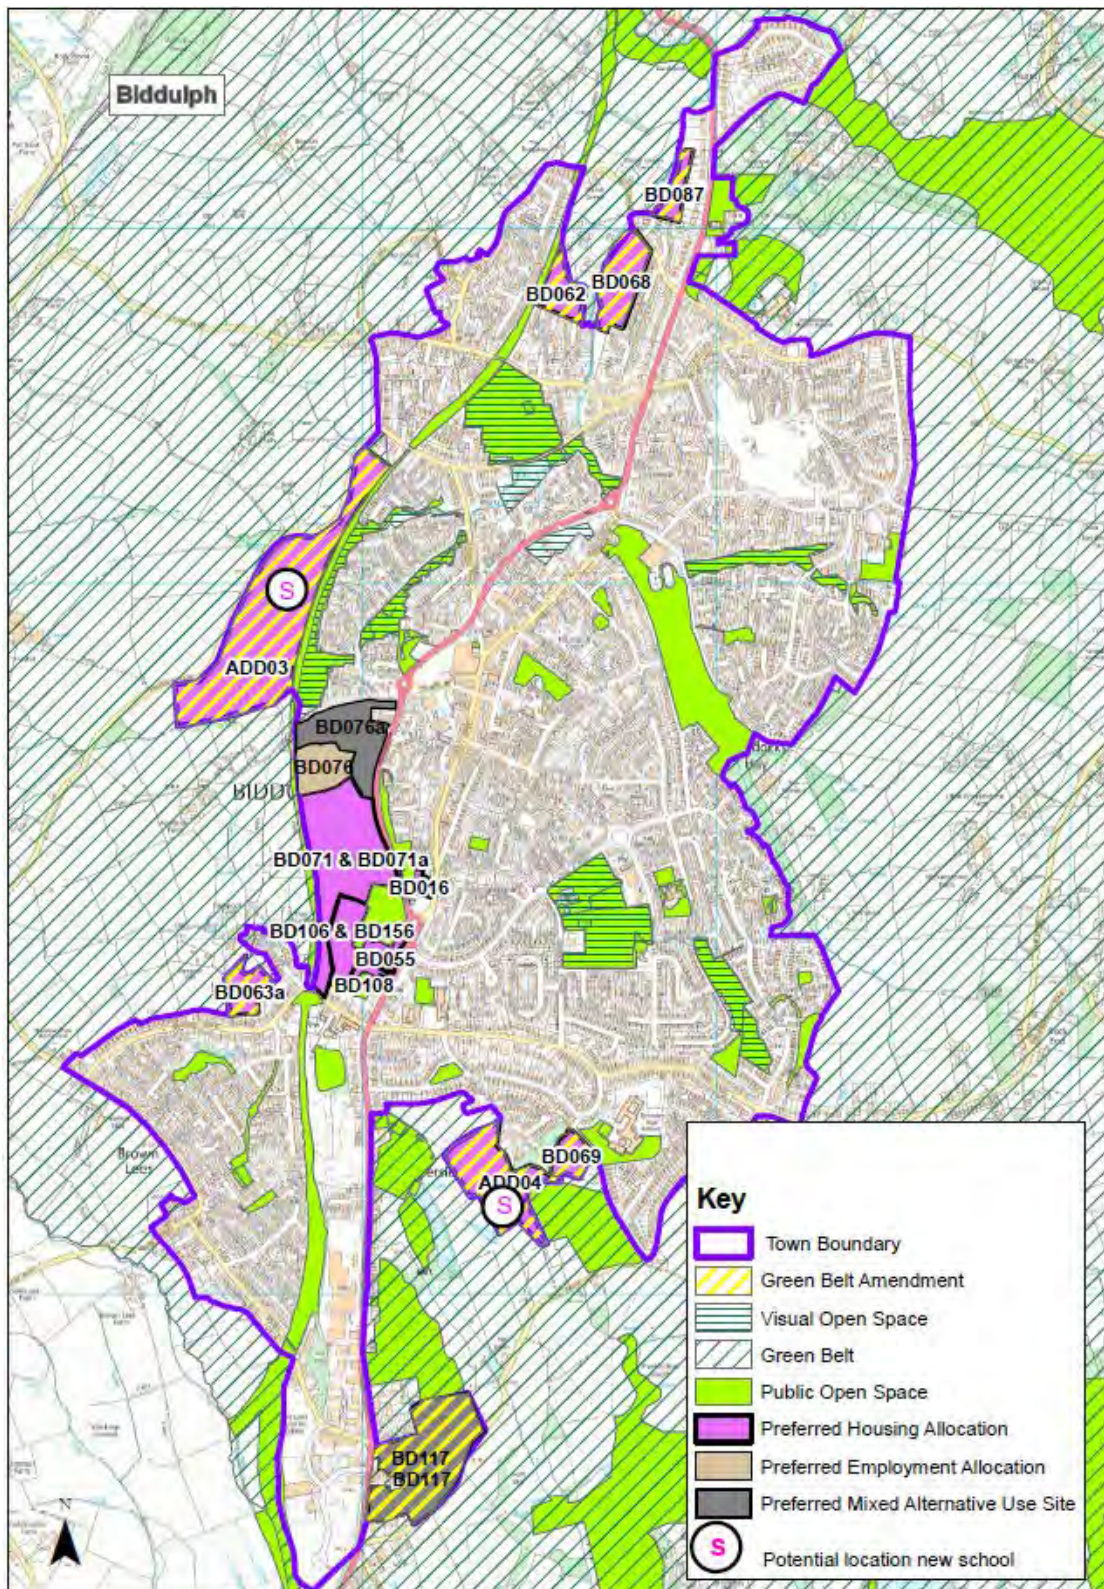

ADD04 off Mill Hayes Road

against all the other evidence relating to this site and reach a decision on whether or not to include it as a development site in the Local Plan.

- **Site in multiple ownerships**
The owners of ADD04 have confirmed to the Council that the land is available for development.
- **Site did not appear in last consultation**
The Local Plan production process, by its very nature, involves several stages of consultation at which point anyone can suggest further sites for inclusion in the plan and the Council decides on whether they are appropriate. This site was suggested as part of the site options consultation.
- **Uplands Mill houses not all been sold.**
The Uplands Mill housing site has been taken into account in calculating Biddulph's housing needs.
- **Develop in Stoke instead.**
National planning guidance states that the Council should seek to meet the development needs of their area. Stoke and Newcastle Councils have their own development needs to meet.

Biddulph

ADD04 off Mill Hayes Road

Biddulph

BD016 Land & buildings at Beehive Farm 16 Tunstall Road

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site to be developed as part of a wider regeneration opportunity including land to the west side of the bypass to bring forward a large strategic mixed use regeneration site which is well related to the town centre and its key services and facilities.
- reasons set out below under 'key issues' heading.

Key Issues

- Within the built up area boundary
- Close to facilities
- Low ecological value but survey work on on-site trees recommended for location, quantity, age and size.
- Low landscape sensitivity
- Suitable for development in heritage terms
- SW Floodplain on site

Site Information

Greenfield/ brownfield	Built up area boundary/country side	Est. housin g capacit y	Area (ha)	Ownersh p status	Site details
Brownfield/ greenfield	Within settlement boundary, close to town centre	20 at 40dph	0.5	Owner willing to develop	<ul style="list-style-type: none">• Farm/small holding and adjoining land• Close to heritage assets• Slopes down from the bypass• Not visually prominent

Studies

Extended Phase 1 Habitat Survey 2015 (FID 115)

The site has been attributed a low ecological value in its potential to support protected species as the habitats are species poor and poorly connected to other more biodiverse habitats. The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2016)

The site has low ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However, more information is required regarding the scattered trees on site in order

Biddulph

BD016 Land & buildings at Beehive Farm 16 Tunstall Road

to establish their ecological importance. The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Assessment of the trees for location, quantity, age and size.

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results

Beehive Farm and adjacent land, enclosed by Colliers Way to the west and Tunstall Road to the east. The existing development within the site does not contribute to a well-defined settlement edge, and therefore development of the site could strengthen the settlement edge. Adjacent land to south of site is also of low landscape sensitivity, and could further improve the settlement edge (or be used to create a vegetated edge to the settlement). **Site is of low landscape sensitivity.**

Heritage Results

There are seven Grade II Listed Buildings within the 400m buffer. The church tower was visible from the site however due to the topography of the landscape, development would be unlikely to adversely affect its setting. Due to the large road junction and intervening buildings, development would be unlikely to cause high adverse effects to the settings of the remaining designated assets. Development in the site would change a small element of the HLC zone BBHECZ 3, although for the most part it would remain unaltered (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The site should deliver a quantum of housing, circa 20 dwellings which is likely to have a significant positive effect, as could the location of the site with regard to its proximity to services and facilities and areas of existing employment as well as the positive effect upon the landscape. The site is located within the settlement boundary and has good accessibility to health care services and facilities. However, its proximity to heritage assets would have a negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Biddulph.

Options Consultation July 2015

Statutory bodies/stakeholders:

Historic England: Made no comments on individual sites recommended that a heritage impact assessment of sites is carried out. (Note – this work has now been undertaken).

Environment Agency; Site not identified as being in an area likely to be affected by flooding. Need to have regard to the relevant River Basin Management Plan.

Biddulph

BD016 Land & buildings at Beehive Farm 16 Tunstall Road

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. Previous coal workings do not prevent development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

United Utilities, Severn Trent, Heritage England, Natural England, Network Rail; no site specific comments

SCC Highways – Access should be gained off Tunstall road, with no access off the bypass.

Developer/Agent/Owner – Land available.

Public response 6 Comments – all support

Issues raised:

- Infrastructure - Schools - easy access
- Infrastructure - Traffic / Transport - easy access
- Infrastructure - Other - easy access to health services
- Landscape
- Government Policy - Not Green Belt
- Other - Improve appearance of area, Infill development

Council Comment – Comments noted

Preferred Options Consultation April 2016

Statutory bodies/stakeholders:

Natural England: notes the proposed preferred site for allocation in Biddulph. We note that it is located close to and/or adjoining existing areas of open space and green infrastructure. Suitable enhancements of existing open spaces' may be required together with appropriate management (and funding thereof) in order to allow these open spaces to function effectively during the local plan period. Similarly the development of these preferred sites (if progressed) will need to include suitable multi-functional green infrastructure. Adopted local plan spatial objectives SO8 & 9 refer together with policies such as DC1 Design Considerations, DC3 landscape and settlement setting, and C3 Green Infrastructure.

Council Response

The Council has produced a Draft Green Infrastructure Strategy for consultation alongside the next draft version of the Local Plan. The strategy identifies green infrastructure corridors around the towns and lists particular issues in relation to that corridor which can be addressed as part of the relevant site policy and / or at the planning application stage. Similarly, a public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and new development in the vicinity could contribute towards this. The Council has also designated Local Green Spaces in line with criteria set out in the NPPF and the Council will seek to facilitate improvements to these areas where required.

Biddulph

BD016 Land & buildings at Beehive Farm 16 Tunstall Road

Developer/Agent/Owner – no response.

Public Response:

25 objections

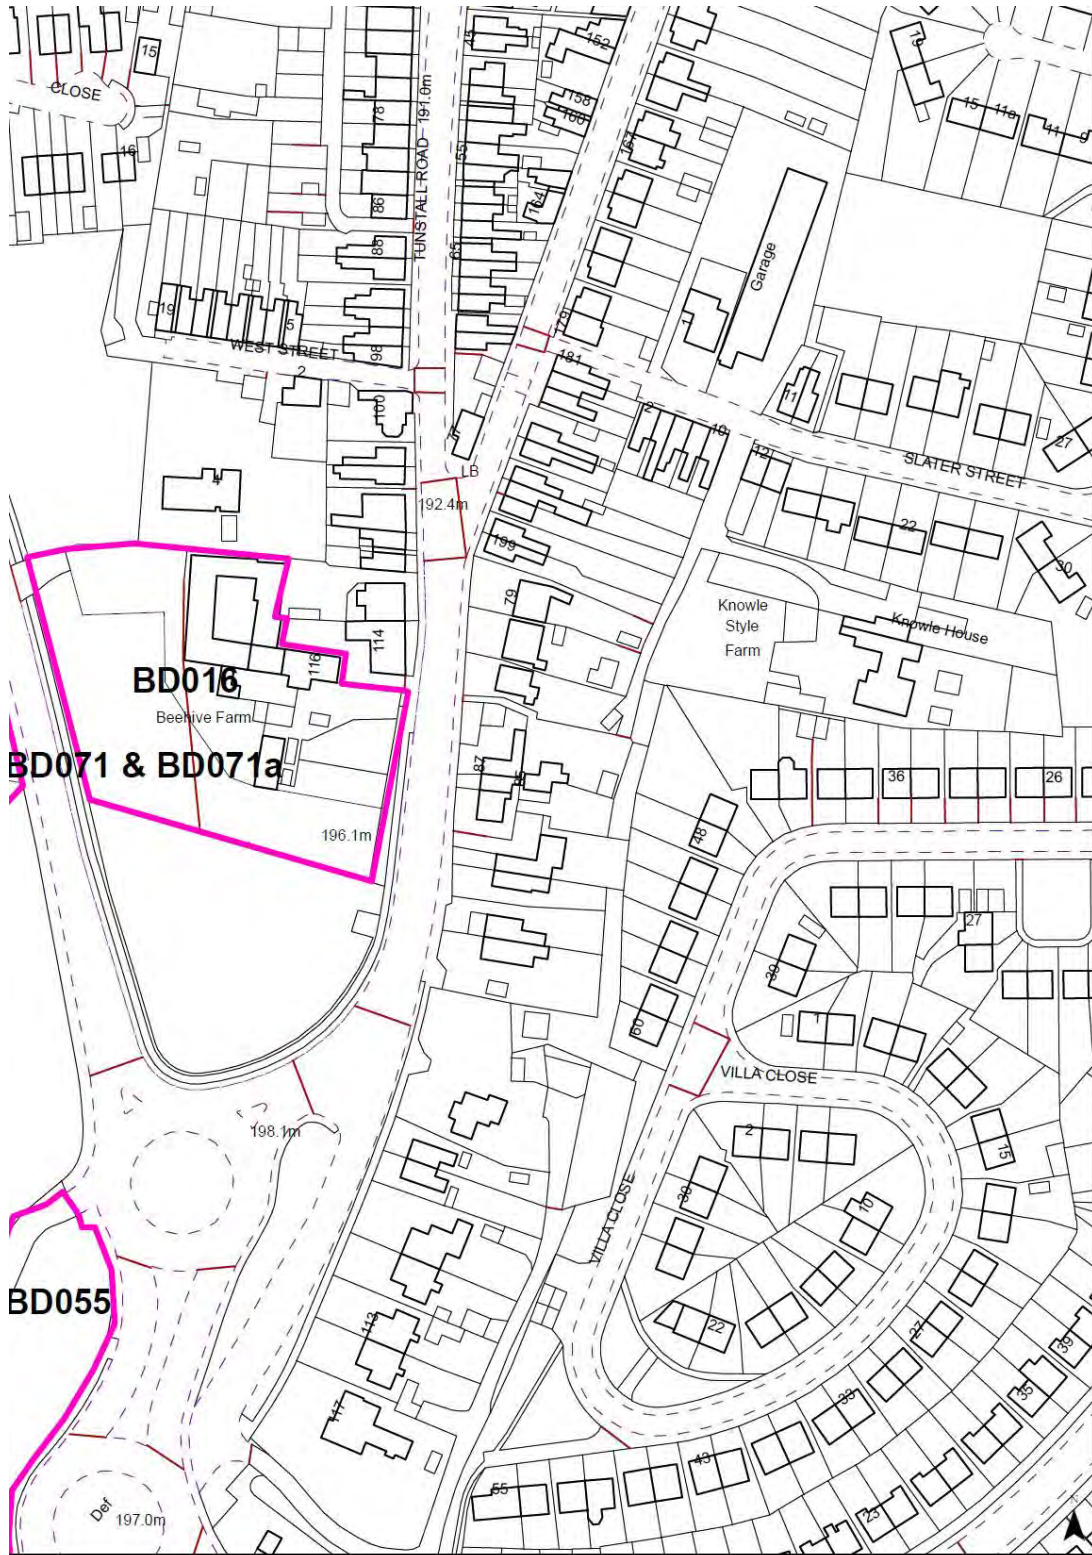

146 support

Issues raised:

No further details from objectors as to why they object.

BD062 Land north of York Close & Essex Drive

Local Plan Process

- Site from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site not taken forward into Preferred Options Local Plan as:

- An alternative Green Belt site exists adjacent to Wharf Road which will assist with bringing forward a large strategic mixed use regeneration site which is well related to the town centre and its key services and facilities.

Key Issues

- Green Belt site – suitable for release if exceptional circumstances are demonstrated.
- No adverse landscape or heritage impacts associated with development of site.
- Preferred Options site boundary part in flood zone 2 (site boundary to be amended if site taken forward at request of landowner – flood zone 2 land was included in error as owner promoting site does not own it – this approach has been agreed with Environment Agency and no level 2 FRA is required).
- Ecological issues (developer has had 3 studies undertaken and considers their evidence is robust in this respect). Further survey work would be required on trees (potential for bat roost) and a reptile survey in order to establish SBI/BAS status.
- Queries about odour from water treatment works (developer has undertaken a study which United Utilities consider acceptable. It recommends excluding a small portion of site at north from development and using as open space). SMDC Environmental Health had some issues with this study but developer has provided a document which addresses these concerns to the satisfaction of officers.
- Noise report received from developer very recently – Environmental Health to check if site taken forward.
- Layout plan showing how 35 houses could be accommodated on site received from developer very recently.
- United Utilities has suggested specific measures which can be incorporated into policy to address any flooding implications.

Site Information

Greenfield/ brownfield	Built up area boundary/country side	Est. housin g capacit y	Area (ha)	Ownersh p status	Site details
Greenfield	Outside the settlement boundary in the Green Belt	35* (approx . 25 dwellings per ha)	1.2	Owner supports development	<ul style="list-style-type: none"> • Overgrown site • Mature trees • PROW on western part of the site • Access from York Close • Adjacent to United Utilities water treatment works

BD062 Land north of York Close & Essex Drive

*Figure reflects requirements of owner's odour study

Studies

Green Belt Review 2015

(Appraised sites according to their contribution to Green Belt Purposes) Assessed with BD068

Check Sprawl: Limited contribution

Maintain Separation: Limited contribution

Prevent Encroachment: Limited contribution

Preserve Setting: Contribution

Overall Impact on Green Belt Purposes: Limited

These sites are connected though their enclosure to the north by Marsh Green Road, as such they are effectively part of the built envelope of Biddulph in this location and notwithstanding the presence of a sewage treatment works between the sites could be developed without impinging on the wider Green Belt either physically or visually.

Recommendation: **Consider for release**

Extended Phase 1 Habitat Survey 2015 (FID 122)

The site has potential for protected species to be present due to the mosaic of habitats and habitat structure present, especially as the site is well connected to the wider countryside. Therefore, the site is not recommended for potential development as the site is deemed to have ecological importance. The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Bat survey of the 2 trees with bat roosting potential
- Reptile survey
- Adoption of Himalayan balsam removal regime
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2016)

Lockwood Hall Associates consider the site habitats to be considered to be of nature conservation value at district level and have the potential to support bats and reptiles, which could allow the consideration of the site as an SBI or BAS.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Assessment of the 2 trees for their potential to support roosting bats.
- Reptile survey required.

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results

Site is located within the north of Biddulph, east of the dismantled railway line, and comprises an area of rough grassland and scrub. The site is enclosed by residential development to the south and west, and a sewage treatment works to the north-east, resulting in low visual prominence. Although the adjacent settlement edge is well-defined, it is urban in character to the south of the site. Existing vegetation on the north-eastern site boundaries would form a vegetated settlement edge, and therefore this vegetation should be retained and strengthened where necessary.

Site is of low landscape sensitivity.

BD062 Land north of York Close & Essex Drive

Heritage Results

There are three Grade II Listed Buildings within the 400m buffer. The site was enclosed by surrounding vegetation and there is no intervisibility between the site and the assets. Development would be highly unlikely to adversely affect the settings of the assets. Development would be highly unlikely to adversely affect HLC zone BBHECZ 8 (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 40 dwellings should have a significant positive effect. The site is also accessible to existing services facilities and areas of employment which is likely to have a positive effect. However, the site's potential for protected species to be present due to the habitats present and its connection to the wider countryside are considered to have a significant negative effect. Similarly, the development of greenfield land, grade 4 ALC and the site's proximity to historic assets are also assessed as having a negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Biddulph.

Options Consultation July 2015

Statutory bodies/stakeholders

Historic England: Made no comments on individual sites recommended that a heritage impact assessment of sites is carried out. (This work has now been completed).

Environment Agency; Site not identified as being in an area likely to be affected by flooding. Need to have regard to the relevant River Basin Management Plan.

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. Previous coal workings do not prevent development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

United Utilities, Severn Trent, Heritage England, Natural England, Network Rail; no site specific comments

SCC Highways - Extensions of York Close and Essex Drive would be acceptable for 40 dwellings.

Developer/Agent/Owner - Land ideally suited for development as part of Green Belt Review, has support from Planning Inspector who conducted Core Strategy examination, land does not make a significant contribution to Green Belt and its

BD062 Land north of York Close & Essex Drive

deletion would not harm function of Green Belt. Land is available and development is achievable for around 35 dwellings taking into account constraints. Highway Authority has no objections to the site being developed, site has good pedestrian connectivity via York Close / Essex Drive and the Biddulph Valley Way, Phase 1 Habitat Survey undertaken confirming site has little ecological significance, an Ecological Mitigation Strategy can address any issues / improvements, site is Flood Zone 1, odour assessment has been commissioned.

Public response 56 comments plus petition with 89 signatures – all objecting.
Issues raised:

Objections

- Infrastructure - Schools oversubscribed - Oxhey First School, Woodhouse Academy.
- Infrastructure - Traffic / Transport - difficult access, surrounding roads not large enough to cope with additional traffic including HGVs, construction traffic and emergency vehicles, Essex Drive / York Close are narrow and crowded with parked cars, Essex Drive steep so impassable for most vehicles in icy weather, highway safety - Well Lane, lack of pavements on Mow Lane and junction with Congleton Road not ideal, need Transport Study, concern about additional traffic around schools and impact on safety.
- Infrastructure - Other - lack of local amenities, could sewerage system cope with all new development? Public transport northwards finishes at 6pm. Current deficit in public open space and severe deficit in children's play areas.
- Landscape
- Nature Conservation - foxes, ducks, badgers, owls, rabbits, kingfishers, hawks (and many other bird varieties), badgers, bats, bees - disagree with results of agent's Phase 1 Habitat survey
- Flood Risk on east side of site & concerns about surface water as a result of new development (photograph supplied), surface water will find its way into sewerage system which cannot cope at present due to design / construction of town sewer causing flooding in Gillow Heath - United Utilities say this cannot be solved without considerable funds.
- Amenity (e.g. noise, privacy, loss of light - oppressive impact on existing development including Beaumont Close, out of character with area)
- Scale of development - 40 dwellings is excessive (along with other sites earmarked in this area)
- Government Policy - not in line with NPPF - Green Belt Land - Brownfield sites should be a priority
- Other - Previous planning refusal on the site, site too close to sewage works - existing noise and odour and potential pollution from gases, high concentration of sewage pipes would make land difficult to build on - query economic viability, works are not heavily screened - can be seen in winter, well used public footpath crosses site, loss of mature trees, could residents obtain home insurance due to flooding? Sites closer to the town centre with better access should be used (e.g. Meadows School), no employment in Gillow Heath so new residents will be commuting creating a dormitory town, lack of market demand for houses, Town Centre is declining - shops are closing, need for new houses / flats in town centres, existing empty properties in town centres, contradicts Council's Core Strategy (point 2.3) and NPPF Green Belt section, object to social housing, SHLAA form not clear, poor consultation - should notify affected residents personally, difficult for people to understand some of technical language in documents and on response form, background documents submitted by

BD062 Land north of York Close & Essex Drive

landowners / agents to support SHLAA forms should be publicly available. Query accuracy of population growth figures as they are nationally produced and not locally.

Council response –

The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.

- The Highway Authority has no difficulties with this development from their point of view. Cumulative impact of several developments in this area would be assessed through a TA.
- New development is the main way to deliver new or improved infrastructure e.g. more residents may support an improved bus service. Infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas.
- United Utilities has advised that if appropriate measures for surface water disposal are included within development schemes then there should be no detrimental impact on the capacity of their infrastructure.
- An odour assessment of the sewage works has been undertaken on behalf of the landowner and it concludes that the vast majority of the site immediately adjacent to the works (BD062) is suitable for residential use and odour issues should not be viewed as a constraint to planning consent.
- The land in question is not highlighted as significant in the Council's Landscape & Settlement Setting Assessment. A Landscape & Visual Impact Assessment will be undertaken during the plan production process and look at all preferred option sites suggesting mitigation measures where appropriate. The results will be incorporated into the Submission Version of the Local Plan.

The Council has recently completed a Phase 1 Ecological Study for the District. This assessed sites included in the Site Options consultation. The site survey results will be used as part of the site selection process. Any other sites which come forward and are potentially suitable for development will also need to be assessed.

- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- It is not considered that development of this particular site would be out of proportion with its surroundings and it is very unlikely that all the sites put forward in the consultation for Gillow Heath will be selected as preferred options. Any new development taking place will be subject to design policies contained within the new Local Plan – which will be subject to public consultation next year.

Biddulph

BD062 Land north of York Close & Essex Drive

- The land in question is within the Green Belt. In order for Biddulph to accommodate new development, the Green Belt boundary will need adjustment as there are not enough sites in the existing settlement boundary to accommodate the level of development needed. The Council has recently completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact on the function of the Green Belt as a whole (as defined in government planning guidance). This study recommends considering site BD062 for release from the Green Belt.
- The SHLAA has assessed more than 150 sites in and around Biddulph including brown field sites and these have been included as allocations where they are suitable, available and deliverable. However, there is not enough brownfield land to meet the town's requirements so green field sites also need to be included. Prioritising brown field land over greenfield in all circumstances is not part of Government policy.
- The previous planning history of a site, particularly from over 20 years ago (1991 in this case) is not a good indicator as to whether a site is acceptable at this time as circumstances and policies will have changed over time.
- The landowner's agent has indicated that the site is viable for housing development.
- Public footpaths can be maintained or re-directed. A link between the area and the Biddulph Valley Way will be maintained.
- New employment land is proposed at the south of the town (BD117). New investment in the town would have knock-on positive effects for the town centre. National population figures are the starting point for assessing an area's objectively assessed housing needs – this is standard practice. The new Local Plan will cover a period to 2031 so lack of demand (perceived or actual) at one point in time is not a valid reason for not meeting the area's objectively assessed housing needs. The Council's evidence demonstrates a need for affordable housing in Biddulph and this is reflected in local policy (set out in the Core Strategy). The Council is required to seek to address this need.

Preferred Options Consultation April 2016

Statutory Bodies / Stakeholders

United Utilities

We wish to emphasise the need to carefully consider the allocation of new housing sites in close proximity to our wastewater treatment works. In this regard we note that our wastewater treatment works (WwTW) in your local authority include: Biddulph WwTW; Biddulph Park WwTW; and Flash WwTW. We wish to highlight that a wastewater treatment works can result in emissions which include odour and noise. Therefore if you are considering any sites for new allocations, especially housing allocations, near to a wastewater treatment works, you should carefully consider the sites with your Environmental Health colleagues. This is important when comparing sites close to treatment works with potential alternative sites that may be available to you for allocation. This reflects our earlier correspondence to you. The position of

Biddulph

BD062 Land north of York Close & Essex Drive

United Utilities is that when considering a range of sites to meet housing needs, it would be more appropriate to identify new housing sites, which are sensitive receptors, that are not close to a wastewater treatment works. We note this point is particularly relevant to your assessment of sites considered for allocation in Biddulph as part of the current Preferred Options Sites and Boundaries consultation. In particular, site references BDO68, BDO62 and BDO87, which are sited in close proximity to Biddulph Wastewater Treatment Works. Notwithstanding this preference, if it is still intended to progress with the allocation of sites near to a wastewater treatment works for housing following discussions with your Environmental Health colleagues, we strongly recommend that your decision should be informed by: 1. an odour impact assessment; and 2. a noise assessment. If after having undertaken these assessments you still allocate land near to the wastewater treatment works for housing, we recommend that there should be detailed associated policy which identifies the need for mitigating measures including any that may be identified as a result of the assessments. We recommend that: 3. careful masterplanning is always prudent in order to mitigate the risk of odour and noise nuisance. For example, any on-site open space should be located so as to act as a buffer between the treatment works and any newly introduced housing. In addition the houses could be orientated so to most appropriately manage the impact of noise; and 4. appropriate soft landscaping is included to strengthen the buffer between the treatment works and the proposed new development.

Further United Utilities Comments May 2017

With respect to any flooding implications, United Utilities wishes to recommend:

1. The need for foul only flows. Surface water should discharge to a more sustainable alternative than the public sewer; and
2. In advance of submitting the application and once more details are known in respect of the proposed development, the applicant should engage in pre-application discussions with United Utilities so that the most appropriate point of connection to the public sewer can be determined for foul water. The point of connection that is agreed for foul water may then be subsequently specified in any planning conditions recommended to the local planning authority.

Council Response

Comments noted.

An Odour Assessment has been produced by the land owner. Since these comments were sent to the Council, United Utilities has agreed that the issue of odour has been effectively addressed in the land owner's odour report. "Further to recent correspondence, United Utilities does not require any further odour impact work subject to the inclusion of the buffer you have proposed in your email of 5 December 2016 and the inclusion of appropriate landscaping boundary treatments."

The developer considered that no noise report was necessary.

It is now up to the Council to balance the planning issues in determining whether to select this site for development in the Local Plan.

BD062 Land north of York Close & Essex Drive

Detailed associated policy for the site will be included in the Local Plan if it is selected and it is acknowledged that careful master planning of the site will be required including appropriate screening /buffering. Similarly, the recommendations above will be incorporated into policy should the site be taken forward.

Natural England

Natural England notes the proposed preferred site for allocation in Biddulph. We note that it is located close to and/or adjoining existing areas of open space and green infrastructure. Suitable enhancements of existing open spaces' may be required together with appropriate management (and funding thereof) in order to allow these open spaces to function effectively during the local plan period. Similarly the development of these preferred sites (if progressed) will need to include suitable multi-functional green infrastructure. Adopted local plan spatial objectives SO8 & 9 refer together with policies such as DC1 Design Considerations, DC3 landscape and settlement setting, and C3 Green Infrastructure.

Council Response

The Council has produced a Draft Green Infrastructure Strategy for consultation alongside the next draft version of the Local Plan. The strategy identifies green infrastructure corridors around the towns and lists particular issues in relation to that corridor which can be addressed as part of the relevant site policy and / or at the planning application stage. Similarly, a public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and new development in the vicinity could contribute towards this. The Council has also designated Local Green Spaces in line with criteria set out in the NPPF and the Council will seek to facilitate improvements to these areas where required.

Staffordshire Wildlife Trust

Site BD062 contains potentially high value areas of habitat and needs to be assessed against the current Staffordshire Local Wildlife Site criteria. The site also would have a 'stepping stone' role as it is adjacent to the Biddulph Brook corridor, a key green corridor through the urban areas of Biddulph that links to the wider countryside. The Extended Phase 1 Habitat Survey (site FID 122) reports that: 'The site is very well connected to other biodiverse habitats through hedgerows, scrub, broadleaved woodland and running water, which accentuates the value of the site. The site itself consists of a potentially biodiverse woodland/ scrub habitat mosaic. The importance of this site is notable as it contains a range of habitat structures of different heights.' Flora species recorded included tufted hair grass, soft rush, ribwort plantain and orchid species (unidentified due to season), which indicate that parts of the site have botanical interest. In addition The Extended Phase 1 Habitat Report dated 27th June 2014 by Leigh Ecology Ltd on behalf of Seabridge Developments (available publically as part of a submitted planning application) found a small marshy area on the site which contained 'yellow flag iris *Iris pseudacorus* , and sedge species and two orchid species, common spotted orchid *Dactylorhiza fuchsia* and southern marsh orchid *Dactylorhiza praetermissa*. ' Dogwood *Cornus sanguinea* is present on the site, and if not planted, is unusual to find, indicating semi-natural habitat. Several bird species were recorded, including priority species Dunnock and Starling. We also support the comments made by Mrs Angie Turner BSc MSc on this site.

Council Response

BD062 Land north of York Close & Essex Drive

Lockwood Hall Associates consider the site habitats to be of nature conservation value at district level and have the potential to support bats and reptiles, which could allow the consideration of the site as an SBI or BAS.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Assessment of the 2 trees for their potential to support roosting bats.
- Reptile survey required.

Environment Agency

2 sites in Biddulph are adjacent to the same watercourse. There is a floodplain extent on the western boundary but this is poorly defined at present. A level 2 assessment will be required for these.

Council Response

The site boundary has been amended to exclude land within Flood Zone 2 at the request of the landowner, who does not own this land and is not promoting it for development. This approach has been agreed with the Environment Agency since their response to the consultation so a Level 2 Flood Risk Assessment is no longer required for the site.

Developer/Agent/Owner

We represent our clients who owns land north of York Close and Essex Drive, Gillow Heath, Biddulph that is identified as BD062 on the Site Options Consultation. Green Belt - Our client was previously represented by McDyre & Co who submitted representations on the Core Strategy and also gave evidence at the Examination in Public. You will have a copy of that representation is on your file, but for the sake of completeness, another copy is attached. You will note that my client has consistently argued that there is a need to review the Green Belt to meet housing need in the Plan period and beyond and also that my client's land is ideally suited to contribute towards that need. The Council has acknowledged that it will be necessary to review the Green Belt to meet its housing needs, including around Biddulph. In this respect, we would draw your attention to paragraph 70 of the Inspectors Report on the Core Strategy when he stated: "A slightly different scenario is provided by suggestions for sites, such as that at Gillow Heath in the vicinity of Biddulph. Here, as I saw during my visits to the area, there are sites currently within the Green Belt designation which could form the basis for small urban extensions which Policy SS5b indicates [MM24] will be identified as part of a comprehensive review of the Green Belt around Biddulph through the Site Allocations DPD and review of the Core Strategy...." (emphasis added) As can be noted, having visited the Gillow Heath area, the Inspector gave a clear indication that my client's land would represent a potentially appropriate housing extension to the urban area. Green Belt The Green Belt Review Study (November 2015) has assessed the value of Site BD062 and the adjoining land to the east (BD068) in terms of the main purposes of Green Belt and has concluded as follows: · Check Sprawl – Limited Contribution · Maintain Separation – Limited Contribution · Prevent Encroachment – Limited Contribution · Preserve Setting – Contribution The Study concludes that the overall impact of developing these two sites on the Green Belt purposes is 'LIMITED' and that "these sites are connected though their enclosure to the north by Marsh Green Road. As such they are effectively part of the built envelope of Biddulph in this location and notwithstanding the presence of a sewage treatment works between the sites could be developed without impinging on the wider Green Belt either physically or visually." We concur with the findings of the Study and we suggest that its deletion will not harm the function of the Green Belt in the wider area. Deliverability and Potential

BD062 Land north of York Close & Essex Drive

Development Capacity My client owns the site and the Registered Title extends up to the adopted highway at the end of York Close and Essex Drive. There are sewer easements over the land, but these can readily be accommodated within any future development on this relatively level site, which is also not affected by the more steeply sloping contours affecting land to the east. The site is available and achievable and we maintain that it is suitable to accommodate up to 40 dwellings, having regard to all known constraints including: the triangular shape of the site; existing sewer easements; the informal/non-statutory path that links from the southern boundary to the footpath and housing to the west; strong boundary tree cover to the east; and the proximity of the sewage works to the north-east.

Transportation We note that the Highway Authority has no objection to a development of up to 40 dwellings served off York Close, presumably in line with Manual for Streets, which of course, post-dates any earlier guidance and/or planning history that might be referred to in order to raise objection to this excellent housing site option. An initial Highways Report has been undertaken and is attached. The Report confirms that a proposed development of up to 40 dwellings can be achieved by safe means of access design that complies with the technical standards adopted by Staffordshire Moorlands and in accordance with Manual for Street Design guide. It also demonstrates that the traffic associated with a development of up to 40 dwellings, can safely be accommodated onto the local highway network. The existing peak time traffic flows currently operate well below their theoretical capacity, meaning that a development of up to 40 dwellings would have a very little impact on the local highway network and would not constitute severe impact to warrant refusal as stated in the NPPF. The site can be accessed by both walking and cycling and therefore provides alternative modes of transport opportunities to the car to access the local schools and amenities. There are also public transport services that operate from Congleton Road (A527) and the surrounding area within a very short walking distance of the proposed development. Overall it can be concluded that the site is very sustainable and offers a wide range of alternative modes of transport locally. The Report notes that the National Planning Policy Framework states that, "Development should only be prevented or refused on transport grounds where the residual cumulative impacts of development are severe". It concludes that overall, the proposed development does not produce a residual cumulative impact on the road network and is considered acceptable in transport terms. The site is located in a sustainable location and would therefore deliver a highly sustainable small scale graft onto the existing urban area. In the circumstances, the proposed access, to serve the application site off York Close, the surrounding priority junctions and footway connectivity can safely accommodate all vehicular and pedestrian movements and so is rightly considered by the Highway Authority as a potentially acceptable allocation for residential use. Ecology An Extended Phase 1 Habitat Survey was undertaken in June 2014 and this confirmed that the site holds little ecological significance and any potential impacts arising from its future development can be minimised and enhancements to local bio-diversity can be achieved through an Ecological Mitigation Strategy to be formulated in due course. The site has recently been re-surveyed and assessed and latest report completed this month (June 2016) and attached herewith, also confirms that: "The habitats on site provided limited potential for use by reptile species. Although suitable reptile habitat within the site is limited in extent, it is recommended that a precautionary approach is followed, with a method statement prepared that details the actions required to reduce the risk to common reptiles (if present) being injured as a result of the works." (§1.11) Flood Risk The site is shown on the Environment Agency Flood Map as being Flood Zone 1 (e.g. not liable to flood). It is envisaged that the foul water will discharge into nearby mains and the surface water can either be to soakaways, or attenuated to discharge at an agreed

BD062 Land north of York Close & Essex Drive

green field run-off rate into the adjacent watercourse. Odour An Odour Assessment has been undertaken and is attached. This confirms that the nearby Treatment Works have not generated objection and that all but the very northern tip of the site (which could be open space) is suitable for residential development. The findings of the report do not materially reduce the capacity of the site to accommodate between 35-40 dwellings. Conclusion The site is of only 'limited' value in terms of fulfilling the purposes of Green Belt and it is clear that there are no physical (ownership, easement and topography) technical (highways and flood risk and drainage), or environmental (landscape, ecology, trees and proximity to the nearby treatment works) constraints to prevent the development of the site for up to 40 dwellings. In summary, this site is suitable, achievable and capable of delivering a sustainable modest scale of residential environment in keeping with the adjoining urban area and without detriment to the wider surroundings. In the circumstances, we fully endorse the site option BD062 which is immediately available and capable of delivering new homes at the earliest available opportunity.

Public Response

The following issues were raised:

- Inadequate highway network.
- Noise and odour, existing raw sewage flooding, capacity of sewage works.
- This site will deliver too few homes to add a measurable contribution to the Community Infrastructure Levy (CIL), it will not bring any direct benefit to the community of Gillow Heath.
- Site is in Flood Zone 2.
- Flooding (general).
- Lack of education infrastructure.
- Victoria Colliery and Childerplay are alternative locations for development.
- Ecological interest on site.
- No exceptional circumstances for loss of GB demonstrated.
- No community benefit of developing site.
- Loss of link through site to Biddulph Valley Way.
- Site should be allocated as Visual Open Space.
- Site's inclusion contradicts with Core Strategy Policy SS5b.
- Site is in the Green Belt.
- Residents have enjoyed unrestricted public access to the site for a long time.
- Need site screening from sewage works.
- Use derelict buildings in Biddulph instead.
- Develop in Stoke instead.
- No Green Infrastructure Strategy is in place.
- Object to heritage impact.
- Object to landscape impact.
- Lack of employment in Biddulph.
- Infrastructure could not cope.
- Site should be designated as public open space.
- Amenity issues.
- Marketing of the consultation.
- Property values.

Council Response

BD062 Land north of York Close & Essex Drive

- **Inadequate highway network.**
The Highway Authority has no difficulties with this development from their point of view. Cumulative impact of several developments in this area would be assessed through a Transport Assessment.
- **Noise and odour, existing raw sewage flooding, capacity of sewage works.**
United Utilities has a statutory duty to provide capacity for new development so this is not a valid reason for development not to come forward in Biddulph. United Utilities considers that there is no need to expand the treatment works in the development plan period for the growth identified in the development plan. Current issues experienced by residents in regard to raw sewage flooding are a separate matter to be investigated by United Utilities. An odour assessment has been undertaken which demonstrates that the site could be developed without adverse impact on future residents.
- **This site will deliver too few homes to add a measurable contribution to the Community Infrastructure Levy (CIL), it will not bring any direct benefit to the community of Gillow Heath.**
New housing development would make a contribution towards Biddulph's housing needs.
- **Site is in Flood Zone 2.**
The site boundary can be amended to exclude land within Flood Zone 2 at the request of the landowner, who does not own this land and is not promoting it for development. This approach has been agreed with the Environment Agency since their response to the consultation so a Level 2 Flood Risk Assessment is no longer required for the site.
- **Flooding (general).**
The part of the site within Flood Zone 2 has now been removed from the site boundary.
- **Lack of education infrastructure.**
Education - The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- **Victoria Colliery and Childerplay are alternative locations for development.**
Sites at Victoria Colliery and Childerplay Road are within the Green Belt like BD062. The Green Belt Review has considered the impact on the Green Belt the release of these sites for development would have. Only the Victoria Colliery site was identified as being suitable for consideration for Green Belt release (in exceptional circumstances). In reaching a decision on which sites to include in the Local Plan, the Council must balance evidence and Government policy.
- **Ecological interest on site.**

BD062 Land north of York Close & Essex Drive

The Council's Phase 1 Habitat consultants consider the site habitats to be of nature conservation value at district level and have the potential to support bats and reptiles, which could allow the consideration of the site as an SBI or BAS. Further survey work would need to take place prior to any development to establish Site of Biological Importance (SBI) / Biodiversity Alert Site (BAS). Prior to any development an assessment would be required of the 2 trees for their potential to support roosting bats and a reptile survey.

- **No exceptional circumstances for loss of GB demonstrated.**
If this site is selected as a housing allocation, exceptional circumstances will need to be demonstrated to justify its release from the Green Belt.
- **No community benefit of developing site.**
Site BD062 will be required to provide a percentage of affordable housing / starter homes to benefit those in the community needing affordable housing.
- **Loss of link through site to Biddulph Valley Way.**
If this site were to be developed, the developer would be required to maintain a public access on to the Biddulph Valley Way.
- **Site should be allocated as Visual Open Space.**
The site is not recommended for designation as Local Green Space in the Landscape, Local Green Space and Heritage Impact Study (2016). Local Green Space supersedes the Visual Open Space designation (which is an old designation not supported by Government policy in the NPPF).
- **Site's inclusion contradicts with Core Strategy Policy SS5b.**
No contradiction with SMDC Core Strategy Policy SS5b 'Biddulph Area Strategy'. Sites within the urban area and an extension to the urban area are included as well as extensions in the Green Belt identified as part of the Green Belt Review as stated in the policy.
- **Site is in the Green Belt.**
In order for Biddulph to accommodate new development, the Green Belt boundary will need adjustment as there are not enough sites in the existing settlement boundary to accommodate the level of development needed. The Council has completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact on the function of the Green Belt as a whole (as defined in government planning guidance). This study recommends considering site BD062 for release from the Green Belt.
- **Residents have enjoyed unrestricted public access to the site for a long time.**
The land is privately owned and has a footpath across it linking to Biddulph Valley Way.
- **Need site screening from sewage works.**
Screening would be required as part of any new development.
- **Use derelict buildings in Biddulph instead.**
Brown field sites have been considered as part of the site selection process and it is agreed that the mills in the centre of Biddulph (particularly Yarn Mill

BD062 Land north of York Close & Essex Drive

and Minster Mill) would be appropriate for residential development. Albion Mill on Station Road is too small for an allocation of its own but if it is developed it would count towards Biddulph's housing needs. The Biddulph Neighbourhood Planning Group are currently working on a Town Centre Masterplan which includes looking at opportunities for redeveloping brownfield sites.

- **Develop in Stoke instead.**
National planning guidance states that the Council should seek to meet the development needs of their area. Stoke and Newcastle Councils have their own development needs to meet.
- **No Green Infrastructure Strategy is in place.**
A Green Infrastructure Strategy for the Staffordshire Moorlands has been produced by the Council with assistance from partners such as the Staffordshire Wildlife Trust and will be published alongside the next Preferred Options consultation.
- **Object to heritage impact.**
Heritage Impact of development on the site has been assessed in the Council's Heritage Impact Study (August 2016), the results for this site are "There are three Grade II Listed Buildings within the 400m buffer. The site was enclosed by surrounding vegetation and there is no intervisibility between the site and the assets. Development would be highly unlikely to adversely affect the settings of the assets. Development would be highly unlikely to adversely affect HLC zone BBHECZ 8 (Historic Environment Character Assessment 2010). Site suitable for development in heritage terms".
- **Object to landscape impact.**
Landscape impact of development on the site has been assessed in the Council's Landscape Impact Study (August 2016), the results for this site are "Site is located within the north of Biddulph, east of the dismantled railway line, and comprises an area of rough grassland and scrub. The site is enclosed by residential development to the south and west, and a sewage treatment works to the north-east, resulting in low visual prominence. Although the adjacent settlement edge is well-defined, it is urban in character to the south of the site. Existing vegetation on the north-eastern site boundaries would form a vegetated settlement edge, and therefore this vegetation should be retained and strengthened where necessary. Site is of low landscape sensitivity."
- **Lack of employment in Biddulph.**
New employment areas are also proposed for Biddulph in the draft Local Plan.
- **Infrastructure could not cope.**
National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with

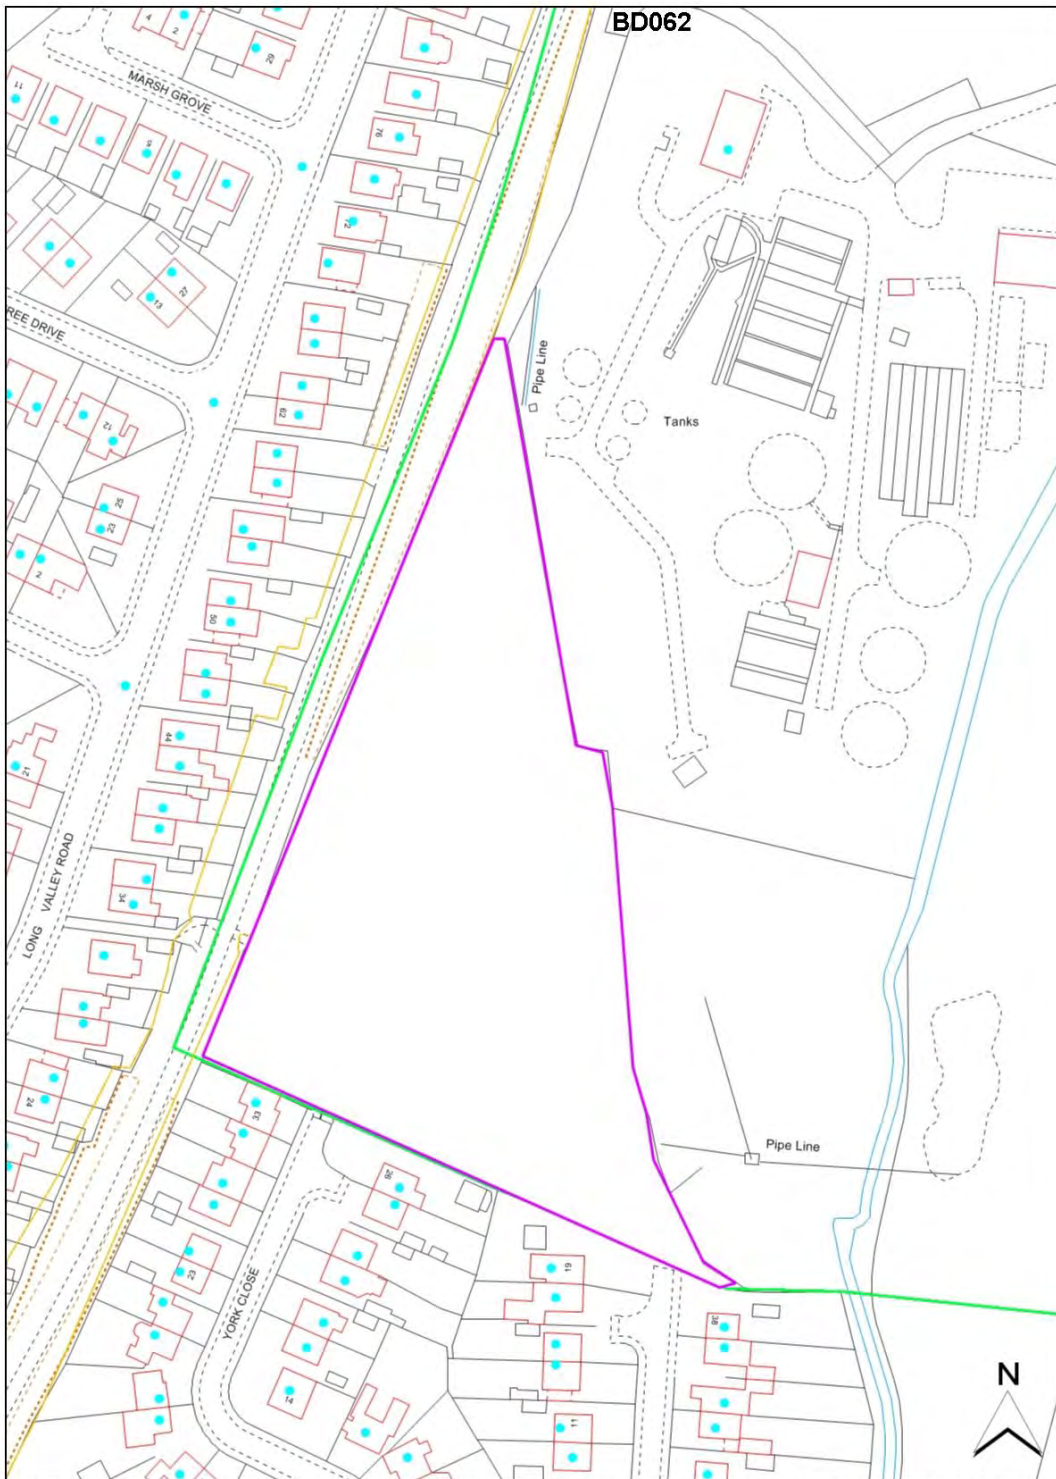

BD062 Land north of York Close & Essex Drive

the County Council to assess the impact of proposed development on school capacity, what additional capacity is needed and how this can be delivered.

- **Site should be designated as public open space.**
The land cannot be allocated as public open space or a community forest as it is privately owned.
- **Amenity issues.**
Issues such as overlooking will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- **Marketing of the consultation.**
The consultation was widely publicised and included a flyer being sent to all households and businesses in the District through Royal Mail. High levels of responses have been received by the Council from Biddulph residents which suggests that a significant number of residents knew about the consultation.
- **Property values.**
Property values are not considered material in planning law.
- **Loss of Agricultural Land**
The land has an agricultural classification of Grade 4 which means that it is poor quality.
- **Query why 20% of the District's development is proposed in Biddulph**
The proportion of 20% of the District's housing development taking place in Biddulph has been through extensive consultation and public examination as it is taken from the Council's Core Strategy which was adopted in March 2014.

Biddulph

BD062 Land north of York Close & Essex Drive

© Crown copyright and database rights 2017 Ordnance Survey 100018384. **MAP SCALE: 1:1250**

Biddulph

BD063a Land off Newpool Road

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site not taken forward into Preferred Options Local Plan as:

- An alternative Green Belt site exists adjacent to Wharf Road which will assist with bringing forward a large strategic mixed use regeneration site which is well related to the town centre and its key services and facilities.

Key Issues

- Green Belt site – Green Belt Review says “might be acceptable, but there are better options to the west of Biddulph.” Exceptional circumstances would need to be demonstrated.
- Ecology – mostly low value but further survey work would be required on the two trees (potential for bat roost) in order to establish SBI/BAS status.
- Low landscape sensitivity and suitable for development in heritage terms.
- Highways - adequate access and visibility splay needed. No objections relating to any impact on wider road network.
- Owner’s agent has done additional work to demonstrate that an appropriate access can be formed onto Newpool Road. It may involve acquiring third party land.
- Possibly located above a historic landfill site – this will be an additional development cost.

Site Information

Green field/brownfield	Built up area boundary/countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Green field	Countryside Green Belt	40 (reduced capacity to reflect Green Belt Review)	1.370	Owner willing to develop	<ul style="list-style-type: none">• Agricultural land used for grazing• Relatively flat site• Minimal landscape impact• Appropriate access needed onto Newpool Road• Close to services & facilities

Studies

Green Belt Review (2015) – assessed as part of much larger site BD063a

Check Sprawl	Contribution
Maintain Separation	Significant Contribution
Prevent Encroachment	Significant Contribution
Preserve Setting	Significant Contribution

BD063a Land off Newpool Road

Significant Impact on Green Belt

An illogical site with no clear external boundaries to prevent unchecked incursion into the open countryside to the west of Biddulph leading up to Mow Cop. **A smaller variant of this site, bounded by an unmade road to the west (off Newpool Road) might be acceptable, but there are better options to the west of Biddulph.** Not Recommended for release at this scale.

Extended Phase 1 Habitat Survey 2015 (FID28)

Site is part of wider area assessed. The site has mostly low biodiversity value overall in terms of the species poor grassland area but has some fairly biodiverse areas connected by hedgerows to the south and north, although the site is attributed district ecological importance due to the presence of trees with bat roosting potential.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- A bat survey regime to ascertain whether bats roost in the trees
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2016)

The site habitats are considered to be of nature conservation value at site level only and are not eligible for possible SBI/ BAS status. However, two trees on site have the potential to support bats and as such, require further assessment.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Assessment of the 2 trees for their potential to support roosting bats.

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results

The site is located north of Newpool road, and comprises a single field that slopes down from the farm track on the western boundary, to the residential development which encloses the site. The site has low visual prominence due to its topography, and screening provided by the adjacent development and a hedgerow on the western boundary. The linear development on Meadowside does not contribute to a well-defined settlement edge, and development of the site could strengthen the settlement edge. The hedgerow on the western boundary should be retained in order to maintain low visual prominence, and a vegetated edge. **Site is of low landscape sensitivity.**

Heritage Results

There are seven Grade II Listed Buildings within the 400m buffer. The site is set behind existing development and development on the site would be highly unlikely to adversely affect the settings of the heritage assets. The site is set within the HLC zone BBHECZ 2 (Historic Environment Character Assessment 2010). The particular HLC type is least susceptible and development would not alter the character of the zone significantly. **Site is suitable for development in heritage terms.**

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

BD063a Land off Newpool Road

The proposed delivery of circa 120 dwellings should have a significant positive effect. The site is also accessible to existing services, facilities and areas of employment which is likely to have a positive effect. However, the site's district ecological importance is considered to have a negative effect. Similarly, the development of greenfield land, grade 3/4 ALC and the site's proximity to historic assets are also assessed as having a negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Biddulph.

Options Consultation July 2015

Statutory bodies/stakeholders

Historic England: Made no comments on individual sites recommended that a heritage impact assessment of sites is carried out. (Note – this work has now been completed).

Environment Agency; Site not identified as being in an area likely to be affected by flooding. Need to have regard to the relevant River Basin Management Plan.

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. Previous coal workings do not prevent development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

United Utilities, Severn Trent, Heritage England, Network Rail; no site specific comments

SCC Highways - Not directly connected to the highway. Additional land will be required to provide adequate access and visibility splay.

Natural England - Natural England consider this may represent a strategic site – Has a Landscape & Visual Impact Assessment been carried out? Those sites taken forward to the next stage of the process may require LVIA in order to inform the development specification for the site. (Note – this work has now been completed).

Developer/Agent/Owner – Land available, in a highly sustainable location close to the town centre and facilities and services, landscape impact would be acceptable – could provide treatments to create a defensible boundary, support extension of the site, Phase 1 Habitat survey supplied demonstrating that no features of ecological interest present which would preclude housing development, a suitable access could be achieved using the existing access point (evidence supplied).

Public response 56 comments – all objections.

Objections

- **Infrastructure - Schools** - new school is needed as local headmistress believes all schools in Biddulph are full and will be for next 4/5 years.
- **Infrastructure - Traffic / Transport** (road network cannot cope, problems with bridge on Newpool Road, highway safety - limited access for emergency vehicles

BD063a Land off Newpool Road

and HGVs, inadequate access to site - properties would need to be demolished, pollution from traffic, site is between a bend and the brow of a hill), Knypersley cross roads already heavily congested at rush hour.

- Infrastructure - Other - medical facilities like doctors and dentists, utilities, the area is lacking in facilities for outdoor sport and recreation, Public transport northwards finishes at 6pm. Current deficit in public open space and severe deficit in children's play areas.
- Landscape - loss of rural character, sprawl, Newpool Road represents the border between Biddulph and Knypersley and marks a distinct boundary between Biddulph and the Cheshire Plains.
- Nature Conservation (foxes, hedgehogs, owls, bats, birds of prey and herons seen on site), loss of trees and hedges
- Flood Risk - site floods during heavy rain, resultant increased insurance premiums for residents, during heavy rain sewers in Newpool Road become full forcing water back into householders drains and causing leakage of sewage onto driveways.
- Amenity (e.g. noise (from extra traffic and building work), loss of privacy, loss of light - some of properties along Newpool Road are bungalows and the land has an elevated incline, unsightly appearance of new development, detrimental to health of existing residents)
- Scale of development excessive
- Government Policy (contradicts NPPF Green Belt policy which protects Green Belt land).
- Other - Loss of prime agricultural land, develop brown field sites first, other sites elsewhere in the town are more suitable (BD071 + BD071A + BD106 + BD156, BD117, disused garden centres, all sites within development boundary, smaller sites, land off Childerplay Road land in neighbouring authorities, open spaces), site did not appear on any legal searches when buying property, loss of right of way, why is site still an option when it was removed from Core Strategy?, concern about unmapped mine shafts, need for new houses / flats in town centres, existing empty properties in town centres, query number of homes needed following recent newspaper article claiming only 2500 needed for Moorlands, loss of tourist appeal, no jobs being created in the town, consultation leaflet not received by all households and tendency to bin junk mail, consultation event unsatisfactory as there were no map handouts left, online form difficult to use and to find on the website, consultation period too short.

Council response –

- The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- There are issues surrounding the suitability of the access point to the site but if these can be resolved to an acceptable standard then development could take place.
- New development is the main way to deliver new or improved infrastructure e.g. more residents may support an improved bus service, more medical facilities. Infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas.

BD063a Land off Newpool Road

- The land in question is not highlighted as significant in the Council's Landscape & Settlement Setting Assessment. A Landscape & Visual Impact Assessment will be undertaken during the plan production process and look at all preferred option sites suggesting mitigation measures where appropriate. The results will be incorporated into the Submission Version of the Local Plan.
- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed sites included in the Site Options consultation. The site survey results will be used as part of the site selection process. Any other sites which come forward and are potentially suitable for development will also need to be assessed.
- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- It is not considered that development of this particular site would be out of proportion with its surroundings. Any new development taking place will be subject to design policies contained within the new Local Plan – which will be subject to public consultation next year.
- The land in question is within the Green Belt. In order for Biddulph to accommodate new development, the Green Belt boundary will need adjustment as there are not enough sites in the existing settlement boundary to accommodate the level of development needed. The Council has recently completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact on the function of the Green Belt as a whole (as defined in government planning guidance). This study recommends considering a smaller variant of site BD063a for release from the Green Belt but considers that other options would be better. The capacity of the site has been reduced from 120 to 40 to reflect the results of the Green Belt Review.
- The SHLAA has assessed more than 150 sites in and around Biddulph including brown field sites and these have been included as allocations where they are suitable, available and deliverable. However, there is not enough brownfield land to meet the town's requirements so green field sites also need to be included. Prioritising brown field land over greenfield in all circumstances is not part of Government policy. The other sites suggested by residents have all been included in the consultation as potentially suitable development sites.
- The land has an agricultural classification of Grade 3 which means that it is good to moderate.
- The issue of using land in neighbouring authorities will be discussed as part of the Council's duty to co-operate obligation.

Biddulph

BD063a Land off Newpool Road

- Public footpaths can be maintained or re-directed. This issue would be considered at the planning application stage.
- The Council is aware of mining issues which affect a number of green field sites around Biddulph and investigative work will take place in these areas prior to the commencement of any development.
- New employment land is proposed at the south of the town (BD117). The new Local Plan will cover a period to 2031 so lack of demand (perceived or actual) at one point in time is not a valid reason for not meeting the area's objectively assessed housing needs.

Preferred Options Consultation April 2016

Statutory bodies/stakeholders

United Utilities: Within Biddulph we note site reference BD063a, this appears to be on the boundary of our area with Severn Trent Water for the provision of wastewater services. We would find it helpful to confirm that this site will discharge to that area served by United Utilities.

Council Response

Points of discharge to the wastewater network are a detail which can be confirmed at a later stage in the process once the sites have been allocated in the Local Plan and detailed development schemes become available at the planning application stage.

Environment Agency: The following comments highlight sites where we consider there may be issues relating to contaminated land BD063: According to information held by the Environment Agency, these sites are located above historic landfill sites. The local council, as lead regulator for these sites, should be contacted for further information.

Council Response

It is considered that although this matter will require more detailed investigation at the time a detailed scheme is being developed, it is an additional development cost rather than an issue which would prevent development from taking place.

Biddulph Neighbourhood Plan Working Group: Major concern with traffic issues which need to be addressed before any development, not recommended for inclusion.

Developer/Agent/Owner: We support the Preferred Housing Allocation reference BD063a and associated Green Belt Amendment.

Public Response

**Petition with 883 signatures opposing development on this site
Plus individual objections received**

Issues Identified:

- Presence of historic landfill.

BD063a Land off Newpool Road

- Why is this area is being reconsidered
- Green Belt and exceptional circumstances for Green Belt Development.
- Develop the mills instead.
- Develop Victoria Colliery and Childerplay Road instead.
- Education capacity
- Problematic access to site.
- Use brownfield land instead.
- Should commission a review in to availability of brown field sites.
- Uplands Mill houses not all been sold.
- Loss of public footpath.
- Impact on ecology.
- Impact on landscape.
- Impact on property values.
- Impact on highways.
- BD071 + BD071A + BD106 + BD156 are suitable alternative sites.
- Lack of infrastructure capacity
- Loss of agricultural land
- Mining legacy
- Drainage
- Flooding
- Impact on residential amenity.
- Query need for housing.
- Responses to previous consultation not online.
- Develop in Stoke instead.
- Develop on open space instead.
- Use BD117 for housing instead of employment.
- Question viability of site.
- Lack of capacity at sewage works.

Council Response:

- **Presence of historic landfill.**
It is considered that although this matter will require more detailed investigation if a detailed scheme is being developed, it is an additional development cost rather than an issue which would prevent development from taking place.
- **Why is this area is being reconsidered**
A larger area was considered as a broad area for development as part of the Core Strategy but not included in the final version of the plan.
- **Green Belt and exceptional circumstances for Green Belt Development.**
The land in question is within the Green Belt. The new Local Plan looks at development requirements to 2031. Biddulph's share is lower than Leek and Cheadle as it is recognised that the Green Belt acts as a constraint. In order for Biddulph to accommodate new development, the Green Belt boundary will need adjustment as there are not enough sites in the existing settlement boundary to accommodate the level of development needed. However, the Council's Green Belt Review highlights areas of the Green Belt around the town which could be considered for release without jeopardising the wider purposes of the Green Belt designation. This study recommends considering

BD063a Land off Newpool Road

a smaller variant of site BD063a for release from the Green Belt but considers that other options to the west of Biddulph would be better. The capacity of the site has been reduced from 120 to 40 to reflect the results of the Green Belt Review. The Council has to balance the evidence base and consider the best way forward.

If this site is selected as a housing allocation, exceptional circumstances will need to be demonstrated to justify its release from the Green Belt.

- **Develop the mills instead.**
Brown field sites have been considered as part of the site selection process and it is agreed that the mills in the centre of Biddulph (particularly Yarn Mill and Minster Mill) would be appropriate for residential development. Albion Mill on Station Road is too small for an allocation of its own but if it is developed it would count towards Biddulph's housing needs. The Biddulph Neighbourhood Planning Group are currently working on a Town Centre Masterplan which includes looking at opportunities for redeveloping brownfield sites.
- **Develop Victoria Colliery and Childerplay Road instead.**
Sites at Victoria Colliery and Childerplay Road are within the Green Belt like BD063a. The Green Belt Review has considered the impact on the Green Belt the release of these sites for development would have. Only the Victoria Colliery site was identified as being suitable for consideration for Green Belt release (in exceptional circumstances). In reaching a decision on which sites to include in the Local Plan, the Council must balance evidence and Government policy.
- **Education capacity**
The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- **Problematic access to site.**
Further work has been undertaken by the owner's agent to demonstrate that the site can be suitably accessed in accordance with highway standards.
- **Use brownfield land instead / Should commission a review in to availability of brown field sites.**
The Council's Strategic Housing Land Availability Assessment has assessed more than 150 sites in and around Biddulph including brown field sites and these have been included as allocations where they are large enough (10+ units), suitable, available and deliverable. However, there is not enough brownfield land to meet the town's requirements.
- **Uplands Mill houses not all been sold.**
The Uplands Mill housing site has been taken into account in calculating Biddulph's housing needs.
- **Use empty houses**

BD063a Land off Newpool Road

Need for additional housing stems from a number of factors, for example household formation, in-migration, linkages with future workforce, and other factors. The NPPF makes clear that housing projections are the starting point for assessing housing needs; however these additional factors should also be taken in to account in Council SHMAs. The Council's own housing need assessments are set out in its evidence base on the website. Note that this already takes into consideration empty properties in the Moorlands.

- **Loss of public footpath.**
Public footpaths can be maintained or re-directed. This issue would be considered at the planning application stage.
- **Impact on ecology.**
The Council uses evidence to justify its selection of 'Preferred' allocation sites from wider sites, including ecological evidence: This site was subject to a Phase I ecological survey in 2014 and a later 2016 ecology study considered the scope for 'local wildlife site' (ie.SBI) designation for all preferred option sites. These studies set out evaluations of the sites followed by recommended further surveys/actions in the event of future development. The Council would expect subsequent schemes to take account of this evidence; further Policy NE1 allows for the Council to require ecological mitigatory or compensatory measures where appropriate. Note that ecology evidence must be weighed against all other relevant evidence when the Council selects 'Preferred' sites.
- **Impact on landscape.**
The Council's Landscape, Local Green Space & Heritage Impact Study (August 2016) concludes that the land is of low landscape sensitivity.
- **Loss of ancient trees and hedgerows**
If development takes place on this site any protected trees would be preserved unless there are exceptional circumstances in which case re-planting would be required. Soft landscaping would be integrated into any scheme. If the site is developed hedgerows would be retained within the scheme layout wherever possible.
- **Impact on property values.**
Property values are not considered material in planning law.
- **Impact on highways.**
The Highway Authority does not raise any objections to development of the site.
- **BD071 + BD071A + BD106 + BD156 are suitable alternative sites.**
It is agreed that BD071 + BD071A + BD106 + BD156 are suitable sites and they have been included in the plan.
- **Lack of infrastructure capacity**
National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work

BD063a Land off Newpool Road

with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan.

- **Loss of agricultural land**
The land has an agricultural classification of Grade 3 which means that it is good to moderate. It is up to the Council to balance all the planning issues in determining whether to select a site for development in the Local Plan.
- **Mining legacy**
The Council is aware of mining issues which affect a number of green field sites around Biddulph and investigative work will take place in these areas prior to the commencement of any development.
- **Drainage**
Any drainage issues on the land could be resolved through new development.
- **Flooding**
The Environment Agency has stated that the area is not affected by flooding.
- **Impact on residential amenity.**
Issues such as overlooking will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application. Problems arising from the construction period of any works, e.g. noise, dust, construction vehicles, hours of working (covered by Control of Pollution Acts) are not material planning considerations.
- **Query need for housing.**
The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change.
- **Query why Biddulph's share of District Housing Need is 20%**
The 20% figure – Biddulph's share of the District housing requirement - is set out in the Council's Core Strategy, a planning document which has been through consultation and an examination by an independent inspector.
- **Responses to previous consultation not online.**
Regarding comments made in response to the previous consultation, the data was published in a different format which did not include the names of everyone who objected, just a list of the issues raised in their objections and Council responses. Only the statutory bodies (e.g. Environment Agency) were named in the report and not private individuals.
- **Develop in Stoke instead.**
Housing allocations are needed to ensure the District's housing requirement is met. Stoke has their own housing requirement.
- **Develop on open space instead.**

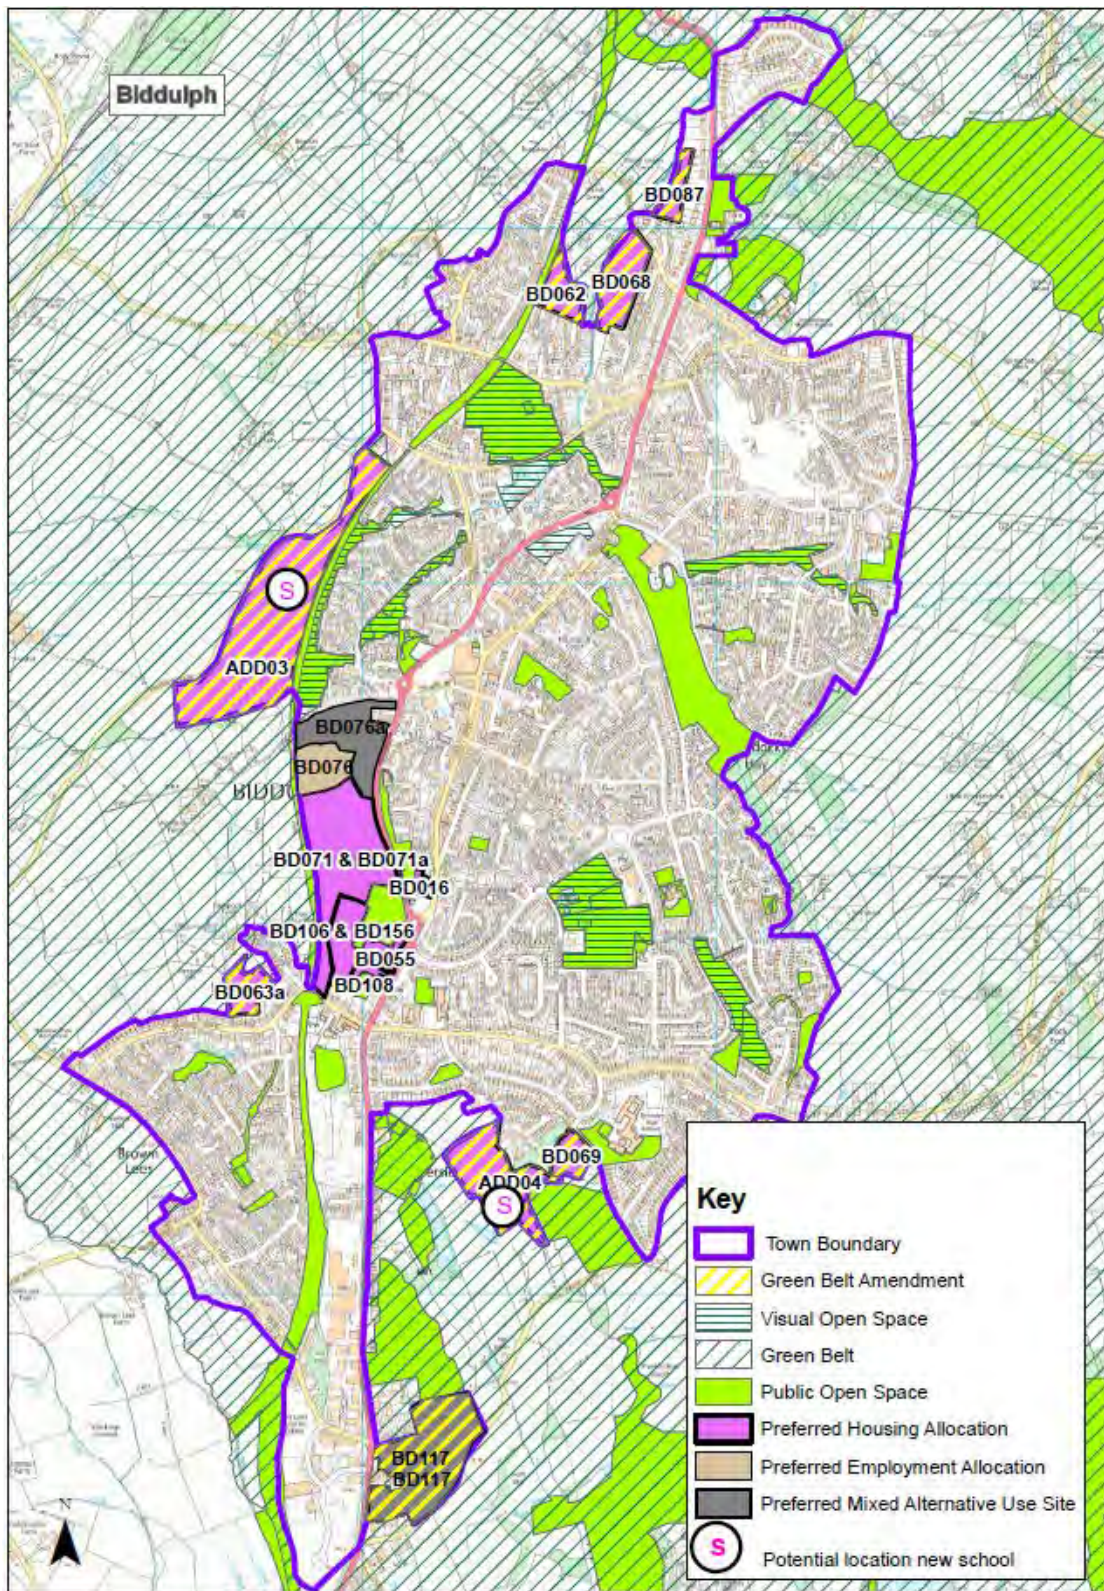

BD063a Land off Newpool Road

Open space needs to be accessible to local communities so developing it and replacing it outside the town in the green belt is not considered to be a satisfactory approach in planning policy.

- **Use BD117 for housing instead of employment.**
The Council is looking to meet the future employment land needs of the District in the period to 2031 – refer to its employment land assessment for further details.
- **Lack of capacity at sewage works.**
United Utilities has a statutory duty to provide capacity for new development so this is not a valid reason for development not to come forward in Biddulph. United Utilities considers that there is no need to expand the treatment works in the development plan period for the growth identified in the development plan.
- **Increase in air pollution**
If the district council considered that a development may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts. In addition the district council continually monitors air quality across the district and regularly undertakes review and assessments of this data to identify areas where the traffic could have an unacceptable impact on local air quality.

Biddulph

BD063a Land off Newpool Road

BD068 Land west of Portland Drive

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site not taken forward into Preferred Options Local Plan as:

- An alternative Green Belt site exists adjacent to Wharf Road which will assist with bringing forward a large strategic mixed use regeneration site which is well related to the town centre and its key services and facilities.

Key Issues

- Green Belt site – considered to be suitable for removal if exceptional circumstances are demonstrated.
- Potential flooding issues would require SFRA level 2 (Environment Agency has confirmed that boundary can be pulled back to exclude area in Flood Zone 2).
- No landscape or heritage issues in relation to development of this site.
- Noise and odour reports have been received from the developer very recently. Noise mitigation measures are recommended which could potentially be implemented as part of a development scheme – no odour mitigation measures are considered necessary. Both reports will be supplied to Environmental Health section for comments if the site is selected as an allocation.
- Ecological surveys are recommended in order to establish SBI/ BAS status.
- United Utilities has suggested specific measures which can be incorporated into policy to address any flooding implications.

Site Information

Studies

Green Belt Review 2015

(Appraised sites according to their contribution to Green Belt Purposes) Assessed with BD062

Check Sprawl: Limited contribution

Maintain Separation: Limited contribution

Prevent Encroachment: Limited contribution

Preserve Setting: Contribution

Overall Impact on Green Belt Purposes: Limited

BD068 Land west of Portland Drive

These sites are connected though their enclosure to the north by Marsh Green Road, As such they are effectively part of the built envelope of Biddulph in this location and notwithstanding the presence of a sewage treatment works between the sites could be developed without impinging on the wider Green Belt either physically or visually.
Recommendation: Consider for release

Extended Phase 1 Habitat Survey 2015

The site has been deemed to have ecological importance due to the presence of trees with bat roosting potential, potential reptile populations and good connectivity to other biodiverse habitats.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- A bat survey regime to ascertain whether bats roost in the tree
- Reptile survey
- Badger survey
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2016)

The site habitats are considered to be of nature conservation value at site level only and are not eligible for possible SBI/ BAS status. However, the tree on site has the potential to support bats and as such, requires further assessment. The site was also noted as potentially supporting reptiles.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Assessment of the building for it's potential to support roosting bats.
- Reptile survey required

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results:

Site is located within the north of Biddulph, south of Marshgreen Road. The site comprises fields enclosed by residential development to the north, east and south; and sewage treatment works to the west. The site is elevated above Marshgreen Road, however it is at a similar level to the adjacent residential development on Portland Drive, and has low visual prominence due to screening provided by the surrounding development and vegetation, particularly trees surrounding the sewage works. The site forms a gap in development, and therefore fits in well with the existing settlement form.

Site is of low landscape sensitivity.

Heritage Results:

There is one Grade II* and eight Grade II Listed Buildings, and a Registered Park and Garden which is also a Conservation Area within the 400m buffer. There was no public access on to the site which is elevated above Marshgreen Road, and it is at a similar level to the adjacent residential development on Portland Drive. Development would be unlikely to cause high adverse effects to the settings of the heritage assets as development would be seen in context of the existing housing estate. Development would not adversely affect HLC zone BBHECZ 8 (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms.

Sustainability Appraisal

BD068 Land west of Portland Drive

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 70 dwellings is considered to have a significant positive effect, as could the site's proximity to existing areas of employment. The site is also accessible to existing services and facilities which is likely to have a positive effect. However, the site's is located within a flood zone which is likely to have a significant negative effect. Similarly, the district ecological importance is considered to have a negative effect, as could the development of greenfield land, grade 4 ALC and the site's proximity to heritage assets is also assessed as having a negative effect

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Biddulph.

Options Consultation July 2015

Historic England: Made no comments on individual sites recommended that a heritage impact assessment of sites is carried out. (Note – this work has now been completed).

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. Previous coal workings do not prevent development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

United Utilities, Severn Trent, Heritage England, Natural England, Network Rail; no site specific comments

SCC Highways - Acceptable subject to access design and visibility splays. Access is likely to need to be close to the bridge in order to meet visibility standards. Footway should be provided on the frontage to connect to the existing footway. Possible improvements to Marsh Green Road/Congleton Road junction. May be appropriate to realign Marsh Green Road to provide visibility to plot BD087 if possible and if agreement can be reached between owners.

Environment Agency – Site is likely to be affected to some degree by flood risk and if taken forward will require the support of the Sequential Test and a Level 2 SFRA. Need to have regard to the relevant River Basin Management Plan. (Note – it has been agreed with Environment Agency that this would not be needed if the boundary of the site is adjusted to remove flood zone).

Developer/Agent/Owner Support development of this site. Propose a sustainable development to include sheltered housing compliant (subject to conditions) with Environmental Health, Environment Agency, United Utilities and Highway Authority requirements. Major supermarket less than one mile from site, churches and schools within easy walking distance, main line railway station at Congleton is just 4 miles away, close to A34 which connects to M6.

Public response 72 comments – 71 objections and 1 neutral.

BD068 Land west of Portland Drive

Issues raised:

Objections

- Infrastructure - Oxhey First School, Woodhouse Academy and Biddulph High School are all full with limited opportunity for expansion.
- Infrastructure - Traffic / Transport - Access to the site would be difficult - crosses a public footpath, Marsh Green Road, Portland Drive, Beaumont Close, Marsh Green Close and bridges cannot cope with more traffic - no footpaths on a large part of Marsh Green Road, narrow and no street lighting, dangerous for pedestrians and cyclists - it is not suitable for HGVs, Congleton Road junction with Woodhouse Lane / Marsh Green Road is dangerous, visibility problems - this would be made even worse if all proposed sites in this area were developed, pollution from extra traffic.
- Infrastructure - Other - Local amenities are not sufficient for existing residents - doctors full, does water treatments works have the capacity for proposed new development? No access to local shops without car, Public transport northwards finishes at 6pm. Current deficit in public open space and severe deficit in children's play areas.
- Landscape - site is part of a steep hillside so would be difficult to build on, loss of attractive landscape, negative impact on character of area.
- Nature Conservation - Mature trees and abundant wildlife on site including newts, kingfishers, sparrow hawks, buzzards, foxes, badgers, squirrels, robins, wrens, swallows, blue tits, goldfinches, kestrel and jay. Site has also recorded roosts for Daubenton's Bats and Pipistrelle Bats.
- Flood Risk - watercourse is prone to flooding, question whether adjacent land is unstable as it is constantly damp, potential issues obtaining home insurance for existing and future residents, development will increase surface water run off, Mow Lane floods, surface water will find its way into sewerage system which cannot cope at present due to design / construction of town sewer causing flooding in Gillow Heath - United Utilities say this cannot be solved without considerable funds.
- Amenity (e.g. noise, privacy, loss of light) - Too close to sewage works which can be noisy (works are carried out at night) and smelly, potential health hazard from flies, new residents would have a clear view of site in winter as much of screening is not evergreen, many of properties on Portland Drive are single storey so new development would be overbearing and detrimental to their amenity in terms of privacy and loss of light, extensive earthworks would be required which would be intrusive and noisy for residents. Refer to Government's document "Code of Practice on Odour Nuisance from Sewage Treatment Plants".
- Scale of development - too high.
- Government Policy - Land is Green Belt and should be protected from development.
- Other - Difficult to build on land due to high concentration of sewage pipes, site has been used for landfill in the past so query any public health risks, contamination from works running into Biddulph Brook, question whether development is economically viable, more appropriate to build next to bypass (e.g. BD071, BD071a) or on brownfield land, land is in use for grazing, new development generally has a poor appearance, no additional employment proposed, town centre is declining, lack of demand for additional housing - housing on Uplands Mill is not selling, will attract in-migration, increased social problems from social housing, Gillow Heath area will be taking majority of

BD068 Land west of Portland Drive

houses, Core Strategy contradicts itself - talks about protecting open space, previous planning application refused, residents do not understand abbreviations used on SHLAA form and would like to see information landowner has provided to Council, poor awareness of consultation - expect to be written to personally about developments affecting them, comments form has too much technical language with residents struggling to understand it, need for new houses / flats in town centres, existing empty properties in town centres.

Council response –

- The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- The Highway Authority considers that this development is acceptable subject to detailed design issues. Public footpaths can be provided as part of a development scheme. Cumulative impact of several developments in this area would be assessed through a TA.
- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. Where necessary, additional assessment work will be undertaken in line with Environment Agency requirements. Mitigation measures will be taken as part of the site development to address any surface water issues.
- New development is the main way to deliver new or improved infrastructure e.g. more residents may support an improved bus service and medical facilities. Infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas.
- United Utilities has advised that if appropriate measures for surface water disposal are included within development schemes then there should be no detrimental impact on the capacity of their infrastructure.
- The land in question is not highlighted as significant in the Council's Landscape & Settlement Setting Assessment. A Landscape & Visual Impact Assessment will be undertaken during the plan production process and look at all preferred option sites suggesting mitigation measures where appropriate. The results will be incorporated into the Submission Version of the Local Plan.
- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed sites included in the Site Options consultation. The site survey results will be used as part of the site selection process. Any other sites which come forward and are potentially suitable for development will also need to be assessed.
- Amenity – issues such as overlooking and loss of light as well as other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.

BD068 Land west of Portland Drive

- An odour assessment of the sewage works has been undertaken on behalf of an adjacent landowner and it concludes that the vast majority of the area is suitable for residential use (any which is not can be left undeveloped) and odour issues should not be viewed as a constraint to planning consent.
- The land in question is within the Green Belt. In order for Biddulph to accommodate new development, the Green Belt boundary will need adjustment as there are not enough sites in the existing settlement boundary to accommodate the level of development needed. The Council has recently completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact on the function of the Green Belt as a whole (as defined in government planning guidance). This study recommends considering release of BD068 from the Green Belt.
- The landowner has undertaken some initial assessments and considers that the site is viable for development.
- The SHLAA has assessed more than 150 sites in and around Biddulph including brown field sites and these have been included as allocations where they are suitable, available and deliverable. However, there is not enough brownfield land to meet the town's requirements so green field sites also need to be included. Sites BD071 and BD071a have been included as potential allocations. Prioritising brown field land over greenfield in all circumstances is not part of Government policy.
- The land has no agricultural land classification as it is classified as being within the urban area.
- New development would need to follow the Council's design policies, which will be the subject of consultation as part of the Local Plan production process.
- New employment land is proposed at the south of the town (BD117). New investment in the town would have knock-on positive effects for the town centre.
- The new Local Plan will cover a period to 2031 so lack of demand (perceived or actual) at one point in time is not a valid reason for not meeting the area's objectively assessed housing needs. The Council's evidence demonstrates a need for affordable housing in Biddulph and this is reflected in local policy (set out in the Core Strategy). The Council is required to seek to address this need. The distribution of development around the town will be considered as part of the selection of Preferred Options sites.
- If development were to take place, the provision of on site open space would be a requirement.
- The previous planning history of a site, particularly from over 20 years ago (1991 in this case) is not a good indicator as to whether a site is acceptable at this time as circumstances and policies will have changed over time.
- Housing requirements in the Staffordshire Moorlands are in addition to existing properties even if these are for sale or derelict.

BD068 Land west of Portland Drive

Preferred Options Consultation April 2016

Statutory Bodies / Stakeholders

United Utilities

We wish to emphasise the need to carefully consider the allocation of new housing sites in close proximity to our wastewater treatment works. In this regard we note that our wastewater treatment works (WwTW) in your local authority include: Biddulph WwTW; Biddulph Park WwTW; and Flash WwTW. We wish to highlight that a wastewater treatment works can result in emissions which include odour and noise. Therefore if you are considering any sites for new allocations, especially housing allocations, near to a wastewater treatment works, you should carefully consider the sites with your Environmental Health colleagues. This is important when comparing sites close to treatment works with potential alternative sites that may be available to you for allocation. This reflects our earlier correspondence to you. The position of United Utilities is that when considering a range of sites to meet housing needs, it would be more appropriate to identify new housing sites, which are sensitive receptors, that are not close to a wastewater treatment works. We note this point is particularly relevant to your assessment of sites considered for allocation in Biddulph as part of the current Preferred Options Sites and Boundaries consultation. In particular, site references BDO68, BDO62 and BDO87, which are sited in close proximity to Biddulph Wastewater Treatment Works. Notwithstanding this preference, if it is still intended to progress with the allocation of sites near to a wastewater treatment works for housing following discussions with your Environmental Health colleagues, we strongly recommend that your decision should be informed by: 1. an odour impact assessment; and 2. a noise assessment. If after having undertaken these assessments you still allocate land near to the wastewater treatment works for housing, we recommend that there should be detailed associated policy which identifies the need for mitigating measures including any that may be identified as a result of the assessments. We recommend that: 3. careful masterplanning is always prudent in order to mitigate the risk of odour and noise nuisance. For example, any on-site open space should be located so as to act as a buffer between the treatment works and any newly introduced housing. In addition the houses could be orientated so to most appropriately manage the impact of noise; and 4. appropriate soft landscaping is included to strengthen the buffer between the treatment works and the proposed new development.

Further United Utilities Comments May 2017

With respect to any flooding implications, United Utilities wishes to recommend:

1. The need for foul only flows. Surface water should discharge to a more sustainable alternative than the public sewer; and
2. In advance of submitting the application and once more details are known in respect of the proposed development, the applicant should engage in pre-application discussions with United Utilities so that the most appropriate point of connection to the public sewer can be determined for foul water. The point of connection that is agreed for foul water may then be subsequently specified in any planning conditions recommended to the local planning authority.

Council Response

BD068 Land west of Portland Drive

Comments noted.

Noise and odour assessments have been produced on behalf of the land owner and received by the Council very recently. Noise mitigation measures are recommended which could potentially be implemented as part of a development scheme – no odour mitigation measures are considered necessary.

It is now up to the Council to balance the planning issues in determining whether to select this site for development in the Local Plan.

Detailed associated policy for the site will be included in the Local Plan if it is selected and it is acknowledged that careful master planning of the site will be required including appropriate screening /buffering. Similarly, the recommendations above will be incorporated into policy should the site be taken forward.

It is noted that United Utilities infrastructure is present on this site and if this site is selected as an allocation, a requirement will be included in the policy for this site requiring the developer to enter into early discussions with United Utilities on this matter.

Environment Agency

2 sites in Biddulph are adjacent to the same watercourse. There is a floodplain extent on the western boundary but this is poorly defined at present. A level 2 assessment will be required for these.

Council Response

The site boundary can be amended to exclude land within Flood Zone 2. This approach has been agreed with the Environment Agency since their response to the consultation so a Level 2 Flood Risk Assessment is no longer required for the site.

Staffordshire County Council

In relation to sites BD068 there is likely to be a requirement for junction improvement at Marsh Green Lane/A527; a transport assessment will be required to consider this.

Council Response

Comment noted. A Transport Assessment can be undertaken at the appropriate time.

Landowner / Agent

No response.

Public Response

Issues Identified:

- Highway infrastructure.
- Presence of UU infrastructure – pipes under the site.
- Noise and odour, existing raw sewage flooding, capacity of water treatment works.
- Flood Zone 2.
- Education capacity.

BD068 Land west of Portland Drive

- Victoria Colliery, Childerplay and north side of Woodhouse Lane as alternative locations for development.
- Use Land North of Woodhouse Lane
- Ecology.
- Loss of Green Belt and exceptional circumstances.
- Lack of community benefit.
- Allocate the site as Visual Open Space.
- Contradiction with Core Strategy Policy SS5b
- Site screening.
- Use of derelict buildings in Biddulph.
- Heritage impact.
- Landscape impact.
- Infrastructure.
- Public open space.
- Amenity issues.
- Marketing of the consultation.
- Developing sites in Stoke instead.
- Property values.
- Lack of demand

Council Response:

- **Highway infrastructure.**
The Highway Authority consider that “the development of the site is acceptable subject to access design and visibility splays. Access is likely to need to be close to the bridge in order to meet visibility standards. Footway should be provided on the frontage to connect to the existing footway. Possible improvements to Marsh Green Road/Congleton Road junction. May be appropriate to realign Marsh Green Road to provide visibility to plot BD087 if possible and if agreement can be reached between owners”.
- **Presence of UU infrastructure – pipes under the site.**
The landowner and United Utilities are aware of the public sewer pipes running underneath the site and any new development would need to enter into early discussions with United Utilities regarding their infrastructure. This requirement will be included in the site policy if the site is selected for development.
- **Noise and odour, existing raw sewage flooding, capacity of water treatment works.**
United Utilities has a statutory duty to provide capacity for new development so this is not a valid reason for development not to come forward in Biddulph. United Utilities considers that there is no need to expand the treatment works in the development plan period for the growth identified in the development plan.

Noise and odour assessments have been produced on behalf of the land owner and received by the Council recently. Noise mitigation measures are recommended which could potentially be implemented as part of a development scheme – no odour mitigation measures are considered necessary.

BD068 Land west of Portland Drive

Current issues experienced by residents in regard to raw sewage flooding are a separate matter to be investigated by United Utilities.

- **Flood Zone 2.**
The site boundary can be amended to exclude land within Flood Zone 2. This approach has been agreed with the Environment Agency since their response to the consultation so a Level 2 Flood Risk Assessment is no longer required for the site. A planning application would still be needed before this (or any other) site could be developed and the Environment Agency is a statutory consultee.
- **Education capacity.**
Education - The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- **Victoria Colliery, Childerplay as alternative locations for development.**
Sites at Victoria Colliery and Childerplay Road are within the Green Belt like BD068. The Green Belt Review has considered the impact on the Green Belt the release of these sites for development would have. Only the Victoria Colliery site was identified as being suitable for consideration for Green Belt release (in exceptional circumstances). In reaching a decision on which sites to include in the Local Plan, the Council must balance evidence and Government policy.
- **Use Land North of Woodhouse Lane**
The land to the north of Woodhouse Lane (west of the school) is not considered suitable for development, mainly due to the heritage impact on the nearby registered park and garden. It is also in the Green Belt.
- **Ecology.**
The Council has had an extended Phase 1 Habitat Survey undertaken on this site in 2015. The site has been deemed to have ecological importance due to the presence of trees with bat roosting potential, potential reptile populations and good connectivity to other biodiverse habitats. The following surveys/ actions are therefore recommended prior to any potential development works being carried out:
 - A bat survey regime to ascertain whether bats roost in the tree
 - Reptile survey
 - Badger survey
 - Vegetation removal at the appropriate time of yearThere is no evidence at present to suggest that the site cannot be developed for ecological reasons.
- **Loss of Green Belt and exceptional circumstances.**
In order for Biddulph to accommodate new development, the Green Belt boundary will need adjustment as there are not enough sites in the existing settlement boundary to accommodate the level of development needed. The Council has completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact

BD068 Land west of Portland Drive

on the function of the Green Belt as a whole (as defined in government planning guidance). This study recommends considering site BD068 for release from the Green Belt provided that exceptional circumstances can be demonstrated.

- **Lack of community benefit.**
Site BD068 will be required to provide a percentage of affordable housing / starter homes to benefit those in the community needing affordable housing.
- **Allocate the site as Visual Open Space.**
The site is not recommended for designation as Local Green Space in the Landscape, Local Green Space and Heritage Impact Study (2016). Local Green Space supersedes the Visual Open Space designation (which is an old designation not supported by Government policy in the NPPF).
- **Contradiction with Core Strategy Policy SS5b**
No contradiction with SMDC Core Strategy Policy SS5b 'Biddulph Area Strategy'. Sites within the urban area and an extension to the urban area are included as well as extensions in the Green Belt identified as part of the Green Belt Review as stated in the policy.
- **Site screening.**
Screening of the sewage works would be required as part of any development on the site.
- **Use of derelict buildings in Biddulph.**
Brown field sites have been considered as part of the site selection process and it is agreed that the mills in the centre of Biddulph (in particular Yarn Mill and Minster Mill) would be appropriate for residential development. Albion Mill on Station Road is too small for an allocation of its own but if it is developed it would count towards Biddulph's housing needs. The Biddulph Neighbourhood Planning Group are currently working on a Town Centre Masterplan which includes looking at opportunities for redeveloping brownfield sites.
- **Heritage impact.**
Heritage Impact of development on the site has been assessed in the Council's Heritage Impact Study (August 2016), the results for this site are "There is one Grade II* and eight Grade II Listed Buildings, and a Registered Park and Garden which is also a Conservation Area within the 400m buffer. There was no public access on to the site which is elevated above Marshgreen Road, and it is at a similar level to the adjacent residential development on Portland Drive. Development would be unlikely to cause high adverse effects to the settings of the heritage assets as development would be seen in context of the existing housing estate. Development would not adversely affect HLC zone BBHECZ 8 (Historic Environment Character Assessment 2010). Site suitable for development in heritage terms."
- **Landscape impact.**
Landscape Impact of development on the site has been assessed in the Council's Landscape Impact Study (August 2016), the results for this site are: "Site is located within the north of Biddulph, south of Marshgreen Road. The site comprises fields enclosed by residential development to the north, east

BD068 Land west of Portland Drive

and south; and sewage treatment works to the west. The site is elevated above Marshgreen Road, however it is at a similar level to the adjacent residential development on Portland Drive, and has low visual prominence due to screening provided by the surrounding development and vegetation, particularly trees surrounding the sewage works. The site forms a gap in development, and therefore fits in well with the existing settlement form. Site is of low landscape sensitivity.”

- **Infrastructure.**
National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered.
- **Public open space.**
The land is privately owned and no public rights of way cross the site so delivery of a community forest is unlikely and it cannot be designated as Public Open Space.
- **Amenity issues.**
Issues such as overlooking will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application. Problems arising from the construction period of any works, e.g. noise, dust, construction vehicles, hours of working (covered by Control of Pollution Acts) are not material planning considerations.
- **Marketing of the consultation.**
The consultation was widely publicised and included a flyer being sent to all households and businesses in the District through Royal Mail. High levels of responses have been received by the Council from Biddulph residents which suggests that a significant number of residents knew about the consultation.
- **Developing sites in Stoke instead.**
National planning guidance states that the Council should seek to meet the development needs of their area. Stoke on Trent City Council has its own development needs to meet.
- **Property values.**
Property values are not considered material in planning law.
- **Lack of demand**
The new Local Plan will cover a period to 2031 so lack of demand (perceived or actual) at one point in time is not a valid reason for not meeting the area’s objectively assessed housing needs (as required by Government policy).
- **Loss of agricultural land**

Biddulph

BD068 Land west of Portland Drive

The land has an agricultural classification of Grade 4 which means that it is poor quality.

Biddulph

BD068 Land west of Portland Drive

(Blue on map shows Flood Zone).

© Crown copyright and database rights 2017 Ordnance Survey 100018384. **MAP SCALE: 1:1250**

BD069 Former nursery adjoining Knypersley Hall

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site not taken forward into Preferred Options Local Plan as:

- An alternative Green Belt site exists adjacent to Wharf Road which will assist with bringing forward a large strategic mixed use regeneration site which is well related to the town centre and its key services and facilities.
- Harm of development to Knypersley Hall is a key issue – any harm would need strong justification.

Key Issues

- Green Belt site – can be considered for release if exceptional circumstances are demonstrated.
- Ecology – Further survey work recommended in order to establish SBI/BAS status and to fully complete an extended Phase 1 Habitat Survey.
- Site of medium landscape sensitivity.
- Highways - Spur road off Conway Road (Colwyn Drive) is private and should be brought up to adoptable standard. Access onto Conway Road is good.
- Development of the site would lead to substantial heritage impacts. Owner has stated that he has commissioned a heritage assessment of the site and intends to submit this to the Council in due course.

Site Information

Greenfield/ brownfield	Built up area boundary/country side	Est. housin g capacit y	Area (ha)	Ownershi p status	Site details
Greenfield	Countryside Green Belt	30 (30dph)	1.02	Owner supports developm ent	<ul style="list-style-type: none"> • Close to Knypersley Hall – listed building – is the former kitchen garden to the hall and has historic significance • Overgrown in parts • Contains trees/shrubs and a number of derelict greenhouses/nursery buildings • Part of Victorian wall associated with the Hall remains

Studies

Green Belt Review 2015

(Appraised sites according to their contribution to Green Belt Purposes)

BD069 Former nursery adjoining Knypersley Hall

Check Sprawl: Limited contribution

Maintain Separation: Limited contribution

Prevent Encroachment: Limited contribution

Preserve Setting: Contribution

Overall Impact on Green Belt Purposes: Limited

Previously developed land with reasonably strong outer boundaries and which would create a logical extension to the current settlement envelope. See also Land north of Mill Hayes Road.

Recommendation: Consider for release

Extended Phase 1 Habitat Survey (FID 21)

It is difficult to ascertain the biodiversity value of the site without full access. The areas of semi-natural broadleaved woodland could also potentially contain badger setts. As a preliminary assumption due to lack of a full survey the following surveys/ actions are at least recommended:

- An Extended Phase 1 Habitat Survey including assessment of bat roost potential
- within trees and buildings, badger survey, open water assessment and noxious weed
- survey as part of the walkover survey.

The following surveys/ actions are therefore recommended from the information gained from limited access:

- A bat survey regime is recommended to ascertain whether bats roost in the trees
- Reptile survey
- Great crested newt survey of nearby pond
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2016)

The broadleaf woodland may be of ecological value and may allow for the site to gain SBI/BAS status once the vegetation has been fully recorded. Furthermore, the site offers potential to support bats, reptiles and amphibians,

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- An extended Phase 1 Habitat Survey, as the assessment could not be fully completed due to issues with access.
- The tree which has the potential to support roosting bats needs to be further assessed.
- Reptile survey required.
- Newt survey required on the pond (pond 4 in ADD04).

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results

Site comprises the former kitchen gardens of Knypersley Hall, which contains the remains of a disused garden centre. The site is currently overgrown, however important features including protected trees and remnants of the original garden wall are present. Development of the site could improve local landscape character through the removal of derelict buildings, the existing metal fencing and scrub. However development within the site would need to be sympathetic to its original use, and ideally would be in keeping with the character of the cottages to the south-east.

BD069 Former nursery adjoining Knypersley Hall

Site is of medium landscape sensitivity. Site-specific landscape mitigation measures could include ensuring development is sympathetic to its original use and in keeping with the character of the adjacent cottages.

Heritage Results

There is one Grade II* and one Grade II Listed Building within close proximity to the site. The site contributes greatly to the setting of the Grade II* as a walled garden to the hall, which in turn, contributes to the overall significance of the asset. Development on the site would highly likely cause substantial adverse effects to the setting of the Grade II* Listed Building which would impact upon its overall significance. The HEA states that development is not deemed appropriate in the HLC zone BBHECZ 7 (Historic Environment Character Assessment 2010). **Site could not be developed without substantial heritage impacts.** Please note that this study forms part of a wider evidence base to support SMDC's Local Plan. Therefore the conclusions within this report will be weighed against other evidence when determining the overall suitability of a site for development.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 30 dwellings is considered to have a significant positive effect. The site is also accessible to existing employment areas which is likely to have a positive effect. However, the site's proximity to historic assets is assessed as having a significant negative effect. The development of greenfield land and its location within a flood zone is also assessed as having a negative effect

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Biddulph.

Options Consultation July 2015

Statutory bodies/stakeholders:

Historic England: Made no comments on individual sites recommended that a heritage impact assessment of sites is carried out.

Environment Agency; Site not identified as being in an area likely to be affected by flooding. Need to have regard to the relevant River Basin Management Plan.

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. Previous coal workings do not prevent development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

United Utilities, Severn Trent, Heritage England, Natural England, Network Rail; no site specific comments

BD069 Former nursery adjoining Knypersley Hall

National Trust - This would entail the destruction of the remains of the kitchen garden at Knypersley Hall. While the Trust has no direct involvement in Knypersley Hall, the house was the former home of James Bateman – who created the gardens at Biddulph Grange which are in our protective ownership. The significance of the Knypersley gardens is recognized in the 2010 Historic Environment Character Assessment jointly published by Staffordshire Moorlands District Council and Staffordshire County Council. This notes that the Hall is listed grade II* and the stable and coach house grade II. While the character much of the historic parkland associated with Knypersley Hall has changed in the 20th century, some remains of the walled garden survive. These have heritage value in themselves and contribute to the settings of the nearby listed buildings. The National Trust considers that development of the walled garden would cause unnecessary harm to heritage assets and should be resisted.

SCC Highways - Not directly connected to the highway. Spur road off Conway Road (Colwyn Drive) is private and should be brought up to adoptable standard. Access onto Conway Road is good.

Leek and Moorlands Historic Buildings Trust - BD069 is the former kitchen garden of Knypersley Hall (Listed Grade II*). It is currently extremely overgrown and therefore difficult to assess. A decade ago various historic structures still survived here so the site will need careful clearance and detailed assessment in advance of any proposed development.

Developer/Agent/Owner

Support development of site - immediately available, consider it is brownfield, site approximately 1km from town centre and close to Biddulph High School, Mill Hayes playing field and in a residential area. Garden centre closed in 2003, site now derelict, surrounded by security fencing to prevent further vandalism, edge of site is well defined and visually contained by trees and soft landscaping along the boundaries, opportunity to improve Orme Road, no major constraints. Content of NPPF and Core Strategy would not preclude development.

Public response 16 comments – 11 supports, 5 objections.

Issues Raised:

Objections:

- Infrastructure - Schools are full
- Infrastructure - Traffic / Transport - congestion on Conway Road if this and neighbouring site is developed, Orme Road could not cope
- Infrastructure - Other - no parks locally, public transport northwards finishes at 6pm. Current deficit in public open space and severe deficit in children's play areas.
- Nature Conservation - as the site is next to a lake would expect it to have ecological interest.
- Flood Risk - the site is next to a lake, has an abundance of wells, naturally occurring springs and a very high water table so concerned about the effects of sinking further foundations into land of this nature and the proximity of the lake.
- Amenity (e.g. noise, privacy, loss of light) - concern about house types - mainly bungalows in this area, do not want youngsters hanging around the streets at night, area is currently quiet

BD069 Former nursery adjoining Knypersley Hall

- Scale of development - 30 dwellings is overdevelopment, no possibility of adequate parking.
- Listed Building / Conservation Area - Historic Landscape Character Assessment recommends that development in this area is inappropriate. James Bateman grew up at Knypersley Hall. Study considers that there is good potential for restoring and/or conserving the heritage assets which contribute to the zones historic character, the walled garden and other structures within BD069 would be an ideal place to begin that restoration. Past owners have removed the historic wall. Council should enforce the recommendations of English Heritage so that the site is brought back to its original state and conserved for future generations. This site should have been added to the Staffordshire Moorlands Local Heritage Register a long time ago to prevent it getting into its current state of disrepair.
- Government Policy - Land is Green Belt
- Other - Concerned about the type of people who will occupy the houses, need for new houses / flats in town centres, existing empty properties in town centres, 30 houses on this site will not make a significant contribution to Biddulph's housing needs.

Support:

- Infrastructure - Close to schools
- Infrastructure - Traffic / Transport - opportunity to repair and adopt the road
- Infrastructure - Other - Close to amenities
- Landscape - will enhance current landscape
- Flood Risk - no flood risk
- Amenity (e.g. noise, privacy, loss of light) - site has been a target for arson and vandalism in its current state, current security fencing gives an industrial appearance, no site pollution
- Listed Building / Conservation Area - Listed items like the walls and well could be included in the development to retain its character
- Government Policy - Brown Field Site, Site is not Green Belt
- Other - site has been derelict for around a decade, development would improve the area, site is in a residential area, site is immediately available, considered to be suitable for executive housing.

Council response –

- The Highway Authority has not raised any issues which would prevent the development of this site.
- The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- New development is the main way to deliver new or improved infrastructure e.g. more residents may support an improved bus service. Infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas.

BD069 Former nursery adjoining Knypersley Hall

- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed sites included in the Site Options consultation. The site survey results will be used as part of the site selection process.
- Amenity – issues such as overlooking and house types as well as other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. This site is not identified as being within a flood plain. Mitigation measures will be taken as part of the site development to address any surface water issues.
- The scale of development is not an absolute figure at this stage, it is merely an indication. On-site constraints may reduce this figure.
- The land in question is within the Green Belt. In order for Biddulph to accommodate new development, the Green Belt boundary will need adjustment as there are not enough sites in the existing settlement boundary to accommodate the level of development needed. The Council has recently completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact on the function of the Green Belt as a whole (as defined in government planning guidance). This study recommends considering the release of BD069 from the Green Belt.
- Housing requirements in the Staffordshire Moorlands are in addition to existing properties even if these are for sale or derelict. Brown field sites close to the town centre have also been suggested for housing but there are not enough of these to meet Biddulph's housing requirement to 2031.
- The site formerly served as the kitchen gardens to Knypersley Hall. Knypersley Hall was Listed Grade II* in 1984 in recognition of its architectural importance and connection with James Bateman who developed a landscaped garden here and carried out botanical investigation prior to moving to Biddulph Grange. The walled garden is likely to retain features of historic interest worthy of preservation. The historic structures on this site will not be covered by the Knypersley Hall Listing as the site was already in separate ownership at the time of Listing. Residential development of the site has the potential to assess the historic significance of the site and surviving structures and provide funding for conservation repair and enhancement. Development would need to be sensitively sited/designed to preserve heritage significance.
- The Council is commissioning a heritage impact assessment for all the sites selected by the Council as Preferred Options for development and this work will be done under the guidance of Heritage England. The work is expected to be completed this summer and will inform the Council as to which sites are appropriate to take forward into its final draft of the plan the 'Submission Version'.

BD069 Former nursery adjoining Knypersley Hall

Preferred Options Consultation April 2016

Statutory bodies/stakeholders:

United Utilities Water Limited: (Summary) With regards to site references ADD04, BD069 and BD117, these sites appear likely to discharge to that area served by Severn Trent for the provision of wastewater services. It would be useful to confirm with the respective landowners the likely point of discharge to the wastewater network from these sites so that we can confirm the receiving wastewater infrastructure and therefore better understand the impact.

Council Response

Points of discharge to the wastewater network are a detail which can be confirmed at a later stage in the process once the sites have been allocated in the Local Plan and detailed development schemes become available at the planning application stage.

Natural England: Natural England notes the proposed preferred site for allocation in Biddulph. We note that it is located close to and/or adjoining existing areas of open space and green infrastructure. Suitable enhancements of existing open spaces' may be required together with appropriate management (and funding thereof) in order to allow these open spaces to function effectively during the local plan period. Similarly the development of these preferred sites (if progressed) will need to include suitable multi-functional green infrastructure. Adopted local plan spatial objectives SO8 & 9 refer together with policies such as DC1 Design Considerations, DC3 landscape and settlement setting, and C3 Green Infrastructure.

Council Response

The Council has produced a Draft Green Infrastructure Strategy for consultation alongside the next draft version of the Local Plan. The strategy identifies green infrastructure corridors around the towns and lists particular issues in relation to that corridor which can be addressed as part of the relevant site policy and / or at the planning application stage. Similarly, a public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and new development in the vicinity could contribute towards this. The Council has also designated Local Green Spaces in line with criteria set out in the NPPF and the Council will seek to facilitate improvements to these areas where required.

Biddulph Neighbourhood Plan Working Group: BD069 - This site was originally the Hall Kitchen garden. There are moves that this site should be restored as a Heritage Kitchen Garden. Until these possibilities have been investigated this site should be withdrawn, not recommended for inclusion.

Developer/Agent/Owner:

We write in support of the proposed allocation of the above brownfield, former garden centre site for residential development, inclusion within the town boundary for Biddulph and removal from the Green Belt. We write as owners of the site since 2003. The site has been in our family since 1940s when our family moved to Biddulph. In writing this letter we have taken advice from town planning consultants and have reviewed the consultation documents available on the Council's website. The following sections of this letter establish our reasons for supporting the proposed allocation of this site for residential development, including within the town boundary and its removal from the green belt. Please take this letter as a formal response to

BD069 Former nursery adjoining Knypersley Hall

the Site Allocations Preferred Options consultation in respect of the site and Question 15, 17 and 19 in particular. The Site and Surroundings The site extends to approximately 1.02 hectares (2.5 acres). The land is shown on the plan attached at Appendix 1 (Ref. SF498873). The site is approximately one kilometre to the southwest of Biddulph town centre, which contains a variety of shops and facilities including a library and leisure centre. The land is bounded, to the north, by Orme Road, beyond which is Biddulph High School. To the south of the site is the Mill Hayes Playing Fields. To the east and west of the site are primarily residential areas. To the south west of the site is a Knypersley Hall which is a Grade II* listed building. The site is a brownfield site which comprises of a former garden centre which was in operation from the late 1960s to 2003. The site is partly covered by greenhouses, other garden centre buildings (as shown on the enclosed photograph) and extensive areas of hard standing. The buildings on site have become dilapidated and have fallen into a state of disrepair following the closure of the Garden Centre in 2003. There are also a number of trees located along the site boundaries.

The Principle of Development The Council's adopted Core Strategy (March 2014) identifies a need for 6,000 dwellings in the District between 2006 and 2026. The Core Strategy commits to undertaking an early review to cover the period 2016 – 2031 to ensure that future provision will continue to meet objectively assessed needs. It also states that the Council will seek to enhance the role of Biddulph as a significant service centre and improve the local housing market by increasing the range of houses and allocating deliverable housing sites within the urban area and, on land adjacent to the urban area. Policy SS5B of the Core Strategy states that sites identified adjacent to the urban area of Biddulph shall be in locations which relate well to the urban area, can be assimilated into the landscape and would help secure infrastructure improvements. The supporting text to Policy SS5B states that due to the extent of green belt around the town, opportunities for peripheral expansion are limited. Therefore, it establishes that in order to meet the longer-term needs of the town, some development will be required in the green belt. It states that up to 2026 there will be a need for a minimum of 813 dwellings in Biddulph, of which land for around 200 dwellings would need to be identified in the green belt. Policy SS5B, therefore, states that the allocation of small urban extension sites will require a comprehensive review of the green belt boundary around Biddulph to accommodate the new dwellings through the preparation of the Site Allocations DPD and an early review of the Core Strategy. We understand that the Council has recently reviewed the position in relation to local housing need accounting for the latest Government household projections, new population and employment data. The Council's updated Housing Need report, from January 2016, concludes that the housing need for the District is between 250 to 440 homes per year between 2012 and 2031. Therefore the Council's Preferred Options document proposes an annual housing requirement of 320 homes per year up to 2031. In relation to Biddulph it identifies a requirement for 1196 new dwellings (855 net) during the plan period to 2031. Therefore, we support the general growth strategy for the District and the focus on the delivery of the majority of housing and employment in the main towns, including Biddulph. We also support the proposed allocation of the Knypersley Hall Garden Centre site, within the town boundary, for residential development to help contribute towards meeting the housing needs for Biddulph, for the following reasons. We understand that the Government attaches great importance to Green Belts and that the fundamental objective of Green Belt policy, as established in the National Planning Policy Framework (NPPF), is to prevent urban sprawl. Paragraph 79 establishes that the essential characteristics of Green Belts are their "openness" and "permanence". However, by virtue of the site's former use as a Garden Centre and the built structures on the site, including various garden centre buildings and green houses, it

BD069 Former nursery adjoining Knypersley Hall

is considered that the brownfield site does not effectively serve or perform the five purposes or functions of the Green Belt established in paragraph 80 of the NPPF: “ to check the unrestricted sprawl of large built-up areas; to prevent neighbouring towns merging into one another; to assist in safeguarding the countryside from encroachment; to preserve the setting and special character of historic towns; and to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. ” Moreover, the edge of the site is well defined and visually contained by the existing trees and soft landscaping which are located along its boundaries. The trees and change in levels at the site boundary sever the site from the green belt to the south, in physical and visual terms. This results in the site becoming a pocket of brownfield land that is visually isolated from the main area of green belt to the south. Therefore, development of the garden centre site would result in no visual impact on the openness of the Green Belt. Furthermore, paragraph 89 of the NPPF states that the partial or complete redevelopment of brownfield land, such as the garden centre site, which would have no greater impact on the openness of the Green Belt and the purpose of including land within it would not be considered inappropriate development in the Green Belt. By virtue of the visual containment of the site it is considered that the redevelopment of this brownfield site for housing would not have any greater impact on the openness of the Green Belt or its function and would not constitute inappropriate development in the Green Belt. The land to the south of the site is not in agricultural use and is the Mill Hayes Playing Fields, which are used by Biddulph High School. It is considered that the northern boundary of the playing fields would provide a more appropriate, clear, defensible boundary for the green belt along a physical feature or use which is readily recognisable and likely to remain permanent in line with paragraph 85 of the NPPF. Moreover, we note that the Council’s Green Belt Assessment, undertaken by Amec Foster Wheeler, in November 2015, confirms that the Knypersley Hall Garden Centre site makes a ‘limited’ contribution to the purposes and function of the green belt, is “ potentially suitable ” for removal from the green belt and comprises: “ Previously developed land with reasonably strong outer boundaries and which would create a logical extension to the current settlement envelope. ” We also note that the Council recognises, in their Options Site Assessment document (which accompanies the Preferred Options Site Allocations document), that in order for Biddulph to accommodate new development, the Green Belt boundary will need to be adjusted as there are insufficient sites in the existing settlement boundary to accommodate Biddulph’s housing requirement to 2031. In proposing the site as a preferred option for removal from the Green Belt and residential development the Council clearly considers that the site is in a sustainable location that is contiguous with the neighbouring residential area that surrounds the site to the north, east and west. The Council clearly agrees with our view that the site is in an accessible location with good levels of accessibility to range of facilities on foot and by public transport. This is confirmed by the Council’s site assessment which states that the site is well related to the residential area and is close to Biddulph High School and other facilities. Moreover, there are several bus stops in close proximity to the site. These are located on Park Lane and Mayfields Road (less than 300 metres walking distance from the site). The bus stops are served by a number of bus routes which provide access to the various shops, facilities and employment in Biddulph Town Centre and further afield to areas including Congleton, Newcastle and Hanley. As stated previously, the site is brownfield land and contains various garden centre buildings and greenhouses. Unfortunately, since the closure of the garden centre in 2003, these buildings have fallen into disrepair. The site has also been the target of both vandalism and arson. Therefore, it considered that the removal of the site from the Green Belt and its allocation for residential development would enable a viable use

BD069 Former nursery adjoining Knypersley Hall

for the site and provide the opportunity for the existing dilapidated structures on the site to be replaced by a viable, secure and efficient use of the land for residential development, which would contribute towards meeting the identified housing needs for Biddulph. Given the sustainable location of the site and its accessibility to services and facilities in the town centre it is also anticipated that the site could make an appropriate contribution to meeting affordable housing needs in the district. The site is currently contained by security fencing due to the issues surrounding vandalism and arson. This gives the site an industrial appearance to dwellings surrounding the site. It is considered that the development of the site would also, therefore, provide the opportunity to improve the appearance and security of the site for residents living nearby.

Technical Constraints It is understood that a suitable access to the site could be provided from Orme Road. Moreover, the development of the site would offer the potential opportunity for associated improvements to the 'un-adopted' Orme Road by a potential developer. Given the former use of the site as a garden centre it is not anticipated that there would be any issue or constraints to development in terms of ground conditions or contamination on the site. It is also understood that, given the former use of the site, and its location contiguous with the settlement boundary and nearby residential development, the site could be easily linked to mains services. The site is also fairly flat and there are no evident building constraints. According to the Environment Agency's Flood Risk Map the site is located entirely within Flood Zone 1 (i.e. at low risk of flooding with less than 1 in 1,000 annual probability of river or sea flooding). According to the National Planning Practice Guidance (NPPG) residential development is a "more vulnerable" use to flooding. The NPPG confirms that residential development would be considered an appropriate use in Flood Zone 1. The Council's Strategic Flood Risk Assessment (2015) also confirms that the site is in Flood Zone 1 at low risk of flooding. However, we note that there appears to be a minor error in the Options Site Assessment document, which accompanies the Preferred Options Site Allocations document, which suggests that the site is located within a flood zone. There are number of trees located within the site. However, the majority are located towards the site boundaries. Therefore, it is considered that the majority of the quality existing trees on the site could be effectively incorporated in to the design and layout of the site at a later stage. Moreover, the site is not subject to any designations relating to the conservation of ecology or biodiversity. Although the site is located adjacent to Knypersley Hall, a Grade II* Listed Building, as stated in the Council's Site Assessment, the site is secluded and separated from Knypersley Hall by the adjacent lake and a significant number of trees and landscaping and falls outside the curtilage of the Listed Building. Therefore, it is considered that the development of the site for approximately 30 dwellings would not result in any significant impact on the designated heritage asset or its setting, subject to appropriate design. We understand that the Council is currently commissioning a heritage impact assessment, in conjunction with Heritage England, for all the sites selected as Preferred Options allocations and we look forward to reviewing the outcome of this in assessment in due course. We are not aware of any technical constraints that would prevent development of the site for housing. However, should the Council require any further technical information to consider or support the suitability of the site for residential redevelopment and removal from the Green Belt we would be willing to investigate this further and provide any information where possible.

Capacity and Deliverability The site is approximately 1 hectare in area. It is assumed that it could be developed at a density of approximately 30 dwellings per hectare, given its rural location. Therefore, giving an indicative site capacity of 30 dwellings. This is reflected in the Preferred Options document which indicates that the Council agrees that the site is capable of delivering circa. 30 dwellings. The site is

BD069 Former nursery adjoining Knypersley Hall

immediately available for residential development. Therefore, assuming that development of the site could commence within two years of the allocation of the site (in the Council's Site Allocations Document which is expected to be formally adopted in 2017), following the grant of planning permission, we anticipate that the total number of dwellings would be constructed and delivered within a further year. Conclusions We trust that our responses above provide sufficient confirmation of our support for the allocation of the site in the Council's Site Allocations Development Plan Document (DPD), its deliverability and its possible contribution to the Council's housing delivery in the short-term, given the identified shortage of housing in the District.

Public response

Issues raised:

- Heritage impact
- Viability
- Flooding
- Ecology

Council Response

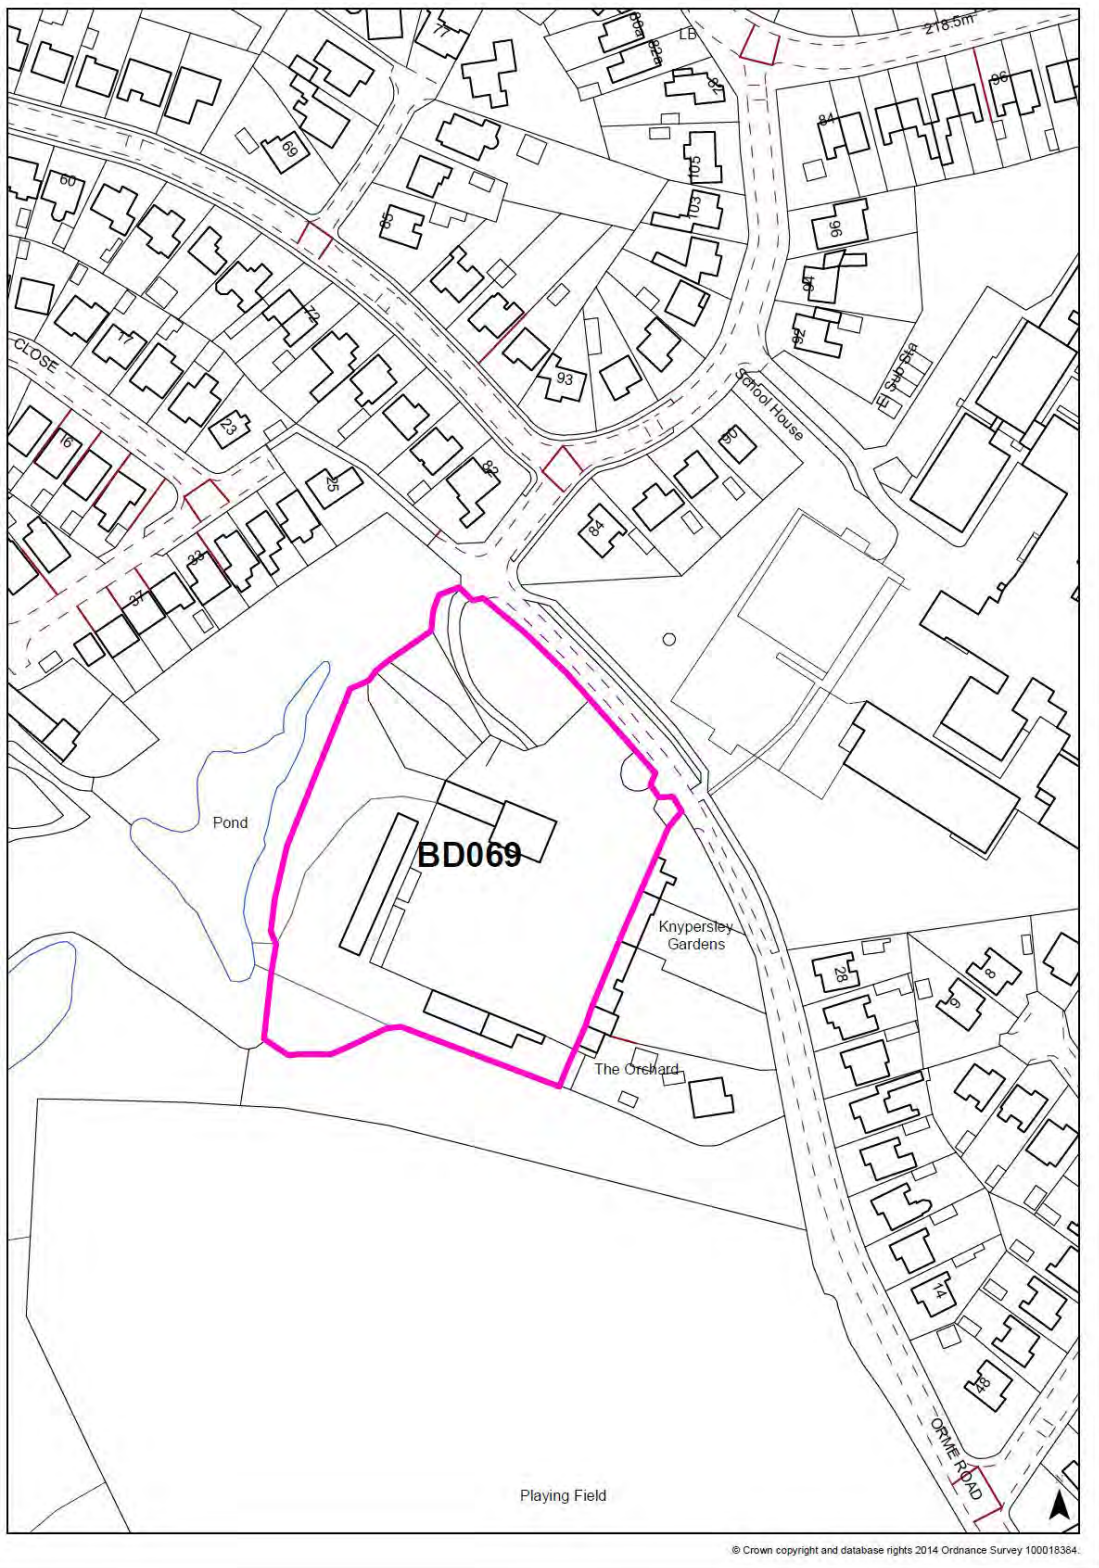

- **Heritage impact**
The Council's Landscape, Local Green Space & Heritage Impact Study (August 2016) assesses this site in terms of heritage and landscape impact. The results for heritage are: "There is one Grade II* and one Grade II Listed Building within close proximity to the site. The site contributes greatly to the setting of the Grade II* as a walled garden to the hall, which in turn, contributes to the overall significance of the asset. Development on the site would highly likely cause substantial adverse effects to the setting of the Grade II* Listed Building which would impact upon its overall significance. The HEA states that development is not deemed appropriate in the HLC zone BBHECZ 7 (Historic Environment Character Assessment 2010). Site could not be developed without substantial heritage impacts."

This study forms part of a wider evidence base to support the Local Plan. Therefore, the conclusions within this report will be weighed against other evidence when determining the overall suitability of a site for development.

- **Flooding**
Regarding flooding, no concerns about development of this site have been raised by the Environment Agency nor the Lead Local Flood Officer to date.
- **Ecology**
The Council's ecological evidence consists of a Phase I ecological survey undertaken in 2014 and a Local Wildlife Assessment undertaken in 2016. This recommends that further survey work should take place in order to establish SBI/BAS status. The Council must consider all the evidence and reach a decision as to whether to continue to promote the site for redevelopment.

Biddulph

BD069 Former nursery adjoining Knypersley Hall

Biddulph
BD076 & BD076a Land West of Biddulph Bypass

Local Plan Process

- Part of allocation for employment / leisure and non-food retail in Biddulph Town Centre Area Action Plan
- Site included in Council's SELAA employment database on basis of AAP allocation and subsequent outline retail consent on part of site (illustrating how northern part could accommodate employment development in accord with AAP); and given the Council's 2008 District Employment Land Study identified northern section as employment opportunity land.
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016 with a larger site boundary to include existing employment units and land in County and District ownership.

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site to be developed as part of a wider regeneration opportunity including land to the south to bring forward a large strategic mixed use regeneration site which is well related to the town centre and its key services and facilities.
- reasons set out below under 'key issues' heading.

Key Issues

- Within settlement boundary.
- Access is good - site is adjacent to bypass and on the edge of the Town Centre.
- Part of larger mixed use development area.
- BD076 included for employment at Preferred Sites and Boundaries Stage.
- BD076a a mixed alternative use site (food retail and possibly employment) at Preferred Sites and Boundaries Stage.
- Good infrastructure links.
- Ecology – Further survey work recommended in order to establish SBI/BAS status.
- Potential coalmining impact on the site – investigative work would be required by developer.
- Both sites are suitable for development in heritage terms.
- (BD076) Site is of medium landscape sensitivity and site-specific landscape mitigation measures would be appropriate. (BD076a) site is of low landscape sensitivity.
- Possible issues with contamination as the sites are located above historic landfill areas.
- Council's Retail Study recommends a retail allocation in the area.

Studies

Extended Phase 1 Habitat Survey 2015 (FID 25) & (FID226)

FID 25 Conclusion:

The site itself has scattered planted broadleaved trees, ephemeral grassland, dense scrub and tall ruderal vegetation which are connected to a series of other hedgerows and habitats, which form an important potentially biodiverse mosaic. Therefore, the site is considered to be of at least district importance in terms of its loss within the wider countryside.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Reptile survey
- Vegetation removal at the appropriate time of year

FID 226 Conclusion:

The site is connected to a hedgerow and other potentially biodiverse habitats, and forms part of an important potentially biodiverse mosaic, therefore the site is attributed district importance.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Reptile survey
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2016)

BD076 - The site has medium ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at local and site level. However, more information is required regarding the species rich hedgerow and the presence/absence of reptiles on the site.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- A hedgerow survey to be carried out using modified HEGS methodology.
- Reptile survey required.

BD076a - The site has some ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at local level only. However, further investigation of the presence/absence of reptiles on the site is needed.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Reptile survey required.

Sustainability Appraisal

Biddulph
BD076 & BD076a Land West of Biddulph Bypass

Initial Sustainability Appraisal Report April 2016

BD076a

The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the site is located within settlement boundary and should have good access to services and facilities which will also have a significant positive effect. However, the site has been assessed as having district ecological importance which will have a negative effect.

BD076

The proposed delivery of circa 70 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect. However, the site's location within a flood zone is assessed as having a significant negative effect. The development of greenfield, urban ALC land is assessed as having a negative effect, as could the district ecological importance of the site and the proximity of historic assets.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Biddulph.

Retail Study 2013

- Recommends allocation of site to accommodate a discount foodstore to claw back some of the 45% of residents who still shop out of town for their main food shopping (qualitative need only – no quantitative need). Study identifies outflow to mainstream and discount foodstores. A discount store would provide the local population with more choice as due to closures of other stores Sainsburys is the only mainstream foodstore in the town. This approach would be unlikely to have a detrimental impact on Sainsburys which is currently trading above average.
- Any new store would have to be sustainably located so that linked trips to the town centre can still be achieved. The only site option would be west of the bypass (this is also raised as a potential site for a mixed use development by the consultants). It would need to be accessed and accommodated alongside housing so careful planning would be required to achieve this. A standard sized store of around 1,000m² (net sales) is recommended.
- Comparison goods – substantially lower capacity than identified in 2006. Although there is a (lower) quantitative and qualitative need for new comparison retail floor space it is recommended that the AAP allocation is reviewed because:
 1. The town centre market share for comparison goods has increased significantly – the offer has increased / improved with Sainsburys, B & M and Home Bargains;
 2. The economic and commercial environment has changed since 2006 with comparison retailers generally looking to rationalize their stores and concentrate on larger catchment areas – clearly, Biddulph is in close proximity to Stoke on Trent;

Biddulph
BD076 & BD076a Land West of Biddulph Bypass

3. The fact that the allocation was not implemented is an indication that there is not market demand for this level of development.
- There is no requirement for the Council to proactively identify any alternative sites for new comparison retail development over the early to mid-phases of the emerging Local Plan. A future update to this study should define quantitative need for the latter phase of the plan (post 2018).

Landscape, Local Green Space & Heritage Impact Study (August 2016)

BD076 Landscape Results:

Within the north of the land enclosed by the dismantled railway and the A527. The site comprises the northern sections of two fields, the remainder of which are located in site BD071 & BD071a to the south. The site is enclosed by the dismantled railway to the west and previously developed land (BD076a) to the north. Land within the site slopes up to a ridge with an approximate north south orientation in the centre of the site. The site is not immediately adjacent to existing settlement edge (separated by BD076a) and therefore should not be developed in isolation. Development on the ridge within the site could be visually prominent, particularly from the countryside to the west of Biddulph. If the site were to be developed consideration could be given to phased development, which would allow advanced planting to be undertaken on the western site boundary and the hedgerows in the centre of the site (located on the ridge) to grow, providing increased screening of development. **Site is of medium landscape sensitivity. Site-specific landscape mitigation measures could include additional advanced planting on the ridge and western boundary.**

BD076 Heritage Results:

There are no designated heritage assets within the 400m buffer. Development in the site would change a small element of the HLC zone BBHECZ 3, although for the most part, it would remain unaltered (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms.

BD076a Landscape Results:

The northern-most of the sites enclosed by the dismantled railway and the A527. Site comprises previously developed land, including an existing depot, on the western edge of Biddulph. The existing development within the north of the site is generally screened by the vegetation that encloses it. However, views from Colliers Way are available. In addition, limited views are available through gaps in vegetation on Wharf Road and the dismantled railway. Re-development of the site could improve local landscape character. The site is located within the current settlement form, enclosed by the disused railway which forms a strong edge to the settlement.

Site is of low landscape sensitivity.

BD076a Heritage Results:

There are no designated heritage assets within the 400m buffer. Development in the site would change a small element of the HLC zone BBHECZ 3, although for the most part, it would remain unaltered (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms.

Options Consultation July 2015

Biddulph
BD076 & BD076a Land West of Biddulph Bypass

BD076a

Statutory bodies/stakeholders

SCC Highways - Acceptable subject to access design and transport assessment.
*Note - this is intended to be a large development scheme also incorporating sites BD106, BD156, BD055, BD108. Access is intended from one of the roundabouts adjacent to the Meadows School (south) and from the road currently used to serve the telephone exchange (north).

Developer/Agent/Owner - Land available

Public response - 10 comments – 6 supports, 4 objections.

Issues raised:

Support

- Infrastructure - Schools
- Infrastructure - Traffic / Transport -
- Infrastructure - Other - good access to local amenities
- Landscape - improve derelict land,
- Amenity (e.g. noise, privacy, loss of light)
- Government Policy - is not in the Green Belt
- Other - site would be suitable for residential development, would act as infill development

Objections

- Infrastructure - Traffic / Transport - would create too much traffic, bypass would become dangerous.
- Landscape - ruin the character of the town
- Amenity (e.g. noise, privacy, loss of light) - Detrimental impact on residential amenity.
- Scale of development - over-development of the town.
- Government Policy - Land is Green Belt and beyond the defensible boundary of the settlement, conflicts with Core Strategy Policy SO9 and C1.
- Other - Should be used for housing as if it is used for retail it will be the final nail in the coffin for the High Street, Consultation form is not straightforward to complete and requirement to complete one for each site is too onerous.

Council response –

- The Highway Authority does not raise any difficulties which would prevent the development of this site.
- Part of the land is identified as being important to the setting of the settlement in the Council's Landscape & Settlement Character Assessment. A Landscape & Visual Impact Assessment will be undertaken during the plan production process and look at all preferred option sites suggesting mitigation measures where appropriate. The results will be incorporated into the next version of the Local Plan. (Note – this work has now been undertaken).

Biddulph
BD076 & BD076a Land West of Biddulph Bypass

- Amenity – issues such as overlooking will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- It is not considered that development of this particular site would be out of proportion with the rest of the town.
- The land in question is not Green Belt.
- The Council's Retail Study recommends that a sequentially preferable site for a discount food retail store is allocated in Biddulph. This is intended to complement the existing retail offer in the town and attract existing residents who currently go out of town for their discount food shopping. As this site is allocated for retail use in the Biddulph Town Centre Area Action Plan and is the only suitable site for this use within and around the town centre it is proposed for allocation.

BD076

Statutory bodies/stakeholders

SCC Highways - Acceptable subject to access design and Transport Assessment.

*Note - this is intended to be a large development scheme also incorporating sites BD106, BD156, BD055, BD108. Access is intended from one of the roundabouts adjacent to the Meadows School (south) and from the road currently used to serve the telephone exchange (north).

Environment Agency – The site has a culverted watercourse flowing beneath it which should be renaturalised through redevelopment to contribute towards WFD objectives. This may take up space within the site, however it may be possible to divert the channel round the edge to create more developable space.

Developer/Agent/Owner

Object to the site being identified for employment. Question issue of need in this specific location as the AAP allocation was not implemented. It is unclear as to whether this site contributes to the 2 hectare employment requirement stated or how it relates to the evidence base. Not considered to be viable for employment use - constraints (e.g. flood risk, levels and ground conditions and also vehicular access would be through third party land). Residential development of this site presents the opportunity to develop an integrated scheme and share remediation and infrastructure costs ensuring a viable scheme. This would also mean that less housing would be required in the Green Belt. Employment needs would be best met on BD117.

Public response

Issues raised:

Objections

- Infrastructure - Traffic / Transport - would create too much traffic, bypass would become dangerous.

Biddulph
BD076 & BD076a Land West of Biddulph Bypass

- Landscape - ruin the character of the town
- Amenity (e.g. noise, privacy, loss of light) - Detrimental impact on residential amenity.
- Scale of development - over-development of the town.
- Government Policy - Land is Green Belt and beyond the defensible boundary of the settlement, conflicts with Core Strategy Policy SO9 and C1.
- Other - Would be more suited to retail or housing, Consultation form is not straightforward to complete and requirement to complete one for each site is too onerous.

Support

- Infrastructure - Other - ideally situated for access to amenities
- Landscape - Land is derelict and not visually appealing
- Government Policy - land is not Green Belt
- Other - Will help businesses who are looking for land / premises in Biddulph, would be suitable for housing

Council response

- The Highway Authority does not raise any difficulties which would prevent the development of this site.
- The site is allocated for retail / employment use in the Biddulph Town Centre Area Action Plan, a development plan document which remains in force.
- There is demand from existing businesses in the town for premises close to the town centre and this is a suitable site to meet that requirement. Access to the site and the link through to this land is within public ownership.
- Viability testing will take place on sites selected by the Council as preferred options.
- Part of the land is identified as being important to the setting of the settlement in the Council's Landscape & Settlement Character Assessment. A Landscape & Visual Impact Assessment will be undertaken during the plan production process and look at all preferred option sites suggesting mitigation measures where appropriate. The results will be incorporated into the Submission Version of the Local Plan.
- Amenity – issues such as overlooking will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application. Views from individual properties are not protected in planning law.
- It is not considered that development of this particular site would be out of proportion with the rest of the town.

Preferred Options April 2016

Statutory Bodies / Stakeholders

Staffordshire Wildlife Trust: Objection - BD 076a, covered by FID 226, part of FID 25 and part un-surveyed. District ecological value, biodiverse site. BD 076 covered

Biddulph
BD076 & BD076a Land West of Biddulph Bypass

by FID 25 - district ecological value, biodiverse site. These should be assessed against the Staffordshire LWS criteria.

Council Response

ECUS Ltd conducted Phase 1 ecological survey (incorporating Local Wildlife Site Assessment) in 2016. They concluded that both sites had the potential to support protected species. The site habitats on both sites were considered to be of nature conservation value at local and site level. Further survey work was identified as a requirement for both sites. On site BD076 more information is required regarding the species rich hedgerow and the presence/absence of reptiles on the site in order to establish SBI/ BAS status. On site BD076a further investigation of the presence/absence of reptiles on the site is needed. If these sites are taken forward as allocations, policy wording will require the survey work to be undertaken in order to inform any planning application for development of the sites.

Environment Agency: General comment - The following comments highlight sites where we consider there may be issues relating to contaminated land. BD076a: According to information held by the Environment Agency, these sites are located above historic landfill sites. The local council, as lead regulator for these sites, should be contacted for further information.

Council Response

Comment noted. Prior to any development taking place on the site, investigations would be needed to establish the precise location of any historic landfill sites and mitigation measures required.

Staffordshire County Council: General Comment - The site is adjacent to, or overlaps with a Biodiversity Alert Site. Design and layout should avoid impacts in this site, enhance it where possible, and maintain linear habitat connectivity.

Council Response

Comments noted. A Green Infrastructure Strategy has been prepared by the Council and consultation on its content is taking place alongside the Preferred Options Local Plan consultation.

Biddulph Neighbourhood Plan Working Group: Support inclusion of sites in plan.

Developer/Agent/Owner

My clients would object to a mixed use and employment allocation of 3.5ha in the northern part of Core Strategy Broad Area 4 (BD076 / BD076A). There has been a long standing allocation on that site, and they have marketed it for employment and commercial uses for over 10 years without success. Their firm view is that residential development is the only viable use on the site, and as such the entire site should be allocated for residential development in the Local Plan review. That course of action is explicitly supported by the NPPF which states (para. 22) that "Planning policies should avoid the long term protection of sites allocated for employment use where there is no reasonable prospect of a site being used for that purpose. Land allocations should be regularly reviewed. Where there is no reasonable prospect of a site being used for the allocated employment use, applications for alternative uses of land or buildings should be treated on their merits having regard to market signals and the relative need for different land uses to support sustainable local communities." Indeed, the Employment Land Requirements Study states (para. 8.4) that: "Whilst adopted and emerging Local Plan policies may seek to safeguard

Biddulph
BD076 & BD076a Land West of Biddulph Bypass

against the loss of employment land to other uses it is likely that, over the course of the plan period, some land will be lost to alternative use (for example where they are no longer suitable for employment use). In accordance with the Practice Guidance, market signals should be used by the LPAs as a guide to whether losses in certain areas will be appropriate or not.” It later (para 8.18) states: “any new provision should ensure that the layout, location and type of space is attractive to the market rather than purely focusing on the quantum of space delivered”. Furthermore, it is questioned whether the need actually exists for an employment allocation on this site in Biddulph. The consultation paper refers to an employment land requirement of 35ha in the District (para 3.16) which is in the middle of the range identified in the Employment Land Requirements Study (para 7.108: 25-45ha). However, the Study states: “it is recognised that the labour supply projections which link to the Objectively Assessed Housing Need are towards the lower end of this range. Whilst it has been acknowledged that there is not a direct causal link between housing and employment land requirements, there is nevertheless a need to ensure that the two dovetail together to avoid any unsustainable outcomes”. Moreover, in relation to Biddulph specifically the consultation paper identifies a residual employment land requirement of only 1.95ha in Table 3.3, and a need for a 1000m² discount foodstore in Table 3.4, but then proposes the allocation of a total of 10.24ha of employment land in and around the town. Consequently, in relation to Broad Area 4, given the clear lack of market interest in employment or commercial uses on the site, and the over riding need to increase the housing land supply in town as highlighted above, it is contended that these areas in the site should also be allocated for residential development in the Local Plan review as part of the wider site allocation.

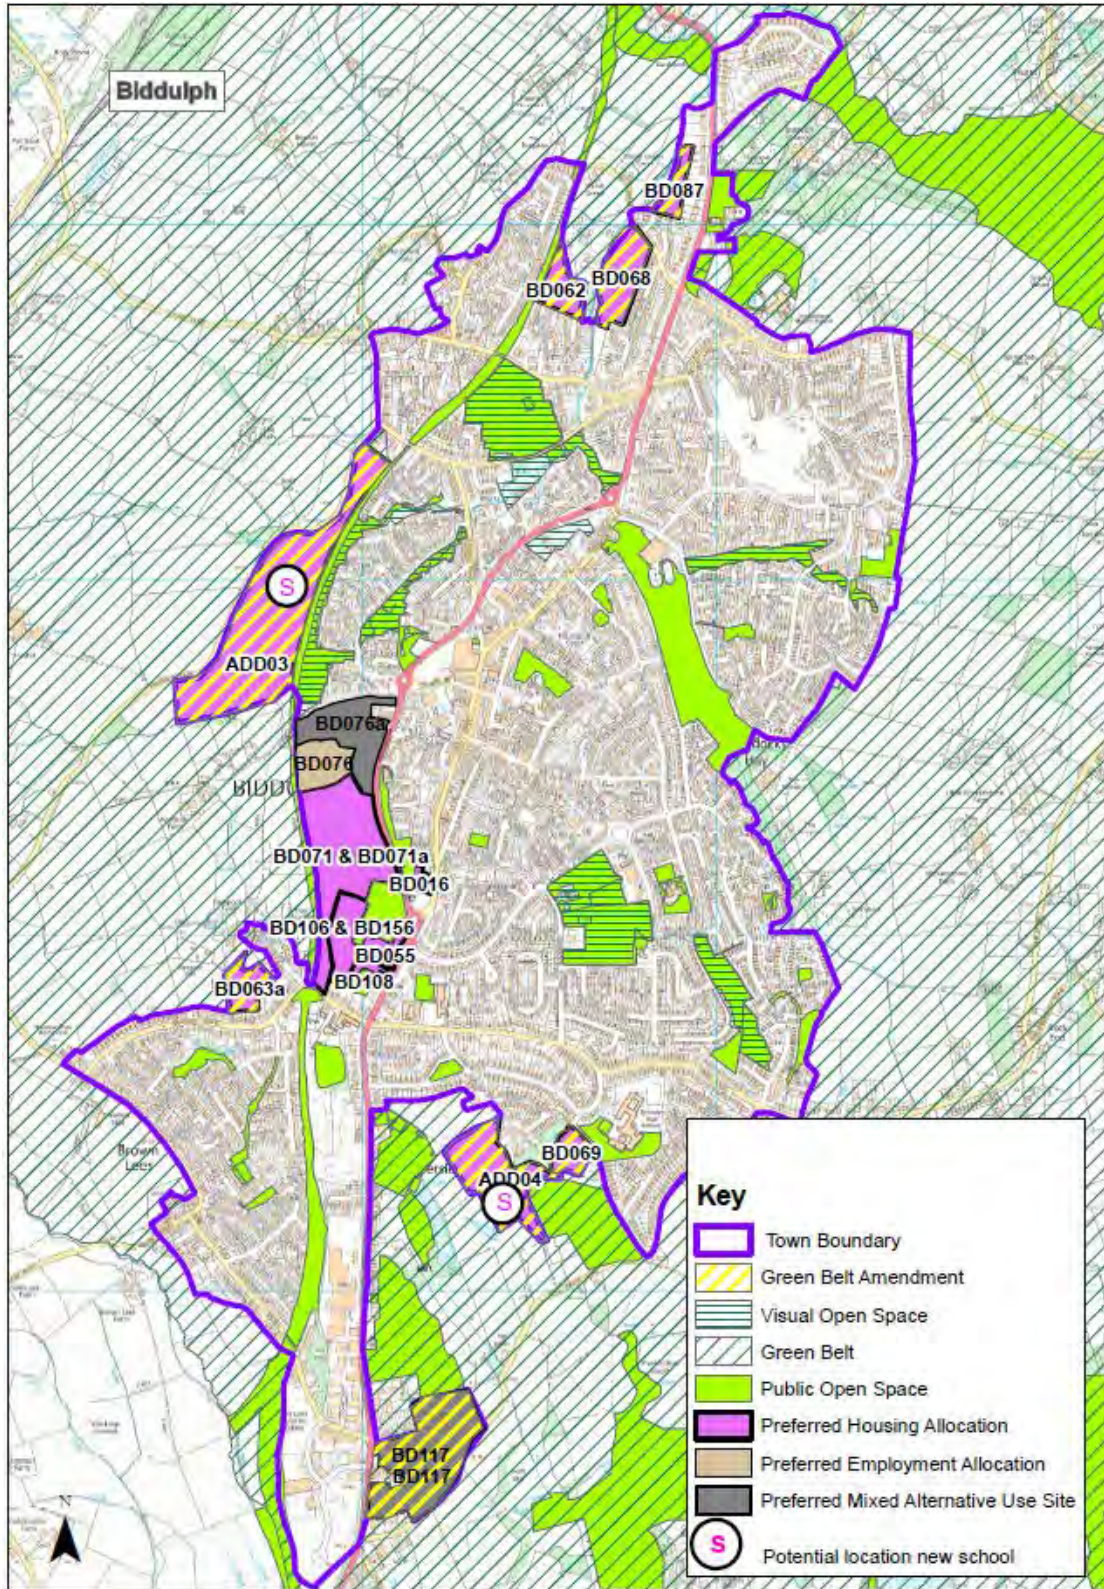

Public Response

- 31 no. support
- 2 objections on the grounds of – negative impact on town centre and considered to be unrealistic.
- 11no. general comments

Council Response

This site would be developed as part of a wider regeneration opportunity including land to the south to bring forward a large strategic mixed use regeneration site which is well related to the town centre and its key services and facilities. No particular parts of the site have been earmarked for particular uses at this stage. A masterplan would be required to examine constraints in order to come up with a suitable and viable site layout. It is considered that this development would benefit the local economy as well as meeting a significant portion of the town’s housing needs.

Biddulph
BD076 & BD076a Land West of Biddulph Bypass

BD087 Land off Beaumont Close

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Sites and Boundaries consultation April 2016

Current Position

Site not taken forward into Preferred Options Local Plan as:

- An alternative Green Belt site exists adjacent to Wharf Road which will assist with bringing forward a large strategic mixed use regeneration site which is well related to the town centre and its key services and facilities.
- Query over viability of developing the site due to the potential cost of a bridge over Biddulph Brook for a small site.

Key Issues

- Green Belt site – considered to be suitable for removal if exceptional circumstances are demonstrated.
- Low landscape sensitivity and suitable for development in heritage terms.
- Ecology – Further survey work recommended in order to establish SBI/BAS status.
- Adjacent to brook - potential flooding issues which would require SFRA Level 2 if site boundary remains the same (according to Environment Agency) but if Flood Zone 2 area removed could be developed if viable (capacity likely to be reduced).
- Noise and odour reports have been received from the developer very recently. The noise report concludes that the site is not affected and no specific noise mitigation measures will be necessary. The odour report concludes that odour impacts at the site would not be significant and that they should not be a constraint to development. If this site is selected for the Preferred Options Local Plan, both reports will be supplied to Environmental Health section for comments.
- Access to site – owner states an agreement has been reached with County Highways involving provision of a bridge over the brook.

Studies

Green Belt Review 2015

BD087 Land off Beaumont Close

(Appraised sites according to their contribution to Green Belt Purposes)

Check Sprawl: Limited contribution

Maintain Separation: Limited contribution

Prevent Encroachment: limited contribution

Preserve Setting: Contribution

Overall Impact on Green Belt Purposes: Limited

A well contained site which would round-off existing development in this location, comprising a reasonable outer boundary of Biddulph Brook. Development would narrow views of open countryside to the north as viewed from Marsh Green Lane.

Recommendation: Consider for release

Phase 1 Habitat Survey 2015 (FID 24)

The site has mostly low biodiversity value overall in terms of the species poor grassland area, and has been given ecological importance in terms of loss within the wider countryside due to the potential presence of reptile populations. The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Reptile survey
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2016)

The site has low ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However, more information is required regarding the presence/absence of reptiles on site.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Reptile survey required.

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results

Site comprises land to rear of linear development on the A527, to the north of the settlement. The site slopes down from this linear development towards Biddulph Brook (located to the west of the site), and is visible from the opposite side of the valley. However, development within the site would be partially screened by trees along Biddulph Brook and would be viewed against the context of the existing development. In addition the site does not extend beyond the existing settlement edge formed by development on Beaumont Close.

Site is of low landscape sensitivity.

Heritage Results

There are three Grade II* and 21 Grade II Listed Buildings, one Scheduled Monument, and a Registered Park and Garden which is also a Conservation Area within the 400m buffer. The site is located behind existing housing. The tower of the Grade II* listed church was visible from the site but it is considered that the development would be highly unlikely to adversely affect the setting of the asset. Due to the intervening buildings and vegetation, development would be unlikely to cause high adverse effects to the understanding of the Registered Park and Garden and Conservation Area. The site is within the HLC zone BBHECZ 17 and the HEA states

BD087 Land off Beaumont Close

that designated heritage assets would require consideration (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 25 dwellings is considered to have a significant positive effect, as could the site's proximity to existing areas of employment. The site is also accessible to existing services and facilities which is likely to have a positive effect. However, the site is located within a flood zone which is likely to have a significant negative effect. The development of greenfield land, grade 4 ALC and the site's proximity to heritage assets and an LNR is likely to have a negative effect, as could the site's district ecological importance.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Biddulph.

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways - Visibility splays of 2.4m x 90m are required at Beaumont road onto Marsh Green Road. These cannot be provided without third party land. If this site is to be developed, an alternative access must be provided, or land acquired. There is a public right of way between Beaumont Close and the plot. Could Marsh Green Road be realigned into plot BD068?

Environment Agency – Site is likely to be affected to some degree by flood risk and if taken forward will require the support of the Sequential Test and a Level 2 SFRA. Need to have regard to the relevant River Basin Management Plan.

Historic England: Made no comments on individual sites recommended that a heritage impact assessment of sites is carried out.

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. Previous coal workings do not prevent development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

United Utilities, Severn Trent, Heritage England, Natural England, Network Rail; no site specific comments

Developer/Agent/Owner Support development of this site. Compliant (subject to conditions) with Environmental Health, Environment Agency, United Utilities and Highway Authority requirements. Major supermarket less than one mile from site, churches and schools within easy walking distance, main line railway station at Congleton is just 4 miles away, close to A34 which connects to M6.

BD087 Land off Beaumont Close

Public response 46 comments – all objections.

Issues raised:

- Infrastructure - Schools oversubscribed.
- Infrastructure - Traffic / Transport - difficult access from Beaumont Close - previously refused as access when considering site for extension to graveyard (also would have to cross a public footpath and difficult HGV access, safety risk - no pavements in close, impassable in icy conditions) or over Biddulph Brook, Marsh Green Road and bridges cannot cope with more traffic especially HGVs - too narrow, junction on Congleton Road with Woodhouse Lane and Marsh Green Road is already dangerous for traffic, pedestrians, dog walkers, cyclists and horse riders, has no footpaths and not wide enough to provide any, cumulative impact on transport network of developing all sites put forward in this area, Congleton Road already very busy, traffic pollution.
- Infrastructure - Other - amenities are not sufficient for current residents - how would emergency services, doctors and dentists cope? No public transport so no access to shops without a car, does sewage works have capacity? A number of drainage pipes run under this site from properties on Congleton Road which are legally agreed and have right of access plus would also require access to maintain existing rear fencing. As site is lower than sewage works, waste from new houses would be pumped up but if pumping facility in flood plain, could result in raw sewage entering the brook, public transport northwards finishes at 6pm. Current deficit in public open space and severe deficit in children's play areas.
- Landscape - destroy natural beauty of the area.
- Nature Conservation - detrimental impact on flora and fauna - ducks and herons use the riverbank, badgers and foxes present on site, bats, frogs, toads, thrush, stoats, squirrels etc. plus loss of trees.
- Flood Risk - Prone to flooding - partial floodplain, next to stream, wet ground conditions, potential problems obtaining home insurance, concern about who would be financially liable if any properties on this site flood in future - would it be the District Council? Surface water will find its way into sewerage system which cannot cope at present due to design / construction of town sewer causing flooding in Gillow Heath - United Utilities say this cannot be solved without considerable funds.
- Amenity (e.g. noise, privacy, loss of light) - Too close to sewage works which is prone to noise, smell and insects and not heavily screened during winter. Refer to Government's "Code of Practice on Odour Nuisance from Sewage Treatment Plants". Loss of amenity in terms of light, noise and privacy for existing residents, over-bearing and oppressive impact on houses in Beaumont Close.
- Scale of development - overdevelopment, out of character with local area.
- Government Policy - Land is Green Belt and should be protected from development. Not in line with NPPF re: protect and enhance natural, built and historic environment helping to improve biodiversity, use of natural resources prudently, minimise waste and pollution, and mitigate and adapt to climate change including moving to a low carbon economy.
- Other - Query whether development would be cost effective taking into account constraints, loss of agricultural land, use brownfield sites instead, Contamination of Biddulph Brook by construction work is a concern, fear of crime, lack of demand - units at Uplands Mill are not selling, concerns about in-migration, SHLAA forms focus on one site only and don't consider implications arising from a number of neighbouring sites being developed and some arguments

BD087 Land off Beaumont Close

applicable to more than one site have only been used on one record but not others e.g. highway infrastructure, loss of wealth in Biddulph economy by residents moving away, Biddulph is known as a 'Garden Town', development may put off inward investors, no additional jobs proposed, town centre is declining, need for new houses / flats in town centres, existing empty properties in town centres, concern about anti-social behaviour from residents of social housing, residents do not understand abbreviations used on SHLAA form and would like to see information landowner has provided to Council, poor awareness of consultation - expect to be written to personally about developments affecting them.

Council response –

- The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- The Highway Authority considers that this development is acceptable subject to detailed design issues. The landowner considers that the issue of access to the site can be resolved and discussions with the highway authority have been held. Public footpaths can be provided as part of a development scheme. Cumulative impact of several developments in this area would be assessed through a TA.
- New development is the main way to deliver new or improved infrastructure e.g. more residents may support an improved bus service and medical facilities. Infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas. Rights of access in relation to the site is a matter to be resolved by the landowner and the other parties involved.
- United Utilities has advised that if appropriate measures for surface water disposal are included within development schemes then there should be no detrimental impact on the capacity of their infrastructure.
- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. Where necessary, additional assessment work will be undertaken in line with Environment Agency requirements. Mitigation measures will be taken as part of the site development to address any surface water issues.
- The land in question is not highlighted as significant in the Council's Landscape & Settlement Setting Assessment. A Landscape & Visual Impact Assessment will be undertaken during the plan production process and look at all preferred option sites suggesting mitigation measures where appropriate. The results will be incorporated into the Submission Version of the Local Plan.
- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed sites included in the Site Options consultation. The site survey results will be used as part of the site selection process.

BD087 Land off Beaumont Close

- Amenity – issues such as loss of light, noise and privacy as well as other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- An odour assessment of the sewage works has been undertaken on behalf of an adjacent landowner and it concludes that the vast majority of the area is suitable for residential use (any which is not can be left undeveloped) and odour issues should not be viewed as a constraint to planning consent.
- The land in question is within the Green Belt. In order for Biddulph to accommodate new development, the Green Belt boundary will need adjustment as there are not enough sites in the existing settlement boundary to accommodate the level of development needed. The Council has recently completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact on the function of the Green Belt as a whole (as defined in government planning guidance). This study recommends that BD087 is considered for release from the Green Belt.
- The landowner has undertaken some initial assessments and considers that the site is viable for development.
- The land has an agricultural land classification of grade 4 which means that it is poor quality.
- The SHLAA has assessed more than 150 sites in and around Biddulph including brown field sites and these have been included as allocations where they are suitable, available and deliverable. However, there is not enough brownfield land to meet the town's requirements so green field sites also need to be included. Sites BD071 and BD071a have been included as potential allocations. Prioritising brown field land is no longer part of Government policy.
- The new Local Plan will cover a period to 2031 so lack of demand (perceived or actual) at one point in time is not a valid reason for not meeting the area's objectively assessed housing needs.
- Cumulative impact of developing a number of sites in one area is and will continue to be considered as part of the process, particularly in terms of transport and infrastructure.
- New employment land is proposed at the south of the town (BD117). New investment in the town would have knock-on positive effects for the town centre.
- The Council's evidence demonstrates a need for affordable housing in Biddulph and this is reflected in local policy (set out in the Core Strategy). The Council is required to seek to address this need.
- Housing requirements in the Staffordshire Moorlands are in addition to existing properties even if these are for sale or derelict.

BD087 Land off Beaumont Close

Preferred Options Consultation

Statutory bodies/stakeholders

United Utilities: We wish to emphasise the need to carefully consider the allocation of new housing sites in close proximity to our wastewater treatment works. In this regard we note that our wastewater treatment works (WwTW) in your local authority include: Biddulph WwTW; Biddulph Park WwTW; and Flash WwTW. We wish to highlight that a wastewater treatment works can result in emissions which include odour and noise. Therefore if you are considering any sites for new allocations, especially housing allocations, near to a wastewater treatment works, you should carefully consider the sites with your Environmental Health colleagues. This is important when comparing sites close to treatment works with potential alternative sites that may be available to you for allocation. This reflects our earlier correspondence to you. The position of United Utilities is that when considering a range of sites to meet housing needs, it would be more appropriate to identify new housing sites, which are sensitive receptors, that are not close to a wastewater treatment works. We note this point is particularly relevant to your assessment of sites considered for allocation in Biddulph as part of the current Preferred Options Sites and Boundaries consultation. In particular, site references BDO68, BDO62 and BDO87, which are sited in close proximity to Biddulph Wastewater Treatment Works. Notwithstanding this preference, if it is still intended to progress with the allocation of sites near to a wastewater treatment works for housing following discussions with your Environmental Health colleagues, we strongly recommend that your decision should be informed by: 1. an odour impact assessment; and 2. a noise assessment. If after having undertaken these assessments you still allocate land near to the wastewater treatment works for housing, we recommend that there should be detailed associated policy which identifies the need for mitigating measures including any that may be identified as a result of the assessments. We recommend that: 3. careful masterplanning is always prudent in order to mitigate the risk of odour and noise nuisance. For example, any on-site open space should be located so as to act as a buffer between the treatment works and any newly introduced housing. In addition the houses could be orientated so to most appropriately manage the impact of noise; and 4. appropriate soft landscaping is included to strengthen the buffer between the treatment works and the proposed new development.

Further United Utilities Comments May 2017

With respect to any flooding implications, United Utilities wishes to recommend:

1. The need for foul only flows. Surface water should discharge to a more sustainable alternative than the public sewer; and
2. In advance of submitting the application and once more details are known in respect of the proposed development, the applicant should engage in pre-application discussions with United Utilities so that the most appropriate point of connection to the public sewer can be determined for foul water. The point of connection that is agreed for foul water may then be subsequently specified in any planning conditions recommended to the local planning authority.

Council Response:
Comments noted.

BD087 Land off Beaumont Close

Noise and odour reports have been received from the developer very recently. The noise report concludes that the site is not affected and no specific noise mitigation measures will be necessary. The odour report concludes that odour impacts at the site would not be significant and that they should not be a constraint to development. Both reports will be supplied to Environmental Health section for comments.

It is now up to the Council to balance the planning issues in determining whether to select this site for development in the Local Plan.

Detailed associated policy for the site will be included in the Local Plan if it is selected and it is acknowledged that careful masterplanning of the site will be required including appropriate screening /buffering.” Similarly, the recommendations above will be incorporated into policy should the site be taken forward.

Staffordshire County Council: With regards Site BD087 as stated in previous responses there is still no obvious access to this site. We will need to see this before we can provide a comprehensive response.

Council Response

The landowner has corresponded directly with the County Highways Officer for the Staffordshire Moorlands and provided evidence that the principle of providing an access from the opposite side of Biddulph Brook using a newly constructed bridge would be acceptable to the highway officer.

Environment Agency: In particular, BD087 will need to be assessed before being taken further. A level 2 assessment will be required.

Public comments:

Issues raised:

- Highways including access.
- Noise and odour, existing raw sewage flooding, capacity of water treatment works.
- Flood Zone 2.
- Education capacity
- Victoria Colliery, Childerplay and north of Woodhouse Lane as alternative locations for development.
- Ecology.
- Community benefit
- Viability of sites
- Allocating the site as Visual Open Space.
- Contradiction with Core Strategy Policy SS5b
- Green Belt Review and exceptional circumstances justifying development in the Green Belt
- Site screening
- Use of derelict buildings in Biddulph.
- Heritage impact.
- Landscape impact.
- Public open space.
- Amenity issues.
- Marketing of the consultation.
- Develop sites in Stoke instead.

BD087 Land off Beaumont Close

- Housing requirement for Biddulph too high.
- Property values.
- Affordable housing

Council Response

- **Highways including access.**
County Highways has stated that the landowner's proposed access (a bridge crossing Biddulph Brook) would be acceptable in principle.
- **Noise and odour, existing raw sewage flooding, capacity of water treatment works.**
United Utilities has a statutory duty to provide capacity for new development so this is not a valid reason for development not to come forward in Biddulph. United Utilities considers that there is no need to expand the treatment works in the development plan period for the growth identified in the development plan.

Noise and odour assessments have been undertaken on behalf of the landowner which demonstrate that the site could be developed without significant adverse impact on future residents.

Current issues experienced by residents in regard to raw sewage flooding are a separate matter to be investigated by United Utilities.

- **Flood Zone 2.**
The site boundary has been amended to exclude land within Flood Zone 2. This approach has been agreed with the Environment Agency since their response to the consultation so a Level 2 Flood Risk Assessment is no longer required for the site. A planning application would still be needed before this (or any other) site could be developed and the Environment Agency is a statutory consultee.
- **Education capacity**
Education - The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- **Victoria Colliery, Childerplay and north of Woodhouse Lane as alternative locations for development.**
Sites at Victoria Colliery and Childerplay Road are within the Green Belt like BD087. The Green Belt Review has considered the impact on the Green Belt the release of these sites for development would have. Only the Victoria Colliery site was identified as being suitable for consideration for Green Belt release (in exceptional circumstances). In reaching a decision on which sites to include in the Local Plan, the Council must balance evidence and Government policy.

BD087 Land off Beaumont Close

The land to the north of Woodhouse Lane (west of the school) is not considered suitable for development, mainly due to the heritage impact on the nearby registered park and garden. It is also Green Belt land.

- **Ecology**

The Council's Phase 1 Habitat Study (2015) concludes that "The site has mostly low biodiversity value overall in terms of the species poor grassland area, and has been given ecological importance in terms of loss within the wider countryside due to the potential presence of reptile populations. The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Reptile survey
- Vegetation removal at the appropriate time of year"

- **Community benefit**

Site BD087 will be required to provide a percentage of affordable housing / starter homes to benefit those in the community needing affordable housing.

- **Allocating the site as Visual Open Space.**

The site is not recommended for designation as Local Green Space in the Landscape, Local Green Space and Heritage Impact Study (2016). Local Green Space supersedes the Visual Open Space designation (which is an old designation not supported by Government policy in the NPPF).

- **Contradiction with Core Strategy Policy SS5b**

No contradiction with SMDC Core Strategy Policy SS5b 'Biddulph Area Strategy'. Sites within the urban area and an extension to the urban area are included as well as extensions in the Green Belt identified as part of the Green Belt Review as stated in the policy.

- **Green Belt Review and exceptional circumstances justifying development in the Green Belt**

In order for Biddulph to accommodate new development, the Green Belt boundary will need adjustment as there are not enough sites in the existing settlement boundary to accommodate the level of development needed. The Council has completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact on the function of the Green Belt as a whole (as defined in government planning guidance). This study recommends considering site BD087 for release from the Green Belt.

If this site is selected as a housing allocation, exceptional circumstances will need to be demonstrated to justify its release from the Green Belt.

- **Site screening**

Screening of the sewage works would be required as part of any development on the site.

- **Use of derelict buildings in Biddulph.**

Brown field sites have been considered as part of the site selection process and it is agreed that the mills in the centre of Biddulph (particularly Yarn Mill and Minster Mill) would be appropriate for residential development. Albion Mill on Station Road is too small for an allocation of its own but if it is

BD087 Land off Beaumont Close

developed it would count towards Biddulph's housing needs. The Biddulph Neighbourhood Planning Group are currently working on a Town Centre Masterplan which includes looking at opportunities for redeveloping brownfield sites.

- **Heritage impact.**

Heritage Impact of development on the site has been assessed in the Council's Heritage Impact Study (August 2016), the results for this site are "There are three Grade II* and 21 Grade II Listed Buildings, one Scheduled Monument, and a Registered Park and Garden which is also a Conservation Area within the 400m buffer. The site is located behind existing housing. The tower of the Grade II* listed church was visible from the site but it is considered that the development would be highly unlikely to adversely affect the setting of the asset. Due to the intervening buildings and vegetation, development would be unlikely to cause high adverse effects to the understanding of the Registered Park and Garden and Conservation Area. The site is within the HLC zone BBHECZ 17 and the HEA states that designated heritage assets would require consideration (Historic Environment Character Assessment 2010). Site suitable for development in heritage terms."

- **Landscape impact.**

Landscape Impact of development on the site has been assessed in the Council's Landscape Impact Study (August 2016), the results for this site are: "Site comprises land to rear of linear development on the A527, to the north of the settlement. The site slopes down from this linear development towards Biddulph Brook (located to the west of the site), and is visible from the opposite side of the valley. However, development within the site would be partially screened by trees along Biddulph Brook and would be viewed against the context of the existing development. In addition the site does not extend beyond the existing settlement edge formed by development on Beaumont Close. Site is of low landscape sensitivity."

- **Public open space.**

The land is privately owned.

- **Amenity issues.**

Issues such as overlooking will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application. Problems arising from the construction period of any works, e.g. noise, dust, construction vehicles, hours of working (covered by Control of Pollution Acts) are not material planning considerations.

- **Marketing of the consultation.**

The consultation was widely publicised and included a flyer being sent to all households and businesses in the District through Royal Mail. High levels of responses have been received by the Council from Biddulph residents which suggests that a significant number of residents knew about the consultation.

- **Develop sites in Stoke instead.**

Biddulph

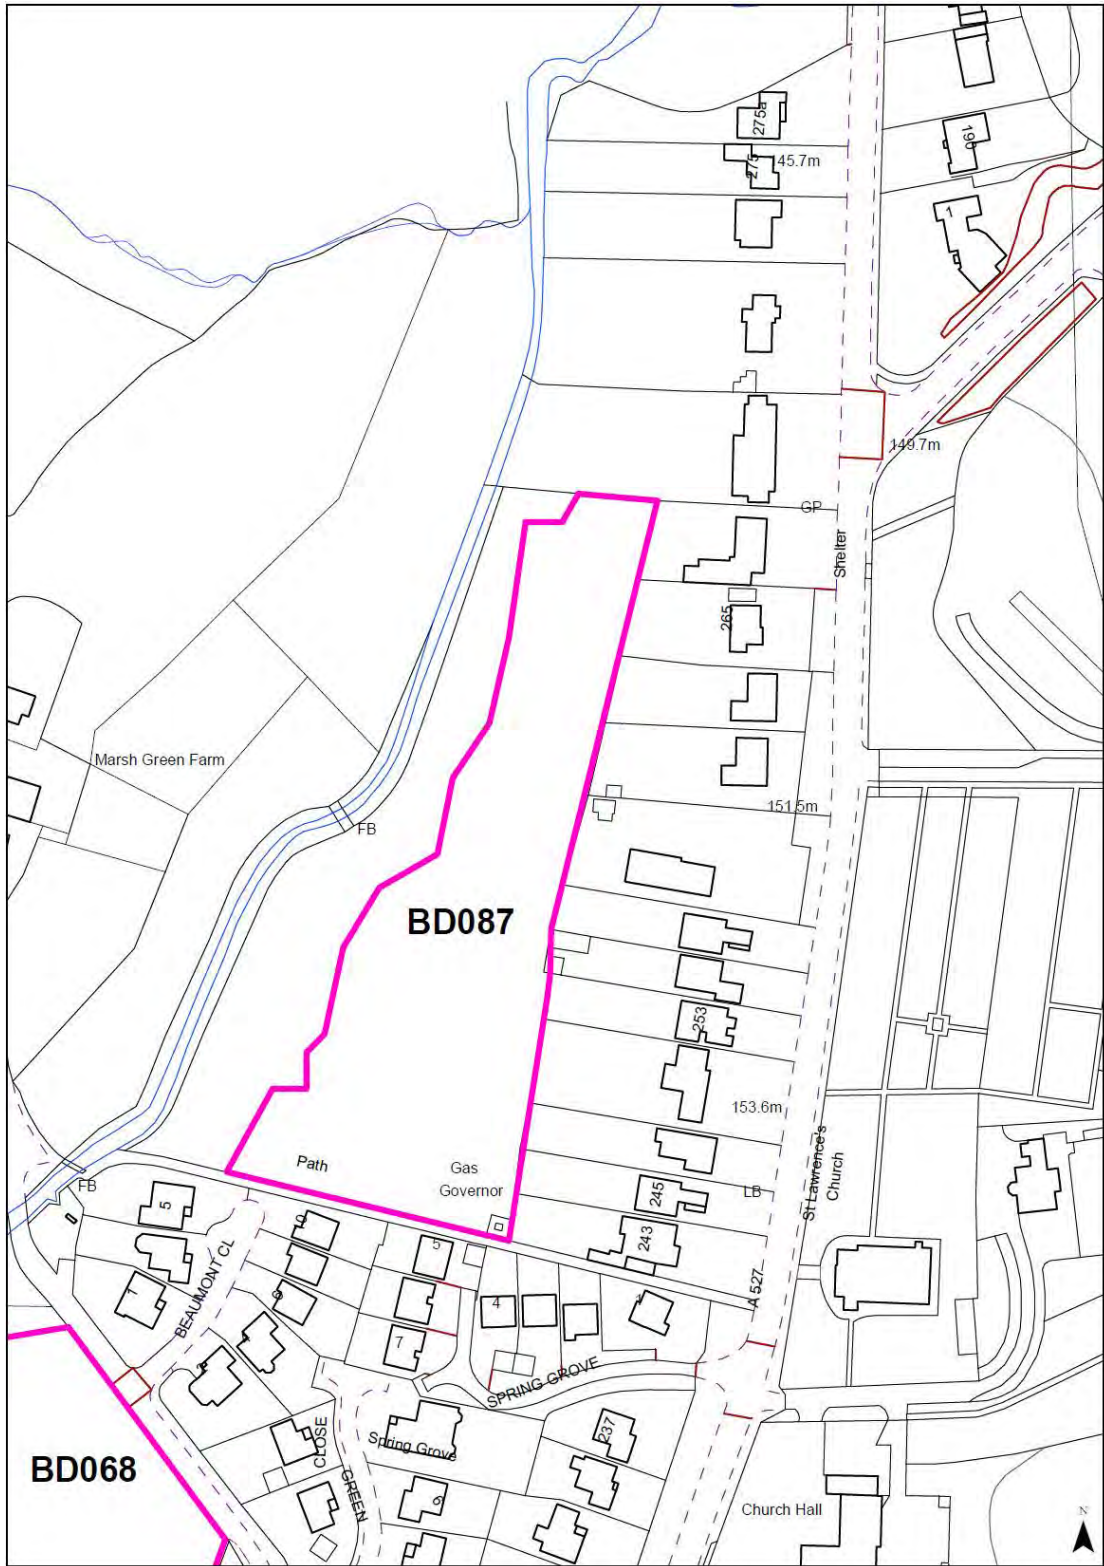

BD087 Land off Beaumont Close

National planning guidance states that the Council should seek to meet the development needs of their area. Stoke on Trent City Council has its own development needs to meet.

- **Housing requirement for Biddulph too high.**
The proportion of 20% of the District's housing development taking place in Biddulph has been through extensive consultation and public examination as it is taken from the Council's Core Strategy which was adopted in March 2014.
- **Property values.**
Property values are not considered material in planning law.
- **Affordable housing**
Provision of affordable housing is enshrined in Government policy.

Biddulph

BD101 Yarn Mill

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Not included in Preferred Sites & Boundaries consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan:

- Brownfield site within the built up area boundary.
- Opportunity to intensify use in this town centre location.
- Owner interested in redevelopment of site.

Key Issues

- Brownfield site within the built up area boundary.
- Located in the town centre.
- Owner interested in redevelopment of site.
- Ecological value unknown.
- Heritage Impact – no full assessment has taken place to date but no Listed Buildings in immediate area.
- Viability unknown – results awaited.
- In deep surface water floodplain and reports of local SW flooding. FRA needed.

Site Information

Greenfield/ brownfield	Built up area boundary/country side	Est. housin g capacit y	Area (ha)	Ownersh i p status	Site details
Brownfield	Within settlement boundary, close to town centre	24 (at 150 dph)	0.16	Owner willing to develop	<ul style="list-style-type: none">• Last used for employment• Mill building with various extensions unlikely to be suitable for residential conversion – new build more likely.

Studies

No survey to date.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

Biddulph

BD101 Yarn Mill

The development of urban ALC brownfield land should have a significant positive effect, as should the preservation of the landscape and the site's proximity to existing areas of employment and services and facilities and the delivery of circa 24 dwellings. The site is located within the settlement boundary, and away from historical assets. However, the site's ecological importance would have a negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to sites in Biddulph.

Options Consultation July 2015

Statutory bodies/stakeholders:

SCC Highways - Acceptable subject to detailed design and provision of adequate parking. Parking will be particularly important.

Developer/Agent/Owner – Landowner intentions unknown (landowner subsequently clarified they were willing to release land for development).

Public response

3 comments – all support.

Issues raised:

- Government Policy - Site is not in the Green Belt

Council Comment –

Comments noted.

Preferred Options Consultation April 2016

Not included in the consultation at this stage. Assumed it would come forward as a windfall but not specifically identified.

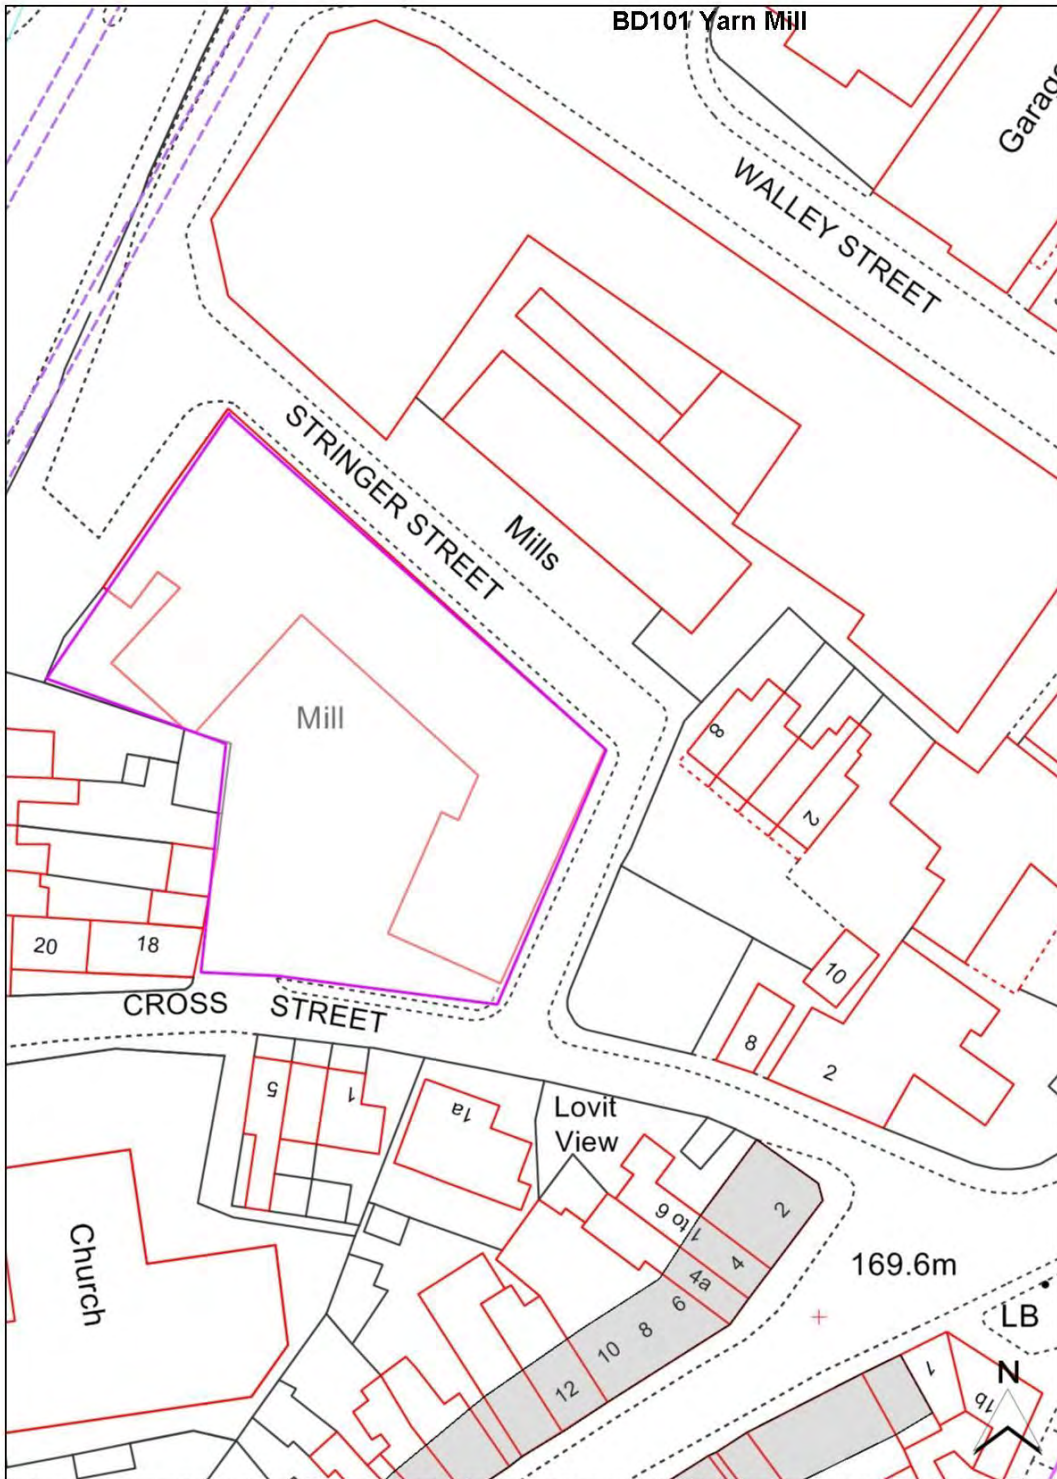

Some comments were made in relation to this site in response to the Preferred Options Consultation including objections relating to the non-inclusion of the site.

Environment Agency: BD101 appears to be brownfield. Although it is unlikely that the issue of Brownfield Land will make any of the allocations undevelopable due to cost/constraint, sites within the Source Protection Zones and flagged up, will be subject to certain restrictions.

Biddulph Neighbourhood Plan Working Group: Brownfield Site part of the proposed mill triangle, recommended for inclusion.

BD104 Land between Tunstall Road and Meadows Way

Local Plan Process

- Site suggestion from the SHLAA
- Not included in consultation to date as it was understood that land was not available for development. This position has changed and the land is now available.

Current Position

Site taken forward into Preferred Options Local Plan:

- Site within the built up area boundary.
- Opportunity to intensify use in this town centre location.
- Owner interested in redevelopment of site.
- Site to be developed as part of a wider regeneration opportunity including land to the west side of the bypass to bring forward a large strategic mixed use regeneration site which is well related to the town centre and its key services and facilities.

Key Issues

- Within the built up area boundary.
- Located in the town centre.
- Owner interested in redevelopment of site.
- Ecological value unknown.
- Heritage Impact – no full assessment has taken place.

Site Information

Sustainability Appraisal

Initial Sustainability Appraisal

The site should deliver a quantum of housing, circa 10 dwellings which is likely to have a significant positive effect, as could the location of the site with regard to its proximity to services and facilities and areas of existing employment as well as the positive effect on the landscape. The site is located within the settlement boundary and has good accessibility to health care services and facilities. However, its

Biddulph

BD104 Land between Tunstall Road and Meadows Way

proximity to heritage assets would have a negative effect. This is an elevated site in a prominent location immediately adjacent to a roundabout and between the bypass and Tunstall Road. Mainly grass with some trees. The site is within 400m of seven grade II listed assets. Ecological and heritage impact assessments are required. The site was proposed for inclusion in the July 2017 preferred option Local Plan as part of the Wharf Road site (Broad Area 4).

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to sites in Biddulph.

Options Consultation July 2015

Not included in the consultation at this stage.

Preferred Options Consultation April 2016

Not included in the consultation at this stage.

Biddulph

BD104 Land between Tunstall Road and Meadows Way

BD104

Biddulph
BD108 Land at Jacksons Nursery Tunstall Road

Local Plan Process

- Site from the SHLAA
- In the Options Consultation
- In the Preferred Sites and Boundaries consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site to be developed as part of a wider regeneration opportunity including land to the west side of the bypass to bring forward a large strategic mixed use regeneration site which is well related to the town centre and its key services and facilities.
- reasons set out below under ‘key issues’ heading.

Key Issues

- Part of larger mixed use site
- Within settlement boundary
- Close to services & facilities
- Owner willing to deliver site
- Ecology – surveys recommended to establish SBI/BAS status.
- Low landscape sensitivity
- Suitable for development in heritage terms

Site Information

Greenfield/ brownfield	Built up area boundary/country side	Est. housin g capacit y	Area (ha)	Ownersh p status	Site details
Brownfield	Within the settlement boundary	12 (28.9dp h)	0.44	Owner willing to develop	<ul style="list-style-type: none"> • Flat, well screened, secluded site • Low visual impact • Scrub land with derelict buildings (former nursery) • Access onto Tunstall Road

Studies

Phase 1 Habitat Survey 2015 (FID 119)

The site has mostly low biodiversity value overall, is set within a fairly urban environment with relatively good connectivity to the wider countryside. Nevertheless, as the site has good connectivity to other more biodiverse habitats, suitable reptile habitat and potential to support roosting bats the site is deemed as having ecological importance. The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- A bat survey regime to ascertain whether bats roost in the buildings
- Reptile survey
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2016)

Biddulph
BD108 Land at Jacksons Nursery Tunstall Road

The site has low ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However, more information is required regarding the scattered trees on site in order to establish their ecological importance.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Further assessment of the building for its potential to support roosting bats, bat survey possibly required.
- Reptile survey.

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results

The southern-most of the sites enclosed by the dismantled railway and the A527. Site comprises previously developed land within the settlement, west of Tunstall Road and north of Roaches School. The site is set back from the road, and screening is provided by the existing trees and vegetation on the road. Development within the site would not be visually prominent, and (in combination with development of the adjacent sites) could create a stronger settlement edge.

Site is of low landscape sensitivity.

Heritage Results

There are two Grade II Listed Buildings in the site and five additional Grade II Listed Buildings within the 400m buffer. The site is small and development would highly likely cause substantial adverse effects to the settings of the assets in the site. To reduce effects, mitigation should include setting development back from the assets coupled with landscape masterplanning to provide screening. Development would not adversely affect the HLC zone BBHECZ 3 (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms subject to appropriate master planning.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The development of urban ALC brownfield land should have a significant positive effect, as should the preservation of the landscape and the site's proximity to services and facilities. However, there is scope that development of this site could have significant negative effects on historical assets. Similarly, the site's ecological importance would have a negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Biddulph.

Options Consultation July 2015

Statutory bodies/stakeholders

Biddulph
BD108 Land at Jacksons Nursery Tunstall Road

Historic England: Made no comments on individual sites recommended that a heritage impact assessment of sites is carried out. (This work has now been undertaken).

Environment Agency; Site not identified as being in an area likely to be affected by flooding. Need to have regard to the relevant River Basin Management Plan.

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. Previous coal workings do not prevent development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

Heritage England; BD055; BD106; BD108; and, BD156 - preferred housing allocations - It is not clear how the impact of the site allocations on the Grade II listed buildings (former Parsonage, school and the Church) and their setting, individually and cumulatively, has been considered. Further information on this is required. (This work has now been undertaken).

United Utilities, Severn Trent, Natural England, Network Rail; no site specific comments

SCC Highways - Acceptable in principle subject to access design and Transport Assessment.

*Note - this is intended to be a large development scheme also incorporating sites BD106, BD156, BD055, BD108. Access is intended from one of the roundabouts adjacent to the Meadows School (south) and from the road currently used to serve the telephone exchange (north)

Developer/Agent/Owner – Land available.

Public response 6 comments – all support.

Issues raised:

- Infrastructure - Easy access to schools.
- Infrastructure - Traffic / Transport - A traffic light controlled crossing already exists for pedestrian safety.
- Infrastructure - Other - Ideally situated for easy access to local amenities such as public transport, shopping, health centre etc. a short walk away.
- Government Policy - Site is not in the Green Belt.
- Other - site is a derelict eyesore, infill development which would improve this part of the town.

Council Response – Comments noted

Preferred Options April 2016

Statutory bodies/stakeholders

Natural England: Natural England notes the proposed preferred site for allocation in Biddulph. We note that it is located close to and/or adjoining existing areas of open space and green infrastructure. Suitable enhancements of existing open spaces' may be required together with appropriate management (and funding thereof) in order to allow these open spaces to function effectively during the local plan period. Similarly

Biddulph
BD108 Land at Jacksons Nursery Tunstall Road

the development of these preferred sites (if progressed) will need to include suitable multi-functional green infrastructure. Adopted local plan spatial objectives SO8 & 9 refer together with policies such as DC1 Design Considerations, DC3 landscape and settlement setting, and C3 Green Infrastructure.

Council Response

The Council has produced a Draft Green Infrastructure Strategy for consultation alongside the next draft version of the Local Plan. The strategy identifies green infrastructure corridors around the towns and lists particular issues in relation to that corridor which can be addressed as part of the relevant site policy and / or at the planning application stage. Similarly, a public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and new development in the vicinity could contribute towards this. The Council has also designated Local Green Spaces in line with criteria set out in the NPPF and the Council will seek to facilitate improvements to these areas where required.

Developer/Agent/Owner: Support the proposed allocation of land at and adjoining Jacksons Nurseries - Preferred Housing Allocation reference BD108 - along with the adjoining site references BD106, BD156 and BD055, for housing development. Reasons are: Land is previously developed and located within the Biddulph Town Boundary; Land is in a sustainable location within walking distance of the town centre and local bus services whole of Biddulph is within cycling distance; A range of local facilities are within 2km of the site - primary schools, secondary schools, supermarkets, convenience store, GP surgery; Pre-application discussions for this site and a neighbouring site have resulted in positive feedback including site layout (attached); Site has a willing landowner and developer and is technically deliverable; and agree with results of options site assessment document published by the Council during the previous (Site Options Consultation) in regard to Site BD108.

Public Response:

30 object

146 support (including Biddulph Neighbourhood Plan Working Group)

Those who objected did not give any reasons for their objections.

Biddulph
BD117 Land south of Victoria Row

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Sites and Boundaries consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site to be developed as part of a mixed use employment / residential scheme in order to address demand for employment and housing in Biddulph. It is considered that this site is ideally located with good road links opposite Victoria Business Park and bringing it forward will have a positive impact on the local economy.
- reasons set out below under ‘key issues’ heading.

Key Issues

- Green Belt site – suitable for release if exceptional circumstances are demonstrated.
- Mixed use split as follows:
 Site boundary for whole site (mixed use) then in policy stipulate:
 At least 4.74ha for employment
 2ha for housing (80 @40dph) – density reflects residential development nearby and house types likely to be smaller on a site in this location.
- Access is good site is on major road
- Good infrastructure links
- Majority of site (to east) has a high landscape sensitivity. Site-specific landscape mitigation measures could include planting within and on the edges of the development, and limits on building sizes and scale.
- Site suitable for development in heritage terms.
- Site has a mining legacy.
- Small part of site is unregistered – owner unknown.
- Ecology - Further survey work recommended in order to establish SBI/BAS status.

Site Information

Greenfield/ brownfield	Built up area boundary/country side	Est. housin g capacit y	Area (ha)	Ownersh p status	Site details
Greenfield	Countryside Green Belt	Mixed use employ ment/h ousing	6.74	5 owners – all willing to release. Small part of site unregister ed – owner unknown.	<ul style="list-style-type: none"> • Agricultural land • Relatively flat • Mining legacy

Biddulph
BD117 Land south of Victoria Row

Studies

Extended Phase 1 Habitat Survey 2015 (FID 210)

The site has very low biodiversity value overall, however as there are 2 trees with bat roosting potential and species rich hedgerows. Therefore, the site has some ecological importance. The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- A bat survey regime to ascertain whether bats roost in the trees
- Hedgerow survey
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2016)

The site has some ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However, more information is required regarding the scattered trees on site in order to establish their ecological importance.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Hedgerow survey following modified HEGS methodology
- Relevant trees to be identified and further assessed for their potential to support roosting bats. Following this a bat survey may possibly be required.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. However, the greenfield nature of this site and its location outside of the settlement boundary, coupled with its ecological importance could have a negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Biddulph.

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results:

Large site comprising fields on the southern edge of Biddulph, east of the A527 (Tunstall Road); south of Victoria Row; and north and west of Mill Hayes Road. Residential properties and a smallholding are located on the A527 and are enclosed by the site. The site is opposite Brown Lees Industrial Estate, which is located on the opposite side of the A527. However, despite this, the site is rural in character. The agricultural buildings enclosed by the site and the cottages on Victoria Row contribute to this character. The site is large and open with high visual prominence, particularly in the north and east of the site, with long distance views available from the footpath on the northern boundary. Visual prominence is lower in the south-west of the site, south of the existing properties on the A527, where the land is enclosed by trees and hedgerows. The landscape sensitivity of the site is low in the south-west, increasing to the north-east corner of the site where sensitivity is highest. In order to limit potential landscape impacts the existing vegetation in the south-west of the site should be retained, and additional planting could be undertaken on the edges

Biddulph
BD117 Land south of Victoria Row

of, and within the development, to create a strong vegetated edge and soften the appearance of the development in long distance views. Limits on the size and scale of buildings would also soften the appearance of the development.

South-west of site (south of properties on A527 – Section A) is of low landscape sensitivity, increasing to high sensitivity in the north-east across the remainder of the site (Section B). Site-specific landscape mitigation measures could include planting within and on the edges of the development, and limits on building sizes and scale.

Please note that this study forms part of a wider evidence base to support SMDC's Local Plan. Therefore, the conclusions within this report will be weighed against other evidence when determining the overall suitability of a site for development.

Heritage Results:

There are no designated heritage assets within the 400m buffer. Development would be highly unlikely to adversely affect the HLC zone BBHECZ 5 (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms.

Green Belt Review (2015)

Check Sprawl – Limited contribution

Maintain separation – contribution

Prevent encroachment – limited contribution

Preserve setting – contribution

Overall impact – limited – 'proposed for employment, this site would infill land between Mill Hayes Road and the A527 Tunstall Road. As such, the land is reasonably well bounded, although smaller boundaries to the east and north are hedgerows. (See also land to the north of Mill Hayes Road).

Biddulph
BD117 Land south of Victoria Row

Recommendation – Consider for release – Release under exceptional circumstances, should be accompanied by extension of the Town Boundary.

Mining

This area, along with many others around Biddulph, has a mining legacy. The Coal Authority has advised that new development should recognise the problems and how they can be positively addressed. They consider that mining legacy is not always a complete constraint and new development can address issues making it safe, sustainable and stable. The mining legacy of this site will not prevent development but detailed site investigation work must take place to inform site design. Land in the central part of the site and land immediately adjacent to Tunstall Road is defined as a high risk mining area. The rest of the site is low risk. According to the latest Coal Authority data, there are no mine entries on or adjacent to the site.

Options Consultation July 2015

Statutory bodies/stakeholders

Historic England: Made no comments on individual sites recommended that a heritage impact assessment of sites is carried out. (This work has now been undertaken).

Environment Agency; Site not identified as being in an area likely to be affected by flooding. Need to have regard to the relevant River Basin Management Plan.

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. Previous coal workings do not prevent development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

United Utilities, Severn Trent, Heritage England, Natural England, Network Rail; no site specific comments

SCC Highways - Where would access be taken? Access to south may have visibility issues, access to the north would conflict with traffic light controlled junction. Access through Victoria Row is at crossroads Brown Lees Road. Careful consideration required.

Developer/Agent/Owner – Portion of land available, part of site availability unknown.

Public response 7 comments – 6 objections, 1 support.

Issues raised:

Objections:

- Infrastructure - Other - query availability of infrastructure
- Landscape - Land has some of the best views over to the Moorlands from anywhere in Biddulph and it would be deplorable to ruin this.

Biddulph
BD117 Land south of Victoria Row

- Amenity (e.g. noise, privacy, loss of light) - would have a detrimental impact on residents
- Scale of development - constitutes over-development
- Government Policy - urban sprawl - concern about merging with Stoke on Trent, land is Green Belt and part of the open countryside, contrary to Core Strategy para. 7.56 and policies SO9 and C1
- Other - Site more suited to housing than employment due to vacant units and scope for extension of Victoria Business Park - could accommodate over 200 homes and lessen the need to consider BD063a, residential development here would have less impact than employment and its location on a major road would appeal to potential purchasers, query agricultural classification of this land? No need for more employment units, there is still availability on Victoria Business Park and the steel works sites. Concerned about complicated response form and consider that filling in one form per site is overly onerous.

Support:

- Infrastructure - Traffic / Transport - area is situated on a major road and access could easily be achieved.
- Other - Ideal location opposite existing successful business park. Can benefit from using existing infrastructure with its close links to Stoke and the M6 without having to go through the town, more jobs are needed. Query why employment land requirement of 25-45 hectares is higher than stated in the Core Strategy.

Council response –

- The Council's Core Strategy (Policy SS4) distributes the District's employment land requirement from the Council's Employment Land Study. Taking into account existing commitments this highlights a need for approximately 2 hectares of additional employment land in Biddulph to 2031. The town is heavily constrained by the Green Belt so identification of a suitable site is not straightforward. BD117 has been identified primarily due to its good road links, close proximity to the Victoria Business Park opposite and minimal impact on the Green Belt.
- Discussions have taken place with County Highways and it is considered that a suitable access point could be created to serve the site.
- The land in question is within the Green Belt. In order for Biddulph to accommodate new development, the Green Belt boundary will need adjustment as there are not enough sites in the existing settlement boundary to accommodate the level of development needed. The Council has recently completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact on the function of the Green Belt as a whole (as defined in government planning guidance). This study recommends considering site BD117 for release from the Green Belt.
- The land is not identified as being important to the setting of the settlement in the Council's Landscape & Settlement Character Assessment. A Landscape & Visual Impact Assessment will be undertaken during the plan production process and look at all preferred option sites suggesting mitigation measures where appropriate. The results will be incorporated into the Submission Version of the Local Plan.

Biddulph
BD117 Land south of Victoria Row

- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application. Views from individual properties are not protected in planning law.
- It is not agreed that there is available space on Victoria Business Park as all the land on the current site has been sold or leased and there is no scope to extend it onto land immediately adjacent. In any case, the 2 hectare requirement is over and above the Victoria Business Park and the steel works sites as well as all other existing employment sites.
- The agricultural land classification of this land is grade 4 which is defined as being poor quality.

Preferred Options April 2016

EMPLOYMENT ELEMENT

Statutory bodies/stakeholders

United Utilities Water Limited - With regards to site reference BD117, site appears likely to discharge to that area served by Severn Trent for the provision of wastewater services. It would be useful to confirm with the respective landowners the likely point of discharge to the wastewater network from these sites so that we can confirm the receiving wastewater infrastructure and therefore better understand the impact.

Council Response:

Points of discharge to the wastewater network are a detail which can be confirmed at a later stage in the process once the sites have been allocated in the Local Plan and detailed development schemes become available at the planning application stage.

Staffordshire County Council - Site BD117 ideally should be extended to cover entire unbroken frontage of A527 to provide access in conjunction with Victoria Business Park.

Biddulph Neighbourhood Plan Working Group - BD117 - Access must be from Tunstall Rd, recommended for inclusion.

Developer/Agent/Owner – One owner objects to employment on his land would prefer housing. One owner supports development.

Public Response

Issues raised:

- Why can't housing go on this site?
- No need for any more employment units

Council Response

Biddulph
BD117 Land south of Victoria Row

- **Why can't housing go on this site?**

This site has been selected primarily for employment use as it has good road links and is well related to Victoria Business Park so is likely to be attractive to businesses to help meet the employment needs of the District (see below).

- **No need for any more employment units**

An assessment of employment land requirements by NLP in February 2017 concluded that 13ha to 27ha of employment land was required to meet the needs of the district 2014-2031. It was recommended and agreed by Council Assembly on 08/03/17 that an annual housing requirement of 320 homes per year (close to combined jobs growth scenario) was taken forward into the Preferred Options Local Plan. An employment land requirement of approximately 27ha was therefore recommended up to the year 2031 for the Preferred Options Local Plan on the basis that it was at the top of the OAN range for employment and so closely corresponds with the proposed housing requirement to support sustainable development. Applying the 20% requirement for Biddulph wards in Pol SS3 Core Strategy gives a requirement for the town of at least 5.4ha, less qualifying 2014-17 employment commitments. A range of employment site choices have been selected for Biddulph – either close to the town centre or to the existing Victoria Business Park.

HOUSING ELEMENT

Landowners:

2 owners responded in support of residential

Natural England: Natural England notes the proposed preferred site for allocation in Biddulph. We note that it is located close to and/or adjoining existing areas of open space and green infrastructure. Suitable enhancements of existing open spaces' may be required together with appropriate management (and funding thereof) in order to allow these open spaces to function effectively during the local plan period. Similarly the development of these preferred sites (if progressed) will need to include suitable multi-functional green infrastructure. Adopted local plan spatial objectives SO8 & 9 refer together with policies such as DC1 Design Considerations, DC3 landscape and settlement setting, and C3 Green Infrastructure.

Council Response

The Council has produced a Draft Green Infrastructure Strategy for consultation alongside the next draft version of the Local Plan. The strategy identifies green infrastructure corridors around the towns and lists particular issues in relation to that corridor which can be addressed as part of the relevant site policy and / or at the planning application stage. Similarly, a public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and new development in the vicinity could contribute towards this. The Council has also designated Local Green Spaces in line with criteria set out in the NPPF and the Council will seek to facilitate improvements to these areas where required.

Public Response

19 objections
40 support

Issues raised:

- Green Belt

Biddulph
BD117 Land south of Victoria Row

- Landscape
- Housing / employment mix – why not 100% housing, why employment?
- Flooding
- Highways
- Use Childerplay Road instead

Council Response

- **Green Belt**

The Council has undertaken a Green Belt Review (published in 2015) to assess all the Green Belt in the Staffordshire Moorlands and determine whether it may be suitable for removal from the Green Belt to meet the District's future development needs to 2031. For this site, it was concluded that the overall impact of development on the Green Belt would be limited. 'This site would infill land between Mill Hayes Road and the A527 Tunstall Road. As such, the land is reasonably well bounded, although smaller boundaries to the east and north are hedgerows. (See also land to the north of Mill Hayes Road). Recommendation – Consider for release – Release under exceptional circumstances, should be accompanied by extension of the Town Boundary.'

- **Landscape**

The Council has also undertaken a Landscape Impact Assessment of the site and this concludes that part of the site (adjacent to Tunstall Road) is of low landscape sensitivity but most of the site (south and east of Victoria Row) is of high landscape sensitivity and landscape mitigation measures are recommended if this area were to be developed.

- **Use Childerplay Road instead**

Childerplay Road is within the Green Belt like BD117. The Green Belt Review has considered the impact on the Green Belt the release of this area for development would have. The Childerplay Road area is not considered suitable for release from the Green Belt. Area BD117 is considered suitable for release from the Green Belt.

- **Flooding**

The Environment Agency commented on the site at the Site Options Consultation Stage in 2015 and said "Site not identified as being in an area likely to be affected by flooding."

- **Highways**

The Highway Authority has agreed that access from Tunstall Road opposite the Tunstall Road / Brown Lees Road junction would be acceptable.

- **Housing / employment mix – why not 100% housing, why employment?**

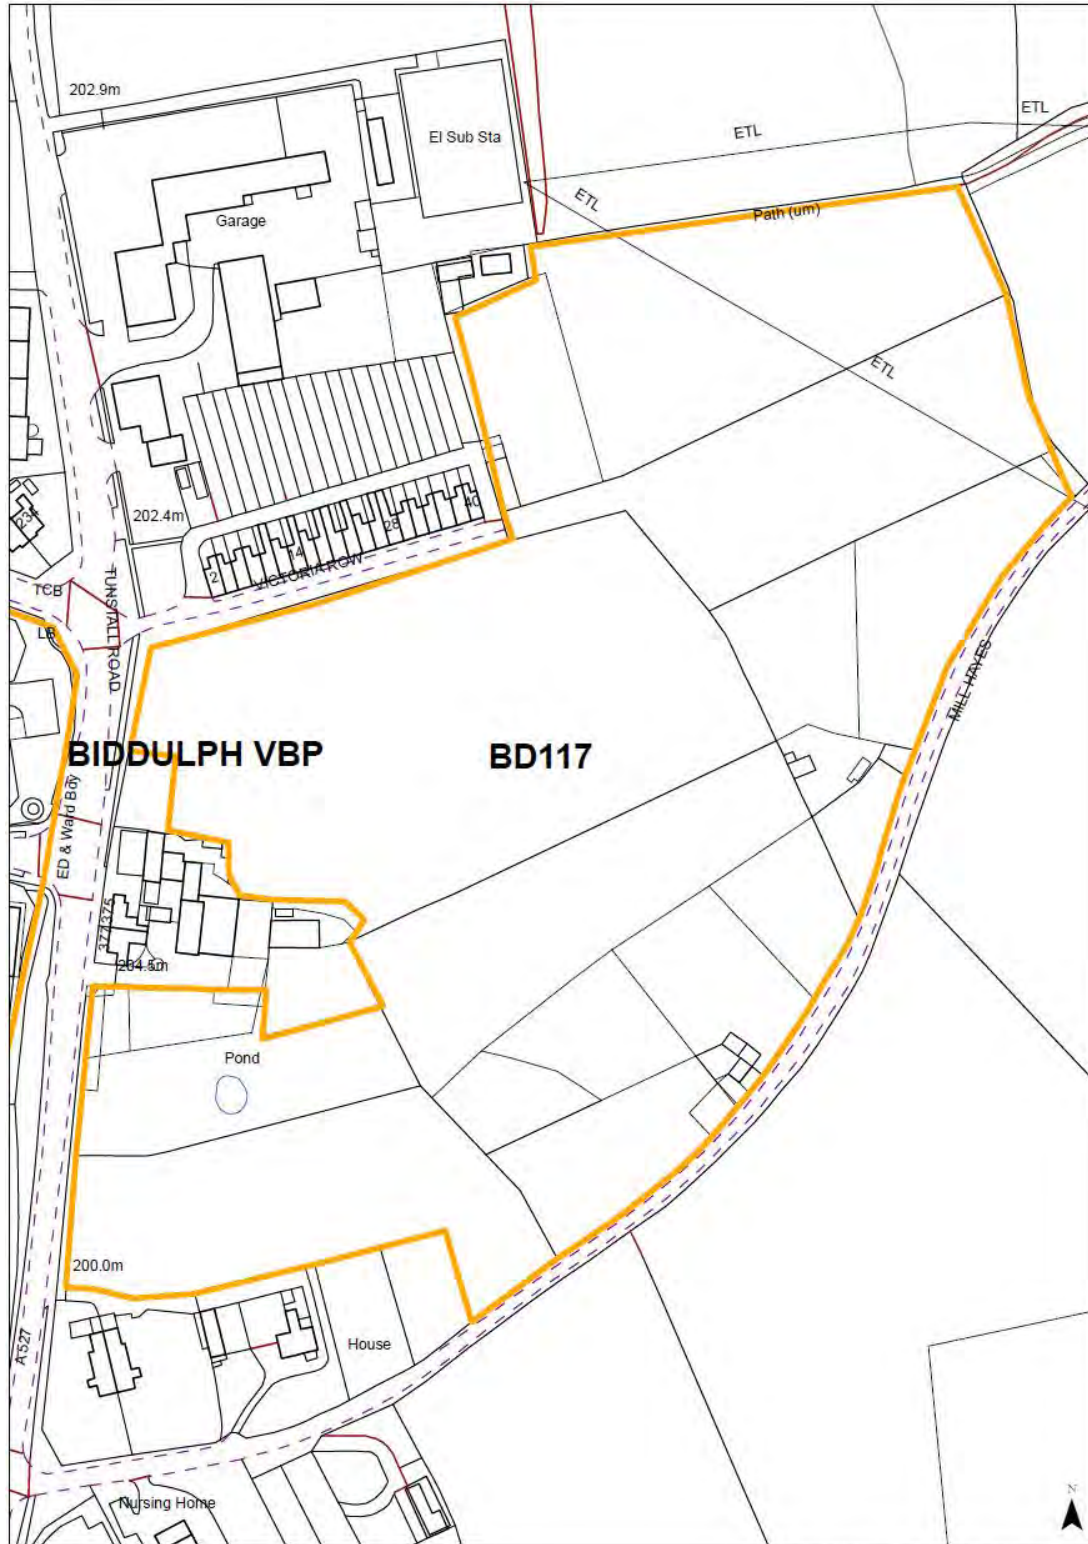

An assessment of employment land requirements by NLP in February 2017 concluded that 13ha to 27ha of employment land was required to meet the needs of the district 2014-2031. It was recommended and agreed by Council

Biddulph
BD117 Land south of Victoria Row

Assembly on 08/03/17 that an annual housing requirement of 320 homes per year (close to combined jobs growth scenario) was taken forward into the Preferred Options Local Plan. An employment land requirement of approximately 27ha was therefore recommended up to the year 2031 for the Preferred Options Local Plan on the basis that it was at the top of the OAN range for employment and so closely corresponds with the proposed housing requirement to support sustainable development. Applying the 20% requirement for Biddulph wards in Pol SS3 Core Strategy gives a requirement for the town of at least 5.4ha, less qualifying 2014-17 employment commitments. A range of employment site choices have been selected for Biddulph – either close to the town centre or to the existing Victoria Business Park.

This site has been selected primarily for employment use as it has good road links and is well related to Victoria Business Park so is likely to be attractive to businesses to help meet the employment needs of the District.

Biddulph

Site West of Biddulph Valley Way / East of Woodside Farm

Local Plan Process

- Suggested at Preferred Options Sites and Boundaries Consultation

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site to be developed as part of a wider regeneration opportunity including land to the west side of the bypass to bring forward a large strategic mixed use regeneration site which is well related to the town centre and its key services and facilities;
- Also see 'key issues' heading.

Key Issues

- In the Green Belt – considered to be suitable for removal if exceptional circumstances are demonstrated.
- Landscape and heritage impact require investigation.
- SHLAA record states that some limited areas of SW flooding shown on site. FRA should consider this risk.
- Mining legacy – land previously used for open cast mining.
- Adjacent to BVW – appropriate links would be required as part of development.
- Access – Currently via bridge across Biddulph Valley Way (BVW) at north of site. Highway Authority advise that for this to be suitable for new housing development, improvements would be needed to this bridge and to whole length of the road up to the bypass roundabout which is likely to be a significant development cost. Preferred alternative is crossing the BVW in a central position to link to development proposed on the other side of BVW. The Highway Authority consider this to be acceptable in principle.
- Network Rail sold the freehold to Biddulph Valley Way (BVW) to Staffordshire County Council and do not appear to retain any adjoining land interests.
- County Rights of Way Team contacted regarding access across BVW – response awaited.
- Investigating any constraints which may prevent a road link across the Biddulph Valley Way from going ahead – checks have been undertaken with the National Grid and Gas and Electricity suppliers to determine the location of their infrastructure – no issues raised to date which would preclude development.

Site Information

Greenfield/ brownfield	Built up area boundary/country side	Est. housin g capacit y	Den sity	Area (ha)	Ownersh p status	Site details

Studies

Green Belt Review (Site 3 – 2017)

“Consider for release under Exceptional Circumstances. Development could be considered without significant damage to the wider Green Belt, although there would be an impact on openness given the location of the land. The site largely sits within low-lying land and is clearly bounded to the north and to the east. The south western boundary is problematic, however, comprising various insubstantial hedgerows as well as being arranged by field pattern and not a clear feature which would constitute a logical and permanent external boundary. This would constitute a new settlement edge which would have to be created, without which there would be a danger of sprawl into open countryside over the longer term”.

Extended Phase 1 Habitat Survey

Survey required.

Landscape & Settlement Character Assessment 2008

Not identified as being important landscape setting to settlement.

Landscape, Local Green Space & Heritage Impact Study

Landscape Results

Survey required.

Heritage Results

Survey required.

Sustainability Appraisal

Initial Sustainability Appraisal Report

The site's proximity to services, facilities and existing areas of employment and proposed delivery of circa 170 dwellings should have a significant positive effect. However there is scope that development of this site could have negative effects due to the site's potential ecological value, its contribution to the Biddulph Valley Way and impacts on landscape character. The development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as within an area where less than 20% of the land is likely to be BMV is assessed as having a negative effect.

The Council's Green Belt review has recommended considering this site for release from the Green Belt if exceptional circumstances can be demonstrated. Landscape and heritage assessments are required.

Biddulph

Site West of Biddulph Valley Way / East of Woodside Farm

There are potential mining legacy issues as the land has previously been used for open cast mining. Masterplanning should be used to demonstrate how a development scheme could contribute to the priorities and actions proposed for the Biddulph strategic GI corridor (as set out in the Green Infrastructure Strategy), including by supporting public access on to the Biddulph Valley Way.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to sites in Biddulph.

Options Consultation July 2015

Not consulted on.

Preferred Options Consultation (April 2016)

Not consulted on. Suggested as an additional site.

Mining

Mining legacy – former open cast mining area. Coal Authority data shows that most of the site is a high risk development area (surface mining) but no mine entries are shown on the site.

Coal Authority (general response – not site specific) “it is important to note that land instability and mining legacy is not always a complete constraint on new development; rather it can be argued that because mining legacy matters have been addressed the new development is safe, stable and sustainable.” (Viability issue – investigative work required by developer).

Biddulph Neighbourhood Plan Working Group

Land available, next to proposed acceptable site, close to town centre, easy access via already proposed site. No neighbouring property. Needs investigation and consultation.

SCC Highways

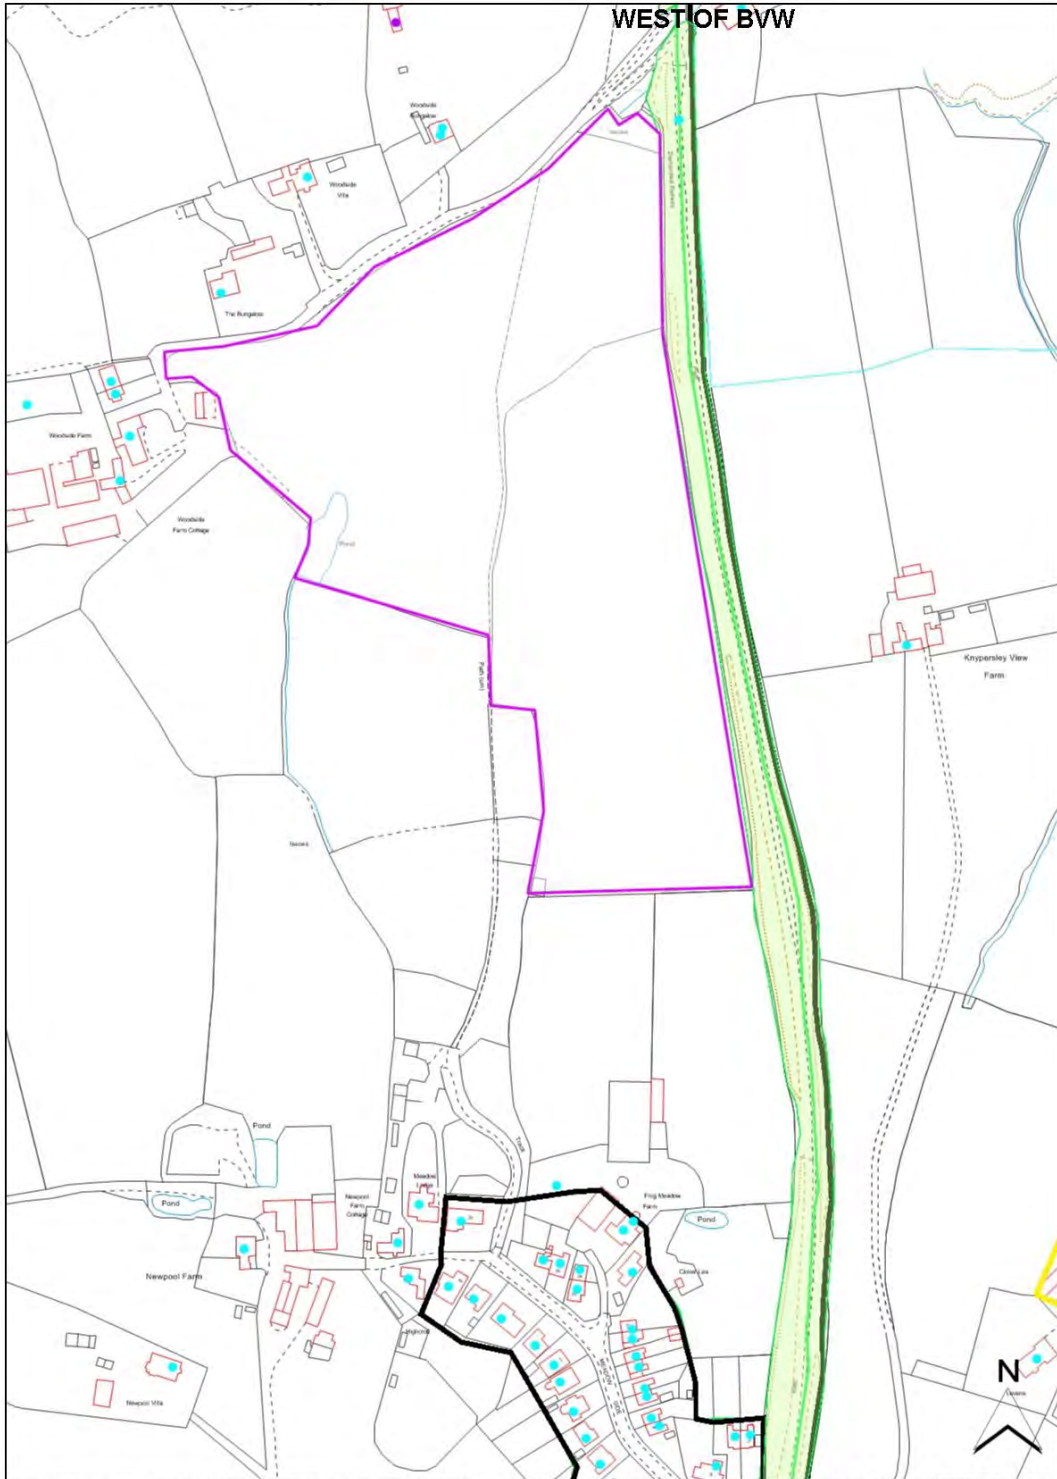

Current access is via a bridge across Biddulph Valley Way (BVW) at north of site. Highway Authority advise that for this to be suitable for new housing development, improvements would be needed to this bridge and to whole length of the road up to the bypass roundabout which is likely to be a significant development cost. Preferred alternative is crossing the BVW in a central position to link to development proposed on the other side of BVW. The Highway Authority consider this to be acceptable in principle.

SCC Rights of Way

County Rights of Way Team contacted regarding access across BVW – response awaited.

Biddulph

Site West of Biddulph Valley Way / East of Woodside Farm

© Crown copyright and database rights 2017 Ordnance Survey 100018384. **MAP SCALE: 1:2500**

Wharf Road - BD055, BD071, BD071a, BD106, BD156

Local Plan Process

- Site suggestion from the SHLAA
- Broad Area 4 in the Council's Adopted Core Strategy (March 2014)
- Included in the Options consultation July 2015
- Included in the Preferred Sites and Boundaries consultation April 2016

Current Position

Sites taken forward into Preferred Options Local Plan due to:

- Sites to be the key part of a regeneration opportunity including land to the east side of the Biddulph Valley Way to bring forward a large strategic mixed use regeneration site which is well related to the town centre and its key services and facilities;
- Also see 'key issues' heading.

Key Issues

- The principle of development in this area is set out in the adopted Core Strategy.
- Propose mixed use site (BD071, BD071A, BD156, BD106, BD108, BD076, BD076A, BD055, BD016, BD104, new site west of BVW east of Woodside Farm) incorporating:

Retail (store and car park)	0.5ha
Employment	1ha
Retention of playing fields	1.5ha
Housing - site size, number of dwellings, density (355 houses at 28.86dph) (23.4ha in total including all sites) (refer to separate pro-formas)	12.3ha
- Recommended for retention as VOS in Landscape & Settlement Character Appraisal 2008 but included in the adopted Core Strategy (March 2014) for development so VOS designation no longer applies.
- Large site.
- Low and medium landscape sensitivity.
- Suitable for development in heritage terms.
- Highways – acceptable in principle. Transport Assessment required.
- Ecological interest on parts of site so further survey work required in advance of any development (see below).
- BD055 (the former Meadows School) had planning consent for 70 extra care units (subject to a s.106 agreement). This permission is not likely to be implemented. Therefore, included this site in the allocation for the wider area.
- The area has a mining legacy – including the presence of 14 mineshafts (see attached map).

Site Information

Greenfield/ brownfield	Built up area boundary/country side	Est. housin g capacit y	Den sity	Area (ha)	Ownersh p status	Site details

Wharf Road - BD055, BD071, BD071a, BD106, BD156

						<ul style="list-style-type: none"> • Sustainable location • TPO trees on site • Watercourse through site • Ecological interest
--	--	--	--	--	--	--

Studies

Extended Phase 1 Habitat Survey 2015

The site itself has 2 trees and buildings with bat potential, species rich hedgerows, dense willow scrub and tall ruderal vegetation which are connected to a series of other hedgerows and habitats, which forms an important potentially biodiverse mosaic and warrants the site being considered to have regionally important value.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- A bat survey regime to ascertain whether bats roost in the trees and buildings
- Reptile survey
- Hedgerow survey
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2016)

BD055 - The site habitats are considered to be of nature conservation value at site level only and are not eligible for possible SBI/ BAS status. However, the building on site has the potential to support bats and as such, requires further assessment. The site was also noted as potentially supporting reptiles.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Assessment of the building for it's potential to support roosting bats.
- Reptile survey required

BD071/BD071a - The broadleaf woodland may be of ecological value and may allow for the site to gain SBI/BAS status once the vegetation has been fully recorded.

Furthermore, the site offers potential to support bats, reptiles and amphibians, The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Hedgerow survey following the HEGS methodology.
- Detailed vegetation survey to determine the status of the habitat mosaic.
- The buildings and trees which have the potential to support roosting bats needs to be further assessed.
- Reptile survey required.

BD106/BD156 - The site habitats are considered to be of nature conservation value at site level only and are not eligible for possible SBI/ BAS status. However, the building and some trees on site has the potential to support bats and as such, requires further assessment. The site was also noted as potentially supporting reptiles.

Wharf Road - BD055, BD071, BD071a, BD106, BD156

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Further assessment of the trees and building for their potential to support roosting bats. Bat survey possibly required.
- Reptile survey required.

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results

BD071 / BD071a

The largest of the sites enclosed by the dismantled railway and the A527. The site comprises Knypersley View Farm and the fields surrounding it, enclosed by the dismantled railway to the west and Colliers Way to the east. The site extends south, adjacent to the railway line, to Newpool Road where the access for the farm is located. The topography within the site is undulating, and so visual prominence of the site varies. The southern extent of the site is generally screened by surrounding vegetation. Visual prominence is higher in the north of the site, where the land rises up to a ridge (as within BD076), however this visibility is generally when viewed from within the settlement. Long distance views towards the site from the west are generally screened by intervening topography within the wider countryside. Development within the site would be located within the existing settlement form, as it is enclosed by the dismantled railway that forms a strong, vegetated edge to the settlement. If the site were to be developed additional planting on the railway line and on the ridge may need to be considered in order to reduce the visual prominence of the site. Phased development could be undertaken, allowing time for this planting to mature. **Site is of medium landscape sensitivity.** Site-specific landscape mitigation measures could include additional advanced planting on the ridge and western boundary.

BD055

Within the southern part of the land enclosed by the dismantled railway and the A527. Site comprises previously developed land (formerly a school, now demolished) immediately west of the junction of St John's Road and Tunstall Road. Re-development of the site could improve local landscape character. Development of the site (in combination with the adjacent sites) could create a stronger edge to the settlement. **Site is of low landscape sensitivity.**

BD106/BD156

Within the south of the land enclosed by the dismantled railway and the A527. Site comprises an existing property (Levens), gardens and adjacent fields within the south-west of the settlement. Site also includes the existing access track, extending east from the property to Tunstall Road. The site is set back from the road and is well screened by intervening vegetation and existing development. Development within the site would not be visually prominent, and (in combination with development of the adjacent sites) could create a stronger settlement edge. **Site is of low landscape sensitivity.**

Heritage Results

BD071/BD071a

There are seven Grade II Listed Buildings within the 400m buffer. Due to topography and surrounding vegetation, development would be unlikely to cause high adverse

Wharf Road - BD055, BD071, BD071a, BD106, BD156

effects to the settings of the assets. Mitigation may include screening in the south-eastern part of the site. Development in the site would change a large element of the HLC zone BBHECZ 3 (Historic Environment Character Assessment 2010). However, with sensitive design, this could be mitigated. **Site suitable for development in heritage terms** subject to appropriate masterplanning.

BD055

There are seven Grade II Listed Buildings within the 400m buffer. Development would be unlikely to cause high adverse effects to the settings of the assets, however, mitigation should include screening along the southern edge of the site to reduce effects. Development would not adversely affect the HLC zone BBHECZ 3 (Historic Environment Character Assessment 2010). **Site suitable for development in heritage terms** subject to appropriate masterplanning.

BD106/BD156

There are seven Grade II Listed Buildings within the 400m buffer. Development would be unlikely to cause high adverse effects to the settings of the assets. To reduce effects, mitigation should include setting development back from the assets by keeping development to the west and north of the site as well as employing screening along the eastern edges of the site. Development would not adversely affect the HLC zone BBHECZ 3 (Historic Environment Character Assessment 2010). **Site suitable for development in heritage terms** subject to appropriate masterplanning.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The site's proximity to services, facilities and existing areas of employment and proposed delivery of circa 265 dwellings should have a significant positive effect. However, there is scope that development of this site could have negative effects due to the site's district ecological importance and the development of greenfield land.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Biddulph.

Coal Mining

Council Officers have corresponded with the Coal Authority about this area prior to and throughout the site selection process. Included below is the Coal Authority's view on these sites from Council correspondence with them in 2014. Note that they also responded to the Council's 'Site Options' consultation in 2015. (NB – map within this document shows approximate position of mine entries)

"The mining legacy features present on this site include mine entries (with their respective zones of influence), a small area of recorded past shallow working, and more extensive areas of probable shallow coal working associated with the coal outcrops that run north-south through the site.

The mine entries are mostly located along the northern and western site boundaries, along some are located more within the site. Mine entries should not be built above or within their zone of influence, even once treated. A developer will therefore need

Wharf Road - BD055, BD071, BD071a, BD106, BD156

to undertake intrusive site investigations to locate these mine entries and determine their current condition followed by undertaking consequential treatment. Any layout would then need to try and locate the mine entries within landscaping belts, open space, roads etc. This will reduce the overall potential capacity. You should note however the zones of influence for the mine entries shown on our system are larger than what is likely to be the actual ZOI. These are defined on our system at 20m, this accounts for the fact that historic records were often inaccurate. The actual ZOI for a mine entry is based on the diameter of the shaft or adit, and the amount of ground above the rock cover. The actual ZOI is a splay of 45 degrees running upwards from the rockhead to the surface, consequently a typical 2m diameter shaft may actually only have a ZOI of 4 or 5 metres.

The other mining legacy features relate to recorded and probable historic shallow workings. These do not render a site undevelopable, so although these cover large tracts of the site, the site will still be developable and deliverable. Indeed new development has a positive impact on the environment by remediating shallow coal workings. The recorded areas are small, in these parts we have deposited records that shallow coal mining took place. In the probable areas we have evidence sufficient to reasonably believe that historic working may have taken place, the problem is that there was no requirement to deposit working plans until 1872 and even then not all operators complied.

In the areas of recorded and probable shallow coal workings the developer will need to review records and undertake intrusive site investigations to determine whether working has taken place and at what depth. Shallow coal working is considered that to be within 30m of the surface. Investigations will identify at what depth workings took place and if so how much competent rock cover exists over the workings. In broad terms you require 10 times competent rock cover above the workings, so a 1m thick coal seam worked would need 10m of rock above it to ensure that the land was not at risk of possible collapse. If remediation is required for the shallow coal workings there are two main options: either remove the remnant coal resource through prior extraction thereby leaving a safe and stable new development platform; or grout and fill the shallow coal workings with material such as Pulverised Fuel Ash or Concrete or a mixture. This can affect the delivery of sites in terms of the economic cost. Prior extraction or grouting can generally be undertaken within weeks or a few months at most, normally as part of the normal site preparation process, it shouldn't therefore undue delay the site coming forward.

Consequently you should not consider this site undeliverable, the mine entries are a constraint which may affect overall capacity, although these can be located within non-built areas such as open space, roads etc. We do regularly see sites coming forward that have more mining legacy features than his site and developers are able to overcome the issues and successfully deliver a residential scheme.”

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways - Acceptable in principle subject to access design and Transport Assessment.

Wharf Road - BD055, BD071, BD071a, BD106, BD156

*Note - this is intended to be a large development scheme also incorporating sites BD106, BD156, BD055, BD108. Access is intended from one of the roundabouts adjacent to the Meadows School (south) and from the road currently used to serve the telephone exchange (north).

Natural England - Natural England consider this may represent a strategic site – Has a Landscape & Visual Impact Assessment been carried out? Those sites taken forward to the next stage of the process may require LVIA in order to inform the development specification for the site. (This work has now been undertaken).

Heritage England; BD055; BD106; BD108; and, BD156 - preferred housing allocations - It is not clear how the impact of the site allocations on the Grade II listed buildings (former Parsonage, school and the Church) and their setting, individually and cumulatively, has been considered. Further information on this is required. (This work has now been undertaken).

Environment Agency; Site not identified as being in an area likely to be affected by flooding. Need to have regard to the relevant River Basin Management Plan.

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. Previous coal workings do not prevent development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

Severn Trent, Network Rail; no site specific comments

Developer/Agent/Owner – Land available.

Public response - 43 comments – 5 objections, 38 supports

Issues raised:

Objections

- Infrastructure - Schools are full.
- Infrastructure - Traffic / Transport - would create too much traffic, bypass would become dangerous.
- Infrastructure - Other - Query capacity of sewage works
- Landscape - loss of extensive views of countryside from bypass - significant for residents and visitors to the town (Biddulph is known as the 'Garden Town' of the Moorlands), ruin the character of the town
- Nature Conservation - impact on wildlife, stream on site, loss of trees and hedgerows.
- Amenity (e.g. noise, privacy, loss of light) - Detrimental impact on residential amenity.
- Scale of development - over-development of the town.
- Government Policy - Land is Green Belt and beyond the defensible boundary of the settlement, conflicts with Core Strategy Policy SO9 and C1.
- Other - topography of site would make building problematic, develop brownfield sites first, town centre is declining, no jobs being created in the town, population figures are national so query their accuracy, lack of demand - housing on

Wharf Road - BD055, BD071, BD071a, BD106, BD156

Uplands Mill site is still for sale, query agricultural land classification of site?
Consultation form is not straightforward to complete and requirement to complete one for each site is too onerous.

Support

- Infrastructure - Schools - easy access
- Infrastructure - Traffic / Transport - Bypass could cope with traffic and increased population
- Infrastructure - Other - availability of public transport, close to new health centre, residents could use BVW to access Gillow Heath playing fields
- Landscape - development here less of a visual impact than east side of town, land is not visually appealing from bypass
- Flood Risk - development of site would not add to existing flooding issues like it would elsewhere in the town
- Amenity (e.g. noise, privacy, loss of light) - site would not overlook existing properties
- Scale of development
- Government Policy - would not constitute 'urban creep', land is not Green Belt
- Other - good access to Town Centre so will attract people to the area and be more environmentally friendly, may also reduce traffic in town centre as residents would be near enough to walk, would re-balance Biddulph in the right direction, development supported in this location in the Council's Core Strategy, would benefit the town.

Council comment –

- The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- The Highway Authority does not raise any difficulties which would prevent the development of this site.
- United Utilities has advised that if appropriate measures for surface water disposal are included within development schemes then there should be no detrimental impact on the capacity of their infrastructure.
- Land is identified as being important to the setting of the settlement in the Council's Landscape & Settlement Character Assessment. A Landscape & Visual Impact Assessment will be undertaken during the plan production process and look at all preferred option sites suggesting mitigation measures where appropriate. The results will be incorporated into the Submission Version of the Local Plan.
- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed sites included in the Site Options consultation. The site survey results will be used as part of the site selection process. Any other sites which come forward and are potentially suitable for development will also need to be assessed. The Study highlights the presence of trees and buildings with bat potential, species rich hedgerows, dense willow scrub and tall ruderal vegetation

Wharf Road - BD055, BD071, BD071a, BD106, BD156

which are connected to a series of other hedgerows and habitats and form an important potentially biodiverse mosaic. This warrants the site being considered to have regionally important value. Owing to its ecological importance, any future development of this site will be considered in line with relevant NPPF and Core Strategy Policies. A number of precautionary surveys/actions are also recommended in the case of development.

- Amenity – issues such as overlooking will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- It is not considered that development of this particular site would be out of proportion with the rest of the town. Any new development taking place will be subject to design policies contained within the new Local Plan – which will be subject to public consultation next year.
- The land in question is not Green Belt.
- The SHLAA has assessed more than 150 sites in and around Biddulph including brown field sites and these have been included as allocations where they are suitable, available and deliverable. However, there is not enough brownfield land to meet the town's requirements so green field sites also need to be included. Prioritising brown field land over greenfield in all circumstances is not part of Government policy. New employment land is proposed at the south of the town (BD117). New investment in the town would have knock-on positive effects for the town centre.
- National population figures are the starting point for assessing an area's objectively assessed housing needs – this is standard practice. The new Local Plan will cover a period to 2031 so lack of demand (perceived or actual) at one point in time is not a valid reason for not meeting the area's objectively assessed housing needs. The land does not have an agricultural land classification as it is within the urban area of Biddulph.

Preferred Sites and Boundaries Consultation - April 2016

Statutory bodies/stakeholders

Natural England: Natural England notes the proposed preferred site for allocation in Biddulph. We note that it is located close to and/or adjoining existing areas of open space and green infrastructure. Suitable enhancements of existing open spaces' may be required together with appropriate management (and funding thereof) in order to allow these open spaces to function effectively during the local plan period. Similarly, the development of these preferred sites (if progressed) will need to include suitable multi-functional green infrastructure. Adopted local plan spatial objectives SO8 & 9 refer together with policies such as DC1 Design Considerations, DC3 landscape and settlement setting, and C3 Green Infrastructure.

Council Response

The Council has produced a Draft Green Infrastructure Strategy for consultation alongside the next draft version of the Local Plan. The strategy identifies green infrastructure corridors around the towns and lists particular issues in relation to that corridor which can be addressed as part of the relevant site policy and / or at the

Wharf Road - BD055, BD071, BD071a, BD106, BD156

planning application stage. Similarly, a public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and new development in the vicinity could contribute towards this. The Council has also designated Local Green Spaces in line with criteria set out in the NPPF and the Council will seek to facilitate improvements to these areas where required.

Staffordshire County Council: These sites are adjacent to, or overlap with a Biodiversity Alert Site. Design and layout should avoid impacts in this site, enhance it where possible, and maintain linear habitat connectivity.

Council Response

Comments noted. This will be reflected in the site policy and the Council's Green Infrastructure Strategy.

Staffordshire Wildlife Trust: Other sites which have potentially high ecology value are: BD 071 and 071a covered by FID 17 - regional ecological value. These should be assessed against the Staffordshire LWS criteria. There are also a number of species-rich hedgerows identified by the surveys.

Council Response

The conclusions from the Ecus LWS survey are that the broadleaf woodland may be of ecological value and may allow for the site to gain SBI/BAS status once the vegetation has been fully recorded. Furthermore, the site offers potential to support bats, reptiles and amphibians,

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Hedgerow survey following the HEGS methodology.
- Detailed vegetation survey to determine the status of the habitat mosaic.
- The buildings and trees which have the potential to support roosting bats needs to be further assessed.
- Reptile survey required.

Heritage England: Map 4.5 Biddulph - BD055; BD106; BD108; and, BD156 - preferred housing allocations - It is not clear how the impact of the site allocations on the Grade II listed buildings (former Parsonage, school and the Church) and their setting, individually and cumulatively, has been considered. Further information on this is required.

Council Response

Heritage Impact of development on the site has been assessed in the Council's Landscape Impact Study (August 2016), the results for this site are:

BD071/BD071a

There are seven Grade II Listed Buildings within the 400m buffer. Due to topography and surrounding vegetation, development would be unlikely to cause high adverse effects to the settings of the assets. Mitigation may include screening in the south-eastern part of the site. Development in the site would change a large element of the HLC zone BBHECZ 3 (Historic Environment Character Assessment 2010). However, with sensitive design, this could be mitigated. Site suitable for development in heritage terms subject to appropriate masterplanning.

Wharf Road - BD055, BD071, BD071a, BD106, BD156

BD055

There are seven Grade II Listed Buildings within the 400m buffer. Development would be unlikely to cause high adverse effects to the settings of the assets, however, mitigation should include screening along the southern edge of the site to reduce effects. Development would not adversely affect the HLC zone BBHECZ 3 (Historic Environment Character Assessment 2010). Site suitable for development in heritage terms subject to appropriate masterplanning.

BD106/BD156

There are seven Grade II Listed Buildings within the 400m buffer. Development would be unlikely to cause high adverse effects to the settings of the assets. To reduce effects, mitigation should include setting development back from the assets by keeping development to the west and north of the site as well as employing screening along the eastern edges of the site. Development would not adversely affect the HLC zone BBHECZ 3 (Historic Environment Character Assessment 2010). Site suitable for development in heritage terms subject to appropriate masterplanning.

Biddulph Neighbourhood Plan Working Group: BD071, BD071a, BD106, BD156 - Meets all criteria, provided that the water course and a decent wildlife corridor is kept as a stream and not diverted / culverted. This could be enhanced to form a nice town river walk linking the developments along this side of the bypass, recommended for inclusion.

Developer/Agent/Owner: I write on behalf of my client Gallagher Developments Ltd with regard to the Local Plan Preferred Options Sites and Boundaries Consultation. Following the adoption of the Core Strategy in 2014 and the identification at that time for a prompt review to roll the plan forward to 2031, my client welcomes the progression of the Local Plan, and specifically this Preferred Options Sites and Boundaries consultation to consider how the identified development needs for the District in that period will be met. The Core Strategy provides an entirely appropriate basis for considering the most appropriate development strategy to meeting future needs, and my clients welcome the continued focus on the Market Towns in the District as the most sustainable locations for future growth. Indeed, you will be aware that they control a significant interest in "Core Strategy Broad Area 4" and welcome the proposed allocation of this land for development in principle. In light of that Gallagher Estates support the allocation of Core Strategy Broad Area 4 for development. The site is not located in the Green Belt and clearly represents a sustainable development opportunity that is well related to the existing urban form of Biddulph and its town centre. It is deliverable in that it has been demonstrated to be suitable, available and achievable, and the site's merits were reflected in the positive comments received from the Site Options Consultation in 2015 (e.g. support from the Highways Authority). Whilst some representors did highlight some environmental sensitivities (e.g. ecology and landscape) it is apparent that there are no over riding or particular constraints to development. However, these issues can be effectively addressed through an iterative masterplanning exercise that takes into account the detailed technical and environmental assessments that will be required to support a planning application, as well as best urban and landscape design practice. The clear intent would be to establish an appropriate form and character of development that would realise a high quality housing development which responds to the site's features and setting, reflects the local character, and is well integrated into its surroundings. Indeed, whilst Table 4.6 in the consultation paper refers to the delivery of 335 dwellings on the site, there is a clear need to optimise its residential capacity

Wharf Road - BD055, BD071, BD071a, BD106, BD156

to ensure that the identified development needs for the town and the District are met. That will also be a critical consideration in the masterplanning process, and may require some flexibility and prioritisation in the design of an appropriate development scheme for the site (e.g. in relation to the extent and location of the public open spaces and the employment /mixed-use allocations).

Public Response

Issues Raised

- Question housing numbers for Biddulph – too many.
- Could development be phased?
- Impact on property values
- Build for demographic of occupants of new housing – older people.
- Use of Victoria Colliery and Childerplay Road for housing
- Inadequate highways
- Lack of employment.
- Query ecological value of site.
- Heritage impact.
- Residential amenity in relation to construction process.
- Site screening.

Council Response

- **Question housing numbers for Biddulph – too many.**
The proportion of 20% of the District's housing development taking place in Biddulph has been through extensive consultation and public examination as it is taken from the Council's Core Strategy which was adopted in March 2014.
- **Could development be phased?**
The Local Plan is planning for the period up to 2031 so will allocate a number of sites in Biddulph in order to meet the need. These will not all be built at exactly the same time, they will come forward as the market demands.
- **Impact on property values**
Property values are not considered material in planning law.
- **Build for demographic of occupants of new housing – older people.**
The Local Plan will reflect the evidence gathered about the housing market. The key document is the Strategic Housing Market Assessment.
- **Use of Victoria Colliery and Childerplay Road for housing**
Sites at Victoria Colliery and Childerplay Road are within the Green Belt. Sites BD071, BD071a, BD106 and BD156 are not in the Green Belt. The Green Belt Review has considered the impact on the Green Belt the release of Victoria Colliery and Childerplay Road for development would have. Only the Victoria Colliery site was identified as being suitable for consideration for Green Belt release (in exceptional circumstances). In reaching a decision on which sites to include in the Local Plan, the Council must balance evidence and Government policy.
- **Inadequate highways**

Wharf Road - BD055, BD071, BD071a, BD106, BD156

County Council Highways have said that development here is acceptable in principle subject to access design and Transport Assessment.

- **Lack of employment.**
Employment sites are proposed at BD117 (opposite Victoria Business Park) and BD076a (north of BD071).
- **Query ecological value of site.**
Ecus Ltd conducted Phase 1 ecological survey (incorporating Local Wildlife Site Assessment) in 2016. It concluded that the habitats on BD055, BD106 and BD156 were considered to be of nature conservation value at the site level only and are not listed as an important habitat in the Staffordshire SBI guidelines. Species recorded on site were common and widespread both at a county and national level and it is considered unlikely that the site significantly supported any notable protected species. [Some predevelopment species surveys recommended]. Sites BD071 / BD071a contain broadleaf woodland which may be of ecological value and may allow for the site to gain SBI/BAS status once the vegetation has been fully recorded. Therefore, this also requires further survey work prior to any development taking place on the site.
- **Heritage impact.**
Heritage Impact of development on the site has been assessed in the Council's Landscape Impact Study (August 2016), the results for this site are:

BD071/BD071a

There are seven Grade II Listed Buildings within the 400m buffer. Due to topography and surrounding vegetation, development would be unlikely to cause high adverse effects to the settings of the assets. Mitigation may include screening in the south-eastern part of the site. Development in the site would change a large element of the HLC zone BBHECZ 3 (Historic Environment Character Assessment 2010). However, with sensitive design, this could be mitigated. Site suitable for development in heritage terms subject to appropriate masterplanning.

BD055

There are seven Grade II Listed Buildings within the 400m buffer. Development would be unlikely to cause high adverse effects to the settings of the assets, however, mitigation should include screening along the southern edge of the site to reduce effects. Development would not adversely affect the HLC zone BBHECZ 3 (Historic Environment Character Assessment 2010). Site suitable for development in heritage terms subject to appropriate masterplanning.

BD106/BD156

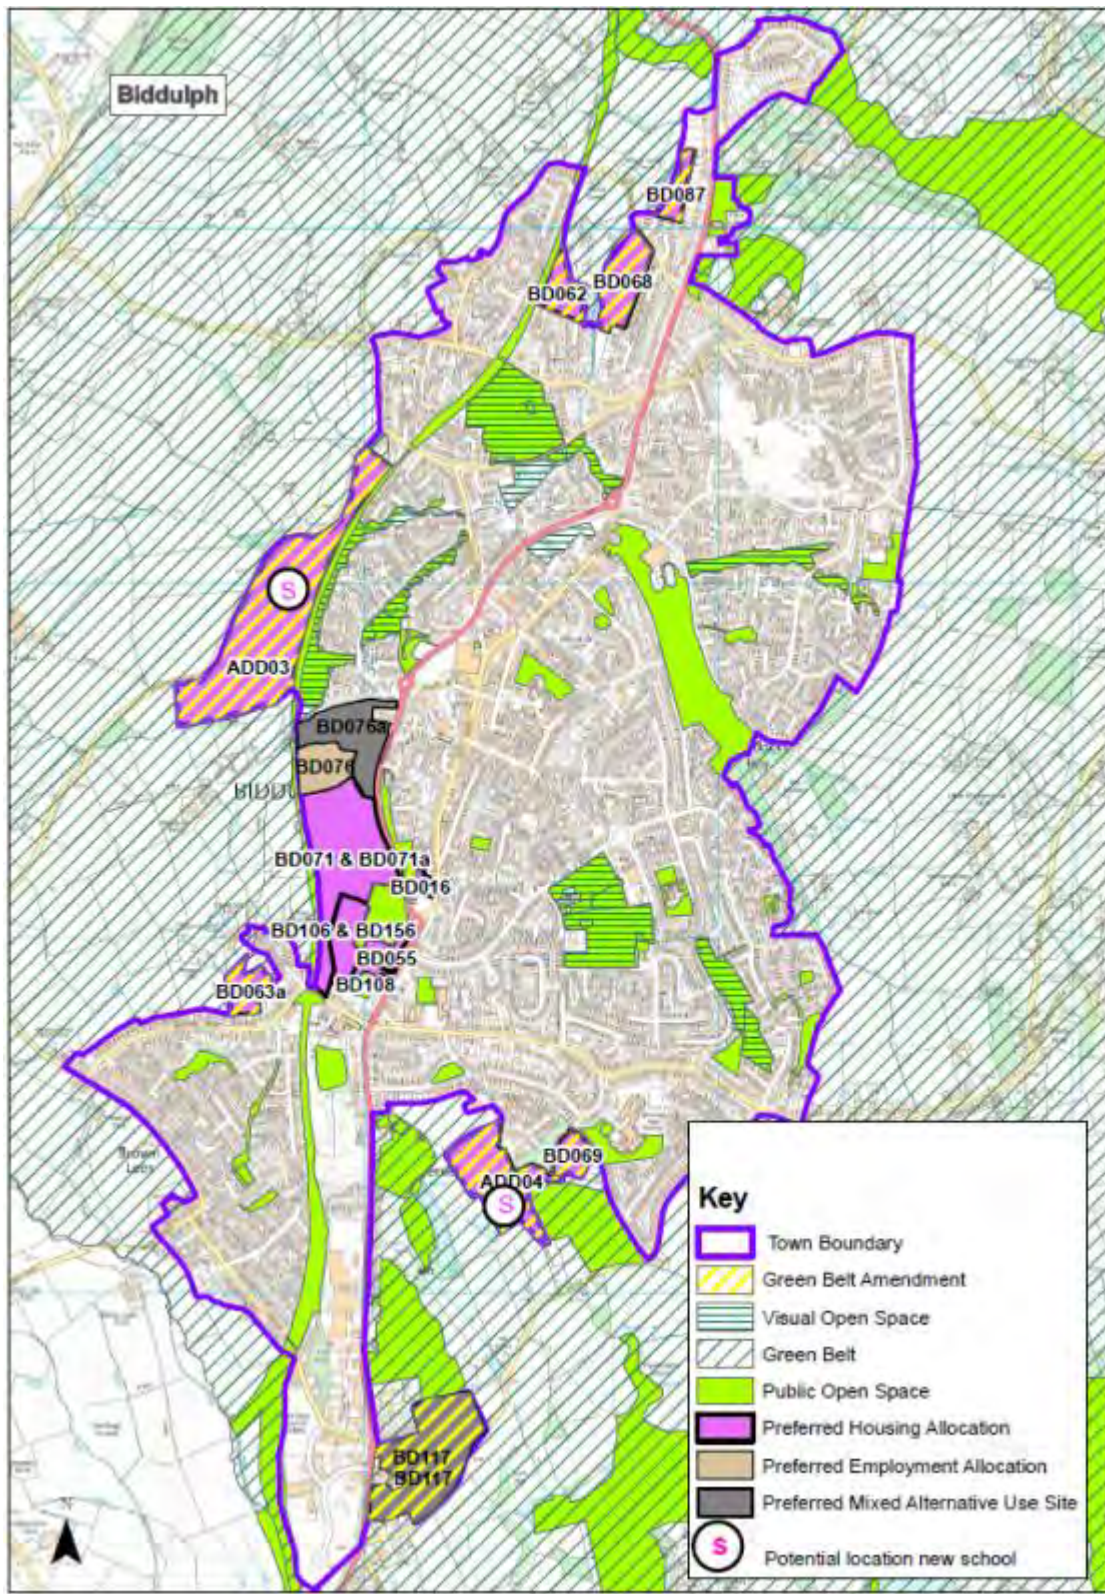

There are seven Grade II Listed Buildings within the 400m buffer. Development would be unlikely to cause high adverse effects to the settings of the assets. To reduce effects, mitigation should include setting development back from the assets by keeping development to the west and north of the site as well as employing screening along the eastern edges of the site. Development would not adversely affect the HLC zone BBHECZ 3 (Historic Environment Character Assessment 2010). Site suitable for development in heritage terms subject to appropriate masterplanning.

Wharf Road - BD055, BD071, BD071a, BD106, BD156

- **Residential amenity in relation to construction process.**
Problems arising from the construction period of any works, e.g. noise, dust, construction vehicles, hours of working (covered by Control of Pollution Acts) are not material planning considerations.
- **Site screening.**
Site screening will be required as part of any new development. This can also help to act as a noise barrier.

Biddulph

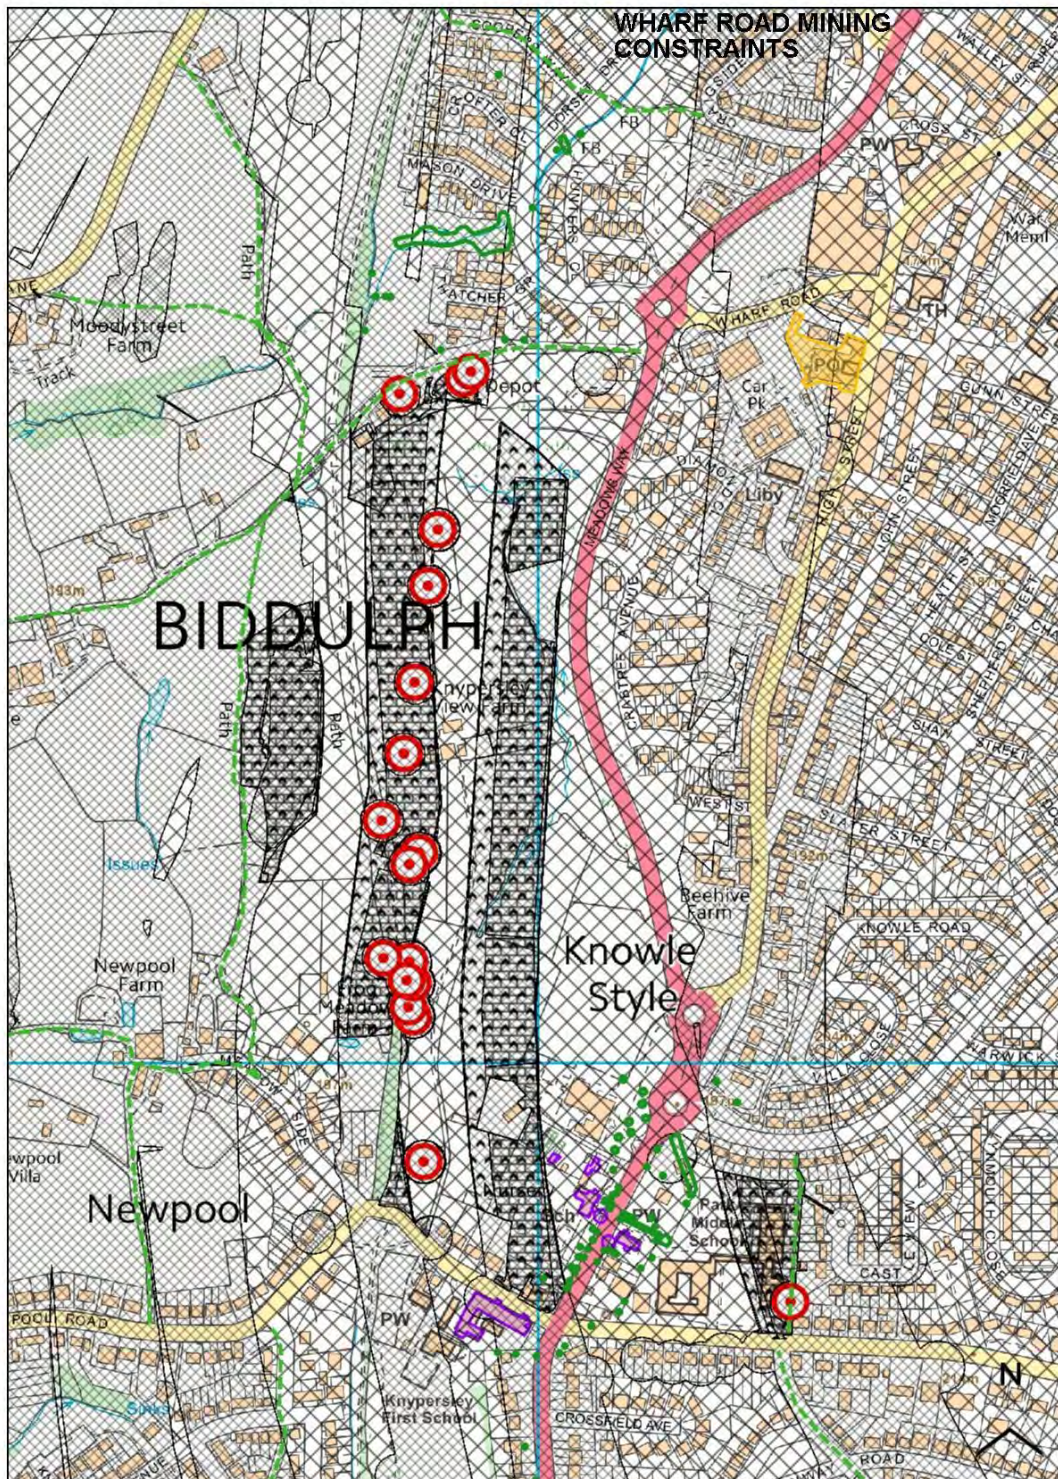

Wharf Road - BD055, BD071, BD071a, BD106, BD156

Biddulph

MAP SHOWING APPROXIMATE LOCATION OF MINE ENTRIES (red circles)

© Crown copyright and database rights 2017 Ordnance Survey 100018384. MAP SCALE: 1:5000

Cheadle

CH001 Land to the south of Donkey Lane

Local Plan Process

- SHLAA form submitted
- Identified in the Core Strategy (SS5c) as a broad location for housing (Area 1)
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site to be developed as strategic residential scheme in conjunction with CH132 and include land for a new primary school to serve the north of the town.
- Site within current development boundary and identified in the Core Strategy for residential development.
- Support from agent.

Key Issues

- Two disused mine shafts / mining legacy.
- Small edge area previously within Flood Zones 2 & 3 been excluded from site – but could form part of open space / surface water mitigation.
- Moderate likelihood that the site could be agricultural Class 3a – best and most versatile.
- Cecilly Brook holds a strong isolated population of water voles. As a protected species their habitat must be maintained.
- Should be developed in conjunction with site CH132 which includes land for a new Primary School.
- Traffic congestion in the town centre.

Site Information

Greenfield/br ownfield	Built up area boundary/countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Greenfield	Within development boundary	240 (based on 35 dwellings per hectare	6.9	Site promoted by agent on behalf Mosaic and supports allocation.	<ul style="list-style-type: none">• Relatively flat land• Well related to existing settlement• Eastern edge adjacent to Cecilly Brook within flood risk excluded from site area.• Two disused mine shafts.• Delivery of new Primary School• Access via existing estate or directly off Froghall Road.

Studies

Extended Phase 1 Habitat Survey 2015 (FID 140)

Conclusion

The site has low potential to support protected species as the habitats are species poor and fairly poorly connected to other more biodiverse habitats, therefore the site is attributed low ecological importance.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2017)

Cheadle

CH001 Land to the south of Donkey Lane

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that the site generally has some ecological value in its potential to support protected species. The scattered trees are considered to be of nature conservation value at district level.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Tree survey of scattered trees
- Bat roost check in buildings and trees

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

Landscape, Local Green Space and Heritage Impact Study (August 2016)

Landscape Assessment

Large site located to the north of the settlement, east of Froghall Road. The site is enclosed by existing development to the north, west and south, and is open to the east. Therefore the site forms a large gap in existing development within Cheadle. The western extent of the site is enclosed with low visual prominence. Visual prominence increases to the east as the site becomes more open, and slopes down to Cecily Brook. If the site were to be developed, development should be limited to the higher ground in this section of the site, adjacent to existing development on Weaver Close. The eastern corner of the site should be retained as open space in order to reduce the visual prominence of the development, and allow a vegetated settlement edge to be created.

Site is of medium landscape sensitivity. Site-specific landscape mitigation measures could include setting development back from the lower ground in the eastern corner of the site and advanced planting on the eastern boundary.

Heritage Assessment

There are no designated heritage assets within the 400m buffer. Development would be highly unlikely to adversely affect the HLC zone CHECZ 3 (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms.

Level 1 SFRA (October 2015)

Site located in Flood Zone 1 – low probability. Small edge area previously within Flood Zones 2 & 3 been excluded from site. Site therefore meets the sequential test.

Best and Most Versatile Land (Natural England dataset)

Data supplied by Natural England indicates that there is a moderate likelihood that the land is best and most versatile land i.e. Class 3a.

Cheadle Town Centre Phase 2 Study (2017)

The Phase 2 Study predicts that in 2031 general traffic growth plus additional trips generated by new housing and employment development will cause increased queuing and delays.

There is limited scope to change junction characteristics due to the historically confined road structure, however the study recommends a package of mitigation measures which could provide some additional capacity to the overall network.

Sustainability Appraisal

Initial Sustainability Appraisal Report - April 2016

The proposed delivery of circa 240 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect. Similarly, the site's location away from historic assets is

Cheadle

CH001 Land to the south of Donkey Lane

likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Cheadle.

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways: This proposed housing site can be served by existing vehicular accesses from Cheltenham Avenue and Ayr Road given their existing geometry and nos. of dwellings currently served by these two roads. Pedestrian connections should be made to the residential area to the north.

Natural England – The site may present a strategic site. Has a Landscape and Visual Impact Assessment been carried out? Those sites taken forward to the next stage of the process may require LVIA in order to inform the development specification for the site.

Environment Agency - Cecilly Brook holds a strong isolated population of water voles. As a protected species their habitat must be maintained with no development creating direct or indirect impacts to impinge movement and expansion of the population along the riparian corridor.

Leek and Moorlands Historic Building Trust - The road frontage of CH001 affects the setting of Woodhead Yard, an undesignated heritage asset . Development should be set back from the road frontage to allow views and retain the form and layout of this unusual group.

Historic England: Made no comments on individual sites recommended that a heritage impact assessment of sites is carried out.

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. Previous coal workings do not prevent development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

Developer/Agent

RPS Supports allocation. Is promoting site and CH132 for development. Will provide access to CH132. Have produced a masterplan for the sites which includes:

- land for a new primary school
- new area of public open space & allotments
- play area
- SUDS
- Improvements to local highways network
- Landscaping
- 33% affordable housing (subject to viability)

Public response

15 objections, 1 support

Issues raised:

Objections

- Infrastructure – Schools – Schools are overcrowded. Schools would be outside Cheadle.

Cheadle

CH001 Land to the south of Donkey Lane

- Infrastructure - Traffic / Transport – Traffic is terrible in Cheadle. Road congestion. Existing high levels of traffic. Traffic from JCB. Results of Cheadle traffic survey not available. Infrastructure – Other – No infrastructure or amenities in Cheadle. GPs & dentists full.
- Landscape
- Nature Conservation _ Impact on wildlife. Habitat survey 2001 is out of date.
- Flood Risk – Potential flooding.
- Amenity (e.g. noise, privacy, loss of light) Impact on existing residents.
- Scale of development – Number too high. Site too large.
- Listed Building / Conservation Area – Increase in traffic will potentially damage St Giles Church.
- Government Policy
- Other Loss of open green space. Should build on brownfield. Least sustainable site. Mining workings on site. Lack of employment. Public right of way crosses site. Are suitable brownfield sites in Stoke. No employment.

Support

- Other Listed as a potential housing site for years. Good bus route to Leek Stoke .Used for grazing not dairy.
- Site is identified in the Core Strategy

Council response –

- The Highway Authority has not raised any issues which would prevent the development of this site. Pedestrian routes and links need to be maintained.
- The site has been included in the Council's Landscape and Settlement Character Assessment. It concludes that the land is not significant in landscape terms. A Landscape & Visual Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. The majority of the site is within Flood Zone 1 – Low probability. A small section to the east of the site is located in Flood Zone 3 – High probability and will need to be incorporated into uses other than housing i.e. open space.
- Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed sites included in the Site Options consultation. The site survey results will be used as part of the site selection process. Any other sites which come forward and are potentially suitable for development will also need to be assessed.
- Cecilly Brook has water voles which are a protected species. Environment Agency comments are noted and advice should be included in any detailed Ecological Study.
- The site is not located within the Conservation Area and there are no listed buildings within the site. The road frontage to the site affects the setting of Woodhead Yard, which is an undesignated heritage asset. Development should be set back from the road frontage to allow views and retain the form and layout of this unusual group. Former mid-19th century historic tramline crosses site and should be reflected in the site layout. A Heritage Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection

Cheadle

CH001 Land to the south of Donkey Lane

process there are a number of options for delivering school capacity dependant on the sites selected to take forward.

- A Masterplan has been submitted by the developer for the proposed development of the site (CH001 & CH132) which indicates land for a primary school.
- The Cheadle Transport Study has assessed the impact of proposed new development on local roads. This concludes that improvements are required and additional work will need to be undertaken to identify mitigation measures once the location of new sites is known.
- New development is the main way to deliver new or improved infrastructure e.g. more residents may support more local facilities. Infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- This area has already been identified as an appropriate area for housing in the adopted Core Strategy (Area 1) and is well related to the existing settlement.
- There are not enough brownfield sites within Cheadle to accommodate the level of housing it needs.
- The National Planning Policy Framework supports housing growth which meets the Council's objectively assessed housing needs.
- There are former mineral workings on the site. The Coal Authority have confirmed that this would not prevent development from taking place. Investigative work will take place in these areas prior to the commencement of any development.
- Employment site options are also proposed in Cheadle to provide opportunities for local businesses and jobs

Preferred Options Consultation April 2016

SCC Highways: Appropriately designed accesses would accommodate 240 + 80 + School. This number would require at least 2 accesses. A new access off Froghall Road would be preferable with secondary accesses through the existing estate. If the 80 units were separate, they could be served off a single point.

No specific access arrangements identified although could be accessed via an improved Donkey Lane? Access onto A521 would require assessment. Consideration should be given to providing cycle route facilities to access the town centre. Traffic impacts on the Tape Street corridor and town centre traffic flows would require assessment, including key junctions. The presence of a school within the new residential development would contain trips, allowing them to be made sustainably and there is the potential for some existing school journeys currently being made to the town to be reassigned.

Cheadle Town Service 123 serves Ness Grove close to the site hourly between 09:30 and 13:30. Services 32/32A operate every 20-30 minutes along the A521 Froghall Road between Hanley and Cheadle. Service 30 (from 12th June 2016) operates every 2 hours along Froghall Road between Leek and Cheadle.

SCC Education: In Cheadle we acknowledge the allocation of a site for a new Primary School. The proposed location will provide for a good spread of provision across the town.

Cheadle

CH001 Land to the south of Donkey Lane

Future Need: Cheadle Town Requirement (based on the assumptions outlined in SCC report)

Primary School Provision

- The number of new homes planned for this school planning area indicate that education contributions will be required to fund additional primary school places at an existing or new school to mitigate the impact of local developments. At least an additional 1FE of primary school provision will be required in Cheadle Town during the Local Plan period to take into account the number of dwellings proposed over the duration of the Local Plan. We note that land to the east of the town (CH132) indicates an approximate location for a new/extended school and we ask that this land continues to be safeguarded.

High School Provision

- The High Schools in this School Place Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in this area, if the level of housing development is consistent with the estimated housing need. However, the allocation of housing sites, including windfall and small sites will continue to be monitored to ensure that there continues to be a sufficient supply of High School places in the town.

There is a small site allowance of 150 dwellings during the Local Plan period in Cheadle Town. As the location of these sites are not yet known the impact of these developments on school places will continue to be monitored as specific sites come forward and may result in additional school places required.

Please note that the allocation of housing in the rural area, including the small site allowance of 570 dwellings which has yet to be allocated, will have an impact on High School places in Cheadle Town, if those pupils attending school in the larger villages go on to attend High School in Cheadle Town.

LLFA: FRA required, consult SCC. Surface water flooding shown on site. May need modelling. Please put developer in contact with SCC as early as possible.

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Majority development low risk area, rest development high risk area (includes area around mineshafts).

SMDC Environmental Health: Significant/ some constraints on residential development including 2 possible coal shafts in central part of the site and part of the site in flood zone.

RPS Planning & Development on behalf of Mosaic Estates: Support

This site was allocated in the Council's 2014 Core Strategy as the principal strategic residential land for Cheadle. Mosaic made a response to the July 2015 early Site Allocations consultation indicating that this site is indeed sustainable as part of the growth of Cheadle and deliverable within the Council's plan period. Though this position remains unchanged and the site is already allocated for around 240 dwellings, there have been a number of responses to the site as part of the previous consultation, which does seem at odds with the status of the allocation. To avoid this confusion, it would be beneficial for future consultation documents to present the site differently, making a clear distinction between what is already allocated and which sites are being proposed for allocation by the Council. Whilst it is accepted that the site

CH001 Land to the south of Donkey Lane

is already allocated, the following observations are made in response to the previous consultation comments: Natural England has commented in respect of a requirement for a Landscape and Visual Impact Assessment (LVIA). It is noted that as part of the evidence base supporting the 2014 Core Strategy, the Council submitted evidence of landscape character and impact which was sufficient for the site to be allocated. In addition, RPS submitted evidence to the Council in May 2014 demonstrating how the site could be delivered. This evidence included an assessment of visual impact as part of an overall strategy for development. Comments were received from the Leek and Moorlands Historic Buildings Trust relating to the setting of Woodhead Heart. The comments pertain to the siting and layout of the allocation, set against Woodhead Heart, an undesignated heritage site. Whilst this site has no formal designated status, it is considered that future development on this site would respond to the local setting in an appropriate and sympathetic way. The Council's own comments from the Sustainability Appraisal offer largely supportive comments on the sustainability of the site. There are however negative comments linked to the Grade 3 Agricultural Land Classification of the site. The Council has not defined whether this is Grade 3a or Grade 3b land, taking a broad brush approach to the assessment. In either case, Grade 3a represents only marginally better quality land than 3b, which is not recognised as 'best and most versatile', along with categories Grade 1 and Grade 2. It appears that the assessment of significant negative effect is, in this regard, an inappropriate conclusion.

Issues raised - public responses:

- Need for new housing
- Amenity issues
- Highways and access
- Traffic in town centre
- Previously found unsound by planning inspector
- Landscape and heritage impact
- Mining legacy
- Lack of employment opportunities
- Plenty of empty properties / houses for sale
- Flood Risk / surface water flooding
- Pedestrian routes / open space
- Cecilly Brook / nature conservation issues
- No need for housing following Thorley Drive permission
- Need for a new school
- Viability of the site
- Capacity of site
- Lack of infrastructure to accommodate new housing
- Inadequate consultation
- Agricultural Land Classification

Council response –

- This site is identified in the adopted Core Strategy as being suitable for housing, however, Policy SS5c states that sites will be identified and phased through the Site Allocations DPD. It is not therefore allocated at this stage.
- The Landscape, Local Green Space and Heritage Impact Study (2016) has considered the site and suggests some site-specific landscape mitigation measures. There are not considered to be any heritage impacts associated with the development of the site.
- The land is Agricultural Class 3 Good to Moderate. Data supplied by Natural England indicates that there is a moderate likelihood that the land is best and most versatile land i.e. Class 3a. The Sustainability Appraisal will be updated to reflect the most up to date evidence base.
- The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate

Cheadle

CH001 Land to the south of Donkey Lane

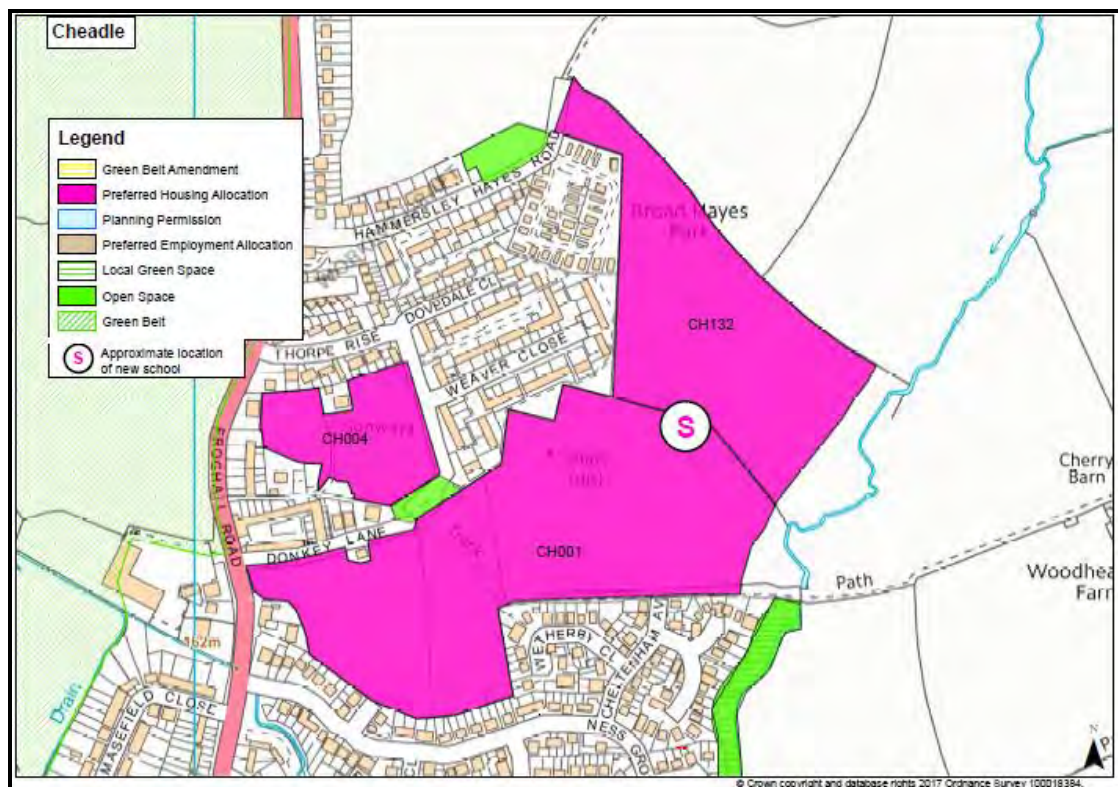

those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change. There are not enough brownfield sites within Cheadle to accommodate the level of housing it needs.

- Amenity issues and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received, and residents will have the opportunity to comment on the content of that application.
- The Highway Authority has not raised any issues which would prevent the development of this site.
- Traffic – The highways authority has confirmed that appropriately designed accesses would accommodate 240 + 80 + school. This number would require at least 2 accesses. A new access off Froghall Road would be preferable with secondary accesses through the existing estate. Pedestrian connections should be made to the residential area to the north.
- The Cheadle Town Centre Phase 2 Study (2017) identifies the likely impacts of the housing and employment Preferred Options sites on the surrounding highway network. By 2031 the study predicts queuing and delays in certain locations, in part due to 17 years of potential traffic growth which is compounded by the additional trips generated by new housing and employment. There is limited scope to change junction characteristics to improve network capacity within the Town Centre due to its historically confined road structure. The study recommends a package of mitigation measures in order to provide additional capacity onto the overall network. Mitigation measures include junction and lane improvements, new sites having good access to public transport provision, measures to encourage walking and cycling to reduce short trips, improved HGV signage and new parking bays along High Street.
- CH001 has already been identified as an appropriate area for housing in the adopted Core Strategy and is well related to the existing settlement.
- Employment site options are also proposed in Cheadle to provide opportunities for local businesses and jobs.
- There are former mineral workings on the site. The Coal Authority have confirmed that this would not prevent development from taking place. Investigative work will take place in these areas prior to the commencement of any development.
- The Strategic Housing Market Assessment (SHMA) makes an allowance for empty properties / houses that are for sale.
- The Council has completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which have been used to inform the site selection process. The site is within Flood Zone 1 – Low probability, however a small section located to the east of the site is located in Flood Zone 3 – High probability. This could be incorporated open space. Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- New housing schemes will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the consideration of new links.
- The site is adjacent to the Cecilly Brook Local Nature Reserve and there is an isolated population of water voles (protected species) Natural England have advised that a buffer along the watercourse would be required.
- The Thorley Drive planning permission can be taken into account as a housing commitment once the final decision notice has been issued. Housing commitments form part of the supply of new housing and will be deducted from the required provision for Cheadle.
- Based on the anticipated number of new dwellings in Cheadle, Staffordshire County Council have indicated that a new Primary School will be required. The existing schools are located in the SW area of Cheadle, close to the town centre. There are benefits in locating a new school to the north of Cheadle to serve new and existing housing to the north of the town and could reduce school generated traffic in the town centre.
- The Council is undertaking Local Plan viability work which will consider the viability of preferred option sites.

Cheadle

CH001 Land to the south of Donkey Lane

- Site CH001 is located within the existing town boundary. It is estimated that the site could accommodate approximately 240 dwellings based on 35 dwellings per hectare.
- National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan.
- The consultation was widely publicised and included a flyer being sent to all households and businesses in the District through Royal Mail. High levels of responses have been received by the Council from Cheadle residents which suggests that a significant number of residents knew about the consultation.

CH002a Land at Moor Lane Farm

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site within current development boundary and no significant issues.
- Landowner has confirmed that the land is available.

Key Issues

- Small edge area previously within Flood Zones 2 & 3 been excluded from site – but could form part of open space / surface water mitigation.
- Cecilly Brook holds a strong isolated population of water voles. As a protected species their habitat must be maintained. Also consider links to existing open space / green infrastructure.
- Traffic congestion in the town centre.

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Greenfield	Within development boundary	26 (based on 35 dph)	0.75	Owner willing to develop	<ul style="list-style-type: none"> • Low visual importance. • Well related to existing settlement, developed to the north and south. • Western edge adjacent to Cecilly Brook within flood risk excluded from site area.

Studies

Extended Phase 1 Habitat Survey 2015 (FID 150)

Conclusion

The site has potential to support protected species although the habitats are fairly species poor but are well connected to other more biodiverse habitats, especially the abutting Cecilly Brook Local Nature Reserve. As the site is bordering the LNR the site's status has been elevated to district ecological importance. The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Creation of a buffer zone between the site and the LNR
- Reptile survey
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2017)

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that the site has some potential to support protected species and further surveys are also recommended for the scattered trees. The site habitats are considered to be of nature conservation value district level. Further surveys are recommended to confirm the presence/absence of reptiles in the in the south-west area of the site due to the presence of scattered scrub and good connectivity with Cecilly brook.

Cheadle

CH002a Land at Moor Lane Farm

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Tree survey
- Hedgerow survey
- Reptile survey

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

Landscape, Local Green Space and Heritage Impact Study (August 2016)

Landscape Assessment

The site comprises a small field on the eastern edge of the settlement that (in combination with CH002b to the east) forms a gap in development. Development would fit in well within the settlement pattern. The site also has low visual prominence due to adjacent vegetation and development.

Site is of low landscape sensitivity.

Heritage Assessment

There are no designated heritage assets within the 400m buffer. Although the HEA states that development could potentially have a negative impact upon the HLC zone CHECZ 2, with sensitive development, this could be accommodated on the site (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms.

Level 1 SFRA (October 2015)

Site located in Flood Zone 1 – low probability. Small edge area previously within Flood Zones 2 & 3 been excluded from site. Site therefore meets the sequential test.

Cheadle Town Centre Phase 2 Study (2017)

The Phase 2 Study predicts that in 2031 general traffic growth plus additional trips generated by new housing and employment development will cause increased queuing and delays.

There is limited scope to change junction characteristics due to the historically confined road structure, however the study recommends a package of mitigation measures which could provide some additional capacity to the overall network.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 26 dwellings is considered to have a significant positive effect, as could the site's proximity to health care services and facilities and areas of existing employment. Similarly, the site's distance away from historic assets is likely to have a positive effect. However, the site is partly within flood zone 2 and 3 which is likely to have a significant negative effect, as could the development of grade 3 ALC land and the site's proximity to designated assets.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Cheadle.

CH002a Land at Moor Lane Farm

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways: Extension of existing estate, acceptable depending on access design.

Environment Agency - Cecilly Brook holds a strong isolated population of water voles. As a protected species their habitat must be maintained with no development creating direct or indirect impacts to impinge movement and expansion of the population along the riparian corridor.

Developer/Agent – Land is available

Historic England: Made no comments on individual sites recommended that a heritage impact assessment of sites is carried out.

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. Previous coal workings do not prevent development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

Public response

4 objections, 1 support

Issues raised:

Objections

- Infrastructure – Schools Cannot cope with numbers now
- Infrastructure - Traffic / Transport – Roads can't cope with traffic. Traffic from Alton Towers & JCB. Roads are dangerous.
- Infrastructure – Other Health services cannot cope now.
- Landscape
- Nature Conservation – stream running through this area feeds into Cecilly Brook nature reserve development would impact on nature reserve
- Flood Risk _ Already a problem on the estate.
- Amenity (e.g. noise, privacy, loss of light) Pollution
- Scale of development
- Listed Building / Conservation Area
- Government Policy
- Other No employment in Cheadle.

Support - Other Infill site, used for grazing hobby farmer.

Council response –

- The Highway Authority has not raised any issues which would prevent the development of this site.
- The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- The Cheadle Transport Study has assessed the impact of proposed new development on local roads. This concludes that improvements are required and additional work will need to be undertaken to identify mitigation measures once the location of new sites is known.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning

Cheadle

CH002a Land at Moor Lane Farm

application is received and residents will have the opportunity to comment on the content of that application.

- The land in question is not highlighted as significant in the Council's Landscape & Settlement Setting Assessment. A Landscape & Visual Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed
- sites included in the Site Options consultation. The site survey results will be used as part of the site selection process. Any other sites which come forward and are potentially suitable for development will also need to be assessed.
- Cecilly Brook has water voles which are a protected species. Environment Agency comments are noted and advice should be included in any detailed Ecological Study.
- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. The majority of the site is within Flood Zone 1 – Low probability. The small area of the site adjacent to the Brook is medium probability and will need to be incorporated into uses other than housing i.e. open space.
- Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- The scale of development is considered appropriate and is well related to the existing settlement. Any new development taking place will be subject to design policies contained within the new Local Plan – which will be subject to public consultation next year.
- The site is not located within the Conservation Area and is not adjacent to any listed buildings. A Heritage Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The National Planning Policy Framework supports housing growth which meets the Council's objectively assessed housing needs.
- Employment site options are also proposed in Cheadle to provide opportunities for local businesses and jobs

Preferred Options Consultation April 2016

SCC Highways: No access specified, perhaps using residential roads? Silverstone Avenue, Moor Lane? Junctions with B5032 and B5417 will require assessment. No existing cycle routes. Consideration of sustainable access to town centre.

Cheadle Town Service 123 serves Kingfisher Crescent and Oulton Road close to the sites hourly between 09:30 and 13:30.

Cheadle

CH002a Land at Moor Lane Farm

SCC Education: Future Need: Cheadle Town Requirement (based on the assumptions outlined in SCC report)

Primary School Provision

- The number of new homes planned for this school planning area indicate that education contributions will be required to fund additional primary school places at an existing or new school to mitigate the impact of local developments. At least an additional 1FE of primary school provision will be required in Cheadle Town during the Local Plan period to take into account the number of dwellings proposed over the duration of the Local Plan. We note that land to the east of the town (CH132) indicates an approximate location for a new/extended school and we ask that this land continues to be safeguarded.

High School Provision

- The High Schools in this School Place Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in this area, if the level of housing development is consistent with the estimated housing need. However, the allocation of housing sites, including windfall and small sites will continue to be monitored to ensure that there continues to be a sufficient supply of High School places in the town.

There is a small site allowance of 150 dwellings during the Local Plan period in Cheadle Town. As the location of these sites are not yet known the impact of these developments on school places will continue to be monitored as specific sites come forward and may result in additional school places required.

Please note that the allocation of housing in the rural area, including the small site allowance of 570 dwellings which has yet to be allocated, will have an impact on High School places in Cheadle Town, if those pupils attending school in the larger villages go on to attend High School in Cheadle Town.

LLFA: FRA required, consult SCC and EA. Surface water flooding shown on site. May need modelling. Please put developer in contact with SCC as early as possible.

Natural England: We note that the following preferred sites are located close to and/or adjoining existing areas of open space and green infrastructure, in particular the Cecilly Brook Local Nature Reserve (LNR).

Suitable enhancements of existing open spaces' may be required together with appropriate management (and funding thereof) in order to allow these open spaces to function effectively during the local plan period. Similarly the development of these preferred sites (if progressed) will need to include suitable multi-functional green infrastructure. Adopted local plan spatial objectives SO8 & 9 refer together with policies such as DC1 Design Considerations, DC3 landscape and settlement setting, C3 Green Infrastructure and NE1 Biodiversity & geological resources.

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Development high risk area.

CH002a Land at Moor Lane Farm

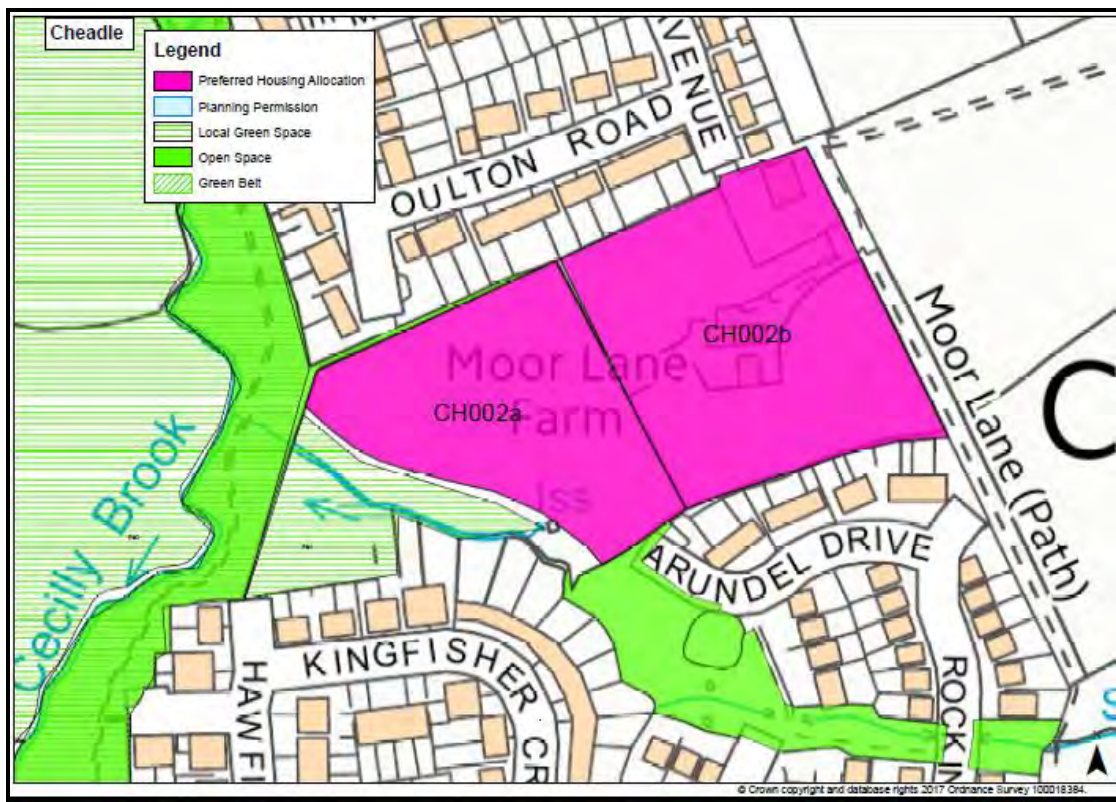

SMDC Environmental Health: No significant Issues

Issues raised - public responses:

- None received

Council response –

- The Council has produced a Draft Green Infrastructure Strategy for consultation alongside the next draft version of the Local Plan. The strategy identifies green infrastructure corridors around the towns and lists particular issues in relation to that corridor which can be addressed as part of the relevant site policy and / or at the planning application stage. Similarly, a public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and new development in the vicinity could contribute towards this. The Council has also designated Local Green Spaces in line with criteria set out in the NPPF and the Council will seek to facilitate improvements to these areas where required.

Cheadle

CH002b Land at Moor Lane Farm Moor Lane

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site within current development boundary and no significant issues.
- Landowner has confirmed that the land is available.

Key Issues

- Traffic congestion in the town centre.

Site Information

Greenfield/ brownfield	Built up area boundary/countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Greenfield	Within development boundary	35 (based on 35 dph)	0.98	Owner willing to develop	<ul style="list-style-type: none">• Low visual importance.• Well related to existing settlement, developed to the north and south.

Studies

Extended Phase 1 Habitat Survey 2015 (FID 151)

Conclusion

The site has potential to support protected species although the habitats are fairly species poor but are well connected to other more biodiverse habitats. As the site has buildings with potential to support roosting bats and a species rich hedgerow the site has been attributed at least district ecological importance. The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Bat survey of the buildings with potential to support roosting bats
- Reptile survey
- Hedgerow survey
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2017)

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that the site generally has low biodiversity but good connectivity to a stream and surrounding habitats deem it to be of district importance for its potential to protected species. The site habitats are considered to be of district importance. Further surveys are recommended to confirm the presence of reptiles and assess the importance of the species-rich hedgerows.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- HEGS survey for species-rich hedgerow
- Tree survey
- Bat roost survey of buildings on site

Cheadle

CH002b Land at Moor Lane Farm Moor Lane

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

Landscape, Local Green Space and Heritage Impact Study (August 2016)

Landscape Assessment

The site comprises a small field containing Moor Lane Farm on the eastern edge of the settlement that (in combination with CH002a to the west) forms a gap in development. Development would fit in well within the settlement pattern. The site also has low visual prominence due to adjacent vegetation and development, although is more open to the east. The existing hedgerow on this boundary could be planted up in order to create a vegetated edge to the settlement and reduce visual prominence.

Site is of low landscape sensitivity.

Heritage Assessment

There are no designated heritage assets within the 400m buffer. Although the HEA states that development could potentially have a negative impact upon the HLC zone CHECZ 2, with sensitive development, this could be accommodated on the site (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms.

Level 1 SFRA (October 2015)

Site located in Flood Zone 1 – low probability. Site therefore meets the sequential test.

Cheadle Town Centre Phase 2 Study (2017)

The Phase 2 Study predicts that in 2031 general traffic growth plus additional trips generated by new housing and employment development will cause increased queuing and delays.

There is limited scope to change junction characteristics due to the historically confined road structure, however the study recommends a package of mitigation measures which could provide some additional capacity to the overall network.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 42 dwellings is considered to have a significant positive effect, as could the site's proximity to services and facilities and areas of existing employment. Similarly, the site's distance away from historic assets is likely to have a positive effect. However, the site's proximity to a designated asset and the development of grade 3 ALC land is likely to have a significant negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Cheadle.

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways: Extension of existing estate, acceptable depending on access design.

Developer/Agent – land is available

Historic England: Made no comments on individual sites recommended that a heritage impact assessment of sites is carried out.

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral

CH002b Land at Moor Lane Farm Moor Lane

resources. Previous coal workings do not prevent development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

Public response

4 objections, 1 support

Issues raised:

Objections

- Infrastructure - Traffic / Transport Roads can't cope with traffic. Traffic from Alton Towers & JCB. Roads are dangerous.
- Flood Risk – Already a problem on the estate.
- Amenity (e.g. noise, privacy, loss of light) - Pollution
- Scale of development

Council response –

- The Highway Authority has not raised any issues which would prevent the development of this site.
- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. The majority of the site is within Flood Zone 1 – Low probability.
- Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- The scale of development is considered appropriate and is well related to the existing settlement. Any new development taking place will be subject to design policies contained within the new Local Plan – which will be subject to public consultation next year.

Preferred Options Consultation April 2016

SCC Highways: No access specified, perhaps using residential roads? Silverstone Avenue, Moor Lane? Junctions with B5032 and B5417 will require assessment. No existing cycle routes. Consideration of sustainable access to town centre.

Cheadle Town Service 123 serves Kingfisher Crescent and Oulton Road close to the sites hourly between 09:30 and 13:30.

SCC Education: Future Need: Cheadle Town Requirement (based on the assumptions outlined in SCC report)

Primary School Provision

- The number of new homes planned for this school planning area indicate that education contributions will be required to fund additional primary school places at an existing or new school to mitigate the impact of local developments. At least an additional 1FE of primary school provision will be required in Cheadle Town during the Local Plan period to take into account the number of dwellings proposed over the duration of the Local Plan. We note that land to the east of the town (CH132) indicates an approximate location for a new/extended school and we ask that this land continues to be safeguarded.

Cheadle

CH002b Land at Moor Lane Farm Moor Lane

High School Provision

- The High Schools in this School Place Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in this area, if the level of housing development is consistent with the estimated housing need. However, the allocation of housing sites, including windfall and small sites will continue to be monitored to ensure that there continues to be a sufficient supply of High School places in the town.

There is a small site allowance of 150 dwellings during the Local Plan period in Cheadle Town. As the location of these sites are not yet known the impact of these developments on school places will continue to be monitored as specific sites come forward and may result in additional school places required.

Please note that the allocation of housing in the rural area, including the small site allowance of 570 dwellings which has yet to be allocated, will have an impact on High School places in Cheadle Town, if those pupils attending school in the larger villages go on to attend High School in Cheadle Town.

LLFA: FRA required, consult SCC. Surface water flooding shown on site. May need modelling. Please put developer in contact with SCC as early as possible.

Natural England: We note that the following preferred sites are located close to and/or adjoining existing areas of open space and green infrastructure, in particular the Cecilly Brook Local Nature Reserve (LNR).

Suitable enhancements of existing open spaces' may be required together with appropriate management (and funding thereof) in order to allow these open spaces to function effectively during the local plan period. Similarly the development of these preferred sites (if progressed) will need to include suitable multi-functional green infrastructure. Adopted local plan spatial objectives SO8 & 9 refer together with policies such as DC1 Design Considerations, DC3 landscape and settlement setting, C3 Green Infrastructure and NE1 Biodiversity & geological resources.

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Eastern section development low risk area, rest development high risk area.

SMDC Environmental Health: No significant Issues

Issues raised - public responses:

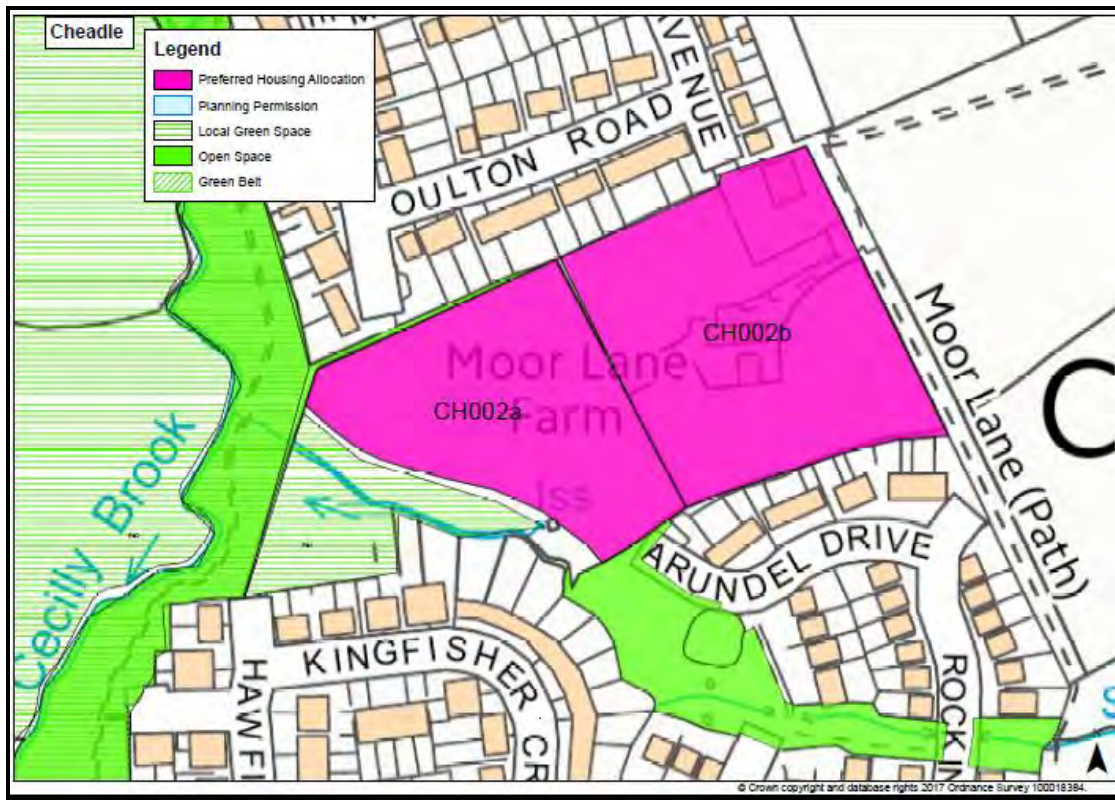

- None received

Council response –

- The Council has produced a Draft Green Infrastructure Strategy for consultation alongside the next draft version of the Local Plan. The strategy identifies green infrastructure corridors around the towns and lists particular issues in relation to that corridor which can be addressed as part of the relevant site policy and / or at the planning

CH002b Land at Moor Lane Farm Moor Lane

application stage. Similarly, a public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and new development in the vicinity could contribute towards this. The Council has also designated Local Green Spaces in line with criteria set out in the NPPF and the Council will seek to facilitate improvements to these areas where required.

Cheadle

CH004 - Land adj to Sunways

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site within current development boundary and no significant issues.
- Landowner has confirmed that the land is available in the medium term.

Key Issues

- Traffic congestion in the town centre.

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Greenfield	Within development boundary	45	1.3	Owner willing to develop	<ul style="list-style-type: none">• Low visual importance• Surrounded by development

Studies

Extended Phase 1 Habitat Survey 2015 (FID 145)

Conclusion

The site has low potential to support protected species as the habitats are species poor and poorly connected to other more biodiverse habitats, though as species rich hedgerows are present the site is considered as having district ecological importance.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Hedgerow survey
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2017)

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that the site generally has low ecological value in its potential to support protected species. Most of the site habitats are considered to be of nature conservation value at local level only. However, the species-rich hedgerow was assessed as being potentially meeting the BAS / SBI status.

Therefore, following surveys/actions are therefore recommended in order to establish SBI/ BAS status:

- HEGS survey of species-rich hedgerow

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

Landscape, Local Green Space and Heritage Impact Study (August 2016)

Landscape Assessment

Cheadle

CH004 - Land adj to Sunways

A single field within the north of the settlement enclosed by residential development, north of the play area on Thorpe Rise. The site includes a track in the centre that provides access to Sunways, a property on the northern boundary. The site forms a gap within the settlement, and therefore fits in well within the existing settlement pattern. The site also has low visual prominence due to the surrounding housing, and the hedgerows that enclose the site.

Site is of low landscape sensitivity.

Heritage Assessment

There are no designated heritage assets within the 400m buffer. Development would be highly unlikely to adversely affect HUCA 7 (Cheadle Extensive Urban Survey report 2012).

Site suitable for development in heritage terms.

Level 1 SFRA (October 2015)

Site located in Flood Zone 1 – low probability. Site therefore meets the sequential test.

Cheadle Town Centre Phase 2 Study (2017)

The Phase 2 Study predicts that in 2031 general traffic growth plus additional trips generated by new housing and employment development will cause increased queuing and delays.

There is limited scope to change junction characteristics due to the historically confined road structure, however the study recommends a package of mitigation measures which could provide some additional capacity to the overall network.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 45 dwellings is considered to have a significant positive effect. Similarly, the site's distance away from historic assets is likely to have a positive effect as could the accessibility to services, facilities and areas of existing employment. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect. The ecological value of the site is likely to have a negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Cheadle.

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways: New access can be created onto Thorpe Rise given current geometry (width 4.8m) and nos. of dwellings served. Ped access to be created onto Froghall Road via existing direct link.

Developer/Agent – land is available but later on in plan period.

Historic England: Made no comments on individual sites recommended that a heritage impact assessment of sites is carried out.

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. Previous coal workings do not prevent development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

Public response

1 objections, 1 support

Cheadle

CH004 - Land adj to Sunways

Issues raised:
Objections
General objection
Support
Other- Infill site

Council response –

- The Highway Authority has not raised any this site.
- Landowner has confirmed that the land will be available within 5 – 10 years.
- No other issues raised

Preferred Options Consultation April 2016

SCC Highways: No specific access arrangements identified although could be accessed via an improved Donkey Lane? Access onto A521 would require assessment. Consideration should be given to providing cycle route facilities to access the town centre. Traffic impacts on the Tape Street corridor and town centre traffic flows would require assessment, including key junctions. The presence of a school within the new residential development would contain trips, allowing them to be made sustainably and there is the potential for some existing school journeys currently being made to the town to be reassigned.

Cheadle Town Service 123 serves Ness Grove close to the site hourly between 09:30 and 13:30. Services 32/32A operate every 20-30 minutes along the A521 Froghall Road between Hanley and Cheadle. Service 30 (from 12th June 2016) operates every 2 hours along Froghall Road between Leek and Cheadle.

SCC Education: Future Need: Cheadle Town Requirement (based on the assumptions outlined in SCC report)

Primary School Provision

- The number of new homes planned for this school planning area indicate that education contributions will be required to fund additional primary school places at an existing or new school to mitigate the impact of local developments. At least an additional 1FE of primary school provision will be required in Cheadle Town during the Local Plan period to take into account the number of dwellings proposed over the duration of the Local Plan. We note that land to the east of the town (CH132) indicates an approximate location for a new/extended school and we ask that this land continues to be safeguarded.

High School Provision

- The High Schools in this School Place Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in this area, if the level of housing development is consistent with the estimated housing need. However, the allocation of housing sites, including windfall and small sites will continue to be monitored to ensure that there continues to be a sufficient supply of High School places in the town.

There is a small site allowance of 150 dwellings during the Local Plan period in Cheadle Town. - None received

CH009 Land & buildings at Orchard Farm Churchill Road

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site not taken forward into Preferred Options Local Plan due to:

- Land availability unknown.
- Site located within settlement boundary so could deliver housing without a formal allocation.

Key Issues

- Availability unknown.
- Close proximity to Cecilly Brook LNR.
- Possible noise pollution from adjacent JCB factory – (now demolished)
- Traffic congestion in the town centre.

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Greenfield	Within development boundary	16 (based on 35 dph)	0.46	Unknown	<ul style="list-style-type: none"> • Farm and adjacent land close to the town centre • Low visual importance

Studies

Extended Phase 1 Habitat Survey 2015 (FID 191)

Conclusion

The site has fairly low biodiversity value overall and is set within a mainly urban environment with some connectivity to the wider countryside through a species rich hedgerow. The combination of the species rich hedgerow and buildings/ tree with bat potential constitutes the site as having district ecological importance.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- A bat survey regime to ascertain whether bats roost in the buildings and tree
- Hedgerow survey
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2017)

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that the site has potential to support protected species although none were identified by Lockwood Hall Associates, 2014. Further surveys are recommended to assess the importance of the species-rich hedgerows and the potential for bat roosts. Therefore, the site habitats are considered to be of district importance.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- HEGS survey for species-rich hedgerow
- Bat roost survey of buildings on site

CH009 Land & buildings at Orchard Farm Churchill Road

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

Landscape, Local Green Space and Heritage Impact Study (August 2016)

Landscape Assessment

The site is located to the east of Churchill Road within the north of the settlement, and comprises Orchard Farm and adjacent land. The site is located to the south of the recreation ground and had low visual prominence due to screening provided by surrounding vegetation and development. Redevelopment of the site could improve local landscape character.

Site is of low landscape sensitivity.

Heritage Assessment

There are three Grade II Listed Buildings and one Conservation Area within the 400m buffer. However, due to the intervening buildings as well as vegetation between the assets and the site, it is considered that development would be highly unlikely to adversely affect the settings of the heritage assets. The site lies within the HUCA 11 (Cheadle Extensive Urban Survey report 2012). Development in this area would be highly unlikely to adversely affect the HUCA as a whole.

Site suitable for development in heritage terms.

Level 1 SFRA (October 2015)

Site located in Flood Zone 1 – low probability. Site therefore meets the sequential test.

Cheadle Town Centre Phase 2 Study (2017)

The Phase 2 Study predicts that in 2031 general traffic growth plus additional trips generated by new housing and employment development will cause increased queuing and delays.

There is limited scope to change junction characteristics due to the historically confined road structure, however the study recommends a package of mitigation measures which could provide some additional capacity to the overall network.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The site's accessibility to services, facilities and areas of existing employment is considered to have a significant positive effect. Similarly, the proposed delivery of circa 16 dwellings is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect, as could the site's proximity to designated assets. The site's proximity to historic assets is likely to have a negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Cheadle.

Options Consultation July 2015

CH013 Land rear of the Birches

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site has planning permission pending – awaiting S106 agreement

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housin g capacit y	Area (ha)	Ownership status	Site details
Greenfield	Within town boundary	51	1.4	Available	• Site has planning permission

Studies

Extended Phase 1 Habitat Survey 2015 (FID 142)

Conclusion

The site has little potential to support protected species apart from roosting bats/ foraging bats and badger, and is fairly poorly connected to the wider countryside. The presence of 2 trees with bat roosting potential has elevated the site's ecological importance to district level.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Bat survey of the 2 trees with bat roosting potential
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2017)

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that the site generally has low biodiversity the presence of two sycamore trees would make it of district importance for its potential to protected species. The site habitats are considered to be of site importance only. Further surveys are recommended to confirm the presence a bat roost in the sycamore trees.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Bat roost survey of two sycamore trees
- Tree survey

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 50 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect. However, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as could the ecological value of the site and its proximity to historic assets.

Cheadle

CH013 Land rear of the Birches

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways: Birches is not yet adopted, but is subject to a S37 to be adopted. Development off it will be acceptable subject to design. The turning head in the Birches will need to be removed and land returned to adjacent owners.

Developer/Agent – land is available

Public response

2 objections, 1 support

Issues raised:

Objections

- Infrastructure - Schools
- Infrastructure - Traffic / Transport
- Infrastructure - Other
- Landscape
- Nature Conservation
- Amenity (e.g. noise, privacy, loss of light)
- Scale of development

Support

- Other – Reluctantly accept more housing has to be built. Need to protect footpaths and countryside for tourism. New residents will work outside Cheadle sites need to be close to major roads & avoid town centre which can't cope with increased traffic.

Council response –

- The Highway Authority has not raised any issues which would prevent the development of this site.
- The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- The Cheadle Transport Study has assessed the impact of proposed new development on local roads. This concludes that improvements are required and additional work will need to be undertaken to identify mitigation measures once the location of new sites is known.
- New development is the main way to deliver new or improved infrastructure e.g. more residents may support more local facilities. Infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a

Preferred Options Consultation April 2016

SCC Highways: No clear access. Likely use of existing residential roads for access. Comprehensive existing network of pedestrian routes. No existing cycle route. Traffic impact on Tean Rd and Charles Street would be included in the assessment of the site. There are existing traffic congestion issues at school times. The local road network is physically constrained.

Cheadle

CH013 Land rear of the Birches

Nearest bus service will be service 31 which from 12th June 2016 will serve Glebe Road in Cheadle 3 times per day between Cheadle, Blythe Bridge and Hanley. Otherwise the north of the site is just under 500m from bus stops in Cheadle Town Centre.

SCC Education: Future Need: Cheadle Town Requirement (based on the assumptions outlined in SCC report)

Primary School Provision

- The number of new homes planned for this school planning area indicate that education contributions will be required to fund additional primary school places at an existing or new school to mitigate the impact of local developments. At least an additional 1FE of primary school provision will be required in Cheadle Town during the Local Plan period to take into account the number of dwellings proposed over the duration of the Local Plan. Cheadle

CH015 Stoddards Depot Leek Road

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site within current development boundary and though some constraints considered that these could be mitigated..
- Agent has confirmed that the site is available.

Key Issues

- Brownfield site with likely contamination.
- Located within Source Protection Zone 2, and partially within Source Protection Zone 1. There would be restrictions on the activities that can take place within Source Protection Zone 1. EA would object to any storage of hazardous substances and would only permit the discharge to ground of clean roof water in Source Protection Zone 1.
- Appropriate heritage masterplanning due to proximity to CA and Listed Buildings. Development could enhance area.
- Suitable site for relocation of business?
- Traffic congestion in the town centre.

Site Information

Greenfield/br ownfield	Built up area boundary/ countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Brownfield	Within development boundary	32 (40 dph)	0.8	Owner supports the development of the site	<ul style="list-style-type: none">• Brownfield site currently in use as a coach depot and oil depot yard.

Studies

Extended Phase 1 Habitat Survey 2015

Conclusion

The site itself has 2 trees and 4 buildings which are considered to have bat roosting potential, and species poor hedgerows which are fairly isolated from other habitats. The site has therefore been deemed to have at least district ecological importance The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- A bat survey regime is recommended to ascertain whether bats roost in the trees and Buildings
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2017)

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that the site has potential for protected species such as roosting bats. Further surveys are recommended to confirm the roosting bats in the buildings and trees and a tree survey is also required.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Bat roost survey of for buildings and two trees on site
- Tree survey

Cheadle

CH015 Stoddards Depot Leek Road

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

Landscape, Local Green Space and Heritage Impact Study (August 2016)

Landscape Assessment

Previously developed land within the centre of the settlement, east of Leek Road. The site has low visual prominence due to surrounding development. Redevelopment of the site could improve local landscape character, particularly on the frontage to Leek Road.

Site is of low landscape sensitivity.

Heritage Assessment

There are 22 Grade II Listed Buildings and one Conservation Area within the 400m buffer. The site consists of previously developed land including a depot, and is adjacent to the Conservation Area and opposite two Grade II Listed Buildings. The present site does not contribute to the setting of the heritage assets and appropriate development could enhance the frontage with sensitive design. Development in this area would be highly unlikely to adversely affect HUCA 5 (Cheadle Extensive Urban Survey report 2012).

Site suitable for development in heritage terms with appropriate masterplanning

Level 1 SFRA (October 2015)

Site located in Flood Zone 1 – low probability. Site therefore meets the sequential test.

Cheadle Town Centre Phase 2 Study (2017)

The Phase 2 Study predicts that in 2031 general traffic growth plus additional trips generated by new housing and employment development will cause increased queuing and delays.

There is limited scope to change junction characteristics due to the historically confined road structure, however the study recommends a package of mitigation measures which could provide some additional capacity to the overall network.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 32 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect, as could the development of brownfield land. However, the ecological value of the site and its proximity to a LNR, candidate AQMA and historic assets is likely to have a negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Cheadle.

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways: Access off Harborne Road would be restricted to one dwelling or no more than existing. Access off Leek Road will be acceptable subject to design and visibility.

Developer/Agent – site is available

Public response

1 objections, 1 support

Cheadle

CH015 Stoddards Depot Leek Road

Issues raised:

Objections

- General objection

Support

- Other Brownfield site surrounded by houses.

Council response –

The Highway Authority has not raised any issues which would prevent the development of this site.

No other issues raised.

Preferred Options Consultation April 2016

Mr G Willard on behalf of Stoddards Ltd: These comments relate mainly to site CH015. The site is presently occupied by a commercial garage with linked dwelling to the rear of it. The site is within a single family ownership and its is free of a legal impediment that might hinder its delivery. Land and property prices in Cheadle are constrained and will be likely to remain so for the foreseeable future. This means that the 'value' of this site for residential purposes can only be realised as and when the site owner wishes to or is able to relocate or to close their business. There is at present no clear date in mind as to when this might be but it is highly likely that the site owner will review the business case following allocation of this site for housing purposes. It is highly likely too that the costs of clearing this site and preparing it for residential development will be factor highly in their deliberations and this will have serious implication for site and development viability. The Council will greatly assist the delivery of this site if any allocation implicitly accepts that the site will be unlikely to be able to contribute to affordable housing or other community works due to the high costs of site clearance and preparation and that any application which is supported by a robust viability appraisal which evidences this will be supported in principle. Without such a helpful statement enshrined within the site allocations plan and/or linked policies it may be the case that the development and delivery of the site for housing does not advance beyond the policy provision.

SCC Highways: No comments

SCC Education: Future Need: Cheadle Town Requirement (based on the assumptions outlined in SCC report)

Primary School Provision

- The number of new homes planned for this school planning area indicate that education contributions will be required to fund additional primary school places at an existing or new school to mitigate the impact of local developments. At least an additional 1FE of primary school provision will be required in Cheadle Town during the Local Plan period to take into account the number of dwellings proposed over the duration of the Local Plan. We note that land to the east of the town (CH132) indicates an approximate location for a new/extended school and we ask that this land continues to be safeguarded.

High School Provision

- The High Schools in this School Place Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in this area, if the level of housing development is consistent with the estimated housing need. However, the allocation of housing sites, including windfall and small sites will continue to be monitored to ensure that there continues to be a sufficient supply of High School places in the town.

Cheadle

CH015 Stoddards Depot Leek Road

There is a small site allowance of 150 dwellings during the Local Plan period in Cheadle Town. As the location of these sites are not yet known the impact of these developments on school places will continue to be monitored as specific sites come forward and may result in additional school places required.

Please note that the allocation of housing in the rural area, including the small site allowance of 570 dwellings which has yet to be allocated, will have an impact on High School places in Cheadle Town, if those pupils attending school in the larger villages go on to attend High School in Cheadle Town.

LLFA: FRA required. Not sure where the water will go.

Environment Agency: Groundwater and Contaminated Land This site is located within Source Protection Zone 2, and partially within Source Protection Zone 1. In line with the position statements in our 'Groundwater Protection: Principles and Practice' document (available from our website at www.gov.uk/environment-agency), there would be restrictions on the activities that can take place within Source Protection Zone 1. For example we would object to any storage of hazardous substances and would only permit the discharge to ground of clean roof water in Source Protection Zone 1. This site also appears to be Brownfield.

The sites in Cheadle, although previously flagged up as requiring further work, should be able to design out flood risk given the small proportion of Flood Zones on the edge of them, and the fact that they are already modded in detail, so the extents shouldn't increase.

Historic England: It is not clear how the impact of the site allocation has been assessed in respect of the Conservation Area and nearby listed buildings, including setting. Further information is required.

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Development low risk area.

SMDC Environmental Health: Some constraints on residential development: Contamination from current industrial use/ haulage yard

Issues raised - public responses:

- None received

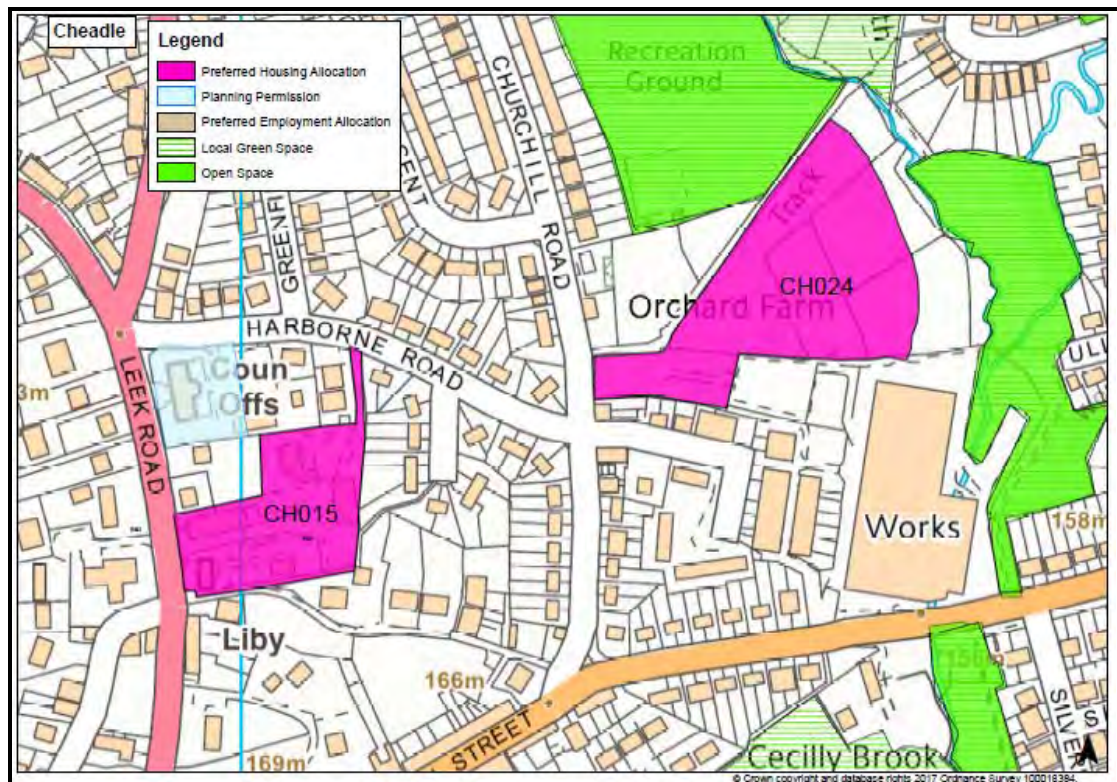

Council response –

- Developer support for the site is noted.
- The Council is undertaking Local Plan viability work which will consider the viability of preferred option sites.
- The site consists of previously developed land including a depot.
- Note comments regarding the site being located within Source Protection Zones 1 & 2.

Cheadle

CH015 Stoddards Depot Leek Road

- The site consists of previously developed land including a depot, and is adjacent to the Conservation Area and opposite two Grade II Listed Buildings.
- The Council's Landscape, Green Space and Heritage Impact Study(August 2016) includes a Heritage Assessment for this site which advises that the present site does not contribute to the setting of the heritage assets and appropriate development could enhance the frontage with sensitive design. It stated that development in this area would be highly unlikely to adversely affect HUCA 5 (Cheadle Extensive Urban Survey report 2012) and the Site is suitable for development in heritage terms with appropriate masterplanning.

Cheadle

CH020 Land north of The Green

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site within current development boundary and no significant issues.
- Land has been subject to previous planning applications for housing.

Key Issues

- Site also in multiple ownership. Refusal due to over development and lack of marketing evidence.
- Western edge area previously within Flood Zones 2 & 3 been excluded from site – but could form part of open space / surface water mitigation.
- Potential contamination from previous brass / gas works
- Traffic congestion in the town centre.
- Piper Group and Ithaca Land Ltd – SMD/2014/0797 – Outline 51 dwellings (all affordable, social rent, shared ownership) – refused. Refusal due to over development and lack of marketing evidence.
- Piper Group and Ithaca Land Ltd – SMD/2013/1029 – Outline 63 dwellings (all affordable, social rent, shared ownership) – refused.

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Part greenfield / part brownfield	Within development boundary	42 (35 dph)	1.2	Previous applications on site in 2013 and 2014.	<ul style="list-style-type: none">• Part employment / part vacant• Surrounded by development• Western edge adjacent to watercourse, area within flood risk excluded from site area.

Studies

Extended Phase 1 Habitat Survey 2015 (FID 160)

Conclusion

The site itself has 1 building that is deemed to have potential to support roosting bats, noxious weeds and a range of 'brownfield' habitats albeit fairly species poor in terms of floral diversity. However the fairly large size of the site and the potential to support protected species warrants being attributed district importance.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- A bat survey regime is therefore recommended to ascertain whether bats roost in the Buildings
- Reptile survey
- Japanese knotweed removal
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2017)

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that most of site habitats are common throughout the region and not considered eligible for

Cheadle

CH020 Land north of The Green

BAS / SBI status. However, the ruderal vegetation is eligible for BAS status. Further surveys are recommended to confirm the presence of roosting bats, reptiles and to assess the scattered trees.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Japanese knotweed removal
 - Tree survey of scattered trees
 - Bat survey of building on site
- Reptile survey

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

Landscape, Local Green Space and Heritage Impact Study (August 2016)

Landscape Assessment

Previously developed land (including a residential property) and rough grassland within the west of Cheadle, north of the A521 and the Brookhouses industrial estate. The site has low visual prominence due to screening provided by surrounding development and vegetation.

Site is of low landscape sensitivity.

Heritage Assessment

There are no designated heritage assets within the 400m buffer. The site lies within the HUCA 15 (Cheadle Extensive Urban Survey report 2012). Development in this area would not adversely impact upon the HUCA as a whole.

Site suitable for development in heritage terms.

Level 1 SFRA (October 2015)

Site located in Flood Zone 1 – low probability. Small edge area previously within Flood Zones 2 & 3 been excluded from site. Site therefore meets the sequential test.

Cheadle Town Centre Phase 2 Study (2017)

The Phase 2 Study predicts that in 2031 general traffic growth plus additional trips generated by new housing and employment development will cause increased queuing and delays.

There is limited scope to change junction characteristics due to the historically confined road structure, however the study recommends a package of mitigation measures which could provide some additional capacity to the overall network.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 42 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. Similarly, the site's accessibility to services and facilities is likely to have a positive effect, as could its location away from historic assets. However, the site is partly within a flood zone which is likely to have a significant negative effect. The ecological value of the site is likely to have a negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Cheadle.

Options Consultation July 2015

CH020 Land north of The Green

Statutory bodies/stakeholders

SCC Highways: Acceptable subject to access design and provision of visibility splays.

Environment Agency – Site is likely to be affected to some degree by flood risk and if taken forward will require the support of the Sequential Test and a Level 2 SFRA.

Developer/Agent – site is available. Recent planning application.

Public response

5 objections

Issues raised

:

Objections

- Infrastructure – Schools
- Infrastructure – Traffic/Transport - access is dangerous No developments should go ahead until the towns traffic problems are addressed. JCB development did not consider traffic impact. Dilhorne Road is narrow, limited pavements.
- Flood Risk. History of flooding
- Amenity (e.g. noise, privacy, loss of light) development should consider surrounding properties ,ie bungalows should be developed next to existing bungalows
- Scale of development- number of houses too high development will not match surrounding properties
- Other - Site should be used for housing for the elderly scope to build residential home. Cheadle has lost Lightwood Home has not been replaced. No consideration has been given to housing for older people. IS to the rear of the only petrol station in town. Unsuitable for housing. Too dangerous. Former gas works maybe contaminated.

Council response –

- The Highway Authority has not raised any issues which would prevent the development of this site.
- The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- The Cheadle Transport Study has assessed the impact of proposed new development on local roads. This concludes that improvements are required and additional work will need to be undertaken to identify mitigation measures once the location of new sites is known.
- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. The majority of the site is within Flood Zone 1 – Low probability. The western section of the site adjacent to the Brook is high probability and will need to be incorporated into uses other than housing i.e. open space. EA and LLFA have not objected to recent scheme on flood risk grounds.
- Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.

Cheadle

CH020 Land north of The Green

- The scale of development is considered appropriate but needs to reflect any constraints such as flood risk.
- Comments regarding suitability for housing for older people is noted.
- Contamination issues will need to be explored and may have an impact on site viability

Preferred Options Consultation April 2016

SCC Highways: No comments

SCC Education: Future Need: Cheadle Town Requirement (based on the assumptions outlined in SCC report)

Primary School Provision

- The number of new homes planned for this school planning area indicate that education contributions will be required to fund additional primary school places at an existing or new school to mitigate the impact of local developments. At least an additional 1FE of primary school provision will be required in Cheadle Town during the Local Plan period to take into account the number of dwellings proposed over the duration of the Local Plan. We note that land to the east of the town (CH132) indicates an approximate location for a new/extended school and we ask that this land continues to be safeguarded.

High School Provision

- The High Schools in this School Place Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in this area, if the level of housing development is consistent with the estimated housing need. However, the allocation of housing sites, including windfall and small sites will continue to be monitored to ensure that there continues to be a sufficient supply of High School places in the town.

There is a small site allowance of 150 dwellings during the Local Plan period in Cheadle Town. As the location of these sites are not yet known the impact of these developments on school places will continue to be monitored as specific sites come forward and may result in additional school places required.

Please note that the allocation of housing in the rural area, including the small site allowance of 570 dwellings which has yet to be allocated, will have an impact on High School places in Cheadle Town, if those pupils attending school in the larger villages go on to attend High School in Cheadle Town.

LLFA: FRA required, consult SCC. Surface water flooding shown on site. May need modelling. Please put developer in contact with SCC as early as possible.

Environment Agency: No longer requiring an SFRA The sites in Cheadle, although previously flagged up as requiring further work, should be able to design out flood risk given the small proportion of Flood Zones on the edge of them, and the fact that they are already modelled in detail, so the extents shouldn't increase.

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the

Cheadle

actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Western section development high risk area, rest development low risk area.

SMDC Environmental Health: Significant constraints on residential development area is part of the spoil tip for Brass/Gas works

Issues raised - public responses:

- None received

Cheadle

CH024 Land off Churchill Road

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site within current development boundary and no significant issues.
- The owner has confirmed that the land is available for residential development.

Key Issues

- Cecilly Brook holds a strong isolated population of water voles. As a protected species their habitat must be maintained. Also consider links to existing open space / green infrastructure.
- Small edge of area previously within Flood Zones 2 & 3 been excluded from site.
- Site previously allocated for school in 1998 Local Plan. Since access to the site was acquired by JCB leaving the rest of the site land locked. JCB site has now closed and access to Churchill Road is available.
- School site has been identified in north of Cheadle as part of masterplan for sites CH001/CH132 and SCC have confirmed that the site to the north is preferable. In addition the site may not be able to accommodate more than a 1FE primary school which requires a site area of around 1.2 ha. SCC have suggested the need for at least a 1FE primary school.
- Traffic congestion in the town centre.

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Greenfield / brownfield	Within development boundary	45 (32 dph)	1.4	Owners supported development of the site at Options Stage	<ul style="list-style-type: none">• Paddock surrounded by development.• Access to site via previous JCB site.• Eastern edge adjacent to Cecilly Brook within flood risk excluded from site area.

Studies

Extended Phase 1 Habitat Survey 2015 (FID161)

Conclusion

The site has potential for protected species to be present mainly due to the close proximity of the mosaic of stream habitats and good connectivity Cecily Brook Local Nature Reserve and the wider countryside, therefore is given district ecological importance.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Reptile survey
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2017)

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded

CH024 Land off Churchill Road

that most of site habitats are common throughout the region and not considered eligible for BAS / SBI status. However, the ruderal vegetation is eligible for BAS status and further surveys are recommended to confirm the presence of reptiles.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Reptile survey
- HEGS survey
- Survey of tall ruderal vegetation

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

Landscape, Local Green Space and Heritage Impact Study (August 2016)

Landscape Assessment

Site comprises a field within the north of the settlement, east of Orchard Farm, south-east of the recreation ground and west of Cecily Brook. The majority of the site has low visual prominence due to screening provided by surrounding development and vegetation. However the eastern edge of the site has higher visual prominence as the land slopes down to the brook. Planting could be undertaken on the eastern site boundary in order to reduce visual prominence. Consideration should be given to the adjacent LNR, and the views from within it.

Site is of low landscape sensitivity.

Heritage Assessment

There are three Grade II Listed Buildings and one Conservation Area within the 400m buffer. Due to the buildings as well as vegetation between the assets and the site, it is considered that development would be highly unlikely to adversely affect the settings of the heritage assets. The site lies within the HUCA 11 (Cheadle Extensive Urban Survey report 2012). Development in this area would not adversely impact upon the HUCA as a whole.

Site suitable for development in heritage terms.

Level 1 SFRA (October 2015)

Site located in Flood Zone 1 – low probability. Small edge area previously within Flood Zones 2 & 3 been excluded from site. Site therefore meets the sequential test.

Cheadle Town Centre Phase 2 Study (2017)

The Phase 2 Study predicts that in 2031 general traffic growth plus additional trips generated by new housing and employment development will cause increased queuing and delays. There is limited scope to change junction characteristics due to the historically confined road structure, however the study recommends a package of mitigation measures which could provide some additional capacity to the overall network.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 45 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect. The ecological importance of the site, its location near to a LNR, and its proximity to heritage assets is assessed as a negative effect.

Initial HRA Screening

Cheadle

CH024 Land off Churchill Road

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Cheadle.

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways: Public right of way Cheadle 38 runs across this plot. If combined with adjacent site CH009 acceptable subject to access design and provision of visibility splays.

Environment Agency – Site is likely to be affected to some degree by flood risk and if taken forward will require the support of the Sequential Test and a Level 2 SFRA. In addition, Cecilly Brook holds a strong isolated population of water voles. As a protected species their habitat must be maintained with no development creating direct or indirect impacts to impinge movement and expansion of the population along the riparian corridor.

Landowner/Agent

J C Bamford Excavators. Supports site allocation. Sustainable location no major constraints.

Public response

1 objections, 2 support

Issues raised:

Objections

- General objection

Support

- Site can be developed on a standalone basis or in conjunction with adjacent site
- High sustainable location adj to existing housing
- No road safety issues
- No landscape protection issues.
- FRA obtained by owner – no issues raised
- No ground condition problems
- Recognise need to have a buffer along Cecilly Brook to protect wildlife
- Other – Infill site. Need to protect footpath.

Council response –

- There is no direct access to this site however access could be provided through adjacent site CH009. Public right of way needs to be protected.
- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. The majority of the site is within Flood Zone 1 – Low probability. The small area of the site adjacent to the Brook is high probability and will need to be incorporated into uses other than housing i.e. open space.
- Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed sites included in the Site Options consultation. The site survey results will be used as part of the site selection process. Any other sites which come forward and are potentially suitable for development will also need to be assessed.
- Cecilly Brook has water voles which are a protected species. Environment Agency comments are noted and advice should be included in any detailed Ecological Study.

Cheadle

CH024 Land off Churchill Road

Preferred Options Consultation April 2016

SCC Highways: Potential for access from Churchill Rd? No identified form of access. Links should be provided for pedestrians into local walking network. Cycle route facilities into the town centre require consideration. Key junctions require assessment including Churchill Rd/B5417 and Churchill Rd/A521.

Cheadle Town Service 123 serves Churchill Road close to the sites hourly between 09:30 and 13:30.

SCC Education: Future Need: Cheadle Town Requirement (based on the assumptions outlined in SCC report)

Primary School Provision

- The number of new homes planned for this school planning area indicate that education contributions will be required to fund additional primary school places at an existing or new school to mitigate the impact of local developments. At least an additional 1FE of primary school provision will be required in Cheadle Town during the Local Plan period to take into account the number of dwellings proposed over the duration of the Local Plan. We note that land to the east of the town (CH132) indicates an approximate location for a new/extended school and we ask that this land continues to be safeguarded.

High School Provision

- The High Schools in this School Place Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in this area, if the level of housing development is consistent with the estimated housing need. However, the allocation of housing sites, including windfall and small sites will continue to be monitored to ensure that there continues to be a sufficient supply of High School places in the town.

There is a small site allowance of 150 dwellings during the Local Plan period in Cheadle Town. As the location of these sites are not yet known the impact of these developments on school places will continue to be monitored as specific sites come forward and may result in additional school places required.

Please note that the allocation of housing in the rural area, including the small site allowance of 570 dwellings which has yet to be allocated, will have an impact on High School places in Cheadle Town, if those pupils attending school in the larger villages go on to attend High School in Cheadle Town.

Additional Information supplied by SCC (August 2016):

- In terms of spatial distribution to create a better spread of school provision there is little to choose from between the two [schools] given they are so close together.
- The site from the '98 local plan has limited frontage and may therefore offer less opportunity to arrange the school access and how the building sits in the street scene. Whereas the site in the proposed allocation can be arranged to sit within the proposed housing estate street scene.
- In relation to access and parking the '98 plan site is surrounded by existing residential streets and therefore may lead to issues of disruption to residents during the school run, but these are likely to be limited to residential amenity rather than highway safety or capacity. The emerging plan site can be accommodated into the proposed estate

Cheadle

CH024 Land off Churchill Road

in such a way to hopefully design out some of the issues experienced at the school gate for many older school sites across the country.

- The '98 plan site has good access on foot though some pedestrian routes from the residential areas lead through areas that are not overlooked. The emerging plan site can have access designed and delivered to the most appropriate standard.

LLFA: FRA required, consult SCC and EA. Main river floodplain. Also ordinary watercourse through site.

Natural England: We note that the following preferred sites are located close to and/or adjoining existing areas of open space and green infrastructure, in particular the Cecilly Brook Local Nature Reserve (LNR).

Suitable enhancements of existing open spaces' may be required together with appropriate management (and funding thereof) in order to allow these open spaces to function effectively during the local plan period. Similarly the development of these preferred sites (if progressed) will need to include suitable multi-functional green infrastructure. Adopted local plan spatial objectives SO8 & 9 refer together with policies such as DC1 Design Considerations, DC3 landscape and settlement setting, C3 Green Infrastructure and NE1 Biodiversity & geological resources.

Environment Agency: No longer requiring an SFRA The sites in Cheadle, although previously flagged up as requiring further work, should be able to design out flood risk given the small proportion of Flood Zones on the edge of them, and the fact that they are already modelled in detail, so the extents shouldn't increase.

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Eastern section development low risk area, rest development high risk area.

SMDC Environmental Health: Some constraints on residential development: Possible noise issues from mill (JCB), possible pesticide use, part flood zone

Issues raised - public responses:

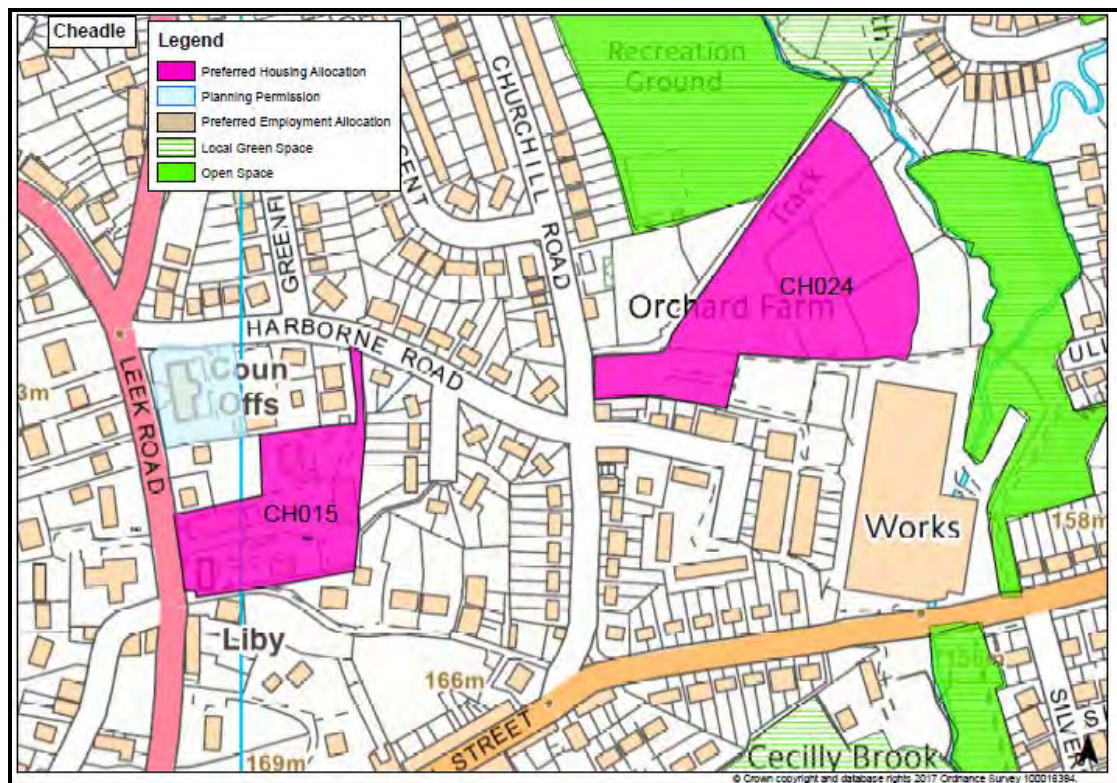

- Good location for new school.
- Not a good location for a new school.

Council response –

- The Council has produced a Draft Green Infrastructure Strategy for consultation alongside the next draft version of the Local Plan. The strategy identifies green infrastructure corridors around the towns and lists particular issues in relation to that corridor which can be addressed as part of the relevant site policy and / or at the planning application stage. Similarly, a public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and new development in the vicinity could contribute towards this. The Council has also designated Local Green Spaces in line with criteria set out in the NPPF and the Council will seek to facilitate improvements to these areas where required.

CH024 Land off Churchill Road

- Site CH024 was previously earmarked for a school in the 1998 Local Plan. Access to the site was subsequently acquired to serve the adjacent factory and the remaining part of CH024 became landlocked.
- Staffordshire County Council support the preferred location (CH001/CH132) for the new school and consider it provides for a good spread of provision around the town. In terms of spatial distribution the location of the previous site and the preferred site are close together.
- Staffordshire County Council estimate that 1.2 ha is require to deliver a 1 Form Entry school. Site CH024 is surrounded by existing development and would be unlikely to accommodate any further expansion. The site has a limited frontage and offers less opportunity to arrange the school access and how the building fits within the street scene. It also is surrounded by residential streets and may lead to residential amenity issues during the school run. The preferred site (CH001/CH132) can be accommodated into the estate in such a way to design out such issues.
- CH024 has good access on foot although some of the routes from residential areas lead through areas that are not overlooked. The preferred school site (CH001/CH132) can have access designed and delivered to the most appropriate standard.
- The delivery of a new school will need to be funded by developer contributions and the cost will include land acquisition and building costs. The inclusion of safeguarded land for a school as part of a wider masterplan means that the school is likely to be deliverable and appropriately designed.

Cheadle

CH085a Land west of Paragon Close

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site within current development boundary and no significant issues.
- Land is available.

Key Issues

- No direct access. No justification for link road but safeguard route.
- Medium landscape sensitivity – restrict building heights and planting to reduce impact.
- Moderate likelihood that the site could be agricultural Class 3a – best and most versatile.
- Density is on the lower side but need for landscaping / spine road etc.
- Traffic congestion in the town centre.

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Greenfield	Within settlement boundary	120 (26 dph)	4.7	Development of site supported by landowner	<ul style="list-style-type: none">• Open field sloping down to brook.• Disused railway line forms boundary to north and west of site.• Previously allocated for housing in 1998 Local Plan.• No direct access

Studies

Extended Phase 1 Habitat Survey 2015 (FID 156)

Conclusion

The site has low potential to support protected species as the habitats present on site are species poor and have poor boundary habitat and connections to other more biodiverse habitats. However, the site is attributed district ecological importance due to the 2 trees present on site that have been deemed capable of supporting roosting bats.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Bat surveys of the 2 trees deemed to have potential to support roosting bats
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2017)

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that most of site habitats are common throughout the region and not considered eligible for BAS / SBI status. However, the two scattered trees present could support roosting bats and be eligible for BAS status.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Bat survey of two oak trees

CH085a Land west of Paragon Close

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

Landscape, Local Green Space and Heritage Impact Study (August 2016)

Landscape Assessment

Site comprises fields on the south-western edge of the settlement, sloping down from the settlement edge. Site is open however long distance views are screened by the railway embankment located to the north and west of the site. There could be impacts on local landscape character, however limiting building heights on the lower ground to the south-west of the site, and planting on this boundary could reduce potential adverse impacts.

Site is of medium landscape sensitivity. Site-specific landscape mitigation measures could include limiting building heights and planting in the southwest of the site.

Heritage Assessment

There are no designated heritage assets within the 400m buffer. Development in the site would change a small element of the HLC zone CHECZ 8, although as a whole, it would remain unaltered (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms.

Level 1 SFRA (October 2015)

Site located in Flood Zone 1 – low probability. Small edge area previously within Flood Zones 2 & 3 been excluded from site. Site therefore meets the sequential test.

Best and Most Versatile Land (Natural England dataset)

Data supplied by Natural England indicates that there is a moderate likelihood that the land is best and most versatile land i.e. Class 3a.

Cheadle Town Centre Phase 2 Study (2017)

The Phase 2 Study predicts that in 2031 general traffic growth plus additional trips generated by new housing and employment development will cause increased queuing and delays. There is limited scope to change junction characteristics due to the historically confined road structure, however the study recommends a package of mitigation measures which could provide some additional capacity to the overall network.

Link Road - Currently there is no link between the A522 Tean Road and Brookhouse Way / A521 due to it being severed by a disused railway line. The railway line is in third party ownership and a bridge will be required to connect a link road through. The proposed link road would allow a percentage of predicted trips from the SW area to traverse Brookhouse Way / A521 opposed to solely the A522, however the level of trips which would use the A521 from this area would have a minimal effect in improving congestion within Cheadle Town Centre. The study considers that the proposed Link Road would not be a solution on its own.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 150 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect, as could the site's location away from historic assets. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect as could part of the site's location within flood zone 2. The site's ecological value is likely to have a negative effect.

Initial HRA Screening

Cheadle

CH085a Land west of Paragon Close

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Cheadle.

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways: Can serve approx 50-75 dwellings off Dryden Way as Dryden Way has width of 5.5m and is connected to main road network via roads with similar geometry. Alternatively Brookhouse Way could be extended to serve land in area CH085a.

Natural England – The site may present a strategic site. Has a Landscape and Visual Impact Assessment been carried out? Those sites taken forward to the next stage of the process may require LVIA in order to inform the development specification for the site.

Environment Agency – Site is likely to be affected to some degree by flood risk and if taken forward will require the support of the Sequential Test and a Level 2 SFRA.

Developer/Agent - Supports allocation of site for housing. Core Strategy states Cheadle's role as a service centre market town will be expanded. South of town is logical place for development. Outside floodplain, no landscape/ecological constraints. Not good quality agricultural land. Access possible. Sustainable transport links to town. Size to safeguard land for community facilities.

Public response

45 objections 2 support 1 general

Issues raised:

Objections

- Infrastructure – Schools Existing schools cannot cope with additional development. Need more school places. Schools are too far from the site.
- Infrastructure - Traffic / Transport – Will increase traffic & disturbance. Create road safety issues. Roads around Cheadle already struggles with traffic & is congested. Traffic from Alton Towers. Site too far from town centre/schools will increase traffic & congestion. Traffic congestion will have an adverse impact on tourism. No access to site from Wedgewood Estate meaning new owners would have to use a car to access town centre. New access created through existing estate would increase traffic. Need southern link road to access site, this is not feasible has been ruled out by SCC & Core Strategy Inspector. Railway next to site, Moorland & City Rail are considering opening part of line to Cresswell. Emergency access. Access difficult.
- Infrastructure – Insufficient emergency services. Health services cannot cope with additional houses. GPs/dentists already full. Existing infrastructure cannot cope with such huge development. No space in cemeteries. Need major infrastructure before development. Lack of open space.
- Landscape – Loss of high quality landscape/green land. Wardell Armstrong Study 2008 land west of Cheadle is an area of landscape enhancement.
- Nature Conservation – Area used by many types of wild animals. Loss of wildlife from area.
- Flood Risk - Would increase flooding. Stream on site already floods. Site borders River Tean
- Amenity (e.g. noise, privacy, loss of light) Existing residents would be overlooked. Loss of privacy/light. Increase in noise and pollution.
- Scale of development – Too big & too far from services Unbalanced development of Cheadle.
- Listed Building / Conservation Area Need to conserve heritage assets.
- Government Policy Contrary to NPPF
- Other – Are brownfield sites/sites in built up area that can be used. Sites to north & east are more sustainable. Public right of way on site used for walking/dog walking. Loss of only area on this side of town for children, walkers. Popular area of countryside well used

Cheadle

CH085a Land west of Paragon Close

by local community for walking.. Should build in north & east of Cheadle. Loss of green belt. Coal workings on site.

Support

- Listed Building / Conservation Area Historic legibility/landscape been categorised as medium compared to high in NE Cheadle.
- Other Allocated for housing in 1998 Local Plan. Inside development boundary & new draft development boundary. Previous application on site, refused but indicates desirability of site. Walking distance to schools. Site was preferred site in Preferred Options stage 2008.

Council response –

- There are issues regarding access to the site as both means of access would involve crossing the former railway line. Access from the north would be limited to 50-75 dwellings. If access can be resolved to an acceptable standard then development could take place. Public footpath crossing site will need to be retained.
- The Highway Authority confirms that site CH128 could provide access to sites CH093 and CH085a – d.
- The land in question is not highlighted as being important to the setting of the settlement in the Council's Landscape & Settlement Character Assessment. A Landscape & Visual Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. The majority of the site is within Flood Zone 1 – Low probability. The western edge of the site adjacent to the Brook is high probability and will need to be incorporated into uses other than housing i.e. open space. Clarification with EA regarding a Level 2 SFRA needed.
- Any application would be accompanied by a FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected
- The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- New development is the main way to deliver new or improved infrastructure e.g. more residents may support more local facilities. Infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas.
- The Cheadle Transport Study has assessed the impact of proposed new development on local roads. This concludes that improvements are required and additional work will need to be undertaken to identify mitigation measures once the location of new sites is known.
- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed sites included in the Site Options consultation. The site survey results will be used as part of the site selection process. Any other sites which come forward and are potentially suitable for development will also need to be assessed.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.

Cheadle

CH085a Land west of Paragon Close

- The scale of development will depend on the number of sites allocated in this particular location. Any new development taking place will be subject to design policies contained within the new Local Plan – which will be subject to public consultation next year.
- The National Planning Policy Framework supports housing growth which meets the Council's objectively assessed housing needs.
- The land is Agricultural Class 3 Good to Moderate.
- The site is not located within the Conservation Area or adjacent to any listed buildings. A Heritage Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The development boundary will be amended to incorporate any new allocations. The site is not located within Green Belt.
- The Coal Authority have confirmed that there are no issues that would prevent development of the site. Investigative work will take place in these areas prior to the commencement of any development

Preferred Options Consultation April 2016

JMW Planning on behalf of Mr Campbell: Support

This site is supported in the initial sustainability appraisal report which considered a south-west focus for new housing development. It is well located in relation to existing services within the town, most of which can be reached by means other than the private motor car. The landowners are willing to consider releasing the land for development initially taking access off the existing highways network.

SCC Highways: Potential link/access road identified connecting to A522 Tean Rd which will require assessment. Assessment of impact on Tape Street Corridor will be required. Connections to local advisory cycle network should be considered. Site will need to connect with existing pedestrian route network. Sustainable access to town centre requires consideration.

Cheadle Town Service 123 serves Wedgwood Road close to the sites between 09:30 and 13:30. Service 32 operates hourly along the A522 Tean Road between Uttoxeter, Cheadle and Hanley.

Link Road

With regard to proposed housing sites to the south west of Cheadle and their potential to deliver the Mobberley Link Road (western bypass), the benefits of this will need to be demonstrated through the study work identified in the Core Strategy section 8.1.53 Policy SS5c. Appended to this letter is a plan showing the protected line for this route. Presumably the access road to these proposed development sites could form the southern section of this route, although it would need to be designed to allow the required capacity for a bypass. This may be difficult to achieve if, for instance, the access road is designed in accordance with the Department for Transport's Manual for Streets. There is also the question of how many forms of access would be required to this development area which is intended to accommodate in excess of 400 dwellings.

Paragraph 3.32 of the Plan refers to the safeguarding of a potential indicative route to enable provision of the bypass. However it is difficult to see how this together with the Adopted Core Strategy Policy SS5c can effectively achieve this. The policy contains the phrase: improve environmental quality and accessibility by: reducing levels of through traffic in the town centre

Cheadle

CH085a Land west of Paragon Close

and along the A521 and A522 promoting the longer term provision of a bypass to the west of the town.

The explanatory text of the Core Strategy reads:

'8.1.53 One of the most significant challenges is identifying the need and viability of a bypass to relieve through traffic in the town and provide improved access to existing and planned housing and employment areas. Whilst some junction improvements have been implemented, there remains a strong need to investigate and identify other potential solutions to improve traffic flows through the town particularly in the light of the growth aspirations for the town. A Transportation Study will therefore be required to investigate the need and viability of a bypass and/or other traffic management solutions, including a link from the A50 at Blythe Bridge to Cheadle, the implications for surrounding villages and the wider area and the scope for funding from proposed developments. This will be undertaken as part of the review of the Core Strategy.'

The bypass is also not shown on the Core Strategy Key Diagram and Inset Maps. It is noted that paragraph 3.31 of the Plan refers to a further study to explore the case and feasibility of a bypass.

Therefore, currently the Core Strategy says that the need / viability for a Bypass has yet to be established and all that's shown on Map 47 Cheadle as a 'potential link road' is part of the historic route of the A521-A522 Cheadle Western Bypass afforded protection by SCC in 2002 and currently declared on searches. It needs to be appreciated that in these circumstances the 'protection' afforded by SCC to this route may be insufficient to resist a challenge from a developer.

SCC Education: Future Need: Cheadle Town Requirement (based on the assumptions outlined in SCC report)

Primary School Provision

- The number of new homes planned for this school planning area indicate that education contributions will be required to fund additional primary school places at an existing or new school to mitigate the impact of local developments. At least an additional 1FE of primary school provision will be required in Cheadle Town during the Local Plan period to take into account the number of dwellings proposed over the duration of the Local Plan. We note that land to the east of the town (CH132) indicates an approximate location for a new/extended school and we ask that this land continues to be safeguarded.

High School Provision

- The High Schools in this School Place Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in this area, if the level of housing development is consistent with the estimated housing need. However, the allocation of housing sites, including windfall and small sites will continue to be monitored to ensure that there continues to be a sufficient supply of High School places in the town.

There is a small site allowance of 150 dwellings during the Local Plan period in Cheadle Town. As the location of these sites are not yet known the impact of these developments on school places will continue to be monitored as specific sites come forward and may result in additional school places required.

Please note that the allocation of housing in the rural area, including the small site allowance of 570 dwellings which has yet to be allocated, will have an impact on High School places in

Cheadle

CH085a Land west of Paragon Close

Cheadle Town, if those pupils attending school in the larger villages go on to attend High School in Cheadle Town.

LLFA: FRA required, consult SCC and EA. Surface water flooding shown on site. May need modelling. Please put developer in contact with SCC as early as possible.

Environment Agency: No longer requiring an SFRA The sites in Cheadle, although previously flagged up as requiring further work, should be able to design out flood risk given the small proportion of Flood Zones on the edge of them, and the fact that they are already modelled in detail, so the extents shouldn't increase.

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Majority development high risk area.

SMDC Environmental Health: No significant Issues

Issues raised - public responses & petition:

- Scale of development
- Link road
- Location of new school (in north)
- Need for new housing
- Amenity issues
- Highways and access
- Traffic in town centre
- Landscape impact
- Flood Risk / surface water flooding
- Not all public open space is accessible to the public
- Pedestrian routes / open space
- Ecology / nature conservation issues
- Lack of infrastructure to accommodate new housing
- Agricultural Land Classification

Council response –

- Developer support for the site is noted.
- The Highways Authority have stated that approximately 50-75 dwellings could be served off Dryden Way.
- The Council has considered a number of sites within and on the edge of Cheadle. The majority of the proposed area for housing is located within the existing town boundary. It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway improvements, affordable housing and community facilities such as public open space.
- The Council's Landscape, Green Space and Heritage Impact Study(August 2016) includes a Landscape Assessment for this site. It advises that the site is open however long distance views are screened by the railway embankment located to the north and west of the site. There could be impacts on local landscape character (medium landscape sensitivity), however site-specific landscape mitigation measures could include limiting building heights and planting in the southwest of the site.
- New housing schemes will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the consideration of new links.

Cheadle

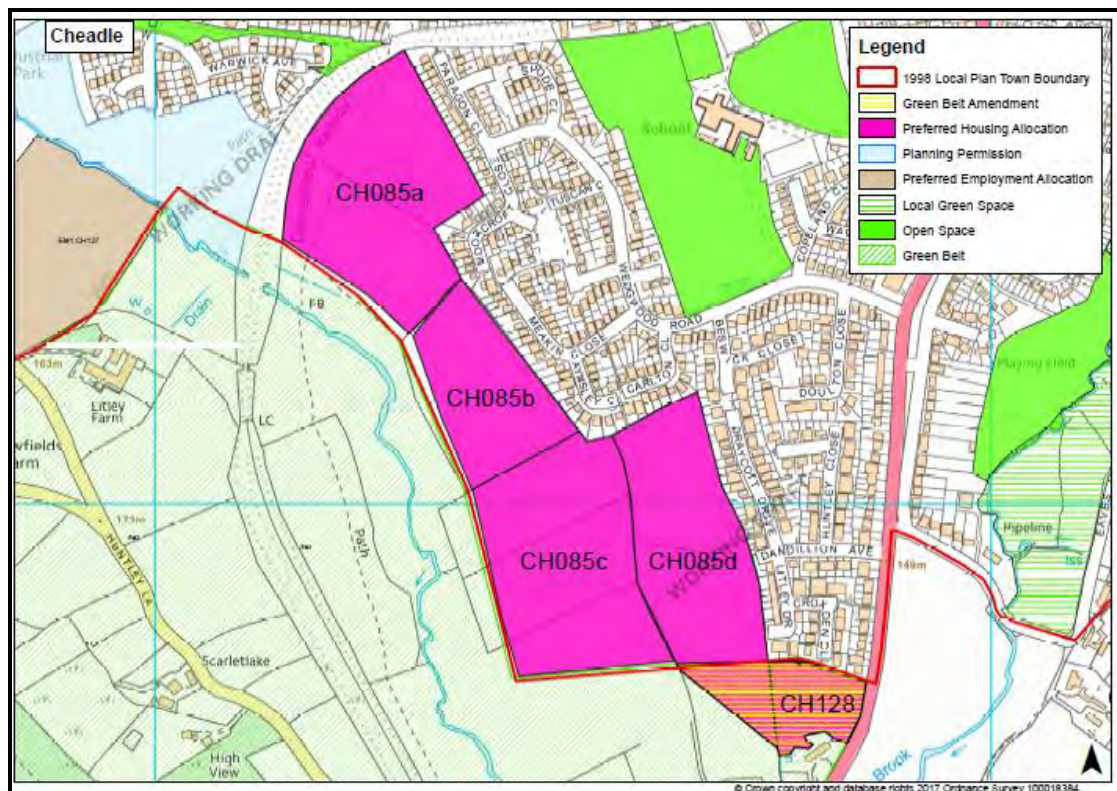

CH085a Land west of Paragon Close

- The Cheadle Town Centre Phase 2 Study (2017) identifies the likely impacts of the housing and employment Preferred Options sites on the surrounding highway network. By 2031 the study predicts queuing and delays in certain locations, in part due to 17 years of potential traffic growth which is compounded by the additional trips generated by new housing and employment. There is limited scope to change junction characteristics to improve network capacity within the Town Centre due to its historically confined road structure. The study recommends a package of mitigation measures in order to provide additional capacity onto the overall network. Mitigation measures include junction and lane improvements, new sites having good access to public transport provision, measures to encourage walking and cycling to reduce short trips, improved HGV signage and new parking bays along High Street.
- The Cheadle Town Centre Phase 2 Study (2017) considers the potential SW link road. Currently there is no link between the A522 Tean Road and Brookhouse Way / A521 due to it being severed by a disused railway line. The railway line is in third party ownership and a bridge will be required to connect a link road through. The proposed link road would allow a percentage of predicted trips from the SW area to traverse Brookhouse Way / A521 opposed to solely the A522, however the level of trips which would use the A521 from this area would have a minimal effect in improving congestion within Cheadle Town Centre. The study considers that the proposed Link Road would not be a solution on its own.
- National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan.
- The Council has considered a number of sites within and on the edge of Cheadle. There is not enough brownfield land or sites to meet the District's proposed housing requirement within the built up area of the town. This site is located on the edge of the settlement within the existing town boundary. It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway improvements, affordable housing and community facilities such as public open space. Distance from the town centre needs to be balanced with other considerations such as Green Belt, Heritage, Landscape and viability / deliverability.
- The Council has completed a Level 1 Strategic Flood Risk Assessment (SFRA) for the District, the results of which have been used to inform the site selection process. The site is within Flood Zone 1 – Low probability. The area to the west of the site adjacent to the Brook is high probability and can be incorporated into uses other than housing i.e. open space. The Environment Agency has confirmed that a Level 2 SFRA will not be required as the developer should be able to design out flood risk given the small proportion of Flood Zones on the edge of them, and the fact that they are already modelled in detail, so the extents shouldn't increase. Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- The proposed new school is planned to serve the north of Cheadle and could therefore reduce school traffic currently accessing schools in the SW of the town. New housing development is also proposed in the north of the town. There are existing schools located in the SW of Cheadle to meet the needs of residents located in the south of the town.
- Agreed that not all the open spaces marked on the map are accessible to the public and should be indicated as 'open space' rather than 'public open space'. A public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and where new public open space is required.

Cheadle

CH085a Land west of Paragon Close

- Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change. The Local Plan also proposes employment sites. The adopted Core Strategy sets out the distribution of housing development between the towns and rural areas: Leek 30%, Biddulph 20%, Cheadle 22% and Rural Areas 28%.
- The land is Agricultural Class 3 Good to Moderate. Data supplied by Natural England indicates that there is a moderate likelihood that the land is best and most versatile land i.e. Class 3a
- New housing schemes will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the consideration of new links.
- The site was subject to a Phase 1 ecological survey in 2014 and a later 2016 ecology study considered the scope for 'local wildlife site' i.e. SBI status. The Phase 1 survey concludes that the site has low potential to support protected species as the habitat is poor and the LWS survey considers that most of the site habitats are common and not considered eligible for SBI status. Both studies recommend further surveys and actions prior to development.
- The Council will seek a proportion of affordable housing on the site which meets the required design policies.

Cheadle

CH085b Land west of Meakin Close

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site within current development boundary and no significant issues.
- Land is available.

Key Issues

- No direct access. No justification for link road but safeguard route.
- Moderate likelihood that the site could be agricultural Class 3a – best and most versatile. Western edge is high likelihood.
- Medium landscape sensitivity – restrict building heights and planting to reduce impact.
- Density is a bit low but need for landscaping / road etc.
- Traffic congestion in the town centre.

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Greenfield	Within development boundary	70 (27 dph)	2.6	Development of site supported by landowner	<ul style="list-style-type: none">• Open field sloping down to brook.• No direct access

Studies

Extended Phase 1 Habitat Survey 2015 (FID 155) (includes CH085b & CH085c)

Conclusion

The site has fairly low potential to support protected species as the habitats are species poor and moderately connected to other more biodiverse habitats. The site is therefore given low ecological importance as the species rich hedgerow is defunct.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Hedgerow survey
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2017)

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that most of site habitats are common throughout the region and not considered eligible for BAS / SBI status. However, the species-rich hedgerow has potential for BAS / SBI status and further surveys are therefore needed.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- HEGS survey of species-rich hedgerow

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

CH085b Land west of Meakin Close

Landscape, Local Green Space and Heritage Impact Study (August 2016)

Landscape Assessment

Site comprises a field on the south-western edge of the settlement, sloping down from the settlement edge. Site is open however long distance views are screened by the railway embankment located to the north and west of the site. There could be impacts on local landscape character, however limiting building heights on the lower ground to the west of the site, and planting on this boundary could reduce potential adverse impacts.

Site is of medium landscape sensitivity. Site-specific landscape mitigation measures could include limiting building heights and planting in the west of the site.

Heritage Assessment

There are no designated heritage assets within the 400m buffer. Development in the site would change a small element of the HLC zone CHECZ 8, although as a whole, it would remain unaltered (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms.

Level 1 SFRA (October 2015)

Site located in Flood Zone 1 – low probability. Small edge area previously within Flood Zones 2 & 3 been excluded from site. Site therefore meets the sequential test.

Best and Most Versatile Land (Natural England dataset)

Data supplied by Natural England indicates that there is a moderate likelihood that most of the site is best and most versatile land i.e. Class 3a. A small section along the western boundary is high likelihood.

Cheadle Town Centre Phase 2 Study (2017)

The Phase 2 Study predicts that in 2031 general traffic growth plus additional trips generated by new housing and employment development will cause increased queuing and delays. There is limited scope to change junction characteristics due to the historically confined road structure, however the study recommends a package of mitigation measures which could provide some additional capacity to the overall network.

Link Road - Currently there is no link between the A522 Tean Road and Brookhouse Way / A521 due to it being severed by a disused railway line. The railway line is in third party ownership and a bridge will be required to connect a link road through. The proposed link road would allow a percentage of predicted trips from the SW area to traverse Brookhouse Way / A521 opposed to solely the A522, however the level of trips which would use the A521 from this area would have a minimal effect in improving congestion within Cheadle Town Centre. The study considers that the proposed Link Road would not be a solution on its own.

Sustainability Appraisal

Initial Sustainability Appraisal Report - April 2016

The proposed delivery of circa 80 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to health care services and facilities and areas of existing employment is likely to have a positive effect, as could the site's location away from historic assets. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect as could part of the site's location within flood zone 2 and 3.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Cheadle.

Cheadle

CH085b Land west of Meakin Close

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways: To serve the quantum of housing envisaged then Brookhouse Way would need to be extended from the North.

Environment Agency – Site is likely to be affected to some degree by flood risk and if taken forward will require the support of the Sequential Test and a Level 2 SFRA.

Developer/Agent Supports allocation of site for housing. Core Strategy states Cheadle's role as a service centre market town will be expanded. South of town is logical place for development. Outside floodplain, no landscape/ecological constraints. Not good quality agricultural land. Access possible. Sustainable transport links to town. Size to safeguard land for community facilities.

- The scale of development will depend on the number of sites allocated in this particular location. Any new development taking place will be subject to design policies contained within the new Local Plan – which will be subject to public consultation next year.
- The National Planning Policy Framework supports housing growth which meets the Council's objectively assessed housing needs.
- The land is Agricultural Class 3 Good to Moderate.

Cheadle

CH085b Land west of Meakin Close

- The site is not located within the Conservation Area or adjacent to any listed buildings. A Heritage Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The development boundary will be amended to incorporate any new allocations. The site is not located within Green Belt.
- The Coal Authority have confirmed that there are no issues that would prevent development of the site. Investigative work will take place in these areas prior to the commencement of any development

Preferred Options Consultation April 2016

JMW Planning on behalf of Mr Campbell: Support

This site is supported in the initial sustainability appraisal report which considered a south-west focus for new housing development. It is well located in relation to existing services within the town, most of which can be reached by means other than the private motor car. The landowners are willing to consider releasing the land for development initially taking access off the existing highways network.

SCC Highways: Potential link/access road identified connecting to A522 Tean Rd which will require assessment. Assessment of impact on Tape Street Corridor will be required. Connections to local advisory cycle network should be considered. Site will need to connect with existing pedestrian route network. Sustainable access to town centre requires consideration.

Cheadle Town Service 123 serves Wedgwood Road close to the sites between 09:30 and 13:30. Service 32 operates hourly along the A522 Tean Road between Uttoxeter, Cheadle and Hanley.

Link Road

With regard to proposed housing sites to the south west of Cheadle and their potential to deliver the Mobberley Link Road (western bypass), the benefits of this will need to be demonstrated through the study work identified in the Core Strategy section 8.1.53 Policy SS5c. Appended to this letter is a plan showing the protected line for this route. Presumably the access road to these proposed development sites could form the southern section of this route, although it would need to be designed to allow the required capacity for a bypass. This may be difficult to achieve if, for instance, the access road is designed in accordance with the Department for Transport's Manual for Streets. There is also the question of how many forms of access would be required to this development area which is intended to accommodate in excess of 400 dwellings.

Paragraph 3.32 of the Plan refers to the safeguarding of a potential indicative route to enable provision of the bypass. However it is difficult to see how this together with the Adopted Core Strategy Policy SS5c can effectively achieve this. The policy contains the phrase: improve environmental quality and accessibility by: reducing levels of through traffic in the town centre and along the A521 and A522 promoting the longer term provision of a bypass to the west of the town.

The explanatory text of the Core Strategy reads:

'8.1.53 One of the most significant challenges is identifying the need and viability of a bypass to relieve through traffic in the town and provide improved access to existing and planned housing and employment areas. Whilst some junction improvements have been implemented, there remains a strong need to investigate and identify other potential solutions to improve traffic flows through the town particularly in the light of the growth aspirations for the town. A Transportation Study will therefore be required to investigate the need and

Cheadle

CH085b Land west of Meakin Close

viability of a bypass and/or other traffic management solutions, including a link from the A50 at Blythe Bridge to Cheadle, the implications for surrounding villages and the wider area and the scope for funding from proposed developments. This will be undertaken as part of the review of the Core Strategy.'

The bypass is also not shown on the Core Strategy Key Diagram and Inset Maps. It is noted that paragraph 3.31 of the Plan refers to a further study to explore the case and feasibility of a bypass.

Therefore, currently the Core Strategy says that the need / viability for a Bypass has yet to be established and all that's shown on Map 47 Cheadle as a 'potential link road' is part of the historic route of the A521-A522 Cheadle Western Bypass afforded protection by SCC in 2002 and currently declared on searches. It needs to be appreciated that in these circumstances the 'protection' afforded by SCC to this route may be insufficient to resist a challenge from a developer.

SCC Education: Future Need: Cheadle Town Requirement (based on the assumptions outlined in SCC report)

Primary School Provision

- The number of new homes planned for this school planning area indicate that education contributions will be required to fund additional primary school places at an existing or new school to mitigate the impact of local developments. At least an additional 1FE of primary school provision will be required in Cheadle Town during the Local Plan period to take into account the number of dwellings proposed over the duration of the Local Plan. We note that land to the east of the town (CH132) indicates an approximate location for a new/extended school and we ask that this land continues to be safeguarded.

High School Provision

- The High Schools in this School Place Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in this area, if the level of housing development is consistent with the estimated housing need. However, the allocation of housing sites, including windfall and small sites will continue to be monitored to ensure that there continues to be a sufficient supply of High School places in the town.

There is a small site allowance of 150 dwellings during the Local Plan period in Cheadle Town. As the location of these sites are not yet known the impact of these developments on school places will continue to be monitored as specific sites come forward and may result in additional school places required.

Please note that the allocation of housing in the rural area, including the small site allowance of 570 dwellings which has yet to be allocated, will have an impact on High School places in Cheadle Town, if those pupils attending school in the larger villages go on to attend High School in Cheadle Town.

LLFA: FRA required. Looks ok.

Environment Agency: No longer requiring an SFRA The sites in Cheadle, although previously flagged up as requiring further work, should be able to design out flood risk given the small proportion of Flood Zones on the edge of them, and the fact that they are already modded in detail, so the extents shouldn't increase.

Cheadle

CH085b Land west of Meakin Close

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Development high risk area.

SMDC Environmental Health: No significant Issues

Issues raised - public responses & petition :

- Scale of development
- Link road
- Location of new school (in north)
- Need for new housing
- Amenity issues
- Highways and access
- Traffic in town centre
- Landscape impact
- Flood Risk / surface water flooding
- Not all public open space is accessible to the public
- Pedestrian routes / open space
- Ecology / nature conservation issues
- Lack of infrastructure to accommodate new housing
- Agricultural Land Classification

Council response –

- Developer support for the site is noted.
- There is no current available access to this section of land.
- The Council has considered a number of sites within and on the edge of Cheadle. The majority of the proposed area for housing is located within the existing town boundary. It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway improvements, affordable housing and community facilities such as public open space.
- The Council's Landscape, Green Space and Heritage Impact Study(August 2016) includes a Landscape Assessment for this site. It advises that the site is open however long distance views are screened by the railway embankment located to the north and west of the site. There could be impacts on local landscape character (medium landscape sensitivity), however site-specific landscape mitigation measures could include limiting building heights and planting in the southwest of the site.
- New housing schemes will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the consideration of new links.
- There are proposals for new housing development to the north of the town.
- The Cheadle Town Centre Phase 2 Study (2017) identifies the likely impacts of the housing and employment Preferred Options sites on the surrounding highway network. By 2031 the study predicts queuing and delays in certain locations, in part due to 17 years of potential traffic growth which is compounded by the additional trips generated by new housing and employment. There is limited scope to change junction characteristics to improve network capacity within the Town Centre due to its historically confined road structure. The study recommends a package of mitigation measures in order to provide additional capacity onto the overall network. Mitigation measures include junction and lane improvements, new sites having good access to public transport provision, measures to encourage walking and cycling to reduce short trips, improved HGV signage and new parking bays along High Street.

CH085b Land west of Meakin Close

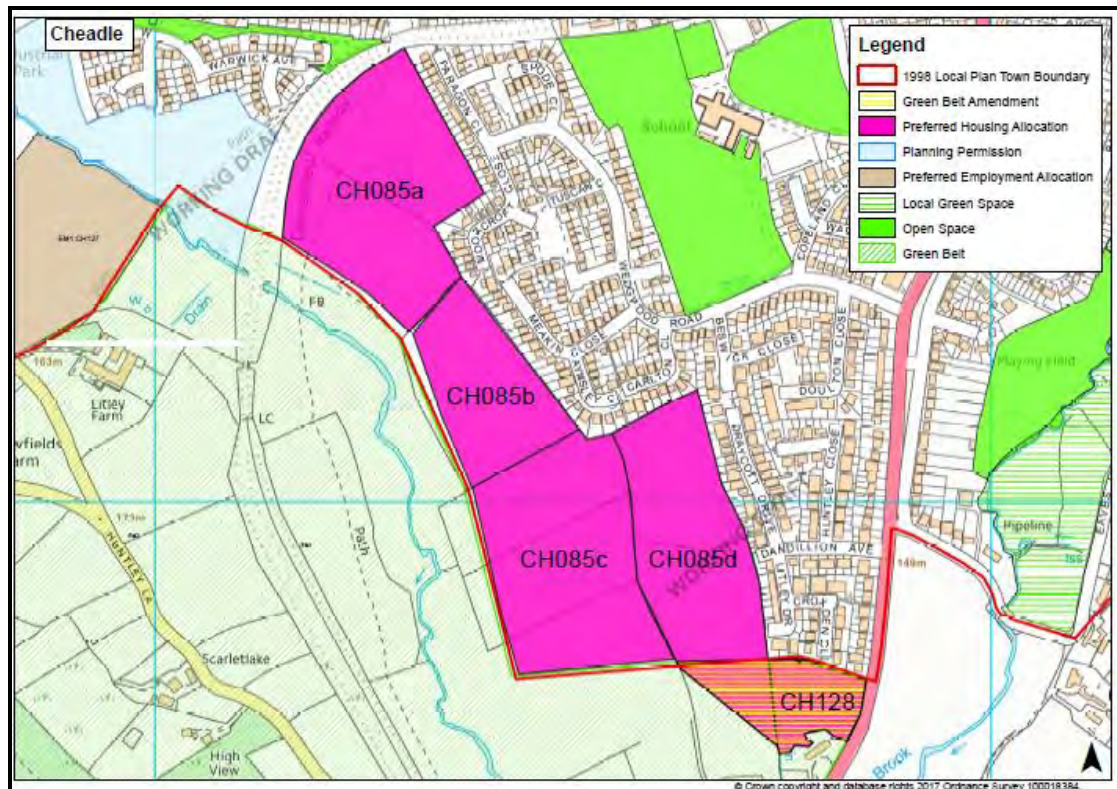

- The Cheadle Town Centre Phase 2 Study (2017) considers the potential SW link road. Currently there is no link between the A522 Tean Road and Brookhouse Way / A521 due to it being severed by a disused railway line. The railway line is in third party ownership and a bridge will be required to connect a link road through. The proposed link road would allow a percentage of predicted trips from the SW area to traverse Brookhouse Way / A521 opposed to solely the A522, however the level of trips which would use the A521 from this area would have a minimal effect in improving congestion within Cheadle Town Centre. The study considers that the proposed Link Road would not be a solution on its own.
- National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan.
- The Council has considered a number of sites within and on the edge of Cheadle. There is not enough brownfield land or sites to meet the District's proposed housing requirement within the built up area of the town. This site is located on the edge of the settlement within the existing town boundary. It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway improvements, affordable housing and community facilities such as public open space. Distance from the town centre needs to be balanced with other considerations such as Green Belt, Heritage, Landscape and viability / deliverability.
- The Council has completed a Level 1 Strategic Flood Risk Assessment (SFRA) for the District, the results of which have been used to inform the site selection process. The site is within Flood Zone 1 – Low probability. The area to the west of the site adjacent to the Brook is high probability and can be incorporated into uses other than housing i.e. open space. The Environment Agency has confirmed that a Level 2 SFRA will not be required as the developer should be able to design out flood risk given the small proportion of Flood Zones on the edge of them, and the fact that they are already modelled in detail, so the extents shouldn't increase. Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- The proposed new school is planned to serve the north of Cheadle and could therefore reduce school traffic currently accessing schools in the SW of the town. New housing development is also proposed in the north of the town. There are existing schools located in the SW of Cheadle to meet the needs of residents located in the south of the town.
- Agreed that not all the open spaces marked on the map are accessible to the public and should be indicated as 'open space' rather than 'public open space'. A public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and where new public open space is required.
- The site was subject to a Phase 1 ecological survey in 2014 and a later 2016 ecology study considered the scope for 'local wildlife site' i.e. SBI status. The Phase 1 survey concludes that the site has low potential to support protected species as the habitat is poor and the LWS survey considers that most of the site habitats are common and not considered eligible for SBI status. Both studies recommend further surveys and actions prior to development.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change. The Local Plan

Cheadle

CH085b Land west of Meakin Close

also proposes employment sites. The adopted Core Strategy sets out the distribution of housing development between the towns and rural areas: Leek 30%, Biddulph 20%, Cheadle 22% and Rural Areas 28%.

- The land is Agricultural Class 3 Good to Moderate. Data supplied by Natural England indicates that there is a moderate likelihood that the land is best and most versatile land i.e. Class 3a
- The Council will seek a proportion of affordable housing on the site which meets the required design policies.

CH085c Land south of Aynsley Close

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site within current development boundary and no significant issues.
- Land is available.

Key Issues

- No direct access. No justification for link road but safeguard route.
- Moderate likelihood that the site could be agricultural Class 3a – best and most versatile. Western section of the site is high likelihood.
- Medium landscape sensitivity – restrict building heights, planting to reduce impact and phasing of development. Screening to mitigate impact on listed building.
- Density is a bit low but need for landscaping / road etc.
- Traffic congestion in the town centre.

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Greenfield	Within development boundary	125 (26 dph)	4.8	Development of site supported by landowner	<ul style="list-style-type: none"> • Open field sloping down to brook. • Previously allocated for housing in 1998 Local Plan. • No direct access

Studies

Extended Phase 1 Habitat Survey 2015 (FID 155) (includes CH085b & CH085c)

Conclusion

The site has fairly low potential to support protected species as the habitats are species poor and moderately connected to other more biodiverse habitats. The site is therefore given low ecological importance as the species rich hedgerow is defunct.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Hedgerow survey
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2017) – considered with CH085b?

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that most of site habitats are common throughout the region and not considered eligible for BAS / SBI status. However, the species-rich hedgerow has potential for BAS / SBI status and further surveys are therefore needed.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- HEGS survey of species-rich hedgerow

Cheadle

CH085c Land south of Aynsley Close

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

Landscape, Local Green Space and Heritage Impact Study (August 2016)

Landscape Assessment

Site comprises fields to the south-west of the settlement, sloping down from the settlement edge. Site is open however long distance views are screened by the railway embankment located to the north and west of the site. There could be impacts on local landscape character, however limiting building heights on the lower ground to the west of the site, and planting on this boundary could reduce potential adverse impacts. Only the north-eastern corner of the site is adjacent to the settlement edge and is otherwise separated by adjacent sites (CH085d). The site should therefore not be developed in isolation. If the adjoining sites are developed first, then CH085c could be considered as a potential development site in a later phase.

Site is of medium landscape sensitivity. Site-specific landscape mitigation measures could include phased development (ensuring the site is developed following the development of adjoining sites), limiting building heights and planting in the west of the site and phasing development.

Heritage Assessment

There is one Grade II Listed Building within 400m. As a farm, the wider agricultural setting is considered to contribute to the overall significance of the asset. The site is part of the wider setting of the asset and therefore development would be likely to cause adverse effects. This could be mitigated through screening of the southern edge of the site. Development in the site would change a part of the HLC zone CHECZ 8, although for the most part, it would remain unaltered (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms subject to appropriate masterplanning.

Level 1 SFRA (October 2015)

Site located in Flood Zone 1 – low probability. Site therefore meets the sequential test.

Best and Most Versatile Land (Natural England dataset)

Data supplied by Natural England indicates that there is a moderate likelihood that two thirds of the site is best and most versatile land i.e. Class 3a. The section along the western boundary is high likelihood.

Cheadle Town Centre Phase 2 Study (2017)

The Phase 2 Study predicts that in 2031 general traffic growth plus additional trips generated by new housing and employment development will cause increased queuing and delays.

There is limited scope to change junction characteristics due to the historically confined road structure, however the study recommends a package of mitigation measures which could provide some additional capacity to the overall network.

Link Road - Currently there is no link between the A522 Tean Road and Brookhouse Way / A521 due to it being severed by a disused railway line. The railway line is in third party ownership and a bridge will be required to connect a link road through. The proposed link road would allow a percentage of predicted trips from the SW area to traverse Brookhouse Way / A521 opposed to solely the A522, however the level of trips which would use the A521 from this area would have a minimal effect in improving congestion within Cheadle Town Centre. The study considers that the proposed Link Road would not be a solution on its own.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 150 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility areas of existing employment is likely to have a positive effect, as could the site's location away from historic assets. However, the

Cheadle

CH085c Land south of Aynsley Close

development of greenfield, grade 3 ALC land is assessed as having a significant negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Cheadle.

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways: Can serve the envisaged no. dwellings of Dandillion Avenue if widened to 5.5m; if Dandillion Avenue remains at 4.8m wide then an additional approx 25-50 dwellings on area CH85c could be served.

Natural England – The site may present a strategic site. Has a Landscape and Visual Impact Assessment been carried out? Those sites taken forward to the next stage of the process may require LVIA in order to inform the development specification for the site.

Developer/Agent

Supports allocation of site for housing. Core Strategy states Cheadle's role as a service centre market town will be expanded. South of town is logical place for development. Outside floodplain, no landscape/ecological constraints. Not good quality agricultural land. Access possible. Sustainable transport links to town. Size to safeguard land for community facilities.

Public response

70 objections, 3 support

Issues raised:

Objections

- Infrastructure – Schools – Need more school places. Schools full.
- Infrastructure - Traffic / Transport - Is some distance from schools/services would increase traffic congestion. Would need Southern Link Road, this is not feasible has been ruled out by SCC & Core Strategy Inspector. Access to the site is difficult. Site bounded by railway line reinstatement of this line is feasible. Moorland & City Railways are considering opening part of the line to Cresswell. Access through Meakin Close would create road safety issues. Would increase traffic. Cheadle is already congested and roads cannot cope. Traffic from Alton Towers/JCB & Tarmac. Traffic congestion will have an adverse impact on tourism. How will site be accessed?
- Infrastructure – Other – Infrastructure inadequate. Need more health services. Are already overstretched. Lack of open space.
- Scale of development - Disproportionate to infrastructure. Too many houses for Cheadle. Unbalanced development of Cheadle
- Landscape Impact on landscape. Wardell Armstrong Study 2008 land west of Cheadle is an area of landscape enhancement.
- Nature Conservation – Loss of wildlife from the area. Site is abundant in wildlife.
- Flood Risk Site borders River Tean, which has a history of flooding in Tean 2 miles away. Development would increase likelihood of further flooding. Site currently gets waterlogged. Potential flooding.
- Amenity (e.g. noise, privacy, loss of light) Existing residents would be overlooked. Loss of privacy/light. Increase in noise/pollution. No public areas this side of Cheadle.
- Scale of development Too high. Unsustainable too far from shops & facilities. Lead to urban sprawl. Unbalanced development of Cheadle. Site unsustainable too far from shops & facilities.
- Listed Building / Conservation Area – Need to protect heritage assets.
- Government Policy – Contrary to NPPF.

Cheadle

CH085c Land south of Aynsley Close

- Other - Sites to north of Cheadle centre would balance town (provided infrastructure improved). Proposed development disproportionate to other towns. Where will the people come from Employment plans in Cheadle south are unacceptable. Cheadle will become a dormer town. Popular area of countryside well used by local community for walking. Should build in north & east of Cheadle. SNPP indicate don't need this many houses. Is green belt. Coal workings on site. Are other suitable brownfield sites. Limited employment will lead to commuting. Loss of agricultural land.

Support

- Listed Building / Conservation Area Historic legibility/landscape been categorised as medium compared to high in NE Cheadle.
- Other - Allocated for housing in 1998 Local Plan. Inside development boundary & new draft development boundary. Previous application on site, refused but indicates desirability of site. Walking distance to schools. Site was preferred site in Preferred Options stage 2008. Reluctantly accept more housing has to be built. Need to protect footpaths and countryside for tourism. New residents will work outside Cheadle sites need to be close to major roads & avoid town centre which can't cope with increased traffic

Council response –

- There is no direct access onto the highway and therefore access would have to be achieved through an adjacent site and this is not achievable via the existing road network. If access can be resolved to an acceptable standard then development could take place.
- The Highway Authority confirms that site CH128 could provide access to sites CH093 and CH085a – d.
- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. The majority of the site is within Flood Zone 1 – Low probability.
- Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- New development is the main way to deliver new or improved infrastructure e.g. more residents may support more local facilities. Infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas.
- The Cheadle Transport Study has assessed the impact of proposed new development on local roads. This concludes that improvements are required and additional work will need to be undertaken to identify mitigation measures once the location of new sites is known.
- The land in question is not highlighted as being important to the setting of the settlement in the Council's Landscape & Settlement Character Assessment. A Landscape & Visual Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed The site survey results will be used as part of the site selection process. Any other sites which come forward and are potentially suitable for development will also need to be assessed.

Cheadle

CH085c Land south of Aynsley Close

- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- The scale of development will depend on the number of sites allocated in this particular location. Any new development taking place will be subject to design policies contained within the new Local Plan – which will be subject to public consultation next year.
- The National Planning Policy Framework supports housing growth which meets the Council's objectively assessed housing needs.
- The land is Agricultural Class 3 Good to Moderate.
- The site is not located within the Conservation Area or adjacent to any listed buildings. A Heritage Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The development boundary will be amended to incorporate any new allocations. The site is not located within Green Belt.
- The Coal Authority have confirmed that there are no issues that would prevent development of the site. Investigative work will take place in these areas prior to the commencement of any development.

Preferred Options Consultation April 2016

JMW Planning on behalf of Mr Campbell: This site is supported in the initial sustainability appraisal report which considered a south-west focus for new housing development. It is well located in relation to existing services within the town, most of which can be reached by means other than the private motor car. The landowners are willing to consider releasing the land for development initially taking access off the existing highways network.

SCC Highways: Potential link/access road identified connecting to A522 Tean Rd which will require assessment. Assessment of impact on Tape Street Corridor will be required. Connections to local advisory cycle network should be considered. Site will need to connect with existing pedestrian route network. Sustainable access to town centre requires consideration.

Cheadle Town Service 123 serves Wedgwood Road close to the sites between 09:30 and 13:30. Service 32 operates hourly along the A522 Tean Road between Uttoxeter, Cheadle and Hanley.

Link Road

With regard to proposed housing sites to the south west of Cheadle and their potential to deliver the Mobberley Link Road (western bypass), the benefits of this will need to be demonstrated through the study work identified in the Core Strategy section 8.1.53 Policy SS5c. Appended to this letter is a plan showing the protected line for this route. Presumably the access road to these proposed development sites could form the southern section of this route, although it would need to be designed to allow the required capacity for a bypass. This may be difficult to achieve if, for instance, the access road is designed in accordance with the Department for Transport's Manual for Streets. There is also the question of how many forms of access would be required to this development area which is intended to accommodate in excess of 400 dwellings.

Paragraph 3.32 of the Plan refers to the safeguarding of a potential indicative route to enable provision of the bypass. However it is difficult to see how this together with the Adopted Core Strategy Policy SS5c can effectively achieve this. The policy contains the phrase: improve environmental quality and accessibility by: reducing levels of through traffic in the town centre

Cheadle

CH085c Land south of Aynsley Close

and along the A521 and A522 promoting the longer term provision of a bypass to the west of the town.

The explanatory text of the Core Strategy reads:

'8.1.53 One of the most significant challenges is identifying the need and viability of a bypass to relieve through traffic in the town and provide improved access to existing and planned housing and employment areas. Whilst some junction improvements have been implemented, there remains a strong need to investigate and identify other potential solutions to improve traffic flows through the town particularly in the light of the growth aspirations for the town. A Transportation Study will therefore be required to investigate the need and viability of a bypass and/or other traffic management solutions, including a link from the A50 at Blythe Bridge to Cheadle, the implications for surrounding villages and the wider area and the scope for funding from proposed developments. This will be undertaken as part of the review of the Core Strategy.'

The bypass is also not shown on the Core Strategy Key Diagram and Inset Maps. It is noted that paragraph 3.31 of the Plan refers to a further study to explore the case and feasibility of a bypass.

Therefore, currently the Core Strategy says that the need / viability for a Bypass has yet to be established and all that's shown on Map 47 Cheadle as a 'potential link road' is part of the historic route of the A521-A522 Cheadle Western Bypass afforded protection by SCC in 2002 and currently declared on searches. It needs to be appreciated that in these circumstances the 'protection' afforded by SCC to this route may be insufficient to resist a challenge from a developer.

SCC Education: Future Need: Cheadle Town Requirement (based on the assumptions outlined in SCC report)

Primary School Provision

- The number of new homes planned for this school planning area indicate that education contributions will be required to fund additional primary school places at an existing or new school to mitigate the impact of local developments. At least an additional 1FE of primary school provision will be required in Cheadle Town during the Local Plan period to take into account the number of dwellings proposed over the duration of the Local Plan. We note that land to the east of the town (CH132) indicates an approximate location for a new/extended school and we ask that this land continues to be safeguarded.

High School Provision

- The High Schools in this School Place Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in this area, if the level of housing development is consistent with the estimated housing need. However, the allocation of housing sites, including windfall and small sites will continue to be monitored to ensure that there continues to be a sufficient supply of High School places in the town.

There is a small site allowance of 150 dwellings during the Local Plan period in Cheadle Town. As the location of these sites are not yet known the impact of these developments on school places will continue to be monitored as specific sites come forward and may result in additional school places required.

Cheadle

CH085c Land south of Aynsley Close

Please note that the allocation of housing in the rural area, including the small site allowance of 570 dwellings which has yet to be allocated, will have an impact on High School places in Cheadle Town, if those pupils attending school in the larger villages go on to attend High School in Cheadle Town.

LLFA: FRA required. Consult SCC. Surface water flooding shown on site. May need modelling. Please put developer in contact with SCC as early as possible.

Historic England: It is not clear how the impact of the site allocations, individually and cumulatively, has been assessed in respect of the Grade II listed building Mobberley House. Further information is required.

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Development high risk area.

SMDC Environmental Health: No significant Issues

Issues raised - public responses & petition :

- Scale of development
- Link road
- Location of new school (in north)
- Need for new housing
- Amenity issues
- Highways and access
- Traffic in town centre
- Landscape impact
- Flood Risk / surface water flooding
- Not all public open space is accessible to the public
- Pedestrian routes / open space
- Ecology / nature conservation issues
- Lack of infrastructure to accommodate new housing
- Agricultural Land Classification

Council response –

- Developer support for the site is noted.
- There is no current available access to this section of land.
- The Council has considered a number of sites within and on the edge of Cheadle. The majority of the proposed area for housing is located within the existing town boundary. It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway improvements, affordable housing and community facilities such as public open space.
- The Council's Landscape, Green Space and Heritage Impact Study(August 2016) includes a Landscape Assessment for this site. It advises that the site is open however long distance views are screened by the railway embankment located to the north and west of the site. Only the north-eastern corner of the site is adjacent to the settlement edge and is otherwise separated by adjacent sites (CH085d). The site should therefore

CH085c Land south of Aynsley Close

not be developed in isolation. If the adjoining sites are developed first, then CH085c could be considered as a potential development site in a later phase. There could be impacts on local landscape character (medium landscape sensitivity), however site-specific landscape mitigation measures could include phased development (ensuring the site is developed following the development of adjoining sites), limiting building heights and planting in the west of the site and phasing development.

- The Council's Landscape, Green Space and Heritage Impact Study (August 2016) includes a Heritage Assessment for this site which advises that the wider agricultural setting is considered to contribute to the overall significance of the Grade II asset – Mobberley House. This could be mitigated through screening of the southern edge of the site. Development in the site would change a part of the HLC zone CHECZ 8, although for the most part, it would remain unaltered (Historic Environment Character Assessment 2010) and the Site is considered suitable for development in heritage terms subject to appropriate masterplanning.
- New housing schemes will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the consideration of new links.
- There are proposals for new housing development to the north of the town.
- The Cheadle Town Centre Phase 2 Study (2017) identifies the likely impacts of the housing and employment Preferred Options sites on the surrounding highway network. By 2031 the study predicts queuing and delays in certain locations, in part due to 17 years of potential traffic growth which is compounded by the additional trips generated by new housing and employment. There is limited scope to change junction characteristics to improve network capacity within the Town Centre due to its historically confined road structure. The study recommends a package of mitigation measures in order to provide additional capacity onto the overall network. Mitigation measures include junction and lane improvements, new sites having good access to public transport provision, measures to encourage walking and cycling to reduce short trips, improved HGV signage and new parking bays along High Street.
- The Cheadle Town Centre Phase 2 Study (2017) considers the potential SW link road. Currently there is no link between the A522 Tean Road and Brookhouse Way / A521 due to it being severed by a disused railway line. The railway line is in third party ownership and a bridge will be required to connect a link road through. The proposed link road would allow a percentage of predicted trips from the SW area to traverse Brookhouse Way / A521 opposed to solely the A522, however the level of trips which would use the A521 from this area would have a minimal effect in improving congestion within Cheadle Town Centre. The study considers that the proposed Link Road would not be a solution on its own.
- National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan.
- The Council has considered a number of sites within and on the edge of Cheadle. There is not enough brownfield land or sites to meet the District's proposed housing requirement within the built up area of the town. This site is located on the edge of the settlement within the existing town boundary. It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway improvements, affordable housing and community facilities such as public open space. Distance from the town centre needs to be balanced with other considerations such as Green Belt, Heritage, Landscape and viability / deliverability.
- The Council has completed a Level 1 Strategic Flood Risk Assessment (SFRA) for the District, the results of which have been used to inform the site selection process. The site is within Flood Zone 1 – Low probability. The area to the west of the site adjacent to the Brook is high probability and can be incorporated into uses other than housing i.e. open space. The Environment Agency has confirmed that a Level 2 SFRA will not be required as the developer should be able to design out flood risk given the small proportion of

Cheadle

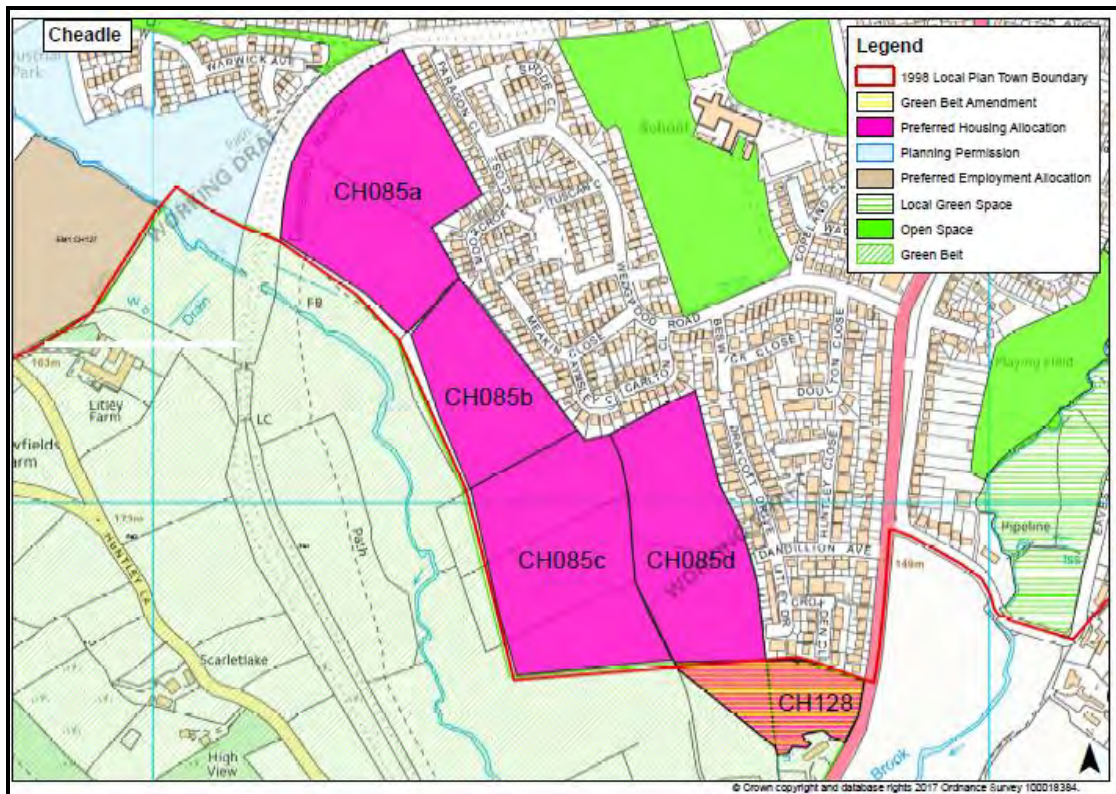

CH085c Land south of Aynsley Close

Flood Zones on the edge of them, and the fact that they are already modelled in detail, so the extents shouldn't increase. Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.

- The proposed new school is planned to serve the north of Cheadle and could therefore reduce school traffic currently accessing schools in the SW of the town. New housing development is also proposed in the north of the town. There are existing schools located in the SW of Cheadle to meet the needs of residents located in the south of the town.
- Agreed that not all the open spaces marked on the map are accessible to the public and should be indicated as 'open space' rather than 'public open space'. A public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and where new public open space is required.
- The site was subject to a Phase 1 ecological survey in 2014 and a later 2016 ecology study considered the scope for 'local wildlife site' i.e. SBI status. The Phase 1 survey concludes that the site has low potential to support protected species as the habitat is poor and the LWS survey considers that most of the site habitats are common and not considered eligible for SBI status. Both studies recommend further surveys and actions prior to development.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change. The Local Plan also proposes employment sites. The adopted Core Strategy sets out the distribution of housing development between the towns and rural areas: Leek 30%, Biddulph 20%, Cheadle 22% and Rural Areas 28%.
- The land is Agricultural Class 3 Good to Moderate. Data supplied by Natural England indicates that there is a moderate to high likelihood that the land is best and most versatile land i.e. Class 3a.
- The Council will seek a proportion of affordable housing on the site which meets the required design policies.

Cheadle

CH085c Land south of Aynsley Close

Cheadle

CH085d Land west of Draycott Drive

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Majority of site within current development boundary and no significant issues.
- Small part of Green Belt considered to be exceptional circumstances to release this small section of Green Belt to provide access to adjacent housing land which is currently landlocked.

Key Issues

- Southern section of the site within the Green Belt
- Moderate likelihood that the site could be agricultural Class 3a – best and most versatile.
- No direct access to whole site. No justification for link road but safeguard route.
- Screening to mitigate impact on listed building.
- Density is a bit low but need for landscaping / road etc.
- Traffic congestion in the town centre.

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Greenfield	Most within development boundary / part within Green Belt & countryside	95 (23 dph)	4.2	Development of site supported by landowner	<ul style="list-style-type: none">• Large open field, well related to existing development• Part within development boundary previously allocated for housing in 1998 Local Plan.• No direct access

Studies

Green Belt Review (2015)

Check Sprawl	Contribution
Maintain Separation	Limited Contribution
Prevent Encroachment	Contribution
Preserve Setting	Contribution

Moderate Impact on Green Belt

A small part of CH093 was incorporated within CH085d at the Preferred Options stage. The whole of CH093 was considered as part of the Green Belt Review Study. The whole of CH093 is a large site which is an extension of land already released from the Green Belt. The site is well set back and screened from the A522 Tean Road to the east and from the disused railway line and Huntley Lane to the west. The difficulty is the absence of a clear western boundary, which is related absence of a clear western boundary of the land removed from the Green Belt to the north. However, comprehensive masterplanning of this site and land immediately to the north would create a comprehensive scheme with significant external boundaries.

To the south, Mobberley Brook could be used as a boundary.

CH085d Land west of Draycott Drive

Recommendation - Consider for Release under Exceptional Circumstances with amendment to the Town Boundary.

Extended Phase 1 Habitat Survey 2015 (FID 154)

Conclusion

The site has fairly low potential to support protected species as the habitats are mainly species poor and moderately connected to other more biodiverse habitats. However the species rich hedgerow and tree with bat potential warrants the site being attributed district ecological importance.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Bat surveys of the tree with roosting potential
- Hedgerow survey
- Vegetation removal at the appropriate time of year

Extended Phase 1 Habitat Survey 2016 (southern section only)

Habitat is common and widespread locally and throughout UK, considered to be of importance to nature conservation level only. Recommends bat survey.

Local Wildlife Assessment (ECUS, 2017)

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that most of site habitats are common throughout the region and not considered eligible for BAS / SBI status. However, the species-rich hedgerow has potential for BAS / SBI status, one oak tree has bat roost potential and the scattered trees also need to be assessed. Further surveys are therefore needed.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- HEGS survey of species-rich hedgerow
- Bat survey
- Tree survey

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

Landscape, Local Green Space and Heritage Impact Study (August 2016)

Landscape Assessment

Site comprises generally flat fields on the south-western edge of the settlement, enclosed by residential development to the east and north. The site is open to the west however long distance views are screened by the railway embankment located further to the west of the site. Site fits well within the existing settlement pattern as it does not extend beyond the existing western settlement edge formed by Draycott Drive and Carlton Close. Planting could be undertaken on the western boundary in order to create a vegetated edge to the settlement. *Site is of low landscape sensitivity.*

Heritage Assessment

There are two Grade II Listed Buildings within 400m; of which the site is part of the wider agricultural setting of a farm to the south. As a farm, the agricultural setting is considered to contribute to the overall significance of the asset. As such, development would be likely to cause adverse effects to its setting by altering some of that agricultural landscape. Mitigation through screening of the southern edge of the site would reduce those effects. Development in the site would change a part of the HLC zone CHECZ 8, although for the most part, it would remain unaltered (Historic Environment Character Assessment 2010).

Cheadle

CH085d Land west of Draycott Drive

Site suitable for development in heritage terms subject to appropriate masterplanning.

Level 1 SFRA (October 2015)

Site located in Flood Zone 1 – low probability. Site therefore meets the sequential test.

Best and Most Versatile Land (Natural England dataset)

Data supplied by Natural England indicates that there is a moderate likelihood that the site is best and most versatile land i.e. Class 3a.

Cheadle Town Centre Phase 2 Study (2017)

The Phase 2 Study predicts that in 2031 general traffic growth plus additional trips generated by new housing and employment development will cause increased queuing and delays. There is limited scope to change junction characteristics due to the historically confined road structure, however the study recommends a package of mitigation measures which could provide some additional capacity to the overall network.

Link Road - Currently there is no link between the A522 Tean Road and Brookhouse Way / A521 due to it being severed by a disused railway line. The railway line is in third party ownership and a bridge will be required to connect a link road through. The proposed link road would allow a percentage of predicted trips from the SW area to traverse Brookhouse Way / A521 opposed to solely the A522, however the level of trips which would use the A521 from this area would have a minimal effect in improving congestion within Cheadle Town Centre. The study considers that the proposed Link Road would not be a solution on its own.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 115 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to health care services and facilities and areas of existing employment is likely to have a positive effect, as could the site's location away from historic assets. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect. The site's ecological value and proximity to historic assets is likely to have a negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Cheadle.

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways: Can serve the envisaged no. dwellings of Dandillion Avenue if widened to 5.5m; if Dandillion Avenue remains at 4.8m wide then an additional approx 25-50 dwellings on area CH85c could be served.

Natural England – The site may present a strategic site. Has a Landscape and Visual Impact Assessment been carried out? Those sites taken forward to the next stage of the process may require LVIA in order to inform the development specification for the site.

Developer/Agent Supports allocation of site for housing. Core Strategy states Cheadle's role as a service centre market town will be expanded. South of town is logical place for development. Outside floodplain, no landscape/ecological constraints. Not good quality agricultural land. Access possible. Sustainable transport links to town. Size to safeguard land for community facilities.

Cheadle

CH085d Land west of Draycott Drive

Public response

37 objections, 4 support

Issues raised:

Objections

- Infrastructure – Schools – Need more school places. Schools already full.
- Infrastructure - Traffic / Transport - Is some distance from schools/services would increase traffic congestion. Need southern link road to access site, this is not feasible has been ruled out by SCC & Core Strategy Inspector.. Access to the site is difficult. Traffic congestion will have an adverse impact on tourism. Railway next to site reinstatement of this line is feasible. Moorland & City Rail are considering opening part of line to Cresswell. Access difficult. Access through estate would create road safety issues. Would increase traffic. Cheadle is already congested and roads cannot cope. Traffic from Alton Towers/JCB & Tamarac. Site bounded by railway line reinstatement of this line is feasible. Access from south through green belt.
- Infrastructure – Other – Infrastructure inadequate. Need more health services. Are already overstretched. Lack of open space. No services/sewerage to the site. Too far from facilities/services.
- Scale of development - Disproportionate to infrastructure. Too many houses for Cheadle. Lead to urban sprawl. Unbalanced development of Cheadle. Site unsustainable too far from shops& facilities.
- Landscape Wardell Armstrong Study 2008 land west of Cheadle is an area of landscape enhancement.
- Nature Conservation – Site home to wildlife. Loss of wildlife from the area. Abundant wildlife on the site.
- Flood Risk Site borders River Tean, which has a history of flooding in Tean 2 miles away. Development would increase likelihood of further flooding. Is a flood risk area..
- Amenity (e.g. noise, privacy, loss of light) – Loss of light/privacy. Noise pollution. Existing residents would be overlooked. Loss of privacy/light. Increase in noise/pollution.
- Listed Building / Conservation Area - Need to conserve heritage assets
- Government Policy - Contrary to NPPF
- Other - Sites to north of Cheadle centre would balance town (provided infrastructure improved). Proposed development disproportionate to other towns. Where will the people come from Employment plans in Cheadle south are unacceptable. Cheadle will become a dormer town. Loss of green belt/ agricultural land. Loss of open space, used for walking/recreation. Should build in north & east of Cheadle. Is green belt. Coal workings on site. Land unsuitable for development possible need for piling. Loss of area used by residents for recreation.

Support

- Listed Building / Conservation Area Historic legibility/landscape been categorised as medium compared to high in NE Cheadle.
- Other Allocated for housing in 1998 Local Plan. Inside development boundary & new draft development boundary. Previous application on site, refused but indicates desirability of site. Walking distance to schools. Good bus links. Site was preferred site in Preferred Options stage 2008. Reluctantly accept more housing has to be built. Need to protect footpaths and countryside for tourism. New residents will work outside Cheadle sites need to be close to major roads & avoid town centre which can't cope with increased traffic

Council response –

- There are issues regarding access to the site and the number of dwellings that could be served. If access can be resolved to an acceptable standard then development could take place.
- The Highway Authority confirms that site CH128 could provide access to sites CH093 and CH085a – d.

Cheadle

CH085d Land west of Draycott Drive

- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. The majority of the site is within Flood Zone 1 – Low probability.
- Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- New development is the main way to deliver new or improved infrastructure e.g. more residents may support more local facilities. Infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas.
- The Cheadle Transport Study has assessed the impact of proposed new development on local roads. This concludes that improvements are required and additional work will need to be undertaken to identify mitigation measures once the location of new sites is known.
- The land in question is not highlighted as being important to the setting of the settlement in the Council's Landscape & Settlement Character Assessment. A Landscape & Visual Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed sites included in the Site Options consultation. The site survey results will be used as part of the site selection process. Any other sites which come forward and are potentially suitable for development will also need to be assessed.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- The scale of development will depend on the number of sites allocated in this particular location. Any new development taking place will be subject to design policies contained within the new Local Plan – which will be subject to public consultation next year.
- The National Planning Policy Framework supports housing growth which meets the Council's objectively assessed housing needs.
- The land is Agricultural Class 3 Good to Moderate.
- The site is not located within the Conservation Area or adjacent to any listed buildings. A Heritage Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The development boundary will be amended to incorporate any new allocations. The site is not located within Green Belt.
- The Coal Authority have confirmed that there are no issues that would prevent development of the site. Investigative work will take place in these areas prior to the commencement of any development.

Cheadle

CH085d Land west of Draycott Drive

JMW Planning on behalf of Mr Campbell: This site is supported in the initial sustainability appraisal report which considered a south-west focus for new housing development. It is well located in relation to existing services within the town, most of which can be reached by means other than the private motor car. The landowners are willing to consider releasing the land for development initially taking access off the existing highways network.

SCC Highways: Potential link/access road identified connecting to A522 Tean Rd which will require assessment. Assessment of impact on Tape Street Corridor will be required. Connections to local advisory cycle network should be considered. Site will need to connect with existing pedestrian route network. Sustainable access to town centre requires consideration.

Cheadle Town Service 123 serves Wedgwood Road close to the sites between 09:30 and 13:30. Service 32 operates hourly along the A522 Tean Road between Uttoxeter, Cheadle and Hanley.

Link Road

With regard to proposed housing sites to the south west of Cheadle and their potential to deliver the Mobberley Link Road (western bypass), the benefits of this will need to be demonstrated through the study work identified in the Core Strategy section 8.1.53 Policy SS5c. Appended to this letter is a plan showing the protected line for this route. Presumably the access road to these proposed development sites could form the southern section of this route, although it would need to be designed to allow the required capacity for a bypass. This may be difficult to achieve if, for instance, the access road is designed in accordance with the Department for Transport's Manual for Streets. There is also the question of how many forms of access would be required to this development area which is intended to accommodate in excess of 400 dwellings.

Paragraph 3.32 of the Plan refers to the safeguarding of a potential indicative route to enable provision of the bypass. However it is difficult to see how this together with the Adopted Core Strategy Policy SS5c can effectively achieve this. The policy contains the phrase: improve environmental quality and accessibility by: reducing levels of through traffic in the town centre and along the A521 and A522 promoting the longer term provision of a bypass to the west of the town.

The explanatory text of the Core Strategy reads:

'8.1.53 One of the most significant challenges is identifying the need and viability of a bypass to relieve through traffic in the town and provide improved access to existing and planned housing and employment areas. Whilst some junction improvements have been implemented, there remains a strong need to investigate and identify other potential solutions to improve traffic flows through the town particularly in the light of the growth aspirations for the town. A Transportation Study will therefore be required to investigate the need and viability of a bypass and/or other traffic management solutions, including a link from the A50 at Blythe Bridge to Cheadle, the implications for surrounding villages and the wider area and the scope for funding from proposed developments. This will be undertaken as part of the review of the Core Strategy.'

The bypass is also not shown on the Core Strategy Key Diagram and Inset Maps. It is noted that paragraph 3.31 of the Plan refers to a further study to explore the case and feasibility of a bypass.

Therefore, currently the Core Strategy says that the need / viability for a Bypass has yet to be established and all that's shown on Map 47 Cheadle as a 'potential link road' is part of the historic route of the A521-A522 Cheadle Western Bypass afforded protection by SCC in 2002 and currently declared on searches. It needs to be appreciated that in these circumstances the 'protection' afforded by SCC to this route may be insufficient to resist a challenge from a developer.

Cheadle

CH085d Land west of Draycott Drive

SCC Education: Future Need: Cheadle Town Requirement (based on the assumptions outlined in SCC report)

Primary School Provision

- The number of new homes planned for this school planning area indicate that education contributions will be required to fund additional primary school places at an existing or new school to mitigate the impact of local developments. At least an additional 1FE of primary school provision will be required in Cheadle Town during the Local Plan period to take into account the number of dwellings proposed over the duration of the Local Plan. We note that land to the east of the town (CH132) indicates an approximate location for a new/extended school and we ask that this land continues to be safeguarded.

High School Provision

- The High Schools in this School Place Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in this area, if the level of housing development is consistent with the estimated housing need. However, the allocation of housing sites, including windfall and small sites will continue to be monitored to ensure that there continues to be a sufficient supply of High School places in the town.

There is a small site allowance of 150 dwellings during the Local Plan period in Cheadle Town. As the location of these sites are not yet known the impact of these developments on school places will continue to be monitored as specific sites come forward and may result in additional school places required.

Please note that the allocation of housing in the rural area, including the small site allowance of 570 dwellings which has yet to be allocated, will have an impact on High School places in Cheadle Town, if those pupils attending school in the larger villages go on to attend High School in Cheadle Town.

LLFA: FRA required. Consult SCC. Flow route across site, needs investigation as to the risk posed to site.

Historic England: It is not clear how the impact of the site allocations, individually and cumulatively, has been assessed in respect of the Grade II listed building Mobberley House. Further information is required.

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Development high risk area.

SMDC Environmental Health: No significant Issues

Issues raised - public responses & petition :

- Scale of development
- Link road
- Location of new school (in north)

Cheadle

CH085d Land west of Draycott Drive

- Need for new housing
- Amenity issues
- Highways and access
- Traffic in town centre
- Landscape impact
- Flood Risk / surface water flooding
- Not all public open space is accessible to the public
- Pedestrian routes / open space
- Ecology / nature conservation issues
- Lack of infrastructure to accommodate new housing
- Agricultural Land Classification

Council response –

- Developer support for the site is noted.
- Some housing could be served off Dandillion Avenue and the capacity could be increased if Dandillion Avenue was widened.
- The Council has considered a number of sites within and on the edge of Cheadle. The majority of the proposed area for housing is located within the existing town boundary. It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway improvements, affordable housing and community facilities such as public open space.
- The Council's Landscape, Green Space and Heritage Impact Study (August 2016) includes a Landscape Assessment for this site. It advises that the site comprises generally flat fields enclosed by residential development to the east and north. The site is open to the west however long distance views are screened by the railway embankment located further to the west of the site. Site fits in well with the existing settlement pattern as it does not extend beyond the existing western settlement edge formed by Draycott Drive and Carleton Drive. Planting could be undertaken on the western boundary in order to create a vegetated edge to the settlement. (low landscape sensitivity).
- The Council's Landscape, Green Space and Heritage Impact Study (August 2016) includes a Heritage Assessment for this site which advises that the wider agricultural setting is considered to contribute to the overall significance of the Grade II asset – Moberley House. This could be mitigated through screening of the southern edge of the site. Development in the site would change a part of the HLC zone CHECZ 8, although for the most part, it would remain unaltered (Historic Environment Character Assessment 2010) and the Site is considered suitable for development in heritage terms subject to appropriate masterplanning.
- New housing schemes will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the consideration of new links.
- There are proposals for new housing development to the north of the town.
- The Cheadle Town Centre Phase 2 Study (2017) identifies the likely impacts of the housing and employment Preferred Options sites on the surrounding highway network. By 2031 the study predicts queuing and delays in certain locations, in part due to 17 years of potential traffic growth which is compounded by the additional trips generated by new housing and employment. There is limited scope to change junction characteristics to improve network capacity within the Town Centre due to its historically confined road structure. The study recommends a package of mitigation measures in order to provide additional capacity onto the overall network. Mitigation measures include junction and lane improvements, new sites having good access to public transport provision, measures to encourage walking and cycling to reduce short trips, improved HGV signage and new parking bays along High Street.
- The Cheadle Town Centre Phase 2 Study (2017) considers the potential SW link road. Currently there is no link between the A522 Tean Road and Brookhouse Way / A521 due to it being severed by a disused railway line. The railway line is in third party ownership and a bridge will be required to connect a link road through. The proposed link road would allow a percentage of predicted trips from the SW area to traverse Brookhouse

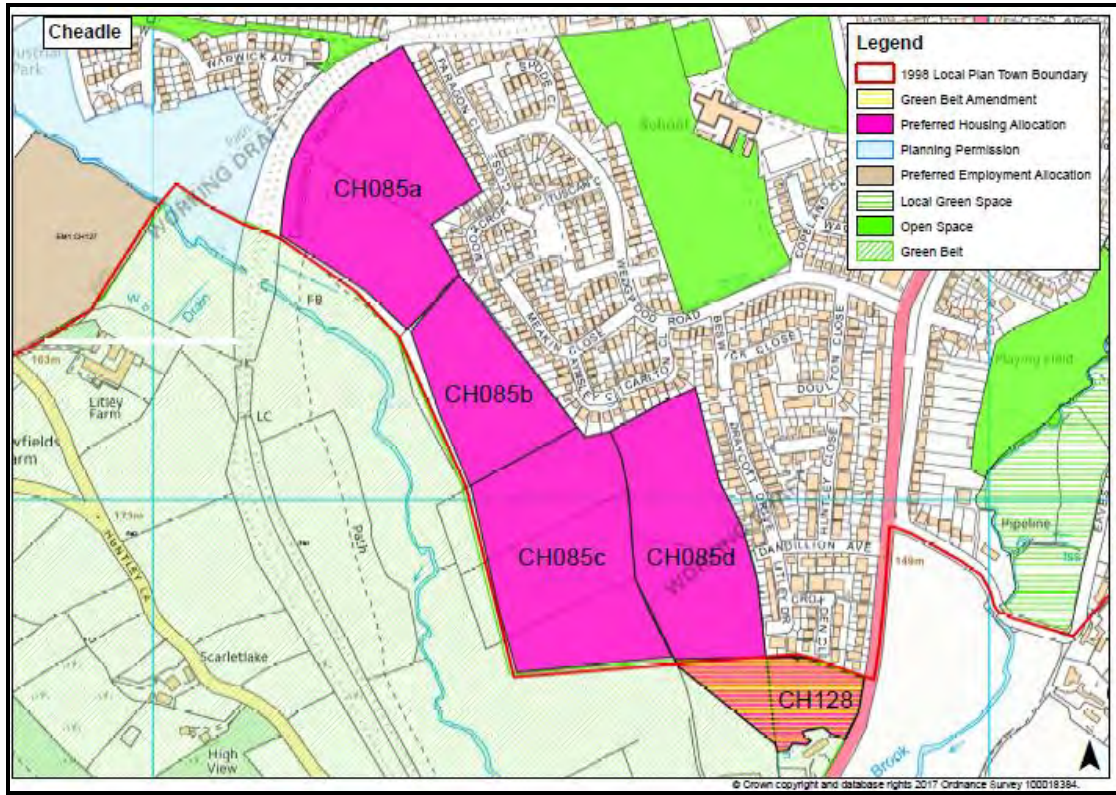

CH085d Land west of Draycott Drive

Way / A521 opposed to solely the A522, however the level of trips which would use the A521 from this area would have a minimal effect in improving congestion within Cheadle Town Centre. The study considers that the proposed Link Road would not be a solution on its own.

- National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan.
- The Council has considered a number of sites within and on the edge of Cheadle. There is not enough brownfield land or sites to meet the District's proposed housing requirement within the built up area of the town. This site is located on the edge of the settlement within the existing town boundary. It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway improvements, affordable housing and community facilities such as public open space. Distance from the town centre needs to be balanced with other considerations such as Green Belt, Heritage, Landscape and viability / deliverability.
- The Council has completed a Level 1 Strategic Flood Risk Assessment (SFRA) for the District, the results of which have been used to inform the site selection process. The site is within Flood Zone 1 – Low probability. Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- The proposed new school is planned to serve the north of Cheadle and could therefore reduce school traffic currently accessing schools in the SW of the town. New housing development is also proposed in the north of the town. There are existing schools located in the SW of Cheadle to meet the needs of residents located in the south of the town.
- Agreed that not all the open spaces marked on the map are accessible to the public and should be indicated as 'open space' rather than 'public open space'. A public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and where new public open space is required.
- The site was subject to a Phase 1 ecological survey in 2014 and a later 2016 ecology study considered the scope for 'local wildlife site' i.e. SBI status. The Phase 1 survey concludes that the site has low potential to support protected species as the habitat is poor and the LWS survey considers that most of the site habitats are common and not considered eligible for SBI status. Both studies recommend further surveys and actions prior to development.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change. The Local Plan also proposes employment sites. The adopted Core Strategy sets out the distribution of housing development between the towns and rural areas: Leek 30%, Biddulph 20%, Cheadle 22% and Rural Areas 28%.
- The land is Agricultural Class 3 Good to Moderate. Data supplied by Natural England indicates that there is a moderate to high likelihood that the land is best and most versatile land i.e. Class 3a.
- The Council will seek a proportion of affordable housing on the site which meets the required design policies.

- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Considered to be exceptional circumstances to release this small section of Green Belt to provide access to adjacent housing land which is currently landlocked.

Key Issues

- Within Green Belt, however makes limited contribution and is well related to existing housing to the north.
- Moderate likelihood that the site could be agricultural Class 3a – best and most versatile.
- Provides access to other SW housing sites. No justification for link road but safeguard route.
- Screening to mitigate impact on listed building.
- Traffic congestion in the town centre.

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Greenfield	Open countryside / Green Belt	20 (25 dph)	0.8	Site put forward by owner	<ul style="list-style-type: none">• Site of former plant nursery, immediately north of the vets, now overgrown.• Could provide access to other housing sites and form part of the link road.

Studies

Green Belt Review (2015)

Check Sprawl	Limited Contribution
Maintain Separation	Limited Contribution
Prevent Encroachment	Limited Contribution
Preserve Setting	Contribution

Limited Impact on Green Belt

A well contained parcel which is a direct extension of the existing built envelope of Cheadle. Development would be contained physically and visually and would not impact on the wider Green Belt in this location. *Recommendation - Consider for Release under Exceptional Circumstances with amendment to the Town Boundary.*

Extended Phase 1 Habitat Survey 2015 (FID 195)

Conclusion

The site is large enough to potentially support small mammals that could provide food for owls and raptors as well as supporting ground nesting birds. However, this former woodland site has species poor habitats and floral diversity and therefore is considered to have low ecological importance.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Vegetation removal at the appropriate time of year

CH128 Land west of Tean Road

Local Wildlife Assessment (ECUS, 2017)

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that most of site habitats are common throughout the region and not considered eligible for BAS / SBI status. No protected species were identified on site and the site is considered to have low ecological importance.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- None required

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

Landscape, Local Green Space and Heritage Impact Study (August 2016)

Landscape Assessment

Site comprises generally flat fields on the south-western edge of the settlement, enclosed by residential development to the east and north. The site is open to the west however long distance views are screened by the railway embankment located further to the west of the site. Site fits well within the existing settlement pattern as it does not extend beyond the existing western settlement edge formed by Draycott Drive and Carlton Close. Planting could be undertaken on the western boundary in order to create a vegetated edge to the settlement. *Site is of low landscape sensitivity.*

Heritage Assessment

There are two Grade II Listed Buildings within 400m which are well screened by vegetation. Due to the topography and existing vegetation, development would be unlikely to cause high adverse effects to the settings of the assets. Mitigation could include screening of the eastern and southern edges to reduce effects. Development in the site would change a small element of the HLC zone CHECZ 8, although for the most part, it would remain unaltered (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms subject to appropriate masterplanning.

Level 1 SFRA (October 2015)

Site located in Flood Zone 1 – low probability. Site therefore meets the sequential test.

Best and Most Versatile Land (Natural England dataset)

Data supplied by Natural England indicates that there is a moderate likelihood that the site is best and most versatile land i.e. Class 3a.

Cheadle Town Centre Phase 2 Study (2017)

The Phase 2 Study predicts that in 2031 general traffic growth plus additional trips generated by new housing and employment development will cause increased queuing and delays. There is limited scope to change junction characteristics due to the historically confined road structure, however the study recommends a package of mitigation measures which could provide some additional capacity to the overall network.

Link Road - Currently there is no link between the A522 Tean Road and Brookhouse Way / A521 due to it being severed by a disused railway line. The railway line is in third party ownership and a bridge will be required to connect a link road through. The proposed link road would allow a percentage of predicted trips from the SW area to traverse Brookhouse

Cheadle

CH128 Land west of Tean Road

Way / A521 opposed to solely the A522, however the level of trips which would use the A521 from this area would have a minimal effect in improving congestion within Cheadle Town Centre. The study considers that the proposed Link Road would not be a solution on its own.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 28 dwellings and accessibility to areas of existing employment is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect. The site's proximity to a historic assets is likely to have a negative effect.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Cheadle.

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways: Access onto highway and visibility can be achieved. Footway should be extended into the plot. Could provide access to CH093 and provide alternative access to CH085a to d to avoid all traffic accessing off existing residential roads.

Leek and Moorlands Historic Buildings Trust - Development of CH128 (and its neighbour CH093) extends too far into open countryside, where a good group of traditional buildings currently mark the break between town and countryside.

Developer/Agent – site is available

Public response

21 objections

Issues raised:

- Objections
- Infrastructure – Schools – Need more school places.
- Infrastructure - Traffic / Transport - Is some distance from schools/services would increase traffic congestion. Cheadle is already congested and roads cannot cope. Traffic from Alton Towers/JCB & Tamarac. Need southern link road to access site, this is not feasible has been ruled out by SCC & Core Strategy Inspector. Access to the site is difficult. Site bounded by railway line reinstatement of this line is feasible. Moorland & City Rail are considering opening part of line to Cresswell.
- Infrastructure – Other – Infrastructure inadequate. Need more health services. Are already overstretched. Lack of open space.
- Scale of development - Disproportionate to infrastructure. Site too far from shops & facilities..
- Landscape Wardell Armstrong Study 2008 land west of Cheadle is an area of landscape enhancement.
- Nature Conservation – Deter wildlife from the area. .Abundant wildlife on site.
- Flood Risk Site borders River Tean, which has a history of flooding in Tean 2 miles away. Development would increase likelihood of further flooding
- Amenity (e.g. noise, privacy, loss of light) Existing residents would be overlooked. Loss of privacy/light. Increase in noise/pollution.
- Scale of development - Too many houses for Cheadle.
- Listed Building / Conservation Area - Need to conserve heritage assets
- Government Policy - Contrary to NPPF
- Other - Sites to north of Cheadle centre would balance town (provided infrastructure improved). Proposed development disproportionate to other towns. Where will the people

Cheadle

CH128 Land west of Tean Road

come from Employment plans in Cheadle south are unacceptable. Cheadle will become a dormer town. Site is green belt. Should build in north & east of Cheadle. Coal workings on site. Loss of area used by residents for recreation. Green belt. Outside draft new town boundary

- Other - Reluctantly accept more housing has to be built. Need to protect footpaths and countryside for tourism. New residents will work outside Cheadle sites need to be close to major roads & avoid town centre which can't cope with increased traffic. Brownfield, good access & would access CH093. Close to housing. Flat . No constraints.

Council response –

- The Highway Authority has not raised any issues which would prevent the development of this site. In addition the site could provide access to site CH093, and sites CH085a – d.
- The site is within the Green Belt. The Council has recently completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact on the function of the Green Belt as a whole (as defined in government planning guidance). This study concludes that site CH128 could be considered for release from the Green Belt.
- The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- New development is the main way to deliver new or improved infrastructure e.g. more residents may support more local facilities. Infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas.
- The Cheadle Transport Study has assessed the impact of proposed new development on local roads. This concludes that improvements are required and additional work will need to be undertaken to identify mitigation measures once the location of new sites is known.
- The land in question is not highlighted as being important to the setting of the settlement in the Council's Landscape & Settlement Character Assessment. A Landscape & Visual Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed sites included in the Site Options consultation. The site survey results will be used as part of the site selection process. Any other sites which come forward and are potentially suitable for development will also need to be assessed.
- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. The site is within Flood Zone 1 – Low probability.
- Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.

Cheadle

CH128 Land west of Tean Road

- The scale of development will depend on the number of sites allocated in this particular location. Any new development taking place will be subject to design policies contained within the new Local Plan – which will be subject to public consultation next year.
- The National Planning Policy Framework supports housing growth which meets the Council's objectively assessed housing needs.
- The site is not located within the Conservation Area or adjacent to any listed buildings. However note comments regarding group of traditional buildings marking edge of town and open countryside. A Heritage Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The development boundary will be amended to incorporate any new allocations.
- The Coal Authority have confirmed that there are no issues that would prevent development of the site. Investigative work will take place in these areas prior to the commencement of any development.

Preferred Options Consultation April 2016

SCC Highways: Potential link/access road identified connecting to A522 Tean Rd which will require assessment. Assessment of impact on Tape Street Corridor will be required. Connections to local advisory cycle network should be considered. Site will need to connect with existing pedestrian route network. Sustainable access to town centre requires consideration.

Cheadle Town Service 123 serves Wedgwood Road close to the sites between 09:30 and 13:30. Service 32 operates hourly along the A522 Tean Road between Uttoxeter, Cheadle and Hanley.

Link Road

With regard to proposed housing sites to the south west of Cheadle and their potential to deliver the Mobberley Link Road (western bypass), the benefits of this will need to be demonstrated through the study work identified in the Core Strategy section 8.1.53 Policy SS5c. Appended to this letter is a plan showing the protected line for this route. Presumably the access road to these proposed development sites could form the southern section of this route, although it would need to be designed to allow the required capacity for a bypass. This may be difficult to achieve if, for instance, the access road is designed in accordance with the Department for Transport's Manual for Streets. There is also the question of how many forms of access would be required to this development area which is intended to accommodate in excess of 400 dwellings.

Paragraph 3.32 of the Plan refers to the safeguarding of a potential indicative route to enable provision of the bypass. However it is difficult to see how this together with the Adopted Core Strategy Policy SS5c can effectively achieve this. The policy contains the phrase: improve environmental quality and accessibility by: reducing levels of through traffic in the town centre and along the A521 and A522 promoting the longer term provision of a bypass to the west of the town.

The explanatory text of the Core Strategy reads:

'8.1.53 One of the most significant challenges is identifying the need and viability of a bypass to relieve through traffic in the town and provide improved access to existing and planned housing and employment areas. Whilst some junction improvements have been

Cheadle

CH128 Land west of Tean Road

implemented, there remains a strong need to investigate and identify other potential solutions to improve traffic flows through the town particularly in the light of the growth aspirations for the town. A Transportation Study will therefore be required to investigate the need and viability of a bypass and/or other traffic management solutions, including a link from the A50 at Blythe Bridge to Cheadle, the implications for surrounding villages and the wider area and the scope for funding from proposed developments. This will be undertaken as part of the review of the Core Strategy.'

The bypass is also not shown on the Core Strategy Key Diagram and Inset Maps. It is noted that paragraph 3.31 of the Plan refers to a further study to explore the case and feasibility of a bypass.

Therefore, currently the Core Strategy says that the need / viability for a Bypass has yet to be established and all that's shown on Map 47 Cheadle as a 'potential link road' is part of the historic route of the A521-A522 Cheadle Western Bypass afforded protection by SCC in 2002 and currently declared on searches. It needs to be appreciated that in these circumstances the 'protection' afforded by SCC to this route may be insufficient to resist a challenge from a developer.

SCC Education: Future Need: Cheadle Town Requirement (based on the assumptions outlined in SCC report)

Primary School Provision

- The number of new homes planned for this school planning area indicate that education contributions will be required to fund additional primary school places at an existing or new school to mitigate the impact of local developments. At least an additional 1FE of primary school provision will be required in Cheadle Town during the Local Plan period to take into account the number of dwellings proposed over the duration of the Local Plan. We note that land to the east of the town (CH132) indicates an approximate location for a new/extended school and we ask that this land continues to be safeguarded.

High School Provision

- The High Schools in this School Place Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in this area, if the level of housing development is consistent with the estimated housing need. However, the allocation of housing sites, including windfall and small sites will continue to be monitored to ensure that there continues to be a sufficient supply of High School places in the town.

There is a small site allowance of 150 dwellings during the Local Plan period in Cheadle Town. As the location of these sites are not yet known the impact of these developments on school places will continue to be monitored as specific sites come forward and may result in additional school places required.

Please note that the allocation of housing in the rural area, including the small site allowance of 570 dwellings which has yet to be allocated, will have an impact on High School places in Cheadle Town, if those pupils attending school in the larger villages go on to attend High School in Cheadle Town.

LLFA: FRA required. Looks ok.

Historic England: It is not clear how the impact of the site allocations, individually and cumulatively, has been assessed in respect of the Grade II listed building Mobberley House.

Cheadle

CH128 Land west of Tean Road

Further information is required.

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Development high risk area.

SMDC Environmental Health: Significant/ some constraints on residential due to coal mining / possible flood (low risk); no issues with link road

Issues raised - public responses & petition :

- Scale of development
- Link road
- Location of new school (in north)
- Need for new housing
- Highways and access
- Traffic in town centre
- Landscape impact
- Flood Risk / surface water flooding
- Not all public open space is accessible to the public
- Ecology / nature conservation issues
- Lack of infrastructure to accommodate new housing

Council response –

- The Council has considered a number of sites within and on the edge of Cheadle. The majority of the proposed area for housing is located within the existing town boundary. It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway improvements, affordable housing and community facilities such as public open space.
- The Council's Landscape, Green Space and Heritage Impact Study(August 2016) includes a Landscape Assessment for this site. It advises that the site comprises generally flat fields enclosed by residential development to the east and north. The site is open to the west however long distance views are screened by the railway embankment located further to the west of the site. Site fits in well with the existing settlement pattern as it does not extend beyond the existing western settlement edge formed by Draycott Drive and Carleton Drive. Planting could be undertaken on the western boundary in order to create a vegetated edge to the settlement. (low landscape sensitivity).
- The Council's Landscape, Green Space and Heritage Impact Study (August 2016) includes a Heritage Assessment for this site which advises that there are two Grade II Listed Buildings within 400m which are well screened by vegetation. Due to the topography and existing vegetation, development would be unlikely to cause high adverse effects to the settings of the assets. Mitigation could include screening of the eastern and southern edges to reduce effects. Development in the site would change a small element of the HLC zone CHECZ 8, although for the most part, it would remain unaltered (Historic Environment Character Assessment 2010) and the Site is considered suitable for development in heritage terms subject to appropriate masterplanning.
- The Cheadle Town Centre Phase 2 Study (2017) identifies the likely impacts of the housing and employment Preferred Options sites on the surrounding highway network. By 2031 the study predicts queuing and delays in certain locations, in part due to 17 years of potential traffic growth which is compounded by the additional trips generated by new housing and employment. There is limited scope to change junction characteristics to improve network capacity within the Town Centre due to its historically confined road

Cheadle

CH128 Land west of Tean Road

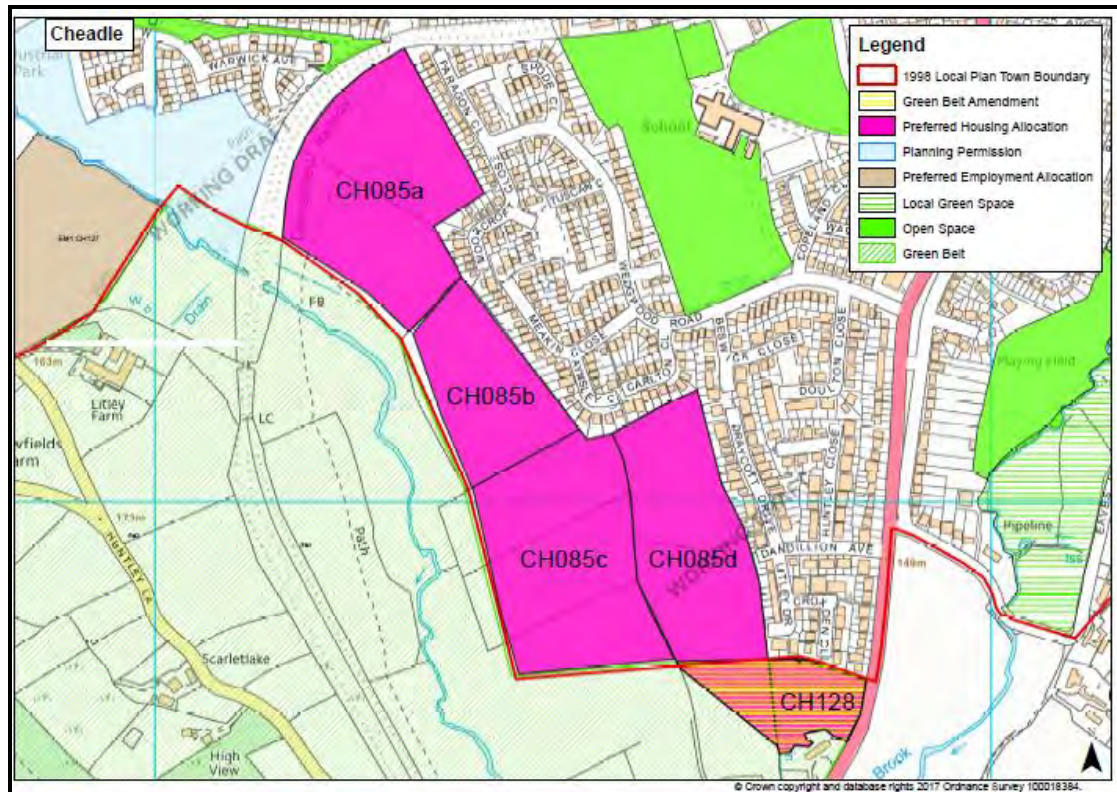

structure. The study recommends a package of mitigation measures in order to provide additional capacity onto the overall network. Mitigation measures include junction and lane improvements, new sites having good access to public transport provision, measures to encourage walking and cycling to reduce short trips, improved HGV signage and new parking bays along High Street.

- The Cheadle Town Centre Phase 2 Study (2017) considers the potential SW link road. Currently there is no link between the A522 Tean Road and Brookhouse Way / A521 due to it being severed by a disused railway line. The railway line is in third party ownership and a bridge will be required to connect a link road through. The proposed link road would allow a percentage of predicted trips from the SW area to traverse Brookhouse Way / A521 opposed to solely the A522, however the level of trips which would use the A521 from this area would have a minimal effect in improving congestion within Cheadle Town Centre. The study considers that the proposed Link Road would not be a solution on its own.
- National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan.
- The Council has considered a number of sites within and on the edge of Cheadle. There is not enough brownfield land or sites to meet the District's proposed housing requirement within the built up area of the town. This site is located on the edge of the settlement within the Green Belt. The Green Belt Review Study (Nov 2015) considers the overall impact on the Green Belt to be limited and site CH128 could be considered for release under exceptional circumstances with an amendment to the Green Belt. It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway improvements, affordable housing and community facilities such as public open space. Distance from the town centre needs to be balanced with other considerations such as landscape impact, viability and deliverability.
- The Council has completed a Level 1 Strategic Flood Risk Assessment (SFRA) for the District, the results of which have been used to inform the site selection process. The site is within Flood Zone 1 – Low probability. Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- The proposed new school is planned to serve the north of Cheadle and could therefore reduce school traffic currently accessing schools in the SW of the town. New housing development is also proposed in the north of the town. There are existing schools located in the SW of Cheadle to meet the needs of residents located in the south of the town.
- Agreed that not all the open spaces marked on the map are accessible to the public and should be indicated as 'open space' rather than 'public open space'. A public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and where new public open space is required.
- The site was subject to a Phase 1 ecological survey in 2014 and a later 2016 ecology study considered the scope for 'local wildlife site' i.e. SBI status. The Phase 1 survey concludes that the site has low potential to support protected species as the habitat is poor and the LWS survey considers that most of the site habitats are common and not considered eligible for SBI status. Recommended that vegetation is removed at an appropriate time of year.
- The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change. The Local Plan also proposes employment sites. The adopted Core Strategy sets out the distribution of

Cheadle

CH128 Land west of Tean Road

housing development between the towns and rural areas: Leek 30%, Biddulph 20%, Cheadle 22% and Rural Areas 28%.

CH132 Land south east of Hammersley Hale road and Silver Street

Local Plan Process

- Site suggestion from the SHLAA
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan due to:

- Site to be developed as strategic residential scheme in conjunction with CH001 and include land for a new primary school to serve the north of the town.
- Site not located within Green Belt.
- Support from agent.

Key Issues

- Small edge area previously within Flood Zones 2 & 3 been excluded from site – but could form part of open space / surface water mitigation.
- Moderate likelihood that the site could be agricultural Class 3a – best and most versatile.
- Cecilly Brook holds a strong isolated population of water voles. As a protected species their habitat must be maintained.
- Should be developed in conjunction with site CH001 and includes land for a new Primary School.
- Traffic congestion in the town centre.

Site Information

Greenfield/br ownfield	Built up area boundary/ countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Greenfield	Countryside	80 + 2 ha for new school	4.3 - 2.3 ha housing at 35 dph - 2 ha for school / landscaping / open space	Site promoted by agent on behalf Mosaic and supports allocation. Whole site in single ownership.	<ul style="list-style-type: none"> • Relatively flat land • Relatively well related to existing settlement • Eastern edge adjacent to Cecilly Brook within flood risk excluded from site area. • Delivery of new Primary School • Access via existing estate roads or directly off Froghall Road.

Studies

Extended Phase 1 Habitat Survey 2015 (FID 146)

Conclusion

The site mainly has low potential to support protected species as the habitats are species poor and poorly connected to other more biodiverse habitats. Nevertheless the species rich hedgerow and trees that have potential to support roosting bats gives the site district ecological importance.

The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- Bat surveys of the 5 trees with roosting potential
- Hedgerow survey
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2017)

CH132 Land south east of Hammersley Hale road and Silver Street

Awaiting information.

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

Landscape, Local Green Space and Heritage Impact Study (August 2016)

Landscape Assessment

Site comprises a large field on the northern edge of Cheadle, which slopes down from the settlement edge to Cecily Brook. Broad Hayes Park (mobile home park) is adjacent to the north-west site boundary. The site is open and visually prominent, particularly when viewed from the opposite side of the valley. However the existing settlement edge is urbanised. Development could be limited to the north of the site, on the higher land adjacent to the existing development, allowing planting to be undertaken on the edge of the development and landscaping on the lower ground adjacent to the brook. This could create a vegetated edge to the settlement. Building heights could be limited to reduce the prominence of the development, particularly on lower land.

Site is of medium landscape sensitivity. Site-specific landscape mitigation measures could include limiting building heights, limiting development to the higher ground, and advanced planting on the southern boundary.

Heritage Assessment

There is one Grade II Listed Buildings within the 400m buffer. As a farm, the wider agricultural setting is considered to contribute to the overall significance of the asset. The site is not within the immediate setting of the asset and development would likely be viewed as part of the existing residential to the west. However, development may cause adverse effects to its wider setting which could be reduced through mitigation including screening of the northeastern boundary. Development would be highly unlikely to adversely affect the HLC zone CHECZ 3 (Historic Environment Character Assessment 2010).

Site suitable for development in heritage terms subject to appropriate masterplanning.

Level 1 SFRA (October 2015)

Site located in Flood Zone 1 – low probability. Small edge area previously within Flood Zones 2 & 3 been excluded from site. Site therefore meets the sequential test.

Cheadle Town Centre Phase 2 Study (2017)

The Phase 2 Study predicts that in 2031 general traffic growth plus additional trips generated by new housing and employment development will cause increased queuing and delays. There is limited scope to change junction characteristics due to the historically confined road structure, however the study recommends a package of mitigation measures which could provide some additional capacity to the overall network.

Best and Most Versatile Land

Data supplied by Natural England indicates that there is a moderate likelihood that the land is best and most versatile land i.e. Class 3a.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 130 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of existing employment and distance away from historic assets is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect, as could the site's partial location within flood zone 2 and 3. The site's proximity to two Local Nature Reserves and ecological value is likely to have a negative effect.

Initial HRA Screening

CH132 Land south east of Hammersley Hale road and Silver Street

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Cheadle.

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways: Vehicular access to link site CH001 to South but nos would be limited to approx 50 with this access arrangement. To deliver total envisaged no. need new vehicular link to Froghall Road via Thorpe Rise. Pedestrian access to be provided to existing residential estate to the West and South. Acceptable subject to access design, provision of adequate visibility and pedestrian links. No direct connection to the highway. How is access proposed? Hammersley Hayes Road will need significant improvement. Additional land will be required if it can be acquired, from multiple owners.

Natural England – The site may present a strategic site. Has a Landscape and Visual Impact Assessment been carried out? Those sites taken forward to the next stage of the process may require LVIA in order to inform the development specification for the site.

Environment Agency - Cecilly Brook holds a strong isolated population of water voles. As a protected species their habitat must be maintained with no development creating direct or indirect impacts to impinge movement and expansion of the population along the riparian corridor

Developer/Agent

RPS Supports allocation. Is promoting site and CH001 for development. Will provide access to CH001. Have produced a masterplan for the sites which includes land for a new primary school

- new area of public open space & allotments
- play area
- SUDs
- Improvements to local highways network
- Landscaping
- 33% affordable housing (subject to viability)
-

Public response

290 objections

Issues raised:

Objections

- Infrastructure – Schools are full to capacity
- Infrastructure - Traffic / Transport – No direct road access. Roads are dangerous due to volumes of traffic & HGVs. One person knocked over a week.. Existing traffic congestion in the area. Alton Towers traffic. JCB expanding leading to more traffic. Need to look at road system before houses are built. Roads cannot cope with existing traffic and increase in traffic. Need a traffic survey. Cheadle cannot support massive proposed developments. Pavements are a major problem.
- Infrastructure –Need more GPs & dentists. Sewage issues.
- Landscape - In the countryside would be visually prominent would have significant landscape impact.
- Nature Conservation – Impact on wildlife.
- Flood Risk -. Will increase flooding Wrong to build houses close to brook that feeds Cecily Brook & other sites of nature significance will impact on wildlife & will lose flood plain.
- Amenity (e.g. noise, privacy, loss of light)
- Scale of development- Too high
- Listed Building / Conservation Area In the vicinity of Broad Haye Farmhouse grade II listed. Area full of local history should be publicised.
- Government Policy
- Other - Site outside Local Plan (1998) boundary & new draft development boundary. Well used footpath on sites. Loss of open space for recreation/green spaces. Loss of green

Cheadle

CH132 Land south east of Hammersley Hale road and Silver Street

belt Not enough jobs. Should use brownfield sites e.g. Thomas Bolton site and sites in town boundary. Need an infrastructure plan before development can be considered. Cheadle becoming overpopulated. Lack of shops on High Street. Should be self build.to a high standard. Need affordable housing. Loss of agricultural land.

Council response –

- The Highway has raised issues regarding access. No of dwellings would be limited to 50 if accessed through adjacent site CH001. Additional land would be required if other access gained into site which would involve numerous landowners.
- The land in question is not highlighted as being important to the setting of the settlement in the Council's Landscape & Settlement Character Assessment. A Landscape & Visual Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. The majority of the site is within Flood Zone 1 – Low probability. A small section to the east of the site is located in Flood Zone 3 – High probability and will need to be incorporated into uses other than housing i.e. open space.
- Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed sites included in the Site Options consultation. The site survey results will be used as part of the site selection process. Any other sites which come forward and are potentially suitable for development will also need to be assessed.
- Cecilly Brook has water voles which are a protected species. Environment Agency comments are noted and advice should be included in any detailed Ecological Study.
- The site is not located within the Conservation Area and there are no listed buildings within the site. Comments about Broad Haye Farmhouse are noted. A Heritage Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- A Masterplan has been submitted by the developer for the proposed development of the site (CH001 & CH132) which indicates land for a primary school.
- The Cheadle Transport Study has assessed the impact of proposed new development on local roads. This concludes that improvements are required and additional work will need to be undertaken to identify mitigation measures once the location of new sites is known.
- New development is the main way to deliver new or improved infrastructure e.g. more residents may support more local facilities. Infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning

Cheadle

CH132 Land south east of Hammersley Hale road and Silver Street

application is received and residents will have the opportunity to comment on the content of that application.

- The National Planning Policy Framework supports housing growth which meets the Council's objectively assessed housing needs.
- The land is Agricultural Class 3 Good to Moderate.
- The development boundary will be amended to incorporate any new allocations.
- New housing will support the town centre.
- There is a requirement for the developer to provide a proportion of affordable housing on each site.

Preferred Options Consultation April 2016

RPS Planning & Development on behalf of Mosaic Estates: The Council has proposed site CH132 as a preferred allocation for Cheadle for 80 dwellings. This forms part of a wider urban extension (along with CH001) for the north of Cheadle for around 320 dwellings. Mosaic considers that this represents a logical and deliverable solution to meet a significant proportion of the town's needs, which is welcomed as part of the PSA. As illustrated on the plan supporting the allocation, the Council has indicated that the site could provide a location for a new primary school in addition to residential uses. This position has been confirmed with Staffordshire County Council and it is considered that as part of the wider masterplan for the site, land can be safeguarded for the Council to bring forward a new primary school in line with evidence of need. The figure of 80 dwellings on the site was proposed by Mosaic as part of discussions with the Council however, reflecting the comments above, Mosaic consider it appropriate for the Council to present this figure as a minimum, if it is decided that the site could deliver additional dwellings, or the County Council take the decision that a new school site would be better located elsewhere. A number of comments were received concerning this site in response to the previous consultation, summarised below: Comments were received from Staffordshire County Council (SCC) as the statutory agency responsible for highways. The comments considered the suitability of the adjacent road network and the potential access points. It was perhaps not understood by SCC that this site would be accessed from CH001, as illustrated in the wider masterplan for the site prepared by Mosaic, however the site is considered deliverable from a highways perspective. Following the Cheadle Transport Study, it is understood that the Council are considering ways in which the local highways network can be upgraded and the site promoters will remain in discussion with the Council in respect of land to the north of Cheadle. Natural England has commented on the proposed allocation, echoing comments similar to those offered in response to CH001. As previously noted, issues of landscape impact have been considered as part of the delivery document prepared by RPS for Mosaic, which took the view that this site had the capacity to accommodate residential development without detriment to landscape or visual amenity. It is noted that a small section of the site falls within Flood Zone 3. This has been accounted for in the latest masterplan provided to the Council, which indicates that a green buffer could be provided in this area which would ensure that instances of potential flood risk can be avoided, compatible with the NPPF. The Council's own comments from the Sustainability Appraisal offer largely supportive comments on the sustainability of the site. There are however negative comments linked to the Grade 3 Agricultural Land Classification of the site. The Council has not defined whether this is Grade 3a or Grade 3b land, taking a broad brush approach to the assessment. In either case, Grade 3a represents only marginally better quality land than 3b, which is not recognised as 'best and most versatile', along with categories Grade 1 and Grade 2. It appears that the assessment of significant negative effect is, in this regard, an inappropriate conclusion. Mosaic welcomes the Council's inclusion of site CH132 as part of a wider allocation to the north of Cheadle. The information submitted as part of the 2014 Delivery Document to the Council includes evidence and a strategy of how the

Cheadle

CH132 Land south east of Hammersley Hale road and Silver Street

site can be delivered which addresses the concerns raised as part of the earlier consultation and is capable of assisting the County Council in finding land for a new primary school.

SCC Highways: Appropriately designed accesses would accommodate 240 + 80 + School. This number would require at least 2 accesses. A new access off Froghall Road would be preferable with secondary accesses through the existing estate. If the 80 units were separate, they could be served off a single point.

No specific access arrangements identified although could be accessed via an improved Donkey Lane? Access onto A521 would require assessment. Consideration should be given to providing cycle route facilities to access the town centre. Traffic impacts on the Tape Street corridor and town centre traffic flows would require assessment, including key junctions. The presence of a school within the new residential development would contain trips, allowing them to be made sustainably and there is the potential for some existing school journeys currently being made to the town to be reassigned.

Cheadle Town Service 123 serves Ness Grove close to the site hourly between 09:30 and 13:30. Services 32/32A operate every 20-30 minutes along the A521 Froghall Road between Hanley and Cheadle. Service 30 (from 12th June 2016) operates every 2 hours along Froghall Road between Leek and Cheadle.

SCC Education: In Cheadle we acknowledge the allocation of a site for a new Primary School. The proposed location will provide for a good spread of provision across the town.

Future Need: Cheadle Town Requirement (based on the assumptions outlined in SCC report)

Primary School Provision

- The number of new homes planned for this school planning area indicate that education contributions will be required to fund additional primary school places at an existing or new school to mitigate the impact of local developments. At least an additional 1FE of primary school provision will be required in Cheadle Town during the Local Plan period to take into account the number of dwellings proposed over the duration of the Local Plan. We note that land to the east of the town (CH132) indicates an approximate location for a new/extended school and we ask that this land continues to be safeguarded.

High School Provision

- The High Schools in this School Place Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in this area, if the level of housing development is consistent with the estimated housing need. However, the allocation of housing sites, including windfall and small sites will continue to be monitored to ensure that there continues to be a sufficient supply of High School places in the town.

There is a small site allowance of 150 dwellings during the Local Plan period in Cheadle Town. As the location of these sites are not yet known the impact of these developments on school places will continue to be monitored as specific sites come forward and may result in additional school places required.

Please note that the allocation of housing in the rural area, including the small site allowance of 570 dwellings which has yet to be allocated, will have an impact on High School places in Cheadle Town, if those pupils attending school in the larger villages go on to attend High School in Cheadle Town.

CH132 Land south east of Hammersley Hale road and Silver Street

LLFA: FRA required, consult SCC. Surface water flooding shown on site. May need modelling. Please put developer in contact with SCC as early as possible.

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Majority development low risk area, very small part development high risk area (area to north).

SMDC Environmental Health: No significant Issues, part flood zone

Issues raised - public responses:

- Previously found unsound by planning inspector
- Location of a new school
- Amenity issues
- Highways and access
- Traffic in town centre
- Landscape and heritage impact
- Flood Risk / surface water flooding
- Cecilly Brook / nature conservation issues
- No need for housing following Thorley Drive permission
- Location of a new school
- Lack of infrastructure to accommodate new housing
- Agricultural Land Classification
- Site is in Green Belt
- Use other sites elsewhere in the Green Belt

Council response –

- Site CH132 is not the same area as 'broad Area 2' which was considered during the Core Strategy examination. Broad Area 2 was a significantly larger area than site CH132 and could accommodate up to 320 dwellings. A large proportion of this broad area was located to the east of the Cecilly Brook and extended to the east into the open countryside. During the consideration of 'broad Area 2' the Inspector raised concerns regarding evidence in the SA which did not justify the 'broad area' particularly as the County Council could not confirm at that stage that a new school would be needed. An updated Sustainability Appraisal has been undertaken which looks in more detail at individual housing site options rather than a broad brush approach taken to the broad area. CH132 is a small section of the previous 'broad Area 2 and together with site CH001 to the south forms a logical and deliverable solution, including land for a new primary school which is supported by the developer.
- The location of the school site to the north of Cheadle is supported by Staffordshire County Council and considers its location would offer a good spread across Cheadle.
- Site CH024 was previously earmarked for a school in the 1998 Local Plan. Site CH009 was not included within this area. Access to the site was subsequently acquired to serve the adjacent factory and the remaining part of CH024 became landlocked.
- Staffordshire County Council support the preferred location for the new school and consider it provides for a good spread of provision around the town. In terms of spatial distribution the location of the previous site and the preferred site are close together. No housing allocations are proposed on the east of Cheadle and therefore it is not the most sustainable location for a new school.

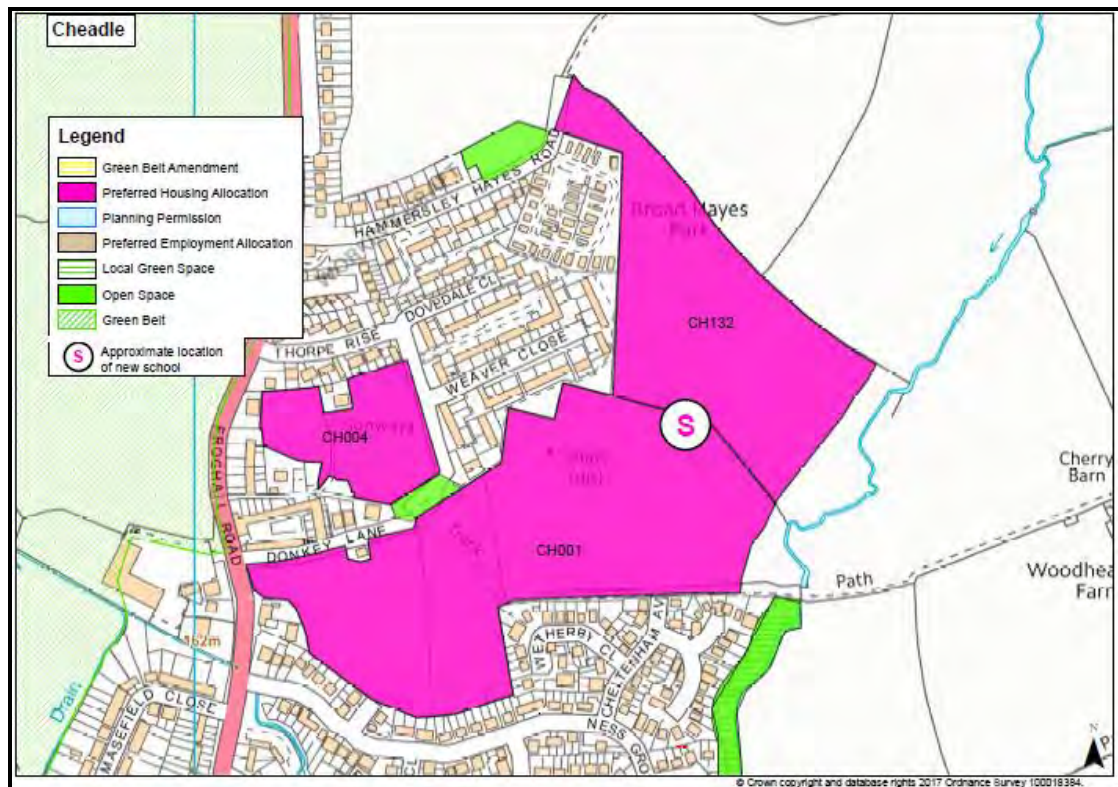

CH132 Land south east of Hammersley Hale road and Silver Street

- Staffordshire County Council estimate that 1.2 ha is require to deliver a 1 Form Entry school. Site CH024 is surrounded by existing development and would be unlikely to accommodate any further expansion.
- The previous site has a limited frontage and offers less opportunity to arrange the school access and how the building fits within the street scene. It also is surrounded by residential streets and may lead to residential amenity issues during the school run. The preferred site can be accommodated into the estate in such a way to design out such issues.
- The previous site has good access on foot although some of the routes from residential areas lead through areas that are not overlooked. The preferred school site can have access designed and delivered to the most appropriate standard.
- The delivery of a new school will need to be funded by developer contributions and the cost will include land acquisition and building costs. The inclusion of safeguarded land for a school as part of a wider masterplan means that the school is likely to be deliverable and appropriately designed.
- Traffic – The highways authority has confirmed that appropriately designed accesses would accommodate 240 + 80 + school. This number would require at least 2 accesses. A new access off Froghall Road would be preferable with secondary accesses through the existing estate. Pedestrian connections should be made to the residential area to the north.
- The Cheadle Town Centre Phase 2 Study (2017) identifies the likely impacts of the housing and employment Preferred Options sites on the surrounding highway network. By 2031 the study predicts queuing and delays in certain locations, in part due to 17 years of potential traffic growth which is compounded by the additional trips generated by new housing and employment. There is limited scope to change junction characteristics to improve network capacity within the Town Centre due to its historically confined road structure. The study recommends a package of mitigation measures in order to provide additional capacity onto the overall network. Mitigation measures include junction and lane improvements, new sites having good access to public transport provision, measures to encourage walking and cycling to reduce short trips, improved HGV signage and new parking bays along High Street.
- National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan.
- The Council has completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which have been used to inform the site selection process. The site is within Flood Zone 1 – Low probability, however a small section located to the east of the site is located in Flood Zone 3 – High probability. This could be incorporated open space. Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- The site is adjacent to the Cecilly Brook Local Nature Reserve and there is an isolated population of water voles (protected species) Natural England have advised that a buffer along the watercourse would be required.
- The Landscape, Local Green Space and Heritage Impact Study (2016) has considered the site as being of medium landscape sensitivity and suggests some site-specific landscape mitigation measures such as limiting building heights and advanced planting on the southern boundary.
- The land is Agricultural Class 3 Good to Moderate. Data supplied by Natural England indicates that there is a moderate likelihood that the land is best and most versatile land i.e. Class 3a. The Sustainability Appraisal will be updated to reflect the most up to date evidence base.
- Amenity issues and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received, and residents will have the opportunity to comment on the content of that application.

Cheadle

CH132 Land south east of Hammersley Hale road and Silver Street

- The Thorley Drive planning permission can be taken into account as a housing commitment once the final decision notice has been issued. Housing commitments form part of the supply of new housing and will be deducted from the required provision for Cheadle.
- Site CH132 is not designated as Green Belt.
- The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances and the recent Housing White Paper reiterates this commitment.

Cheadle

Cheadle EM1 CH127 – Land North of New Haden Road

Local Plan Process

- Site included in Council's SELAA employment database on basis of its identification in the Council's 2008 District Employment Land Study as employment opportunity land.
- Included in the options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan as:

- Existing employment allocation from 1998 Local Plan – not constructed
- Within current town development boundary
- Not in Green Belt
- Abuts long established industrial area
- Accessible to other services and facilities

Key Issues

- Identity of landowner, and their position with respect to employment allocation, is still unclear
- **Flood risk** - Small northern strip of site affected by floodzone 2/3 (opposite Brookhouse Way estate)
- **Ecology** – Further survey work recommended in order to establish SBI/BAS status.
-

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity	Area (ha)	Ownership status	Site details
Greenfield	Built up area	NIL (proposed employment allocation)	4.27 (estimated employment floorspace = 17080m ²)	Identity of landowner, and their position with respect to employment allocation, is still unclear	<ul style="list-style-type: none">• FZ2/3 runs along north of site• Public right of way runs up eastern perimeter• SBI approx. 260m to South

Studies

Extended Phase 1 Habitat Survey 2015 (FID 218)

Conclusion

The site has species poor habitats present on site; however the surrounding habitats are potentially biodiverse and reptiles could be found along the site's boundaries, especially to the north and west. Therefore the site is given district ecological importance due to its species rich hedgerow and potential to support reptile populations.

The following surveys/actions are therefore recommended prior to any potential development works being carried out:

- Reptile survey
- Hedgerow survey
- Vegetation removal at the appropriate time of year.

Local Wildlife Assessment (ECUS, 2017)

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that most of site habitats are common throughout the region and not considered eligible for BAS / SBI status. However, the two scattered trees present could support roosting bats and be eligible for BAS status.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Bat survey of two oak trees

Cheadle EM1 CH127 – Land North of New Haden Road

Landscape & Settlement Character Assessment 2008

Not within important landscape setting to the settlement.

Landscape, Local Green Space and Heritage Impact Study (August 2016)

Landscape Assessment

The site comprises a large field south of existing industrial development, which slopes down from New Haden Road to a stream on the northern site boundary. The site is open, however the land continues to rise to the south, screening longer distance views from this direction. Tree planting and vegetation on the site boundaries and within adjacent land reduces visual prominence. Views of the site from the north would be seen in the context of the adjacent industrial development. If the site were to be developed the site should be developed in a similar style to the adjacent industrial development, i.e. development concentrated on the lower ground, and planting undertaken on the site boundaries to increase screening. The height of development should not extend above the adjacent industrial development. The existing planting on the boundary with the adjacent development is sparse. Thicker planting should be undertaken on the south-east boundary of the site to increase screening and potentially create a vegetated settlement edge. ***Site is of medium landscape sensitivity. Site-specific landscape mitigation measures could include additional advanced planting on the site boundaries and limiting building heights.***

Heritage Assessment

No designated heritage assets within the 400m buffer. Whilst the HEA states that the HLC zone CHECZ 7 has little capacity to absorb change, with sensitive development, this could be accommodated on the site (Historic Environment Character Assessment 2010). ***Site suitable for development in heritage terms.***

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the accessibility of other services and facilities and its location away from historic assets is likely to have a positive effect. However, the development of greenfield, grade 4 ALC land is likely to have a negative effect as could the district ecological importance of the site.

Initial HRA Screening

No Likely Significant Effects (LSEs) have been identified in relation to the preferred option site allocations in Cheadle.

Options Consultation July 2015

SCC Highways: TA required. New Haden Road would likely need improvement. Extension of Brookhouse Way may be a better access.

Historic England: Made no comments on individual sites recommended that a heritage impact assessment of sites is carried out.

Coal Authority: Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. Recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. Previous coal workings do not prevent development of sites and therefore do not wish to recommend any sites are excluded from assessment on mining legacy grounds.

Public response

3 objections, 1 support

Objections

- Infrastructure - Schools
- Infrastructure - Traffic / Transport –Will increase number of HGVs in residential area & be dangerous for residents & children that play in the area. Will park in residential area causing noise disturbance – engines running. Access via a country lane.
- -Infrastructure - Other
- Landscape

Cheadle

Cheadle EM1 CH127 – Land North of New Haden Road

- Nature Conservation
- Flood Risk
- Amenity (e.g. noise, privacy, loss of light) – Noise from units.
- Scale of development
- Other – Units will be target for crime as they will be empty for long periods. Footpath crosses site. Leisure facility should be protected.

Council response –

- The Highway Authority has indicated that a TA would be required and improvements would be likely along New Haden Road. If these can be resolved to an acceptable standard then development could take place.
- The District Council is working with the County Council on the issue of school capacity. The County has determined that additional school provision would be required to support housing growth at the Primary phase of education. At this early stage in the site selection process there are a number of options for delivering school capacity dependant on the sites selected to take forward.
- The land in question is not highlighted as significant in the Council's Landscape & Settlement Setting Assessment. A Landscape & Visual Impact Assessment will be undertaken during the plan production process if the site is taken forward.
- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed sites included in the Site Options consultation. The site survey results will be used as part of the site selection process. Any other sites which come forward and are potentially suitable for development will also need to be assessed.
- The Council has recently completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. The majority of the site is within Flood Zone 1 – Low probability. The small area of the site adjacent to the Brook is medium probability and will need to be incorporated into uses other than housing i.e. open space.
- Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
- Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- The scale of development is considered appropriate and is well related to the existing settlement.
- New developments should be well designed and incorporate 'designing out crime' initiatives.

Preferred Options Consultation April 2016

SCC Transportation: Access to this site may not be suitable from New Haden Road without significant improvements but could be provided via an extension to Brookhouse Way potentially via site CH143. New cycle links into the existing advisory network should be provided as well footway links to existing footways. Assessment should include The Green/Brookhouse Way junction. The closest bus service to this site is the 31 service along the A521 at Brookhouses, which from September will operate every 2 hours between Cheadle, Blythe Bridge and Hanley. The nearest bus stop is over 700m away from the site.

SCC LLFA Officer: River Tean floodplain, upstream of Main River. Contact EA for nearest flood level and flood risk needs to be investigated to ascertain risk to site. FRA required.

Cheadle

Cheadle EM1 CH127 – Land North of New Haden Road

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Majority development high risk area, rest development low risk area.

SMDC Environmental Health: Suitable for Employment / low sensitive end use , not residential . Significant contamination issues possible due to former colliery/ opecast mine and noise nuisance issues from other buisness in the vicinity.

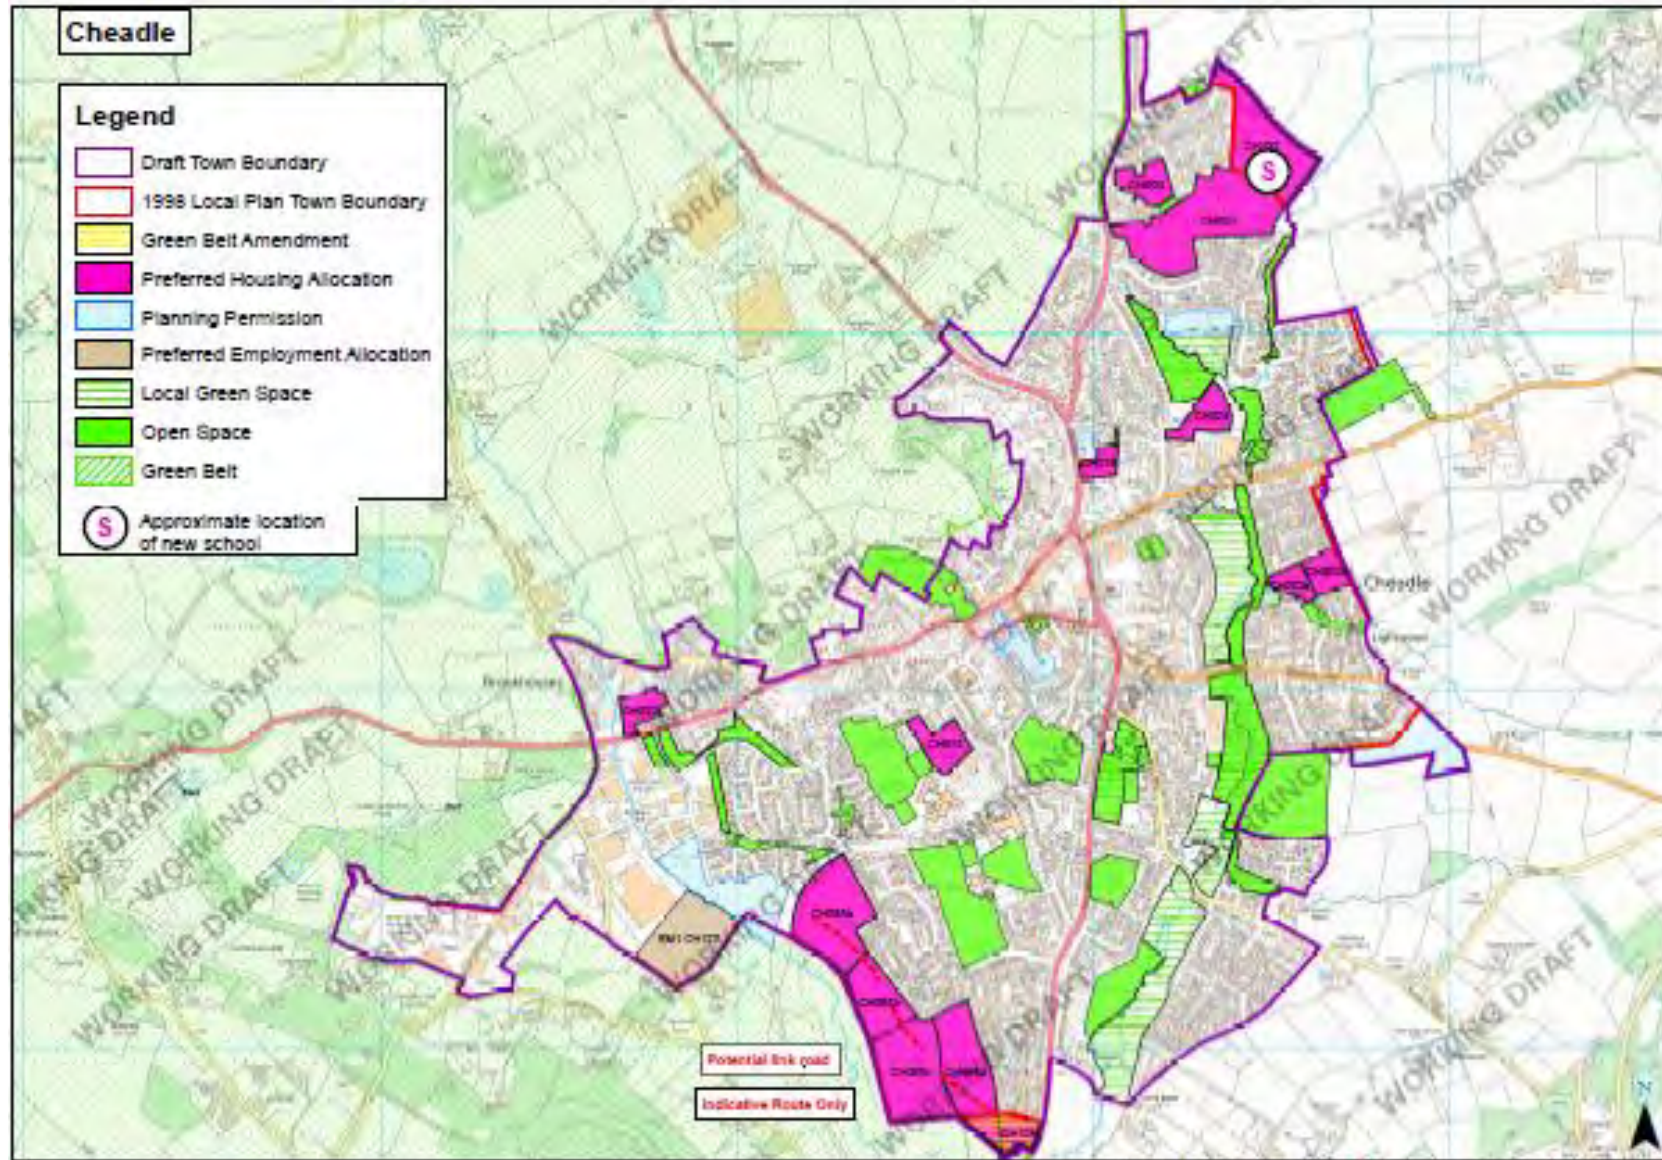

Public response

- Poor quality access road to this area. Why not expand by JCB in the north with better access roads.
- The two areas identified as potential employment sites do not justify the amount of housing development that is proposed for the town.
- This would be one industrial site too many on this country lane. Also footpath No 17 edges this area and needs protecting.
- Employment plans in Cheadle South on the Green Belt are totally unacceptable.

Council response –

- The Council consults with SCC Highways during Local Plan preparation. SCC Highways did not object to the allocation of this site for employment purposes; however has indicated that a TA would be required and improvements would be likely along New Haden Road. If these can be resolved to an acceptable standard then development could take place.
- JCB Leek Road premises lies in the Green Belt. Whilst Councils can allocate within the Green Belt National Planning policy is clear that this requires exceptional circumstances to justify (as compared to non-Green Belt). The Council recently completed a Green Belt Review which assessed the suitability for retention of all areas of Green Belt in the District, against the five Green Belt 'purposes' set out in the NPPF. This will be used by the Council alongside other evidence in progressing its Local Plan. The NPPF also allows for consideration of development proposals that would represent 'limited infilling', or in some cases redevelopment of 'brownfield' sites in the Green Belt.
- Councils must firstly assess their OANs (development requirements) for future land uses such as housing and employment land; and then meet these requirements, to have a sound Local Plan in place. An assessment of employment land requirements and housing requirements by NLP in February 2017 concluded that 13ha to 27ha of employment land, and 320 homes/year were required to meet the needs of the district 2014-2031. To dovetail with the housing requirement it was recommended to and agreed by Council Assembly on 08/03/17 that 27ha of employment land should be provided 2014-2031. The Council's adopted Core Strategy Policy SS3 sets out how District housing and employment requirements be 'split' across the District, including for Cheadle. This forms the basis of the housing and employment land provision for the town.
- Development proposals affecting the routes of recognised public rights of way would need to make allowance for them.
- Note that both of the preferred options employment sites Cheadle EM1 and Cheadle EM2 lie within the town development boundary; and do not fall within Green belt.
- Sites affected by mining legacy to have a policy criterion to clarify that developers should recognise mining legacy problems and demonstrate how they can be positively addressed by new development. Policy also to clarify that no development should take place over mine entries even when treated.

Cheadle EM1 CH127 – Land North of New Haden Road

Leek

ADD01 East of Horsecroft Farm

Local Plan Process

- Not Included in the site options consultation July 2015
- Site suggestion from the SHLAA after site options
- New site Included in the Preferred Options consultation April 2016

Current Position

Site taken forward into Preferred Options Local Plan as:

- A small site abutting the current town boundary
- Not in Green Belt
- Has owner support for residential and/or educational allocation
- No highways objections
- Site policy will require submission of landscaping plan.

Key Issues

- Whole of site is high landscape sensitivity in Landscape, Local Green Space & Heritage Impact Study 2016 (LLGSHIS). Forms part of important landscape setting to Leek in 2008 LSCA
- Greenfield site in open countryside, abutting town boundary.
- **Ecology** – Further survey work recommended in order to establish SBI/BAS status of the peripheral hedgerow habitat only.
- **Protected habitats** - HRA states new housing/employment development in Leek could potentially increase recreational pressure and air pollution from increased road traffic which could have an effect on SPAs and SACs and this requires further investigation in the HRA. LSEs relating to air quality are identified in relation to all of the allocation sites in Leek because they may increase traffic. Potential in combination effect with employment allocations in Leek and development in neighbouring areas.

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity/density	Area (ha)	Ownership status	Site details
Greenfield	Countryside (abuts current town boundary)	15 (based on 33.33 dwellings per hectare assuming 50% of site area for housing).	0.9	1 owner (supports allocation)	<ul style="list-style-type: none">• Access via new Nightingale Estate (SCC no objections)• Reasonable access to services & facilities• May be footpath crossing site but this does not appear adopted

Studies

Extended Phase 1 Habitat Survey and Local Wildlife Assessment (ECUS, 2016)

Ecus Ltd conducted Phase 1 ecological survey of the site (incorporating Local Wildlife Assessment) in 2016. It concluded that the improved grassland habitat on ADD01 was considered of nature conservation value at the site level only. However the peripheral hedgerow habitat has reasonable potential that it may qualify as a County-level Site of Biological Importance (SBI) or a District-level Biodiversity Alert Site (BAS), dependent on further survey following the hedgerow evaluation. Species recorded on site were common and widespread both at a county and national level and it is considered unlikely that the site significantly supported any notable protected species. [Some pre-development species surveys recommended].

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 25 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. The site's accessibility to areas of open space is considered to have a positive effect. However, the site's proximity to designated and historic assets is likely to have a negative effect, as could the development of greenfield land, grade 4 ALC and the inaccessibility of services and facilities.

Leek

ADD01 East of Horsecroft Farm

Initial HRA Screening

New housing development in Leek could potentially increase recreational pressure and air pollution from increased road traffic which could have an effect on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC and this requires further investigation in the HRA. The screening has also identified that new employment sites could also increase traffic and air pollution near to the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC and this also requires further investigation in the HRA. The closest part of the SAC/SPA (Leek Moss SSSI) is approx. 4km from the western edge of Leek.

Updated HRA Screening of Preferred Options Sites June 2017

The purpose of screening is to identify whether the elements of a plan (i.e. policies, site allocations) could result in Likely Significant Effects (LSE) on European sites.

Further investigation has been undertaken in relation to potential urban effects resulting from these allocation sites. Urban effects on European sites typically have an adverse effect on sites within 500m of residential areas (primarily due to cat predation and fire risk due to arson etc). Other urban effects (primarily dog walking from the site to the SPA/SAC) can have an adverse effect on European sites up to 1.6km from residential areas. All allocated sites identified as preferred options are further than 1.6km from the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC.

LSEs relating to urban effects are identified resulting from the following allocation sites:

- Allocated sites on the eastern edge of Leek (LE066, LE140, LE128a, LE142 a and b) located between 3.8km and 4.2km from the Peak District SPA and the South Pennine Moors SAC.

LSEs relating to air quality are identified in relation to all of the allocation sites in Leek because they may increase traffic. Potential in combination effect with employment allocations in Leek and development in neighbouring areas.

Landscape & Settlement Character Assessment (2008)

Forms part of important landscape setting to Leek.

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results

The site comprises a fenced section of a field sloping down from the northeastern edge of Leek, to the north-west of Churnet View Middle School. The site is semi-enclosed by vegetation on the settlement edge, however is open to the north-west. This allows long distance views and inter-visibility between the site and higher ground across the valley to the north-west. Currently the settlement edge is well-defined and vegetated, with views of existing development generally screened. In addition the settlement edge is currently located on a ridge, with development not extending beyond this ridge, however the site is located below this ridge. Therefore, development of the site would be visually prominent, and would encroach on the countryside by extending beyond this ridge. In addition there would be no clear limit to development if the site were developed, compromising the surrounding sensitive countryside. Development would adversely affect the settlement edge, settlement pattern and landscape character. **Site is of high landscape sensitivity. Please note that this study forms part of a wider evidence base to support SMDC's Local Plan. Therefore the conclusions within this report will be weighed against other evidence when determining the overall suitability of a site for development.**

Heritage Results

There are two Grade II Listed Buildings within the 400m buffer. Due to the topography and intervening buildings, development would be highly unlikely to adversely affect the assets. Outside of the 400m buffer, there is a Scheduled Monument to the north-west of the site. Due to the open topography, development could adversely affect its setting. Mitigation including the use of the vegetation screening may reduce effects. Whilst the HEA states that HLC zone LLHECZ 1 has little capacity to absorb change, with sensitive development, this could be accommodated on the site (Historic Environment Character Assessment 2010). **Site suitable for development in heritage terms subject to appropriate masterplanning.**

Green Belt Review (November 2015)

Not applicable.

Options Consultation July 2015

Statutory bodies/stakeholders

Leek

ADD01 East of Horsecroft Farm

SCC Highways – The road into Horsecroft Farm is now almost complete and will ultimately be adopted as highway. Development of this site will be acceptable subject to access design.

Public response – 1 objection

- Infrastructure – schools
- Infrastructure – traffic/transport

Council response –

- Site may potentially be needed for extension to adjacent school.
- County Highways do not raise any issues which would prevent development of this site.
- County Education advise that there are capacity issues affecting Leek First-, Middle- and High Schools; and given the scale of housing proposed across this catchment, new capacity will be required within Leek. The District Council will work with the County Council to identify an appropriate solution.
- This is a new suggested site put forward by the landowner and the site is well related to the settlement. Although this site could be suitable for housing it could also provide for the possible expansion of the adjacent middle school if required.

Preferred Options Consultation April 2016

Environmental Health: Constraints on development due to possible ground gas (methane and Carbon dioxide) from nearby landfills(s). Investigation would be required.

Council Response – Comments noted. Site-specific policy to reference the above.

SCC Lead Local Flood Risk Officer: Flow path to north of site. Flood Risk Assessment required.

Council Response – Comments noted. The Council would ensure that subsequent schemes where possible mitigate any on-site flooding issues, including the integration of SuDS, in accordance with local and national policy, and following consultation with SCC LLFA Officer.

SCC Local Education Authority: Advise that in Leek education contributions will be required to fund additional school places. At least a minimum of 1FE of first school provision and 1FE of middle school provision will be required in Leek Town during the Local Plan period. The High Schools in the Leek Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in Leek.

In Leek additional land is required adjacent to Churnet View Middle school in order to facilitate potential expansion. It is noted that land in the adjacent housing site has been proposed and we will need to consider options in liaison with the school for extending the buildings and how this affects the external spaces. It is noted however that the school field shares a boundary with District Council owned public open space and it may be that this provides an opportunity to re-provide the school external space that will be lost through extending the building footprint. We would therefore like to meet to discuss what potential exists in this respect to inform the Plan going forward.

Council Response – Comments noted.

Sport England: It is important to ensure that extended schools do not lead the loss of outdoor sports provision. There will be more demand from more pupils for curricular sports facilities (indoor and outdoor) to help promote healthy lifestyles etc. but all too often sports facilities are lost as a result of expansion resulting in more demand and less supply. Key schools that are/will become sites will community shared facilities (such as playing fields and sports halls) need to be required to offer secured community use outside of school hours where this is needed in the local area to meet identified needs for sports facilities. This should be a policy requirement.

Council Response – Comments noted. ADD01 is private land that is not currently identified as school playing fields or public open space.

Leek

ADD01 East of Horsecroft Farm

Site specific Local Plan Policies must be demonstrated to be sound to Planning Inspector therefore the Council will need to consider carefully whether such policies in relation to school sites, include requirements for provision of facilities referred to.

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Site does not fall within any coal risk area.

Council Response – Sites affected by mining legacy to have a policy criterion to clarify that developers should recognise mining legacy problems and demonstrate how they can be positively addressed by new development. Policy also to clarify that no development should take place over mine entries even when treated.

Public response

Issues raised:

Objections -

- access via Ball Haye Road already full to capacity any further development would worsen traffic levels
- Consider drop off and pick up school children without blocking road
- question how access for school will be achieved – will it use an alternative entrance to be constructed along the track to Wardle Barn Farm? This would be inappropriate [public footpath].
- encompassing ADD01 is taking away more greenfield site from the perimeter of the town - unacceptable encroachment on public countryside. Site being used instead of local brownfield sites
- why not build the LE140 first school next to Churnet View Middle school instead, to save creating traffic along Mount Rd & Kniveden Lane?

Support –

- This site is ideal for both the school expansion and a new housing development. In addition the development of this site would reduce pressure to build on more sensitive sites elsewhere. The site is less than 200 metres from a bus stop and also a very short walk from the amenities of Leek which would restrict the need/use of vehicles.

Council Response:

- in the event of proposals for education facilities, SCC are the determining planning authority. SCC Highways would be consulted as a matter of course; and their recommendations with regards road safety reported to the determining authority.
- The Council requires owner support for any allocated land use. The County Council does not have any spare land in the town for additional middle school facilities. ADD01 has owner support for mixed residential/educational use. There is insufficient land elsewhere within the town boundary to accommodate middle school growth.
- There is insufficient capacity at the existing Churnet View Middle School playing fields to accommodate a new first school complex. The loss of existing playing fields would also need to be compensated.
- The Council considers the sustainability/accessibility of all potential housing sites, and will publish a full sustainability appraisal as part of its evidence base.
- If additional middle school space within Leek is required it is considered this site could be suitable to expand the existing Churnet View Middle School.
- The Council uses evidence to justify its selection of 'Preferred' allocation sites from wider sites. This includes landspace impact evidence and other studies. The Council must balance all relevant evidence when deciding over preferred allocations.
- The Council consults with SCC Highways during Local Plan preparation. SCC did not raise any objections to ADD01 as the road into Horsecroft Farm is now almost complete and will ultimately be adopted as highway. Development of this site will be acceptable subject to access design. The Council would assess schemes having significant transport impacts against

Leek

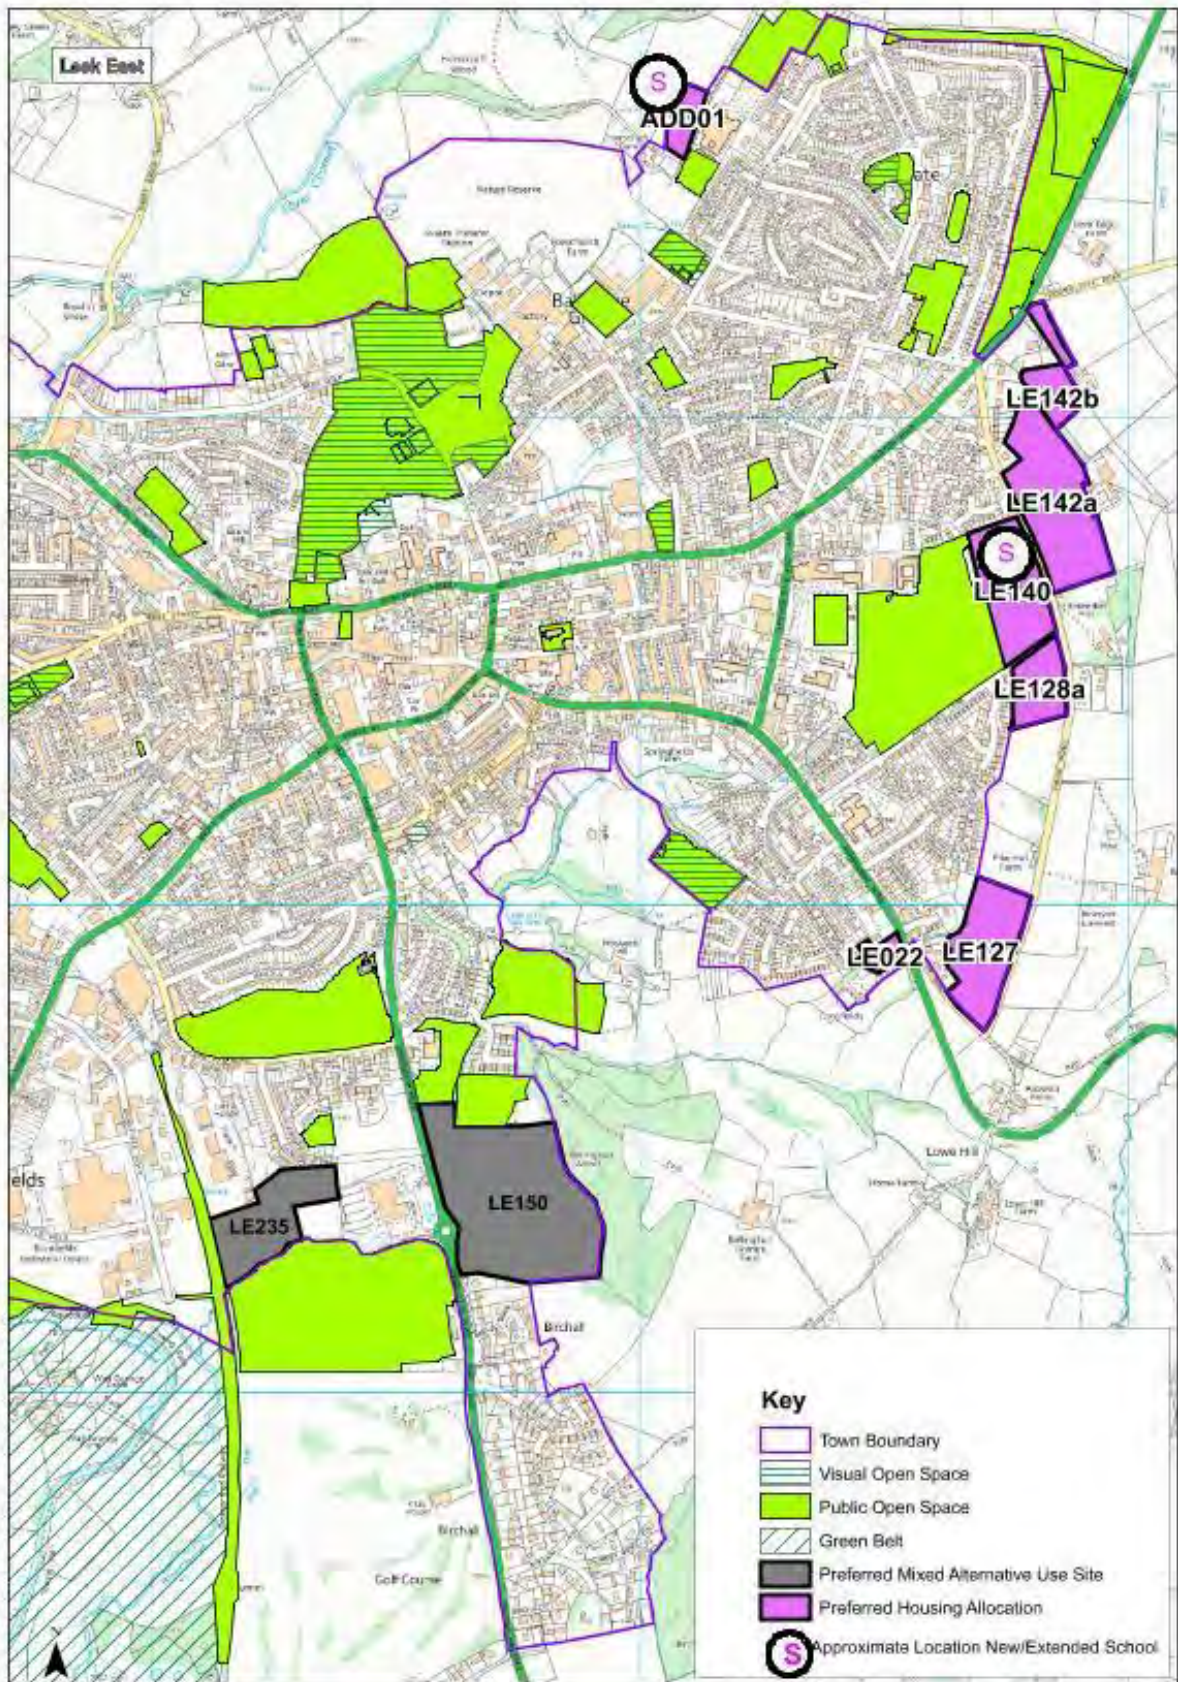

ADD01 East of Horsecroft Farm

relevant NPPF and Local Plan policy (including requirement to submit transport statements, and provide highways improvements where deemed appropriate).

- Development proposals affecting the routes of recognised public rights of way would need to make allowance for them.
- The Council consults with SCC Education during Local Plan preparation, and SCC have indicated a need for additional first- and middle- school land provision in Leek resulting from the town's development requirements. These are laid out in the Preferred Options consultation document.
- The NPPF expects Councils to meet their objectively assessed development requirements for all relevant land uses, meaning the Council must demonstrate this to Planning Inspector at examination, to have a sound Plan in place.
- The Council uses evidence to justify its selection of 'Preferred' allocation sites from wider sites. This includes landscape impact evidence. The most recent 2016 landscape impact study also assessed impacts from the Peak Park. It concluded site ADD01 to be of high landscape sensitivity as it is open to the north-west allowing long distance views and inter-visibility between the site and higher ground across the valley to the north-west. Development of the site would be visually prominent, and would encroach on the countryside by extending beyond this ridge. Note that landscape evidence must be weighed against all other relevant evidence when the Council selects 'Preferred' sites. The Council could require developers to integrate on-site landscaping/screening mitigatory measures to reduce landscape impacts, as part of a site-specific policy.
- Site ADD01 is identified for the necessary expansion of Churnet View Middle School (if this site were allocated for the new first school site instead, middle school expansion would need to occur elsewhere in the town).

Leek

ADD01 East of Horsecroft Farm

© Crown copyright and database rights 2016 Ordnance Survey 100019384

Leek

ADD09 – Land West of Basford Lane Leekbrook

Local Plan Process

- Site suggestion from the SHLAA for residential (C classification)
- Not Included in the options consultation July 2015
- New site included in the Preferred Options consultation April 2016 for employment uses

Current Position

Site taken forward into Preferred Options Local Plan as:

- Has owner support for employment (or residential) use
- Abuts current village boundary. Adjacent to existing employment areas
- Not in Green Belt
- Part of a suite of employment allocations across different areas of Leek to provide choice
- Site-specific policy to reference topography and control of building heights. Also to specific that access off A520 not Basford Lane

Key Issues

- **Topography** – rising site. LLGSHIS therefore recommends development should be limited to the lower ground and building heights limited in the west. Consideration should be given to the adjacent woodland SBI/ TPO.
- **Ecology** – Most features of the site were deemed of local- or site-level importance only. However there is reasonable potential that the hedgerow habitat may qualify as an SBI or a BAS dependent on further survey. Note adjacent woodland forms part of an SBI and woodland TPO.
- **Protected habitats** - HRA states potential increase in traffic associated with this new employment site could potentially increase air pollution near to the SPA/SAC - require further investigation in the HRA.
- relatively inaccessible to services and facilities.

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity /density	Area (ha)	Ownership status	Site details
Greenfield	Countryside (abuts village boundary).	NIL (proposed general employment allocation)	Gross area 1.67ha. Net area 0.8ha (estimate) Floorspace estimate = 3200m ²	1 x owner: Has owner support for employment or residential	<ul style="list-style-type: none"> • Proposed extension site for existing adjacent haulage company • Site rises to west • SBI/TPO to west • Access should be via Dockseys onto A520 (not Basford Lane).

Studies

Extended Phase 1 Habitat Survey and Local Wildlife Assessment (ECUS, 2016)

Ecus Ltd conducted Phase 1 ecological survey of the site (incorporating Local Wildlife Assessment) in 2016. It concluded that the hedgerow habitat on site was considered of nature conservation value at the local level. Furthermore, there is reasonable potential that it may qualify as an SBI or a BAS dependent on further survey following the hedgerow evaluation and grading system outlined in the Staffordshire SBI guidelines. The improved grassland habitat on site was considered of nature conservation value at the site level only. This habitat is not listed as an important habitat in the Staffordshire SBI guidelines.

Species recorded on site were common and widespread both at a county and national level and it is considered unlikely that the site significantly supported any notable protected species. No species listed as important in the Staffordshire SBI guidelines were recorded and therefore no part of the site currently qualifies for consideration as an SBI or as a BAS under these criteria. However, badger may use the site and further survey for badger should be undertaken prior to any future development. Similarly, bats may also use the site and bat activity surveys should be undertaken prior to any future development. Mature trees should be further investigated to determine whether they host bat roosts. It would be necessary to conduct nesting bird checks before vegetation clearance or other disturbance during the bird breeding

ADD09 – Land West of Basford Lane Leekbrook

season. Riparian mammals and white-clawed crayfish should also be surveyed for if Leek brook, close to the north-eastern corner of the site, is likely to be disturbed.

Landscape & Settlement Character Assessment (2008)

Site does not form part of important landscape setting to Leek.

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results

The site comprises a field that slopes steeply up from Basford Lane to woodland, which encloses the site to the west and south. The site is bound by commercial development on the A520 to the north. The surrounding vegetation and development which encloses the site reduces visual prominence, and development of the site would fit in well with the existing pattern of surrounding industrial/commercial development. The site rises steeply increasing visual prominence to the west, therefore development should be limited to the lower ground and building heights limited in the west. Consideration should be given to the adjacent woodland, which is designated as a SBI and TPO. ***Site is of medium landscape sensitivity. Site-specific landscape mitigation measures could include restricted development and building heights on the higher ground.***

Heritage Results

There is one Grade II Listed Building within the 400m buffer. Due to the intervening industrial estate, development would not adversely affect the setting of the asset. The site is within the HLC type of small irregular fields. This type is post-medieval in date and not sensitive to change. ***Site suitable for development in heritage terms.***

Green Belt Review (November 2015)

Not applicable.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. The site's accessibility to open space is likely to have a positive effect. However, the site is relatively inaccessible to services and facilities which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is assessed as being a negative effect, as could the site's proximity to historic assets.

Initial HRA Screening

Potential increase in traffic associated with this new employment site could potentially increase air pollution near to the SPA/SAC thereby increasing nitrogen and acid deposition. These potential effects require further investigation in the HRA.

Updated HRA Screening of Preferred Options Sites June 2017

The purpose of screening is to identify whether the elements of a plan (i.e. policies, site allocations) could result in Likely Significant Effects (LSE) on European sites.

Further investigation has been undertaken in relation to potential urban effects resulting from these allocation sites. Urban effects on European sites typically have an adverse effect on sites within 500m of residential areas (primarily due to cat predation and fire risk due to arson etc). Other urban effects (primarily dog walking from the site to the SPA/SAC) can have an adverse effect on European sites up to 1.6km from residential areas. All allocated sites identified as preferred options are further than 1.6km from the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC.

LSEs relating to urban effects are identified resulting from the following allocation sites:

- Allocated sites on the eastern edge of Leek (LE066, LE140, LE128a, LE142 a and b) located between 3.8km and 4.2km from the Peak District SPA and the South Pennine Moors SAC.

LSEs relating to air quality are identified in relation to all of the allocation sites in Leek because they may increase traffic. Potential in combination effect with employment allocations in Leek and development in neighbouring areas.

Leek

ADD09 – Land West of Basford Lane Leekbrook

Options Consultation July 2015

Not applicable – site was not included in 2015 Site Options consultation.

Council response –

- Further investigations are required to establish any constraints on the site.
- The Council has a Landscape & Settlement Setting Study and this site is not identified as being important landscape setting to the settlement.

Preferred Options Consultation April 2016

Natural England - With regard to preferred site ADD 09 please refer to our generic representation on local wildlife Sites and related information. We advise that the Council checks on this site's status accordingly. Our 'priority habitat' records (Ref – Section 41 of the Natural Environment and Rural Communities Act 2006) show the adjoining land to the west and south of this site as a block of deciduous woodland and lowland grassland of good quality. Given the site's close proximity to lowland deciduous woodland the local plan process should seek to ensure that the provisions of policies NE1 Biodiversity and Geological Resources and C3 Green Infrastructure are implemented.

Council response -

Note this site was the subject of a Phase I survey as part of the Council's 2016 Ecological Study. The site report acknowledges the site's surroundings, the evaluation provides recommendations for further surveys/actions, based on the survey. The Council will weigh the ecological evidence against all other relevant evidence when it selects 'preferred sites'. Note that Local Plan policies will set out for any appropriate ecological protection measures across site allocations.

SCC Highways - In Leekbrook site ADD09 should be required to take access off the A520.

SCC Transportation - Access via Brooklands Way may not be achievable and access from A520 should be considered. A520/Basford Lane will require assessment as well as Basford Lane/Brooklands Way. Sustainable transport links may require improvement. Public Transport comments: Service 16 between Hanley, Cheddleton and Leek operates every 30 minutes along the A520 Cheddleton Road. Service 116 also provides 3 additional journeys per day between Leek and Cheddleton.

Council response – Comments noted. The above will be reflected in any site-specific policy, including any requirement to submit a TA.

Environmental Health: No significant Issues/ possible groundwater contamination but unlikely to be significant constraint; loss of greenfield land / adjacent to area of special biological importance (non sta consideration

Council response – Comments noted. Refer to Natural England response.

SCC Lead Local Flood Risk Officer: Adjacent flow path, steep site, may need 3rd party land to discharge surface water. FRA required.

Council response – Comments noted. Site-specific policy to reference these issues and need for FRA.

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Site does not fall within any coal risk area.

Council Response – Sites affected by mining legacy to have a policy criterion to clarify that developers should recognise mining legacy problems and demonstrate how they can be positively addressed by new development. Policy also to clarify that no development should take place over mine entries even when treated.

Public response – Objections:

Leek

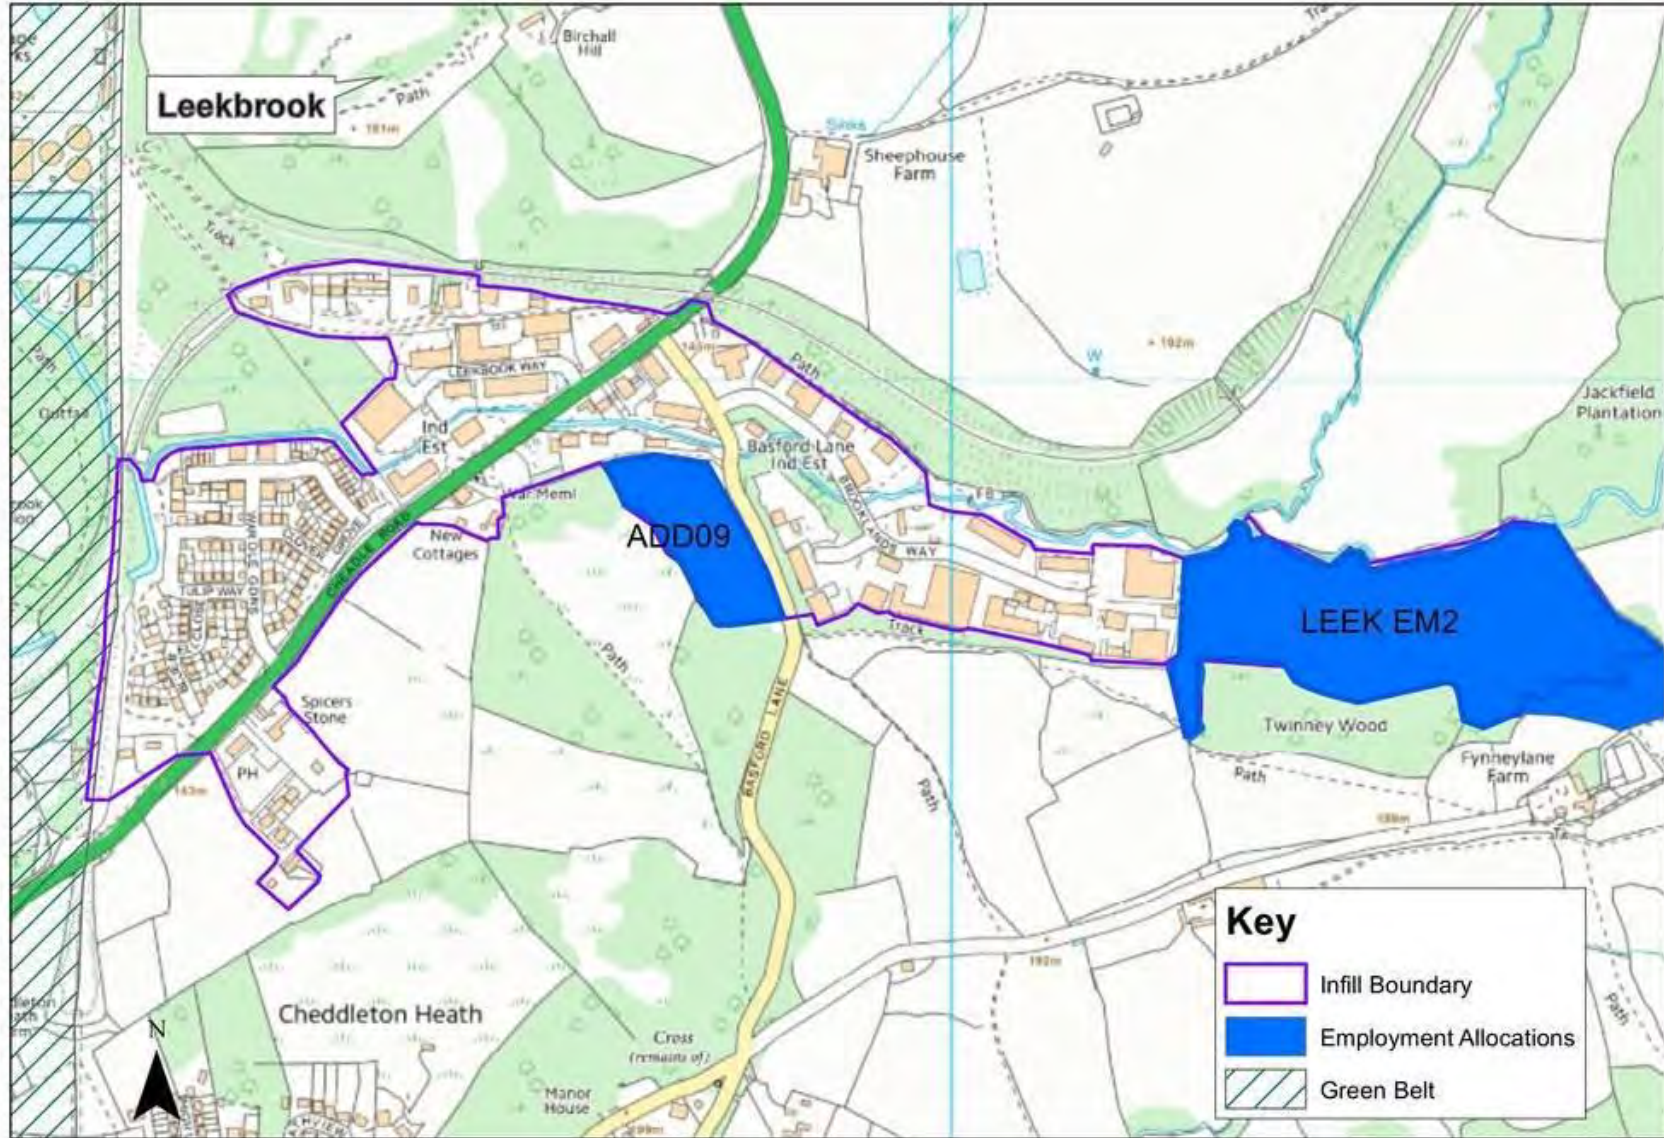

ADD09 – Land West of Basford Lane Leekbrook

- damaging to a beautiful part of the Staffordshire Moorlands countryside and the wildlife habitats contained therein
- given the elevated position of the site, the creation of a hardstanding area of development will greatly contribute to the risk of flash flooding via the brook below
- development would have an adverse impact on the natural wildlife habitats contained within the adjacent heathland
- would be a visual intrusion into the green open space currently observed on the rise towards Cheddleton Heath, which would be highly visible to travellers along the A520 from Leek
- access to the site would be highly impracticable due to the narrow road bridge crossing the brook, which sits just above the current industrial estate, on Basford Lane.

Council response -

- The Council uses evidence to justify its selection of 'Preferred' allocation sites from wider sites. This includes landscape impact evidence, ecological evidence, and a Strategic Flood Risk Assessment for the District.
- The most recent 2016 landscape impact study concluded the site is of medium landscape sensitivity; it also provided recommendations regarding mitigatory measures including restricted development and building heights on the higher ground.
- All current Preferred Options sites were subject to Phase I ecological surveys between 2014 and 2016; a 2016 ecology study also considered the scope for 'local wildlife site' (ie.SBI) designation for all of these preferred options. These studies set out ecological evaluations of the sites followed by recommended further surveys/actions in the event of future development. The Council would expect subsequent schemes to take account of this evidence; further Core Strategy Policy NE1 allows for the Council to require ecological mitigatory or compensatory measures where appropriate. The 2016 survey concluded that most of the site (improved grassland) was of 'site level' nature conservation value only; however the perimeter hedgerow habitat was of higher nature conservation importance (and may qualify as a local-level nature designation, subject to further survey). A number of pre-development surveys/actions are also recommended in relation to badgers, bats and birds. Note that ecology evidence must be weighed against all other relevant evidence when the Council selects 'Preferred' sites. According to the 2006 NERC Act, the Council must in its Planmaking, have regard to the purpose of conserving biodiversity.
- The SFRA provides an overview of flood risk from all sources across the District, and will be used alongside formal EA responses regarding proposed allocations. All major development proposals will also be required to integrate sustainable drainage measures (SuDS) into site layout, as a condition of Local Plan policy (to mitigate flood risk elsewhere).
- Note that all evidence must be weighed against all other relevant evidence when the Council selects 'Preferred' sites.
- Vehicular access to the site is anticipated via the Dockseys haulage company to the west, onto the A520, not from Basford Lane. The SCC Highways comments to the consultation are based upon this.

ADD09 – Land West of Basford Lane Leekbrook

Leek

LE022 Land west of Ashbourne Road

Local Plan Process

- Site suggestion from the SHLAA
- Included in the site options consultation July 2015
- Included in the Preferred Options consultation April 2016

Status:

Site taken forward into Preferred Options Local Plan as:

- Site has full planning permission for 12x dwellings (subject to awaited legal agreement); is deliverable in short term, with owner support for development
- Small site within town development boundary
- Site assessed as having low ecological importance; and not considered to have SBI/BAS status
- accessible to existing services and facilities

Key Issues

- Greenfield site
- Site has full planning permission for 12 x dwellings SMD/2016/0510 (subject to awaited legal agreement)
- **Protected habitats** - HRA states new housing/employment development in Leek could potentially increase recreational pressure and air pollution from increased road traffic which could have an effect on SPAs and SACs and this requires further investigation in the HRA. LSEs relating to air quality are identified in relation to all of the allocation sites in Leek because they may increase traffic. Potential in combination effect with employment allocations in Leek and development in neighbouring areas.

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity/ density	Area (ha)	Ownership status	Site details
Greenfield	Within existing Leek settlement boundary	16 (based on 35.56 dwellings per hectare).	0.45	2 x owners – both supportive.	<ul style="list-style-type: none">• Site has full planning permission for 12 x dwellings SMD/2016/0510• Ladydale SBI a short distance to S/W

Studies

Extended Phase 1 Habitat Survey 2015 (FID 29)

Conclusion

The site has mostly low biodiversity value overall in terms of the species poor grassland area but has some fairly biodiverse areas connected by hedgerows to the south and north. Therefore the site is deemed to have low ecological importance. The following surveys/ actions are therefore recommended prior to any potential development works being carried out: Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2017)

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that the site has low ecological value in its potential to support protected species although grass snake, brown hare, hedgehog and foraging bats have all been recorded. The site habitats are considered to be of nature conservation value at site level only. Not considered to have SBI/BAS status.

Landscape & Settlement Character Assessment (2008)

Forms part of important landscape setting to Leek.

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results

The site comprises a small field on the south-eastern edge of Leek, west of the A523 (Ashbourne Road). The site is enclosed to the south by thick tree belts, which form the existing well-defined,

Leek

LE022 Land west of Ashbourne Road

vegetated settlement edge. The site fits well within the existing settlement pattern, as it is adjacent to existing development and enclosed by these tree belts to the south. Development of the site could potentially improve the approach to Leek on Ashbourne Road, as it could screen existing views of the service station to the north. **Site is of low landscape sensitivity.**

Heritage Results

There are four Grade II Listed Buildings within the 400m buffer. Their settings are not considered to contribute greatly to the significance of the assets. Development would be highly unlikely to adversely affect their settings. The site is located within the Leek Extensive Urban Survey report (2011) in HUCA 12. Development would be highly unlikely to adversely affect the zone. **Site suitable for development in heritage terms.**

Green Belt Review (November 2015)

Not applicable.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 16 dwellings is considered to have a positive effect. The site is also accessible to existing services and facilities which is likely to have a positive effect, as could the site's low ecological importance. However, the development of greenfield land is assessed as having a negative effect, as could the site's proximity to historic assets and the inaccessibility of existing areas of employment.

Initial HRA Screening

New housing development in Leek could potentially increase recreational pressure and air pollution from increased road traffic which could have an effect on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC and this requires further investigation in the HRA. The screening has also identified that new employment sites could also increase traffic and air pollution near to the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC and this also requires further investigation in the HRA. The closest part of the SAC/SPA (Leek Moss SSSI) is approx. 4km from the western edge of Leek.

Updated HRA Screening of Preferred Options Sites June 2017

The purpose of screening is to identify whether the elements of a plan (i.e. policies, site allocations) could result in Likely Significant Effects (LSE) on European sites.

Further investigation has been undertaken in relation to potential urban effects resulting from these allocation sites. Urban effects on European sites typically have an adverse effect on sites within 500m of residential areas (primarily due to cat predation and fire risk due to arson etc). Other urban effects (primarily dog walking from the site to the SPA/SAC) can have an adverse effect on European sites up to 1.6km from residential areas. All allocated sites identified as preferred options are further than 1.6km from the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC.

LSEs relating to urban effects are identified resulting from the following allocation sites:

- Allocated sites on the eastern edge of Leek (LE066, LE140, LE128a, LE142 a and b) located between 3.8km and 4.2km from the Peak District SPA and the South Pennine Moors SAC.

LSEs relating to air quality are identified in relation to all of the allocation sites in Leek because they may increase traffic. Potential in combination effect with employment allocations in Leek and development in neighbouring areas.

Options Consultation July 2015

Statutory bodies/stakeholders

SCC Highways: May be acceptable. Access would require careful design to avoid creating a crossroads with Mount Road or Mount View. Access off Fairview Road much more preferable and development acceptable if this is proposed and access onto Ashbourne Road permanently closed.

Developer/Agent Letter from owner of LE128 stating that land is available for development.

Public response 6 comments – 5 objections and 1 support

Leek

LE022 Land west of Ashbourne Road

Issues raised:
Objections

- Infrastructure - Schools
- Infrastructure - Traffic / Transport- road will not support an additional 500 homes if all sites come forward
- Infrastructure – Other- uneven distribution across Leek, close to wind turbine
- Landscape- high quality rural landscape, loss of panoramic views
- Nature Conservation
- Amenity (e.g. noise, privacy, loss of light)- would effect quality of life, used for leisure activities, should remain open space
- Scale of development – brownfield first

Support • No reasons given

Council response –

- County Highways do not raise any issues which would prevent development.
- County Education advise that there are capacity issues affecting Leek First-, Middle- and High Schools; and given the scale of housing proposed across this catchment, new capacity will be required within Leek. The District Council will work with the County Council to identify an appropriate solution.
- The Council has a Landscape & Settlement Setting Study and this site has been identified as being important to the landscape setting of the settlement.
- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed sites included in the Site Options consultation. The site survey results will be used as part of the site selection process. Any other sites which come forward and are potentially suitable for development will also need to be assessed.
- Amenity – issues such as overlooking will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
- The Council is required to meet its housing needs to 2031 and there are not enough brown field sites in Leek to achieve this so the Council needs to consider both brownfield and green field sites.

Preferred Options Consultation April 2016

Environmental Health: No significant Issues

SCC Lead Local Flood Risk Officer: Looks OK. FRA not required.

SCC Local Education Authority: Advise that in Leek education contributions will be required to fund additional school places. At least a minimum of 1FE of first school provision and 1FE of middle school provision will be required in Leek Town during the Local Plan period. The High Schools in the Leek Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in Leek.

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Site does not fall within any coal risk area.

Public response (includes generic responses to The Mount sites received for LE022)

Issues raised:

- Loss of important local amenity – The Mount is a very important open space close to the town. Mount Road is a route of Staffordshire Moorlands Walk a very popular route for Leisure activities such as running, cycling and walking.

Leek

LE022 Land west of Ashbourne Road

- High quality Landscape – unsympathetic to landscape and the character and quality of the area. Urbanisation of the country lane that is mount road – if all 6 developments proceed then the 500 houses would be constructed. Visual impact – restrict important skyline and further afield. Currently, attractive views towards Leek conservation area. New street lighting – loss of dark skies. Overlook from the National Park - building as designated will adversely affect the view from the National Park
- The spatial distribution of the proposed access sites across leek is unbalance – there will not be sufficient demand to build all of these houses on one side of the town so the council will not meet its housing needs in any event.
- Impact for infrastructure – primary schools in particular (Leek 1 st school and Beresford Memorial School) will struggle to keep up demand and the situation where some children already have to school in the west of leek will become more common. Lack of Health Care provision in respect to GP services and hospital care for the area
- Traffic generation/inadequate roads. Most commuters work in Stoke/Manchester/Macclesfield (as opposed to Buxton/Ashbourne). Traffic will need to pass through town centre. Kniveden Lane will become rat run. Noise and air pollution caused by new cars.
- Develop Kniveden Hall (LE066) instead- well screened brownfield site.
- Wildlife/ecological impacts of new development
- No reason for new houses on green space that should be available for all to enjoy. Develop alternative sites such as Macclesfield Road/Home Farm, or the area around Foker Grange instead. Develop brownfield sites/empty derelict mills in Leek instead. Such alternative sites have not been identified or consulted upon.
- Loss of views/privacy from adjacent properties
- Council made decisions about the Mount in secret denying people of the Moorland the chance to put forward their views
- The beautiful location will command high prices, therefore no affordable houses will be built
- Have serious concerns about the effects on the water run off if large areas of the Mount are built upon. The Mount is the highest point in our town, and huge amounts of water drain off it down towards Leek on a daily basis. Without the ground to soak up this water concerned the water table may be affected causing flooding. There would be a significant cost to put in mains services as the existing water and drainage are inadequate
- Sets a precedent for further sites at the Mount in future
- There is a significant discrepancy between between SMDC & Government figures for required housing. Believe you are seriously over-estimating the local housing need. The Council are only motivated by the new homes bonus. There are hundreds of empty properties throughout the Staffordshire Moorlands/Leek.
- Sites are good quality farmland
- Mismatch between local employment opportunities and amount of new housing.
- Development would lead to homogenisation of the town
- Loss of property values
- In 2006 New York took the far sighted decision to turn a disused elevated railway in a linear park (the high lane). Would that Leek had planners and leader of similar vision to develop mount road into a high lane for the benefit all off the community

Council Response:

- The public/visual open spaces proposed by the Council are those mapped in the Preferred Options consultation document. The Council's adopted Core Strategy policies seek to improve public access to open spaces/recreation generally where this is consistent with other policies; and subject to landowner agreement. Note there is no automatic public right to cross privately owned land beyond public rights of way. Development proposals affecting the routes of recognised public rights of way would need to make allowance for them.
- The Council uses evidence to justify its selection of 'Preferred' allocation sites from wider sites. This includes landscape impact evidence. The most recent 2016 landscape impact study assessed impacts from the Peak Park, and concluded that the various Mount sites exhibited low- through to high- landscape sensitivity; also providing recommendations regarding mitigatory measures. Note that landscape evidence must be weighed against all other relevant evidence when the Council selects 'Preferred' sites. Site LE022 is of low landscape sensitivity. Site LE066 [Kniveden Hall] is of high landscape sensitivity.
- Issues such as external lighting in schemes can be controlled by the Council's amenity policies. Streetlighting is a matter controlled by SCC Highways.

Leek

LE022 Land west of Ashbourne Road

- The broad justification for the Council's selection of 'preferred' sites over other sites, is site out in the 'Options Site Assessments' on the website. This includes consideration of heritage impacts, following consultation with the Council's Conservation Officer, and the heritage impact recommendations of the most recent 2016 landscape impact study. All proposed sites must also be the subject of sustainability appraisal (the Council's S.A. will be published as part of its evidence base).
- The Council is preparing a viability study that assesses the general financial viability of broad 'typologies' of development site. All Mount sites are considered to be broadly viable
- National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered. All proposed sites must also be the subject of sustainability appraisal (the Council's S.A. will be published as part of its evidence base).
- The Council is also preparing a Development Capacity Study, which considers the extent of public services across the District.
- The Council consults with SCC Education during Local Plan preparation, and SCC have indicated a need for additional first- and middle- school land provision in Leek resulting from the town's development requirements. These are laid out in the Preferred Options consultation document.
- The Council consults with service providers including Regional Clinical Commissioning Groups during Plan preparation; and is also preparing a Development Capacity Study, which considers the extent of public services across the District. Note that this evidence must be weighed against all other relevant evidence when the Council selects 'Preferred' sites.
- The Council consults with SCC Highways during Local Plan preparation. SCC did not raise any objections to Preferred Options sites LE022/ LE127/ LE128A/ LE140/ LE142A/ LE142B subject to development in this area contributing to the improvement of Mount Road including provision of footways and pedestrian links. Also Kniveden Lane should be brought up to adoptable standard with the implementation of footways. Further junction improvements at Mount Road/Ashbourne Road may also be appropriate. The Council would assess schemes having significant transport impacts against relevant NPPF and Local Plan policy (including requirement to provide highways improvements where deemed appropriate).
- Notwithstanding current commuting patterns, the District as a whole has residual general employment land requirement, and Leek has a requirement (of around 8ha to 2031) and the Council must demonstrate that it will fully meet these along with its housing requirements, to have a sound Local Plan in place. Government Policy promotes mixed land uses, subject to proper consideration of amenity impacts (such as noise). The Council works with neighbouring planning authorities under its duty to cooperate, to explore opportunities for the meeting of development requirements cross-border. However neighbouring authorities must also address their own development requirements. The Council consults with SCC Transport (regarding strategic impacts) during Local Plan preparation; and has regard to SCC's Local Transport Plan Integrated Transport Strategy for the District.
- If the Council considered that a development may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts. In addition the Council continually monitors air quality across the district and regularly undertakes review and assessments of this data to identify areas where the traffic could have an unacceptable impact on local air quality.
- The Council uses evidence to justify its selection of 'Preferred' allocation sites from wider sites, including ecological evidence: The Mount sites LE022/ LE127/ LE128/ LE140/ LE142A/ LE142B were subject to a Phase I ecological survey in 2014 and a later 2016 ecology study considered the scope for 'local wildlife site' (ie.SBI) designation for all preferred option sites. These studies set out evaluations of the sites followed by recommended further surveys/actions in the event of future development. The Council would expect subsequent

LE022 Land west of Ashbourne Road

schemes to take account of this evidence; further Policy NE1 allows for the Council to require ecological mitigatory or compensatory measures where appropriate. **Site LE022** was deemed mostly low biodiversity value overall in terms of the species poor grassland area but has some fairly biodiverse areas connected by hedgerows to the south and north [some predevelopment species surveys recommended]. Note that ecology evidence must be weighed against all other relevant evidence when the Council selects 'Preferred' sites.

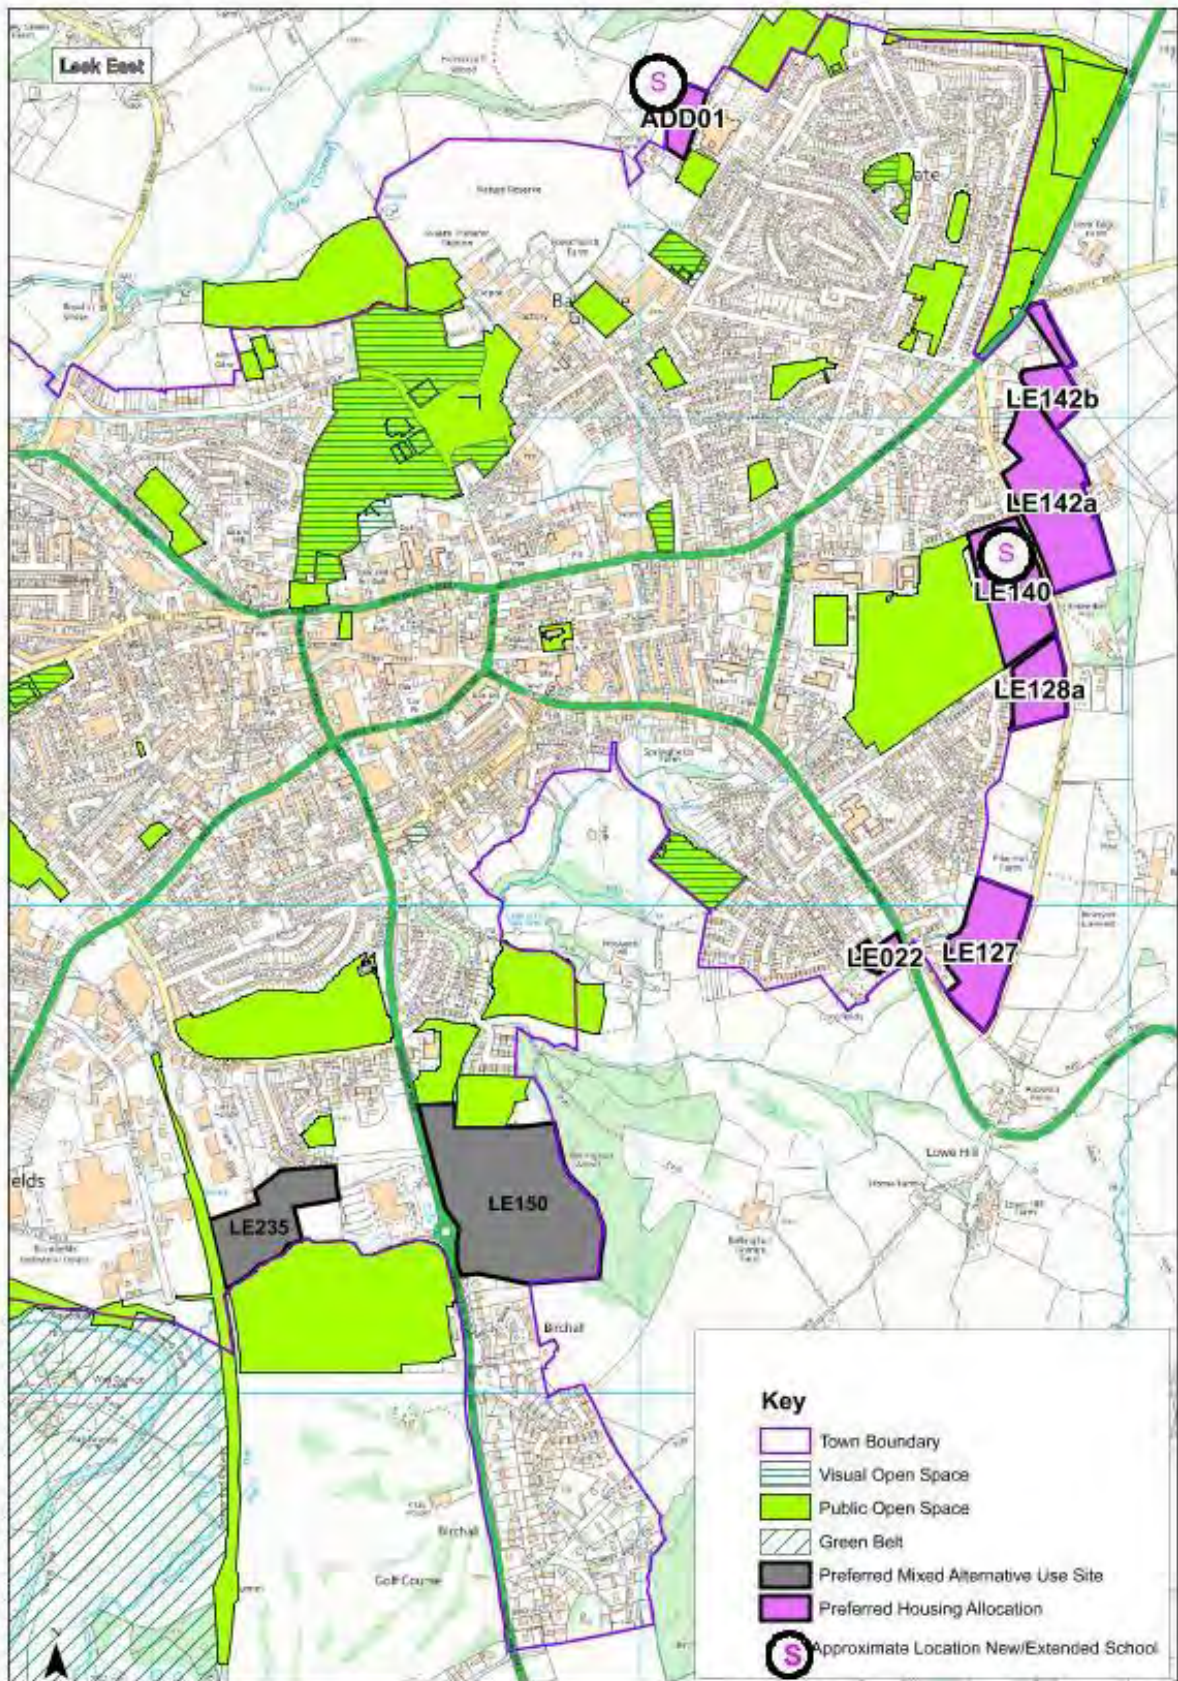

- Need for additional housing stems from a number of factors, for example household formation, in-migration, linkages with future workforce, and other factors. The NPPF makes clear that housing projections are the starting point for assessing housing needs; however these additional factors should also be taken in to account in Council SHMAs. The Council's own housing need assessments are set out in its evidence base on the website. Note that this already takes into consideration empty properties in the Moorlands.
- Note that none of the Mount sites falls within the Green Belt, whereas the western edge of Leek has Green Belt status. Whilst Councils can allocate within the Green Belt National Planning policy is clear that this requires exceptional circumstances to justify (as compared to non-Green Belt). The Council recently completed a Green Belt Review which assessed the suitability for retention of all areas of Green Belt in the District, against the five Green Belt 'purposes' set out in the NPPF. This will be used by the Council alongside other evidence in progressing its Local Plan. The NPPF also allows for consideration of development proposals that would represent 'limited infilling', or in some cases redevelopment of 'brownfield' sites in the Green Belt.
- The Council must demonstrate that it will fully meet residual housing (and education) requirements for Leek to have a sound Local Plan in place. However this requirement does not have to be met 100% from land allocations – unanticipated development of other urban brownfield/greenfield sites counts too – Table 4.1 factors in assumptions about future windfall housing (resulting in a lower requirement). However there is insufficient capacity to meet this requirement entirely from sites within the Leek town boundary alone resulting in proposed sites both within the urban area, and greenfield peripheral "urban extensions". The Council uses evidence to justify its selection of 'Preferred' allocation sites from wider sites including landscape impact evidence). The Council must balance all relevant evidence when deciding over preferred allocations.
- The Council consulted upon all potential sites (of a minimum size) deemed deliverable for housing, as part of the Site Options consultation in July 2015. The results of this consultation (including the call for sites), alongside other relevant evidence, has informed the subsequent Preferred Options.
- The Council's design and amenity Policies and standards will be applied to subsequent planning schemes across allocated sites.
- The Council must conduct public consultation concerning its emerging Local Plan as set out in the Local Plan regulations (or exceeding these requirements); and in also in accordance with the Council's adopted Statement of Community Involvement. All stages of the local Plan (including consultations) must be agreed by the elected Council Assembly; and all meetings of the Council Assembly are open to the public.
- An element of affordable housing will be required for all major housing schemes in the District, as set out in Local Plan Policies. The Council may also require an element of starter homes, and self-build plots on such sites. The Council's housing/design policies and the NPPF expect that housing schemes provide for variegation in design; and a mix of house types to meet differing socio-economic needs, including affordable housing.
- The Council consults with utilities providers, the Environment Agency, and the SCC Lead Local Flood Risk Officer during Local Plan preparation. These bodies did not object to any of the Mount sites. The SFRA provides an overview of flood risk from all sources across the District, and will be used alongside formal EA responses regarding proposed allocations. Note that subsequent development proposals would be required to integrate sustainable drainage features into layouts, as required by the Flood and Water Management Act.
- Each stage of Local Plan preparation must be agreed by Full Council Assembly. The Council must demonstrate to a Planning inspector that they have produced a Local Plan preferably covering a 15-year time horizon, to take account of longer term requirements.

Leek

LE022 Land west of Ashbourne Road

- All Planning Authorities are eligible to receive New Homes Bonus which was introduced by the Government to reflect and incentivise housing growth in their areas. It is based on the amount of extra Council Tax revenue raised for new homes and is payable annually over a 6 year period. The Council intends to spend this income on...
- The NPPF directs that where development is necessary, lower grade agricultural land be used ahead of higher grade. Note that the various site options around Leek appear to fall within the same ALC (Grade 4 'poor'). Agricultural land quality must be weighed against all other relevant evidence when the Council selects 'Preferred' sites.
- property values are not a matter covered by the Planning Acts
- The Council's adopted Core Strategy already contains a policy (T2) protecting existing railway lines from development; and supporting recreational re-use etc. The Mount does not contain any such routes.
- Sites affected by mining legacy to have a policy criterion to clarify that developers should recognise mining legacy problems and demonstrate how they can be positively addressed by new development. Policy also to clarify that no development should take place over mine entries even when treated.

LE022 Land west of Ashbourne Road

© Crown copyright and database rights 2016 Ordnance Survey 100018384

LE064 Land to the north of Kiln Lane

Local Plan Process

- Site suggestion from the SHLAA
- Included in the site options consultation July 2015
- Included in the Preferred Options consultation April 2016

Current Position

Site **not** taken forward into Preferred Options Local Plan as:

- already benefits from outline planning permission for 11x dwellings (with owner support for residential development)

Key Issues

- Greenfield site
- Site has outline planning permission for 11 x dwellings SMD/2013/1201
- **Ecology** – Further survey work recommended in order to establish SBI/BAS status.
- **Protected habitats** - HRA states new housing/employment development in Leek could potentially increase recreational pressure and air pollution from increased road traffic which could have an effect on SPAs and SACs and this requires further investigation in the HRA. LSEs relating to air quality are identified in relation to all of the allocation sites in Leek because they may increase traffic. Potential in combination effect with employment allocations in Leek and development in neighbouring areas.

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity/ density	Area (ha)	Ownership status	Site details
Greenfield	Within existing Leek settlement boundary	11 (approved) at a density of 27.5/ha	0.40	1 owner (appear to be planning applicant)	<ul style="list-style-type: none"> • Site has outline planning permission for 11 x dwellings SMD/2013/1201

Studies

Extended Phase 1 Habitat Survey 2015 (FID 33)

Conclusion

The site has fairly low biodiversity overall, with fairly poor connectivity to more biodiverse habitats therefore is attributed low ecological importance. Although anecdotal evidence suggests that badger do use the site for foraging, no field signs were found at the time of survey and no setts were present. The following surveys/ actions are therefore recommended prior to any potential development works being carried out: Vegetation removal at the appropriate time of year.

Local Wildlife Assessment (ECUS, 2017)

Ecus Ltd conducted Local Wildlife Site (LWS) Assessment of the site in 2017 in order to establish potential SBI/BAS status against Staffordshire Wildlife Trust criteria. It concluded that the site has low ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However, more information is required regarding the scattered trees on site in order to establish their ecological importance.

The following surveys/ actions are therefore recommended in order to establish SBI/ BAS status:

- Further assessment of the tree for the potential to support roosting bats.
- Bat survey possibly required.

Landscape & Settlement Character Assessment (2008)

Forms part of important landscape setting to Leek.

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results

The site is located on the north-western edge of Leek, and comprises a field of rough grassland which slopes up from commercial development on Ashbourne Road to a property on Kiln Lane. Visual prominence of the site is reduced by surrounding development and vegetation. The existing settlement

LE064 Land to the north of Kiln Lane

edge is not well-defined, and development of the site could strengthen this. However the site could be perceived as a break between residential and commercial development. This break could potentially be maintained with planting and landscaping in the north of the site. In addition a strong, vegetated edge would need to be planted on the western site boundary to limit development, as land to the north-west is located outside of the existing settlement pattern. ***Site is of medium landscape sensitivity. Site-specific landscape mitigation measures could include advanced planting on the north-west site boundary.***

Heritage Results

There are four Grade II Listed Buildings and one Scheduled Monument within the 400m buffer. The visual prominence of the site was reduced by surrounding development and vegetation. Development would be highly unlikely to adversely affect the setting of the designated assets due to the intervening buildings and vegetation. Development would be a small change to HUCA 18 and the majority of the zone would remain unaltered (Leek Extensive Urban Survey report 2011). ***Site suitable for development in heritage terms.***

Green Belt Review (November 2015)

Note applicable.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The site's proximity to existing areas of employment is considered to be a significant positive effect. Similarly, the site has good accessibility to services and facilities which is likely to have a positive effect. However, the site is located within flood zone 2 which is assessed as being a negative effect. The development of greenfield land is likely to have a negative effect, as could the site's proximity to historic assets and a Local Nature Reserve.

Initial HRA Screening

New housing development in Leek could potentially increase recreational pressure and air pollution from increased road traffic which could have an effect on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC and this requires further investigation in the HRA. The screening has also identified that new employment sites could also increase traffic and air pollution near to the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC and this also requires further investigation in the HRA. The closest part of the SAC/SPA (Leek Moss SSSI) is approx. 4km from the western edge of Leek.

Updated HRA Screening of Preferred Options Sites June 2017

The purpose of screening is to identify whether the elements of a plan (i.e. policies, site allocations) could result in Likely Significant Effects (LSE) on European sites.

Further investigation has been undertaken in relation to potential urban effects resulting from these allocation sites. Urban effects on European sites typically have an adverse effect on sites within 500m of residential areas (primarily due to cat predation and fire risk due to arson etc). Other urban effects (primarily dog walking from the site to the SPA/SAC) can have an adverse effect on European sites up to 1.6km from residential areas. All allocated sites identified as preferred options are further than 1.6km from the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC.

LSEs relating to urban effects are identified resulting from the following allocation sites:

- Allocated sites on the eastern edge of Leek (LE066, LE140, LE128a, LE142 a and b) located between 3.8km and 4.2km from the Peak District SPA and the South Pennine Moors SAC.

LSEs relating to air quality are identified in relation to all of the allocation sites in Leek because they may increase traffic. Potential in combination effect with employment allocations in Leek and development in neighbouring areas.

Options Consultation July 2015

Statutory bodies/stakeholders

LE064 Land to the north of Kiln Lane

SCC Highways: Not directly connected to highway. Access would need to be through the football club due to level difference with Kiln Lane. This site has been subject to planning applications (latest SMD/2013/1201) which was recommended for conditional approval by highways.

Environment Agency – Site is likely to be affected to some degree by flood risk and if taken forward will require the support of the Sequential Test and a Level 2 SFRA.

Developer/Agent/Owner – Land available.

Public response 1 comment – 1 objection

Issues raised:

- Amenity (e.g. noise, privacy, loss of light) unofficial footpath through site which should be retained

Council Response

- Site is considered developable from a County Highways point of view.
- The Council has a Landscape & Settlement Setting Study and this site has been identified as being important to the landscape setting of the settlement.
- There is relevant planning history on this site – an outline application for 11 dwellings which is awaiting a S.106 agreement

Preferred Options Consultation April 2016

Environmental Health: Some constraints on residential development: Noise from adjacent football ground/ light

SCC Lead Local Flood Risk Officer: Main river floodplain. Consult EA. Flood Risk Assessment required.

SCC Local Education Authority: Advise that in Leek education contributions will be required to fund additional school places. At least a minimum of 1FE of first school provision and 1FE of middle school provision will be required in Leek Town during the Local Plan period. The High Schools in the Leek Planning Area are projected to have limited capacity to accommodate any children generated from housing allocated in Leek.

Coal Authority: Welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.

Latest Coal Authority data 27/04/2016. Site does not fall within any coal risk area.

Severn Trent Water: As a water company we have an obligation to provide water supplies and sewage treatment capacity for future development... We will complete any necessary improvements to provide additional capacity once we have sufficient confidence that a development will go ahead...We expect surface water to be managed in line with the Government's Water Strategy, Future Water. Surface water needs to be managed sustainably. For new developments we would not expect surface water to be conveyed to our foul or combined sewage system and, where practicable, we support the removal of surface water already connected to foul or combined sewer. **Water Quality:** Any proposals should take into account the principles of the Water Framework Directive and River Basin Management Plan for the Severn River basin unit as prepared by the Environment Agency.

Public response

Issues raised:

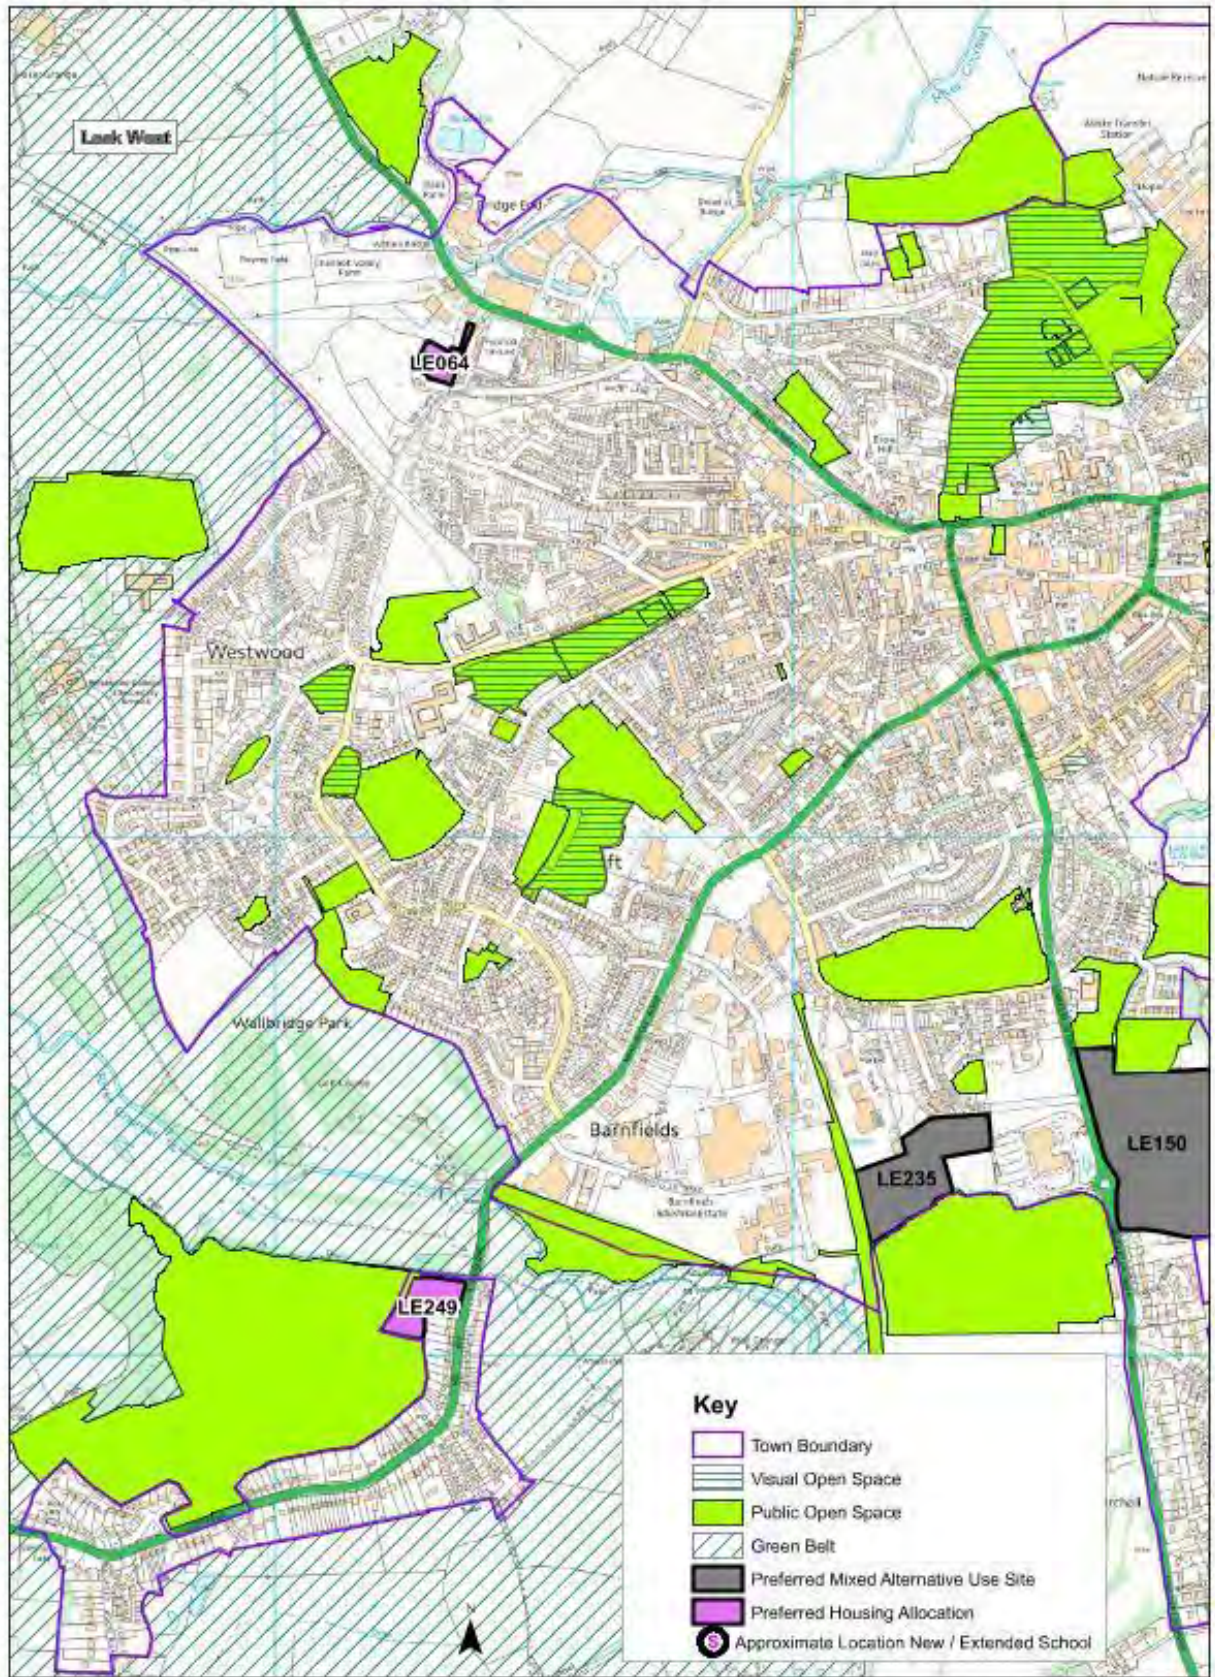

- Care needs to be given to number of properties and access to main road. Also, potential to flooding. Consider more linear development and the potential slight expansion of the development boundary for infill sites such as Highfield / Lowfield and around the cricket club should be added without encroaching the green belt.

LE064 Land to the north of Kiln Lane

Council Response:

- Site ref LE064 was recently granted outline planning permission for 11x dwellings (SMD/2013/1201). Note that the applicant submitted a site-specific flood risk assessment; and the permission contained a number of conditions requiring flood measures be designed into the scheme, including sustainable drainage (SuDS).
- Any boundary alterations involving loss of Green Belt (even if just for infill) would require demonstration of exceptional circumstances to Planning Inspector. The NPPF allows for consideration of 'limited infilling' in villages and development proposals upon 'brownfield' sites, in the Green Belt.
- Sites affected by mining legacy to have a policy criterion to clarify that developers should recognise mining legacy problems and demonstrate how they can be positively addressed by new development. Policy also to clarify that no development should take place over mine entries even when treated.

LE064 Land to the north of Kiln Lane

© Crown copyright and database rights 2010 Ordnance Survey 100018364

Leek

LE066 Kniveden Hall, Mount Road

Local Plan Process

- Site suggestion from the SHLAA
- Included in the site options consultation July 2015
- Site included in Preferred Options Local Plan after 2016 Preferred Options

Current Position

Site taken forward into Preferred Options Local Plan as:

- brownfield site in close proximity to current town boundary. Some perimeter screening
- good accessibility to services and facilities
- not in Green Belt
- Landowner SCC are still promoting this site for residential use

Key Issues

- site assessed as having **high landscape sensitivity** in 2016 landscape and heritage impact study. Part of site forms important landscape setting to town in 2008 LSCA
- **Ecology** - ecological survey states site is of District ecological importance. Further survey work needed in order to establish SBI/BAS status.
- **Protected habitats** - HRA states new housing/employment development in Leek could potentially increase recreational pressure and air pollution from increased road traffic which could have an effect on SPAs and SACs and this requires further investigation in the HRA. LSEs relating to air quality are identified in relation to all of the allocation sites in Leek because they may increase traffic. Potential in combination effect with employment allocations in Leek and development in neighbouring areas.

Site Information

Greenfield/ brownfield	Built up area boundary/ countryside	Est. housing capacity/ density	Area (ha)	Ownership status	Site details
Brownfield	Countryside	74 (based on 35 dwellings per hectare)	2.1 (net area, excluding heavily wooded areas)	Understood landowner SCC are still promoting this site for residential use	<ul style="list-style-type: none">• public right of way crosses site between Kniveden Hall and Springhill• good accessibility to services and facilities

Studies

Extended Phase 1 Habitat Survey 2015 (FID 34)

The site consists mainly of common habitats, mixed planted woodland, buildings, amenity grassland and associated gardens, allotments and amenity grassland and the site is fairly isolated with little connectivity to the wider countryside, apart from being located 20m away from FID 41. The woodland and habitat mosaic as well as the buildings that could potentially support roosting bats and therefore the whole site has been attributed district ecological importance. The following surveys/ actions are therefore recommended prior to any potential development works being carried out:

- A bat survey regime to ascertain whether bats roost in the buildings and 4 trees
- Invasive species removed and disposed of according to strict appropriate guidelines.
- Vegetation removal at the appropriate time of year

Local Wildlife Assessment (ECUS, 2017)

Site was not included in 2017 assessments as was not included in 2016 Preferred Options sites that formed the basis for assessment. LWS assessment required.

Landscape & Settlement Character Assessment (2008)

Northern part of site falls within important landscape setting to Leek.

Landscape, Local Green Space & Heritage Impact Study (August 2016)

Landscape Results

The site is located on the on the eastern edge of Leek, east of Mount Road. The site is previously developed, with the northern section comprising Kniveden Hall amongst woodland, and the southern half comprising a property and polytunnels/horticulture. The site is located beyond the ridge of Mount

Leek

LE066 Kniveden Hall, Mount Road

Road, which currently screens views of Leek from the PDNP. Existing development within the site is generally screened by the trees and other vegetation both within and surrounding the site. The woodland within the site also provides screening of existing development within Leek. Development within the site would be visually prominent and could potentially affect the setting of the PDNP. ***Site is of high landscape sensitivity. Please note that this study forms part of a wider evidence base to support SMDC's Local Plan. Therefore the conclusions within this report will be weighed against other evidence when determining the overall suitability of a site for development.***

Heritage Results

There are no designated heritage assets within the 400m buffer. Although the HEA states that HLC zone LLHECZ 2 is sensitive to change, with appropriate development, this could be accommodated on the site (Historic Environment Character Assessment 2010). ***Site suitable for development in heritage terms.***

Green Belt Review (November 2015)

Not applicable.

Sustainability Appraisal

Initial Sustainability Appraisal Report April 2016

The proposed delivery of circa 50 dwellings is considered to have a significant positive effect. Similarly, the site is located away from historic assets and has good accessibility to services and facilities which is likely to have a positive effect. However, the district ecological importance of the site is likely to have a negative effect as well as the inaccessibility of existing areas of employment.

Initial HRA Screening

New housing development in Leek could potentially increase recreational pressure and air pollution from increased road traffic which could have an effect on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC and this requires further investigation in the HRA. The screening has also identified that new employment sites could also increase traffic and air pollution near to the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC and this also requires further investigation in the HRA. The closest part of the SAC/SPA (Leek Moss SSSI) is approx. 4km from the western edge of Leek.

Updated HRA Screening of Preferred Options Sites June 2017

The purpose of screening is to identify whether the elements of a plan (i.e. policies, site allocations) could result in Likely Significant Effects (LSE) on European sites.

Further investigation has been undertaken in relation to potential urban effects resulting from these allocation sites. Urban effects on European sites typically have an adverse effect on sites within 500m of residential areas (primarily due to cat predation and fire risk due to arson etc). Other urban effects (primarily dog walking from the site to the SPA/SAC) can have an adverse effect on European sites up to 1.6km from residential areas. All allocated sites identified as preferred options are further than 1.6km from the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC.

LSEs relating to urban effects are identified resulting from the following allocation sites:

- Allocated sites on the eastern edge of Leek (LE066, LE140, LE128a, LE142 a and b) located between 3.8km and 4.2km from the Peak District SPA and the South Pennine Moors SAC.

LSEs relating to air quality are identified in relation to all of the allocation sites in Leek because they may increase traffic. Potential in combination effect with employment allocations in Leek and development in neighbouring areas.

Options Consultation July 2015

Leek Town Council: Mount Road should form the new eastern development boundary. These site fall outside this so should be rejected.

SCC Highways: Mount Road should be improved including pedestrian links. Footway should be provided on frontage.

SMDC Conservation - Assess historic significance of Kniveden Hall estate (early 20th century but not Listed).

Leek

LE066 Kniveden Hall, Mount Road

Leek and Moorlands Historic Buildings Trust - LE066 covers the setting of Knivedon Hall The significance of the Hall and its estate (early 20th century but not Listed) needs assessment. Some areas already have 20th century housing in place, and further development may well be acceptable.

Public response 84 comments - 84 objections

Issues raised:

Objections

- Infrastructure – Schools already at capacity
- Infrastructure - Traffic / Transport- road will not support an additional 500 homes if all sites come forward. Footpaths 21,41,and 22 under threat from development. Route of Staffordshire Moorlands walk, become rat run
- Infrastructure – Other- uneven distribution across Leek, close to wind turbine
- Landscape- high quality rural landscape, loss of panoramic views
- Nature Conservation
- Amenity (e.g. noise, privacy, loss of light)- would effect quality of life, used for leisure activities, should remain open space
- Scale of development – brownfield first, all sites would mean more than 500 homes

Council response –

- The Highway Authority does not raise any issues which would prevent the development of this site.
- County Education advise that there are capacity issues affecting Leek First-, Middle- and High Schools; and given the scale of housing proposed across this catchment, new capacity will be required within Leek. The District Council will work with the County Council to identify an appropriate solution.
- The Council has a Landscape & Settlement Setting Study and part of this site has been identified as being important to the landscape setting of the settlement. The site also lies inside an identified ridgeline.
- The Council has recently completed a Phase 1 Ecological Study for the District. This assessed sites included in the Site Options consultation. The site survey results will be used as part of the site selection process. Any other sites which come forward and are potentially suitable for development will also need to be assessed. As there are a considerable amount of trees located around the site, the study recommends that as many trees are retained if the site is to be developed.
- Amenity – issues such as overlooking will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application. Views from individual properties are not protected in planning law.
- Knivedon Hall would require heritage assessment if the site is taken forward. [Note this was subsequently undertaken. Refer to LLGSHIA results above].
- The Council is required to meet its housing needs to 2031 and there are not enough brownfield sites in Leek to achieve this so the Council needs to consider both brownfield and green field sites.
