PO4915	Mr A Barbeard				Object	Regarding the proposals to build BD062 in Gillow Heath in my opinion as a HGV driver due to the plans a heavy amount of traffic/HGV's will have to drive down Mow Lane to deliver materials to the site. This would be dangerous for pedestrian and other car users due to the width of Mow Lane. Mow Lane has no pavements for pedestrians and has very sharp blind bends. This would cause a huge congestion because HGV will not be able to pass the parked cars or buses safely on the opposite side of the road. Access is in and out of York Close is also very narrow and of a dangerous width. Most of the times cars are parked up on the road which will mean a HGV will have to drive on the pavement to pass. If two HGV's meet on the pavement to pass due to the width of York Close it means that one of the vehicles has to drive up the pavement to allow enough room to pass. If two HGVs meet each other on Mow Lane everything will come to a standstill. Here we have the name of some HGV drivers who between them have 176 years between them of HGV driving.	See site table for specific comments on individual sites
PO4913	Mrs P kelly				Object	Biddulph My husband and I have lived in our bungalow since it was built in 1970 when it was 1 st built and the rest of the estate was a building site. We watched the homes being built and the roads being laid. Our children played in the street without fear of being knocked over. Over the years families got cars, some got 2 or 3, so our road	See site table for specific comments on individual sites

ID	Consultee Name	Company / Org	Agent Name	Agent Company /Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						became impassable. Now cars are parked in the roads and the pavements as well as their drives, vans, cars and lorry's have to mount the pavement if two cars are parked side by side not even a bike can get passed, sometimes pedestrians can't pass the cars if they are parked on the pavement because there is no room. Vans and lorry's have to use our drive to turn around, which has now become a hazard to children and all of the residents. Hoping to put another 40 residents there in the field next to York Close beggar's belief as our road cannot take anymore, not to mention the blind bends where you can't see what coming round the corner. We also can't take any more smell from the sewage, the raw sewage in the field when it gets over run, the flooding in the field when we have heavy rain, which is like a marsh 12 months of the year. Now more sewers has started to smell is in the bedrooms, our field our sinks and not to mention the grids.	
PO4914	Mr P Kelly				Object	Biddulph Roads to this site not good enough for the amount of traffic using it. Sewage works not capable to take any more waste. Flooding occurs in field the field has wildlife in it.	See site table for specific comments on individual sites
PO4901	Mr B Barcoft				Object	Biddulph Unacceptable added traffic, preserve the Green Belt that gives Biddulph its charm.	See site table for specific comments on individual sites
PO4890	Mrs K Hallam				Object	BD062 - I have lived in Mow Lane since 1972 when it was a nice little village and country lane – as the name suggests. Over the years it has got busier and the traffic to have got bigger. Since there is no pavement or even room to put one on it will become more of a hazard to walk the children to and from school are in constant danger. Therefore I don't see how building on this site a group of houses is a viable proposition. I don't see that the sewage facility could support that increase to the population.	See site table for specific comments on individual sites
PO4924	Mrs P Hindmarsh				Object	Biddulph As a resident of Mow Lane for a number of years and seen how congested it get with the buses and lorry's and busses and the narrow bends. I cannot see more volume in cars helping this road, plus no footpath also hinders the walking of children to school. Also sewage is a problem in Mow Lane if it rains it comes up the drains	See site table for specific comments on individual sites

Question 24 – Do you have any comments on the proposed town boundary for Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object/ General Comment	Consultee Comments	Officer Response
PO335	Mr & Mrs Harrison	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	Object	<p>LAND TO THE WEST OF FRIAR'S CLOSE, CHEADLE . On behalf of my clients, the site owners, Mr & Mrs Harrison (address supplied). I object to the omission of site from the proposed residential allocations. My clients put forward the site in a letter dated 18 September 2015 as part of the Site Options consultations. A location plan was submitted with the letter. The reasons for objecting to the exclusion of the site are: Although the site is outside the proposed Town Boundary and in the Green Belt it is within walking distance of the town centre, shops and services and is immediately available for development. Access to the site is via an existing access from Friar's Close and was shown on the previously submitted plan. Whilst the site is in the Green Belt and below the threshold for display in the Local Plan development for housing would make beneficial use of the land which is currently mown grass and not in agricultural use and because of its location away from farms is not suitable for agricultural use. It is immediately adjacent to modern housing and development would not have a significant effect on the wider landscape character. The woodland to the west would provide a clear, recognisable and permanent boundary to the site and the Green Belt. Development on this site would not conflict with the purposes of the Green Belt (preventing sprawl, encroachment, merger, protecting the setting of historic towns and urban regeneration). Whilst the land would be developed the site is contained by the surrounding properties and woodland. Because of the number of houses proposed the site is not specifically assessed in the Council's Green Belt Review however in the Review the site is in the S13 sub-zone where its contribution to preventing sprawl, merger, and assisting urban regeneration is considered to be limited. The Review considers that the zone does make a contribution towards the setting of the town and preventing encroachment. However, it is contended that because of the site's location between houses and woodland development would not lead to encroachment as it would involve only a small part of the sub-zone from which it is visually separated by the woodland. Further, because of its setting against a backdrop of trees, because it would be partially hidden by the existing houses on Friars Close, and because of the small-scale of proposed development it would not have a harmful effect on the setting of the town. The access is about 4 m wide, with clear sight from one end to the other, and would be suitable as an access-way for a low density development of up to five houses. Vehicle access to Friars Close is via Croft Road and via Church Street and Prince George Street. The first and last roads, whilst narrow, are one-way and thus able to accommodate any increase in traffic to and from the site which would not be large. The proximity to the town centre would most likely mean fewer car journeys to shops and services not adding in any significant way to the congestion in the town. There are a number of semi-mature trees on the site but these are not protected by Tree Preservation Order. It would be possible to sensitively develop the site whilst retaining many of the trees and create an attractive development. There is a wood to the west of the site and trees to the north and south which form strong and clear boundaries to the site and an attractive backcloth for development. A low density development would also provide opportunities for new tree planting in keeping with the setting. This part of Cheadle is naturally hilly and characterised by narrow roads and houses on the slopes. Houses on this site would be in character with the area and whilst the site slopes to the east it is open to the south and it would be possible to design the houses to take advantage of this. My clients request that this site is removed from</p>	See response to Question 26 – Green Belt Boundary, comment number PO334.

Question 24 – Do you have any comments on the proposed town boundary for Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object/ General Comment	Consultee Comments	Officer Response
						the Green Belt and included in the Town Development Boundary to enable its residential development.	
PO478	Mr T A J Campbell		Mr John Wren	JMW Planning Limited	Object	The boundary excludes site CH093 which is a deliverable housing site. It is currently in the Green Belt and representations were made about removing this designation last year. Greater weight should have been given to those representations given the Council's strategy for Cheadle and the lack of alternative suitable sites to bring forward development quickly. The site should be taken out of the green belt and be allocated for housing with the development boundary adjusted accordingly.	See response to Question 26 – Green Belt Boundary comment number PO479.
PO798	Ms Alison Conybeare				General comment	Please seek the local residents views. These are the most important.	Residents views have been sought as part of the consultation.
PO1009	Mrs Laura Cartlidge				Object	It is entirely inappropriate to be consulting on proposals in respect of Cheadle when; a) 'this consultation does not include details of proposed policies that will be included in the Local Plan' (paragraph 1.4). b) 'a transport study (WILL be completed) relating to the cumulative impact of development in the vicinity of Cheadle and the A50 (paragraph 1.16). 'The study WILL explore the case and feasibility of a bypass to the west of the town' (paragraph 3.31). c) 'an infrastructure delivery plan IS BEING PREPARED' (paragraph 3.27) In short the public is being consulted on spatial matters in a significant research and policy vacuum. We would add that it seems equally inappropriate to plan consultation on Local Plan Policies in the peak holiday months of July and August.	Some evidence base documents were still in progress prior to the Preferred Options and Boundaries consultation. There will be an opportunity to comment on the draft policies, the transport study at the next consultation stage.
PO6880	Unknown	Stoddards Ltd	Mr G Willard		General comment	None at this stage but reserve the right to comment later.	Comment noted.
PO6933	Mr M Bullock		Mr Ben Weatherley	Knights LLP	Object	Following from the comments above, we would encourage the LPA to give further consideration to potential changes to the town and Green Belt boundaries in Cheadle and support a strategy for releasing sites from the Green Belt through the Local Plan process where appropriate - such as to accommodate residential development on part of the land in our client's ownership at Park Lane. Our previous representations have included submission of the following: A report in response to the SHLAA setting out the proposed development of our client's site and associated justification (see Enclosure 1); A diagram (Enclosure 2) showing the site's proximity and accessibility to Cheadle High Street and other facilities nearby including the nearest bus stops and supermarkets (all within walking distance); A further diagram (Enclosure 3) showing the site's relationship to a large number of buildings in the vicinity, which highlights the site's proximity to existing built development and confirms that the northern half of the site is an infill plot amongst this existing development; An indicative site plan and elevation (Enclosure 4) - featuring an access designed by highway consultants (SCP Transport) - to demonstrate that safe and suitable vehicular access onto the site could be achieved and showing the development of five detached single storey dwellings (with accommodation in the roofspace) on the front (north) part of the site, reflecting the building line of the existing residential properties on both sides of our client's site and demonstrating that a suitable housing layout of an appropriate density and character for the area could be provided on site taking other relevant factors into account. In response to the previous round of consultation, the Council published an Options Site Assessment, which forms part of the supporting documents to the current consultation. We would like to make the following comments in response to the content of the assessment of site CH165: 1. The assessment of site CH165 is	See response to Question 26 – Green Belt Boundary comment number PO6934.

Question 24 – Do you have any comments on the proposed town boundary for Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object/ General Comment	Consultee Comments	Officer Response
						<p>based on the development of circa 26 dwellings, therefore no account has been taken of our previous representations that promote the development of circa 5 dwellings on the northern part of the site only. We would urge the LPA to reconsider the site on this basis. 2. Similarly, reference is made to the Green Belt Review concluding that the site makes a significant contribution and should not be considered for release, however it is considered that the impact would not be significant when considering the development of circa 5 single storey dwellings on the northern part of the site only - which is at lower level than the more prominent higher ground to the south - and the infill nature of the site (with existing dwellings to both sides). The combination of the topography of the lower part of the site and provision of dormer bungalows that would blend into and complement the existing dwellings to both sides of the site would limit the impact of the site's development on the Green Belt. 3. We welcome and support the acknowledgment that the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect. 4. Reference is made to the site's development having a significant negative effect as a result of it comprising greenfield, grade 3 agricultural land. However, there is a good supply of grade 3 land in the vicinity and furthermore the site has severely limited potential for agricultural purposes as a result of its limited size and the proximity of existing dwellings to both sides (east and west). 5. With regard to access, reference is made to SCC Highways commenting that Park Lane is narrow and unmade and would need to be widened and improved to provide access to this site. However the road already provides access to a number of residential properties - including some further west than our client's land - and was deemed a suitable access to serve other uses nearby including the adjoining cemetery (which we understand has or will be doubled in size without such concerns being raised about the use of Park Lane to provide access to it). Furthermore we would also draw your attention to the section of our original SHLAA representations (Enclosure 1), which provide information on the low number of vehicle movements that would be generated by the development of circa five dwellings on the northern part of the site. 6. Further to the two points above, it is considered that traffic associated with residential development of the site would be more acceptable on Park Lane and the local highway network in general than the frequent use of larger vehicles associated with any future use of the site for agricultural purposes. With all the merits of the site in mind we would urge the LPA to re-consider the potential allocation of the front/northern part of our client's land at Park Lane, Cheadle for housing development along with associated revisions to the town and Green Belt boundary on the edge of Cheadle to accommodate this. The site is being promoted by a willing landowner and it is considered that the proposed development of five detached dwellings on the subject site is technically deliverable. Given the location and characteristics of the site and the availability of local services/utilities/infrastructure residential development of this site is economically viable and therefore achievable. Whilst the site is located within the Green Belt, we consider that additional sites are required to meet the housing needs of Cheadle and the district as a whole, particularly given that opportunities to deliver housing on previously developed land and other infill or windfall sites within the existing settlement boundary are severely limited. The release of land from the Green Belt is now further justified through an increase in the housing requirement, and as</p>	

Question 24 – Do you have any comments on the proposed town boundary for Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object/ General Comment	Consultee Comments	Officer Response
						demonstrated in this submission, and other submissions made by Knights to date regarding the land at Park Lane, the release of the northern part of this site from the Green Belt is considered to be justified, effective, and would be consistent with national policy. I trust that this letter is clear in expressing our views regarding potential revisions to the Local Plan to incorporate the allocation of land at Park Lane, Cheadle for housing development.	
PO7051		Danbank Developments Ltd	Richard Barton	HOW Planning LLP	General comment	Danbank Developments consider that the proposed Cheadle development boundary is suitable and appropriate to deliver the identified quantum of development identified within the adopted Core Strategy. Danbank Developments would, however, reiterate that the identified amount of development is a minimum requirement and should not be regarded as a ceiling.	Support noted.
PO6812			Mr G Willard		Object	Yes. The town boundary fails to provide for small scale housing sites that could be suitable for small scale local builders or for self-builders. The attached plan shows a relatively small area of land that is in limited ownership and which is free from any legal or technical encumbrance preventing development. The site lies to the South (and to the town side) of site CH165 which is considered not to be suitable for development. The character of this land is sloping and it is in use as a paddock, garden land or as urban scrub. Its character and nature is markedly different from the land that lies to the North and West of the site (including site CH165) as will be borne out by a site visit by officers.	See response to Question 26 – Green Belt Boundary comment number PO6843.
PO7032	J W Poultney		Mr Gregory Gray	Gregory Gray Associates	Object	Our Client objects to the exclusion of Harewood Grange Farm from the Cheadle Town Boundary. The site would comprise a logical extension in association with other land uses in the area that is otherwise unconstrained and plays no meaningful Green Belt function (a separate representation is made to Q26) and will provide an appropriate and logical area for sustainable settlement growth over the Plan period, avoiding the need for further Green Belt review.	See response to Question 26 – Green Belt Boundary comment number PO7035.

Page 162

Question 25 – Do you have any comments on the proposed visual and public open spaces for Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
PO2569	Mrs Maggie Taylor	Planning Manager Sport England			All	Object	I note some of the open space designations are formal sports facilities (which is supported) but it is very important that all sports sites are captured otherwise those excluded will have lesser protection. I note that the Football Ground off Orchard Court/Grace Street for example is not designated whereas the cricket club site just to the north is - why? I also note that the playing fields associated with the secondary school are not designated – should they not be? It will be important to clarify what is designated and why (or why not) and to ensure all playing fields are clearly protected (as it is a defined function/use of open space), whether it is in Council ownership or not (Birchall Playing Fields appears to be included?) so there is a consistent level of protect for all open space, whatever its use. This principle applies across ALL THE PROPOSED PLANS.	The Council is undertaking a review of open space, sport and recreation facilities which includes an updated playing pitch strategy. Any inconsistencies will be investigated as part of this updated work.
PO2864	James Chadwick	Spatial Planning Policy Officer Staffordshire County Council			All	Object	In relation to the areas of Open Space identified throughout the site options document it is noted that all school playing fields have been categorised as open space, some in their entirety and others appear to only include certain parts. There is no definition in the plan as to what 'Open Space' constitutes or whether it needs to be accessible to the general public. As the Plan progresses it is unclear what policy restrictions may be imposed to such land. We therefore reserve our position on 'Open Space' at school fields and suggest that further discussion is required on whether the identification of school playing fields as 'Open Space' is required given the protection afforded to playing fields already through National Planning legislation and school premises legislation?	<ul style="list-style-type: none"> Not all the open spaces marked on the map are accessible to the public and should be indicated as 'open space' rather than 'public open space'. See response to PO2569.
PO1290	Justin Milward	Lead Government Affairs Officer (Local), Woodland Trust			All sites	Support	Support provision of Open Space in the Local Plan. (Further detail in attached comments).	Support noted.
PO621	Mr Julian Baskeyfield				All	Object	The majority of the 'public' open spaces on the map are in fact private property and belong to the schools. The map gives the impression that the public open spaces are evenly balanced across the town when this is not the case. If the housing is built in the south most people will be a considerable distance from any public open space. This needs to be rectified on the map because it is misinforming the public.	<ul style="list-style-type: none"> See response to PO2864 regarding public open space.
PO819	Mr Alan Donaldson				All to south west of Tean Road	General comment	The existing open spaces marked in green, to the west of the Tean Road are playing fields or hospital grounds or church yard which are not accessible to the general public. Therefore should the proposed developments take place consideration must be given for open public access areas to be included within any development ie CH085D. This area is predominately bungalows occupied by elderly who would benefit from access to open space within a short walk, which the farmer currently allows.	<ul style="list-style-type: none"> See response to PO2864 regarding public open space. Public access within sites and links to wider green infrastructure will need to be considered within the layout and design of each site.

Page 4163

Question 25 – Do you have any comments on the proposed visual and public open spaces for Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
PO1505 PO1497 PO1512 PO1517 PO7080	Mrs J L Taylor Mr J P Taylor Mr P Taylor Mr T A Taylor M Ellicock				CH001	General comment	Looking at the map designations, the areas designated as Visual Open Space are few but the land designated for development is considerable. Due to the fact that the proposed development of CH001 would have the maximum adverse impact upon existing residents, given that it is bordered by more existing residents than most of the other proposed sites, plus those residents in the adjoining road structure, it would make more sense to for this to be Visual Open Space instead of being used to connect the existing housing to form one of the largest blocks of housing in Cheadle.	<ul style="list-style-type: none"> This area has already been identified as an appropriate area for housing in the adopted Core Strategy and is well related to the existing settlement. New housing schemes will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the creation of new links.
PO1010	Mrs Laura Cartlidge				CH085a	Object	It is erroneous to classify large areas of school and college playing fields in the south west of the town as 'Public Open Space'. While some is in 'public' ownership, there is no de facto access on a casual basis for members of the general public. It is to provide a misleading picture of public open space availability in this part of the town.	<ul style="list-style-type: none"> See response to PO2864 regarding public open space.
PO1237	Mr & Mrs S & A Baker				Cheadle	Object	Tonight's meeting has been very useful there were points however on the maps that were incorrect. Public open spaces, bright green in colour were all schools! School playing fields are private. In the day there are child safety issues and at night locked due to vandalism?	<ul style="list-style-type: none"> See response to PO2864 regarding public open space.
PO108	Mr Andrew Baker				Cheadle west	Object	We live on Paragon Close in Cheadle which runs parallel to the proposed development site. Is the council aware that there is a significant drop of between 6 to 8 feet onto the field which is a known flood plain? The fields identified are used continually by families, dog walkers and runners. Building on this area would severely limit the public's access to open and green areas, and with the arrival of potentially 1000 cars the pollution levels would rise significantly. The primary school that has been identified to be built is not necessary as the present schools are not full. However is the council aware that the only two high schools are full and are turning prospective pupils away? It must be noted that the areas on the map designated by the council as public open spaces were actually school playing fields. So, in fact the "green" areas are neither public nor open. This is misleading information.	<ul style="list-style-type: none"> See response to PO2864 regarding public open space. Public access within sites and links to wider green infrastructure will need to be considered within the layout and design of each site. The Council has completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which have been used to inform the site selection process. The site is within Flood Zone 1 – Low probability, however a small section located to the west of the site is located in Flood Zone 3 – High probability. This could be incorporated open space. Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected. Based on the anticipated number of new dwellings in Cheadle, Staffordshire County Council have indicated that a new Primary School will be required.
PO799	Ms Alison Conybeare				General	General comment	Please seek the local residents views. These are the most important.	Residents views have been sought as part of the consultation.
PO7514	Mr Philip Walton				General comments	Object	Cheadle There are no Public Areas on this side of Cheadle (west). Those 'green' areas depicted on the map are school playing fields to which the public has no access. Cheadle does not have much open space within the town, and what we do have needs improvement. The plans do not seem to indicate new open spaces, play areas etc to accommodate the new families.	<ul style="list-style-type: none"> See response to PO2864 regarding public open space. New housing schemes will need to incorporate areas of open space and landscaping.

Question 25 – Do you have any comments on the proposed visual and public open spaces for Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
PO167	Mrs E Baskeyfield				Multiple	Object	Many of the 'public open spaces' highlighted on the map are not actually public open spaces. Land belonging to the Moorlands Sixth Form College, Painsley Catholic College, The Cheadle Academy and Cheadle County Primary have all been highlighted. These are in fact private property and not open to the public. By highlighting these as public open spaces it appears that the houseing provision proposed for the southern areas of the town is balanced by the open spaces provided when this is not the case. New housing in the south would be some distance from any public open space.	<ul style="list-style-type: none"> • See response to PO2864 regarding areas of public open space. • See response to PO7514 regarding need for new open space in Cheadle West.
PO391	Mrs Joanne Chadwick				South west	Object	The 3 public open spaces highlighted on the above map for the south west are in actual fact school fields which we, the public, do not have access to. This map is very misleading. If you take out the school fields then this area of cheadle has little public open space and what it does have you are proposing to build on.	<ul style="list-style-type: none"> • See response to PO2864 regarding areas of public open space. • See response to PO7514 regarding need for new open space in Cheadle West.

Question 26 – Do you have any comments on the Green Belt boundary for Cheadle?

ID	Consultee Name	Company / Org	Agent name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO80	Mrs Desiree Billington				General comment	<p>We used to live and work in the heart of the West Midlands (the Black Country). A large urban sprawl and often very congested. After taking early retirement, in 2012, we chose to live in Cheadle, it being a very pleasant semi rural market town. Cheadle has the correct amount of properties and population to make it a very nice and friendly place to live. It does have its problems, it can get very congested at school times and morning and evening rush hour. In particular in the town centre and Tean Road. Tape Street is also a big problem having 3 sets of pedestrian crossing lights which causes tailbacks at certain times. No one wants any more building in Cheadle. There is not enough infrastructure to cope with an extra influx of people. Roads certainly cannot cope with more traffic. On a personal note, we do not want any more houses near to our property as this will cause noise pollution, obstruct our current views, invade our privacy, cause havoc to wildlife and maybe even cause environmental problems such as flooding, ie: houses being built on farm land which currently has good rain water drainage. Cheadle council need to think seriously about the upset and problems they are like to cause if they go ahead with a ludicrous idea of excess building anywhere in the town.</p>	<ul style="list-style-type: none"> • The Cheadle Town Centre Phase 2 Study (2017) identifies the likely impacts of the housing and employment Preferred Options sites on the surrounding highway network. By 2031 the study predicts queuing and delays in certain locations, in part due to 17 years of potential traffic growth which is compounded by the additional trips generated by new housing and employment. There is limited scope to change junction characteristics to improve network capacity within the Town Centre due to its historically confined road structure. The study recommends a package of mitigation measures in order to provide additional capacity onto the overall network. Mitigation measures include junction and lane improvements, new sites having good access to public transport provision, measures to encourage walking and cycling to reduce short trips, improved HGV signage and new parking bays along High Street. • National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. • The Council has completed a Level 1 Strategic Flood Risk Assessment (SFRA) for the District, the results of which have been used to inform the site selection process.
PO99	Mrs Karen Wilshaw		Mrs Karen Wilshaw		Object	<p>This is an opportunity to consider the inclusion of small parcels of land close to the centre of Cheadle for building development which are currently in the green belt. I have previously proposed a site at the rear of our property (CH016b). Currently the green belt runs through the middle of this site - the lower part has already been developed for over 30 years and there are houses on three sides of the remaining small parcel of land - one currently under construction. Revising the green belt boundary to include this land would create the opportunity for a modest building development to enhance the diversity of housing close to the centre of the town. Including such parcels of land such as this site would not undermine the main purpose of the green belt - protecting from urban sprawl - as it is already surrounded by housing.</p>	<ul style="list-style-type: none"> • The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances and the recent Housing White Paper reiterates this commitment. • The Green Belt review considers this parcel (S13) is a relatively remote rural parcel which forms part of the eastern edge of the Green Belt. The parcel is vulnerable to urbanisation, given its relative proximity to Cheadle immediately to the south. <ul style="list-style-type: none"> - Check unrestricted sprawl – limited contribution - Prevent towns merging – limited contribution - Safeguarding from encroachment – contribution

Question 26 – Do you have any comments on the Green Belt boundary for Cheadle?

ID	Consultee Name	Company / Org	Agent name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
							<ul style="list-style-type: none"> - Setting of towns – contribution - Assist regeneration – limited contribution • Although the site (CH016b) is in a sustainable location close to the town centre and of a relatively small size 6 dwellings, it is considered that there are no exceptional circumstances to justify amendment of the Green Belt boundary in this location. There are other housing sites available in Cheadle not located in the Green Belt. • Land is identified as important landscape setting to settlement.
PO334	Mr & Mrs Harrison	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	Object	<p>LAND TO THE WEST OF FRIAR'S CLOSE, CHEADLE . On behalf of my clients, the site owners, Mr & Mrs Harrison I object to the omission of site from the proposed residential allocations. My clients put forward the site in a letter dated 18 September 2015 as part of the Site Options consultations. A location plan was submitted with the letter. The reasons for objecting to the exclusion of the site are: Although the site is outside the proposed Town Boundary and in the Green Belt it is within walking distance of the town centre, shops and services and is immediately available for development. Access to the site is via an existing access from Friar's Close and this was shown on the previously submitted plan. Whilst the site is in the Green Belt and below the threshold for display in the Local Plan development for housing would make beneficial use of the land which is currently mown grass and not in agricultural use and because of its location away from farms is not suitable for agricultural use. It is immediately adjacent to modern housing and development would not have a significant effect on the wider landscape character. The woodland to the west would provide a clear, recognisable and permanent boundary to the site and the Green Belt. Development on this site would not conflict with the purposes of the Green Belt (preventing sprawl, encroachment, merger, protecting the setting of historic towns and urban regeneration). Whilst the land would be developed the site is contained by the surrounding properties and woodland. Because of the number of houses proposed the site is not specifically assessed in the Council's Green Belt Review however in the Review the site is in the S13 sub-zone where its contribution to preventing sprawl, merger, and assisting urban regeneration is considered to be limited. The Review considers that the zone does make a contribution towards the setting of the town and preventing encroachment. However, it is contended that because of the site's location between houses and woodland development would not lead to encroachment as it would involve only a small part of the sub-zone from which it is visually</p>	<ul style="list-style-type: none"> • The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances and the recent Housing White Paper reiterates this commitment. • green Belt review considers this parcel (S13) is a relatively remote rural parcel which forms part of the eastern edge of the Green Belt. The parcel is vulnerable to urbanisation, given its relative proximity to Cheadle immediately to the south. <ul style="list-style-type: none"> - Check unrestricted sprawl – limited contribution - Prevent towns merging – limited contribution - Safeguarding from encroachment – contribution - Setting of towns – contribution - Assist regeneration – limited contribution • Although the site is in a sustainable location close to the town centre and of a relatively small size, it is considered that there are no exceptional circumstances to justify amendment of the Green Belt boundary in this location. There are other housing sites available in Cheadle not located in the Green Belt. • Land is identified as important landscape setting to settlement.

Question 26 – Do you have any comments on the Green Belt boundary for Cheadle?

						<p>separated by the woodland. Further, because of its setting against a backdrop of trees, because it would be partially hidden by the existing houses on Friars Close, and because of the small-scale of proposed development it would not have a harmful effect on the setting of the town. The access is about 4 m wide, with clear sight from one end to the other, and would be suitable as an access-way for a low density development of up to five houses. Vehicle access to Friars Close is via Croft Road and via Church Street and Prince George Street. The first and last roads, whilst narrow, are one-way and thus able to accommodate any increase in traffic to and from the site which would not be large. The proximity to the town centre would most likely mean fewer car journeys to shops and services not adding in any significant way to the congestion in the town.</p>	
PO1091	Mr P Beesley				Object	<p>Access into this site would add to an already busy stretch. Pedestrians already have to walk up the road to cross the bridge . This needs to be sorted as well crossroads at the Huntsman which is already an accident black spot.</p>	<ul style="list-style-type: none"> The Highway Authority confirms that site CH128 could provide access to sites CH093 and CH085a – d. A smaller amount of dwellings could be served off the existing highways network.

PO479	Mr T A J Campbell		Mr John Wren	JMW Planning Limited	Object	The retention of site CH093 within the green belt is not justified on functional or visual grounds. It meets none of the purposes for having this designation set out in paragraph 80 of the National Planning Policy Framework. Given the urgent need for the Council to find deliverable housing sites in the District and in Cheadle in particular this land should be taken out of the green belt and should be shown as a preferred residential site as the Plan moves forward.	<ul style="list-style-type: none"> • CH093 was considered as part of the Green Belt Review Study and the overall impact of development on the purposes of the Green Belt was considered to be moderate. <ul style="list-style-type: none"> - Check unrestricted sprawl – contribution - Prevent towns merging – limited contribution - Safeguarding from encroachment – contribution - Setting of towns – contribution • The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances and although concludes that it could be considered for release, exceptional circumstances would need to be justified. • The Landscape, Local Green Space and Heritage Impact Study considers the site to be of high landscape sensitivity. Some screening is provided by woodland to the south, particularly when viewed from the A522, however the land rises up from the woodland and visual prominence increases. The site does not fit well within existing settlement pattern and development of the site would adversely affect the existing settlement pattern and edge, and encroach on countryside. • It is considered that there are no exceptional circumstances to justify amendment of the Green Belt boundary in this location. There are other housing sites available in Cheadle not located in the Green Belt.
PO800	Ms Alison Conybeare				Object	The green belt must not be altered for development. It is vital to maintain in order to prevent urban spread.	The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review.
PO1069	Mr John Bevan	Cheadle Unite			General comment	Move or use the Green Belt to allow a new Link rd between JCB (built in green belt), Leek Rd and Brookhouses, Cheadle & on to Draycott & A50 to remove congestion in Cheadle town.	<ul style="list-style-type: none"> • The Cheadle Town Centre Phase 2 Study (2017) considers the potential for a bypass-type road and concludes that the cost to construct a new road would be very high and unlikely to offset any cost benefits of the scheme. • green Belt review considers this parcel (S13) is a

							<p>relatively remote rural parcel which forms part of the eastern edge of the Green Belt. The parcel is vulnerable to urbanisation, given its relative proximity to Cheadle immediately to the south.</p> <ul style="list-style-type: none"> - Check unrestricted sprawl – limited contribution - Prevent towns merging – limited contribution - Safeguarding from encroachment – contribution - Setting of towns – contribution - Assist regeneration – limited contribution
PO818	Mr Alan Donaldson				Object	We strongly object to the development of a large section of green belt land to the west of Cheadle.	The development of land to the west of Cheadle would not require a substantial Green Belt adjustment as the majority of this area has already been taken out of the Green Belt.
PO1506 PO1498 PO1513 PO1529 PO7083	Mrs J L Taylor Mr J P Taylor Mr P Taylor Mr T A Taylor M Ellicock				General comment	<p>CH168 is listed on the SHLAA document with a potential for 450 properties. This area is arguably the least contentious in terms of its location, causing least impact upon the existing population as a whole and could be served from the existing JCB factory roundabout. But it's on green belt land. So are the JCB Factories. Although been on green belt hasn't stopped it from been listed on the SHLAA document. In nearly thirty years of travelling past this site, I have yet to see anyone using it . The JCB factories are on green belt land and they have been developed responsibly. Few would argue that the JCB factories are of enormous benefit to Cheadle and are an example of how such land can be a benefit to the town as a whole. This could save many other sites in our area like CH001 that is widely used for recreational purposes. It would have no impact on the existing population or road structure and maintain the "open space" character of Cheadle that is so important to this town. It is reported that 60% of Cheadle residents commute out for employment, CH168 has direct access to the A522, the main roadway in and out of the town. The Large Site Assessment Forms states; "The Agent states there are no ownership constraints Sept 2012" and "Development would be economically viable taking into account all likely costs and planning obligations associated with the site."</p>	<ul style="list-style-type: none"> • The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances and the recent Housing White Paper reiterates this commitment. • green Belt review considers this parcel (S14) is a largely rural parcel which forms part of the eastern edge of the Green Belt. The parcel is vulnerable to urbanisation, given its relative proximity to Cheadle immediately to the south and east. <ul style="list-style-type: none"> - Check unrestricted sprawl – limited contribution - Prevent towns merging – limited contribution - Safeguarding from encroachment – contribution - Setting of towns – contribution - Assist regeneration – limited contribution • Although the site (CH168) is in close proximity to JCB which is a major employer in the town, it is considered that there are no exceptional circumstances to justify amendment of the Green Belt boundary in this location to accommodate new housing. There are other housing sites available in Cheadle not located in the Green Belt.
PO6934	Mr M Bullock		Mr Ben Weatherley	Knights LLP	Object	Following from the comments above, we would encourage the LPA to give further consideration to potential changes to the town and Green Belt boundaries in Cheadle and support a strategy for releasing sites from the Green Belt through the Local Plan process where appropriate - such as to accommodate residential development on part of the land in our client's ownership at Park	<ul style="list-style-type: none"> • CH168 was considered as part of the Green Belt Review Study and the overall impact of development on the purposes of the Green Belt was considered to be significant. <ul style="list-style-type: none"> - Check unrestricted sprawl – contribution

Question 26 – Do you have any comments on the Green Belt boundary for Cheadle?

ID	Consultee Name	Company / Org	Agent name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
						<p>Lane. Our previous representations have included submission of the following: A report in response to the SHLAA setting out the proposed development of our client's site and associated justification (see Enclosure 1); A diagram (Enclosure 2) showing the site's proximity and accessibility to Cheadle High Street and other facilities nearby including the nearest bus stops and supermarkets (all within walking distance); A further diagram (Enclosure 3) showing the site's relationship to a large number of buildings in the vicinity, which highlights the site's proximity to existing built development and confirms that the northern half of the site is an infill plot amongst this existing development; An indicative site plan and elevation (Enclosure 4) - featuring an access designed by highway consultants (SCP Transport) - to demonstrate that safe and suitable vehicular access onto the site could be achieved and showing the development of five detached single storey dwellings (with accommodation in the roofspace) on the front (north) part of the site, reflecting the building line of the existing residential properties on both sides of our client's site and demonstrating that a suitable housing layout of an appropriate density and character for the area could be provided on site taking other relevant factors into account. In response to the previous round of consultation, the Council published an Options Site Assessment, which forms part of the supporting documents to the current consultation. We would like to make the following comments in response to the content of the assessment of site CH165: 1. The assessment of site CH165 is based on the development of circa 26 dwellings, therefore no account has been taken of our previous representations that promote the development of circa 5 dwellings on the northern part of the site only. We would urge the LPA to reconsider the site on this basis. 2. Similarly, reference is made to the Green Belt Review concluding that the site makes a significant contribution and should not be considered for release, however it is considered that the impact would not be significant when considering the development of circa 5 single storey dwellings on the northern part of the site only - which is at lower level than the more prominent higher ground to the south - and the infill nature of the site (with existing dwellings to both sides). The combination of the topography of the lower part of the site and provision of dormer bungalows that would blend into and complement the existing dwellings to both sides of the site would limit the impact of the site's development on the Green Belt. 3. We welcome and support the acknowledgment that the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect. 4. Reference is made to the site's development having a significant negative effect as a result of it comprising greenfield, grade 3 agricultural land. However, there is</p>	<ul style="list-style-type: none"> - Prevent towns merging – limited contribution - Safeguarding from encroachment – significant contribution - Setting of towns – significant contribution • The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances and the recent Housing White Paper reiterates this commitment. • Although the site is in a sustainable location close to the town centre and development would be of a much more limited scale (5 dwellings compared to an indicative 26 dwellings) the Green Belt review considers that development in this location would create an unacceptable intrusion into open countryside on rising land. It is considered that there are no exceptional circumstances to justify amendment of the Green Belt boundary in this location. There are other housing sites available in Cheadle not located in the Green Belt. • Land is identified as important landscape setting to settlement in the LCA.

Question 26 – Do you have any comments on the Green Belt boundary for Cheadle?

ID	Consultee Name	Company / Org	Agent name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
						<p>a good supply of grade 3 land in the vicinity and furthermore the site has severely limited potential for agricultural purposes as a result of its limited size and the proximity of existing dwellings to both sides (east and west). 5. With regard to access, reference is made to SCC Highways commenting that Park Lane is narrow and unmade and would need to be widened and improved to provide access to this site. However the road already provides access to a number of residential properties - including some further west than our client's land - and was deemed a suitable access to serve other uses nearby including the adjoining cemetery (which we understand has or will be doubled in size without such concerns being raised about the use of Park Lane to provide access to it). Furthermore we would also draw your attention to the section of our original SHLAA representations (Enclosure 1), which provide information on the low number of vehicle movements that would be generated by the development of circa five dwellings on the northern part of the site. 6. Further to the two points above, it is considered that traffic associated with residential development of the site would be more acceptable on Park Lane and the local highway network in general than the frequent use of larger vehicles associated with any future use of the site for agricultural purposes. With all the merits of the site in mind we would urge the LPA to re-consider the potential allocation of the front/northern part of our client's land at Park Lane, Cheadle for housing development along with associated revisions to the town and Green Belt boundary on the edge of Cheadle to accommodate this. The site is being promoted by a willing landowner and it is considered that the proposed development of five detached dwellings on the subject site is technically deliverable. Given the location and characteristics of the site and the availability of local services/utilities/infrastructure residential development of this site is economically viable and therefore achievable. Whilst the site is located within the Green Belt, we consider that additional sites are required to meet the housing needs of Cheadle and the district as a whole, particularly given that opportunities to deliver housing on previously developed land and other infill or windfall sites within the existing settlement boundary are severely limited. The release of land from the Green Belt is now further justified through an increase in the housing requirement, and as demonstrated in this submission, and other submissions made by Knights to date regarding the land at Park Lane, the release of the northern part of this site from the Green Belt is considered to be justified, effective, and would be consistent with national policy. I trust that this letter is clear in expressing our views regarding potential revisions to the Local Plan to incorporate the allocation of land at Park Lane, Cheadle for housing development.</p>

PO7035	J W Poultney		Mr Gregory Gray	Gregory Gray Associates	Object	<p>Our Client objects to the inclusion of Harewood Grange Farm in the Green Belt and the exclusion from the Cheadle Town Boundary (a separate representation is made to Q24). The site would comprise a logical settlement extension in association with other land uses in the area that is otherwise unconstrained and plays no meaningful Green Belt function and will provide an appropriate and logical area for sustainable settlement growth over the Plan period, avoiding the need for further Green Belt review.</p>	<ul style="list-style-type: none"> • The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances and the recent Housing White Paper reiterates this commitment. • green Belt review considers this parcel (S13) is a relatively remote rural parcel which forms part of the eastern edge of the Green Belt. The parcel is vulnerable to urbanisation, given its relative proximity to Cheadle immediately to the south. <ul style="list-style-type: none"> - Check unrestricted sprawl – limited contribution - Prevent towns merging – limited contribution - Safeguarding from encroachment – contribution - Setting of towns – contribution - Assist regeneration – limited contribution • Although Harewood Grange Farm is in close proximity to JCB which is a major employer in the town, it is considered that there are no exceptional circumstances to justify amendment of the Green Belt boundary and town development boundary in this location to accommodate new housing. There are other housing sites available in Cheadle not located in the Green Belt. • Land is identified as important landscape setting to settlement in the LCA.
PO6843			Mr G Willard		Object	<p>The NPPG says the following with regard to defining Green Belt boundaries: When defining boundaries, local planning authorities should: • ensure consistency with the Local Plan strategy for meeting identified requirements for sustainable development; • not include land which it is unnecessary to keep permanently open; • where necessary, identify in their plans areas of ‘safeguarded land’ between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period; • make clear that the safeguarded land is not allocated for development at the present time. Planning permission for the permanent development of safeguarded land should only be granted following a Local Plan review which proposes the development; • satisfy themselves that Green Belt boundaries will not need to be altered at the end of the development plan period; and • define boundaries clearly, using physical features that are readily recognisable and likely to be permanent. Having regard to the above the following comments are relevant: The land identified within this submission is wholly sustainable. It the closest developable land to the town centre with other land</p>	<ul style="list-style-type: none"> • The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances and the recent Housing White Paper reiterates this commitment. • green Belt review considers this parcel (S13) is a relatively remote rural parcel which forms part of the eastern edge of the Green Belt. The parcel is vulnerable to urbanisation, given its relative proximity to Cheadle immediately to the south. <ul style="list-style-type: none"> - Check unrestricted sprawl – limited contribution - Prevent towns merging – limited contribution - Safeguarding from encroachment – contribution - Setting of towns – contribution - Assist regeneration – limited contribution • Although the site is in a sustainable location close to the town centre and of a relatively small size 10

Question 26 – Do you have any comments on the Green Belt boundary for Cheadle?

						<p>being either too steep to build on or constrained by open space designation or forming part of Cheadle Park. Such accessible land cannot be disregarded in policy formulation especially since sustainability is the golden thread which should run thru policy making. There is no need to keep this land open. It is surrounded to the North, East and West by residential development. The development of the land for housing would not have a significantly detrimental impact upon local openness. Whilst the site could be identified as safeguarded land this would not address the need and requirement to provide land within plans (para 159 of the NPPF) that is suitable for self-build housing. The proposal will provide a clear and defensible boundary in the form of an ancient hedgerow running along the length of the site. This replaces an existing Green Belt plan boundary which cuts across garden land and an open paddock and which is not so clearly defined or easy to defend in the future. It is considered that the plan ought to be amended with a revised Green Belt boundary that runs to the West of Nursery Close (see attached plan). This would allow for limited infilling to the east of this line with self-build or custom housing. The council are asked at this stage to pause reflect and consider what if any policy provision they have or are likely to have for self build housing or small sites suitable for local builders. Park Lane is a part of Cheadle which comprises wholly or mainly of custom build houses and the small extension of the Green Belt boundary in this area will serve to continue that provision and be in character with the nature of the area, whilst providing a logical and defensible new Green Belt boundary as shown on the attached plan (Appendix B). The proposed site ought to be measured against the purposes of the Green Belt before it is considered for release from the Green Belt. In these respects the following can be said: Preventing Sprawl - The site already has residential development to the North, East and West of it. It would not advance beyond this existing build line and consequently the allocation for housing would have a limited contribution to Urban Sprawl. Maintain separation - The site is to the North of Cheadle with many clear miles of open Green Belt land between the site and Stoke-on-Trent. It would have a very limited contribution to and would not harm separation. Prevent encroachment - The site is bounded by a mature and well defined hedge boundary to the West of it which would contain the site to within the built up area. It would have a limited impact upon encroachment. Preserve setting - The site is modest in scale and protected from wider view because of the nature of the gently sloping terrain. Self build housing forms on the site would accord with that already completed on the adjacent land and the development would have at worst only a modest and acceptable impact upon protecting the setting of the town. Overall impact upon purpose of the Green Belt</p>	<p> dwellings, it is considered that there are no exceptional circumstances to justify amendment of the Green Belt boundary in this location. There are other housing sites available in Cheadle not located in the Green Belt.</p> <ul style="list-style-type: none"> • Land is identified as important landscape setting to settlement.

Question 26 – Do you have any comments on the Green Belt boundary for Cheadle?

ID	Consultee Name	Company / Org	Agent name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
						<p>- The proposed site has a well defined and clear boundary (see appendix B) and it would provide a long term and defensible settlement and Green Belt boundary to the town which would be defensible whilst at the same time allowing for organic or natural infill on a site which is within close walking distance of the town centre and is sustainable. The Green Belt boundary ought to be changed in this area and the land identified released for niche residential development of up to 10 dwellings. Note...the site and boundary identified within this submission has not been especially identified or considered by the Green Belt review which appears to have not considered any land to the South of site CH165. It cannot therefore be said that the proposal do or do not accord with the findings within the Green Belt review.</p>	

Question 27 – Do you have any comments on the proposed employment sites in Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General comment	Consultee comments	Officer Response
PO392	Mrs Joanne Chadwick				Broad Area EM1	General comment	Poor quality access road to this area. Why not expand by JCB in the north with better access roads.	<p>The Council consults with SCC Highways during Local Plan preparation. SCC Highways did not object to the allocation of this site for employment purposes; however has indicated that a TA would be required and improvements would be likely along New Haden Road. If these can be resolved to an acceptable standard then development could take place.</p> <p>JCB Leek Road premises lies in the Green Belt. Whilst Councils can allocate within the Green Belt National Planning policy is clear that this requires exceptional circumstances to justify (as compared to non-Green Belt). The Council recently completed a Green Belt Review which assessed the suitability for retention of all areas of Green Belt in the District, against the five Green Belt 'purposes' set out in the NPPF. This will be used by the Council alongside other evidence in progressing its Local Plan. The NPPF also allows for consideration of development proposals that would represent 'limited infilling', or in some cases redevelopment of 'brownfield' sites in the Green Belt.</p>
PO820	Mr Alan Donaldson				Broad Area EM1	General comment	The two areas identified as potential employment sites do not justify the amount of housing development that is proposed for the town.	<p>Councils must firstly assess their OANs (development requirements) for future land uses such as housing and employment land; and then meet these requirements, to have a sound Local Plan in place. An assessment of employment land requirements and housing requirements by NLP in February 2017 concluded that 13ha to 27ha of employment land, and 320 homes/year were required to meet the needs of the district 2014-2031. To dovetail with the housing requirement it was recommended to and agreed by Council Assembly on 08/03/17 that 27ha of employment land should be provided 2014-2031. The Council's adopted Core Strategy Policy SS3 sets out how District housing and employment requirements be 'split' across the District, including for Cheadle. This forms the basis of the housing and employment land provision for the town.</p>
PO8981	Mrs L J Hurst				Broad Area EM1	Object	This would be one industrial site too many on this country lane. Also footpath No 17 edges this area and needs protecting.	<p>The Council consults with SCC Highways during Local Plan preparation. SCC Highways did not object to the allocation of this site for employment purposes; however has indicated that a TA would be required and improvements would be likely along New Haden Road. If these can be resolved to an acceptable standard then development could take place.</p>

PO803	Ms Alison Conybeare				Broad Area EM2	Object	The main access road to this site struggles to cope with the current industrial traffic. Additional traffic would be difficult to accomodate.	The Council consults with SCC Highways during Local Plan preparation. SCC Highways did not object to the allocation of this site for employment purposes; advising it is acceptable subject to Transport Assessment if access can be achieved.
PO7518	Mr Philip Walton				Broad Area EM2	Object	Employment plans in Cheadle South on the Green Belt are totally unacceptable.	Note that both of the preferred options employment sites Cheadle EM1 and Cheadle EM2 lie within the town development boundary; and do not fall within Green belt.

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? CH001 and CH132

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
Broad Area 1 – CH001								
PO6906		Mosaic Estates	Mr Cameron Austin-Fell	RPS Planning & Development	Broad Area 1 - CH001	Support	<p>Core Strategy Broad Area 1 – CH001, Cheadle This site was allocated in the Council’s 2014 Core Strategy as the principal strategic residential land for Cheadle. Mosaic made a response to the July 2015 early Site Allocations consultation indicating that this site is indeed sustainable as part of the growth of Cheadle and deliverable within the Council’s plan period. Though this position remains unchanged and the site is already allocated for around 240 dwellings, there have been a number of responses to the site as part of the previous consultation, which does seem at odds with the status of the allocation. To avoid this confusion, it would be beneficial for future consultation documents to present the site differently, making a clear distinction between what is already allocated and which sites are being proposed for allocation by the Council. Whilst it is accepted that the site is already allocated, the following observations are made in response to the previous consultation comments: Natural England has commented in respect of a requirement for a Landscape and Visual Impact Assessment (LVIA). It is noted that as part of the evidence base supporting the 2014 Core Strategy, the Council submitted evidence of landscape character and impact which was sufficient for the site to be allocated. In addition, RPS submitted evidence to the Council in May 2014 demonstrating how the site could be delivered. This evidence included an assessment of visual impact as part of an overall strategy for development. Comments were received from the Leek and Moorlands Historic Buildings Trust relating to the setting of Woodhead Heart. The comments pertain to the siting and layout of the allocation, set against Woodhead Heart, an undesignated heritage site. Whilst this site has no formal designated status, it is considered that future development on this site would respond to the local setting in an appropriate and sympathetic way. The Council’s own comments from the Sustainability Appraisal offer largely supportive comments on the sustainability of the site. There are however negative comments linked to the Grade 3 Agricultural Land Classification of the site. The Council has not defined whether this is Grade 3a or Grade 3b land, taking a broad brush approach to the assessment. In either case, Grade 3a represents only marginally better quality land than 3b, which is not recognised as ‘best and most versatile’, along with categories Grade 1 and Grade 2. It appears that the assessment of significant negative effect is, in this regard, an inappropriate conclusion.</p>	<ul style="list-style-type: none"> • Developer support for the site is noted. • This site is identified in the adopted Core Strategy as being suitable for housing, however, Policy SS5c states that sites will be identified and phased through the Site Allocations DPD. It is not therefore allocated at this stage. • The Landscape, Local Green Space and Heritage Impact Study (2016) has considered the site and suggests some site-specific landscape mitigation measures. There are not considered to be any heritage impacts associated with the development of the site. • The land is Agricultural Class 3 Good to Moderate. Data supplied by Natural England indicates that there is a moderate likelihood that the land is best and most versatile land i.e. Class 3a. The Sustainability Appraisal will be updated to reflect the most up to date evidence base.
PO399	Mrs Joanne Chadwick				Broad Area 1 - CH001	Support	Makes sense to propose housing development near the new school good access roads more balanced developemnt for Cheadle town.	Support noted.

PO1382	Mrs J Schmidt				Broad Area 1 - CH001	Object	I wish to add my complaints to the proposed development of 400+ houses + a school in front of the of the Park Home development of Broad Hayes Park down to the Oakamoor – Cheadle Road bordering haies Hall + Caravan plus Leisure Park. We urge the responsibilities of the council under the human rights act in particular protocol 1 article 1 which states that a person has the right to a peaceful enjoyment which include the home + other land. We believe that article 8 of the Human Rights act states that a person has substantive right to respect for their private + family life. In the case of Britain V SOS the courts reappraised the purposes of the law + concluded that the protection of the countryside falls within the interests of article 8. Private + Family life therefore encompass not only the homes but also the surroundings. As the occupants of Broad Hayes Park Homes are mostly retained in the over 70's group. They should be able to enjoy their retirement in peace + quiet without extra traffic ect that the Cheadle Roads cannot cope with the already plus all the noise from building 400 + houses + roads would be detrimental to their lives. As I was thinking of retiring to that area myself I feel I should send you my letter of complaint.	<ul style="list-style-type: none"> The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change. There are not enough brownfield sites within Cheadle to accommodate the level of housing it needs. Amenity issues and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received, and residents will have the opportunity to comment on the content of that application. Traffic – The highways authority have advised that appropriately designed accesses would accommodate 240 + 80 + School. This number would require at least 2 accesses. A new access off Froghall Road would be preferable with secondary accesses through the existing estate. If the 80 units were separate, they could be served off a single point. Pedestrian connections should be made to the residential area to the north.
PO1507 PO1499 PO1514 PO1530	Mrs J L Taylor Mr J P Taylor Mr P Taylor Mr T A Taylor				Broad Area 1 - CH001	Object	Objection to development of CH001 Adoption of this site directly affects more existing residents than any other of the proposed sites and has a history of being refused planning when local councils had control of their own areas. The area known as CH001 has been widely used by residents that adjoining the site and residents living beyond its immediate vicinity on a daily basis for recreational purposes. It also worse SA score than some other sites in the area. Cheadle is one of the many areas in the country that does not have a housing crisis. It has been mentioned that 60% of Cheadle residents commute out for employment, it is hardly environmentally friendly to increase this percentage. At the time of writing there are nearly 80 properties for sale in Cheadle between the price range of £70,000 - £200,000 and more above this price range. In this area, all roads lead to Ness Grove. It seems that either no consideration has been given to the Ness Grove residents or residents in the surrounding feeder roads / proposed feeder roads, or it has been completely ignored. The field retains water, especially on the east side and can have a soggy feel when walking on it, especially after rainfall, significant pools of water are clearly visible. Sounds similar to water draining from a kitchen sink have been heard in the area of the old mineshaft after rainy spell. CH001 features a gentle slope controlling and slowing the eventual release of water into the adjoining brook. Increasing the hard impermeable surfaces of a development would accelerate water release into the brook, increasing the flood risk downstream, particularly in the Tay Close area where the brook passes under a low bridge. Nationwide, the intensity	<ul style="list-style-type: none"> This area has already been identified as an appropriate area for housing in the adopted Core Strategy and is well related to the existing settlement. Employment site options are also proposed in Cheadle to provide opportunities for local businesses and jobs. The Strategic Housing Market Assessment (SHMA) makes an allowance for empty properties / houses that are for sale. The Highway Authority has not raised any issues which would prevent the development of this site. There are former mineral workings on the site. The Coal Authority have confirmed that this would not prevent development from taking place. Investigative work will take place in these areas prior to the commencement of any development. The Council has completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which have been used to inform the site selection process. The site is within Flood Zone 1 – Low probability, however a small section located to the east of the site is located in Flood Zone 3 – High probability. This could be incorporated open space. Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected. New housing schemes will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the consideration of new links.

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? CH001 and CH132

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
							<p>of flood events has increased and impacted areas that have not previously been affected. Flood risk is becoming less predictable as our weather patterns are changing. If an area does experience a flood or is reassessed as a higher flood risk, then insurance premiums become unaffordable or unavailable. Flood risk can no longer be predicted. The term "unprecedented rainfall" is now redundant and is becoming the norm, as well publicised recent events nationwide would testify. From the Local Government Association website: "Urbanisation has reduced the ability of land to absorb rainfall through the introduction of hard, impermeable surfaces. This results in an increase in the volume and rate of surface run-off as less water infiltrates into the ground." You don't have to be an environmental genius to come up with that statement. When flooding occurs, particularly flash flooding, the risk of which would be greatly increased, what compensation is available to cover the increased insurance cost, if insurance is available at all. Would affected residents be left with the option of attempting to sue in order to recoup their increased costs, citing past development refusals as the basis for compensation. Who would take responsibility, developers or councils? Obviously Cheadle is not the Cotswolds but for many residents green space is readily accessible for recreational purposes, walking and jogging, generally adding to residents quality of life. Filling in every available green space is poor planning and town design, something that is reminiscent of decades past. Large concentrations of housing has long since been frowned upon and the balance of housing and green space in the Cheadle North East area is better than some other towns. The difference is that the Cotswolds is largely protected and the Prime Minister lives there. Further, consider the voting, consultation process. If it were based solely upon the designated area that the resident(s) lived closest to, then the planning refusals of the past concerning CH001 would remain but when residents are anxious to protect their own area of the environment elsewhere around Cheadle and can be organised or led into objecting to a collection of other identified sites whilst not commenting or objecting to another, then the nominated "sacrificial lamb" is out voted by some margin. Looking at the map designations, the areas designated as Visual Open Space are few but the land designated for development is considerable. Due to the fact that the proposed development of CH001 would have the maximum adverse impact upon existing residents, given that it is bordered by more existing residents than most of the other proposed sites, plus those residents in the adjoining road structure, it would make more sense to for this to be Visual Open Space instead of being used to connect the existing housing to form one of the largest blocks of housing in Cheadle.</p>

PO2808 PO3362 PO3622 PO3748	A Brattley Mr Harvey Cope Mr J Edwards Mr T Loving				Broad Area 1 - CH001	Object	<p>This area was previously deemed unsound by the planning inspector and it is difficult to comprehend what the reasoning behind again including this area, especially as nothing has changed since the inspector's recommendation for removal of this site. In appendix 1 of the preferred options and boundaries report prepared for the council assembly meeting on the 13/04/2016, pages 53-55 of the Cheadle section, SMDC has raised the following issues regarding site CH132. The highways dept has raised issues regarding access. Number of dwellings would be ltd to 50 if accessed through adjacent site CH001. Additional land would be required if other access gained onto the site which would involve numerous land owner. Subject to flooding due to Cecilly Mills Brook Adjacent to Cecilly Mills Brook which has a strong population of water voles (protected species) The field is Greenfield grade 3 ALC land Elevated land heightening visual impact The last consultation, the proposed development of this field is large number of public objections (290), indicating the strength of feeling by neighbouring residents. There are other sites within Cheadle which are infinitely more substantial (as compiled in the councils sustainability charts) which have been discounted. It goes without saying that any decisions must be capable of standing up to the scrutiny of the inspector so as not to arrive in the same situation as before, that is, removal of CH132 in its entirety, Furthermore, it is reasonable to suggest that this field is no longer required in the light of the recent planning application approval at Thorley Drive 60 houses on the 12 th May 2016, this new development will be classified as urban extension: accordingly, we are asking you to remove CH132 in the plan and move the location of potential new school to a more sensible, more sustainable and central location.</p>	<ul style="list-style-type: none"> • CH001 has already been identified as an appropriate area for housing in the adopted Core Strategy and is well related to the existing settlement. • See response to PO2734 regarding site CH132 and the Core Strategy examination. • See response to PO1382 regarding access and numbers of dwellings that could be served. • See response to PO1507 regarding flood risk. • The site is adjacent to the Cecilly Brook Local Nature Reserve and there is an isolated population of water voles (protected species) Natural England have advised that a buffer along the watercourse would be required. • The Thorley Drive planning permission can be taken into account as a housing commitment once the final decision notice has been issued. Housing commitments form part of the supply of new housing and will be deducted from the required provision for Cheadle. • Based on the anticipated number of new dwellings in Cheadle, Staffordshire County Council have indicated that a new Primary School will be required. The existing schools are located in the SW area of Cheadle, close to the town centre. There are benefits in locating a new school to the north of Cheadle to serve new and existing housing to the north of the town and could reduce school generated traffic in the town centre.

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? CH001 and CH132

PO7463	Ms Linda Powell				Broad Area 1 - CH001	Object	<p>Area CH001 Although within the town boundary, the over-development of this area, circa 240 houses, will generate an unacceptable volume of traffic, when taking into consideration traffic on the Oakamoor Road from JCB, and the MJS Transport depot which has now been given permission to expand their operations, resulting in more heavy goods vehicular traffic on Froghall Road. The Cheadle Town centre traffic survey of November 2015 omitted to include the Froghall Road junction to highlight its inherent problems. Public right of way crossing Area 1, which in accordance with National Legislation and ByeLaws should remain in place, which would mean any development would be in fragmented sections, with associated access problems. Historic evidence of coal extraction in this area. Old mine workings, 2 disused mine shafts and bell pits with associated waste products would make the stability of this area questionable. I can find no evidence that SMDC has carried out a comprehensive survey to assess the suitability of the land for building use, and until this is done the area must be rendered unsuitable for development. Part of the proposed Area 001 is considered to be a flooding risk. Furthermore, it is reasonable to suggest that this field is no longer required in light of the recent planning application approval at Thorley drive for 60 houses on the 12 th May 2016, this new development will be classified as urban extension; accordingly, we are asking you to remove these sites from the plan and move the location of a potential new School to a more sensible, sustainable and central location.</p>	<ul style="list-style-type: none"> • The Highway Authority has not raised any issues which would prevent the development of this site. The Cheadle Town Centre Phase 2 Study (2017) identifies the likely impacts of the housing and employment Preferred Options sites on the surrounding highway network. By 2031 the study predicts queuing and delays in certain locations, in part due to 17 years of potential traffic growth which is compounded by the additional trips generated by new housing and employment. There is limited scope to change junction characteristics to improve network capacity within the Town Centre due to its historically confined road structure. The study recommends a package of mitigation measures in order to provide additional capacity onto the overall network. Mitigation measures include junction and lane improvements, new sites having good access to public transport provision, measures to encourage walking and cycling to reduce short trips, improved HGV signage and new parking bays along High Street. • See response to PO1507 regarding former mineral workings. • See response to PO1507 regarding flood risk. • The Council is undertaking Local Plan viability work which will consider the viability of preferred option sites. • See response to PO2808 regarding the Thorley Drive housing application. • See response to PO2808 regarding the location of the proposed new school.

							<p>have been redeveloped. Some of these ‘brown field’ sites are known to be contaminated with compounds that had been used during the various manufacturing processes carried out at these locations, and I believe that the longer these sites are left in the current state, the more difficult any subsequent ‘clean up’ operation will become. In the case of the ‘Thomas Bolton’ site at Froghall, there are people who know exactly where the various compounds were dumped when the site was partially cleared – in this case they were placed in a number of pits, the whereabouts known only to those directly involved in the work. These people will not be around for ever, thus the Council should make every effort now to identify the contaminated areas with a view to making the land safe and thus more suitable for development. The situation can only get worse, the longer it is ignored. Land on the fringe of towns and villages is in grave danger of being lost to urban sprawl. Greenfield land provides an immeasurable sense of well-being to residents both aesthetically and recreationally through its very existence and via the network of public footpaths. It is a habitat for our declining wildlife and agricultural sites provide a much needed food resource. You can’t even graze cattle on brownfield sites, which is one of the uses to which the proposed site is currently capitalised. Cheadle is a fine town . It is attractive when entering from the surrounding countryside. So much so that the Staffordshire Moorlands District Council regularly use the view of Cheadle from the North East as a banner to their various documents. It would be a shame to spoil that idyllic view of the town by introducing housing on those very approaches. Of course land to the North of Cheadle consists mainly of ‘green field’ and ‘green belt’ land and as such enhance the idyllic view. Development on those approached would make it very difficult for any photographer to reproduce the Council’s well used banner, without significant use of ‘photo-shop’ and/or ‘air-brushing’. Without sufficient places to work locally the people who’ll be able to afford to buy/rent these houses will have to work somewhere...Potteries? – thus reducing the ‘green’ potential by having people driving there and back each day and in turn clogging up Cheadle at ‘rush-hour’. The town is steeped in history and already famous for ‘Pugin’s Gem’, which does bring visitors to the town. There are many examples of the past, both distant and not so, to be found in and around Cheadle. For instance everyone knows of Cheadle’s rich past with the coal industry, but few know of the 19 th century tramlines that cut through the North and North East of Cheadle. These tram lines brought coal from the various ‘pits’ and routed the wagons to a wharf on the Caldor canal near to Oakamoor. This part of the canal was lost, as was most of the canal between Froghall and Uttoxeter, when the railway line was constructed. The exact route of both canal and railway can be ascertained with</p>	<p>prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan.</p>

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? CH001 and CH132

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
							<p>reference to 'old maps' of the area (as can the route of the tramways). More recently Cheadle played a key role in one of the World's best kept secrets . Only now are we hearing the story of what went on at Cheadle and at Bletchley Park (in Buckinghamshire) and specifically with respect to one or two people who worked there. People tell us that the last war was shortened by 2 years due to the work carried out there. Even now the processes used to analyse those wartime signals and traffic is considered too important to publish, and remains on the secret list. Yet, the signals unit that was to the North East of Cheadle played a most important role in the functioning of Bletchley Park. Signals were intercepted here at Cheadle and at other stations around the country. Cheadle formed one of the main 'feeder' stations to Bletchley Park, pre-processing the signals collected from the other stations – in some cases decoding them here – before feeding them into the relevant 'hut' at Bletchley. Because it was and still is quite a secret not a lot is known about this – even locally (people who did work there are still gagged under the Official Secrets Act). It is know that the area we call Area 2 is still know to the 'locals' as 'up by t military', for this very reason. The aerial masts have long gone (18 years ago) and there is little that remains to suggest its previous use, but this is without doubt a very important historical site. There may be lots of below surface infrastructure such as cables and foundations that were not removed at that time. After the war, the topography of the local area, with its many mineshafts made it attractive to the government of the time to facilitate the disposal of surplus yet brand new goods. These 'goods' consisted of just about anything you could think of from paints to cables, and from radios to ordnance. In fact so many brand new items were deposited down the shafts of Cheadle that a small cottage industry grew from farmers bringing some of these items back to the surface and selling them on. Of course when a certain shaft, which was used to dump weapons and cables, caught fire this brought a swift end to some of these activities. Eventually, this lead to an explosion which resulted in the capping on the mineshaft being fired into the air. The fire was brought under control and the cap was replaced. There are lots of mineshafts and associated underground tunnels in the Cheadle area – it is after all on the Eastern most end of the Staffordshire coalfield. Most mines are well documented – but some aren't. Any development of land anywhere in the Cheadle area needs to consider carefully the potential for mining subsidence and/or sinkholes which could open up anywhere. This area does suffer from flooding, and always has. Sometime in the past (long ago) the land was drained down the natural slope and into Cecily Brook at the bottom. Sometimes the amount of water that falls is too much for the drainage system to cope with and large lake like areas</p>	

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? CH001 and CH132

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
							<p>become flooded. There is an interesting hole around the centre of CH132 in the flooded area where large quantities of water disappear noisily into the ground – rather like a plug hole in a sink, but on a much grander scale. Tentative work with a stick would suggest that the water sinks some distance – certainly up to a metre. I am concerned that if this land is developed (dug up for housing foundations etc.) then the existing historic drainage system will become non-operational, and this could lead to quite a bit more flooding because only surface run off would be draining the excess water. To replace the existing field drains might be a rather expensive alternative. The chances of development on Area 1 are at least very high. This area has featured on the Council’s preferred list for at least 20 years now. I note that the scoring system used to place CH132 in the lead position is based on access to facilities (as it was for Area 1) called sustainability – an interesting word that covers various things such as health care, schools, shops and pubs. There is only one shop on Froghall Road and this is well away from the development site, there was a public house on Froghall Road that has been closed for some time and is likely to be demolished to redevelop the land, and schools and health care facilities are further from CH132 than any of the other suggested sites. The access into town involves a bottleneck at the Froghall Road / Leek Road junction in addition to the gyratory melee known as the town centre, which, due to it’s one way system, opposes traffic flow in every direction. Whatever happened to the various plans and master plans we were promised to look into and hopefully alleviate the traffic issues of Cheadle. Speaking to local builders, there is still the shadow of recession lurking, never too far away. They are ‘not keen’ to invest monies into building houses that they are then unable to sell. A number of builders have already done some ‘in-fill’ development only to find that they don’t have a quick sale for the properties once built/and or modernised. Too many new houses WILL depress the market further, making them uneconomic to build (this fact seemingly at odds with the Council’s desire for affordable homes – affordable for who, the buyer or the builder?). The China triggered recession is just around the corner and who knows what will happen when the EU referendum completes. I doubt anyone can foresee the economy for the next 10 years never mind the next 20. If they could, why is this country still taking austerity measures to try to make ends meet, why oh why! In summary: Please – reconsider the numbers. There is a lot of evidence to suggest that building this number of houses in Cheadle, and furthermore your plans for development across the district, would be pure folly. Please – use ‘brown field’ sites before anything ‘green’. Please – consider the aesthetics of the immediate area. Many people choose to live here based on it being a pleasant place to live. By bringing in people (houses)</p>	

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? CH001 and CH132

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
							<p>with no local work prospects (factories) you are creating a dormitory town and adding to the daily rush of people travelling from Cheadle to the Potteries (by either the A50 or the A52 – both known to suffer from congestion during ‘rush-hour’). Please – try to compliment the history of Cheadle. Let’s not have a Leek situation where we allowed development on Railway and Canal historical infrastructure, only to see a great revival looking to recreate those very links back into the town. It was the same situation with the Caldron canal (or more properly the Uttoxeter canal) which was allowed to have a railway built on top of it from Froghall Wharf towards Oakamoor and beyond. I know there are a number of incentives to see that canal opened up again, even if it means a slightly different route at times. What happened to forward plans here then? Please – don’t forget the history of Cheadle land. It’s been mined for hundreds of years, sometimes no useful records remain. Consider carefully where to build and how to build. You don’t know what might just be under the surface. Please – do remember that flooding does occur in and around this area specifically – I can’t speak for any other areas because I’ve only witnessed this directly in land adjacent to the caravan site (area CH132). As pointed out in my previous representations on this matter, which the Council have decided not to consider against this ‘new’ plan, the flora and fauna of CH132 supports this ‘wet’ description as it consists of a lot of reeds (which you don’t get on dry soil). Please – Please - reconsider your scoring for amenities for this area. Schools – none. Healthcare – town center. Shops – town center (excluding 1 on Froghall Road). Pubs – none. Work – none. Public transport – yes a bus route to the Potteries, but no good if you have to work in Cheadle at Brookhouses Industrial Estate (which you can’t get to without adding to the traffic chaos at ‘rush hour’). Road infrastructure – no change over many years (BAD). Please - Please - Please - if these houses are being considered as essential to allow the UK to absorb as many Eastern European and Middle East immigrants as possible, I would like to suggest that our own homeless, our own homeless/jobless ex-servicemen and our own children should get first access to whatever we build, where ever we build it. Perhaps the Council would be prepared to bring unsold houses on to its books to subsequently offer up to such refugees/immigrants, after our own homeless families.</p>	
PO3227	Mr N Hewitt				Broad Area 1 - CH001	Object	<p>I object to this housing allocation on the grounds of access and the state of the roads system in Cheadle. If we continue to build houses without doing something with the present road system Cheadle will be a total gridlock. How come Leek, Biddulph doesn’t get the same applications has Cheadle. The arrogance of the planners and councillors is beyond belief. They think they can dump everything on Cheadle. The last consultation was only advertised on twitter and a poster in the library. Was this so</p>	<ul style="list-style-type: none"> • See response to PO7463 and PO1382 regarding highways and traffic • See response to PO1507 regarding flood risk. • See reponse to PO1507 regarding former mineral workings. • The consultation was widely publicised and included a flyer being sent to all households and businesses in the District through Royal Mail. High levels of responses have been received by the Council from Cheadle residents which

							there would be no one to protest. Everything revolves around Leek and Biddulph I cannot believe this site has been proposed. Anyone who has walked that field will know that it is water logged for the biggest part of the year. Also there are shafts in the area. Plus where is the access to this site going to be Hammerly Hayes Road in totally a unsuitable for this amount of traffic, and more traffic on Ness grove estate, which is used as a rat run now. Will be the congestion in the town centre before more houses are built.	suggests that a significant number of residents knew about the consultation.
PO804	Ms Alison Conybeare				Broad Area 1 - CH001	General comment	Please seek the local residents views on all the housing proposals. These are the most important.	Residents views have been sought as part of the consultation.
CH132								
PO6912		Mosaic Estates	Mr Cameron Austin-Fell	RPS Planning & Development	CH132	Support	<p>The Council has proposed site CH132 as a preferred allocation for Cheadle for 80 dwellings. This forms part of a wider urban extension (along with CH001) for the north of Cheadle for around 320 dwellings. Mosaic considers that this represents a logical and deliverable solution to meet a significant proportion of the town's needs, which is welcomed as part of the PSA. As illustrated on the plan supporting the allocation, the Council has indicated that the site could provide a location for a new primary school in addition to residential uses. This position has been confirmed with Staffordshire County Council and it is considered that as part of the wider masterplan for the site, land can be safeguarded for the Council to bring forward a new primary school in line with evidence of need. The figure of 80 dwellings on the site was proposed by Mosaic as part of discussions with the Council however, reflecting the comments above, Mosaic consider it appropriate for the Council to present this figure as a minimum, if it is decided that the site could deliver additional dwellings, or the County Council take the decision that a new school site would be better located elsewhere. A number of comments were received concerning this site in response to the previous consultation, summarised below: Comments were received from Staffordshire County Council (SCC) as the statutory agency responsible for highways. The comments considered the suitability of the adjacent road network and the potential access points. It was perhaps not understood by SCC that this site would be accessed from CH001, as illustrated in the wider masterplan for the site prepared by Mosaic, however the site is considered deliverable from a highways perspective. Following the Cheadle Transport Study, it is understood that the Council are considering ways in which the local highways network can be upgraded and the site promoters will remain in discussion with the Council in respect of land to the north of Cheadle. Natural England has commented on the proposed allocation, echoing comments similar to those offered in response to CH001. As previously noted, issues of landscape</p>	<ul style="list-style-type: none"> • Developer support for the site and the location of a new primary school is noted. • 80 dwellings is an estimated number of dwellings based on an average density and is not fixed. • Traffic – The highways authority have advised that appropriately designed accesses would accommodate 240 + 80 + School. This number would require at least 2 accesses. A new access off Froghall Road would be preferable with secondary accesses through the existing estate. If the 80 units were separate, they could be served off a single point. Pedestrian connections should be made to the residential area to the north. • Comments regarding flood risk are noted. A FRA would be required. • The Landscape, Local Green Space and Heritage Impact Study (2016) has considered the site as being of medium landscape sensitivity and suggests some site-specific landscape mitigation measures such as limiting building heights and advanced planting on the southern boundary. • The land is Agricultural Class 3 Good to Moderate. Data supplied by Natural England indicates that there is a moderate likelihood that the land is best and most versatile land i.e. Class 3a. The Sustainability Appraisal will be updated to reflect the most up to date evidence base.

Page 4191							<p>impact have been considered as part of the delivery document prepared by RPS for Mosaic, which took the view that this site had the capacity to accommodate residential development without detriment to landscape or visual amenity. It is noted that a small section of the site falls within Flood Zone 3. This has been accounted for in the latest masterplan provided to the Council, which indicates that a green buffer could be provided in this area which would ensure that instances of potential flood risk can be avoided, compatible with the NPPF. The Council's own comments from the Sustainability Appraisal offer largely supportive comments on the sustainability of the site. There are however negative comments linked to the Grade 3 Agricultural Land Classification of the site. The Council has not defined whether this is Grade 3a or Grade 3b land, taking a broad brush approach to the assessment. In either case, Grade 3a represents only marginally better quality land than 3b, which is not recognised as 'best and most versatile', along with categories Grade 1 and Grade 2. It appears that the assessment of significant negative effect is, in this regard, an inappropriate conclusion. Mosaic welcomes the Council's inclusion of site CH132 as part of a wider allocation to the north of Cheadle. The information submitted as part of the 2014 Delivery Document to the Council includes evidence and a strategy of how the site can be delivered which addresses the concerns raised as part of the earlier consultation and is capable of assisting the County Council in finding land for a new primary school.</p>	
	PO400	Mrs Joanne Chadwick				CH132	Support	<p>Makes sense to propose housing development near the new school good access roads more balanced developemnt for Cheadle town.</p>

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? CH001 and CH132

PO1383	Mrs J Schmidt				CH132	Object	<p>I wish to add my complaints to the proposed development of 400+ houses + a school in front of the of the Park Home development of Broad Hayes Park down to the Oakamoor – Cheadle Road bordering hales Hall + Caravan plus Leisure Park. We urge the responsibilities of the council under the human rights act in particular protocol 1 article 1 which states that a person has the right to a peaceful enjoyment which include the home + other land. We believe that article 8 of the Human Rights act states that a person has substantive right to respect for their private + family life. In the case of Britain V SOS the courts reappraised the purposes of the law + concluded that the protection of the countryside falls within the interests of article 8. Private + Family life therefore encompass not only the homes but also the surroundings. As the occupants of Broad Hayes Park Homes are mostly retained in the over 70's group. They should be able to enjoy their retirement in peace + quiet without extra traffic ect that the Cheadle Roads cannot cope with the already plus all the noise from building 400 + houses + roads would be detrimental to their lives. As I was thinking of retiring to that area myself I feel I should send you my letter of complaint.</p>	<p>Amenity issues and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received, and residents will have the opportunity to comment on the content of that application.</p>

In appendix 1 of the preferred options and boundaries report prepared for the council assembly meeting on the 13/04/2016, pages 53-55 of the Cheadle section, SMDC has raised the following issues regarding site CH132. The highways dept has raised issues regarding access. Number of dwellings would be ltd to 50 if accessed through adjacent site CH001. Additional land would be required if other access gained onto the site which would involve numerous land owner. Subject to flooding due to Cecilly Mills Brook Adjacent to Cecilly Mills Brook which has a strong population of water voles (protected species) The field is Greenfield grade 3 ALC land Elevated land heightening visual impact The last consultation, the proposed development of this field is large number of public objections (290), indicating the strength of feeling by neighbouring residents. There are other sites within Cheadle which are infinitely more substantial (as compiled in the councils sustainability charts) which have been discounted. It goes without saying that any decisions must be capable of standing up to the scrutiny of the inspector so as not to arrive in the same situation as before, that is, removal of CH132 in its entirety, Furthermore, it is reasonable to suggest that this field is no longer required in the light of the recent planning application approval at Thorley Drive 60 houses on the 12 th May 2016, this new development will be classified as urban extension: accordingly, we are asking you to remove CH132 in the plan and move the location of potential new school to a more sensible, more sustainable and central location.</p>	<ul style="list-style-type: none"> Site CH132 is not the same area as 'broad Area 2' which was considered during the Core Strategy examination. Broad Area 2 was a significantly larger area than site CH132 and could accommodate up to 320 dwellings. A large proportion of this broad area was located to the east of the Cecilly Brook and extended to the east into the open countryside. During the consideration of 'broad Area 2' the Inspector raised concerns regarding evidence in the SA which did not justify the 'broad area' particularly as the County Council could not confirm at that stage that a new school would be needed. An updated Sustainability Appraisal has been undertaken which looks in more detail at individual housing site options rather than a broad brush approach taken to the broad area. CH132 is a small section of the previous 'broad Area 2 and together with site CH001 to the south forms a logical and deliverable solution, including land for a new primary school which is supported by the developer. Traffic – The highways authority have advised that appropriately designed accesses would accommodate 240 + 80 + School. This number would require at least 2 accesses. A new access off Frogghall Road would be preferable with secondary accesses through the existing estate. If the 80 units were separate, they could be served off a single point. Pedestrian connections should be made to the residential area to the north. The location of the school site to the north of Cheadle is supported by Staffordshire County Council and considers it's location would offer a good spread across Cheadle. The Cheadle Town Centre Phase 2 Study (2017) identifies the likely impacts of the housing / employment Preferred Options sites on the surrounding highway network. By 2031 the study predicts queuing and delays in certain locations, in part due to 17 years of potential traffic growth which is compounded by the additional trips generated by new housing and employment. There is limited scope to change junction characteristics to improve network capacity within the Town Centre due to its historically confined road structure. The study recommends a package of mitigation measures in order to provide additional capacity onto the overall network. Mitigation measures include junction and lane improvements, new sites having good access to public transport provision, measures to encourage walking & cycling to reduce short trips, improved HGV signage & new parking bays along High St. See response to PO1507 regarding flood risk. See response to PO2808 - Cecilly Brook LNR & Water Voles. See response to PO6912 regarding visual impact and landscape issues. See response to PO2808 regarding approval at Thorley Drive. See response to PO6912 regarding agricultural land quality.

PO3796 PO3402 PO3410 PO3074 PO3136 PO3143 PO2999 PO2868	Mr A Wilson Mr David Tavernor Mrs Brenda Mills Mr W Wordsworth Mr N Watson Mr and Mrs J Greenwood E Sposito Mrs Dorothy Tunncliffe				CH132	Object	Logic suggest that the school would be better placed in a more central location rather than in the area with poor access and situated on an outer peninsular of the town, away from the majority of existing homes. The site previously earmarked for a school in 1998 Local plan is still undeveloped (field CH024 and CH009 combined area size 2.47ha) of Churchill Road. This area has been allocated for housing – why has it not been earmarked again for the school? Such a location makes sense on many counts, especially if walking, cycling is to be encouraged. In planning application SMD/2014/0227 Staffs County Council stated that a new primary school for Cheadle would cost in the region of 4 million. Based on their calculation in order to fund the new primary school it would require a developer contributions from over 100 dwellings, in order to pay for the new school potentially meaning that every new development in Cheadle up to 2031 will be required t contribute to the new school. Therefore, if the school does not require attaching any particular development in order to fund it, its location is of paramount importance. Staffs County Council are promoting 10 min walk to school zones. Indicating that it is a reasonable for Children to walk 10 minutes to school, any longer than that would most likely to take a car journey. Its seems logical that a site more centrally located would be more preferable to a site on the outskirts of town, if the Council would like to ensure that walking to school is maximised. The school site is not restricted to the North of the town. In a letter dated 15/09/2015 from Staffs County Council on Staffs Moorlands Council, James Chadwick Planning Policy Officer clearly states that it would be logical to place the School in the East or the North of the town. If the new primary school is to also to serve the East of the town then surely a site more accessible to the East would have been more preferable.	<ul style="list-style-type: none"> Site CH024 was previously earmarked for a school in the 1998 Local Plan. Site CH009 was not included within this area. Access to the site was subsequently acquired to serve the adjacent factory and the remaining part of CH024 became landlocked. Staffordshire County Council support the preferred location for the new school and consider it provides for a good spread of provision around the town. In terms of spatial distribution the location of the previous site and the preferred site are close together. No housing allocations are proposed on the east of Cheadle and therefore it is not the most sustainable location for a new school. Staffordshire County Council estimate that 1.2 ha is require to deliver a 1 Form Entry school. Site CH024 is surrounded by existing development and would be unlikely to accommodate any further expansion. The previous site has a limited frontage and offers less opportunity to arrange the school access and how the building fits within the street scene. It also is surrounded by residential streets and may lead to residential amenity issues during the school run. The preferred site can be accommodated into the estate in such a way to design out such issues. The previous site has good access on foot although some of the routes from residential areas lead through areas that are not overlooked. The preferred school site can have access designed and delivered to the most appropriate standard. The delivery of a new school will need to be funded by developer contributions and the cost will include land acquisition and building costs. The inclusion of safeguarded land for a school as part of a wider masterplan means that the school is likely to be deliverable and appropriately designed.
PO4775 PO4791 PO4816 PO4801 PO4821 PO4796 PO4781 PO4806	Mr Alan Copcutt Mr Richard Gallagher Mrs G Smith Jean Horsley Ms Mary Walchester Mr Keeling Mr and Mrs R & J Lovatt Mrs R Johnson				CH132	Object	The planning Inspector previously deemed Area CH0132 unsound and it is difficult to comprehend what the reasoning is behind again including this area, especially as nothing has changed since the Inspectors recommendation for removal of this site. ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
							more strain on the sewage system. Also have trees for the birds and the other animals which there are in abundance. The roads around they have not been designed to take more cars and for each house again you build, we could be talking over 2 cars extra for each property on local roads.	
PO3097	Mrs J Seddon				CH132	Object	This site bordered by significant number of single storey homes, specifically for the over 50's and people with disabilities. Some of these homes are privately owned but sites on a residential park home site (which approved by the council). Others are local housing association. Surely it is very in - appropriate to build family homes and schools on site which is boarded by these single storey homes occupied by the most vulnerable of our community. These people need peace and quiet being and a feeling of safety in order to enjoy wellbeing. Please remove this site from CH132 from any proposal housing and school plans for Cheadle.	See response to PO1383 regarding amenity issues.
PO3011	Mrs J Foster				CH132	Object	The existing roads in Cheadle can't cope with the volume of traffic. To build more houses will make the road system impossible. Ness Grove was built as a small estate road, it is used as a rat run and not designed to take the current level of traffic.	See response to PO2734 regarding access.
PO2931	Mrs Catherine Fraser				CH132	Object	Is unsuitable forth proposed housing, as has been evidenced by the planning officer/inspector deeming the site 'unsound'? Why has it again been included?? The traffic exiting and entering the junction between Froghall Road + is already dangerous and difficult. The infrastructure in Cheadle struggles at present, increasing the housing stock before addressing this problem is ridiculous. Adding more housing without the chance of employment will mean yet more traffic in or rural roads, with people travelling to the cities to their employment, thereby again increasing pollution levels. How can you justify raising this application again when it has been throw out by the planning inspectors! There are more suitable areas for housing than CH132 which has a high conservation value and habitat. If Cheadle is to have more houses on the scale then the infrastructures has to be done before the building of more houses. It defies logic to build a school at the furthest outpost of Cheadle, surely it should be as central as possible, children can then walk to school and much less traffic occurring. I do not understand how anyone could suggest building a school at the furthest end of town, which will inevitably result in far more car journeys. Having children able to walk to school not only protects there health it also protects the environment. I.e.: less pollution. Please reconsider this crazy proposal.	<ul style="list-style-type: none"> • See response to PO2734 regarding Core Strategy Examination. • See response to PO2734 regarding access and traffic • See response to PO2808 regarding nature conservation issues. • See response to PO2734 regarding location of new school.
PO2936	Mr Barry Fraser				CH132	Object	How can you justify raising this application again when it has been thrown out by the planning inspectors! There are more suitable areas for housing on this scale if Cheadle is to have more houses than CH132 which has high conservation value and habit, if Cheadle is to have more houses on a scale then the infrastructure has to be in place before the building of houses. It	<ul style="list-style-type: none"> • See response to PO2734 regarding Core Strategy Examination. • See response to PO2734 regarding location of new school.

							defies logic to build a school at the furthest outpost of Cheadle, surely it should be central as possible, children can walk to school and much less traffic occurring. I am most annoyed, as are a very great number of people in Cheadle 1000's of objections were made your proposal of high numbers of houses built on Greenfield sites around Cheadle and specifically CH132. The planning inspector deemed this proposal unsound and recommended removal of this site. Yet you have ignored this and just re-proposed building houses and school on this site. You have ignored 1000's people who objected to your proposals. I feel certain people will not forget this when the time comes around for your local elections	
PO2536	Mr A Hide				CH132	Object	My concern is that should CH132 be developed the negative impact in increased traffic in an already congested area of town will have serious implications for road safety .	<ul style="list-style-type: none"> • See response to PO2734 regarding traffic. Issues.
PO2544	Mr Albert Allen				CH132	Object	Publically address the town of Cheadle on your road traffic plans CH132 would itself in huge traffic increase on our 2 already heavily congested routes into Cheadle? Green belt is not the answer, brownfield first.	<ul style="list-style-type: none"> • See response to PO2734 regarding traffic issues • Site CH132 is not designated as Green Belt.
PO4778	Mr and Mrs R & J Lovatt				CH132	Object	To build on CH132 for housing & a school is absolutely stupid. The amenities in Cheadle are all full, Dr's etc. There is nothing to do in Cheadle & enough empty properties without building more. These fields flood regularly we need the fields much more than housing. I totally object to housing.	<ul style="list-style-type: none"> • See response to PO2734 regarding location of new school. • See response to PO7471 regarding infrastructure.
PO8982	Mrs L J Hurst				CH132	Object	I objected to this area for development previously, for housing but mainly now, I object to the proposal to site a school - a primary school - there. Based on its location it's too far out of town and out on a limb and what a distance from the secondary schools! (AMENDED) Can consideration be given to a new location please? How about the green belt land adjacent to MJS transport on Froghall Road? Exceptional circumstances and plenty of room for expansion.	<ul style="list-style-type: none"> • See response to PO2734 regarding location of new school. • The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances and the recent Housing White Paper reiterates this commitment.

Petition									
Page 4204	952 Signatures						We, the residents of Cheadle south West, consider the allocation of our area is unacceptable because it has given us the largest number of preferred sites, 5 out of 7, for building in Cheadle from a map considering 51 sites, and the largest number of houses, at 430, in the whole of Staffs Moorlands. This is instead of the small distributed developments of which nearly all residents of Cheadle could approve. We will become a super estate without any major public open space. At a consultation in Cheadle SMDC maps wrongly showed the 4 school playing fields as public open space. This inaccuracy is crucial as much of the land behind us should be allocated as public open space, not housing, as we have very little indeed compared to other areas of Cheadle. Our MP Sir William Cash has agreed with us at a meeting on Friday 22nd July that development in Cheadle is “disproportionate”. We believe, with him, that whereas the government requirement for Staffs Moorlands is 2530, the SMDC requirement of 6000 is based on SMDC’s historically high housing acceptance over government required levels. We challenge this injustice.	<ul style="list-style-type: none"> The Council has considered a number of sites within and on the edge of Cheadle. The majority of the proposed area for housing is located within the existing town boundary. It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway improvements, affordable housing and community facilities such as public open space. Agreed that not all the open spaces marked on the map are accessible to the public and should be indicated as ‘open space’ rather than ‘public open space’. A public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and where new public open space is required. The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district’s full housing needs, including affordable housing, whilst taking into account migration and demographic change. The adopted Core Strategy sets out the distribution of housing development between the towns and rural areas: Leek 30%, Biddulph 20%, Cheadle 22% and Rural Areas 28%. 	
	CH085A								
	PO480	Mr T A J Campbell		Mr John Wren	JMW Planning Limited	CH085A	Support	This site is supported in the initial sustainability appraisal report which considered a south-west focus for new housing development. It is well located in relation to existing services within the town, most of which can be reached by means other than the private motor car. The landowners are willing to consider releasing the land for development initially taking access off the existing highways network.	<ul style="list-style-type: none"> Developer support for the site is noted. The Highways Authority have stated that approximately 50-75 dwellings could be served off Dryden Way.
PO476	Mrs Jennifer C Moreton				CH085A		In this area there is a major flaw in the fact that you are taking away all of the available access to countryside. Cheadle was built in a basin apart from the North which has a continuation of green fields for miles to Kingsley Holt, Whiston etc. On the south west the only countryside left is one small field and Huntley Woods were are not accessible to public. Therefore this will be COMPLETE OVER KILL OF THE SOUTH WEST OF CHEADLE. You will diminish the availability to walk this countryside by all the residents who use it on a very regular basis. In your plan you are joining Cheadle with Teanford and this is not fair or acceptable to the South West residents. You also will need to break through the area of the old railway line . This area close to the Huntley woods has great potential as a place of pleasure something we are very short of in Cheadle and indeed should be preserved not decimated the whole of this area greatly adds to the quality of life to us in the South West. The road you have on your plan shows it goes nowhere! in 1998 The SMDC fought ardently with	<ul style="list-style-type: none"> The Council has considered a number of sites within and on the edge of Cheadle. The majority of the proposed area for housing is located within the existing town boundary. It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway improvements, affordable housing and community facilities such as public open space. The Council’s Landscape, Green Space and Heritage Impact Study(August 2016) includes a Landscape Assessment for this site. It advises that the site is open however long distance views are screened by the railway embankment located to the north and west of the site. There could be impacts on local landscape character (medium landscape sensitivity), however site-specific landscape

							<p>Danbank saying the road was not viable and the expense was far too great. This road would not help the traffic because most of the traffic travelling through goes to the Potteries. It was suggested at that enquiry the builders would never finish this road because the costs were too great. Staffs County Council then said there were no finances available at that time and the case remains the same to-day. In the South West we already take the brunt for 2 High Schools, 1 Sixth Form and 1 Primary school, also most of Cheadle's Industry, Why are you persisting in creating more congestion in an area already experiencing problems? A SOUTH WEST LINK ROAD WILL NOT WORK AS IT WAS IN 1998 IT IS A ROAD TO NOWHERE. The adjacent houses to the areas I refer are approx 500 Houses, (Dandillions estate and Wedgewood estate). Your plans are to add another 500 making a 1,000 mass of residential properties. This is not good planning. These houses should be divided into smaller groups and distributed more evenly around the town. Why is there no building suggested for the North i.e. Leek Road A522 areas. JCB is in Leek Road and we have to cope with the traffic and employees coming from the South of Cheadle. Whereas I am not suggesting 500 be built there I do consider that part of the area on the East Side of Leek Road would be viable. This would also help with the proposed School in the North East. The School Buses we have to contend with amount to approx 30/40 buses, taxi's mini buses per day morning and night as well as numerous parental transport. This South West is a further walking distance to our town centre than Leek Road. Does the Government not suggest houses should be built as close as possible to the centre of a Town?</p>	<p>mitigation measures could include limiting building heights and planting in the southwest of the site.</p> <ul style="list-style-type: none"> • New housing schemes will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the consideration of new links. • There are proposals for new housing development to the north of the town. • The Cheadle Town Centre Phase 2 Study (2017) identifies the likely impacts of the housing and employment Preferred Options sites on the surrounding highway network. By 2031 the study predicts queuing and delays in certain locations, in part due to 17 years of potential traffic growth which is compounded by the additional trips generated by new housing and employment. There is limited scope to change junction characteristics to improve network capacity within the Town Centre due to its historically confined road structure. The study recommends a package of mitigation measures in order to provide additional capacity onto the overall network. Mitigation measures include junction and lane improvements, new sites having good access to public transport provision, measures to encourage walking and cycling to reduce short trips, improved HGV signage and new parking bays along High Street. • The Cheadle Town Centre Phase 2 Study (2017) considers the potential SW link road. Currently there is no link between the A522 Tean Road and Brookhouse Way / A521 due to it being severed by a disused railway line. The railway line is in third party ownership and a bridge will be required to connect a link road through. The proposed link road would allow a percentage of predicted trips from the SW area to traverse Brookhouse Way / A521 opposed to solely the A522, however the level of trips which would use the A521 from this area would have a minimal effect in improving congestion within Cheadle Town Centre. The study considers that the proposed Link Road would not be a solution on its own. • National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. • The Council has considered a number of sites within and on the edge of Cheadle. There is not enough brownfield land or sites to meet the District's proposed housing requirement within the built up area of the town. This site is located on the edge of the settlement within the existing town boundary. It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway

								improvements, affordable housing and community facilities such as public open space. Distance from the town centre needs to be balanced with other considerations such as Green Belt, Heritage, Landscape and viability / deliverability.
PO1169	Mr P Beesley				CH085A	Object	This land is flood plain + it is always very well. It has been proved in the past that it is unsuitable for building. Proposed relief road goes nowhere would be better going to link with + if this was built then it might become viable	<ul style="list-style-type: none"> The Council has completed a Level 1 Strategic Flood Risk Assessment (SFRA) for the District, the results of which have been used to inform the site selection process. The site is within Flood Zone 1 – Low probability. The area to the west of the site adjacent to the Brook is high probability and can be incorporated into uses other than housing i.e. open space. The Environment Agency has confirmed that a Level 2 SFRA will not be required as the developer should be able to design out flood risk given the small proportion of Flood Zones on the edge of them, and the fact that they are already modelled in detail, so the extents shouldn't increase. Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected. See response to PO476 regarding proposed link road.
PO619	Mr Julian Baskeyfield				CH085A	Object	This is too large an area to develop without the infrastructure to support it. The roads are not suitable to take the increased number of vehicles, the town already gets gridlocked at key times of the day. It will create a dense area of housing to the south with shopping and leisure facilities all being in the town and a considerable distance to walk to, this is likely to increase traffic on the roads.	<ul style="list-style-type: none"> See response to PO476 regarding traffic issues. See response to PO476 regarding scale of development and infrastructure.
PO622	Mr Julian Baskeyfield				CH085A	Object	The housing will be too dense to the south of the town and too far away from shopping and leisure facilities meaning that car journeys will be inevitable. This will increase the number of cars travelling both to and through the town (especially at peak times because the new school is planned for the north). The roads can barely manage the current amount of traffic at the moment without the additional number from a new estate in the south. The north of the town is more suitable because it will be close to the new school and it is also less distance to the shopping area of town than it will be from the south.	<ul style="list-style-type: none"> There are proposals for new housing development to the north of the town. See response to PO476 regarding traffic issues. See response to PO476 regarding scale of development and infrastructure.
PO168	Mrs E Baskeyfield				CH085A	Object	<p>Areas CH085a-d & CH128 are too far from the main infrastructure of the town. They are not near to any public open spaces as the majority of those on the plan are private field owned by schools and are not for public use. The new housing proposal for the south would increase congestion on the roads especially as the new school is planned for the north of the town. This will cause increased traffic jams on the roads through the town at peak times.</p> <p>The building of houses in this area will increase the water table significantly as the fields are already heavily waterlogged after rain which will have a negative impact on those further down the valley in Tean who have already had areas under water this year due to flooding. Building in this area will exacerbate this problem.</p>	<ul style="list-style-type: none"> See response to PO476 regarding traffic issues. See response to PO476 regarding scale of development and infrastructure. See response to PO1169 regarding flood risk issues. The proposed new school is planned to serve the north of Cheadle and could therefore reduce school traffic currently accessing schools in the SW of the town. New housing development is also proposed in the north of the town. There are existing schools located in the SW of Cheadle to meet the needs of residents located in the south of the town. Agreed that not all the open spaces marked on the map are accessible to the public and should be indicated as 'open space' rather than 'public open space'. A public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is

								where improvements are needed to these spaces and where new public open space is required.
PO393	Mrs Joanne Chadwick				CH085A	Object	With the large proposed development of ch085a-d and Ch128 Cheadle south west seems to have a disproportionate amount of the housing development for Cheadle, with 400+ of the total allocation being suggested for this area! I do not understand why this area has been chosen over others in view of the fact that a lot of extra traffic will now have to go through the centre of town to leave on the north side. In particular you are suggesting the new primary school is built in the north so this will cause even more traffic congestion as people have to travel from the south to the north of the town with our struggling roads!! There are little/no public space in the south west. As I mentioned previously those listed are school fields not open to the public. Very misleading!!! With this development we will lose even more! This hardly seems fair, balanced or in the interest of public health! Concerns over the size of the estate and how it will be managed effectively. ?? Increased crime, increased traffic, noise and pollution.	<ul style="list-style-type: none"> • See response to PO476 regarding traffic issues. • See response to PO476 regarding scale of development and infrastructure. • See response to PO168 regarding proposed new school. • See response to PO168 regarding public open space.
PO397	Mrs Joanne Chadwick				CH085A	Object	Unbalanced development in Cheadle area - 400+ houses in the south west out of total allocation. I would question if this number of houses is needed, but if so spread them more evenly to develop all sides of the town. proposed link road ?? Through the estate. Not appropriate for heavy traffic through a residential estate. It would be a waste of time unless the link road continued through the north west up to Leek road - then this may help to reduce traffic. access road through the railway line would spoil local walking areas. This surely would not be in the interest of public health!! loss of green space and walking areas. no public open spaces in the south west as the 3 large areas on the map are school playing fields and not open to the public - very misleading. increase in traffic. Why build the school in the north and a large proportion of the houses in the south!	<ul style="list-style-type: none"> • See response to PO476 regarding scale of development and infrastructure. • See response to PO476 regarding proposed link road. • See response to PO168 regarding public open space. • See response to PO168 regarding proposed new school.
PO1008	Mrs Laura Cartlidge				CH085A	Object	These comments are in relation to proposals to sites CH085a, CH085b, CH085c and CH085d which are all objected to. a) It remains entirely unclear why and how these sites (and indeed all others) have become 'Preferred Housing Allocation' sites. There are no published criteria for the evaluation of all sites put forward in the Summer 2015 Consultation, nor any available analysis and results of any such evaluation. b) The reduction of agricultural land, and the increase in built development, will have the double effect of significantly increasing surface water run-off to the River Tean. At this point, and below, the River is in an Environment Agency Flood Warning Area, and there has been abundant recent evidence of downstream flooding in Tean. c) There would be	<ul style="list-style-type: none"> • Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. • See response to PO1169 regarding flood risk issues. • See response to PO476 regarding landscape issue and pedestrian links. • See response to PO476 regarding proposed link road and traffic issues. • See response to PO168 regarding proposed new school. • See response to PO476 regarding infrastructure.

Page 4208							<p>a massive reduction in public amenity. The very essence of the value of the Green Belt to the south west of the sites is precisely because it forms part of a valley, with walks and views in both directions. To build over half the valley would detract from the views from the remaining Green Belt land, and would very severely curtail the extremely popular current public access by children and adults for pleasure, dog walking, cycling etc. De facto it is THE public open space for this part of the town (see also q25 above). d) There are significant accessibility problems associated with the sites. Whether a 'potential link road' (will this be subject to a Section 101 Agreement with the developer?) is built, or simply an estate access road, there will be markedly increased traffic on different parts of Tean Road. The large majority of visits from the development to the town centre will be by car, increasing pressure on a road network which is barely able to cope at the moment at peak times. e) The development would add to pressure on schools in the area which are already close to capacity. We note the views of the County Council that an additional primary school will be required in Cheadle, but find it slightly perverse that this should be planned for the northernmost part of the town at the furthest point from the largest 'preferred' development. The 'school run ' will add to the traffic impact on Tean Road and the town centre. f) Similarly the development would add to the pressure on the already overstretched resources of the NHS in Cheadle, eg GP appointment times. g) Finally from a personal point of view, my property currently looks out onto the proposed building site and as such the development would have a high impact on our lives, both in the initial building stage from the huge disruption and later on the outlook from our property which is one of the main reasons we and many of our neighbours bought our properties.</p>	<ul style="list-style-type: none"> • Amenity – issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application.
PO7552	Mrs M Campbell				CH085A	Object	<p>Since 2009 I have been sending comments and response forms. My previous comments and letters still apply. I see a link road has been put back on the map which will do little to help congestion in the town, probably cause more problems in Tean. If we are to have more housing, roads need to be provided first i.e. a ring road further out to channel traffic especially heavy goods vehicles away from the narrow roads within Cheadle. (At present we need many potholes repaired). Also we need more medical facilities before more people live here. I enclose copies of my previous letters and my husband's in case you have not kept them.</p>	<ul style="list-style-type: none"> • See response to PO476 regarding proposed link road and traffic issues. • See response to PO476 regarding infrastructure.
PO7440	Mr And Mrs A B Lewis				CH085A	Object	<p>I wish, together with my wife, to comment on the draft plans for Cheadle, in particular the plans for housing allocation in the area around Mobberley and the proposed path of a link road from the main Cheadle /Tean Rd. First there is a proposal to build a substantial number of houses in this area bordering on green belt. This is the third time that this part of our town has been subjected to attempts to build. My main objections are in regard to the infrastructure of this area. I am a regular user of the main road between Cheadle and Tean as a runner, on the pavement, and as a motorist. I have previously made complaints to the holder of the highways portfolio on the County Council on the state of this major road out of the town and the accompanying pavement. This road and pavement are a danger to all who have the misfortune to have to use them on a regular basis. The road between the bridge over Cecily brook and Tenford is in an appalling state for a carriageway which is classified as an A road. Large</p>	<ul style="list-style-type: none"> • See response to PO476 regarding proposed link road and traffic issues. • See response to PO476 regarding infrastructure.

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? Mobberley Sites

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
							<p>vehicles from JCB and other industrial sites in and around Cheadle are constantly trundling up and down this road in both directions breaking up the surface and leaving potholes. When resurfacing work was done a few years back on this road, the work stopped at the bridge for some reason so that the situation has continued to deteriorate. On many occasions I have seen two vehicles travelling in opposite directions barely able to pass each other thereby causing one of them to stop and mount the pavement in order to allow the other to pass. As far as the pavement is concerned the surface is broken all along the stretch between Eaves Lane and Tenford necessitating careful placement of feet even when walking, let alone running. In addition there is all manner of vegetation growing out of the hedgerow reducing the pavement width to less than two feet in places. When I last reported these problems last year a half hearted attempt at improving the pavement was made by cutting back the growth, but of course we are now in the growing season and the situation is as bad if not worse than ever. No work has been carried out on the pavement surface so that it continues to deteriorate. I did suggest that Mr Deaville might like to take a stroll with me along this road so that I could point out the problems as he is obviously unaware of them but there was no response. My point in making the above statement is twofold. If several hundred homes are planned for this part of Cheadle the infrastructure will deteriorate even more with the addition of many more vehicles using the road. Secondly the link road proposal to me seems pointless. In what way is this going to improve the situation. Were it built, the traffic, including the heavy vehicles, would need to access it via the poor road talked about above. Finally you do not show where this road is supposed to go to. It appears to finish in the middle of the proposed housing. In summary then, it appears as if you are proposing a large estate serviced by a major road which has narrow single carriageways and is little more than an old turnpike road with a tarmacked surface. Together with this the heavy vehicles currently using this road would be diverted onto a new link road apparently going nowhere according to the plan. The whole idea as far as we can see beggars belief unless we are missing something patently obvious to everyone else. If so we would be grateful if you could enlighten us.</p>

PO7494	Mr Philip Walton				CH085A	Object	Summary of representation - please see full response (attached). Object to the development of this site for the following reasons: not enough capacity in local schools & additional school traffic created; doctors, dentists and shops are all over 1km which will create more traffic; Staffs CC ruled out a southern link road; Latest traffic survey is not available; access to the site would be difficult; flooding issues along River Tean and surface water flooding issues; access to the site is bounded by a railway line which is leased by Network Rail to Moorlands and City Railways Ltd on a 15 year lease from 2011. Reopening of the line is possible; consultation is being repeated when a previous attempt was thrown out; one consultation meeting was inadequate; open space cannot be replaced; lack of public open space; green spaces indicated are playing fields with no public access; scale of building is disproportionate to the size of Cheadle's infrastructure; sites to the north of Cheadle would bring this balance provided additional facilities such as schools, shops, dentists and doctors are provided; where are all the people going to come from to fill these new houses? lack of public open space and existing spaces need improving; no new spaces indicated on the plans; few employment plans, where are all the new people going to work? roads are inadequate for the current levels of traffic; medical facilities are already overstretched. An improvement in the infrastructure of the town would help the general acceptance of these proposals.	<ul style="list-style-type: none"> • See response to PO476 regarding infrastructure, scale and location of development. • See response to PO476 regarding proposed link road and traffic issues. • See response to PO1169 regarding flood risk issues. • See response to PO168 and PO476 regarding public open space. • The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change. The Local Plan also proposes employment sites.
PO8984	Mrs L J Hurst				CH085A	Object	Good agricultural land and a well used footpath, No 16 cuts through this field. The land is used for grazing cattle. Also flood plain needs protecting.	<ul style="list-style-type: none"> • The land is Agricultural Class 3 Good to Moderate. Data supplied by Natural England indicates that there is a moderate likelihood that the land is best and most versatile land i.e. Class 3a • New housing schemes will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the consideration of new links. • See response to PO1169 regarding flood risk issues.

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? Mobberley Sites

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
PO8990	Mr A Brandrick				CH085A	Object	<p>Summary of representation (see attached document) Infrastructure Concerns Any further development would only exacerbate the existing traffic congestion along the A522 route. A traffic survey taken during quiet periods does not reflect the standstill common during rush hour, the effect on emergency services and the general disruption. Stationary traffic enhances pollution and numerous children walking home are exposed to increased pollution. An increase in housing in the SW would add to congested parking in the town centre. The proposed relief road would add to High Street congestion, increase danger to pedestrians, cause a bottleneck where it meets the A521 and through traffic would have to travel along High Street to leave the town. Impact on the need for new school places. Current schools are centrally located adding to further congestion. Surely logic would dictate the need for a new school in a different area where new housing could support this. Building in the N and E would relieve the S and centre. Access How will the southern link road cross the dismantled railway? The line owned by Network Rail is leased by Moorlands and City Railway for 15 years. This would not be possible in the immediate and medium term. Flood Risk The recent springs saw unprecedented high levels of floodwater in the proposed southwest development areas. Given the inevitable additional surface water run-off and the new planned developments in Upper Tean, there would be an increased risk of flooding for Upper Tean. Does not the recent government focus on floodplains have an influence upon any consideration to build upon the floodplain margin? Wildlife Abundance of unusual wildlife, voles, kingfishers, owls, bats, house martins, redstarts and buzzards. These would be disturbed and disrupted by proposed developments. Green Areas Where will children play/roam? Where would the public open spaces be? The small green space would be squeezed close to the river. School playing fields are shown as 'public open space' these are not public spaces. Housing Will there be an appropriate percentage of affordable homes for first-time buyers or will it be a series of developments housing middle and high income families, blighting the landscape with three-storey properties?</p>	<ul style="list-style-type: none"> • See response to PO476 regarding traffic issues. • See response to PO476 regarding proposed link road. • See response to PO168 regarding proposed new school. • See response to PO1169 regarding flood risk issues. • See response to PO168 and PO476 regarding public open space. • The site was subject to a Phase 1 ecological survey in 2014 and a later 2016 ecology study considered the scope for 'local wildlife site' i.e. SBI status. The Phase 1 survey concludes that the site has low potential to support protected species as the habitat is poor and the LWS survey considers that most of the site habitats are common and not considered eligible for SBI status. Both studies recommend further surveys and actions prior to development. • The Council will seek a proportion of affordable housing on the site which meets the required design policies.

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? Mobberley Sites

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
PO9011	Mr B Moreton				CH085A	Object	<p>Summary of representation (see attached) Would take away almost all of the countryside to the SW of Cheadle. Area is devoid of green spaces. Those identified on the map are school playing fields and not available to the public. Overdevelopment in this area. Already an industrial estate, 2 high schools and a sixth form. Smaller areas would be more appropriate. Link road Sites depend on the delivery of a Southern Link Road for access. The 'disused' railway line to the west owned by Network Rail has a 15 year lease to Moorlands and City Railway and could reopen. The rail route should be protected. Access to the sites is therefore not available from the North and West. From the south access would be through Green Belt land from a dangerous bend on the Tean Road and add more traffic. Building of a southern link road was refused at the Core Strategy examination. The road is not listed in the Staffordshire County Council list of schemes and there is a policy of implementing initiatives to reduce traffic rather than to provide for growth. New link road would do nothing to relieve traffic problems in Cheadle. Sustainability The number of houses proposed would double the amount of housing in the SW. The sites are more than 1km from the town centre making it unlikely that residents would walk to access services and facilities. Not enough dentists. Amenity - Well used footpath crosses site and would be lost if developed. Its development would conflict with the improving health agenda. Flood Risk – sites border the River Tean and will contribute surface water. This will add to flood risk further down stream at Tean. Infrastructure – More school places required. Current schools are located in the centre of Cheadle and cause a huge problem on the surrounding roads with buses, taxis and cars. Potentially another 700 commuter cars will add to this problem. A new school would be better located in the north of the town which would reduce pressure on the SW and centre. Building in the north and east would be closer to the town centre and easier to access services and facilities. A number of option sites were closer to the town centre - walking and cycling would be real options. Government Policy – the Localism Act states that we only need to make housing provision to meet local need. SMDC has a declining population and household projections indicate a demand for 2573 houses not 6000+ that are proposed. This relates to a build rate of 171.5 dwellings per annum. Landscape – Wardell Armstrong's assessment of visual open space states that there are areas such as this that provide a visual break between areas of development and can enhance the setting of public footpaths and should be protected from development. The area west of Cheadle is identified as an area of landscape enhancement. The wonderful views of Huntley Woods are a great asset to the south of Cheadle.</p>	<ul style="list-style-type: none"> • See response to PO476 regarding scale of development and infrastructure. • See response to PO476 regarding infrastructure. • See response to PO476 regarding landscape issues. • See response to PO476 regarding proposed link road. • See response to PO168 and PO476 regarding public open space and footpaths. • See response to PO1169 regarding flood risk issues. • See response to PO168 regarding proposed new school.
CH085B								
PO481	Mr T A J Campbell		Mr John Wren	JMW Planning Limited	CH085B	Support	<p>This site is supported in the initial sustainability appraisal report which considered a south-west focus for new housing development. It is well located in relation to existing services within the town, most of which can be reached by means other than the private motor car. The landowners are willing to consider releasing the land for development initially taking access off the existing highways network.</p>	<ul style="list-style-type: none"> • Developer support for the site is noted. • There is no current available access to this section of land.

PO8991	Mr A Brandrick				CH085B	Object	<p>Summary of representation (see attached document) Infrastructure Concerns Any further development would only exacerbate the existing traffic congestion along the A522 route. A traffic survey taken during quiet periods does not reflect the standstill common during rush hour, the effect on emergency services and the general disruption. Stationary traffic enhances pollution and numerous children walking home are exposed to increased pollution. An increase in housing in the SW would add to congested parking in the town centre. The proposed relief road would add to High Street congestion, increase danger to pedestrians, cause a bottleneck where it meets the A521 and through traffic would have to travel along High Street to leave the town. Impact on the need for new school places. curent schools are centrally located adding to further congestion. Surely logic would dictate the need for a new school in a different area where new housing could support this. Buidling in the N and E would relieve the S and centre. Access How will the southern link road cross the dismantled railway? The line owned by Network Rail is leased by Moorlands and City Railway for 15 years. This would not be possible in the immediate and medium term. Flood Risk The recent springs saw unprecedented high levels of floodwater in the proposed southwest development areas. Given the inevitable additional surface water run-off and the new planned developments in Upper Tean, there would be an increased risk of flooding for Upper Tean. Does not the recent government focus on floodplains have an influence upon any consideration to build upon the floodplain margin? Wildlife Abundance of unusual wildlife, voles, kingfishers, owls, bats, house martins, redstarts and buzzards. These would be disturbed and disrupted by proposed developments. Green Areas Where will children play/roam? Where would the public open spaces be? The small green space would be squeezed close to the river. School playing fields are shown as 'public open space' these are not public spaces. Housing Will there be an appropriate percentage of affordable homes for first-time buyers or will it be a series of developments housing middle and high income families, blighting the landscape with three-storey properties?</p>	<ul style="list-style-type: none"> • See response to PO476 regarding traffic issues. • See response to PO476 regarding proposed link road. • See response to PO168 regarding proposed new school. • See response to PO1169 regarding flood risk issues. • See response to PO168 and PO476 regarding public open space. • See response to PO8990 regarding wildlife and ecology. • See response to PO8990 regarding affordable housing and design issues.

PO9012	Mr B Moreton				CH085B	Object	<p>Summary of representation (see attached) Would take away almost all of the countryside to the SW of Cheadle. Area is devoid of green spaces. Those identified on the map are school playing fields and not available to the public. Overdevelopment in this area. Already an industrial estate, 2 high schools and a sixth form. Smaller areas would be more appropriate. Link road Sites depend on the delivery of a Southern Link Road for access. The 'disused' railway line to the west owned by Network Rail has a 15 year lease to Moorlands and City Railway and could reopen. The rail route should be protected. Access to the sites is therefore not available from the North and West. From the south access would be through Green Belt land from a dangerous bend on the Tean Road and add more traffic. Building of a southern link road was refused at the Core Strategy examination. The road is not listed in the Staffordshire County Council list of schemes and there is a policy of implementing initiatives to reduce traffic rather than to provide for growth. New link road would do nothing to relieve traffic problems in Cheadle. Sustainability The number of houses proposed would double the amount of housing in the SW. The sites are more than 1km from the town centre making it unlikely that residents would walk to access services and facilities. Not enough dentists. Amenity - Well used footpath crosses site and would be lost if developed. Its development would conflict with the improving health agenda. Flood Risk – sites border the River Tean and will contribute surface water. This will add to flood risk further down stream at Tean. Infrastructure – More school places required. Current schools are located in the centre of Cheadle and cause a huge problem on the surrounding roads with buses, taxis and cars. Potentially another 700 commuter cars will add to this problem. A new school would be better located in the north of the town which would reduce pressure on the SW and centre. Building in the north and east would be closer to the town centre and easier to access services and facilities. A number of option sites were closer to the town centre - walking and cycling would be real options. Government Policy – the Localism Act states that we only need to make housing provision to meet local need. SMDC has a declining population and household projections indicate a demand for 2573 houses not 6000+ that are proposed. This relates to a build rate of 171.5 dwellings per annum. Landscape – Wardell Armstrong's assessment of visual open space states that there are areas such as this that provide a visual break between areas of development and can enhance the setting of public footpaths and should be protected from development. The area west of Cheadle is identified as an area of landscape enhancement. The wonderful views of Huntley Woods are a great asset to the south of Cheadle.</p>	<ul style="list-style-type: none"> • See response to PO476 regarding scale of development and infrastructure. • See response to PO476 regarding infrastructure. • See response to PO476 regarding landscape issues. • See response to PO476 regarding proposed link road. • See response to PO168 and PO476 regarding public open space and footpaths. • See response to PO1169 regarding flood risk issues. • See response to PO168 regarding proposed new school.

PO10257	Mrs Jennifer C Moreton				CH085B	Object	In this area there is a major flaw in the fact that you are taking away all of the available access to countryside. Cheadle was built in a basin apart from the North which has a continuation of green fields for miles to Kingsley Holt, Whiston etc. On the south west the only countryside left is one small field and Huntley Woods were are not accessible to public. Therefore this will be COMPLETE OVER KILL OF THE SOUTH WEST OF CHEADLE. You will diminish the availability to walk this countryside by all the residents who use it on a very regular basis. In your plan you are joining Cheadle with Teanford and this is not fair or acceptable to the South West residents. You also will need to break through the area of the old railway line . This area close to the Huntley woods has great potential as a place of pleasure something we are very short of in Cheadle and indeed should be preserved not decimated the whole of this area greatly adds to the quality of life to us in the South West. The road you have on your plan shows it goes nowhere! in 1998 The SMDC fought ardently with Danbank saying the road was not viable and the expense was far too great. This road would not help the traffic because most of the traffic travelling through goes to the Potteries.It was suggested at that enquiry the builders would never finish this road because the costs were too great. Staffs County Council then said there were no finances available at that time and the case remains the same to-day.In the South West we already take the brunt for 2 High Schools, 1 Sixth Form and 1 Primary school,also most of Cheadle's Industry, Why are you persisting in creating more congestion in an area already experiencing problems ? a SOUTH WEST LINK ROAD WILL NOT WORK AS IT WAS IN 1998 IT IS A ROAD TO KNOWHERE. The adjacent houses to the areas I refer are approx 500 Houses, (Dandillions estate and Wedgewood estate). Your plans are to ajoin another 500 making a 1,000 mass of residential properties. This is not good planning. These houses should be divided into smaller groups and distributed more evenly around the town. Why is there no building suggested for the North i.e. Leek Road A522 areas. JCB is in Leek Road and we have to cope with the traffic and employees coming from the South of Cheadle. Whereas I am not suggesting 500 be built there I do consider that part of the area on the East Side of Leek Road would be viable. This would also help with the proposed School in the North East. The School Buses we have to contend with amount to approx 30/40 buses, taxi's mini buses per day morning and night as well as numerous parental transport. This South West is a further walking distance to our town centre than Leek Road. Does the Government not suggest houses should be built as close as possible to the centre of a Town ?	<ul style="list-style-type: none"> • See response to PO476 regarding landscape issues. • See response to PO476 regarding pedestrian links. • See response to PO476 regarding development in north Cheadle. • See response to PO476 regarding link road and traffic. • See response to PO476 regarding infrastructure. • See response to PO476 regarding scale and location of new development.
PO1171	Mr P Beesley				CH085B	Object	This land is flood plain + it is always very well. It has been proved in the past that it is unsuitable for building. Proposed relief road goes nowhere would be better going to link with + if this was built then it might become viable.	<ul style="list-style-type: none"> • See response to PO1169 regarding flood risk issues. • See response to PO476 regarding proposed link road.
CH085C								
PO482	Mr T A J Campbell		Mr John Wren	JMW Planning Limited	CH085C	Support	This site is supported in the initial sustainability appraisal report which considered a south-west focus for new housing development. It is well located in relation to existing services within the town, most of which can be reached by means other than the private motor car. The landowners are willing to consider releasing the land for development initially taking access off the existing highways network.	<ul style="list-style-type: none"> • Developer support for the site is noted. • There is no current available access to this section of land.

PO1114	Alan Fox				CH085C	Object	Nature Conservation – Loss of wildlife from the area. Site is abundant in wildlife.... needs to be expanded to include protected species. i.e Nature Conservation – Loss of wildlife from the area. Site is abundant in wildlife including protected species. i.e. bats which have their roosts, along with their foraging and commuting habitats protected by law. I object to the development of this area as it would illegal to destroy the roosts and foraging and commuting habitats of the bats in the area. I have photographs and video of bats foraging in the Aynsley Close area available for any site survey / enquiry. (while they are not of the highest quality they are never the less conclusive.)	<ul style="list-style-type: none"> See response to PO8990 regarding wildlife and ecology.
PO10265	Mrs E Baskeyfield				CH085C	Object	<p>Areas CH085a-d & CH128 are too far from the main infrastructure of the town. They are not near to any publi open spaces as the majority of those on the plan are private field owned by schools and are not for public use. The new housing proposal for the south would increase congestion on the roads especially as the new school is planned for the north of the town. This will causing increased traffic jams on the roads through the town at peak times.</p> <p>The building of houses in this area will increase the water table significantly as the fields are already heavily waterlogged after rain which will have a negative impact on those further down the valley in Tean who have already had areas under water this year due to flooding. Building in this area will on exaserbate this problem.</p>	<ul style="list-style-type: none"> See response to PO476 regarding traffic issues. The Council’s Landscape, Green Space and Heritage Impact Study(August 2016) includes a Landscape Assessment for this site. It advises that the site is open however long distance views are screened by the railway embankment located to the north and west of the site. Only the north-eastern corner of the site is adjacent to the settlement edge and is otherwise separated by adjacent sites (CH085d). The site should therefore not be developed in isolation. If the adjoining sites are developed first, then CH085c could be considered as a potential development site in a later phase. There could be impacts on local landscape character (medium landscape sensitivity), however site-specific landscape mitigation measures could include phased development (ensuring the site is developed following the development of adjoining sites), limiting building heights and planting in the west of the site and phasing development. See response to PO1169 regarding flood risk issues. See response to PO168 regarding new school . See response to PO168 regarding public open space.
PO396	Mrs Joanne Chadwick				CH085C	Object	Unbalanced development in cheadle area - 400+ houses in te south west out of total allocation. I would question if this number of houses is needed, but if so spread them more evenly to develop all sidesof the town. proposed link road ?? Through the estate. Not appropriate for heavy traffic thourhg a residential estate. It would be a waste of time unless the link road continued through the north west up to leek road - then this may help to reduce traffic. loss of green space and walking arreas. no public open spaces in the south west as the 3 large areas on the map are school playing fields and not open to the public - very misleading. increase in traffic. Why build the scool in the north and a large propotion of the houses in the south!	<ul style="list-style-type: none"> See response to PO476 regarding traffic issues. See response to PO10265 regarding scale of development and infrastructure. See response to PO168 regarding proposed new school. See reponse to PO168 regarding public open space.
PO1364	Ms Rosamund Worrall	Heritage England			CH085C	Object	Map 4.7 - Cheadle - CH85c; CH85d; and, CH128 - preferred housing allocations - It is not clear how the impact of the site allocations, individually and cumulatively, has been assessed in respect of the Grade II listed building Mobberley House. Further information is required.	<ul style="list-style-type: none"> The Council’s Landscape, Green Space and Heritage Impact Study (August 2016) includes a Heritage Assessment for this site which advises that the wider agricultural setting is considered to contribute to the overall significance of the Grade II asset – Mobberley House. This could be mitigated through screening of the southern edge of

PO7557	Mrs M Campbell				CH085C	Object	Since 2009 I have been sending comments and response forms. My previous comments and letters still apply. I see a link road has been put back on the map which will do little to help congestion in the town, probably cause more problems in Tean. If we are to have more housing, roads need to be provided first i.e. a ring road further out to channel traffic especially heavy goods vehicles away from the narrow roads within Cheadle. (At present we need many potholes repaired). Also we need more medical facilities before more people live here. I enclose copies of my previous letters and my husband's in case you have not kept them.	<ul style="list-style-type: none"> • See response to PO476 regarding proposed link road and traffic issues. • See response to PO476 regarding infrastructure.
PO7444	Mr And Mrs A B Lewis				CH085C	Object	I wish, together with my wife, to comment on the draft plans for Cheadle, in particular the plans for housing allocation in the area around Mobberley and the proposed path of a link road from the main Cheadle /Tean Rd. First there is a proposal to build a substantial number of houses in this area bordering on green belt. This is the third time that this part of our town has been subjected to attempts to build. My main objections are in regard to the infrastructure of this area. I am a regular user of the main road between Cheadle and Tean as a runner, on the pavement, and as a motorist. I have previously made complaints to the holder of the highways portfolio on the County Council on the state of this major road out of the town and the accompanying pavement. This road and pavement are a danger to all who have the misfortune to have to use them on a regular basis. The road between the bridge over Cecily brook and Tenford is in an appalling state for a carriageway which is classified as an A road. Large vehicles from JCB and other industrial sites in and around Cheadle are constantly trundling up and down this road in both directions breaking up the surface and leaving potholes. When resurfacing work was done a few years back on this road, the work stopped at the bridge for some reason so that the	<ul style="list-style-type: none"> • See response to PO476 regarding proposed link road and traffic issues. • See response to PO476 regarding infrastructure.

							<p>situation has continued to deteriorate. On many occasions I have seen two vehicles travelling in opposite directions barely able to pass each other thereby causing one of them to stop and mount the pavement in order to allow the other to pass. As far as the pavement is concerned the surface is broken all along the stretch between Eaves Lane and Tenford necessitating careful placement of feet even when walking, let alone running. In addition there is all manner of vegetation growing out of the hedgerow reducing the pavement width to less than two feet in places. When I last reported these problems last year a half hearted attempt at improving the pavement was made by cutting back the growth, but of course we are now in the growing season and the situation is as bad if not worse than ever. No work has been carried out on the pavement surface so that it continues to deteriorate. I did suggest that Mr Deaville might like to take a stroll with me along this road so that I could point out the problems as he is obviously unaware of them but there was no response. My point in making the above statement is twofold. If several hundred homes are planned for this part of Cheadle the infrastructure will deteriorate even more with the addition of many more vehicles using the road. Secondly the link road proposal to me seems pointless. In what way is this going to improve the situation. Were it built, the traffic, including the heavy vehicles, would need to access it via the poor road talked about above. Finally you do not show where this road is supposed to go to. It appears to finish in the middle of the proposed housing. In summary then, it appears as if you are proposing a large estate serviced by a major road which has narrow single carriageways and is little more than an old turnpike road with a tarmacked surface. Together with this the heavy vehicles currently using this road would be diverted onto a new link road apparently going nowhere according to the plan. The whole idea as far as we can see beggars belief unless we are missing something patently obvious to everyone else. If so we would be grateful if you could enlighten us.</p>

PO7507	Mr Philip Walton				CH085C	Object	Summary of representation - please see full response (attached). Object to the development of this site for the following reasons: not enough capacity in local schools & additional school traffic created; doctors, dentists and shops are all over 1km which will create more traffic; Staffs CC ruled out a southern link road; Latest traffic survey is not available; access to the site would be difficult; flooding issues along River Tean and surface water flooding issues; access to the site is bounded by a railway line which is leased by Network Rail to Moorlands and City Railways Ltd on a 15 year lease from 2011. Reopening of the line is possible; consultation is being repeated when a previous attempt was thrown out; one consultation meeting was inadequate; open space cannot be replaced; lack of public open space; green spaces indicated are playing fields with no public access; scale of building is disproportionate to the size of Cheadle's infrastructure; sites to the north of Cheadle would bring this balance provided additional facilities such as schools, shops, dentists and doctors are provided; where are all the people going to come from to fill these new houses? lack of public open space and existing spaces need improving; no new spaces indicated on the plans; few employment plans, where are all the new people going to work? roads are inadequate for the current levels of traffic; medical facilities are already overstretched. An improvement in the infrastructure of the town would help the general acceptance of these proposals.	<ul style="list-style-type: none"> • See response to PO476 regarding infrastructure, scale and location of development. • See response to PO476 regarding proposed link road and traffic issues. • See response to PO1169 regarding flood risk issues. • See response to PO168 and PO476 regarding public open space. • The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change. The Local Plan also proposes employment sites.
PO8986	Mrs L J Hurst				CH085C	Object	Good agricultural land. Also flood plain needs protecting.	<ul style="list-style-type: none"> • The land is Agricultural Class 3 Good to Moderate. Data supplied by Natural England indicates that there is a moderate to high likelihood that the land is best and most versatile land i.e. Class 3a. • See response to PO1169 regarding flood risk issues.

PO7	Mrs Desiree Billington				CH085D	Object	We used to live and work in the heart of the West Midlands (the Black Country). A large urban sprawl and often very congested. After taking early retirement, in 2012, we chose to live in Cheadle, it being a very pleasant semi rural market town. Cheadle has the correct amount of properties and population to make it a very nice and friendly place to live. It does have its problems, it can get very congested at school times and morning and evening rush hour. In particular in the town centre and Tean Road. Tape Street is also a big problem having 3 sets of pedestrian crossing lights which causes tailbacks at certain times. No one wants any more building in Cheadle. There is not enough infrastructure to cope with an extra influx of people. Roads certainly cannot cope with more traffic. On a personal note, we do not want any more houses near to our property as this will cause noise pollution, obstruct our current views, invade our privacy, cause havoc to wildlife and maybe even cause environmental problems such as flooding, ie: houses being built on farm land which currently has good rain water drainage. Cheadle council need to think seriously about the upset and problems they are like to cause if they go ahead with a ludicrous idea of excess building anywhere in the town.	<ul style="list-style-type: none"> • See response to PO476 regarding traffic issues. • See response to PO476 regarding infrastructure. • See response to PO1008 regarding amenity issues. • See response to PO8990 regarding wildlife and ecology. • The Council has completed a Level 1 Strategic Flood Risk Assessment (SFRA) for the District, the results of which have been used to inform the site selection process. The site is within Flood Zone 1 – Low probability. Any application would be accompanied by an FRA which would consider surface water run-off. Mitigation would be required to ensure that neighbouring areas are not affected.
PO1115	Alan Fox				CH085D	Object	Nature Conservation – Loss of wildlife from the area. Site is abundant in wildlife..... needs to be expanded to include protected species. i.e Nature Conservation – Loss of wildlife from the area. Site is abundant in wildlife including protected species. i.e. bats which have their roosts, along with their foraging and commuting habitats protected by law. I object to the development of this area as it would be illegal to destroy the roosts and foraging and commuting habitats of the bats in the area. I have photographs and video of bats foraging in the Aynsley Close area available for any site survey / enquiry. (while they are not of the highest quality they are never the less conclusive.)	<ul style="list-style-type: none"> • See response to PO8990 regarding wildlife and ecology.
PO398	Mrs Joanne Chadwick				CH085D	Object	Unbalanced development in Cheadle area - 400+ houses in the south west out of total allocation. I would question if this number of houses is needed, but if so spread them more evenly to develop all sides of the town. proposed link road ?? Through the estate. Not appropriate for heavy traffic through a residential estate. It would be a waste of time unless the link road continued through the north west up to Leek Road - then this may help to reduce traffic. loss of green space and walking areas - not in the interest of public health! no public open spaces in the south west as the 3 large areas on the map are school playing fields and not open to the public - very misleading. increase in traffic. Why build the school in the north and a large proportion of the houses in the south! reduced standard of living and quality of life to current residents in the south west due to unbalanced development which will increase traffic, noise, pollution.	<ul style="list-style-type: none"> • See response to PO476 regarding traffic issues. • The Council's Landscape, Green Space and Heritage Impact Study (August 2016) includes a Landscape Assessment for this site. It advises that the site comprises generally flat fields enclosed by residential development to the east and north. The site is open to the west however long distance views are screened by the railway embankment located further to the west of the site. Site fits in well with the existing settlement pattern as it does not extend beyond the existing western settlement edge formed by Draycott Drive and Carleton Drive. Planting could be undertaken on the western boundary in order to create a vegetated edge to the settlement. (low landscape sensitivity). • See response to PO168 regarding proposed new school. • See response to PO168 regarding public open space.
PO1377	Mrs H Wordsworth				CH085D	Object	environmental impact on visual landscape noise pollution and air quality	<ul style="list-style-type: none"> • See response to PO398 regarding visual impact. • See response to PO7 regarding flood risk issues. • See response to PO1008 regarding amenity issues.
PO1365	Ms Rosamund Worrall	Heritage England			CH085D	Object	Map 4.7 - Cheadle - CH85c; CH85d; and, CH128 - preferred housing allocations - It is not clear how the impact of the site allocations, individually and cumulatively, has been assessed in respect of the Grade II listed building Mobberley House. Further information is required.	<ul style="list-style-type: none"> • The Council's Landscape, Green Space and Heritage Impact Study (August 2016) includes a Heritage Assessment for this site which advises that the wider agricultural setting is considered to contribute to the overall significance of the Grade II asset – Mobberley House.

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
								This could be mitigated through screening of the southern edge of the site. Development in the site would change a part of the HLC zone CHECZ 8, although for the most part, it would remain unaltered (Historic Environment Character Assessment 2010) and the Site is considered suitable for development in heritage terms subject to appropriate masterplanning.
PO1234	Mr David Billington				CH085D	Object	No comments made	-
PO821	Mr Alan Donaldson				CH085D	Object	Any houses built in this area will result in potentially hundreds of additional vehicles joining the Tean Road which already has problems with either vehicles heading into town blocking the road as they queue to enter the unsatisfactory road system through the town, or going away from Cheadle will cause more problems in Tean. Any by-pass will simply result in vehicles going to the west of town and trying to enter the one way system or create further congestion at the T junction in Foresbrook/Blythe Bridge. Schools, Drs, and infra-structure is already inadequate without further development. Further development will cause more surface water which from the proposed area CH085D will flow down to Tean, which already experiences flooding. This area has been the boundary for housing development for nearly 50 years and consideration should be given to the quantity and type of housing that is being proposed and should include public open spaces as there are none at all on this side of the Tean Road. The scale of the proposed development is out of balance with the infra structure and employment opportunities that already exist.	<ul style="list-style-type: none"> • See response to PO476 regarding traffic issues. • See response to PO398 regarding scale of development and infrastructure. • See response to PO7 regarding flood risk issues. • A public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and where new public open space is required.
PO1175	Mr P Beesley				CH085D	Object	This land is flood plain + it is always very well. It has been proved in the past that it is unsuitable for building. Proposed relief road goes nowhere would be better going to link with + if this was built then it might become viable	<ul style="list-style-type: none"> • See response to PO7 regarding flood risk issues. • See response to PO476 regarding proposed link road.
PO7559	Mrs M Campbell				CH085D	Object	Since 2009 I have been sending comments and response forms. My previous comments and letters still apply. I see a link road has been put back on the map which will do little to help congestion in the town, probably cause more problems in Tean. If we are to have more housing, roads need to be provided first i.e. a ring road further out to channel traffic especially heavy goods vehicles away from the narrow roads within Cheadle. (At present we need many potholes repaired). Also we need more medical facilities before more people live here. I enclose copies of my previous letters and my husband's in case you have not kept them.	<ul style="list-style-type: none"> • See response to PO476 regarding proposed link road and traffic issues. • See response to PO476 regarding infrastructure.
PO7446	Mr And Mrs A B Lewis				CH085D	Object	I wish, together with my wife, to comment on the draft plans for Cheadle, in particular the plans for housing allocation in the area around Mobberley and the proposed path of a link road from the main Cheadle /Tean Rd. First there is a proposal to build a substantial number of houses in this area bordering on green belt. This is the third time that this part of our town has been subjected to attempts to build. My main objections are in regard to the infrastructure of this area. I am a regular user of the main road between Cheadle and Tean as a runner, on the pavement, and as a motorist. I have previously made complaints to the holder of the highways portfolio on the County Council on the state of this major road out of the town and the accompanying pavement. This road and pavement are a danger to all who have the misfortune to have to use them on a regular basis. The road between the bridge over Cecily brook and Tenford is in an appalling state for a carriageway which is classified as an A road. Large	<ul style="list-style-type: none"> • See response to PO476 regarding proposed link road and traffic issues. • See response to PO476 regarding infrastructure.

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? Mobberley Sites

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
							<p>vehicles from JCB and other industrial sites in and around Cheadle are constantly trundling up and down this road in both directions breaking up the surface and leaving potholes. When resurfacing work was done a few years back on this road, the work stopped at the bridge for some reason so that the situation has continued to deteriorate. On many occasions I have seen two vehicles travelling in opposite directions barely able to pass each other thereby causing one of them to stop and mount the pavement in order to allow the other to pass. As far as the pavement is concerned the surface is broken all along the stretch between Eaves Lane and Tenford necessitating careful placement of feet even when walking, let alone running. In addition there is all manner of vegetation growing out of the hedgerow reducing the pavement width to less than two feet in places. When I last reported these problems last year a half hearted attempt at improving the pavement was made by cutting back the growth, but of course we are now in the growing season and the situation is as bad if not worse than ever. No work has been carried out on the pavement surface so that it continues to deteriorate. I did suggest that Mr Deaville might like to take a stroll with me along this road so that I could point out the problems as he is obviously unaware of them but there was no response. My point in making the above statement is twofold. If several hundred homes are planned for this part of Cheadle the infrastructure will deteriorate even more with the addition of many more vehicles using the road. Secondly the link road proposal to me seems pointless. In what way is this going to improve the situation. Were it built, the traffic, including the heavy vehicles, would need to access it via the poor road talked about above. Finally you do not show where this road is supposed to go to. It appears to finish in the middle of the proposed housing. In summary then, it appears as if you are proposing a large estate serviced by a major road which has narrow single carriageways and is little more than an old turnpike road with a tarmacked surface. Together with this the heavy vehicles currently using this road would be diverted onto a new link road apparently going nowhere according to the plan. The whole idea as far as we can see beggars belief unless we are missing something patently obvious to everyone else. If so we would be grateful if you could enlighten us.</p>

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
PO8993	Mr A Brandrick				CH085D	Object	<p>Summary of representation (see attached document) Infrastructure Concerns Any further development would only exacerbate the existing traffic congestion along the A522 route. A traffic survey taken during quiet periods does not reflect the standstill common during rush hour, the effect on emergency services and the general disruption. Stationary traffic enhances pollution and numerous children walking home are exposed to increased pollution. An increase in housing in the SW would add to congested parking in the town centre. The proposed relief road would add to High Street congestion, increase danger to pedestrians, cause a bottleneck where it meets the A521 and through traffic would have to travel along High Street to leave the town. Impact on the need for new school places. curent schools are centrally located adding to further congestion. Surely logic would dictate the need for a new school in a different area where new housing could support this. Buidling in the N and E would relieve the S and centre. Access How will the southern link road cross the dismantled railway? The line owned by Network Rail is leased by Moorlands and City Railway for 15 years. This would not be possible in the immediate and medium term. Flood Risk The recent springs saw unprecedented high levels of floodwater in the proposed southwest development areas. Given the inevitable additional surface water run-off and the new planned developments in Upper Tean, there would be an increased risk of flooding for Upper Tean. Does not the recent government focus on floodplains have an influence upon any consideration to build upon the floodplain margin? Wildlife Abundance of unusual wildlife, voles, kingfishers, owls, bats, house martins, redstarts and buzzards. These would be disturbed and disrupted by proposed developments. Green Areas Where will children play/roam? Where would the public open spaces be? The small green space would be squeezed close to the river. School playing fields are shown as 'public open space' these are not public spaces. Housing Will there be an appropriate percentage of affordable homes for first-time buyers or will it be a series of developments housing middle and high income families, blighting the landscape with three-storey properties?</p>	<ul style="list-style-type: none"> • See response to PO476 regarding traffic issues. • See response to PO476 regarding proposed link road. • See response to PO168 regarding proposed new school. • See response to PO7 regarding flood risk issues. • See response to PO168 and PO476 regarding public open space. • See response to PO8990 regarding wildlife and ecology. • See response to PO8990 regarding affordable housing and design issues.

PO7510	Mr Philip Walton				CH085D	Object	Summary of representation - please see full response (attached). Object to the development of this site for the following reasons: not enough capacity in local schools & additional school traffic created; doctors, dentists and shops are all over 1km which will create more traffic; Staffs CC ruled out a southern link road; Latest traffic survey is not available; access to the site would be difficult; flooding issues along River Tean and surface water flooding issues; access to the site is bounded by a railway line which is leased by Network Rail to Moorlands and City Railways Ltd on a 15 year lease from 2011. Reopening of the line is possible; consultation is being repeated when a previous attempt was thrown out; one consultation meeting was inadequate; open space cannot be replaced; lack of public open space; green spaces indicated are playing fields with no public access; scale of building is disproportionate to the size of Cheadle's infrastructure; sites to the north of Cheadle would bring this balance provided additional facilities such as schools, shops, dentists and doctors are provided; where are all the people going to come from to fill these new houses? lack of public open space and existing spaces need improving; no new spaces indicated on the plans; few employment plans, where are all the new people going to work? roads are inadequate for the current levels of traffic; medical facilities are already overstretched. An improvement in the infrastructure of the town would help the general acceptance of these proposals.	<ul style="list-style-type: none"> • See response to PO476 regarding infrastructure, scale and location of development. • See response to PO476 regarding proposed link road and traffic issues. • See response to PO7 regarding flood risk issues. • See response to PO168 and PO476 regarding public open space. • The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change. The Local Plan also proposes employment sites.
PO3265	Mrs J.F. Eaton				CH085d	Object	S/W area on the map open spaces are not open they are open playing fields. Nearly 500 houses in 1 area cannot be right it is total overload. Tean Road is already congested without more traffic we moved to Draycott Drive because it was nice & quiet it won't be nice and quiet with all the houses behind it and the extra traffic.	<ul style="list-style-type: none"> • See response to PO168 regarding open space. • See response to PO476 regarding traffic issues. • See response to PO476 regarding scale of development.

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? Mobberley Sites

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
PO9014	Mr B Moreton				CH085D	Object	<p>Summary of representation (see attached) Would take away almost all of the countryside to the SW of Cheadle. Area is devoid of green spaces. Those identified on the map are school playing fields and not available to the public. Overdevelopment in this area. Already an industrial estate, 2 high schools and a sixth form. Smaller areas would be more appropriate. Link road Sites depend on the delivery of a Southern Link Road for access. The 'disused' railway line to the west owned by Network Rail has a 15 year lease to Moorlands and City Railway and could reopen. The rail route should be protected. Access to the sites is therefore not available from the North and West. From the south access would be through Green Belt land from a dangerous bend on the Tean Road and add more traffic. Building of a southern link road was refused at the Core Strategy examination. The road is not listed in the Staffordshire County Council list of schemes and there is a policy of implementing initiatives to reduce traffic rather than to provide for growth. New link road would do nothing to relieve traffic problems in Cheadle. Sustainability The number of houses proposed would double the amount of housing in the SW. The sites are more than 1km from the town centre making it unlikely that residents would walk to access services and facilities. Not enough dentists. Amenity - Well used footpath crosses site and would be lost if developed. Its development would conflict with the improving health agenda. Flood Risk – sites border the River Tean and will contribute surface water. This will add to flood risk further down stream at Tean. Infrastructure – More school places required. Current schools are located in the centre of Cheadle and cause a huge problem on the surrounding roads with buses, taxis and cars. Potentially another 700 commuter cars will add to this problem. A new school would be better located in the north of the town which would reduce pressure on the SW and centre. Building in the north and east would be closer to the town centre and easier to access services and facilities. A number of option sites were closer to the town centre - walking and cycling would be real options. Government Policy – the Localism Act states that we only need to make housing provision to meet local need. SMDC has a declining population and household projections indicate a demand for 2573 houses not 6000+ that are proposed. This relates to a build rate of 171.5 dwellings per annum. Landscape – Wardell Armstrong's assessment of visual open space states that there are areas such as this that provide a visual break between areas of development and can enhance the setting of public footpaths and should be protected from development. The area west of Cheadle is identified as an area of landscape enhancement. The wonderful views of Huntley Woods are a great asset to the south of Cheadle.</p>	<ul style="list-style-type: none"> • See response to PO476 regarding scale of development and infrastructure. • See response to PO476 regarding infrastructure. • See response to PO398 regarding landscape issues. • See response to PO476 regarding proposed link road. • See response to PO168 and PO476 regarding public open space and footpaths. • See response to PO7 regarding flood risk issues. • See response to PO168 regarding proposed new school.

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? Mobberley Sites

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
PO10260	Mrs Jennifer C Moreton				CH085D	Object	In this area there is a major flaw in the fact that you are taking away all of the available access to countryside. Cheadle was built in a basin apart from the North which has a continuation of green fields for miles to Kingsley Holt, Whiston etc. On the south west the only countryside left is one small field and Huntley Woods were are not accessible to public. Therefore this will be COMPLETE OVER KILL OF THE SOUTH WEST OF CHEADLE. You will diminish the availability to walk this countryside by all the residents who use it on a very regular basis. In your plan you are joining Cheadle with Teanford and this is not fair or acceptable to the South West residents. You also will need to break through the area of the old railway line . This area close to the Huntley woods has great potential as a place of pleasure something we are very short of in Cheadle and indeed should be preserved not decimated the whole of this area greatly adds to the quality of life to us in the South West. The road you have on your plan shows it goes nowhere! in 1998 The SMDC fought ardently with Danbank saying the road was not viable and the expense was far too great. This road would not help the traffic because most of the traffic travelling through goes to the Potteries.It was suggested at that enquiry the builders would never finish this road because the costs were too great. Staffs County Council then said there were no finances availableat that time and the case remains the same to-day.In the South West we already take the brunt for 2 High Schools, 1 Sixth Form and 1 Primary school,also most of Cheadle's Industry, Why are you persisting in creating more congestion in an area already experienceing problems ? a SOUTH WEST LINK ROAD WILL NOT WORK AS IT WAS IN 1998 IT IS A ROAD TO KNOWHERE. The adjacent houses to the areas I refer are approx 500 Houses, (Dandillions estate and Wedgewood estate). Your plans are to ajoin another 500 making a 1,000 mass of residential properties. This is not good planning. These houses should be divided into smaller groups and distributed more evenly around the town. Why is there no building suggested for the North i.e. Leek Road A522 areas. JCB is in Leek Road and we have to cope with the traffic and employees coming from the South of Cheadle. Whereas I am not suggesting 500 be built there I do consider that part of the area on the East Side of Leek Road would be viable. This would also help with the proposed School in the North East. The School Buses we have to contend with amount to approx 30/40 buses, taxi's mini buses per day morning and night as well as numerouse parental transport. This South West is a further walking distance to our town centre than Leek Road. Does the Government not suggest houses should be built as close as possible to the centre of a Town ?	<ul style="list-style-type: none"> • See response to PO398 regarding landscape issues. • See response to PO476 regarding pedestrian links. • See response to PO476 regarding development in north Cheadle. • See response to PO476 regarding link road and traffic. • See response to PO476 regarding infrastructure. • See response to PO476 regarding scale and location of new development.
CH128								
PO1366	Ms Rosamund Worrall	Heritage England			CH128	Object	Map 4.7 - Cheadle - CH85c; CH85d; and, CH128 - preferred housing allocations - It is not clear how the impact of the site allocations, individually and cumulatively, has been assessed in respect of the Grade II listed building Mobberley House. Further information is required.	<ul style="list-style-type: none"> • The Council's Landscape, Green Space and Heritage Impact Study (August 2016) includes a Heritage Assessment for this site which advises that there are two Grade II Listed Buildings within 400m which are well screened by vegetation. Due to the topography and existing vegetation, development would be unlikely to cause high adverse effects to the settings of the assets. Mitigation could include screening of the eastern and southern edges to reduce effects. Development in the site would change a small element of the HLC zone CHECZ 8, although for the most part, it would remain

PO8988	Mrs L J Hurst				CH128	Object	This area of land has suddenly appeared on the map. It hasn't shown on previous ones! But it's suddenly become available for one purpose and that is as an access for areas CH085a, CH085b, CH085c and CH085d. How very convenient! But what a dangerous location for such a junction. Please leave well alone.	<ul style="list-style-type: none"> See response to PO476 regarding proposed link road and traffic issues.
PO10267	Mrs E Baskeyfield				Ch128	Object	<p>Areas CH085a-d & CH128 are too far from the main infrastructure of the town. They are not near to any public open spaces as the majority of those on the plan are private field owned by schools and are not for public use. The new housing proposal for the south would increase congestion on the roads especially as the new school is planned for the north of the town. This will causing increased traffic jams on the roads through the town at peak times.</p> <p>The building of houses in this area will increase the water table significantly as the fields are already heavily waterlogged after rain which will have a negative impact on those further down the valley in Tean who have already had areas under water this year due to flooding. Building in this area will exacerbate this problem.</p>	<ul style="list-style-type: none"> The Council has considered a number of sites within and on the edge of Cheadle. There is not enough brownfield land or sites to meet the District's proposed housing requirement within the built up area of the town. This site is located on the edge of the settlement within the Green Belt. The Green Belt Review Study (Nov 2015) considers the overall impact on the Green Belt to be limited and site CH128 could be considered for release under exceptional circumstances with an amendment to the Green Belt. It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway improvements, affordable housing and community facilities such as public open space. Distance from the town centre needs to be balanced with other considerations such as landscape impact, viability and deliverability. See response to PO476 regarding traffic issues. See response to PO1176 regarding flood risk issues. See response to PO168 regarding new school . See response to PO168 regarding public open space.

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? Mobberley Sites

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
PO8994	Mr A Brandrick				CH128	Object	<p>Summary of representation (see attached document) Infrastructure Concerns Any further development would only exacerbate the existing traffic congestion along the A522 route. A traffic survey taken during quiet periods does not reflect the standstill common during rush hour, the effect on emergency services and the general disruption. Stationary traffic enhances pollution and numerous children walking home are exposed to increased pollution. An increase in housing in the SW would add to congested parking in the town centre. The proposed relief road would add to High Street congestion, increase danger to pedestrians, cause a bottleneck where it meets the A521 and through traffic would have to travel along High Street to leave the town. Impact on the need for new school places. Current schools are centrally located adding to further congestion. Surely logic would dictate the need for a new school in a different area where new housing could support this. Buidling in the N and E would relieve the S and centre. Access How will the southern link road cross the dismantled railway? The line owned by Network Rail is leased by Moorlands and City Railway for 15 years. This would not be possible in the immediate and medium term. Flood Risk The recent springs saw unprecedented high levels of floodwater in the proposed southwest development areas. Given the inevitable additional surface water run-off and the new planned developments in Upper Tean, there would be an increased risk of flooding for Upper Tean. Does not the recent government focus on floodplains have an influence upon any consideration to build upon the floodplain margin? Wildlife Abundance of unusual wildlife, voles, kingfishers, owls, bats, house martins, redstarts and buzzards. These would be disturbed and disrupted by proposed developments. Green Areas Where will children play/roam? Where would the public open spaces be? The small green space would be squeezed close to the river. School playing fields are shown as 'public open space' these are not public spaces. Housing Will there be an appropriate percentage of affordable homes for first-time buyers or will it be a series of developments housing middle and high income families, blighting the landscape with three-storey properties?</p>	<ul style="list-style-type: none"> • See response to PO476 regarding traffic issues. • See response to PO476 regarding proposed link road. • See response to PO168 regarding proposed new school. • See response to PO1176 regarding flood risk issues. • See response to PO168 and PO476 regarding public open space. • See response to PO8990 regarding affordable housing and design issues. • The site was subject to a Phase 1 ecological survey in 2014 and a later 2016 ecology study considered the scope for 'local wildlife site' i.e. SBI status. The Phase 1 survey concludes that the site has low potential to support protected species as the habitat is poor and the LWS survey considers that most of the site habitats are common and not considered eligible for SBI status. Recommended that vegetation is removed at an appropriate time of year.

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? Mobberley Sites

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
PO7511	Mr Philip Walton				CH128	Object	Summary of representation - please see full response (attached). Object to the development of this site for the following reasons: not enough capacity in local schools & additional school traffic created; doctors, dentists and shops are all over 1km which will create more traffic; Staffs CC ruled out a southern link road; Latest traffic survey is not available; access to the site would be difficult; flooding issues along River Tean and surface water flooding issues; access to the site is bounded by a railway line which is leased by Network Rail to Moorlands and City Railways Ltd on a 15 year lease from 2011. Reopening of the line is possible; consultation is being repeated when a previous attempt was thrown out; one consultation meeting was inadequate; open space cannot be replaced; lack of public open space; green spaces indicated are playing fields with no public access; scale of building is disproportionate to the size of Cheadle's infrastructure; sites to the north of Cheadle would bring this balance provided additional facilities such as schools, shops, dentists and doctors are provided; where are all the people going to come from to fill these new houses? lack of public open space and existing spaces need improving; no new spaces indicated on the plans; few employment plans, where are all the new people going to work? roads are inadequate for the current levels of traffic; medical facilities are already overstretched. An improvement in the infrastructure of the town would help the general acceptance of these proposals.	<ul style="list-style-type: none"> • See response to PO10267 regarding infrastructure, scale and location of development. • See response to PO476 regarding proposed link road and traffic issues. • See response to PO1176 regarding flood risk issues. • See response to PO168 and PO476 regarding public open space. • The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change. The Local Plan also proposes employment sites.

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? Mobberley Sites

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
PO9016	Mr B Moreton				CH128	Object	<p>Summary of representation (see attached) Would take away almost all of the countryside to the SW of Cheadle. Area is devoid of green spaces. Those identified on the map are school playing fields and not available to the public. Overdevelopment in this area. Already an industrial estate, 2 high schools and a sixth form. Smaller areas would be more appropriate. Link road Sites depend on the delivery of a Southern Link Road for access. The 'disused' railway line to the west owned by Network Rail has a 15 year lease to Moorlands and City Railway and could reopen. The rail route should be protected. Access to the sites is therefore not available from the North and West. From the south access would be through Green Belt land from a dangerous bend on the Tean Road and add more traffic. Building of a southern link road was refused at the Core Strategy examination. The road is not listed in the Staffordshire County Council list of schemes and there is a policy of implementing initiatives to reduce traffic rather than to provide for growth. New link road would do nothing to relieve traffic problems in Cheadle. Sustainability The number of houses proposed would double the amount of housing in the SW. The sites are more than 1km from the town centre making it unlikely that residents would walk to access services and facilities. Not enough dentists. Amenity - Well used footpath crosses site and would be lost if developed. Its development would conflict with the improving health agenda. Flood Risk – sites border the River Tean and will contribute surface water. This will add to flood risk further down stream at Tean. Infrastructure – More school places required. Current schools are located in the centre of Cheadle and cause a huge problem on the surrounding roads with buses, taxis and cars. Potentially another 700 commuter cars will add to this problem. A new school would be better located in the north of the town which would reduce pressure on the SW and centre. Building in the north and east would be closer to the town centre and easier to access services and facilities. A number of option sites were closer to the town centre - walking and cycling would be real options. Government Policy – the Localism Act states that we only need to make housing provision to meet local need. SMDC has a declining population and household projections indicate a demand for 2573 houses not 6000+ that are proposed. This relates to a build rate of 171.5 dwellings per annum. Landscape – Wardell Armstrong's assessment of visual open space states that there are areas such as this that provide a visual break between areas of development and can enhance the setting of public footpaths and should be protected from development. The area west of Cheadle is identified as an area of landscape enhancement. The wonderful views of Huntley Woods are a great asset to the south of Cheadle.</p>	<ul style="list-style-type: none"> • The Council's Landscape, Green Space and Heritage Impact Study(August 2016) includes a Landscape Assessment for this site. It advises that the site comprises generally flat fields enclosed by residential development to the east and north. The site is open to the west however long distance views are screened by the railway embankment located further to the west of the site. Site fits in well with the existing settlement pattern as it does not extend beyond the existing western settlement edge formed by Draycott Drive and Carleton Drive. Planting could be undertaken on the western boundary in order to create a vegetated edge to the settlement. (low landscape sensitivity). • See response to PO10267 regarding scale of development and infrastructure. • See response to PO476 regarding proposed link road. • See reponse to PO168 and PO476 regarding public open space and footpaths. • See response to PO1176 regarding flood risk issues. • See response to PO168 regarding proposed new school.

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? Mobberley Sites

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
PO10259	Mrs Jennifer C Moreton				CH128	Object	<p>In this area there is a major flaw in the fact that you are taking away all of the available access to countryside. Cheadle was built in a basin apart from the North which has a continuation of green fields for miles to Kingsley Holt, Whiston etc. On the south west the only countryside left is one small field and Huntley Woods were are not accessible to public. Therefore this will be COMPLETE OVER KILL OF THE SOUTH WEST OF CHEADLE. You will diminish the availability to walk this countryside by all the residents who use it on a very regular basis. In your plan you are joining Cheadle with Teanford and this is not fair or acceptable to the South West residents. You also will need to break through the area of the old railway line . This area close to the Huntley woods has great potential as a place of pleasure something we are very short of in Cheadle and indeed should be preserved not decimated the whole of this area greatly adds to the quality of life to us in the South West. The road you have on your plan shows it goes nowhere! in 1998 The SMDC fought ardently with Danbank saying the road was not viable and the expense was far too great. This road would not help the traffic because most of the traffic travelling through goes to the Potteries.It was suggested at that enquiry the builders would never finish this road because the costs were too great. Staffs County Council then said there were no finances available at that time and the case remains the same to-day.In the South West we already take the brunt for 2 High Schools, 1 Sixth Form and 1 Primary school,also most of Cheadle's Industry, Why are you persisting in creating more congestion in an area already experiencing problems ? a SOUTH WEST LINK ROAD WILL NOT WORK AS IT WAS IN 1998 IT IS A ROAD TO NOWHERE. The adjacent houses to the areas I refer are approx 500 Houses, (Dandillions estate and Wedgewood estate). Your plans are to ajoin another 500 making a 1,000 mass of residential properties. This is not good planning. These houses should be divided into smaller groups and distributed more evenly around the town. Why is there no building suggested for the North i.e. Leek Road A522 areas. JCB is in Leek Road and we have to cope with the traffic and employees coming from the South of Cheadle. Whereas I am not suggesting 500 be built there I do consider that part of the area on the East Side of Leek Road would be viable. This would also help with the proposed School in the North East. The School Buses we have to contend with amount to approx 30/40 buses, taxi's mini buses per day morning and night as well as numerous parental transport. This South West is a further walking distance to our town centre than Leek Road. Does the Government not suggest houses should be built as close as possible to the centre of a Town ?</p>	<ul style="list-style-type: none"> • See response to PO9016 regarding landscape issues. • See response to PO476 regarding pedestrian links. • See response to PO476 regarding development in north Cheadle. • See response to PO476 regarding link road and traffic. • See response to PO476 regarding infrastructure. • See response to PO10267 regarding scale and location of new development.

Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? New allocations – within the urban area

CH002A								
PO2597	Consultation Service	Natural England			CH002A	General comment	Natural England notes the proposed preferred site for allocation in Cheadle. We note that it is located close to and/or adjoining existing areas of open space and green infrastructure. Suitable enhancements of existing open spaces' may be required together with appropriate management (and funding thereof) in order to allow these open spaces to function effectively during the local plan period. Similarly the development of these preferred sites (if progressed) will need to include suitable multi-functional green infrastructure. Adopted local plan spatial objectives SO8 & 9 refer together with policies such as DC1 Design Considerations, DC3 landscape and settlement setting, and C3 Green Infrastructure.	<ul style="list-style-type: none"> The Council has produced a Draft Green Infrastructure Strategy for consultation alongside the next draft version of the Local Plan. The strategy identifies green infrastructure corridors around the towns and lists particular issues in relation to that corridor which can be addressed as part of the relevant site policy and / or at the planning application stage. Similarly, a public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and new development in the vicinity could contribute towards this. The Council has also designated Local Green Spaces in line with criteria set out in the NPPF and the Council will seek to facilitate improvements to these areas where required.
CH002B								
PO2598	Consultation Service	Natural England			CH002B	General comment	Natural England notes the proposed preferred site for allocation in Cheadle. We note that it is located close to and/or adjoining existing areas of open space and green infrastructure. Suitable enhancements of existing open spaces' may be required together with appropriate management (and funding thereof) in order to allow these open spaces to function effectively during the local plan period. Question 28 – Do you have any comments on the proposed housing allocations in Cheadle? New allocations – within the urban area

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Site Ref	Support / Object / General Comment	Consultee Comments	Officer Response
								appropriate development could enhance the frontage with sensitive design. It stated that development in this area would be highly unlikely to adversely affect HUCA 5 (Cheadle Extensive Urban Survey report 2012) and the Site is suitable for development in heritage terms with appropriate masterplanning.
PO2798	Mr Martin Ross	Environment Agency			CH015	General comment	CH015: This site is located within Source Protection Zone 2, and partially within Source Protection Zone 1. In line with the position statements in our 'Groundwater Protection: Principles and Practice' document (available from our website at www.gov.uk/environment-agency), there would be restrictions on the activities that can take place within Source Protection Zone 1. For example we would object to any storage of hazardous substances and would only permit the discharge to ground of clean roof water in Source Protection Zone 1. This site also appears to be Brownfield.	<ul style="list-style-type: none"> The site consists of previously developed land including a depot. Note comments regarding the site being located within Source Protection Zones 1 & 2.
PO6883	Unknown	Stoddards Ltd	Mr G Willard		CH015		These comments relate mainly to site CH015. The site is presently occupied by a commercial garage with linked dwelling to the rear of it. The site is within a single family ownership and its is free of a legal impediment that might hinder its delivery. Land and property prices in Cheadle are constrained and will be likely to remain so for the foreseeable future. This means that the 'value' of this site for residential purposes can only be realised as and when the site owner wishes to or is able to relocate or to close their business. There is at present no clear date in mind as to when this might be but it is highly likely that the site owner will review the business case following allocation of this site for housing purposes. It is highly likely too that the costs of clearing this site and preparing it for residential development will be factor highly in their deliberations and this will have serious implication for site and development viability. The Council will greatly assist the delivery of this site if any allocation implicitly accepts that the site will be unlikely to be able to contribute to affordable housing or other community works due to the high costs of site clearance and preparation and that any application which is supported by a robust viability appraisal which evidences this will be supported in principle. Without such a helpful statement enshrined within the site allocations plan and/or linked policies it may be the case that the development and delivery of the site for housing does not advance beyond the policy provision.	<ul style="list-style-type: none"> Developer support for the site is noted. The Council is undertaking Local Plan viability work which will consider the viability of preferred option sites.
CH024								
PO2599	Consultation Service	Natural England			CH024	General comment	Natural England notes the proposed preferred site for allocation in Cheadle. We note that it is located close to and/or adjoining existing areas of open space and green infrastructure. Suitable enhancements of existing open spaces' may be required together with appropriate management (and funding thereof) in order to allow these open spaces to function effectively during the local plan period. Similarly the development of these preferred sites (if progressed) will need to include suitable multi-functional green infrastructure. Adopted local plan spatial objectives SO8 & 9 refer together with policies such as DC1 Design Considerations, DC3 landscape and settlement setting, and C3 Green Infrastructure.	See response to PO2597 regarding green infrastructure.

Question 29 – Do you have any comments on the potential location for a new school in Cheadle?

ID	Consultee Name	Company / Org	Agent name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO2856	James Chadwick	Spatial Planning Policy Officer Staffordshire County Council			Support	In Cheadle we acknowledge the allocation of a site for a new Primary School. The proposed location will provide for a good spread of provision across the town.	Support noted.
PO6917		Mosaic Estates	Mr Cameron Austin-Fell	RPS Planning & Development	Support	The Council has proposed site CH132 as a preferred allocation for Cheadle for 80 dwellings. This forms part of a wider urban extension (along with CH001) for the north of Cheadle for around 320 dwellings. Mosaic considers that this represents a logical and deliverable solution to meet a significant proportion of the town's needs, which is welcomed as part of the PSA. As illustrated on the plan supporting the allocation, the Council has indicated that the site could provide a location for a new primary school in addition to residential uses. This position has been confirmed with Staffordshire County Council and it is considered that as part of the wider masterplan for the site, land can be safeguarded for the Council to bring forward a new primary school in line with evidence of need. The figure of 80 dwellings on the site was proposed by Mosaic as part of discussions with the Council however, reflecting the comments above, Mosaic consider it appropriate for the Council to present this figure as a minimum, if it is decided that the site could deliver additional dwellings, or the County Council take the decision that a new school site would be better located elsewhere. Mosaic welcomes the Council's inclusion of site CH132 as part of a wider allocation to the north of Cheadle. The information submitted as part of the 2014 Delivery Document to the Council includes evidence and a strategy of how the site can be delivered which addresses the concerns raised as part of the earlier consultation and is capable of assisting the County Council in finding land for a new primary school.	Support for safeguarding land for a new primary school as part of a wider masterplan for the site is noted.
PO170	Mrs E Baskeyfield				Support	I support the building of a new school further out of the main town centre however it will not reduce congestion if the proposed housing provision is in the south. This will mean that new comers will have to travel across town to get to the school. It would make more sense to have the housing provision in the north will good links off the main road so that people can access JCB or Stoke-on-Trent.	<ul style="list-style-type: none"> The proposed new school is planned to serve the north of Cheadle and could therefore reduce school traffic currently accessing schools in the SW of the town. The Highways Authority has not raised any objections to the provision of a new primary school in this location. New housing development is also proposed in the north of the town. There are existing schools located in the SW of Cheadle to meet the needs of residents located in the south of the town.
PO1007	Mrs Laura Cartlidge				Object	The development would add to the pressure on schools in the area which are already close to capacity. We note the views of the County Council that an additional primary school will be required in Cheadle, but find it slightly perverse that this should be planned for the northernmost part of the town at the furthest point from the largest 'preferred' development. The 'school run' will add to the traffic impact on Tean Road and the town centre.	See response to PO170 regarding the location of the new school and traffic.

Question 29 – Do you have any comments on the potential location for a new school in Cheadle?

ID	Consultee Name	Company / Org	Agent name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO1378	Mr Price				Object	I believe a better location for the school would be in the south west of Ch085 near the proposed new link road. This would be more accessible to the majority of the population. It would also be exacerbating the Froghall Road/Leek Road. Bottle neck junction which is likely to get worse with the additional housing proposals in the Froghall Road area, development at JCB complex in Leek Road and also developments likely to take place at the former bottoms copper works in Froghall at the former Copper bottom works all of which will add traffic to this road	See response to PO170 regarding the location of the new school and traffic.
PO2848	mr michael tunnicliffe				Object	If we are to have more houses, I feel that the most appropriate location would be land from Brook houses to Mobberley including a relief road which would have little impact on the Town Centre, impact may ease the problems there.	Comments noted.
PO822	Mr Alan Donaldson				Object	Yes we object to the location of a new school simply due to the additional travel congestion this will cause on roads that cannot deal with the level of traffic that it currently has.	See response to PO170 regarding traffic and access.
PO2807	A Brattley				Object	I don't believe there should be any more in any large numbers in Cheadle area there are housing estates on most of the roads in and out of Cheadle more than enough considering the employment situation in the town. So build a school the other side of town from other schools is only going to result in more traffic around Cheadle which as more than enough traffic already.	See response to PO170 regarding the location of the new school and traffic.
PO1508 PO1502 PO1516 PO1531	Mrs J L Taylor Mr J P Taylor Mr P Taylor Mr T A Taylor				Object	CH001/CH132 There are more suitable locations for a school site. The reality is that few pupils actually walk to school these days, they are dropped off by parents using their cars whilst commuting to work. Some are just driven to the school and then the parents drive back home afterwards. The congestion around the existing schools in Cheadle is considerable and a different site should be chosen that would minimize the impact upon residents, the current nominated site would cause maximum adverse impact upon residents and road structure.	See response to PO170 regarding the location of the new school and traffic.
PO2548	Mrs Karen Green				Support	A different area of Cheadle could be this area if allocated for a new primary school could serve Cheadle by making the distance shorter taking pressure of existing infrastructure as at present the primary schools are centralised. The class sizes could be affected and if numbers of children per class are reduced then surely this would be better for the town as a whole. Better for some families, than the current positions of primary schools	Support noted.

Page 12 of 22

Question 29 – Do you have any comments on the potential location for a new school in Cheadle?

ID	Consultee Name	Company / Org	Agent name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO2733 PO2745 PO2741 PO2762 PO2679 PO3012 PO2675 PO3017 PO2658 PO2892 PO2874 PO2758 PO2666 PO2720 PO2654 PO2973 PO3008 PO3003 PO2693 PO2712 PO2641 PO2606 PO2610 PO2937	Mr R Snow Mrs V Weston Mr J Weston Mrs J Weston Mr A Hide Mrs J Foster Mrs D Hide Cllr H Lingard Mr R Owen-Jones Mr Alan Moss Mrs Margaret Moss Mr Andrew Weston Mr Christopher Alcock Mr Albert Allen Mrs Lara Austin Mr Jason Baggley Mr Desmond Barnes Mrs Sylvia Barnes Mr Eric Cartlidge Mr Karen Cartlidge Mrs Carole Edwards Mr Michael Feather Mr Angeal Feather Mr Barry Fraser				Object	<p>Logic suggests that the school would be better placed in a more central location rather than in the area with poor access and situated on an outer peninsular of the town, away from the majority of existing homes. The site previously earmarked for a school in 1998 Local plan is still undeveloped (field CH024 and CH009 combined area size 2.47ha) of Churchill Road. This area has been allocated for housing – why has it not been earmarked again for the school? Such a location makes sense on many counts, especially if walking, cycling is to be encouraged. In planning application SMD/2014/0227 Staffs County Council stated that a new primary school for Cheadle would cost in the region of 4 million. Based on their calculation in order to fund the new primary school it would require a developer contributions from over 100 dwellings, in order to pay for the new school potentially meaning that every new development in Cheadle up to 2031 will be required to contribute to the new school. Therefore, if the school does not require attaching any particular development in order to fund it, its location is of paramount importance. Staffs County Council are promoting 10 min walk to school zones. Indicating that it is a reasonable for Children to walk 10 minutes to school, any longer than that would most likely to take a car journey. It seems logical that a site more centrally located would be more preferable to a site on the outskirts of town, if the Council would like to ensure that walking to school is maximised. The school site is not restricted to the North of the town. In a letter dated 15/09/2015 from Staffs County Council on Staffs Moorlands Council, James Chadwick Planning Policy Officer clearly states that it would be logical to place the School in the East or the North of the town. If the new primary school is to also to serve the East of the town then surely a site more accessible to the East would have been more preferable.</p>	<ul style="list-style-type: none"> • Site CH024 was previously earmarked for a school in the 1998 Local Plan. Site CH009 was not included within this area. Access to the site was subsequently acquired to serve the adjacent factory and the remaining part of CH024 became landlocked. • Staffordshire County Council support the preferred location for the new school and consider it provides for a good spread of provision around the town. In terms of spatial distribution the location of the previous site and the preferred site are close together. No housing allocations are proposed on the east of Cheadle and therefore it is not the most sustainable location for a new school. • Staffordshire County Council estimate that 1.2 ha is require to deliver a 1 Form Entry school. Site CH024 is surrounded by existing development and would be unlikely to accommodate any further expansion. • The previous site has a limited frontage and offers less opportunity to arrange the school access and how the building fits within the street scene. It also is surrounded by residential streets and may lead to residential amenity issues during the school run. The preferred site can be accommodated into the estate in such a way to design out such issues. • The previous site has good access on foot although some of the routes from residential areas lead through areas that are not overlooked. The preferred school site can have access designed and delivered to the most appropriate standard. • The delivery of a new school will need to be funded by developer contributions and the cost will include land acquisition and building costs. The inclusion of safeguarded land for a school as part of a wider masterplan means that the school is likely to be deliverable and appropriately designed.

Page 4243

Question 29 – Do you have any comments on the potential location for a new school in Cheadle?

ID	Consultee Name	Company / Org	Agent name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO2621	Mr Damien Flynn					<p>Logic suggests that the school would be better placed in a more central location rather than in the area with poor access and situated on an outer peninsular of the town, away from the majority of existing homes. The site previously earmarked for a school in 1998 Local plan is still undeveloped (field CH024 and CH009 combined area size 2.47ha) of Churchill Road. This area has been allocated for housing – why has it not been earmarked again for the school? Such a location makes sense on many counts, especially if walking, cycling is to be encouraged. In planning application SMD/2014/0227 Staffs County Council stated that a new primary school for Cheadle would cost in the region of 4 million. Based on their calculation in order to fund the new primary school it would require a developer contributions from over 100 dwellings, in order to pay for the new school potentially meaning that every new development in Cheadle up to 2031 will be required to contribute to the new school. Therefore, if the school does not require attaching any particular development in order to fund it, its location is of paramount importance. Staffs County Council are promoting 10 min walk to school zones. Indicating that it is a reasonable for Children to walk 10 minutes to school, any longer than that would most likely to take a car journey. Its seems logical that a site more centrally located would be more preferable to a site on the outskirts of town, if the Council would like to ensure that walking to school is maximised. The school site is not restricted to the North of the town. In a letter dated 15/09/2015 from Staffs County Council on Staffs Moorlands Council, James Chadwick Planning Policy Officer clearly states that it would be logical to place the School in the East or the North of the town. If the new primary school is to also to serve the East of the town then surely a site more accessible to the East would have been more preferable</p>	<p>See response to PO2733 regarding the proposed new school.</p>

PO7077	MRS PENNY PLANT				Object	I object to the location of the proposed school site.	Objection noted
PO2553	Mr Andrew Weston				Object	The consultation should generate opinion from residents with local knowledge. Site CH132 constantly generates high levels of objections, where more sustainable areas are left out of the plan. Please listen to residents and remove the proposed school site is a very poor location with limited access and situated on the edge of the town meaning more school journeys by car. The site on CH024 is much better or other sites, such as the east could be considered.	<ul style="list-style-type: none"> • See response to PO2733 regarding the proposed new school. • See response to PO170 regarding traffic and access.
PO2902	Mr Raymond James				Object	Years ago Staffordshire County Council allocate the site for a school. Now owned by JCB as the site for a new school, this first noted, after Churchill Road was built 1% is an ideal site, being by the Churchill recreation ground and being central to Cheadle, this site is not subject to flooding being above the flood level of the Brooks.	<ul style="list-style-type: none"> • See response to PO2733 regarding the proposed new school.
PO7073	Mr Alex Plant				Object	I object to the location of the proposed school site.	Objection noted.
PO7087	M Ellicock				Object	There are more suitable locations for a school site. The reality is that few pupils actually walk to school these days, they are dropped off by parents using their cars whilst commuting to work. Some are just driven to the school and then the parents drive back home afterwards. The congestion around the existing schools in Cheadle is considerable and a different site should be chosen that would minimize the impact upon residents, the current nominated site would cause maximum adverse impact upon residents and road structure.	<ul style="list-style-type: none"> • See response to PO2733 regarding the proposed new school. • See response to PO170 regarding traffic and access.

Question 29 – Do you have any comments on the potential location for a new school in Cheadle?

ID	Consultee Name	Company / Org	Agent name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO8983	Mrs L J Hurst				Object	I objected to this area for development previously, for housing but mainly now, I object to the proposal to site a school - a primary school - there. Based on its location it's too far out of town and out on a limb and what a distance from the secondary schools! AND if it is built there it's going to be a couple of fields away from The Woodhouse 'home' which could pose a safety risk (amended). Can consideration be given to a new location please? How about the green belt land adjacent to MJS transport on Froghall Road? Exceptional circumstances and plenty of room for expansion.	<ul style="list-style-type: none"> See response to PO170 regarding the location of the new school and traffic. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances and the recent Housing White Paper reiterates this commitment.
PO9640	Mr B Moreton				Object	Summary of representation (see attached) A new school would be better located in the north of the town which would reduce pressure on the SW and centre. Building in the north and east would be closer to the town centre and easier to access services and facilities. A number of option sites were closer to the town centre - walking and cycling would be real options.	See response to PO2733 regarding the proposed new school.
PO2811	Mrs Vera James				Object	Too close to the Kingsley school I ask the question, why build a school on the outskirts of Cheadle, is forward thinking to close the school at Kingsley? My husband knows a lot of history about all the sites in the north east area, was mined for over 700 years for the wood mining company, the field by JCB factory was in Staffs Moorland draft plan for 1998. Orchard Farm, off Churchill Road recreation ground. JCB tested this ground last year, bed rock 4-0" below the surface not affected by flooding, above the level of both brooks – highways already in place why if it was suitable in 1998 its not suitable now? Come on officers. It was an ideal site then why not now?	<ul style="list-style-type: none"> See response to PO2733 regarding the proposed new school. There are former mineral workings on the site. The Coal Authority have confirmed that this would not prevent development from taking place. Investigative work will take place in these areas prior to the commencement of any development.
PO3072	Mr W Wordsworth				Object	The is no need for more housing in Cheadle the roads won't take the extra traffic we could do with another school somewhere.	See response to PO170 regarding the location of the new school and traffic.
PO3077	Ms J Croft				Object	I strongly object to any further building of properties in or around Cheadle. I also strongly object to the proposal of a school being built off Churchill road, the area is busy enough with traffic the area would be like Charles Street. Cheadle is classed as a market town and the area is under strain with traffic now without further houses being built that would possibly be owned by 2 car families. I strongly object to any house or school being built on green fields	The preferred location for a new school is not off Churchill Road.
PO102	Mrs Lesley Hackney				General comment	At the moment, the schools are not over subscribed but if housing plans go ahead then more school places will be needed however why would you build a school in this area when it is not the most populated or not adjacent to the most populated areas. You would be expecting people to walk long distances to attend a school on this site which would not be practical.	See response to PO170 regarding the location of the new school and traffic.
PO3195	Mrs P Routledge				Object	School badly needed off Churchill road are road improvement needed 1 st.	See response to PO2733 regarding the proposed new school.
PO3276	Mr S Hassell				Object	Against the school to be built on Churchill road	The preferred location for a new school is not off Churchill Road.
PO3281	Mrs C Moseley				Object	Against the school to be built on Churchill road	The preferred location for a new school is not off Churchill Road.

Question 29 – Do you have any comments on the potential location for a new school in Cheadle?

ID	Consultee Name	Company / Org	Agent name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO807	Ms Alison Conybeare				General comment	Bearing in mind the likelihood for the schools to be at their peak intake requirement and a number of schools from the surrounding villages have had to close through lack of use (eg Whiston Village School that closed January 2007), is there really a need for this extra school?	The need for an additional school has been confirmed by Staffordshire County Council.
PO620	Mr Julian Baskeyfield				General comment	if the school is in the north and the majority of new housing in the south it will increase the amount of cars travelling directly through the town each morning and afternoon. This doesn't make sense, it would be more practical to put a greater proportion of the housing in the north which is closer to the town centre than in the south.	See response to PO170 regarding the location of the new school and traffic.
PO623	Mr Julian Baskeyfield				General comment	The area for the school will inly be suitable if the new housing is built next to it. It does not make sense to build the school in the north and the housing in the south. Cheadle will be grid locked every morning and afternoon.	See response to PO170 regarding the location of the new school and traffic.
PO2550	Mrs V Weston				General comment	My opinion is that the school should be in a more centralised location and closer to the high schools to allow better links between the schools	See response to PO170 regarding the location of the new school and traffic.
PO394	Mrs Joanne Chadwick				General comment	Why in the north, furthest away from the most residential area of Chedle in the south west and east??	See response to PO170 regarding the location of the new school and traffic.

Question 30 – Do you have any comments on the Cheadle town centre boundary?

ID	Consultee Name	Company / Org	Agent Name	Agent / Company Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO808	Ms Alison Conybeare				General comment	Please seek the local residents views. These are the most important.	Residents views have been sought as part of the consultation.

Question 31 – Do you have any comments on the Cheadle primary and secondary frontages?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / Comment	Consultee Comments	Officer Response
PO809	Ms Alison Conybeare				General comment	Please seek the local residents views. These are the most important.	Residents views have been sought as part of the consultation.
PO1367	Ms Rosamund Worrall	Heritage England			General comment	Map 4.8 - Cheadle Town Centre - Historic England has no objections in principle to the proposed primary and secondary frontages at this stage although it is difficult for these to be meaningful without any policy context at present. It is expected that such policy context would be addressed in the full Local Plan as it progresses and we may wish to comment further at that stage.	Comments noted. Policies relating to the primary and secondary frontages will be published in the next draft version of the Local Plan and comments will be invited.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO103	Mrs Lesley Hackney				General comment	I don't believe that the proposed number of new homes is needed. The evidence does not stack up. The road structure cannot support extra traffic and the proposed link road is not a link road in its present proposed location. It will merely divert traffic from new housing to the main road. This will not alleviate traffic hotspots as traffic will still need to go into town for schools, shops etc and also to pass through.	<ul style="list-style-type: none"> The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. Housing targets need to be based on robust and proportional evidence. The Cheadle Town Centre Phase 2 Study (2017) identifies the likely impacts of the housing and employment Preferred Options sites on the surrounding highway network. By 2031 the study predicts queuing and delays in certain locations, in part due to 17 years of potential traffic growth which is compounded by the additional trips generated by new housing and employment. There is limited scope to change junction characteristics to improve network capacity within the Town Centre due to its historically confined road structure. The study recommends a package of mitigation measures in order to provide additional capacity onto the overall network. Mitigation measures include junction and lane improvements, new sites having good access to public transport provision, measures to encourage walking and cycling to reduce short trips, improved HGV signage and new parking bays along High Street. The Cheadle Town Centre Phase 2 Study (2017) considers the potential SW link road. Currently there is no link between the A522 Tean Road and Brookhouse Way / A521 due to it being severed by a disused railway line. The railway line is in third party ownership and a bridge will be required to connect a link road through. The proposed link road would allow a percentage of predicted trips from the SW area to traverse Brookhouse Way / A521 opposed to solely the A522, however the level of trips which would use the A521 from this area would have a minimal effect in improving congestion within Cheadle Town Centre. The study considers that the proposed Link Road would not be a solution on its own.
PO810	Ms Alison Conybeare				General comment	Please seek the local residents views. These are the most important.	Residents views have been sought as part of the consultation.
PO1307	Ms Melanie Lindsley	Planning Liaison Manager The Coal Authority			General comment	(Summary - please see attached file for full version) As you will be aware, the Staffordshire Moorlands area contains coal resources which are capable of extraction by surface mining operations. These resources cover an area amounting to approximately 22.07 of the Council area. The Coal Authority is keen to ensure that coal resources are not unnecessarily sterilised by new development. Where this may be the case, The Coal Authority would be seeking prior extraction of the coal. Prior extraction of coal also has the benefit of removing any potential land instability problems in the process. The area has been subjected to coal mining which will have left a legacy. Whilst most past mining is generally benign in nature, potential public safety and stability problems can be triggered and uncovered by development activities. Problems can include collapses of mine entries and shallow coal mine workings, emissions of mine gases, incidents of spontaneous combustion, and the discharge of water from abandoned coal mines. These surface hazards can be found	<ul style="list-style-type: none"> Sites affected by mining legacy to have a policy criterion to clarify that developers should recognise mining legacy problems and demonstrate how they can be positively addressed by new development. Most recent GIS information from the Coal Authority has been downloaded and informs the site assessments.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
						<p>in any coal mining area, particularly where coal exists near to the surface, including existing residential areas. Within the Plan area there are approximately 1,225 recorded mine entries and around 205 coal mining related hazards have been reported to The Coal Authority. A range of other mining legacy features are present, in total The Coal Authority High Risk Development Area covers approximately 6.98% of the Council area. Mining legacy is concentrated in and around the Towns of Biddulph and Cheadle and many of the villages south-west of the A523. Mine entries may be located in built up areas, often under buildings where the owners and occupiers have no knowledge of their presence unless they have received a mining report during the property transaction. Mine entries can also be present in open space and areas of green infrastructure, potentially just under the surface of grassed areas. Mine entries and mining legacy matters should be considered by Planning Authorities to ensure that site allocations and other policies and programmes will not lead to future public safety hazards. No development should take place over mine entries even when treated. Although mining legacy occurs as a result of mineral workings, it is important that new development recognises the problems and how they can be positively addressed. However, it is important to note that land instability and mining legacy is not always a complete constraint on new development; rather it can be argued that because mining legacy matters have been addressed the new development is safe, stable and sustainable. In our previous response on the 14 September 2015 we stated: "In assessing potential site allocations, it would therefore be prudent to include a criterion which assesses coal mining data. In accordance with NPPF guidance (paras. 109, 120, 121 and 166), this would be a due diligence check to ensure that potential development sites do not contain any mine entries or other coal related hazards which would require remediation or stabilisation prior to development. This assessment should be undertaken by the LPA using the GIS data provided by the Coal Authority. The Coal Authority notes that the Development Risk product and Surface Coal Resource product were downloaded by the LPA on the 8 June 2015. The LPA should use the most up to date information available to inform its assessments." I note and welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.</p>	
PO1374	Ms Rosamund Worrall	Heritage England			General comment	<p>Paragraph 126 of the NPPF requires Local Plans to set out a positive strategy for the conservation and enjoyment of the historic environment. This means that the plan, as a whole (including the sites it is putting forward as allocations) has to set out a framework which is likely to conserve the historic environment of the Plan area. The Plan puts forward a number of sites which, if developed, appear likely to affect the significance of one or more designated heritage assets in their vicinity. The Allocation of a site for development within the Local Plan is, in effect, establishing that the principle of development in that particular location is acceptable. However, in the case of this Local Plan, at present, there is no clear meaningful evaluation of what impact the development of these areas might have upon those heritage assets. The evidence base relies on the Historic Environment Character Assessment of 2010 and the Landscape and Settlement Character Assessment (LSCA) of 2008 amongst others. It is also noted that the SHLAA methodology includes reference to constraints and opportunities in relation to the LSCA but does not mention the Historic Environment Character Assessment. In addition, it is noted that the Halcrow Toolkit of 2011 used</p>	<p>The Council has recently undertaken a Landscape, Local Green Space and Heritage Impact Study to form part of the evidence base to support the Local Plan and assess the potential heritage impacts of the development allocations and mitigation measures.</p>

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
						<p>for the Core Strategy information has been used in respect of the current SHLAA. Table 2.1 of the site rating criteria includes reference to designated heritage assets, but there is no reference to non-designated heritage assets, setting or harm. As such, it is not clear how impact on the historic environment has been assessed and subsequently applied to the site options in relation to them being put forward as allocation sites, other than where mentioned in the associated SA. Even in the SA it is not clear how the sites have been assessed in respect of the historic environment. It is also of concern that Para 1.16 of the draft plan sets out that further evidence base studies will be completed to inform the Local Plan including Landscape and Heritage Impact Study. In the Options Sites Assessments tables, part of the evidence base, it is also noted that Heritage Impact Assessments will be undertaken during the plan production if sites, where negative effect on the historic environment and heritage assets has been identified, are taken forward. These assessments should be undertaken and considered at this stage to ensure that the preferred allocation sites are deliverable in respect of the historic environment but, at present, Part 7 of the SA does not deal with this. In the absence of any assessment of the degree of harm which the proposed Allocations might cause to the historic environment or, indeed, what measures the Plan might need to put in place in order to ensure that any harm is minimised, at present, the authority cannot demonstrate that the sites it is putting forward for development is compatible with the Plan’s own policies for the protection of the historic environment. Moreover, in terms of national policy guidance, the Plan also fails to demonstrate that:- (a) The sites that it is putting forward for development will deliver a “positive strategy for the historic environment” as is required by NPPF Paragraph 126. (b) The sites that are allocated will be likely to “contribute to protecting or enhancing the historic environment”. Therefore, it has not shown that it is likely to deliver sustainable development in terms of the historic environment [NPPF Paragraph 7]. (c) The sites which it has allocated are likely to “conserve heritage assets in a manner appropriate to their significance”. Therefore it has not shown that it will be likely to deliver the Government’s objectives for the historic environment [NPPF Paragraph 17]. (d) It has complied with the statutory duty under S72 of the Planning (Listed Buildings and Conservation Areas) Act, 1990 to pay “special attention” to “the desirability of preserving or enhancing the character or appearance” of its Conservation Areas. Moreover, from the information available there is no evidence that, in preparing the Plan, the local planning authority has had “special regard to the desirability of preserving” any of its Listed Buildings. Whilst it is accepted that S66 of the Planning (Listed Buildings and Conservation Areas) Act, 1990 does not apply, specifically, to Plan making, the absence of any evaluation potentially brings into question the deliverability of some sites and, for some, the amount of development they can accommodate. When the requirements of the Act are eventually undertaken, it may be found that the quantum of development on some of the sites is, either, unachievable or, at worst, that the need to safeguard the setting of the building actually renders them largely undevelopable. Please note that these comments are based on known heritage assets at a national level and do not include local information available through heritage environment records which should be considered by the local authority.</p>	

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO823	Mr Alan Donaldson				General comment	The roads cannot cope now with the level of traffic that travels through Cheadle. The roundabout at the junction of the Ashbourne Road is a hazard, the design of the roundabout does not allow for a car and a HGV to meet, does not allow for a vehicle to turn left from the Ashbourne Road if there is another vehicle waiting to enter the roundabout from the Tean Road and the proposal of potentially over a 1000 new properties into the Town Boundary would bring in the region of 2000/2500 additional vehicles on these inadequate roads/junctions.	See response to PO103 regarding traffic and junctions.
PO2580	Consultation Service	Natural England			General comment	With regard to baseline data and additional new sites : The Council may need to check that up to date information on local wildlife sites (Sites of Biological Interest and Biodiversity Alert Sites in Staffordshire) has been referenced when identifying preferred sites. Our previous advice letter dated 14.9.15 gave detailed advice on themes and issues including these non-statutory sites. Natural England no longer has access to this dataset and the as the preferred sites consultation includes a number of additional sites (not considered as part of last year's consultation) the Council will need to access up to date information to check on any impacts on these sites. Please contact the Staffordshire Wildlife Trust (01889 880 100 or email info@staffswt.org.uk) for further information if you do not hold the relevant dataset in house.	Comments noted.
PO2710	Mr Martin Ross	Environment Agency			General comment	The sites in Cheadle, although previously flagged up as requiring further work, should be able to design out flood risk given the small proportion of Flood Zones on the edge of them, and the fact that they are already modelled in detail, so the extents shouldn't increase.	Comments noted.
PO2800	Mr Martin Ross	Environment Agency			General comment	CH135b: This site is located partially within Source Protection Zone 2. In line with the position statements in our 'Groundwater Protection: Principles and Practice' document (available from our website at www.gov.uk/environment-agency), there would be restrictions on the activities that can take place on this site (e.g. in relation to the storage of hazardous substances and drainage arrangements).	Comments noted. This site is not identified as a preferred option site.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO2833	Mr Martin Ross	Environment Agency			General comment	<p>The appropriate level and detail of ecological appraisal should be provided for any developments going forward on the proposed site allocations. These should be completed to CIEEM guidelines namely to identify and evaluate the ecological features of interest and potential impacts upon them. The mitigation hierarchy should be employed from the outset of any design and development planning to avoid, minimise, mitigate, offset impacts, both direct and indirect. Many proposed allocations are adjacent to priority habitats and statutory and non-statutory designated sites, including watercourses. In line with the mitigation hierarchy and relevant NPPF sections, i.e. 109, every effort should be made to re-naturalize watercourses, including de-culverting where technically feasible. The main impact on any sites from a developable point of view, are easements from watercourses to help promote Green and Blue corridors and networks where migration and movement along the watercourse banks can occur. This is likely to be between 5 metres, up to 10 metres on some main river stretches. Impacts on water quality need to be assessed, particularly the cumulative impact to ensure the relevant WFD waterbodies do not deteriorate in status and listed measures in the RBMP are taken into account. Collective contributions from specific areas could be used to support innovative land management schemes upstream in the catchment delivering natural flood management to reduce flood risk in the new developments and wider communities downstream. We would recommend and welcome the opportunity to comment on pre-applications to ensure the best opportunities and outcomes are realised.</p>	<p>Comments noted. Policies for sites affected by watercourses should require that early discussions with the Environment Agency and the Lead Local Flood Authority are undertaken.</p>

Question 32 – Do you have any other comments to make regarding Cheadle?

PO2859	James Chadwick	Spatial Planning Policy Officer Staffordshire County Council			General comment	<p>Whilst we have not assessed each site in detail it is clear that many of them will be crossed by public rights of way which will need to be considered in full as part of any proposed development. We are also in the process of preparing the 4th Review of the Definitive Map and Statement for Staffordshire Moorlands area and the District Council will be provided with copies of the maps and Statement to indicate the alignment of all recorded routes. Staffordshire Moorlands District Council currently hold copies of the existing Definitive Map and Statement which should form part of any discussions with developers regarding the proposed sites. As the Plan progresses we suggest policy provision to ensure that all public rights of way are protected and, where possible, enhanced in conjunction with any development. If any Public Path Orders are required to enable the development to take place these should be processed alongside the planning application by the District Council. Many of the sites chosen are close to existing urban areas and it is likely that there are non-definitive routes across the sites which should be considered by any applicants. In many cases these routes could have become rights of way by virtue of established usage over many years and should be treated as public. There will also be sites where such usage or historic evidence has already resulted in applications being made to the County Council under Section 53 of the Wildlife and Countryside Act 1981 to add or modify the Definitive Map of Public Rights of Way, which affects the land in question. As the Plan evolves it would be useful to provide guidance to developers/applicants around enhancing the existing path network where possible in line with Staffordshire County Council's Rights of Way Improvement Plan. This could include: - the creation of public bridleways or the upgrading of public footpaths to bridleways to improve provision for horse riders and cyclists across Staffordshire where there is currently a shortfall in available access routes. - the creation and promotion of short circular walks to promote the health benefits of walking - the replacement of stiles with gaps (where there are no stock) or gates (where there are) in line with Staffordshire County Council's Least Restrictive Principle for path furniture The County Council is able to provide further advice and guidance as and when required.</p>	<p>Comments noted. Public footpaths can be maintained or redirected. Policy provision to ensure that all public rights of way are protected and, where possible, enhanced in conjunction with any development has been added, though it is recognised that they may have to be re-directed.</p>

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO2881	James Chadwick	Spatial Planning Policy Officer Staffordshire County Council			General comment	<p>In relation to more general matters regarding the Local Plan’s approach and considering the incorporation of policies for the next iteration the following should be considered. A Historic Environment Assessment (HEA) has previously been prepared for the Staffordshire Moorlands and its focus and extent was informed through discussion with the District Council. The statement regarding the need for further evidence including a ‘Heritage Impact Study’ (s1.16) of the Staffordshire Moorlands Local Plan booklet is to be supported and should also be welcomed by Historic England. This Heritage Impact Study should review the previous work of the HEA (and update where required), extend the boundaries of the previous study where necessary and enhance the assessment where appropriate. It should cover all aspects of the historic environment and be undertaken by a suitably experienced historic environment specialist following a detailed brief agreed in advance with Historic England, the SMDC Conservation Team and the Staffordshire County Council Historic Environment Team. We have not assessed each site in detail as it is considered that the Heritage Impact Study (identified in s1.16) will undertake this work with reference to all relevant documentary information and databases (Staffordshire County Council Historic Environment Record, National Heritage List for England etc). The Heritage Impact Study should also make use of all available recent studies to inform its assessment including, where appropriate, the relevant Extensive Urban Survey (available on www.staffordshire.gov.uk/ search under EUS) and the historic farmsteads guidance available on the same web pages. Bearing in mind the scale of many of these developments, where appropriate applicants should be encouraged to undertake, as a minimum, a Heritage Statement in support of any application in order to ‘...describe the significance of any heritage assets affected, including any contribution made by their setting.’ (NPPF, s.128). Where more complex remains or larger developments are being considered, then a full Historic Environment Desk-Based Assessment should be prepared. In all cases these documents should be prepared at an early stage by appropriately experienced historic environment specialists and they will inform discussions with the Local Planning Authority and their historic environment advisors regarding the need for and scale of any historic environment interventions including opportunities (where appropriate) to enhance heritage assets within a scheme. The Staffordshire County Council Historic Environment Team would be happy to be consulted by the historic environment specialist appointed to undertake the Heritage Impact Study. We would also be content to advise on the production of Heritage Statements/Historic Environment Desk-Based Assessments to inform development proposals and can advise the LPA on, in particular, the archaeological and historic landscape character aspects of specific developments at the planning application stage.</p>	<p>The Council has recently undertaken a Landscape, Local Green Space and Heritage Impact Study to form part of the evidence base to support the Local Plan and assess the potential heritage impacts of the development allocations.</p>
PO2925	James Chadwick	Spatial Planning Policy Officer Staffordshire County Council			General comment	<p>See attached transport comments in relation to sites.</p>	<p>Comments noted.</p>

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO2929	James Chadwick	Spatial Planning Policy Officer Staffordshire County Council			General comment	In relation to surface water flood risk you have provided to us recently a GIS mapping layer of the proposed allocations that we have run through our flood risk software. Attached are our initial comments on the sites and it is hoped that these should help identify any potential issues at each site and assist in framing policy for assessment and SuDS requirements. However, we have only been able to undertake a high level initial assessment at this stage and would welcome the opportunity to discuss with you further and perhaps identify sites that require further detailed consideration.	Comments noted. Further discussions have been held with SCC regarding flooding issues.
PO2571	Mr Alan Eaton				General comment	The infrastructure of Cheadle will not allow any more houses to be built. The roads in on out are at a standstill in the morning and again to 4pm in the afternoon. The one way system should never have happened the high st is a car park not safe for school children to walk along. In 1939 and 1947 a by-pass was talked about in 2016 we still have the same road structure. Drains are blocked schools are full we struggle to get a Drs appointment but never mind as long as staffs county council get £1000 for every house built on green belt even when there's plenty if brown field sites available. That money will not be spent in Cheadle we cannot get the roads required properly.	<ul style="list-style-type: none"> National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. There is not enough brownfield land/ sites to meet the District's proposed housing requirement within the built up area of the town. Brownfield sites have been included in the potential supply of sites. See response to PO103 regarding traffic issues.
PO2567	Mr Michael Feather				General comment	I note that you intend to build a new school where will the children go when they are older for secondary education.	<ul style="list-style-type: none"> The Council is working with Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered.
PO8	Mrs Desiree Billington				Object	We used to live and work in the heart of the West Midlands (the Black Country). A large urban sprawl and often very congested. After taking early retirement, in 2012, we chose to live in Cheadle, it being a very pleasant semi rural market town. Cheadle has the correct amount of properties and population to make it a very nice and friendly place to live. It does have its problems, it can get very congested at school times and morning and evening rush hour. In particular in the town centre and Tean Road. Tape Street is also a big problem having 3 sets of pedestrian crossing lights which causes tailbacks at certain times. No one wants any more building in Cheadle. There is not enough infrastructure to cope with an extra influx of people. Roads certainly cannot cope with more traffic. On a personal note, we do not want any more houses near to our property as this will cause noise pollution, obstruct our current views, invade our privacy, cause havoc to wildlife and maybe even cause environmental problems such as flooding, ie: houses being built on farm land which currently has good rain water drainage. Cheadle council need to think seriously about the upset and problems they are like to cause if they go ahead with a ludicrous idea of excess building anywhere in the town.	<ul style="list-style-type: none"> See response to PO2571 regarding infrastructure. See response to PO103 regarding traffic issues. Amenity issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application. Developers will be required to provide a Flood Risk Assessment.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO337	Mr J Webster				Object	When the final plans are drafted detailing which areas are to be built upon, which areas will be developed first, and then in what order will subsequent property building take place, covering the whole period up until 2031 ? I understand this will eventually be decided upon, but fear that if it's not out in the public domain in the early stages of decision making, then it might be too late to raise any points of conflict. This will create unnecessary bitterness and hostility, which could easily be avoided with consideration for those affected. If, for example, the area where I live (South West of Cheadle), along with the so-called link road (that would serve no useful purpose whatsoever IMO), was left until the latter stages of the 2020's, then I'm certain that would be far more acceptable to a somewhat majority elderly population in the vicinity, who by that time probably couldn't care less how many houses or roads are built !	A housing trajectory has been prepared as part of the Preferred Options Local Plan and will be the subject of consultation alongside the Local Plan at the end of July 2017.
PO169	Mrs E Baskeyfield				Object	It does not make sense to build a new primary school at the north of the town yet have the proposed housing in the south. This will cause increased traffic chaos at peak times. The public open spaces are mainly private land and should not have been marked as public. This gives the impression that there is an even spread of public open space where as this is not the case. If the new school is in the north, then the housing should also be in the north to prevent the through flow of traffic through the town. It would also give good access to JCB and to Stoke-on-Trent for those working in the city. The schools whose land has been highlighted on this proposal have been made aware and I have contacted the SMDC directly to lodge my concerns about this. People should not be expected to make informed decisions when the information provided is incorrect.	<ul style="list-style-type: none"> The proposed new school is planned to serve the north of the town and could therefore reduce school traffic currently accessing schools in the SW of the town. New housing development is also proposed in the north of the town. There are existing schools located in the SW of Cheadle to meet the needs of residents located in the south of the town. Agreed that not all the open spaces marked on the map are accessible to the public and should be indicated as 'open space' rather than 'public open space'. A public open space study is underway covering all designated public open spaces in the Staffordshire Moorlands. One of the areas this will advise on is where improvements are needed to these spaces and new development in the vicinity could contribute towards this.
PO1077	Mrs Valerie Marsden				Object	I agree with all these issues mentioned it all makes sense.	Comments noted.
PO624	Mr Julian Baskeyfield				Object	The proposed development is too large for the town to service. The roads are not suitable for the increased amount of traffic especially in the town centre itself. The main roads though the town have traffic jams every day which will only get worse. The housing will be too dense in the south with no facilities, and it will be so far from any services that everyone will have to drive into the town. The proposed housing in the south will affect the water table which could have serious repercussions for residents further down the valley in Tean who have already suffered flooding this year. The town does not have the diversity of services that Leek does e.g major chains so for anyone moving here they will still have to travel further afield to buy clothing or other items. Therefore the diversity of shops in the town needs to improve and develop before planning housing otherwise it won't actually increase the trade in the town. The areas marked CH085a-d are in an area of outstanding beauty and heritage, having the old Cheadle railway running adjacent to it. This is an area used by many walkers and children playing and this will be lost if the development goes ahead. I am not against development but the location, density and scale will be very detrimental to the south of the town.	<ul style="list-style-type: none"> It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway improvements, affordable housing and community facilities such as public open space. See response to PO103 regarding traffic issues. The Council has completed a Level 1 Strategic Flood Risk Assessment (SFRA) for the District, the results of which have been used to inform the site selection process. The sites are within Flood Zone 1 – Low probability. The area adjacent to the Brook is high probability and can be incorporated into uses other than housing i.e. open space. The Environment Agency has confirmed that a Level 2 SFRA will not be required as the developer should be able to design out flood risk given the small proportion of Flood Zones adjacent to them, and the fact that they are already modelled in detail, so the extents shouldn't increase. Any application would be accompanied by a Flood Risk Assessment which would consider surface water run-off. Mitigation would be required to ensure that

							<p>neighbouring areas are not affected.</p> <ul style="list-style-type: none"> • New housing is known to have a positive economic impact on the local area and is considered as part of the Sustainability Appraisal. • New housing schemes will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the consideration of new links.
PO1331	Ms K Dewey	Staffordshire Wildlife Trust			Object	<p>Not all the proposed allocation sites have had ecological surveys carried out. We understand around 11 sites have been added to the proposed allocation sites that were not consulted upon in 2015, and these have not been assessed for their ecological value. The SMDC Local Plan Policy C3 Sustainable Communities - Green Infrastructure 8.7.16 and 8.7.17 references the production of a Green Infrastructure Strategy, which “ will inform the production of the Site Allocations Development Plan Document and will establish appropriate objectives and targets.” No Green Infrastructure Strategy has as yet been produced. Therefore, we are concerned that this lack of evidence base will not enable good decisions to be made on allocation sites. The Extended Phase 1 Habitat Surveys carried out by Lockwood Hall Associates Ltd in 2015 do not comprehensively cover all natural features that the NPPF and Planning Practice Guidance list as needing to be mapped as part of ecological networks: the location and extent of internationally, nationally and locally designated sites; Existing designated sites are recognised, but identification of all Local Wildlife Sites (LWS) is not as yet comprehensive. In terms of potential allocation sites, there are several where information from the Extended Phase 1 Habitat Surveys, other ecological survey reports for planning applications, and habitat data from MAGIC indicate potentially high value habitats, which should be assessed against the Staffordshire Local Wildlife Sites criteria. the distribution of protected and priority habitats and species ; Priority habitats and species are taken to mean those listed as habitats or species of Principal Importance for Conservation in England according to the list under section 41 of the NERC Act 2006, plus those listed on the Staffordshire, and any more local, Biodiversity Action Plan. The Extended Phase 1 Habitat Surveys do provide data that would allow identification of some priority habitats, but do not highlight priority habitats where they are present or use the definitions to describe habitats found. Recommendations for further protected and priority species surveys are made, but full information on their presence has not been gathered. areas of irreplaceable natural habitat , such as ancient woodland or limestone pavement, the significance of which may be derived from habitat age, uniqueness, species diversity and/or the impossibilities of re-creation; This includes veteran trees and ancient hedgerows. Records for these features are not comprehensive. Some veteran tree records are available on http://www.ancient-tree-hunt.org.uk/discoveries/interactivemap It does not appear that this database was searched in the desk studies informing the habitat surveys in 2014. The survey reports do not specifically mention irreplaceable habitats. habitats where specific land management practices are required for their conservation; Some mention is made of current land management in the Extended Phase 1 Habitat Surveys, but important areas are not highlighted. main landscape features which, due to their linear or continuous nature, are important for the migration, dispersal and genetic exchanges of plants and animals, including any potential for new habitat corridors to link any isolated sites that hold nature conservation value, and therefore improve species dispersal; Good habitat links and recommended buffer areas are mentioned in the</p>	<p>Ecus Ltd have now completed ecological assessment of all sites includes in the Preferred Options Sites and Boundaries (April 2016) consultation.</p> <p>A Green Infrastructure Strategy for the Staffordshire Moorlands has been produced by the Council with assistance from partners such as the Staffordshire Wildlife Trust and will be published alongside the next Preferred Options consultation.</p>

Question 32 – Do you have any other comments to make regarding Cheadle?

						<p>Extended Phase 1 Habitat Surveys, and the information within the surveys could be used to identify corridors and stepping stones, but specific identification of these features is not part of the report or clearly and consistently highlighted. Corridors and stepping stones need to be recognised and protected, and their other benefits to visual and access amenity in urban areas recognised. areas with potential for habitat enhancement or restoration, including those necessary to help biodiversity adapt to climate change or which could assist with the habitats shifts and species migrations arising from climate change; The ecology surveys would help identify such areas, and some Visual Open Space and Public Open Space areas are proposed in the allocations plans, but areas to be enhanced in terms of habitat value are not specifically identified. information on the biodiversity and geodiversity value of previously developed sites and the opportunities for incorporating this in developments; Previously developed sites are among those proposed for allocation and covered by ecological surveys, which give some recommendations. However geodiversity is not covered. If ecological networks and other GI features could be mapped for each settlement, this would give a good basis for allocating sites, both for hard development, and for green space and environmental enhancements. This would also provide a framework for any CIL monies, partnership projects etc. to target priorities in the area and improve the environmental quality of each town and village.</p>

PO1510 PO1503 PO1519 PO1509	Mrs J L Taylor Mr J P Taylor Mr P Taylor Mr T A Taylor				Object	This whole process is about Central Government trying to lead an economic recovery by force feeding property development upon local councils nationwide. The highly respected Sir Bill Cash is reported in the Daily Telegraph in 2011 as having concerns about the policy and is reported as saying “ The developers will have the whip hand” Government Ministers responsible for implementing the policy are also reported to oppose developments in their own constituencies. We are now witnessing the Government policy first hand in Cheadle. No one wants it. Whats wrong with being a small town, if we wanted to live in a big town we have options to move. People choose to live in Cheadle because of what it is, it’s a small town with greenfield areas next to existing housing that add to residents quality of life. It is difficult to separate politics from this flawed “consultation” process, it is very much a voting process. Various political parties received donations from property development companies including a reported £3.3 million to the Conservative Party in 2011. The process is designed to reward developers for their donations. The Staffordshire Moorlands and Cheadle particularly could be changed for the worse and once it’s done, it can’t be reversed. The only control that Cheadle has regarding developments is to implement the enforced process in conjunction with SMDC. It’s a far cry from the days when the councils, who know Cheadle, have a history of denying planning consent for various reasons associated with various sites. Not least to preserve the greenfield amenities that add so much to the towns character and residential areas. The current plan for Cheadle takes town planning backwards by proposing to destroy green spaces within the area that has been defined as the town boundary. The phrase Sustainable Development appears regularly in various documents but for whose benefit, Cheadle residents or property developers. Well it’s not for residents benefit. It really means lowest cost to the developer and largely disregards anyone else. The voting or consultation process has also been made unnecessarily complicated for many residents, there is a lot to comment on regarding Cheadle and having to submit multiple forms, one for each “question” is quite off putting for many. Some people choose not to utilize online facilities or are unfamiliar with using a PC, if they own one. This leaves the hand written option and if you want to comment on five “questions” and your partner too, that’s ten separate comment forms.	<ul style="list-style-type: none"> • Central Government sets the national planning policy and Local Planning Authorities must prepare Local Plans that are in conformity with it or they will be found unsound. • The adopted Statement of Community Involvement sets out the ways in which the Council will consult at the various stages of the Plan’s preparation. Online, email and paper comments are all accepted.
PO2547	Mr R Snow				Object	I do not believe that SMDC are interested in Cheadle they are fast pursuing policy’s the government have laid down. That is to build more houses.	See response to comment PO1510.
PO2549	Mr J Weston				Object	There are more sustainable sites in Cheadle this should be removed.	See updated Sustainability Appraisal.
PO2554	Mrs J Weston				Object	I am disappointed that despite many objections by neighbouring residents this site has again been chosen for allocation.	Comment noted. See previous responses to issues raised.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO2697	Mr Martin Ross	Environment Agency			Object	There is no commentary around the issue of flood risk and how the sites have been chosen with the Sequential process in mind. However, we do note that the sites we previously identified as being the most severely impacted due to flood risk, have not been taken forward to this stage, which we welcome. We have however, identified some sites where further work is necessary and we wish to remind the Local Planning Authority that Sequential Test evidence should be provided and reiterate if these sites are to be taken forward, then a Level 2 SFRA should also be undertaken. At this Preferred Options stage, this work should already be done. However, there is one final chance for this to be undertaken, prior to the Publication Draft towards the end of this year. If it is not done by that stage, the Site Allocation Document risks being found unsound as it will be at odds with the guidance set out in the SFRA Level 1 and potentially, Flood Risk policies that will be set out in the next consultation.	Sites identified are not located in Cheadle.
PO3016	Councillor Helen Lingard	Cheadle Town Council			Object	Why do you keep coming back with this stupid idea? Are you trying to test our patience?	Comment noted.
PO2529	MR ROBERT OWEN-JONES				Object	This is a small historic market town has no infrastructure or employment to justify the proposed massive increase in housing. There is nowhere to be seen, a proposal to improve the road network for usability and safety, nor is there anywhere to improve the employment business locations on the plans. This indicates that most people will be travelling and commuting to and from town, adding to the already chronic traffic situations	See response to PO103 regarding traffic issues.
PO2891	Mr Alan Moss				Object	Despite several surveys there are no proposals to improve the infrastructure of Cheadle, particularly roads. No further housing development should take place until the road system around Cheadle is improved to reflect the industrialisation of the Cheadle area which has taken place over the last 15 years.	See response to PO103 regarding traffic issues.
PO2873	Mrs Margaret Moss				Object	Despite recent surveys there are current proposals to improve the road network around Cheadle, which is not fit to take the large number of vehicles currently using the Cheadle roads. Much of which, is generated by the industrial development around the town.	See response to PO103 regarding traffic issues.
PO2847	mr michael tunnicliffe				Object	If we are to have more houses, I feel that the most appropriate location would be land from Brook houses to Mobberley including a relief road which would have little impact on the Town Centre, impact may ease the problems there.	See response to PO103 regarding traffic issues.
PO2532	Mr Mark Alcock				Object	Roads cannot cope with what we have now. More houses would not help at all. A new school is needed but where?	See response to PO103 regarding traffic issues.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO2528	Mrs Lara Austin				Object	We have lived in Cheadle for 30 years and seen many new housing developments yet no extra provision of schools doctors or dentists. I don't object to more housing as long as they are suitable locations that are fit for purpose. We are in need of a new school but again locations are key. Access and parking have to be taken into consideration. The proposal as they stand seem to be the opposite of what is logical and it's as if we are throwing up housing to meet targets. We have beautiful country side and are lucky to have it so I would like to see it stay that way for as long as possible.	<ul style="list-style-type: none"> See response to PO2571 regarding infrastructure. See response to PO103 regarding traffic issues.
PO3007	Mr Desmond Barnes				Object	No sensible pedestrian access. Too far out especially for people living Tean Road Rakeway areas of town.	New housing schemes will need to consider new pedestrian links.
PO3002	Mrs Sylvia Barnes				Object	Already suffering from too much traffic especially from May-Oct when towers opens, pavements very narrow and access via Queen Street involves lane delays.	See response to PO103 regarding traffic issues.
PO2806	A Brattley				Object	I don't believe there should be any more in any large numbers in Cheadle area there are housing estates on most of the roads in and out of Cheadle more than enough considering the employment situation in the town. So build a school the other side of town from other schools is only going to result in more traffic around Cheadle which as more than enough traffic already.	<ul style="list-style-type: none"> See response to PO103 regarding traffic issues. The proposed new school is planned to serve the north of Cheadle and could therefore reduce school traffic currently accessing schools in the SW of the town. New housing development is also proposed in the north of the town. There are existing schools located in the SW of Cheadle to meet the needs of residents located in the south of the town. The location of the school site to the north of Cheadle is supported by Staffordshire County Council.
PO2540	Mr Eric Cartlidge				Object	Why again are proposing housing in this part of Cheadle when there has been no roads improvements to the centre of Cheadle. There has been allocated housing sits for 30 years but no one has built on them. This is green belt and a elevated position looking across Cheadle. The foot paths on Frogall road are dangerous to any child walking past donkey lane the idea of a school on the edge of Cheadle is stupid.	<ul style="list-style-type: none"> See response to PO103 regarding traffic issues. The area to the north east of Cheadle is not designated as Green Belt. See response to PO2806 regarding the location of the new school.
PO2525	Mrs Carole Edwards				Object	Cheadle does not have sufficient infrastructure for more houses, doctors, work schools, water, sewage and busy roads.	See response to PO2571 regarding infrastructure.
PO2563	Mrs Angela Feather				Object	Building new houses and primary school in the proposed position will mean an increase in traffic in Frogall road and Cheadle town which is already unable to cope with the current traffic. How is this going to be addressed? Where are the children going to be taught when they leave the proposed primary school? Has this been addressed!	<ul style="list-style-type: none"> The Highway Authority has not raised any issues which would prevent the development of this site. See response to PO2567 regarding secondary education.
PO2521	Mr Damien Flynn				Object	Proposed local road infrastructure is woefully inadequate proposed school site is on the edge of this area - it should be central to NE Cheadle.	See response to PO2563 regarding highway access.
PO2982	Mr Ronald Fryer				Object	Cheadle does not need all these extra houses, the infrastructure is not there. At peak times Cheadle becomes gridlocked. The core strategy is all about building houses on beautiful green fields for immigrants	<ul style="list-style-type: none"> See response to PO2571 regarding infrastructure. See response to PO103 regarding need for new housing.
PO2543	Mr Andrew Gibson				Object	Why would any sensible council suggest building a school as far away from the town centre as possible is ridiculous? This would create more traffic and chaos which Cheadle cannot cope with.	See response to PO2806 regarding the location of the new school.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO2784	Miss Angela Gregory				Object	Cheadle does not require more houses its needs doctors. I have struggle to get appointments with a doctor and now it's getting as bad to see the nurse. I have to wait 2 months for a dentist appointment. The roads need repairing. The street and main roads in Cheadle can barely cope with the traffic coming through. The high street needs new shops, more shops. Better things for kids, somewhere they can play safely. Improve what we have. No more houses. Cheadle used to be thriving Market Town. There's no market anymore, its wasted space now a car park at the best. Cheadle is just a through road to Towers traffic nothing here to draw people in.	See response to PO2571 regarding infrastructure.
PO2539	Mrs Alice Hide				Object	Cheadle at the moment is gridlocked with traffic. Where we live when we have torrential rain the brook fills very quickly and if more houses are built we are going to have a flooding situation. We do not have enough doctors in cheadle area to cope with any more 100s of houses.	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • See response to PO2571 regarding infrastructure. • See response to PO624 regarding flooding issues.
PO2766	Mrs H Keeling				Object	I think we should have a look at the doctors and dentists, as you can imagine you can not get an appointment when you need them. We should have a look at the new shops for them to build to bring people into cheadle.	See response to PO2571 regarding infrastructure.
PO2558	Mr Stefan Lilleker				Object	I feel the location of a new school is situated in the wrong area I strongly object to all the proposed housing, due to the lack of Dr's (a week just to get into see your Dr) Dentist (I haven't even got one because they are all full). Lack of jobs and shops takeaways & pubs that's Cheadle site CH132 is not suitable for any development.	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure. • See response to PO2806 regarding the location of the new school.
PO2987	Mr Ian Menzies Lingard				Object	How many more times are you coming back with this? We have done this twice already and still no more services before more large scale building.	See response to PO2571 regarding infrastructure.
PO2824	Mrs B Massey				Object	When my husband and I first moved here in 1965 we were told that a ring road was planned, and 51 years later we are still waiting. The amount of traffic in the town is now past saturation point and we need more infrastructure in place before any more housing to is planned in this area.	See response to PO103 regarding traffic issues.
PO2559	R S Matner				Object	Cheadle does not require more houses it needs doctors. I have struggled to get appointments with a doctor and now its getting bad to see the nurse. I have to wait 2mths for a dentist appt. The roads need repairing. The high street and main roads can barely cope with the heavy traffic coming through. The high street needs new shops, more shops. Better thhings for kids, somewhere the can play safely improve what we have. No more houses. Cheadle used to be thriving markets town. There's no market any more, it's a wasted space now. A car park at best, cheadle is just a through road for towers traffic there is nothing to draw people in.	See response to PO2571 regarding infrastructure.
PO2534	Mr Gareth Owen-Jones				Object	This is a small historic market town has no infrastructure or employment to justify the proposed massive increase in housing. Cheadle is a compact market town with a central layout that hasn't changed much for centuries. Absolutely no consideration has been given to improving the infrastructure for massive increase in traffic anywhere around the town but especially for inappropriately placed school. Where are the link roads bypasses and cycle lanes etc	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure. • See response to PO103 regarding traffic issues.
PO2835	Mrs Christine Pickin				Object	Why do you want to build a new school in the middle of nowhere? Surely it should be in the town centre. Why destroy our countryside. Why do we have to have all the travellers' sites for the moorlands in Cheadle and also a proportion of proposed housing sites? We have no extra jobs to offer.	<ul style="list-style-type: none"> • See response to PO2806 regarding the location of the new school. • There are no allocations for a traveller site in Cheadle.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO2526	Mr And Mrs T & J Prince				Object	We have no room for any more houses or schools.	Comments noted.
PO2557	Mrs K Rogers				Object	I object to any further planning in Cheadle. The schools the dentist Dr's are full and cannot take any more. If we kept the houses for the people from far away we would need to build any more.	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure. • See response to PO103 regarding need for new housing.
PO2533	Miss Lynne Sanders				Object	Cheadle is fast becoming over crowded there are not enough school places or Dr's appointments available. The roads are grid locked at school times and then we have the added traffic for Alton towers throughout their season. How can the powers that be just think they can build a stack of houses (plus at least one more vehicle for each other without having sufficient facilities? Cheadle is going from big to small market town into a over populated one which is a real shame.	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure. • See response to PO103 regarding traffic issues.
PO2552	Mr Oliver Weston				Object	There are better locations for a school within the town, the best site needs to found for the long term benefit for the local residents.	<ul style="list-style-type: none"> • See response to PO2806 regarding the location of the new school.
PO2520	Mrs Ena Wetwood				Object	Cheadle is the poor relation in SMDC. Cheadle is a dying town, shops closing, market is a joke. The traffic is horrendous; this discourages visitors from visiting the town. There is no infrastructure to cope with additional proposals.	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure. • See response to PO103 regarding traffic issues.
PO2530	Mr A Emery				Object	There is nowhere to be seen, a proposal to improve the road network for usability and safety, nor is there anywhere to improve the employment business locations on the plans. This indicates that most people will be travelling and commuting to and from town, adding to the already chronic traffic situations This town need to have its infrastructure dealt with first and its road system sorting out before we go into putting more houses up. But i agree we need to build more houses as Cheadle is growing but this needs to corner all sectors. Young families single people and the elderly. And you need to look at the water tables, traffic, and facilities this town needs.	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure. • See response to PO103 regarding traffic issues. • Employment site options are also proposed in Cheadle to provide opportunities for local businesses and jobs.
PO2523	Mrs Rosemarie Green				Object	Yes we agree Cheadle has very little greenfields left and no need for that much housing. We came to Cheadle to retire and agree no need for further employment land, young people travel to better job opportunities and will probably leave soon after reducing need for more houses & employment in Cheadle. This will endanger wildlife and young people due to more access needed to the site and risk of flooding Not suitable for a school location.	<ul style="list-style-type: none"> • See response to PO103 regarding need for new housing. • The Highway Authority has not raised any issues which would prevent the development of this site. • See response to PO2806 regarding the location of the new school.
PO2524	Mr Clive Green				Object	Yes it is approaching on green belt land (which Cheadle has very little of again). No need for more houses in this area as little employment to sustain them in Cheadle. Yes I object as it is on green land and it will devalue our property which we bought to retire in, not to be on a housing estate, more traffic, more noise etc It won't be in easy reach of pupils, so causing more traffic chaos and disruption.	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure. • See response to PO103 regarding traffic issues.
PO2545	Mr John Elks				Object	We need a new surgery with at least 3 doctor's. Cheadle hospital should stay open with a accident and emergency unit as many old people have no transport to get to A & E at stoke hospital.	See response to PO2571 regarding infrastructure.
PO2546	Mrs Mavis Elks				Object	We would need 2 new doctors surgeries and Cheadle hospital to stay open for the beds and an A & E unit like Leek as I have no transport to get me to A & E in Stoke.	See response to PO2571 regarding infrastructure.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO2537	Mr Philip Simcock				Object	My concerns are regarding the flooding due to the Cecilly Mill brook. Some households have had letters saying they will not cover them for flood damage. Also another concern is the extra traffic; the roads are not suitable to cope with the extra volume.	<ul style="list-style-type: none"> • See response to PO624 regarding flooding issues. • See response to PO103 regarding traffic issues.
PO2538	Ms Marie Kennaway				Object	The general infrastructure off Cheadle is nightmare, with all the traffic that passes through the central outskirts of town in the north will only increase this problem as will be too far to walk.	<ul style="list-style-type: none"> • The Highway Authority has not raised any issues which would prevent the development of sites in this area. • See response to PO103 regarding traffic issues.
PO2522	Mrs J Whitefield				Object	I object to any large housing estate in Cheadle to me the best way would be to put a few houses dotted around the town on brownfield sites. The infrastructure of the town has to be sorted out before a big project is agreed; also the doctors, dentists etc cannot cope with all the people of the town without adding to it. A school well away from the rest of the schools is to me silly; just think how many more cars would have to go through the town (which at times can't cope now).	<ul style="list-style-type: none"> • There is not enough brownfield land or sites to meet the District's proposed housing requirement within the built up area of the town. • See response to PO2571 regarding infrastructure. • See response to PO2806 regarding the location of the new school.
PO3295	Mrs J Birks				Object	Cheadle is a flood plain. I think before you build any houses the roads needs putting in place. The traffic at the moment in Cheadle is a great problem. You have not really thought of about this. I thought your bypass and free to public plans were very misleading and not informal. Where are these people going to work or go to school, no senior schools were being built. What about doctors, we cannot get to see a doctor now so how will all these extra people get in? Why can't you build on Brownfield site in areas around Stoke on Trent where there is more work? The people of Cheadle want our wildlife species protected. Why dig up our beautiful green land?	<ul style="list-style-type: none"> • See response to PO624 regarding flooding issues. • See response to PO103 regarding traffic issues • See response to PO2571 regarding infrastructure. • National planning guidance states that the Council should seek to meet the development needs of their area. Housing allocations are needed to ensure the Districts housing requirement is met. • Ecological surveys have been undertaken for each preferred site.
PO3300	Mr M Birks				Object	The map of proposals also shows a "dead end road" going to Moberley Housing proposal. From discussions with representatives of SMDC at the open day it was suggested that this road was not a dead end but a through road connecting to the Tay Estate onto the Blythe Bridge Road connecting onto the Blythe Road. If this case it should be shown as a through road. Again, misleading people to think different about the proposal. Before you build any more houses the roads need improving. Do the road's first and then no problem building as many houses required. Not sure where these new residents are going to work whatever they will need to travel there. Is this going to be the right approach by reducing emissions from cars etc.	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues and link road.
PO3031	Mr & Mrs L & D Stevenson				Object	We need green belt left alone. Doctor's facilities need upgrading to accommodate more housing. We need less housing built because we don't have enough jobs in the area for the people who live here already. The primary school and senior schools need upgrading to accommodate the children now. The primary school the council is on about should be built before the houses and should be up and running and ready welcome new families and existing ones. The new roads are congested enough without further traffic.	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure. • See response to PO103 regarding traffic issues • See response to PO2530 regarding employment opportunities
PO3249	K W Alcock				Object	Yes where are the roads to make it easier to travel and why there isn't a crossing at level to Salts Fish Shop. Do you want unsound land for housing because I don't?	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO3254	Mr Roger Davis				Object	It's ok building houses but we have a high street that's not fit for purpose we have more empty shops than used ones. We need doctor's, dentist's, road repairs, there holes in the roads you can hide in, we need a by-pass around Cheadle before houses are built. The rest of the moorland towns get all they need, Leek being the prime example, we need a council that fights for Cheadle not give way all the time, to the rest.	<ul style="list-style-type: none"> See response to PO624 regarding economic benefits of new housing.
PO3046	Mrs Eva Moulton				Object	To build more houses on beautiful green fields will take away the natural habit of our wonderful wild life, at the same time this could put Cheadle at high risk of flooding I strongly object to this planning application.	<ul style="list-style-type: none"> See response to PO3295 regarding ecological issues. See response to PO624 regarding flooding issues
PO3041	Mr Kenneth George Moulton				Object	Cecilly Brook, floods now after heavy rainfall to build houses in its vicinity would be catastrophic. The brook also sustains a lot of wildlife water voles kingfishers and small species of fish to name a few. I strongly object to spoiling this wonderful landscape that surrounds Cheadle.	<ul style="list-style-type: none"> See response to PO3295 regarding ecological issues. See response to PO624 regarding flooding issues
PO2941	D Pittman				Object	There are too many houses in Cheadle and roads are congested leave the countryside as is. Why spoil what we have. It is beautiful.	See response to PO103 regarding traffic issues
PO2946	D Pittman				Object	Roads are too narrow to take more traffic. I object to more houses.	See response to PO103 regarding traffic issues
PO2966	Mr & Mrs R W Ratcliffe				Object	I object to more houses as employment in the area is very low, the roads are far too busy and always have large queues Alton Towers doesn't help, JCB doesn't has HGVS and the roads are not wide enough Cheadle needs a by-pass before more houses are built. It is very unsafe walking on pavements or crossing the roads for children and older people.	<ul style="list-style-type: none"> See response to PO103 regarding traffic issues. See response to PO2530 regarding employment opportunities.
PO2863	Mrs Dorothy Tunnicliffe				Object	There are times when Leek Road area of Cheadle is grid locked especially when JCB factory finishes work we cannot access our house because of the build-up. Also if a school is to be built at this end of the town, that would impact on the traffic situation. Houses would be better be built on the Mobberley/Brookhouse area where traffic could access A50 without coming into town.	<ul style="list-style-type: none"> See response to PO103 regarding traffic issues. See response to PO2806 regarding the location of the new school.
PO3021	Mr D Waring				Object	I personally know and would not recommend building houses near the fields and brook area which floods and they are great walking areas for people and dogs owners. There are also too many schools anyway than building an extra 1, which is already good, 3 primary schools, 2 high schools plus 1 college. There is 1 thing we do need is the shops to reopen there is a lot which have closed down which is located at the High Street.	<ul style="list-style-type: none"> See response to PO624 regarding flooding issues. New housing schemes will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the consideration of new links. Staffordshire County Council have advised that a new primary school is required. See response to PO624 regarding economic benefits of new housing.
PO2977	Mrs Susan Wiseman				Object	The road network around Cheadle is poor and until that concern is addressed people will continue to object to major builds.	See response to PO103 regarding traffic issues.
PO2796	Mrs Florence Worsley				Object	I think the fields should be left alone. They are good for health, walking the dog, wild life. You are trying to move the town into our country side. Build a new school will not solve the problem; the children will need places when they are 11 years? Too much traffic on the road, not enough Dr's, day centre care homes etc.	<ul style="list-style-type: none"> See response to PO2571 regarding infrastructure. See response to PO103 regarding traffic issues. See response to PO2567 regarding secondary education.
PO3259	Mr A.R. Eaton				Object	Dentist and doctors will not cope with a greater population building houses in S/W and a school in N/E would add to the severe congestion in the town. Development bordering river Tean, will increase amount of surface water draining onto the river. This will add to the flood risk further down in Upper Tean.	<ul style="list-style-type: none"> See response to PO2571 regarding infrastructure. See response to PO2806 regarding the location of the new school. See response to PO624 regarding flooding issues

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO2956	Mrs Patricia Griffiths				Object	It seems that Cheadle + rural areas are being discriminated against in favour of Leek and Biddulph. Green Land must be preserved to avoid urban spread. A school must be accessible, if more children walk to school there are less issues with parking, pollution, from cars and risk of cars to children. It seems a waste of time and money to keep proposing a site which is clearly unsuitable and has been deemed unsuitable.	Comments noted.
PO2961	Mr John Shipley				Object	Having moved from Hanley to Cheadle what a wonderful place Cheadle is, apart from the roads being grid locked, brook, voles and wildlife being affected by building work, lots of takeaways spoil the high street, Police White Elephant only open from 9am and 5pm on weekdays money should have been better spent in Cheadle, leaving it as a small market town.	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure. • See response to PO103 regarding traffic issues.
PO3026	Mrs Angela Jones				Object	Cheadle needs more adequate shopping outlet e.g. clothing and another supermarket. Also need another GP's as Cheadle has grown, but the facilities do not reflect this. Leisure facilities needed as many cannot travel to Leek, Uttoxeter for the cinema/bowling.	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure. • See response to PO624 regarding economic benefits of new housing.
PO2992	Mr Michael Sposito				Object	Cheadle roads are currently congested enough without the additional 150 + vehicles. Infrastructure i.e. schools, Dr's surgeries struggle to cope with our current population – what chance with an extra 500 + persons	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure. • See response to PO103 regarding traffic issues.
PO2997	Elvira Sposito				Object	Having got the surgery's to cope with now. Waiting already too long for appointment is chaos in rush Hour time to drive through Cheadle as the roads are congested more housing would add to it.	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure. • See response to PO103 regarding traffic issues.
PO2951	Mr Ronald Griffiths				Object	How will the pupils be transported to the new school site and should they walk through a new housing estate? Why is it always Cheadle, rather than other sites/places this has to be largest allocation of housing?	<ul style="list-style-type: none"> • See response to PO2806 regarding the location of the new school. • The proportion of new housing is set out in the Core Strategy : Leek 30%, Biddulph 20%, Cheadle 22% and the rural areas 28%.
PO2841	Mrs Hazel Simcock				Object	Traffic noise and hold ups on the road flooding due to the brook running back of houses in Sandown Close, Mount has sewage coming from the houses built.	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • See response to PO624 regarding flooding issues
PO3036	Mrs Susan Clare				Object	To build more houses & a school in this area is placing more pressure onto the already over populated area, causing more traffic problems and chaos. Cheadle does not have enough facilities to cope with the population living here already the road systems are inadequate and appalling to use. Devaluation to other properties before adding you should consider amending the already poor services supplied to the people of Cheadle.	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure. • See response to PO103 regarding traffic issues.
PO3102	Mr D Gould				Object	Until a workable road system that bypasses Cheadle is implemented I am against any further population increase. I am also in total agreement that the population increase should reflect employment. Let's keep Cheadle district green.	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • See response to PO2530 regarding employment opportunities.
PO3139	Mr And Mrs J Greenwood				Object	We strongly object as the houses, school, all around Churchill Road and Hammersley Hayes, Froghall Road, will not take the increase in traffic.	<ul style="list-style-type: none"> • The Highway Authority has not raised any issues which would prevent the development of sites in this area.
PO3051	Mr A Shenton				Object	Yes good luck on your campaign can not help carer for family.	<ul style="list-style-type: none"> • Comment noted.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO3243	Mr C Smith				Object	<p>The object of this consultation with the public should be that SMDC receive the views of the public and then implement policies which take into account the views expressed by the public. The public and in particular the people of the Staffordshire moorlands are the people who the council are elected to represent. This particular is the latest in a series of consultations which have all very similar objectives. In the previous consultations, the people have been very clear in expressing their opposition to this massive, local development which significantly, over a period of time, change the nature of this small market town and cause problems for the people who live here. The council have not responded to the previous oppositions to the developments. At meeting in Cheadle relating to the last 'consultation', people were clearly expressing the views because it is clear that the council will not take there views into consideration. In addition, there are many people who are unaware of the consultation and its time frame and also the formal nature submission is not user friendly to people who are expected to respond. It should therefore take into account that objections to these developments only represent a fraction of the actual views of the people of Cheadle. Earlier this year, there was a storm which created flash flooding in Tean. Virtually all of the rainwater that falls in Cheadle area funnels towards Tean. Houses built have been developed in areas of Tean which are in reach of potential and actual flooding and, I understand the councils are proposing more houses in such areas. The developments in Cheadle, wherever they are situated, will result in a significant loss of soil which, at present, absorbs such rainfall. Each house built will soak off the ground where the house sits and also drives, the house frontages will be covered in tarmac, house rears will be covered in flagstones and decking which is the way with modern living. Roads to the houses will be built, again removing absorbing green countryside. When such rains as earlier in the year fall, the flooding which result in Tean, will be significantly worse. Have the people of Tean been made aware through 'consultation' of these ensuing problems? I am aware that a traffic survey was completed earlier this year on behalf of the council. However living in Cheadle shows that are traffic problems which quickly occur and bring the traffic to a standstill. There is little leeway for any problem? Some short time ago, there was a need for traffic lights on the Terrace adjacent to Park Lane and Lid Lane (possibly cable lying). At 5 o'clock on a Friday, I was travelling back to Cheadle via Tean. The effect that the traffic lights was such that the traffic had built up along Bank Street and along Chapel Street to the roundabout on Tape Street. The traffic had then built up on Tean Road. I joined the end of the queue just past Lime Trees veterinary Clinic on Tean Road which 100 hundred yards outside the Cheadle Boundary. I had selected this route having previously the horrendous queue from Brook houses. Today travelling through the High Street which is a one way, a bus in front stopped at the bus stop adjacent to the Nat West Bank. Behind the bus was a lorry which could not pass because of the limited road width. The traffic immediately built up at least to the visible end of the High street, blocking access to cross street. With the current road layouts, there is no capacity for increased traffic which will come about with this proposed significant increase in population. The bulk of the increased population will not be even employed here, just commuting to the Potteries what a disgraceful waste of energy and pollution of the environment.</p>	<ul style="list-style-type: none"> • Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. • See response to PO624 regarding flooding issues. • See response to PO103 regarding traffic issues. • See response to PO2530 regarding employment opportunities.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO3134	Mr N Watson				Object	I object to any houses been built on green field as we need to retain our countryside. The roads around Cheadle will not cope with more traffic. If any houses have to be built there are some brown sites that are derelict that can be demolished and houses can be built there.	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • See response to PO2571 regarding brown field sites.
PO3144	Mrs J Davies				Object	I have lived in Cheadle all my life and it seems to me that Staffs CC won't give up until they have ruined Cheadle completely. They do not care about our wonderful countryside or the fact that there is hardly any employment. Please, please listen to the people.	See response to PO2530 regarding employment opportunities.
PO3233	Mrs M Snow				Object	Cheadle is really run down the high street is scruffy the rec has hardly anything for the children to play on. Road surfaces on in a terrible state peak time they are grid locked, and someone thinks it's a grid idea to build more houses. Can't get a appointment at the Dr's because they are over stretched. We need money spending on the town before we have more houses and a school.	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure. • See response to PO624 regarding economic benefits of new housing.
PO3149	Mrs J Titterton				Object	We don't have the infrastructure to support it – the doctors, the dentist and the schools are all full. It takes a month to see a named Dr at my surgery. There are plenty of empty houses in the area that could be used.	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure. • The Strategic Housing Market Assessment (SHMA) makes an allowance for empty properties / houses that are for sale.
PO3092	Mrs C Goodwin				Object	When it suits SMDC you refuse planning applications when previously approved. Your planning dept doesn't or can't tell the difference between peak park rules and Staffs Moorlands rules. Concentrate on the conversion of Brown Field sites and building that are protected and left to rot fall to bits, unless some kind of bypass is built Cheadle cannot cope with any additional amount of traffic. Painted roundabouts are useless, large trucks use air lanes. Let's be realistic people, no more houses without a better road system!!!	<ul style="list-style-type: none"> • The Peak District National Park has it's own Local Plan and determines it's own planning applications. The Staffordshire Moorlands Local Plan covers the area of the district lying outside the Peak Park. • See response to PO2571 regarding brown field sites. • See response to PO103 regarding traffic issues.
PO3087	Mrs B Barks				Object	Yes need better road system due to grid lock at certain times of the day in most areas. Need shops that will get people to come to Cheadle, better market? What's gone wrong there? From how it was in the past years, paying for car park for town trade was a killer. Now they park anywhere on the high street, lorry's with shop stock have to ride around till they can park and unload a lot abuse the blue badge I have seen this first hand. Money need to be spent on Cheadle to attract firms in and new employment we need more doctors and dentists if we have more houses. Yes we could do with schools but that still means where the best place would be?	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • See response to PO2571 regarding infrastructure. • See response to PO2530 regarding employment opportunities.
PO3129	Mr A Ainsworth				Object	Traffic is already an issue. All surveys magically happen when towers are closed and the children are off school, therefore, not giving a true reading of the problem. Cheadle is known outside as a green place to live + unfortunately these areas are rapidly disappearing. Why not refurb old unused buildings instead of making new ones.	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • An allowance is made for small sites (less than 10 residential units) to come forward as windfall such as suitable unused buildings.
PO3164	Mr D Ainsworth				Object	I already can't get out of my drive in a morning! Do we really need more houses? When others are empty?	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • See response to PO3149 regarding empty properties.
PO3124	Mr G Clewlow				Object	I fully support all the above questions more work is needed on the road/traffic alterations. Furthermore doctors, surgeries are already at bursting point more services are requested e.g. at least one more local petrol station, easing congestion. We cannot continually fill any space to benefit developers – who do not have to live here.	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • See response to PO2571 regarding infrastructure.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO3159	Mr D Dunn				Object	Cheadle can't cope with current levels of transport; therefore extra will only cause more congestion! You have not proved a need for further extra housing	<ul style="list-style-type: none"> See response to PO103 regarding traffic issues. See response to PO103 regarding need for new housing.
PO3154	Mrs P Dunn				Object	Cheadle has poor transport links. I don't think we need more housing putting pressure on this, this town does not need anymore housing.	<ul style="list-style-type: none"> See response to PO103 regarding traffic issues. See response to PO103 regarding need for new housing.
PO3169	Mr D Ratcliffe				Object	For new housing we should consider rent a shop – let's get people shopping Cheadle – reduce rates for local businesses. The Dr's surgeries are full – let's build upon the community if we have sufficient resources – for younger generations.	<ul style="list-style-type: none"> See response to PO2571 regarding infrastructure.
PO3215	Mr D Ratcliffe				Object	The road system in Cheadle is already in adequate, way too much traffic. How can we justify more housing? Remove the stupid 2 way 1 way system and this would improve the traffic or better still make it a 1 way system!	<ul style="list-style-type: none"> See response to PO103 regarding traffic issues.
PO3238	Mr R Lees				Object	I don't think any new housing should be built until a decent road system or ring road is built to cure the already congested roads around the town.	<ul style="list-style-type: none"> See response to PO103 regarding traffic issues.
PO3210	Mr R Ball				Object	If more houses are to be built as the traffic is horrendous will towers traffic and school time traffic particularly Leek Road and Tean Road?	<ul style="list-style-type: none"> See response to PO103 regarding traffic issues.
PO3082	Mr A Hewitt				Object	I strongly object to any house or school being built on green fields. Please stop this over development of our town. If development is required logic needs to be sustained. Why develop on green field site on the side of town that experiences traffic problems via town hall Bank sites closer to the centre of town should be considered, if any sites at all. Sites closer to the South/West should be of higher importance as infrastructure to get to the city or transport links such as A50 or Blythe bridge train station make much more sense. Cheadle's infrastructure/road system cannot cope with increased traffic travelling through – hence sense is to develop at the opposite ends of the town. Please use your heads before this town you are proposing is ruined for good. Developments next to/on green field site should be avoided at all costs, especially when you are looking to develop the wrong side of town. If a school is required a better location would be the bottom of Tean Road or on Draycott cross road opposite New Hayden Road, these are much better locations for parents and commenting, heading to the city. For housing sites behind Wedgewood estate would make far more sense, and a school could even be added here. This would allow high volumes of children to walk to school. Unlike your current plan parents would drive through/out of Cheadle – drop their kids at school before heading back through town (hitting a mega busy town hall bank + one way system) to get off to work. Please see sense	<ul style="list-style-type: none"> See response to PO103 regarding traffic issues. See response to PO169 regarding location of proposed school.
PO3205	Mr J Hewitt				Object	This proposal is the wrong side of town! Cheadle cannot cope with the traffic which heads towards the A50/Blythe Bridge, this development should be on the other side of the town.	<ul style="list-style-type: none"> See response to PO103 regarding traffic issues.
PO3200	Miss K Pickford-Avery				Object	I don't understand why it is being proposed to build these houses and school on this side of the town. Any new builds should be on the other side of town so as not to exacerbate the problems that already exist with traffic of Cheadle!	<ul style="list-style-type: none"> See response to PO103 regarding traffic issues. See response to PO169 regarding location of proposed school.
PO3190	Mrs A Rogers				Object	More houses is likely to bring more cars. This will add to congestion at rush hour – it is already difficult to drive at night and morning because of the heavy traffic . Schools and doctors surgeries are already full. Don't need more problems.	<ul style="list-style-type: none"> See response to PO103 regarding traffic issues. See response to PO2571 regarding infrastructure.
PO3185	Miss S Ford				Object	Strongly object to. Difficult to comprehend	Comments noted.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO3067	Mr J Lawler				Object	More services required for residents i.e. Dr's utilities some more of the empty shops/premises in the town Sort out the road issues. You can build more houses – but what will people do for work, in need of Dr's, and gridlocking already poor road system. Especially in high season.	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • See response to PO2571 regarding infrastructure.
PO3180	Mrs P Wordsworth				Object	Cheadle does not really need more housing , not enough jobs to go round but if need be, only few, we don't need be, only a few we, don't need many. We could do with another school though somewhere.	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure.
PO3062	Mr C Foster				Object	The existing roads in Cheadle cannot cope with the current level of traffic. To build significantly more houses will make the road system impossible. Ness Grove was built as a small estate road; it is used as a rat run and was not designed to take the current level of traffic.	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • The Highways Authority has not raised any issues which would prevent future development in this area.
PO3174	Mr P Hollywood				Object	I feel that Cheadle does not have the required infrastructure to support the proposed housing developments. The roads are to support the proposed housing developments. The roads are struggling to hand i.e. the volume of traffic now so I cannot see how the town can cope with these proposed changes.	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • See response to PO2571 regarding infrastructure.
PO3057	Mrs A Hollywood				Object	This town is too small for any more houses the roads ae to narrow and cannot handle any more traffic they are already breaking up GP's surgery are at their limit – waiting times are ridiculous Leave this town alone – no more houses	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • See response to PO2571 regarding infrastructure.
PO3107	Mr I Millward				Object	Until a workable road system that by passes Cheadle is implemented I am against any further population increase. I am also in total agreeance that the population increase should reflect employment. Let's keep Cheadle district green. Build more houses around stoke and Hanley not in a small town like Cheadle. Rebuild on old industrial land or where houses used to be, not on green belt land. You cannot get through Cheadle in a car now God help us when this happens.	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • See response to PO3295 regarding building in the Potteries..
PO3113	Miss P Millward				Object	Could you please use the bigger cities for more housing developments not the countryside? Green Belt land.	See response to PO103 regarding need for new housing.
PO3118	Mr B Clare				Object	Before you build anything else in Cheadle you need to get the roads system sorted out because it is bad enough now. Also the Dr's can't cope with the demand of the patients	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • See response to PO2571 regarding infrastructure.
PO3222	Mr P Heath				Object	I strongly object to these plans Green field site should never be built on. They are precious assets and not only important for us but our children and wildlife. Once built on these sites will never be recovered. There must be many more sites which are more suitable for Cheadle's future housing. The people who make these plans are not affected by the outcomes- they don't live there – they lose the benefits of the green fields give. Some of these people don't even live in Cheadle. The environment is talked a lot by government yet they are bent on destroying it and local councils jump on the bandwagon for money! Shame on you.	<ul style="list-style-type: none"> • See response to PO103 regarding need for new housing. • See response to PO1510 regarding national planning policy.
PO3270	Mr and Mrs A Brown				Object	Maybe the land surrounding the former public house miners rest on Froghall road should also be considered for housing.	An allowance is made for small sites (less than 10 residential units) to come forward as windfall.
PO3286	Mrs B Heesman				Object	It seems to me that another school is needed also we need another Drs. I walk to school with my younger child it takes 25mins the older child is of high school and its 35mins walk. The traffic going through Cheadle is already far too dangerous and more houses add to more traffic. This needs looking into instead of being given excuses all	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • See response to PO2571 regarding infrastructure.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
						the time.	
PO4777	Mr Alan Copcutt				Object	The level and scale of development proposed in CH001 and CH132 , Cheadle North and North East, would mean compromising road, health, and safety issues, and will not provide Cheadle with an integrated and sustainable development plan. These areas I consider to be the least sustainable and desirable locations for development in Cheadle. 1. The 'Preferred Options Site Allocations' as part of the Local Plan, does not include any plans for removing non-essential traffic away from Cheadle and also omit any plans to reduce traffic conflicts in and around Cheadle. 2. Current traffic levels in and around Cheadle town centre need to be surveyed at all main junctions and over a long time period (at least 1 year minimum) to incorporate the daily data spikes and also the weekly and seasonal data spikes. The 2015 traffic survey was carried out in Dec 2014 and Jan, March and April 2015 and so provides non typical data given it was not peak season at Alton Towers, as well as not being able to capture data from the 'Perfect Storm' conditions of JCB working weeks, Alton Towers fully open, School term time, all businesses open. This is especially a concern considering the extra-ordinary impact on Cheadle, a Non-Typical market town, due to the proximity of locations of these 2 organisations: Cheadle is the nearest town and access point to the UK's No1 Theme Park, Alton Towers. The Cheadle area is home to JCB, the WORLD's largest digger manufacturer, with the majority of the main factories being in Cheadle or within a 10 mile radius. The main employment sites are situated in the West/South of Cheadle town. Also, the requirement for SMDC to liaise with neighbouring Councils, pre-dominantly Stoke County Council. I can find no evidence where SMDC has made any approach to Stoke County Council in order to discuss housing allocations and the potential development of housing in an area providing job opportunities, which would negate Cheadle becoming a 'dormitory town'. Brown field sites. The SMDC have not included brown field sites in the Site Options for housing, Eg. Froghall, Thomas Bolton old works site. These are a main omission by the Council and should be included when considering options for the number of houses proposed for Cheadle. Anti-social behaviour has increased in the town more recently (amended).	<ul style="list-style-type: none"> • See updated Sustainability Appraisal. • The 2015 survey included data when Alton Towers was open. • See response to PO103 regarding traffic and junctions. • The council has a Duty to Co-operate with adjacent Local Planning Authorities and Staffordshire County Council, meeting regularly to discuss future development /growth across the area. • Housing sites are also proposed in the South West of Cheadle, close to where the existing employment areas are. • See response to PO2571 regarding brownfield sites.
PO4789	Mr Richard Gallagher				Object	We have been promised schools before to fund this school you need developers cash, so I think the school will never be developed will get houses built underhanded and corruptly.	<ul style="list-style-type: none"> • See response to PO2571 regarding infrastructure.
PO4794	Mr Keeling				Object	Too much traffic on the roads at peak times. Already Dr's cannot cope with more residents.	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • See response to PO2571 regarding infrastructure.
PO7562	Mrs M Campbell				Object	CH093 Since 2009 I have been sending comments and response forms. My previous comments and letters still apply. I see a link road has been put back on the map which will do little to help congestion in the town, probably cause more problems in Tean. If we are to have more housing, roads need to be provided first i.e. a ring road further out to channel traffic especially heavy goods vehicles away from the narrow roads within Cheadle. (At present we need many potholes repaired). Also we need more medical facilities before more people live here. I enclose copies of my previous letters and my husband's in case you have not kept them.	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues and link road. • See response to PO2571 regarding infrastructure.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO6935	Mr M Bullock		Mr Ben Weatherley	Knights LLP	Object	<p>Following from the comments above, we would encourage the LPA to give further consideration to potential changes to the town and Green Belt boundaries in Cheadle and support a strategy for releasing sites from the Green Belt through the Local Plan process where appropriate - such as to accommodate residential development on part of the land in our client's ownership at Park Lane. Our previous representations have included submission of the following: A report in response to the SHLAA setting out the proposed development of our client's site and associated justification (see Enclosure 1); A diagram (Enclosure 2) showing the site's proximity and accessibility to Cheadle High Street and other facilities nearby including the nearest bus stops and supermarkets (all within walking distance); A further diagram (Enclosure 3) showing the site's relationship to a large number of buildings in the vicinity, which highlights the site's proximity to existing built development and confirms that the northern half of the site is an infill plot amongst this existing development; An indicative site plan and elevation (Enclosure 4) - featuring an access designed by highway consultants (SCP Transport) - to demonstrate that safe and suitable vehicular access onto the site could be achieved and showing the development of five detached single storey dwellings (with accommodation in the roofspace) on the front (north) part of the site, reflecting the building line of the existing residential properties on both sides of our client's site and demonstrating that a suitable housing layout of an appropriate density and character for the area could be provided on site taking other relevant factors into account. In response to the previous round of consultation, the Council published an Options Site Assessment, which forms part of the supporting documents to the current consultation. We would like to make the following comments in response to the content of the assessment of site CH165: 1. The assessment of site CH165 is based on the development of circa 26 dwellings, therefore no account has been taken of our previous representations that promote the development of circa 5 dwellings on the northern part of the site only. We would urge the LPA to reconsider the site on this basis. 2. Similarly, reference is made to the Green Belt Review concluding that the site makes a significant contribution and should not be considered for release, however it is considered that the impact would not be significant when considering the development of circa 5 single storey dwellings on the northern part of the site only - which is at lower level than the more prominent higher ground to the south - and the infill nature of the site (with existing dwellings to both sides). The combination of the topography of the lower part of the site and provision of dormer bungalows that would blend into and complement the existing dwellings to both sides of the site would limit the impact of the site's development on the Green Belt. 3. We welcome and support the acknowledgment that the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect. 4. Reference is made to the site's development having a significant negative effect as a result of it comprising greenfield, grade 3 agricultural land. However, there is a good supply of grade 3 land in the vicinity and furthermore the site has severely limited potential for agricultural purposes as a result of its limited size and the proximity of existing dwellings to both sides (east and west). 5. With regard to access, reference is made to SCC Highways commenting that Park Lane is narrow and unmade and would need to be widened and improved to provide access to this site. However the road already provides access to a number of residential properties - including some further west than our client's land - and was deemed a suitable access to serve other uses nearby including the adjoining cemetery (which we understand has or will be doubled in size without such concerns being raised</p>	See response to Question 26 – Green Belt Boundary comment number PO6934.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
						<p>about the use of Park Lane to provide access to it). Furthermore we would also draw your attention to the section of our original SHLAA representations (Enclosure 1), which provide information on the low number of vehicle movements that would be generated by the development of circa five dwellings on the northern part of the site. 6. Further to the two points above, it is considered that traffic associated with residential development of the site would be more acceptable on Park Lane and the local highway network in general than the frequent use of larger vehicles associated with any future use of the site for agricultural purposes. With all the merits of the site in mind we would urge the LPA to re-consider the potential allocation of the front/northern part of our client's land at Park Lane, Cheadle for housing development along with associated revisions to the town and Green Belt boundary on the edge of Cheadle to accommodate this. The site is being promoted by a willing landowner and it is considered that the proposed development of five detached dwellings on the subject site is technically deliverable. Given the location and characteristics of the site and the availability of local services/utilities/infrastructure residential development of this site is economically viable and therefore achievable. Whilst the site is located within the Green Belt, we consider that additional sites are required to meet the housing needs of Cheadle and the district as a whole, particularly given that opportunities to deliver housing on previously developed land and other infill or windfall sites within the existing settlement boundary are severely limited. The release of land from the Green Belt is now further justified through an increase in the housing requirement, and as demonstrated in this submission, and other submissions made by Knights to date regarding the land at Park Lane, the release of the northern part of this site from the Green Belt is considered to be justified, effective, and would be consistent with national policy. I trust that this letter is clear in expressing our views regarding potential revisions to the Local Plan to incorporate the allocation of land at Park Lane, Cheadle for housing development.</p>

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO7466	Ms Linda Powell				Object	<p>The level and scale of development proposed in CH001 and CH132 , Cheadle North and North East, would mean compromising road, health, and safety issues, and will not provide Cheadle with an integrated and sustainable development plan. These areas I consider to be the least sustainable and desirable locations for development in Cheadle. The 'Preferred Options Site Allocations' as part of the Local Plan, does not include any plans for removing non-essential traffic away from Cheadle and also omit any plans to reduce traffic conflicts in and around Cheadle. Current traffic levels in and around Cheadle town centre need to be surveyed at all main junctions and over a long time period (at least 1 year minimum) to incorporate the daily data spikes and also the weekly and seasonal data spikes. The 2015 traffic survey was carried out in Dec 2014 and Jan, March and April 2015 and so provides non typical data given it was not peak season at Alton Towers, as well as not being able to capture data from the 'Perfect Storm' conditions of JCB working weeks, Alton Towers fully open, School term time, all businesses open. This is especially a concern considering the extraordinary impact on Cheadle, a Non-Typical market town, due to the proximity of locations of these 2 organisations: Cheadle is the nearest town and access point to the UK's No1 Theme Park, Alton Towers. The Cheadle area is home to JCB, the WORLD's largest digger manufacturer, with the majority of the main factories being in Cheadle or within a 10 mile radius. 4.The main employment sites are situated in the West/South of Cheadle town. 5.Also, the requirement for SMDC to liaise with neighbouring Councils, pre-dominantly Stoke County Council. I can find no evidence where SMDC has made any approach to Stoke County Council in order to discuss housing allocations and the potential development of housing in an area providing job opportunities, which would negate Cheadle becoming a 'dormitory town'. 6. Brown field sites. The SMDC have not included brown field sites in the Site Options for housing, Eg. Froghall, Thomas Bolton old works site. These are a main omission by the Council and should be included when considering options for the number of houses proposed for Cheadle.</p>	<ul style="list-style-type: none"> • See updated Sustainability Appraisal. • The 2015 transport survey included data when Alton Towers was open. See response to PO103 regarding traffic and the Cheadle Town Centre Phase 2 Study (2017). • The council has a Duty to Co-operate with adjacent Local Planning Authorities and Staffordshire County Council, meeting regularly to discuss future development /growth across the area. • Housing sites are also proposed in the South West of Cheadle, close to where the existing employment areas are. • See response to PO2571 regarding brownfield sites.
PO7460	Mr C Machin				Object	<p>The addition of the proposed dwellings will ultimately increase the population of the town by approximately 25%, leading to an increase in traffic on existing poor infrastructure and exerting additional pressures on already stretched public services. There is potential for the substantial loss of greenfield and agricultural land around the edge of the town, leading to environmental implications such as impacts on flora and fauna, increasing the risk of flooding and damaging the rural picturesque setting of the town.</p>	<ul style="list-style-type: none"> • See response to PO103 regarding traffic issues. • See response to PO2571 regarding infrastructure. • See response to PO3295 regarding ecological issues. • See response to PO624 regarding flooding issues. • The Landscape, Local Green Space and Heritage Impact Study (2016) has considered the preferred option sites and suggests site-specific landscape mitigation measures where necessary.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO7054		Danbank Developments Ltd	Richard Barton	HOW Planning LLP	Object	<p>HOW Planning LLP (“HOW Planning”) has been instructed by Danbank Developments to prepare and submit representations to the Staffordshire Moorlands: Preferred Options Sites and Boundaries consultation (“the Preferred Options Site and Boundaries”) . Danbank Developments is the owner of a parcel of land located off Brookhouse Way, Cheadle, which benefits from extant outline planning permission for a mixed use development comprising a residential development of up to 43 dwellings and up to 1,350sqm of employment use (Permission Ref. SMD/2014/0655). The site location plan is identified at Appendix 1 to this letter. Illustrated at Map 4.7 of the Preferred Options Sites and Boundaries are the locations of the preferred housing, employment, public open space, and other key infrastructure. One such identified element of infrastructure is the ‘Potential Link Road – Indicative Route Only’ which is identified within draft housing allocations CH085A, CH085B, CH085C, CH085D and CH128. Table 4.13B states that land will be safeguarded within these draft housing allocations to accommodate a potential link road.</p> <p>Danbank Developments acknowledge that the document published for consultation is with respect to sites and boundaries only, and that a separate consultation will be held later in 2016 regarding policies, however Danbank Developments consider that the following points should be considered by the Council and fully addressed within the Preferred Options Policies when published later this year. The Indicative Route of the Proposed Link Road Map 4.7 provides an indicative route for the proposed link road. Whilst Danbank Developments accept that at this stage of the Local plan it is onerous to provide a detailing routing of the link road, Danbank Developments do have concerns that the Preferred Sites and Boundaries omits to consider the location where the link road would be joining the existing road network at its northern connection. As drafted, the indicative route of the link road ends within draft allocation CH085a. Danbank Developments’ land holding is located to west of draft allocation CH085a and provides a connection to Brookhouse Way and onto The Green (A521). In the absence of detailed information regarding connections to the existing road network, Danbank Developments have concerns regarding the Council’s expectation of the Brookhouse Way site in accommodating land for any potential link road. Proposed Link Road Evidence Base No detailed evidence, with respect to highways or viability/feasibility, has been produced by the Council to support the proposed link road. In order to meet the tests of soundness set out at paragraph 182 of the National Planning Policy Framework (NPPF), a Local Plan must be justified and effective. To be justified, the plan should be the most appropriate strategy when considered against the reasonable alternative, based on proportionate evidence; and to be effective, the plan should be deliverable over its period. In the absence of detailed evidence to support the proposed link road, the tests of the NPPF are not met. As such, Danbank Developments reiterate that this evidence must inform the Preferred Options Policies when published later this year to ensure that the Local Plan promotes a sound strategy of this key infrastructure. Given the present uncertainties detailed within this letter, Danbank Developments would be grateful if a meeting could be arranged with the Council to discuss the relationship between the Brookhouse Way site and the proposed link road.</p>	<ul style="list-style-type: none"> The Cheadle Town Centre Phase 2 Study (2017) considers the potential SW link road. Currently there is no link between the A522 Tean Road and Brookhouse Way / A521 due to it being severed by a disused railway line. The railway line is in third party ownership and a bridge will be required to connect a link road through. The proposed link road would allow a percentage of predicted trips from the SW area to traverse Brookhouse Way / A521 opposed to solely the A522, however the level of trips which would use the A521 from this area would have a minimal effect in improving congestion within Cheadle Town Centre. The study considers that the proposed Link Road would not be a solution on its own. It should be noted that as part of the Land Off Brookhouse Way Outline planning approval for a mixed development with associated open space, highways and landscaping, the extension to Brookhouse Way will provide a section of a spine road to traverse up to the edge of the disused railway line. Such a road would not initially link the A521 and A522 but could form part of a future link road to do so.
PO7088	M Ellicock				Object	Cheadle is a very pleasant town to live in at the moment, sadly it is in danger of being completely ruined by developers.	Comments noted.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO6852	unknown unknown		Mr G Willard		Object	<p>The plan fails to provide suitable and clearly identified sites for small scale local housing which may be suitable for local house-builders or those who wish to build their own homes. There is a significant need for such land as the identified article (Appendix A) clearly sets out. The site herein identified could provide a site for up to and for no more than 10 self build housing units. Such provision would accord wholly with the NPPF. The same article identifies a recent survey which shows ‘ that Lack of available and viable land was the most commonly cited barrier to increasing output’ identified by small builders. Para 159 of the NPPF says the following in respect of planning for housing provision: Local planning authorities should have a clear understanding of housing needs in their area. They should: • prepare a Strategic Housing Market Assessment to assess their full housing needs, working with neighbouring authorities where housing market areas cross administrative boundaries. The Strategic Housing Market Assessment: • should identify the scale and mix of housing and the range of tenures that the local population is likely to need over the plan period which: – meets household and population projections, taking account of migration and demographic change; – addresses the need for all types of housing, including affordable housing and the needs of different groups in the community (such as, but not limited to, families with children, older people, people with disabilities, service families and people wishing to build their own homes); 34 and – caters for housing demand and the scale of housing supply necessary to meet this demand; • prepare a Strategic Housing Land Availability Assessment to establish realistic assumptions about the availability, suitability and the likely economic viability of land to meet the identified need for housing over the plan period. * Note - my emphasis in bold. Albeit that the council may contest that this plan is not looking to identify smaller sites it does propose a revised town boundary which inherently will fix both the location of major housing sites and determine where small or infill housing sites may go in the future. There are few if any small sites identified within the plan. For this reason the proposed Green Belt and settlement boundary ought to be changed and a small custom build housing site in respect of land off Park Lane be included within the plan as set out in this submission. Appendix A - Article from web site of Federation of Master-builders. HOUSING AND PLANNING THE NEED FOR NEW HOUSE BUILDING New house building brings enormous economic and social benefits and it is widely accepted that there is a pressing need for the UK to build many more homes than it is currently doing. The number of households in England alone is growing at the rate of over 220,000 each year, yet only 124,520 new homes were built in England in 2014/15. The last time more than 200,000 homes were built in a single year in England was in 1988. THE DECLINE OF SMES IN THE HOUSE BUILDING INDUSTRY An analysis of NHBC statistics shows that in 1988, firms completing less than 500 units per annum delivered two-thirds of all new homes in the UK. However, the number of small and medium sized (SME) house building firms has declined significantly since then and in 2014 only 30% of new homes were delivered by firms of this size. This trend has accelerated over the course of the economic downturn, with the number of SME house builders in operation having halved since 2007. This represents a serious loss of capacity in the UK house building industry which must begin to be reversed if we are to start building the number of new homes we need. We need to enable growth in output among existing firms, an increase in new entrants to the industry and make better use the of the large numbers of skilled small contractors who would have the capacity. In order to do this, we need to address the major barriers and structural constraints which</p>	<ul style="list-style-type: none"> • See response to Question 26 – Green Belt Boundary, comment number PO6843. • Local Plan Policy H1 refers to self-build.

Question 32 – Do you have any other comments to make regarding Cheadle?

							Belt boundary in this location. There are other employment sites available in Cheadle not located in the Green Belt.
PO8987	Mrs L J Hurst				Object	This objection is in respect of the proposed new road passing through the above sites (CH085a, CH085b, CH085c, CH085d and CH128) and running between Tean Road at Mobberley and The Green, Brookhouses. What will it achieve?	See response to PO103 regarding link road.
PO8989	Mrs L J Hurst				Object	My general comment is that I feel that I have not been listened to, having responded to the last consultation with support for and objections to proposals I feel it was all in vain and no-one is 'seeing sense' for Cheadle. I would have liked to have seen my facial reaction when I saw the latest preferred sites because I was shocked and thought "What's the Point?" But it's my town and I want to do my best for it.	Comments noted.
PO7522	Mr Philip Walton				Object	CH093 Summary of representation - please see full response (attached). Object to the development of this site for the following reasons: not enough capacity in local schools & additional school traffic created; doctors, dentists and shops are all over 1km which will create more traffic; Staffs CC ruled out a southern link road; Latest traffic survey is not available; access to the site would be difficult; flooding issues along River Tean and surface water flooding issues; access to the site is bounded by a railway line which is leased by Network Rail to Moorlands and City Railways Ltd on a 15 year lease from 2011. Reopening of the line is possible; consultation is being repeated when a previous attempt was thrown out; one consultation meeting was inadequate; open space cannot be replaced; lack of public open space; green spaces indicated are playing fields with no public access; scale of building is disproportionate to the size of Cheadle's infrastructure; sites to the north of Cheadle would bring this balance provided additional facilities such as schools, shops, dentists and doctors are provided; where are all the people going to come from to fill these new houses? lack of public open space and existing spaces need improving; no new spaces indicated on the plans; few employment plans, where are all the new people going to work? roads are inadequate for the current levels of traffic; medical facilities are already overstretched. An improvement in the infrastructure of the town would help the general acceptance of these proposals	A small part of CH093 has now been included within CH085d. Please see comments in relation to this site. The rest of CH093 is not included as a preferred housing site.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO7487	Mrs Carol Hill				Object	CH165 What are you playing at ?, having attended the final 'drop in' event presented at the Guild Hall Cheadle, the over-riding mood of the public in attendance was one of 'all the decisions have already been made', Staffordshire Moorlands District Council and it's attending officers are putting on a passive 'show' before getting on with it. We have studied the on-line draft plan and are alarmed to see CH165 with the number 65 in brackets on the draft. Having studied and cross referenced other sites we are reasonably sure this refers to the number of proposed dwellings. CH165 is a tiny constrained, ill conceived potential site with lousy access, exactly opposite the soon to be extended Cheadle cemetery. We do hope that the figure printed on CH165 is an unfortunate printing error, we all make mistakes even Staffordshire Moorlands District Council ! If our original objection to the forwarding of this small piece of land as having potential for housing development is studied, you will note that we point out that the original site assessment form states in the Strengths/Opportunities column quote NOT ALL OF THE SITE WOULD HAVE TO BE INCLUDED un-quote, Also on the assessment form the FULL CAPACITY is stated at 26 dwellings. The site assessment form goes onto suggest that not all of the site would have to be used, this statement makes complete nonsense i.e propose 26 houses, settle for less, maybe even less than the minimum small town criterion Oh and you stick No 65 on it. Finally the ' draft' plan demonstrates that Cheadle will never be the same again, changed for the worse, decisions have been made from the top down, typically those making the decisions will not suffer the consequences. One final question, with the odd exception when did the elected Councillors stop acting on and considering the interests of those people that voted for them, some don't even have the decency an manners to reply to questions and e-mails ! As our original objection said, we did object and still do most strongly to CH165 even being considered for housing development.	Site CH165 was included as a potential site at the site options stage but was not included at the preferred options stage.
PO9083	Mr Greg Powell	Cheadle Unite			Object	Summary of representation (see attached) The site option detailed on the maps do not reflect the level of development proposed through to 2031. Of the remaining requirement of 1029 dwellings, nearly half are not as yet identified, including 445 described a s small urban extensions. Further housing proposals have already been considered and approved e.g. Thorley Drive - 60 properties that are not considered as part of the housing allocation. The local community are not being presented with a clear picture of the full likely impact on the town and landscape.	<ul style="list-style-type: none"> Table 4.11 in the Preferred Options document lists the anticipated housing provision for Cheadle up to 2031. Sites included as urban extensions are included in Table 4.13 B). The Thorley Drive planning permission can be taken into account as a housing commitment once the final decision notice has been issued. Housing commitments form part of the supply of new housing and will be deducted from the required provision for Cheadle.
PO9074	Mr Greg Powell	Cheadle Unite			Object	Summary of representation (see attached) Strategy ignores reality and promotes a declining standard of living due to road issues. Cheadle has serious road network issues that are a barrier to further expansion of the town. Traffic surveys have found that roads are already running at capacity. All SMDC have done is suggest a SW bypass but the reality is that no road improvements are mandatory before more housing is developed. Understand that SMDC did look at a NW link road but the costs were prohibitive. Surely if no adequate road improvements can be made development must go where the infrastructure exists e.g. Stoke-on-Trent.	<ul style="list-style-type: none"> See response to PO103 regarding traffic issues and the SW link road. See response to PO3295 regarding meeting housing needs.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO10261	Mrs Jennifer C Moreton				Object	<p>Site ref CH093 Settlement CHEADLE In this area there is a major flaw in the fact that you are taking away all of the available access to countryside. Cheadle was built in a basin apart from the North which has a continuation of green fields for miles to Kingsley Holt, Whiston etc. On the south west the only countryside left is one small field and Huntley Woods were are not accessible to public. Therefore this will be COMPLETE OVER KILL OF THE SOUTH WEST OF CHEADLE. You will diminish the availability to walk this countryside by all the residents who use it on a very regular basis. In your plan you are joining Cheadle with Teanford and this is not fair or acceptable to the South West residents. You also will need to break through the area of the old railway line . This area close to the Huntley woods has great potential as a place of pleasure something we are very short of in Cheadle and indeed should be preserved not decimated the whole of this area greatly adds to the quality of life to us in the South West. The road you have on your plan shows it goes nowhere! in 1998 The SMDC fought ardently with Danbank saying the road was not viable and the expense was far too great. This road would not help the traffic because most of the traffic travelling through goes to the Potteries.It was suggested at that enquiry the builders would never finish this road because the costs were too great. Staffs County Council then said there were no finances availableat that time and the case remains the same to-day.In the South West we already take the brunt for 2 High Schools, 1 Sixth Form and 1 Primary school,also most of Cheadle's Industry, Why are you persisting in creating more congestion in an area already experiencing problems ? a SOUTH WEST LINK ROAD WILL NOT WORK AS IT WAS IN 1998 IT IS A ROAD TO NOWHERE. The adjacent houses to the areas I refer are approx 500 Houses, (Dandillions estate and Wedgewood estate). Your plans are to ajoin another 500 making a 1,000 mass of residential properties. This is not good planning. These houses should be divided into smaller groups and distributed more evenly around the town. Why is there no building suggested for the North i.e. Leek Road A522 areas. JCB is in Leek Road and we have to cope with the traffic and employees coming from the South of Cheadle. Whereas I am not suggesting 500 be built there I do consider that part of the area on the East Side of Leek Road would be viable. This would also help with the proposed School in the North East. The School Buses we have to contend with amount to approx 30/40 buses, taxi's mini buses per day morning and night as well as numerouse parental transport. This South West is a further walking distance to our town centre than Leek Road. Does the Government not suggest houses should be built as close as possible to the centre of a Town ?</p>	<ul style="list-style-type: none"> • See response to PO7522 regarding site CH093. • See response to PO103 regarding SW link road.
PO9639	Mr B Moreton				Object	<p>Summary of representation (see attached) Link road Sites depend on the delivery of a Southern Link Road for access. The 'disused' railway line to the west owned by Network Rail has a 15 year lease to Moorlands and City Railway and could reopen. The rail route should be protected. Access to the sites is therefore not available from the North and West. From the south access would be through Green Belt land from a dangerous bend on the Tean Road and add more traffic. Building of a southern link road was refused at the Core Strategy examination. The road is not listed in the Staffordshire County Council list of schemes and there is a policy of implementing initiatives to reduce traffic rather than to provide for growth. New link road would do nothing to relieve traffic problems in Cheadle.</p>	See response to PO103 regarding SW link road.

Question 32 – Do you have any other comments to make regarding Cheadle?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
PO395	Mrs Joanne Chadwick					<p>The developments plans seem very unbalanced as regards to Cheadle town. The south west seem to have drawn the short straw and I cannot see why. When you reassess the road situation please can you do it at a prime time when the schools are open, alton towers is open and JCB are working, not in the holidays as you have previously done. This may give you a clearer picture of why residents are concerned. I am not opposed to some development as I think it is good for the town but this plan has too many houses for a town like Cheadle, with not enough emphasis on the retail aspect. I still question why certain areas or Cheadle seem to have escaped without any development and if the housing allocation has to remain then this maybe should be reviewed and it shared more evenly throughout the town. This may support resident acceptance of the scheme!</p>	<ul style="list-style-type: none"> • See response to PO103 regarding the tansport studdy and traffic. • See response to PO624 regarding the economic benefits of new housing. • The Council has considered a number of sites within and on the edge of Cheadle. The majority of the proposed area for housing is located within the existing town boundary. It is acknowledged that together the cumulative amount of housing in this area would be significant, however, there are infrastructure benefits arising from allocating a larger area for residential development, such as highway improvements, affordable housing and community facilities such as public open space.

							<ul style="list-style-type: none"> undertaken The Council has recently undertaken a Landscape, Local Green Space and Heritage Impact Study 2016 to form part of the evidence base to support the Local Plan and assess the potential landscape impacts of the development allocations, the study found the site is of low landscape sensitivity See response to PO1344 regarding wildlife
PO910	Mr Howard Leeson	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	Object	Please see the response to Question 33. It is contended that there should be more emphasis on infill than on larger sites.	See response to question 33
PO1111	Mr & Mrs D Coultas				Object	We were opposed to this development at Capri, Gallows Green along with a considerable number of other residents and this was approved against the aspirations of the local community. The type of houses that have been approved fail to meet the needs of the village, which if anything, require starter homes for the young and bungalows for the old, thus freeing up the large number of family homes (that are currently inhabited by elderly people who do not wish to leave the village) that could be made available. A perfect example of NOT reflecting the needs and aspirations of the local community.	<ul style="list-style-type: none"> Outline planning permission pending for 13 dwellings SMD/2014/0824
PO1610	Mr Charles Harris				General comment	I endorse and support this proposal the village boundary shown on the site plan for Alton i.e. identified within the consultation draft of the proposed village boundary, in so far as it restates the existing boundary amended for the inclusion of the site AL012 (for	<ul style="list-style-type: none"> Comments noted.

ID	Consultee Name	Company/Org	Agent Name	Agent Company / Org	Support/object/general comment	Comments	Officer Response
						<p>which planning permission for 18 dwellings has been granted). I wish to make it clear that I would not support the inclusion of any further sites (reserve sites) for Alton in the local plan. In addition to site AL012 there have been a number of recent building completions. I am aware of further new infill builds that are planned (some already having planning permission) within the existing village boundary which can be expected to add more than 10 dwellings to the existing housing stock. I am firmly of the view that Alton with a population of c1000 already has a more than adequate 5 year forward supply of housing and I can see no reason whatever for any further sites to be added outside of the revised village boundary. There are serious concerns about infrastructure and sustainability that naturally limits other than modest growth of this village. This plan as currently set is a sustainable plan that will ensure that the need for new housing in Alton for the next 30 years is satisfied through availability of appropriate sites encompassed by the proposed village boundary as described above.</p>	
PO2916	James Chadwick	Spatial Planning Policy Officer Staffordshire County Council			General comment	In Alton Site AL012 improvement/realignment to Allotment Lane should be included.	<ul style="list-style-type: none"> Outline planning permission pending for 13 dwellings SMD/2014/0824
PO4712	Mr Gez Willard	Willardwillard Ltd			Support	This representation is made on behalf of the owners of site AL012. The site is in single ownership and the site owners are willing and able to release the site for housing. The site has no technical or other planning obstacles preventing housing from being	<ul style="list-style-type: none"> Comments noted.

PO3538	Mrs C Bray				Object	Re: Land at Battlesteads, Alton I would like to submit the above land to be considered for selection when the Council decides on the final development sites. Below are reasons why I think this land would be the best option, and have the least impact on the village. 1. Existing ribbon development adjoining the site boundary, therefore not breaking into open countryside. 2. Adequate road frontage to allow access point and visibility splays. 3. Easy access to foul and surface water sewers. 4. Gently sloping agricultural land, only suitable for grazing. 5. Suitable for mix of affordable and open market housing. (photos of the site submitted)	<ul style="list-style-type: none"> The site was identified as a C site in the SHLAA and was not considered suitable for development. Site identified in the L & SCA as being important to the setting of the settlement. Steeply sloping. Not considered suitable for development due to its location and relationship to the village.
PO9551		Alton Orchard Action Group	Mr M Sutcliffe		Object	Summary - see attached Housing Site Option AL024 Alton Orchard Action Group (AOAG) was formed with the aim of securing the future of the last traditional orchard in Alton. The site was previously identified as a housing option and although not a preferred housing allocation it is coded as a possible reserve site. This possible status is objected to for the following reasons: a) Ecology - its unique and significant feature is its ecological importance as a traditional orchard. It is a Priority Habitat within the Biodiversity Action Plan and European Habitat Directive. The Council has now changed a temporary TPO to a permanent one. Site is protected under the Birds and Habitat Directive and its development would be contrary to the NPPF. b) Landscape - question the statement in the SHLAA that the site is not highlighted as significant in the Council's Landscape and Settlement Setting Assessment. The Council's Churnet Valley Landscape Character Assessment promotes protection of specimen and groups of trees that are significant historically or visually. Development would be contrary to CS policy NE1. c) Conservation - The Council's Conservation Officer has acknowledged the importance of the Orchard and its association with an area of historic market gardens. The trees, dry stone walls and Ivy Cottage were judged worthy of classification as a non-designated heritage asset. Development would be contrary to CS Policies DC2 and DC3. Support the exclusion of AL024 from the preferred sites. Now the TPO has been confirmed consider that the site should be designated 'not suitable' rather than a 'reserve site'.	<ul style="list-style-type: none"> The site is not a proposed site allocation

PO570	Mr Paul Holdcroft				Support	Bagnall The strategy of providing 30 dwellings p.a. for infill in the smaller rural areas appears more realistic and appropriate there to than the previously specific identification of larger sites, and thus mini estates, in some of the smaller villages, which would have ruined their characters and demonstrably been against overwhelming public opinion, strongly expressed in some cases. If this revision be the approved result after final consultation then the Council is to be congratulated on its revised approach as a thoughtful compromise in respect of many of its smaller villages. PO1 138	Mr and Mrs S Stanlake				BM0 13	Object	As residents of Rudyard Road, Biddulph Moor we object to the proposed plans to build up to 45 dwellings between Rudyard Road and Hot Lane To build an "estate" on this land would eradicate the village status. We are proud of our village and would hate to see such a dramatic change. Traffic is already a problem on Rudyard Road, and should the proposal go ahead that would mean an extra 45+vehicles using the road. In most cases a vehicle is necessary to get to work etc. as the local bus service would not be adequate. The village school would not be able to cope with extra influx of pupils. The whole infrastructure of the village would be affected. We understand that a preferred option has been put to SMDC. If plans to build have to go ahead we would prefer this option which is to use "infill" sites.	<ul style="list-style-type: none"> • The Highway Authority does not raise any insurmountable issues in relation to development of this site – footpaths can be provided as part of a development scheme. • The total number of of houses proposed on all sites for the village is 45, BM13 would only comprise part of this • National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered. • New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas • Site allocations are required to meet the District's proposed housing requirement. There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites need to be included. Any new development taking place will be subject to design policies contained within the new Local Plan

		County Council					improvements.	
PO4 38	Miss Philippa Whalley				BM0 13	Object	The amended site allocation which recommends housing fronting Hot Lane is unsuitable for housing. Hot Lane is single track in one direction, and narrow for the remaining half of it in the other direction. Additional traffic would place a burden on this narrow road and would pose an additional safety threat to children attending the local primary school in School lane and also those walking to the Recreation Ground in Hot Lane. The section of BM013 adjoining the Parklands makes reasonable sense given the access onto the existing estate of the Parklands.	<ul style="list-style-type: none"> See response to PO1138 regarding highways
PO1 388	Mr and Mrs I. Turner				BM0 13	Object	This area should be retained as green belt. This has good agricultural land which is on regular basis. It gives open views which extend far beyond its boundaries. The positioning of the houses in its location shown would destroy the land drains which exist the positioning of the building particularly in the lowest areas of land would undoubtedly cause additional flooding to that which already exists I enclose a amended plan which spreads the traffic more evenly around the village which would spread the traffic more instead of having increased traffic in one area	<ul style="list-style-type: none"> The land in question is within the Green Belt. The Council has recently completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact on the function of the Green Belt as a whole (as defined in government planning guidance). Two assessments of this site were carried out; both considered there was potential to consider the site for development as its contribution to green belt purposes were moderate. The first assessment in 2015 looked at the larger site from Site Options consultations and found it was first preference for release from the green belt over sites BM014a & BM014b, the second 2016 looked at the southern half of the site opposite Parklands it recommended there was potential for Green Belt release although it recognised that the absence of a northwestern boundary could be problematic See response to PO1138 regarding highways and the need for site allocations and PO1133 regarding flooding
PO4 714	Ms Karena Lawson				BM0 13	Object	To whom it may concern, I have filled & returned my form expressing my thoughts on the 3 options offered. However, I felt it only right to follow on with an email as there wasn't really many options. I really cannot understand how the site on Rudyard Road / Hot Lane has even been considered as a suitable site to build new homes. the reason I say this is that Rudyard Road regularly floods when we have a heavy downpour & numerous houses have previously been flooded (some on a few occasions) the flooding happens on Rudyard Road & leading into Parklands. I can categorically state the above as fact as I live on Rudyard Road & have done so for many years. I was also informed by previous occupants to Parks Farm that there is a covenant in the deeds which states that no development would be permitted on the land? With this said please could you explain how the covenant can be ignored?	<ul style="list-style-type: none"> See response to PO1133 regarding flooding
PO1 136	Mr & Mrs J & S Heath				BM0 13		We are writing to strongly object to the proposed building of 45 dwellings between Rudyard Road and Hot Lane. We have been residents here for the past 17 years and moved here to enjoy a semi rural location in a quiet village position. We are greatly disturbed at the proposal that the homes would all	<ul style="list-style-type: none"> Issues such as overlooking will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application. Problems arising from the construction period of any works, e.g. noise, dust, construction vehicles, hours of working

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							be built in the one location creating an 'housing estate' directly opposite ourselves. This would impact on the vicinity and the residents surrounding the area. Reasons for objection: ~ there would be a considerable amount of noise and traffic during and after building ~ the drains are inadequate the road is already prone to flooding during wet periods ~ the power supply particularly on Rudyard Road already struggles to be maintained – the power has been off 3 times in the last week, so a confined building of property would add more disruption ~ the school is full to capacity ~ there is a concern that if all the properties are built together this would create more than required, therefore surplus empty accommodation. There is already an adequate amount of varied properties available in the area for sale ~ green belt land should be protected and if absolutely necessary building should be kept to a minimum ~ there is a lack of public transport to Biddulph Moor – particularly if you wish to travel after 5.00pm which most working adults/students are required to We feel the proposal by the local council to distribute the houses throughout the village (in fill) would be more in keeping with the village and enable a more natural process through local builders and self build properties.	(covered by Control of Pollution Acts) are not material planning considerations <ul style="list-style-type: none"> See response to PO1133 regarding flooding, the need for site allocations, infrastructure, and PO1388 regarding the green belt
PO1 428	Mr and Mrs I Beech				BMO 13	Object	We object to the proposals for the following reasons. Additional traffic it will create, when Hot Lane is already used as a rat run in preference to people using Rudyard Road. Hot Lane is already dangerous because it is so narrow and the junction at the top of Hot Lane is already tricky, whether exiting or entering Hot Lane and a permanent structure where it is proposed to be sited, will only add to this and obscure drivers views even more, plus the parked cars created by the residents.	<ul style="list-style-type: none"> See response to PO1138 regarding highways
PO4 88	Mr Michael Nevitt				BMO 13	Object	We recently attended the consultation at Biddulph Town Hall and came away dispirited by the lack of proper answers to our questions and what we believed to be genuine and serious issues relating to the proposal to build 4 bungalows on the former green belt land opposite the 8 houses that make up the Parklands community. We were speaking to Councillor Jones and we felt that he had already made-up his own mind on the issue and was not prepared to consider our wishes. Perhaps his reasoning is that we are a small community in voting terms and do not have the manpower to launch a serious objection to the proposals. For this reason we have submitted the relevant detail to you. Half the residents of Parklands have lived there in excess of 35 years and many years ago we took upon ourselves to plant trees, flowers and to maintain the verges and the stream together with its wild life. This was then a neglected area,	<ul style="list-style-type: none"> The land is in private ownership and the landowner is willing to develop the site for residential development See response to PO1129 regarding flooding and PO1138 regarding traffic issues Site BM013 also includes part of the land fronting Hot Lane

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>for many years SMDC would not adopt this strip of land and whilst a contractor does now occasionally cut the grass with a strimmer, we, the residents, maintain its upkeep. I refer you to recent photographs of this verge and the trees. We would also point out that with the climate change experienced throughout the country, from which Biddulph Moor is not immune, we now regularly have a tidal wave of water which comes down Rudyard Road and from the grounds of Parks Farm and regularly flushes down the road flooding the road and properties. I refer you to recent photographs of the flooding and the water draining from Parks Farm, even on a dry day. Concreting over more of the land to build houses and drives onto Parklands will simply worsen the situation and in the event of more serious flooding we will hold the council and its servants responsible for the damage to our properties as this has been brought to your attention countless times. At times, getting in and out of Parklands is difficult due to vehicles from Rudyard Road parking at the head of the cul-de-sac. Regularly vehicles attending a property on Rudyard Road park on the pavement making it difficult for our children and grand children to visit and stay on the pavement provided for their prams. In view of all these issues relating to Parklands, we asked Councillor Jones why you needed to build on the field rather than use the bigger strip of land off Hot Lane where there are no trees to tear down, no streams to cross and less damage to the environment. Councillor Jones said that Hot Lane was too narrow. I therefore suggested widening it was less impactful than what was planned for Parklands. He simply would not consider it. Councillor Jones also said that the field in question, accessed by a large swept entrance and gate off Hot Lane, offered some of the finest views on Biddulph Moor and if houses were build on this land he would want to own one. This part of the field offers potential for more houses, widening the road from the Village Hall to the Foxhounds is hardly a serious challenge but this alternative suggestion fell on deaf ears. If the proposal for Parklands does continue in its present form then we will recommend to the residents that we take legal advice over the flooding issue and speak with the Environmental Agency regarding the damage to the verge its mature trees and the wild life. Regarding "the finest views on Biddulph Moor", Parks Farm has chosen to surround the property with tall conifers. We understand that residents of both Rudyard Road and Parklands have asked the owners to keep the trees trimmed to a reasonable height as their view towards Cheshire has already being restricted. The owners said that they would deal with the matter but choose not to</p>	

Q37 Do you have any comments on the housing allocations for the Rural Areas?

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>trim the conifers. With a possible 5 years of further growth, the proposed houses to be built on this plot will spend their mornings in the shadow of these conifers. We were unable to get our points across during the meeting at the Town Hall, hence this letter and a small selection of photographs that illustrate the points that we were trying to make, unsuccessfully.</p>

							carried out in The Employment Land Requirement Study the draft Local Plan proposes employment allocations/policies to meet this need. New employment areas are proposed in nearby Biddulph
PO1 074	Ms Claire E Pointon				Object	<p>Opposition to proposed building site allocations – Biddulph Moor Site allocation part of BM014a & BM014b Copy of letter 25/8/2015 This is as previously stated by yourselves the only green space left in the village of Biddulph Moor. Building here will virtually join Biddulph Moor to Biddulph it will become a built up area and the village will disappear and become part of a town. The roads surrounding this proposed area are totally impractical for more houses. 2 are ancient highways unadopted lanes, single track all the way along very narrow. Chapel Lane is only 1 car passable for at least 75% of its length. New Street from the brow of the hill of Chapel Lane – pulling out on any stretch of New Street is dangerous (I know this for a fact because I do it every day). You cannot see traffic coming over the brow of the hill or round the corner near to Leek Lane entrance. Most cars do not drive at 30 mph speed limit. Cars are continually parked on 1 stretch of this road outside the cottages and at sometimes both sides, again 1 car passable. These roads cannot take more houses and more cars. The amenities in this area are already over insufficient: We already have problems with existing sewers, also periodically power and phone lines Ground this ground has always been wet ground, not suitable for building. Any survey will prove this. This beautiful part of this village, 100's if not 1000's people both local and visitors walk this area, it's in the middle of several public footpaths and is home to large amounts of wildlife including bats and birds (I see them every night). Building here would spoil the entrance to the village; Biddulph Moor is a beautiful part of Staffordshire Moorlands and should remain as it is. Preserved for generations to come</p>	<ul style="list-style-type: none"> • See response to PO9569 regarding infrastructure • An ecological assessment of the site is being undertaken
PO1 072	Ms Claire E Pointon				Object	<p>Site allocation part of BM014a & BM014b Further to my letter dated 25 th August 2016 – Copy attached outlined in and concerned outlined in this letter. After further proposals and preferred proposed building sites please see below. In the last 5 years planning application for the 2 similar style cottages in the row in the New Street opposite the proposed site was refused by yourself stating that this is only green space left in the Village of Biddulph Moor and needs to be preserved. There is no footpath on the majority of the length of Chapel Lane- the area of Chapel Lane where the building site is proposed has no footpath and is not possible to put in a footpath without demolishing the existing property on this side of the road. It's just too narrow. Chapel Lane is Narrow – It is not possible for 2 cars to pass on the majority of</p>	<ul style="list-style-type: none"> • A current planning application for development will be determined with regard to the existing policies in the Development Plan. The Preferred Options consultation is to consult on a new Local Plan for the District which will contain revised and updated policies to meet future development needs • See response to PO9569 regarding highways and infrastructure • The site was not assessed in the Extended Phase 1 Habitat Survey. An ecological assessment of the site is being undertaken and will inform the suitability of the site for allocation.

						<p>Chapel Lane and all of entirety at the proposed building sit end. This lane is already not designed for the amount of cars currently uses it without more. This part of New Street is dangerous – there are now cars parked on both sides at times – Residents parking in both sides of this road leaves this a very dangerous road to drive – now without any extra traffic. Also very dangerous to walk on as you have to walk in the road to go around any parked cars parked on the footpath (I do this every morning!) The road to get to Biddulph Moor – Woodlands Lane and new Street are not designed for the amount of traffic that already them without any additional properties. This is a village! And people have chosen and paid higher house prices because they have chosen to live in a village. Building here will virtually join Biddulph Moor to Biddulph. It will become a town The amenities in this area are already insufficient; we already have problems with the existing water sewers and phone and power lines being over stretched. This is a beautiful part of the village, hundreds if not thousands of locals and visitors walk this area every day, it’s in the middle of several public footpaths and is home to large amounts of wildlife and birds . It is the national habitat of bats and as you will be aware all bat species and their homeland are protected by law. All roads surrounding this proposed site are narrow, 1 car passable roads and already busy roads as 1 of the main roads into Biddulph Moor. How can these roads cope with and entrance to housing estate? They can’t! We cannot understand how anyone who has been to Biddulph Moor could even consider using this area for building homes even for the safety aspect alone. Building here will totally spoil the entrance to the village; Biddulph Moor is beautiful part of Staffordshire Moorlands, your Staffordshire moorlands and ours. It is the entrance to this beautiful village and should remain as it is preserved for generations to come. We need green space for Biddulph Moor to remain a village and the road is narrow lanes in this area with mainly no footpaths cannot cope with more houses.</p>

PO4 715	Ms Karena Lawson				Object	<p>To whom it may concern, I have filled & returned my form expressing my thoughts on the 3 options offered. However, I felt it only right to follow on with an email as there wasn't really many options. I really cannot understand how the site on Rudyard Road / Hot Lane has even been considered as a suitable site to build new homes. The reason I say this is that Rudyard Road regularly floods when we have a heavy downpour & numerous houses have previously been flooded (some on a few occasions) the flooding happens on Rudyard Road & leading into Parklands. I can categorically state the above as fact as I live on Rudyard Road & have done so for many years. I was also informed by previous occupants to Parks Farm that there is a covenant in the deeds which states that no development would be permitted on the land? With this said please could you explain how the covenant can be ignored?</p>	<ul style="list-style-type: none"> The Environment Agency has not identified any site specific issues. They recommend that the ecological value of watercourses is enhanced where possible and the impact on water quality is assessed. The Council has completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. Mitigation measures will be taken as part of the site development to address any surface water issues. The issue of a covenant on the site will require further investigation to determine if it will impact on site delivery.

							<p>Potential for release under Very Special Circumstances reflecting the enclosed character of the site, although sequentially, land off Rudyard Road & Parklands is preferred. Retain existing village boundary reflecting the detached location of the site, although if BM5 were developed, the village boundary could be extended along Rudyard Road.</p> <ul style="list-style-type: none"> Land off Farmside Lane opposite Broomfields Not recommended for release due to the impact on the openness of the Green Belt in this location and the unbounded southeastern edge of the site
PO1431	Mr G F Waller				Object	<p>BM008 I write to object to the with-drawal of site ref BM008 from the schedule of potentially suitable housing sites for the following reasons:- the site of just 0.57ha is within the green belt but has not had agricultural usage for many years. the 18 dwellings would have no impact on the outlook from existing dwellings or curtail privacy. national building contractors will not be interested in a site for just 18 dwellings, this would leave the door open to local contractors. The dwellings would as a result be designed to suit the location and established housing types. local contractors would employ local labour and source local building materials. the dwellings, a mix of affordable and family homes will provide over 1/3 of the dwellings required in Biddulph Moor. The site is within easy walking distance from shops, post office, school, church and other essential services with no requirement for transport every day needs, the impact on the roads and parking facilities will be limited. the limited development will recognise the visual importance of its location on a main gateway into Biddulph Moor. the development will give the elderly the opportunity to downsize to a home in close proximity of the town centre. I await the outcome with interest.</p>	<ul style="list-style-type: none"> The site was previously included in the Site Options consultation 2015 and was not taken forward. A number of sites were dropped from the emerging Local Plan after the Site Options consultation. Not all sites were required to meet the Districts housing requirements. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. The land in question is within the Green Belt. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. The review found that the site was not suitable for release from the Green Belt.
PO9822	Mr Armitt	Westwood Golf Club			Object	<p>(From Councillor John Jones' Survey refer to PO8995) Plan C – All infill sites (maximum of 10-12 units per site) spread more widely around the village (likely to interest local and self builders).</p>	<ul style="list-style-type: none"> See response relevant question in site tables for site specific comments

PO1354	Mr R Goodall				Object	BB041 (50 Housing development. Caverswall Old Road) is a late addition to the local plan. Consequently giving local residents less time to be aware of the proposed green belt site. And your proposal of 50 houses. The two proposed/preferred question as above as well as Draycott Old Road 70 new build are to be taken into the greenbelt and not infilling. I question their sustainable viability because of your core strategy criteria with regard to infrastructure. Your two preferred options will create a lot of pressure to the Cheadle Road to Blythe Bridge– 70 new builds) with both sites being either side of that same road, and are both only a short distance from the Junction of Caverswall old road. Caverswall old road/draycott old road are traditional rural roads with narrow widths and the sites will have an impact for pedestrians, cyclists, horse riders, disabled. Will two new sites provide enough green space to meet environmental /community leisure expectations? In the Forsbrook conurbation once both sites are complete?	<ul style="list-style-type: none"> The preparation of the Local Plan is an ongoing process which takes account of consultation responses, the evidence base and national planning policy. The site was suggested following the Site Options stage and was therefore included in the Preferred Options consultation to enable people to comment on it. The Highway Authority does not raise any objections to the development of this site. They recommend that key junctions will require assessment including Caverswall Rd/A521 and Caverswall Old Rd/A521 and pedestrian links into Blythe Bridge will require consideration New housing schemes will need to incorporate areas of open space and landscaping The Council is undertaking Local Plan viability work which will consider the viability of preferred option sites.
PO9945	St Modwen Development Ltd	St Modwen Developments Limited	Ms Stacey Green	Barton Willmore	Object	Email containing letter and Evidence Report submitted [both attached to PO9838]: Our comments relate to the absence of evidence presented by the Council to justify the need for Green Belt release, in the context of there being alternative land i.e. Blythe Vale, available for development, but not assessed by the Council. Site BB054 is identified for release from the Green Belt for housing, however given the proximity of the River Blythe and the nature of the constrained points of highways access, onto a narrow country lane, we question the appropriateness of this allocated site, compared to the availability, suitability and achievability of Blythe Vale. In summary, we believe that additional housing sites should be identified at Blythe Bridge and Forsbrook but also that exceptional circumstances have not been demonstrated for BB054 and BB041. BB054 in particular appears to have additional technical constraints that	<ul style="list-style-type: none"> The land in question is within the Green Belt. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. The Green Belt review considered the overall impact on Green Belt purposes of the development to be limited. It found “The high degree of enclosure of this land both physically and visually means that damage to the overall openness of the Green Belt in this location would be limited. Identified in the LCA as making a contribution to the setting of the settlement.” and recommended the site was considered for release it said

						<p>have yet to be explored.</p>	<p>the site "Could be phased for beyond the Plan period, but given its potential scale would require comprehensive masterplanning which incorporates extensive Green Infrastructure" In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt.</p> <ul style="list-style-type: none"> • See response to PO1354 regarding highways
PO638	Mrs Christine Bratt				Object	<p>I am making observations concerning the proposal to include additional housing in Forsbrook; 1. off Caverwall Old Road - this road is a narrow county lane with no public footpath and is liable to flooding. The local school is full to capacity so it would mean more use of transport to get to other local schools not in walking distance. The traffic situation in Forsbrook and Blythe Bridge can at best be described as a disaster and when as often happens the A50 is closed it is an absolute nightmare. To suggest an increase in residents is irresponsible. On the grounds of health and safety we should not be encouraging walkers along a road with no footpaths and insufficient room to provide them. 2. Draycott Ol Road - again another country road that would only bring more traffic causing further problems and creating a great health and safety risk. The comments as detailed above also apply. In addition there would need to be major improvement to the drains both rainwater and sewage to cope with the additional burden, as well as increase in health facilities and doctors surgeries.</p>	<ul style="list-style-type: none"> • See response to PO1354 regarding highways • The Environment Agency has not identified any site specific issues. They recommend that the ecological value of watercourses is enhanced where possible and the impact on water quality is assessed. The Council has completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. Mitigation measures will be taken as part of the site development to address any surface water issues. • New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas. • National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
							Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan.
PO9448	mr david totton				Object	I am sending this email objection to proposed construction of houses to the rear of Manifold Road, Forsbrook, Stoke on Trent ST11 9BN ref BB041 field code map 4-13. We have lived in Manifold Road , Forsbrook 48 years and have observed the land mentioned become a habitat for all kinds of wild life, including herons, owls, buzzards, sparrow hawks, woodpeckers ,pheasants and all kinds of birds including a family of bats that hunt at night up and down the said field. With construction of houses all this will stop. The roads of Forsbrook and Blythe Bridge are inadequate to take away any more traffic, let alone building traffic, large lorries, machinery etc. The local schools are all overcrowded and children already have to dodge traffic on inadequate footpaths. To get off the estate on to Uttoxeter Road, either down Cheadle Road or Caverswall Road Blythe Bride is impossible most of the time, especially when the train comes through the station. The noise, disruption and pollution plus the mud and sludge, while the building goes on would be disgusting and not good for health.	<ul style="list-style-type: none"> • See response to PO1354 regarding highways • The site was not included in the Extended Phase 1 Habitat Survey. Staffordshire Wildlife Trust consider the site to be good quality semi improved grassland consider it could potentially be of high environmental value & note it is covered by a higher level stewardship scheme. They recommend the site is assessed against the Staffordshire LWS criteria. The results of the ecological assessment of the site will be taken into consideration in determining the suitability of the site for development • National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered • Problems arising from the construction period of any works, e.g. noise, dust, construction vehicles, hours of working (covered by Control of Pollution Acts) are not material planning considerations
PO9154	Mrs Suzanne				Object	I am writing to object to the proposed	<ul style="list-style-type: none"> • Property values are not a material

	Whiston					<p>housing development on the field behind Manifold Road off Caverswall Old Road site allocation BB041. We live in Manifold Road and obviously have many personal reasons to object as listed below 1. De-valuation of property prices 2. Loss of view (the reason we brought the house). 3. A lot of children from the street play in the field as it's a safe environment enabling them to enjoy their childhood and not be stuck playing on computers. 4. We only have small back gardens this is not so much of an issue because of the sense of space having a green field behind your home. 5. Disturbance from prolonged building. Not great having a building site behind your home. 6. Being overlooked from the rear of the property. There are also reasons to help protect the village 1. Caverswall road is very narrow and is a single lane road in parts where passing places have to be used. 2. Forsbrook and Blythe Bridge cannot handle the current volume of traffic if any further strain is put on it the roads would not cope. 3. Caverswall road is already used as a cut through as people cannot get through Blythe Bridge so other villages especially Caverswall would get a higher volume of traffic from more people cutting out the traffic in Blythe. 4. A lot of people walk through the lane going to Foxfield it would make it even more unsafe. 5. Wildlife in the field would be destroyed. Buzzards, Owls, Bats, field mice are often spotted. 6. All local schools are often over subscribed. 7. Put a strain on the local amenities 8. Its GREENBELT.</p>	<p>planning consideration.</p> <ul style="list-style-type: none"> • Loss of view is not a material planning consideration • New housing schemes will maintain existing pedestrian links as well as considering new links where appropriate. Depending on size developments may need to incorporate areas of open space and landscaping. • Issues such as overlooking will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application • See response to PO9448 regarding disruption during construction work, wildlife & school capacity/infrastructure • See response to PO1354 regarding highways • See response to PO9945 regarding green belt
PO182	Mr Brian Hannah				Object	<p>I chose to live in a village surrounded by countryside. The proposal of housing over my back fence will feel like an intrusion into my personal life. Road systems around Forsbrook cannot support the present volume of traffic without adding to the problem. Housing creates drainage and flooding issues in an area already on a hillside and additional flooding issues will result lower down in the village around the railway station and main A50 highway. The proposed site currently has a public</p>	<ul style="list-style-type: none"> • See response to PO9154 regarding residential amenity • See response to PO1354 regarding highways • See response to PO638 regarding flooding • See response to PO9154 regarding footpath/recreation use • Site allocations are required to meet the District's proposed housing requirement. There is not enough brownfield land or sites or infill sites in

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						footpath running through it where a pleasant walk can be taken to absorb the flora and fauna which presently resides in those fields. Why destroy more countryside when Brown belt areas are available to build houses?	settlements to meet the District's proposed housing requirements so green field sites have been proposed. Prioritising brown field land over greenfield in all circumstances is not part of Government policy
PO29	Miss Gabrielle Bailey				Object	I object. More houses mean more people and traffic which cannot be supported without complementary infrastructure. The main roads through Blythe Bridge and Forsbrook are already gridlocked at certain times of day with queues right back into Forsbrook waiting at the crossroads to Blythe Bridge. People park all the way down the main road in Blythe Bridge which means queues down the road as it's single file. Add this to waiting for the railway crossing at Blythe Bridge and what should be a short journey turns into one where you need to pack sandwiches! With new sites for housing and a massive area now allocated for building to support employment how on earth are residents supposed to get to work or indeed hope to cross Cheadle Road in Forsbrook village? It's dangerous and time consuming as it is. I haven't seen anything on the table as solutions to the infrastructure problems which need to be in place before or alongside any addition to the population. In addition this is green belt land, which I fundamentally object to building on when there are so many brownfield sites available.	<ul style="list-style-type: none"> • See response to PO9448 regarding infrastructure • See response to PO1354 regarding highways • See response to PO9945 regarding green belt • See response to PO182 regarding the need to build on greenfield sites
PO1435	Mrs S J Malpass				Object	I refer to the preferred options sites - development boundaries consultation and the housing requirement for Blythe Bridge. In particular I refer to your recent preferred options for 50 and 70 No new house sites, viz Caverswall Old Road (BB041) and Draycott Old Road respectively, to fulfil proposed 120 No new homes allocated for the next 15 year development plan. I consider the impact of these two close new build sites will contribute to an over populated area around Forsbrook, and they will contravene your core strategy policy which	<ul style="list-style-type: none"> • See response to PO9448r regarding infrastructure • See response to PO1354 regarding highways • See response to PO182 regarding the need for site allocations

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>is to ensure current infrastructure is not compromised. Both your preferred, proposed sites are in such close proximity to one another it raises the question how the foreseeable impact on Forsbrook, with inevitable heavy traffic flow through the road network of Forsbrook/Cheadle/Blythe Bridge, plus surrounding road links, will cope as these developments mature. There would also be probable, substantial pressure on other necessary infrastructure amenities in Forsbrook because of your proposed concentrated preferred options, as a random example - pedestrian/leisure requirements, utility services, deliveries (expected on-line traffic that would be required to service everyday expectations of 21st century residents to 120 no homes). Site BB041 proposed contradicts your rejection of other green belt sites, especially when you consider the above points and traffic on the Forsbrook to Cheadle Road. BB041 is also further from Blythe Bridge shops, Doctors, railway station etc than other development options. A more proportionate, fairer and transparent 'spread' of new housing in Blythe Bridge could still provide more community leisure facilities instead of saturating a 15 year allocation in two close proximity clustered sites. I also consider BB041's very late application has not been given the same period of consultation for the SMDC public who wish to comment. Even if you should widen accesses, the exit routes will cause great concern, especially BB041. Over a 15 year period I would have expected a fairer distribution of preferred sites, with possibilities for mid to long term land bank, and I am quite frankly bewildered by your preferred, proposed sites for the next development plan. Once again I object to 70 no new build in Draycott Old Road and 50 no new build in Caverswall Old Road (BB041) for the aforementioned reasons.</p>	
PO9158	Mr Peter Addison				Object	<p>I wish to inform you of my objection of the proposed development for 50 houses on Caverswall Old Road, Blythe Bridge (SHLAA</p>	<ul style="list-style-type: none"> • See response to PO 1354 regarding highways • See response to PO9945 regarding

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>site BB041) The site is not suitable for such a development for many reasons. I have been a resident in Manifold Road, Forsbrook since our house was built in 1968. I have witnessed many developments in the Village. Some good and other not. I do not live in which I at first described as a village. With many similar developments it has already taken its toll in its local services. The traffic which builds up during each day causes considerable problems. The situation of the Railway Station causes delays in both Uttoxeter Road and Stallington Lane and the present volume of traffic from Caverswall Road joining Uttoxeter Road. This causes a build up not only in Uttoxeter Road with traffic tailing back into Cheadle Road in the village of Forsbrook. The impact of this proposed development will cause danger, delays and over capacity of traffic in the surrounding highway network. Caverswall Old Road can only be described as a country lane were parts single traffic can pass. Caverswall Road is marginally better and narrows only in two dangerous parts. The junction of these two roads is a nightmare. It is just waiting for another accident to occur. The speed that some drivers swing into the lane from the direction of the Foxfield Railway site will one day cause a fatality. Caverswall Old Road is boarded with Hawthorn hedgerows and with a number of large trees that have been there for hundreds of years all of which are protected by law. The lane is used by many residents of the area which causes concern for the safety of pedestrians, school children, older people walking their dogs, and visitors to both the Foxfield Steam Railway and the popular Heath House Farm and garden centre. If this application succeeds the capacity of the likely increase of traffic it certainly would not be able to cope with its demands. It appears that no consideration has been given to the accessibility to and from the proposed site. I also note that the application is located in a defined Green</p>	<p>green belt</p> <ul style="list-style-type: none"> • See response to PO9448 regarding wildlife • The consultation is to seek residents views on the proposed changes including those the village boundary and site allocations

						<p>Belt area. I am aware that the development in such areas should be strongly controlled. The review taken by Amec-Foster-Wheeler is flawed I believe that this would probably breach chapter 9 of the National Planning Policy Framework These fields for many years were used by the old farmer both with both sheep and cattle. Following his death it is been only used occasionally the building up of cattle ready for market. At the present time is has been left to nature and being ready to be cut for silage. This has been done twice a year and in doing this is now a paradise for wildflowers attracting many wild creatures including buzzards, pheasants and foxes. The two small pools contains a hive of activity As Caverswall Road is already subject to flooding from the adjoining fields and the Foxfield site. Any further building of houses in the area like the recent rejected application of the building houses off Caverswall Road that is only about 100 yards further along the lane should be rejected for the same reasons. It is interesting that the Local Plan Boundary for Forsbrook seems to have been changed and does not include the other fields adjoining BB041 and the brown field area (former tile, brick yard). Why has this been done without informing the general residents?</p>	
PO9142	Philippa Hackney				Object	<p>I would like to express my disapproval with reference to the proposed housing development (plot BB041) for the reasons below; Green Belt land - should be protected to preserve the local countryside and provide a habitat for wildlife in addition to controlling urban sprawl. It is important that Green Belt land is protected for future generations. The additional road traffic generated to access the proposed development would have a negative impact on the surrounding community (e.g. traffic jams / increased risk of traffic accidents / noise / pollution).</p>	<ul style="list-style-type: none"> • See response to PO9945 regarding green belt • See response to PO9448 regarding wildlife • See response to PO1354 regarding highways • If the district council considered that a development they may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts • There is a policy in the Local Plan regarding the pollution

						<p>development (Plot BB041) for the reasons stated below: 1) Greenbelt land should be protected to preserve the local countryside and provide a safe habitat for local wildlife – this can only be preserved by reducing urban sprawl. 2) It is important that greenbelt land is protected for future generations. 3) The additional road traffic generated to access the proposed development would have a negative impact on the surrounding community. For example, the additional traffic would result in severe congestion due to the proposed sites' geographical location and the narrow winding lanes. This would create problems for vehicles wishing to travel either to Blythe Bridge or Caverswall. Obviously this will lead to a rise in both noise and pollution which we are all committed to try and reduce.</p>	<ul style="list-style-type: none"> • See response to PO9448 regarding wildlife • See response to PO1354 regarding highways • See response to PO9142 regarding pollution
PO9148	Mrs Helen Reid				Object	<p>I would like to object to the above with regard to the option site and boundary at BB041 - land off Caverswall Old Road in Forsbrook, for the following reasons. Use of green belt land Firstly I object to the site being used as it is green belt. Planning guidance states that green belt land should only be altered in exceptional circumstances. At the drop in session I was advised by one of the planners that one of the reasons the land had been identified was because the landowner had made the land available. I do not believe this is a valid enough reason to change green belt boundaries when there is other land which is far better suited for houses and development. It appears to be more of an easy option than an area which has been identified for the right reasons. Destruction of countryside and wildlife habitat The fields are a beautiful part of the village environment with mature trees, hedgrows and grassland which are full of wildlife. (A public footpath is also within the site) There are a large variety of birds which we have the privilege of seeing and listening to whilst in our gardens. We have many common varieties but also sparrow</p>	<ul style="list-style-type: none"> • See response to PO9945 regarding green belt • See response to PO9448 regarding wildlife and infrastructure • See response to PO1354 regarding highways • See response to PO91545 regarding residential amenity • See response to PO638 regarding flooding

						<p>hawks, kestrels, woodpeckers and golden pheasants. Yesterday we saw an owl. In the pond at the bottom of the field there are herons and frogs. Other wildlife we see are bats, foxes, bees, butterflies, bees, bumblebees, hedgehogs. This wildlife needs to be protected. The State of Nature report in 2013 states that many of the above species are on the decline and action needs to be taken to protect these species.</p> <p>Increase of traffic on already narrow access roads Traffic is a major problem in Forsbrook and has been for many years with many near misses in the village where there is no pedestrian crossing and a blind bend where cars come through too quickly. The building of 100 + houses at the above site and the one off Draycott Old Road I believe would cause major problems in the following areas; - Caverswall Road - at the top near Caverswall Old Road the road has no pavement and is very narrow - more heavy goods vehicles during development and then the added car load from 50+ houses would make this road very dangerous. At the bottom where it meets Uttoxeter Road is also a problem area. Since the station started charging for parking, cars now park all the way up to the bridge on Caverswall Road. This is a major problem now as there are near misses at the bridge where cars are coming up to it on the wrong side of the road and at the bottom where cars are stopped from turning left into Caverswall Road off Uttoxeter Road by queues causing problems on the crossings. More cars using this road could cost lives. - Caverswall old Road - Again this is a road with no pavement and more suited to single lane traffic - the addition of 50 + houses and associated cars would make this road extremely dangerous. - Cheadle Road - at school drop off / pick up times and uptill approx. 6 o'clock this road is extremely congested. It is not uncommon for the queue from Blythe Bridge to be backed up to Blythe Mount Park - this road cannot take any more traffic without causing</p>

						<p>considerable inconvenience for the residents of Blythe Bridge and Forsbrook. I understand that sites looked at previously in the Caverswall Road area and top of Caverswall Old Road area were deemed unsuitable due to the poor roads and lack of pavemnets. Site BB041 would present the same issues. School provision The local primary school, Forsbrook primary, is fully subscribed. I understand that Blythe Bridge high school is always over subscribed. What provision would be made for the extra need for school places without increasing class sizes? Drainage issues Manifold Road is on a hill and has in the past had a problem with drainage issues at the bottom. This was rectified by the construction of another drain at the bottom of the road. However the construction of 50 houses on the field is of great concern to me. The natural surface drainage will be greatly reduced and I am concerned what provision would be made to ensure this does not become a problem for the houses on Manifold Road. The field at the bottom of the hill is often waterlogged and there is already a pond at the bottom. Overlooking issues We, as have many of the houses on Manifold Road have large patio doors and conservatories which have been built to enjoy the views of the fields. I am concerned that any development will overlook direct into our houses.</p>

						<p>fields. I am concerned that any development will overlook direct into our houses. Proximity to village centre . I understand that the location considered on the basis of proximity to existing facilities. It appears that Blythe Bridge shops has been used as the village centre when in fact the facilities area for Forsbrook (where the considers site sits) is the retail area at the junction of Cheadle Rd and Chapel street. This area has significant retail and transport links.</p>	
PO9112	Mr A Brereton				Object	<p>I would like to object, in the strongest possible terms, to the proposed building on greenbelt land within the Blythe Bridge and Forsbrook area. It is utterly abhorrent that consideration is being given to the destruction of the natural habitat of wildlife in our local area such as badgers, buzzards and newts. Not only will the proposed development devastate emerging vulnerable species, but will massively and detrimentally impact on the quality of life of local residents. In particular, I would like to object to the building of housing on site BB041 (as per map 4:13). The groups for this objection are based upon: Unsuitable access - the narrow lanes and local highways infrastructure are not suitable for greater traffic numbers. The lanes that feed the immediate area surrounding site BB041 are narrow, heavily congested as it is, and prone to severe flooding. Therefore, the proposal to build extra housing, which will lead to further traffic chaos, is unsuitable and based upon unsound judgement. Detrimental impact on the environment - the building of houses on site BB041 will massively impact on local wildlife, as there are badger sets in the field and buzzards nesting nearby. Also, newts have been spotted living in the pool at the bottom of the field. However, the greatest detrimental impact will be on the quality of life of local residents who rely upon the open views and peaceful location to cope with the stresses of life. An suitable alternative site would be 459 Uttoxeter</p>	<ul style="list-style-type: none"> • See response to PO9945 regarding green belt • See response to PO9448 regarding wildlife • See response to PO9154 regarding residential amenity • See response to PO1354 regarding highways

						road as the access routes are far better, and the impact on local wildlife/residents minimised.	
PO9109	Mr and Mrs R Bryant				Object	<p>I would like to strongly object to the Planning Applications for housing development on the Caverswall Old Road site for the following reasons: Road access – very narrow lanes – Caverswall Road and Caverswall Old Road. The installation of utilities could be difficult. Forsbrook and Blythe Bridge have been subjected to flooding in the past. If these houses are built on the proposed site there would be no soakaway for run-off of rain. Ecology of the site, ie buzzards nesting etc. Special wildflower meadow left to nature and cut for silage only. We get a wide variety of wild life in the fields. The field is unique as it is used at present as farmers would call “set aside”. It is mown once a year for silage and therefore the flora has time to grow and set seed. The hedgerows are Hawthorn and have been there a very long time as have the trees and these have preservation orders on them and should be kept at all costs. These are not “prairie” fields like a lot over the county but extremely old style fields which need preserving. The field which is the site of the old brickworks seems to have been discounted. This is waste land and should be used for housing before the fields in the vicinity. Has this been rejected because of more influential intervention I think this is very possible. Green belt – does this mean nothing anymore? We will have no green belt left in the whole country if the Government and Councils have their way. I am very conscious that a lot of people do not think about the impact of ecology but Britain will become a concrete jungle with nothing of our past left. 50 houses are proposed for the site as I understand it, and that could mean the possibility of 100 cars – working on 2 cars per family. Forsbrook and Blythe Bridge already have a huge problem with parking at present so this would make things much worse. I appreciate houses are necessary</p>	<ul style="list-style-type: none"> • See response to PO1354 regarding highways • See response to PO638 regarding flooding • See response to PO9448 regarding wildlife • See response PO9945 regarding green belt • See response to PO182 regarding the need for site allocations • The consultation was widely publicised and included a flyer being sent to all households and businesses in the District through Royal Mail. High levels of responses have been received by the Council from residents which suggests that a significant number of residents knew about the consultation.

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>but surely there are some derelict sites that can be used that do not interfere with greenbelt and people who cherish this. All over the area of Stoke and Staffs Moorlands there are these sites which have not been used for anything for years and are not greenbelt ie Stoke's old football ground, British Steels' massive site, Twyfords, Boltons in Froghall etc. Some of these sites have been derelict for years. When Stallington Hospital site was used for housing it effected very little. This proposed development effects a lot of people. Has the person or persons who are making the final decision visited the site? I hope you will give this objection due consideration and look at other less unique sites. I and the people who care are disgusted with the way this has been handled. No information to house holders affected I was told this was in the local paper and on the local radio station and on tiny notices on one notice board. A lot of us do not read or listen to these. Does this mean we have to buy a paper every day and listen to the radio every day in the hope that we hear about planning proposals? The rural communities are being put under real pressure over this and I think its time somebody realised this.</p>	
PO9451	Ms Julie Lyons				Object	<p>I would like to take this opportunity to object to any further building in our village, as previously stated in my earlier objection, the services and the infrastructure cannot cope. I have lived in the village for the last 17 years and I feel that the quality of village life has somewhat diminished. Forsbrook has already lost it's identity and has merged with Blythe Bridge, I don't want to end up living in a suburb of Stoke on Trent as I fear that will be the end result for our neighbour Caverswall. I cannot understand why the Council (government) want to cram developments into unsuitable locations, it should be looking for new locations and building the services and infrastructure to match. The site that has been put forward in the village will cause traffic issues on a daily basis. There is</p>	<ul style="list-style-type: none"> • See response to PO1354 regarding highways • The Local Plan will contain an affordable housing policy requiring a percentage of houses to be affordable

						<p>also a discrepancy as to the amount of houses that Staffs Moorlands requires and the differences between the two schemes that have been published haven't been fully explained to the public. If there are to be houses built will there be a restriction as to sold to local people or will it be as I fear they are sold to anyone, thus causing further problems with future housing. There has already been one large development and several smaller developments built between the two villages in the last ten years, swelling the population even further.</p>	
PO9527	Mr K Tunnicliffe				Object	<p>I write in reference to the above site options consultation and I also wish to include the impact of other sites namely BB041(Caverswall Road) and OC055 (Blythe Park expansion, Cresswell) because if all sites are granted permission, it will result in the diminution of the quality of life for all residents of Blythe Bridge, Forsbrook, Draycott and Cresswell, along with increased traffic problems for residents of Hilderstone. With the overview of all the linked sites named above, (Northern Gateway Site/Proposed Traveller Site/BB041/OC055) I wish to draw your attention to the following information from The World Health Organisation website, where the full document is available for your perusal: (http://www.iarc.fr/en/media-centre/iarcnews/pdf/pr221_E.pdf 1st June 2016) Lyon/Geneva, 17 October 2013 – The specialized cancer agency of the World Health Organization, the International Agency for Research on Cancer (IARC), announced today that it has classified outdoor air pollution as carcinogenic to humans (Group 1). After thoroughly reviewing the latest available scientific literature, the world's leading experts convened by the IARC Monographs Programme concluded that there is sufficient evidence that exposure to outdoor air pollution causes lung cancer (Group 1). 						<p>bladder cancer. Particulate matter, a major component of outdoor air pollution, was evaluated separately and was also classified as carcinogenic to humans (Group 1). The IARC evaluation showed an increasing risk of lung cancer with increasing levels of exposure to particulate matter and air pollution. Although the composition of air pollution and levels of exposure can vary dramatically between locations, the conclusions of the Working Group apply to all regions of the world. It is therefore immediately apparent that increased air pollution created from the higher volume of traffic generated from ALL of the above sites will be a source of concern to the health and wellbeing of residents. If the proposals go ahead the identity of Blythe Bridge, Draycott and Cresswell will be changed beyond recognition from small hamlets and a village to an extension and continuation of the urban sprawl of Stoke on Trent. Many of my neighbours I have discussed this matter with, purchased our properties and chose to live in the area because it is a non estate location, rural, with few houses and lots of green space. Therefore our views must be taken into consideration, when any major changes to the area in which we reside and pay council tax for are considered. Clearly this was not the case with the Blythe Park expansion, which will cause the volume of traffic on Cresswell Lane and Uttoxeter Road, Draycott to greatly increase the number of vehicles on an already very busy road-also used as a diversion for the frequent A50 closures. The vibration from this traffic has already caused damage to garden walls and with some HGV's you can feel the vibration through the house.</p>

PO9156	Mr Mathew Russell				Object	<p>I write in reference to the above site. As a resident of Caverswall road i have concerns over the proposed housing site which will have a huge effect on the infrastructure on caverswall road, surrounding roads and surrounding areas. Traffic on caverswall road already as i high volume of traffic as cars cut through caverswall old road to skip the junction of cheadle road and uttoxeter road. i live on a really narrow bend on caverswall road and find it difficult and dangerous to pull from my driveway onto caverswall road. the increase in traffic will only increase the danger on this section of road. At the bottom of caverswall Road which adjoins uttoxeter road as a major drainage problem and floods frequently. Since Blythe Bridge railway station introduced parking fees rail users are using caverswall road as a free car park which causes congestion point at the junction. The Proposed site will only add to the already over congested road. Schools in the local area are over subscribed St Filomenas, Forsbrook Infants both rejecting siblings at the same school as there brothers and sisters with parents having to do multiple school runs increasing more traffic on the local roads. The Fields Surrounding our area of natural beauty and wildlife which as residents paid a premium to live in these areas. As i understand the proposed Traveller site TR002 The owner of the said land is not willing to sell the land as a traveller site but is willing to sell for development of housing. It makes sense to me that TR002 should be the development site for the mass housing and relocate the travellers site to a different area of the moorlands where the infrastructure is in place.</p>	<ul style="list-style-type: none"> • See response to PO1354 regarding highways • See response to PO9488 regrading infrastructure and wildlife • See response to Question 40 regarding the travellers site

						<p>the countryside in jeopardy. My main concern is also the infrastructure costs. Caverswall Old Road is a narrow Lane which is already a hazardous area at times with the amount of traffic that passes through the lane which is also single track in places. Vastly increasing the volume of traffic on that lane would only make the situation detrimental to all involved. This brings me onto the additional traffic & proximity to the railway line & the junction. I don't believe with the extra traffic these surrounding areas would be able to cope, leading to major congestion within the proximity. Then there's the lack of appropriate access to the development, additional noise pollution, no footpaths or street lighting and general safety for residents. Other issues which form my objections are the major strain on local amenities. Local schools are already averaging 30 pupils plus per class, waiting upto 2 weeks for a Doctors appointment or longer to see a dentist. I genuinely believe there are far more appropriate places for a property development around the Staffordshire Moorlands area which wouldn't have a direct affect on people, families or Greenbelt land.</p>

PO876	mr jonathan broadhurst				Object	If affordable housing is needed in this area, this type of housing would not fit in this the surrounding housing. Building more housing in this area will place an additional strain on the local infrastructure, including the highways and schools. The lane adjacent to this site is very narrow with a number of dangerous narrow points along it. The additional vehicles that this number of extra houses would place upon the local highways would cause a significant problem. These narrow lanes were not designed for the amount of traffic currently using them, they cannot cope with a significant increase. Caverswall Road does not have pavements on both sides of the road, making it a necessity to continually cross over. Pedestrians would be put at more risk through the increased traffic. There are a number of blind bends on this road that are dangerous enough as it is. Exiting Caverswall Road at the busy junction with Uttoxeter Road by the level crossing is already hazardous and difficult to do given the current amount of traffic. Any increase of users coming from the proposed housing on this site would cause significant problems and increased dangers, especially for the children walking to and from Blythe High and Springcroft Primary. There are no pedestrian crossings near to this junction.	<ul style="list-style-type: none"> • See response to PO1354 regarding highways • See response to PO9488 regrading infrastructure • Any new development taking place will be subject to design policies contained within the new Local Plan which seek to ensure that appropriate for the location and does not harm the character of the area

						<p>your required housing need in Blythe Bridge, these two sites will significantly outweigh the benefits of your core strategy requirements. The closeness of the two sites (BB054 and BB041) will undoubtedly have an enormous impact on roads, traffic and transport as well as noise levels to surrounding environment, due to the large clusters of proposed housing. The roads referred to are already narrow, have no footpaths in places, and lead to junctions that are already with limited visibility and safe access. the schools would possibly cope but the concentration of these two developments has a longer, larger impact to everyday living. The landscape for these numbers of houses will again be affected by lessening natural wildlife and birdlife. In one statement you want to meet sustainability, control of environment issues but consider two heavily numbered housing clusters to be more preferable in meeting your SHLAA, but will surely have a detrimental impact on all sections of the existing community because you have extended your housing needs in two close sites instead of spreading the housing needs (over the next plan period) in a more fair, proportionate, environmentally friendly future for the area. I hope you will consider the above and view your current proposals, in view of the late addition of land BB041 to your Local Plan in a transparent, democratic, fair way.</p>	<ul style="list-style-type: none"> See response to PO9448 regarding wildlife
PO1262	Mr W Harper				Object	<p>Insufficient infrastructure and insufficient drainage this was mooted in the late 1960s and was turned down then for the same reasons the worst place a travellers site boundaries by Blythe Bridge village hall a children's play area and 2 mot garage within a short distance</p>	<p>See responses to question 40 regarding the traveller site</p>
PO9631	Mrs K Robertson				Object	<p>Letter objecting to Preferred Options sites TR002, and BB041 (correspondence sent to Bill Cash MP attached): site currently designated as green belt land, and is therefore unsuitable for a development of this scale [Government NPPF Policy]. site is a massive and very obtrusive development which would be to the permanent</p>	<ul style="list-style-type: none"> See response to PO9945 regarding green belt The Landscape, Local Green Space & Heritage Impact Study concluded the site was of low landscape sensitivity it stated "Site comprises fields to the north of the settlement, sloping down from Caverswell Old Road towards the

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						detriment of the rural landscape site would impact on the landscape setting of the area. For this reason should be categorised a 'C' [like BB049 and BB064 were] There are no pavements for pedestrians on Caverswall Road and Caverswall Old Road in the vicinity of B041. All road junctions in the vicinity of BB041 are very narrow..large sections of Caverswall Old Road are simply too narrow to accommodate existing traffic, let alone 70 new houses, this restriction to the flow of traffic extends for at least 300m down Caverswall Road towards Blythe Bridge station, Caverswall road could not accommodate the traffic generated by a development at BB041. the road junction between Caverswall Road and Uttoxeter Road is dangerous to both motor vehicles, cyclists and pedestrians, as there is no clear view of oncoming traffic when attempting to exit Caverswall Road and make a right turn (west) across the level crossing on Uttoxeter Road. Any increase in traffic will lead to further accidents. site would be detrimental to the rural character and quality of the area. The visual and acoustic privacy of existing immediate residents will be decimated.. [Letter to Bill Cash also attached re-iterating objections].	<p>settlement edge (rear of properties on Caverswell Road). The site is generally screened by existing development; vegetation (particularly the hedgerow on Caverswell Old Road); and topography, as the land continues to rise to a ridge to the north of the site, thus screening long distance views from this direction. Development of the site would fit in well within the existing settlement form, and would create a well defined, vegetated settlement edge.”</p> <ul style="list-style-type: none"> • See response PO1354 regarding highways • See response to PO876 regarding scale of development

						<p>plot BB041. My objections, although not exhaustive are:- The only access road (Caverswall Old Road) is a single lane carriageway, and has no pavements. With the above road the only access point, a significant increase in traffic movement would be realised, along with what realistically would be an increase in potential accidents both vehicle to vehicle and more frightening, directly with the general public travelling by foot or bike. This road is currently used by a number of pedestrians from the village as two popular local recreational facilities are located along this road, Heath House Farm and Foxfield Railway, and the increase of traffic on this route would dramatically increase the risk of serious injury to local people. BB041 and its adjacent field are pasture lands and house a significant amount of wildlife. With the entire proposed area being surrounded by at least a dozen oak trees, old and all holding preservation orders. Buzzards have been nesting for several years in the above mentioned oak trees, along with pheasants, herons, not to mention numerous plants, shrubs and hedgrows. There would have to be a major survey and infrastructure work undertaken to assess the possibility of building on this land. This would have long term consequences on both land and local wildlife that could be damaged forever. The proposal for building on BB041 would definitely realise a reduction in grazing areas for local cattle. This proposal brings too many infrastructure issues to make it a sound proposal, surely there are more suitable and safer areas to develop within the Forsbrook/Blythe Bridge area that have better links to our road network. One particular plot is TR002 which I believe to be far more suitable for a residential development, particularly due to the road access, as this would reduce the need for any additional traffic to come through the village as access could be made directly from the A50 via the A521. I am also particularly annoyed at the fact that the</p>	wildlife

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						original consultation, where the area was apparently given preferential status, was done without any residents knowledge, and we were unable to voice our objections at this initial stage. I would therefore appreciate this proposal being looked at again, and the above points taken into account before a final decision is made.	
PO1475	Mr T Brian				Object	<p>Please accept this letter of my comments and objections to the proposed housing development in Forsbrook, particularly BB041 and the travellers camp TR002 The field is green belt and should remain so as it has onto been proven that more housing is needed in forsbrook, which at this time is a village To develop on green belt requires exceptional circumstances. I don't believe this is the case. None of the residents in Manifold Road, Trent Road, Dove Road, Hillside Avenue in the immediate vicinity of BB041 have been notified by any communication from SMDC or its planning department. This could have been in the form of flyers, newsletters, trade locally magazines etc. There has been no postal communication of the intended proposal. It may have been decided that more housing is required in SMDC, but given the size of the area there are certainly more suitable locations than BB041. All properties in Manifold Road which back on to BB041 will be devalued as they will lose the privacy and views from there back garden. It could put some of our younger and most recent residents in Manifold Road at significant risks of negative equity. Trading for health house and garden centre and Foxfield railway could be significantly reduced as its present visitors have a perception of being in the countryside, which in fact are green belt. Due to the location of forsbrook and the fact that it is a village with Ltd amenities and most families with younger children find necessary to own and run 2 cars. More new housing will create more traffic problems. At present the section Caverswall Old Road which was affected is actually a country lane with passing places.</p>	<ul style="list-style-type: none"> • See response to PO9945 regarding green belt • See response to PO9109 regarding consultation • See response to PO154 regarding property values and loss of views and residential amenity • See response to PO1354 regarding highways • See response to PO9448 regarding infrastructure • See response to PO638 regarding flooding • See response to question 40 regarding the travellers site

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>This section of road has a national speed limit. Roads used to access this area are country lanes. During school opening times these roads are at present extremely busy. Winter months create more problems using them, Snow ploughs and gritter's would be needed more frequently. That said these roads are part of our area and are wholly acceptable to the current residents my side of forsbrook. To develop them would completely change the area of this countryside. Creating a new junction at Caverswall Old Road will require major development of this roadway. More houses on Caverswall Road area will create even more delays for the vehicles traversing and joining the A50 at blythe bridge railway crossing. The 2 regular trains each hour 7 days a week already cause chaos. Roads are not too good whichever direction you go in plus they are prone to local flooding.</p>	
PO9160	Mr Joseph Rickard				Object	<p>Please may I give my objections to the building of houses on the plot of green land at the top of Churnet Road Forsbrook. This objection is late because I have been out of the Country. I am a long standing resident of Churnet Road. The plot in question is well kept grassland with mature trees with a long standing public footpath running across it. This gives a pleasing and aesthetic value that to the locale of Caverswall Old Road, Trent Road, Churnet Road and Hillside Avenue. It provides the only readily available recreational space for residents and children. The school grounds are nearby but they are not for public use. To remove the public footpath and uproot trees and the grassed area to build houses will deprive local residents of the free open space that has been used over many years. To do so could be in breach of their Human Rights. Some years ago palisade fencing was erected around this area by some person who no doubt was after taking the land for personal use. However the local council stepped in and quite rightly saved it. So why is the council now suddenly proposing to make a 'U' turn to try and do the same? There are other</p>	<ul style="list-style-type: none"> • See response to PO9631 regarding landscape • See response to PO9154 regarding recreation use of site • See response to PO182 regarding the need for site allocations on greenfield sites • See response to PO1354 regarding highways

						'brown sites' that could be developed in a sensitive way. Why not explore this option instead of destroying our quality of life by taking away this small open space by cramming in more dwellings. Building of houses on this small plot will increase what is already a congested area. The narrow roads will not be able to support additional residential traffic and parking that is also used by parents when bringing their children to and from a large school complex.	
PO1380	Mr John Dougherty				Object	Proposed development of land for housing site BB041 (land adjacent to Caverswall old road Blythe Bridge) I want to object strongly to the development of this green belt site for housing. Your records will show that I have objected previously to the proposed development of this at these sites BB063, BB086, BB027/28, BB040. My objections against the development of these sites apply equally to site BB041. Hence to avoid repetition I would be grateful if you could apply my previous objections.	<ul style="list-style-type: none"> • See response to PO9945 regarding green belt
PO312	J Gillman					Regarding BB041. There are several objections to the dept. of this site. There are already problems with flooding given the lie of the land. Further housing will reduce natural drainage given increased hard surfaces. There are already at least three permanent water holes at the lower end of the field in question. There are in addition at least four established trees which have a protection order placed on them and which will make it impossible to widen Caverswall Old Road and therefore create an even greater bottleneck as increased traffic will have to negotiate a way round tight bends where visibility for both motorists and pedestrians will constitute a greater danger to all concerned. Two badger setts exist on the proposed site which are protected. Traffic is already a major problem at the junctions of Caverswall Rd, Caverswall Old Road and Uttoxeter Road. Increased traffic will lead to further congestion especially as trains cross at the level crossing every 30	<ul style="list-style-type: none"> • See response to PO 638 regarding flooding • See response to PO9448 regarding wildlife • See response to PO9154 regarding highways

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						minutes. In addition pedestrians have no adequate footpaths down Caverswall Rd and Caverswall Old Road. Without significant widening of roads and pavements the risk to life and limb can only increase.	
PO1347	Ms K Dewey	Staffordshire Wildlife Trust			Object	Site BB041 has not been covered by the Extended Phase 1 Habitat Surveys. MAGIC http://www.magic.gov.uk shows the two north-western fields within this site to be 'Good quality semi-improved grassland'. The entire site is in a Higher Level Stewardship scheme, indicating that habitat quality and diversity could be higher than on average farmland. From aerial photos and photos sent to us by residents, all the fields within the site look to be potentially diverse, or at least not intensively managed. From aerial photos and Google Streetview, the hedgerows look to be potentially diverse, with good structure and contain mature trees. There are two ponds on the site, which could potentially support great crested newts and other amphibians such as Common Toad (priority species). A number of birds have been recorded in the area including priority species Dunnock, Bullfinch, good populations of House sparrow and Skylark. The site could potentially be of high environmental value and needs to be assessed against the Staffordshire LWS criteria.	<ul style="list-style-type: none"> Comments noted the Council is undertaking a further ecological assessment of the site the results of which will inform the decision regarding the suitability of the site for allocation
PO9509	Mr Chris Stevenson				Object	Summary of full representation (attached) Primary reasons for objection are: BB041 is currently designated as greenbelt land and therefore unsuitable for a development of this scale. It is a massive and very obtrusive development. BB041 would impact on the landscape setting of the area. There are no pavements for pedestrians. All road junctions in the vicinity of BB041 are very narrow. Caverswall Road could not accommodate the traffic generated. The road junction between Caverswall Road and Uttoxeter Road is dangerous to all users. BB041 would be detrimental to the rural character and quality of the area. Visual and acoustic privacy of existing	<ul style="list-style-type: none"> See response to PO9945 regarding green belt See response to PO9631 regarding landscape See response to PO1354 regarding highways See response to PO876 regarding scale of development

						immediate residents will be decimated. Proposal contradicts previous statements made by SMDC on the protection of the green belt.	
PO351	Mr Stuart and Norma Rushton				Object	<p>The proposed housing development off Willfield Lane has a number of issues that make the site unsuitable for housing development. Willfield Lane is narrow and at peak periods it is hazardous, more traffic will make this problem worse. Visibility from Fairfield Avenue and Meadow Road is impaired when cars and larger vehicles are parked on Willfield Lane. Extra traffic will make the situation more dangerous. Residents have to use their own transport as the bus service has been cut. In bad weather the existing drains and sewers in Brown Edge are unable to cope with the present number of houses. Further housing will make the problem worse. The residents of Brown Edge have to wait for two weeks to get a doctor's appointment. More residents will mean longer waiting time. We are fortunate to enjoy abundant wildlife, foxes, bats, pole-cats, badgers and many types of birds. These creatures will lose their habitats if building work goes forward. We live in a beautiful village, its character will be lost with more housing, please do not allow this to happen.</p>	<ul style="list-style-type: none"> • See response to PO1354 regarding highways • See response to PO638 regarding flooding • See response to PO9448 regarding wildlife
PO1387	Mrs Patricia Powell				Object	<p>The site is bounded by narrow lanes which make driving more challenging especially as pavements are virtually non-existent. I believe several trees edging the lanes are subject to its preservation order so widening the roads to allow for extra traffic will be problematic. To provide access to this site will only increase to congestion leading to further delays especially when joining Uttoxeter Road where the level crossing provides an effective barrier to free moving traffic approximately every 30 minutes. We have regular visits from the badgers that have setts in the fields which will be destroyed by this proposed development. Flooding is an increasing problem and further building with consequent reduction of natural grass and soil surfaces will serve to make flooding</p>	<ul style="list-style-type: none"> • See response to PO1354 regarding highways • See response to PO638 regarding flooding

						more likely	
PO1391	Ms Brenda Hewitt				Object	<p>This is an extension of the boundary and land is green belt designated. The proposed building of 70 houses will impact on the local roads which do not cater for the existing traffic. Congestion has been observed and documented by the Parish Council at the junction of the Caverswall Road and Caverswall Old Road and Uttoxeter Rad where the railway crossing is would cause. Pavements are inadequate and nonexistence in places on Caverswall Road and Caverswall Old Road. A new housing system would cause chaos on the narrow road system. Noise pollution would increase. Lighting will disrupt bats flight paths. Animal life will be affected and bird's life with feeding areas developed. Schools will not able to cope with the no of children. Dr's surgeries are full to capacity. The village cannot sustain more houses and vehicles which with the proposed 70 houses could be more than 140 cars. I strongly object to this proposed housing site.</p>	<ul style="list-style-type: none"> • See response to PO1354 regarding highways • See response to PO9448 regarding infrastructure • See response to PO9142 regarding pollution
PO1064	Mr David Nixon				Object	<p>This new site has all the shortcomings of the previous sites with regard to infrastructure and flood risk. It has access only from Caverswall Old Road and all traffic would be concentrated on this. It slopes towards the Uttoxeter/ Blythe Bridge station junction which has been highlighted as an are subject to flooding. In contrast there are immediately to the East has two long road frontages and 5 connections to the road network. These would facilitate a diffusion rather than concentration of traffic. There is also scope here for the integration of a SuDS framework to attenuate surface water flows. This directly responds to the Environment Agency policy in "site assessment,key issues" This alternative site has shorter easier transport links to Forsbrook, particularly for pedestrians which has relevance for the affordable housing component. Most importantly this site would be sustainable and deliverable within the plan period, characteristics</p>	<ul style="list-style-type: none"> • See response to PO638 regarding flooding • See response to PO9448 regarding infrastructure

						which are not obviously apparent for the other sites	
PO1268	Mr G Hulme				Object	To many houses already and do not want a traveller site on my doorstep	Objection noted
PO1242	Mr J Millar				Object	Traffic is already extremely heavy on this road especially due to the fact the road is very narrow. Also, there is no public pavement for pedestrians which could result in accidents. Further traffic volumes will be dangerous Ref – TR002 the area is already overcrowded with traffic congestion compounding the problem	<ul style="list-style-type: none"> See response to PO1354 regarding highways
PO1285	Mr and Mrs A Powell				Object	village plan ie site around the village breach road for playing field + building these are my preferred options. NO BUILDING ON GREEN FIELD SITE	Objection noted
PO8980	Mr and Mrs John David and Susan Margaret Jackson				Object	We also consider that as there is already a development at Cresswell that has been approved for in excess of 160 homes and planned development to the extension of the business park there is no room for any further development to put added strain on the schools in Blythe Bridge, Tean and surrounding areas. Indeed the Primary school at Draycott is no longer there. There are no schools or any nearby services for the expansion of Cresswell so the already stretched services in Blythe Bridge will be expected to pull in the slack. This takes us on to the proposed housing sites BB041 /ADD011 and BB054 in Forsbrook/ Caverswall Road and Draycott Old Road. These sites are in the green belt and should not be used except in the most extreme circumstances. Furthermore Draycott Old Road just can't take the extra volume of traffic that a development such as this will generate. As for the area of green belt BB041 the road leading to that is the Same in as much as it's a single track for the most part. Our green belt is precious and must be preserved for future generations and not chipped away at until we have nothing left. We are most fortunate to live in a pretty rural area and it will be a sad day indeed when it's all gone. The junction in the centre of the village is already overcrowded and traffic is held up constantly with lorries etc. making their	<ul style="list-style-type: none"> See response to PO182 regarding the need for site allocations See response PO9448 regarding infrastructure See response to PO9945 regarding the green belt See response to PO1354 regarding highways

						deliveries to Tesco express and the Co-op in Blythe Bridge, which usually coincides with the school run.	
PO9478	Mr and Mrs Moore				Object	<p>We are writing to vehemently object to the proposed allocation of land off Caverswall Old Road, Forbrook for housing development. Firstly, having lived in Manifold Road for 22 years we are fully aware of the present difficulties re volume of traffic at the junctions of Uttoxeter Road/Cheadle Road and the junction by Blythe Bridge railway station where Caverswall Road meets Uttoxeter Road, particularly in the mornings and evenings. An additional 70 houses will only add to the chaos and create huge traffic delays for local people. The lane itself off which the housing development is proposed is exactly that - a country lane - and is dangerous at the best of times. There are no pavements and vision is very limited meaning that cars have to continually stop to allow each other to pass. At drop off time for Blythe Bridge High School the traffic coming to and from both directions is horrendous. Adding to this would just exacerbate an already dangerous situation. Proposals to widen the road would not offer a solution as the bottlenecks at both ends of the lane would still exist. Secondly, we wish to object in the strongest terms against any development that would disturb the rich ecology of the area. This land is inhabited by a real diversity of wildlife and it would be a travesty if the habitats of these animals, plants and trees were to be destroyed. If you actually took the time to walk along the lane, you would see established trees and hedgerows that house a huge number of animals that makes our village - as it stands - a pleasure to live in. Thirdly, we would like to ask if anyone has considered the issue of drains that, in times of heavy rain are unable to cope with volume of water in the area around the approach to Blythe Bridge railway station from Caverswall Road which is like a river with water pouring up out of the drains. While we understand that a</p>	<ul style="list-style-type: none"> • See response to PO1354 regarding highways • See response to PO9448 regarding wildlife • See response to PO638 regarding flooding • See response to question 40 regarding the traveller site

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						Parish plan has had to be put forward there is a clear alternative for housing development in the area that would have no detrimental impact on roads, drains or wildlife. This is the land (jackson's Yard) formerly proposed as a traveller site, which has direct access to the A50 and would have minimal impact on the green belt. We understand that the current owners would sell this land as long as it was used for housing not travellers. Local feelings are running very high and confidence in the SMDC is very low considering the way in which this whole issue has been handled. We have never been informed directly by either SMDC or the Parish Council regarding this issue and have relied on neighbours and homemade fliers to bring it to our attention. I hope that trust in those whom we expect to protect our interests will be rebuilt and our views listened to and respected.	
PO1381	Mr Philip S Price				Object	Proposed development of land for housing site BB041 (land adjacent to Caverswall old road Blythe Bridge) I want to object strongly to the development of this green belt site for housing. Your records will show that I have objected previously to the proposed development of this at these sites BB063, BB086, BB027/28, BB040. My objections against the development of these sites apply equally to site BB041. Hence to avoid repetition I would be grateful if you could apply my previous objections.	<ul style="list-style-type: none"> See response to PO182 regarding green belt and the need for site allocations
PO9471	Mr and Mrs Canner				Object	We wish to object to the planning of house building on the above plot BB041. Our concerns as residents of Caverswall Road are as follows: 1 This land is greenbelt land – there is a vast amount of brown belt land available throughout Staffordshire which would be improved vastly if housing was built, but green belt land should be cherished as it provides enjoyable areas for wildlife, walkers, dog owners etc. to enjoy. 2 The area indicated would create considerable access issues. Currently Caverswall Old Road is a complete bottle neck at rush hour periods as it is only one	<ul style="list-style-type: none"> See response to PO182 and PO9945 regarding green belt and the need for site allocations See response to PO1354 regarding highways See response to PO638 regarding flooding See response to PO9448 regarding wildlife See response to PO9631 regarding landscape impact

						<p>car wide with occasional passing places. The junction with Caverswall Road has visibility and width issues causing further problems. 3 There are no pavements in either Caverswall Road, or Caverswall Old Road which endangers the lives of pedestrians and drivers. 4 The lanes surrounding this area are small, narrow country lanes and the increased vehicular and pedestrian movements would be a major cause for concern increasing the risk of accidents. 5. The country lanes are prone to flooding cutting off access... most recently on March 28th 2016 when Caverswall Road was flooded and blocked by stranded vehicles in two places... at the bottom of Caverswall Road immediately after turning from the railway lines and also further up the lane where a second stranded vehicle blocked the lane. This caused major traffic issues and difficulties for drivers having to turn around in tiny country lanes. The other major concern was that the traffic was backing up onto Uttoxeter Road and across the railway lines... and this is a regular occurrence. This is so dangerous and Network Rail must also have concerns. 6 The land being considered is also home to badger setts and lots of other wildlife, this habitat should be secured on ecological grounds. Badgers visit my garden so I know that they have setts in the adjacent fields. 7 The proposed housing would be a blot on the countryside landscape eating into what little remaining green belt land surrounds us. Horrendous! 8 As a Civil Engineer, and in my opinion, I doubt that the proposed land would be viable for development as the natural fall of the ground would make drainage, both surface water and foul, almost impossible to achieve as the lower end of the land is completely surrounded by private housing. The housing is mature individually built detached properties, not of the "estate" type where you would expect mains drainage to have been laid to cope for future development. Please consider</p>

						my objections and the future of a corner of local countryside that may be lost forever.	
PO350	Ms Shirley Hulme				Object	<p>We wish to register our opposition to the proposed development of the site in Willfield Lane Brown Edge, numbered BE041. We feel this site is totally unsuitable for this proposed housing development. Our objection is due to its position on a very narrow country lane and the increased number of vehicle journeys it will generate in an area that already has a propensity for road traffic accidents. The lane in question connects the Brown Edge area with Stockton Brook and the A53. In places this road is only wide enough for one vehicle to travel along at a time and, as a consequence of this, peak period usage is already treacherous. The possibility of a further 80 cars plus using the lane will only further aggravate this already hazardous situation. We are also of the opinion that Fairfield Avenue will become a short cut for these additional vehicles wishing to access the A53 for journeys to Leek and beyond. Fairfield Avenue already has many cars and, indeed, larger vehicles parked outside its homes and the additional flow of traffic will make it a dangerous area for all concerned. Those who will use the exit of Willfield Lane onto High Lane will find that they already have very bad visibility in the easterly direction made all the more dangerous by the volume and speed of the traffic using this major arterial road. It is a dangerous and stressful manoeuvre which, again, is not going to be helped by an increase in the usage which BE041 being developed will create. At the present time the change in weather patterns causing torrential downpours of rain is a problem for residents to the west of Willfield Lane due to the antiquated drainage system not being able to cope with the huge amounts of surface water. Flooding has been reported in the houses in Meadow Road and Caroline Crescent with manhole covers being lifted and raw sewage actually coming up in some homes. Increased housing on the Willfield Lane site will</p>	<ul style="list-style-type: none"> • See response to PO1354 regarding highways • See response to PO638 regarding flooding • See response to PO9448 regarding wildlife • See response to PO9154 regarding residential amenity

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
PO1028 5	Janet Carnall				Object	<p>remove a large amount of natural water runoff exacerbating the problems now being experienced. The narrow lanes to the North of the site are already suffering due to the lack of parking facilities as they are unable to additionally park outside their own homes. They are, therefore, unsuitable for increased use as a thoroughfare and would not be safe or practical as such. Additionally, this site is one of abundant wildlife which gives great pleasure to those people who live on its boundaries and who use the field for leisure activities. There are bats, badgers, foxes, deer and a myriad number of breeds of birds that will lose their habitat. This will greatly decrease the standard of life for residents. We in Fairfield Avenue and Willfield Lane do not want to be overlooked by houses built in this area. The terrain of BE041 is higher than our homes and we do not want to lose our privacy and the peace and quiet we currently enjoy. The increase in traffic is also unwanted by all concerned and we are most unhappy that our life and the area we love will be blighted by this proposed development. We look forward to receiving your written response in respect of the above issues as a matter of urgency.</p> <p>Access to this site is to narrow country lane of Caverswall old road, which is in several places single car width with making shift passing places. There are no foot paths or curbs or street lighting for pedestrians to walk along this lane cautiously to reach Forsbrook village and sightedness are poor. Generation or more traffic (100+ cars/vehicles) would cause problems and increase in noise. Where this road meets Caverswall Road at a T Junction, the width is restricted to one car and sight lines are also poor. Flooding infrastructure highways cost viability Flooding of Caverswall road where it meets Uttoxeter Road to create a T junction is and always has been a major problem. It is impassable, happening</p>	See response to PO1354 regarding highways

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>regularly and forcing the residents to divert into Blythe Bridge village through Forsbrook back along Caverswall Road, passed this proposed housing site generating more traffic problems. The sewage/drainage systems on the road is already overwhelmed with the slightest rainfall running off the fields from top junction with Caverswall Old Road, manhole covers are raised with the force of the water and sewage spills onto road and sidewalk making it a health and safety issue for existing residents, pedestrians and local school children. Development of site BB041 will only exacerbate further. Major Investment of SMDC /Highways/Seven Trent is much needed to improve the road system and indeed the road surface as it is in a very sad state at the moment. To add to this, there is also the dangerous highways problems which have arisen from Blythe Bridge Railway who do not use the carpark instead they park up the length of Caverswall Road for the whole day, causing greatly reduced road with in the road creating a bottleneck system with substantial tailbacks of traffic even queuing onto the rail crossing itself. Landscape – Inappropriate development – the proposal concerned is a change of use of land and would adversely affect the character and opens of this area by extending the boundary. Residents only wish to protect this semi-rural environment.</p>

PO9680	Brenda Matthews				Support	(Summarised) Support the Council's proposals for the housing development that would be situated less than 100m from the opposite end of our field. We currently live in Weston Coyney but would love to have the opportunity to live in Fosbrook on our land and be part of the growing developments in the surrounding areas.	<ul style="list-style-type: none"> • Support noted
PO781	Dr Jules Allt				Object	<p>1) Due process in current consultation not followed - this site was not appropriately publically highlighted during the consultation period. The official SMDC sign was put up in the afternoon of 3 May, but removed by someone on the same day. We telephoned the appropriate department of SMDC who promised replace the poster, but it has still not been replaced, less than 24 hours before the consultation period is due to end. This will have adversely impacted on the number of comments made about this site. 2) Loss of amenity. There is a public right of way across the site, in almost constant use by the public for walking / dog walking allowing enjoyment of the countryside. Development of the site with 70 properties would significantly increase traffic noise on Draycott Old Road and spoil the tranquil nature of the lane 3) Loss of amenity - privacy. Part of the site is raised above road level and properties developed on this part of the site be above and would overlook the current properties on the lane. 4) Flooding. During even modest rainfall, a significant amount of water flows down the lane past BB054. Concreting over this large soakaway fielded area, which drains into the River Blythe that passes around the boundary of BB054 has the potential to increase this flood water. There are a number of well known recent flooding incidents of Forsbrook village which would have been worsened by this. 5) Road safety for pedestrians. There is no pavement from BB054 into Forsbrook village, and the lane is too narrow to allow addition of a pavement past existing properties. 70 residences would include a large number of school-aged children amongst the residents who should be walking to school. Lack of a safe walking route to school would encourage car usage and hence traffic and contribute to a growing childhood obesity problem. 6) Road safety for motor vehicles. Because of the curve in Cheadle Road opposite The Butchers Arms, at the junction between Draycott Old Road and Cheadle Road (at the village end of the lane) it is almost impossible to see oncoming traffic from the Cheadle direction. 7) Road safety for vehicles and pedestrians exiting the development / on Draycott Old Road. The lane is only single track in most places, and has a bend at BB054. I find it difficult to see where there could be safe access to the site both during development and following occupation. 8) Excessive scale of development for a small country lane 9) Development of the site would entail loss of natural habitat to wildlife, including hedgerows and trees. 10) Lack of infrastructure locally for increased number of residents, lack of bus transport, schooling, policing, primary care facilities and general road congestion.</p>	<ul style="list-style-type: none"> • The consultation was widely publicised and included a flyer being sent to all households and businesses in the District through Royal Mail. High levels of responses have been received by the Council from residents which suggests that a significant number of residents knew about the consultation. The Council cannot be held responsible for the removal of site notices by third parties. • Public footpaths can be maintained or redirected • Issues such as overlooking, traffic generated will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application • The Environment Agency have not raised any issues with this site. SCC as Lead Local Flood Authority state that part of the site is within a floodplain. They do not object to the site subject to a condition requiring early engagement with the Environment Agency and a flood risk assessment • Highways Authority advises that access at the eastern end of the site looks possible as levels are less of an issue than from the west. Adjacent to the site Draycott Old Road is only single vehicle width in places and has no footway provision. • There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites have been proposed. Prioritising brown field land over greenfield in all circumstances is not part of Government policy • Any new development taking place will be subject to policies contained within the new Local Plan, which seek to protect the character of the area, consideration will be given to the scale of development and its impact on the surrounding area. • New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas. • National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
							<p>the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact of proposed development on school capacity, what additional capacity is needed and how this can be delivered.</p> <ul style="list-style-type: none"> • The Extended Phase 1 Habitat Survey 2015 assessed the present and potential ecological value of the proposed site allocations. It found that the site was mainly species poor improved grassland grazed by cows with 2 trees with bat potential.
PO88	Mr Barry Cartlidge				Object	<p>According to the proposed site for a housing development I realise that the land proposed for this site is situated between Uttoxeter Road, Draycott and Draycott Old Road , Forsbrook. My concern is the access to this site – I presume that access would be virtually impossible to and from Uttoxeter Road due to the distance from that road . Therefore I am again assuming that access would have to be via Draycott Old Road which even at the present time is not suitable for the traffic that it carries. This road is used generally as a short cut for traffic wishing to avoid the heavily congested area around Blythe Bridge village. It is impossible to get two vehicles passing side by side without extreme care and in some places along the road only one vehicle can travel at a time. We are therefore having a further 70 houses built and probably a minimum of a further 140 vehicles travelling in the area. Having lived in Forsbrook for the past 35 years I have seen a gradual increase in the number of vehicles using the roads in the area. Travelling from Forsbrook towards Blythe Bridge , even at the quiet times of the day you have to queue for some time to get on to Uttoxeter Road at the junction of Cheadle Road. The junction cannot cope with the volume as it presently stands today so a further increase in that volume would have a knock on effect from Draycott Old Road, Cheadle Road and into Blythe Bridge. Traffic turning right from Draycott Old Road towards Cheadle would be doing so at their own risk as it is impossible to see any distance prior to making the 2lderly2u. I would suggest that the planning committee travel along Draycott Old Road into Forsbrook before making any recommendations. On conclusion I feel that the whole road 2infrastructure should be investigated prior to any consideration for the further additional housing . Safety to all road users is paramount and after having a pedestrian crossing application refused in Forsbrook I feel that safety is being jeopardised , especially for school children and the 2lderly wishing to cross this already dangerous road.</p>	<ul style="list-style-type: none"> • See response to PO781 regarding access
PO1355	Mr R Goodall				Object	<p>BB041 (50 Housing development. Caverswall Old Road) is a late addition to the local plan. Consequently giving local residents less time to be aware of the proposed green belt site. And your</p>	<ul style="list-style-type: none"> • See response to PO781 regarding infrastructure and highways

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						proposal of 50 houses. The two proposed/preferred question as above as well as Draycott Old Road 70 new build are to be taken into the greenbelt and not infilling. I question their sustainable viability because of your core strategy criteria with regard to infrastructure. Your two preferred options will create a lot of pressure to the Cheadle Road to Blythe Bridge– 70 new builds) with both sites being either side of that same road, and are both only a short distance from the Junction of Caverswall old road. Caverswall old road/draycott old road are traditional rural roads with narrow widths and the sites will have an impact for pedestrians, cyclists, horse riders, disabled. Will two new sites provide enough green space to meet environmental /community leisure expectations? In the Forsbrook conurbation once both sites are complete?	
PO9946	St Modwen Development Ltd	St Modwen Developments Limited	Ms Stacey Green	Barton Willmore	Object	Email containing letter and Evidence Report submitted [both attached to PO9838]: Our comments relate to the absence of evidence presented by the Council to justify the need for Green Belt release, in the context of there being alternative land i.e. Blythe Vale, available for development, but not assessed by the Council. Site BB054 is identified for release from the Green Belt for housing, however given the proximity of the River Blythe and the nature of the constrained points of highways access, onto a narrow country lane, we question the appropriateness of this allocated site, compared to the availability, suitability and achievability of Blythe Vale. In summary, we believe that additional housing sites should be identified at Blythe Bridge and Forsbrook but also that exceptional circumstances have not been demonstrated for BB054 and BB041. BB054 in particular appears to have additional technical constraints that have yet to be explored.	<ul style="list-style-type: none"> The Green Belt review considered the overall impact on Green Belt purposes of the development to be limited. It recommended the site was considered for release only in context of wider land in this location It stated that the site was <i>“Not physically well enclosed (being hedgerows on three sites) but reasonably visually well enclosed from Draycott Old Road. Development would create an incongruous eastward extension, leaving an illogical tongue of Green Belt to the west. See also wider land to the south of Draycott Old Road/East of Tater Lane for a more comprehensive masterplanned approach to this area.”</i>
PO1390	Mr Roger Melville				Object	Firstly this is open grassland with no defensible boundaries on three sides leaving room for future village sprawl. I am aware green belt land must be used in order to accommodate future housing needs but still there must be sites within this area that would give less impact on the Green Belt if developed. Secondly Draycott old road is a narrow carriageway, most of the length one car width. It is as used as a rat run to the A50 commuters and parents on the school run. It frequently floods following this excessive rainfall and has no footways on either side. More cars using the road following this housing development would make this road extremely dangerous. I cannot believe Highways have passed this. I feel these concerns are valid planning reasons for this site to be removed as a preferred option.	<ul style="list-style-type: none"> See response to PO9946 regarding the Green Belt and PO781 regarding highways
PO260	Mrs S Allt				Object	Housing increase within Forsbrook and Blythe Bridge to the level suggested will put extra pressures on local schools there will not be enough school places for the large increase in residents. Roads within these two villages already struggle with the amount of traffic from residents and those passing through particularly at peak times the increased housing will have significant impact on these roads	<ul style="list-style-type: none"> See response to PO781 regarding infrastructure, highways, flooding, recreation use and public consultation

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>many of which are country lanes. Local services are quite limited within these villages and we no longer have a local police station. What do the council intend on doing to address these concerns prior to increasing Forsbrook and Blythe Bridge village occupants to the proposed level? BB054 Draycott Old road access from top end of lane is acceptable however this quickly turns into a single track lane, there are no street lamps down and no pavements down this lane, it is also currently a 60mph road with a number of blind bends and it is poorly surfaced all these issues would need rectifying before you could safely add 70 houses with anything from 50-140 cars to go with them! At the end of Draycott Old Road where it connects with Cheadle Road is a blind corner and the potential for increased accidents must also be considered. Drainage on this lane is poor and there have been a number of issues resulting in flooding directly from the lane within forsbrook village - removing the land/trees etc and adding houses would have a significant impact on current poor drainage issues. Can the council assure villagers that building on this site would not increase the risk of flooding as previously seen within the village? This is currently greenbelt land with a public footpath and is particularly popular with dog walkers and families as it leads to the recreation ground in Blythe Bridge 70 houses on this site would take that away from people affecting liesure/pleasure activities other than unpaved counrty lanes or paved road side where do the council propose that these people can now walk for pleasure? Scale of this development for such a small area seems ridiculous is this really necessary and the best possible site given the above issues. Forsbrook Parish Council have rejected sites BB27/28 and BB040 however it is very difficult to see why they would feel that Draycott Old Road with very similar structure is a suitable alternative. Low numbers of local residents seem to be aware of this proposed development on the lane - the SMDC yellow proposal notice at the end of the public footpath was removed the day it was put up, we do not know by whom. I alerted the Parish council and SMDC of this SMDC advised me that it would be replaced. It has not been replaced. How can local residents voice their comments if they are unaware of the proposed plans surely this contravenes local consultation.</p>	
PO10263	Mrs Christine Bratt				Object	<p>I am making observations concerning the proposal to include additional housing in Forsbrook; 1. off Caverwall Old Road - this road is a narrow county lane with no public footpath and is liable to flooding. The local school is full to capacity so it would mean more use of transport to get to other local schools not in walking distance. The traffic situation in Forsbrook and Blythe Bridge can at best be described as a disaster and when as often happens the A50 is closed it is an absolute nightmare. To suggest an increase in residents is irresponsible. On the grounds of health and safety we should not be encouraging walkers along a road with no footpaths</p>	<ul style="list-style-type: none"> • See response to PO 781 regarding highways and infrastructure

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						and insufficient room to provide them. 2. Draycott Old Road - again another country road that would only bring more traffic causing further problems and creating a great health and safety risk. The comments as detailed above also apply. In addition there would need to be major improvement to the drains both rainwater and sewage to cope with the additional burden, as well as increase in health facilities and doctors surgeries.	
PO37	Mr Daniel Newton				Object	I am objecting to the proposed site off Draycott Old Road for the following reasons: 1. The site proposed would be better suited to a brown field site or waste land, not a working farm on green belt; 2. The proposed development would have an adverse effect on the amenities of existing residents (doctors, library's, schools etc); 3. The development would be accessed via a dangerous single track road, generating traffic levels posing a threat to highway safety; 4. Inadequate space for additional pupils at local schools; 5. The destruction on local nature; 6. Would cause harm to the character and appearance of the area; 7. Impact of construction and construction vehicles would cause danger to the public on such a narrow access road; 8. Impact of construction would also cause unacceptable disturbance to local residents.	<ul style="list-style-type: none"> • See response to PO781 regarding the need for greenfield site allocation, infrastructure, highways, wildlife • Any new development taking place will be subject to design policies contained within the new Local Plan which seek to protect the character of the area • Problems arising from the construction period of any works, e.g. noise, dust, construction vehicles, hours of working (covered by Control of Pollution Acts) are not material planning considerations
PO104	Mrs Shontell Tunnicliffe				Object	I am opposed the development of this areas as I am a resident and there is not the infrastructure in place to accommodate such development. The scale of this site would dominate the local area and this is a small area. The wildlife would be affected severely and this is unfair as I believe this is in inappropriate development and is harmful to the Green Belt and should not be approved. The fields and trees are a haven for numerous British wildlife this includes a large variety of bird species including owls, woodpeckers, kestrel, sparrow hawk and buzzard. The fields are also home to hedgehogs which are in serious decline and their habitat should be protected. Foxes, badgers and pheasants are regularly seen in the field. There are numerous bats which live in the surrounding area and they are seen every evening by the residents. This is a foraging /commuting area for the bats and therefore should not be disturbed, as bats are a protected species. Heavy traffic on the A521 Uttoxeter Road which is currently very dangerous and should actually have speed cameras as it is like race track. Bringing more traffic to contribute to this as well as the traffic getting in and out of Blythe Bridge on a daily basis is just madness. The commute to get from Blythe Bridge/Draycott, to even Longton at 7am in the morning can queue from the Blythe Bridge turn off that then has knock on effect. The A50 from Blythe that links to the Uttoxeter turning is an extremely busy and dangerous junction and this alone without the consideration on the wildlife should be considered highly as it is very dangerous. I am a resident on the lane and do not personally want the landscape altered for any kind of employment as we already have enough sheds and office buildings	<ul style="list-style-type: none"> • See response to PO781 regarding infrastructure, scale of development, wildlife, highways • Loss of views is not a material planning consideration • The Landscape, Local Green Space & Heritage Impact Study acknowledged that the site had a high landscape sensitivity and any development will have to take account of the impact on the wider landscape to ensure it does not have a harmful impact

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>across Stoke and Staffordshire that can surely accommodate. Access roads for the from the A521, Uttoxeter Road, have significant issues as there is one road in and out as the train line cause chaos at the busier periods. This results in very dangerous road conditions. Several accidents and near misses have occurred due to the current volume of traffic. The situation at these junctions is exacerbated twice daily by school traffic. If the proposed development were to go ahead it would cause a significant health and safety risk to other car users due to the volume of traffic and the increase to this also the main of Blythe Bridge would be used as a rat run to avoid the tailbacks. Rural Vista / Loss of Light: The proposed development will have a severe impact on views across open countryside, as it will be visible from Uttoxeter Road, the Blythe Estate and of course the residents. Further development will result in the skyline being breached, development of this site has been discussed in the past and refused for development with Modwen wanting to change the plans. At the time Rob Ffello MP was involved and I will be making him aware of the above as the proposals then were dangerous, and still are. In the past few months he has called to the Government to build a relief road for Stoke-On-Trent as realistically the A50 is reaching the limit of what can be achieved with a road that has limited space for expansion and simply cannot handle the volume of traffic required of it. The city is in constant gridlock. By developing further is ludicrous the A50 nor A500 is suitable and all of this links to Blythe and you want to add more to this by building more. I appreciate the need to develop but it is the wrong area with insufficient infrastructure with no consideration given to the residents in the local areas.</p>	
PO434	Mrs Gillian Jackson				Object	<p>I have grave concerns regarding the proposed development of this site the main one being the amount of extra vehicles using Draycott Old Road. This road is single track with a few passing places and NO footpath. It is already used as a rat run for traffic avoiding an almost always congested Blythe Bridge. I would be interested to know when a traffic survey was last carried out on this road and at what time of day etc. Between 7am and 8.30am and 3pm to 5.30pm traffic can be heavy especially during term time in schools.</p>	<ul style="list-style-type: none"> • See response to PO781 regarding highways
PO1443	Mrs S J Malpass				Object	<p>I refer to the preferred options sites - development boundaries consultation and the housing requirement for Blythe Bridge. In particular I refer to your recent preferred options for 50 and 70 No new house sites, viz caverswall Old Road (BB041) and Draycott Old Road respectively, to fulfil proposed 120 No new homes allocated for the next 15 year development plan. I consider the impact of these two close new build sites will contribute to an over populated area around Forsbrook, and they will contravene your core strategy policy which is to ensure current infrastructure is not compromised. Both your preferred, proposed sites are in such close proximity to</p>	<ul style="list-style-type: none"> • See response to PO781 regarding infrastructure, highways and need for site allocations

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						one another it raises the question how the foreseeable impact on Forsbrook, with inevitable heavy traffic flow through the road network of Forsbrook/Cheadle/Blythe Bridge, plus surrounding road links, will cope as these developments mature. There would also be probable, substantial pressure on other necessary infrastructure amenities in Forsbrook because of your proposed concentrated preferred options, as a random example - pedestrian/leisure requirements, utility services, deliveries (expected on-line traffic that would be required to service everyday expectations of 21st century residents to 120 no homes). A more proportionate, fairer and transparent 'spread' of new housing in Blythe Bridge could still provide more community leisure facilities instead of saturating a 15 year allocation in two close proximity clustered sites. Over a 15 year period I would have expected a fairer distribution of preferred sites, with possibilities for mid to long term land bank, and I am quite frankly bewildered by your preferred, proposed sites for the next development plan. Once again I object to 70 no new build in Draycott Old Road and 50 no new build in Caverswall Old Road (BB041) for the aforementioned reasons.	
PO997	Ms Natasha Allt				Object	I use the footpath on this field to get to Blythe Bridge, and also walk my nanny's dog on this field. I also use it for running on. I would be sad to lose this lovely green area, and think the council should be supporting people to keep fit rather than building houses on this field. It would also cause a lot more traffic on Draycott Old Road which is a quiet, peaceful lane and is too narrow for the level of traffic in the proposed development.	<ul style="list-style-type: none"> • See response to PO781 regarding public footpath and highways
PO1002	Mrs Carol Harrison				Object	I use the public footpath on this site to exercise and walk my dog when visiting my relatives. I enjoy the natural beauty of the field and would be saddened at the loss of this amenity. I also walk down the lane, which is narrow with no pavement, and the increased traffic on the lane would increase the danger of this activity. Children walking to school from this development would have to walk in the road, as it would not be possible to put in a pavement because of existing houses, and that would be a risk so encourage more short car journeys, at a time when the council should be encouraging the young to exercise. Close to this site, at the Forsbrook end of the lane, it is almost impossible to safely turn right towards Cheadle, and increased traffic would worsen this. Turning left is already very congested at peak times, often with traffic backed up all the way into Forsbrook. 80-120 extra cars again can only worsen this. There is also flooding on this lane, and further downhill in the village, and decreasing the soakaway effect of this field can only worsen this.	<ul style="list-style-type: none"> • See response to PO781 regarding public footpath, flooding and highways
PO9137	Mr and Mrs M Jackson				Object	I would also like to oppose the housing development that you are proposing off Draycott Old Road for the following reasons:- * Having lived in Scarratt Drive with my parents for many years and	<ul style="list-style-type: none"> • See response to PO781 regarding public footpath and highways • Policies in the Local Plan will require an element of new

						<p>my mother still lives there now I have seen and experienced first hand how busy Draycott Old Road already is, as you are aware it's quite a narrow road which struggles to cope with the amount of traffic that already goes down it. As you are proposing that Draycott Old Road be the main entrance to the housing development, I think it will be quite hazardous and the road will struggle to cope with the amount of traffic, it will also be very disruptive to not only the people that live close by but the increased traffic throughout the village would also become a nuisance to local residents. * The turning leading from Draycott Old Road into Forsbrook is very dangerous it is a blind bend and most people choose to turn left and turn around because it is so dangerous to turn right. Increased traffic on this turning would be so hazardous, I am very surprised that no fatal accidents have already happened on this bend having had a few near misses myself from people that are going over the speed limit on Cheadle Road and coming around the blind bend, you would definitely be increasing the risk of a fatality should you allow the entrance to the housing development to be located on Draycott Old Road. Do you really want this responsibility to fall to you should something happen? * Our village is already very busy and you want to build 'affordable housing' on this plot, I question what sort of people this housing type would attract? We hold our house prices in Forsbrook because people want to buy our houses as it is currently a desirable place to live, if you were to add a load of affordable housing the residents that already live in the village would find it much harder to sell their property as the area wouldn't be as prestigious. It seems to me and my husband and to many of the local residents that you have put no thought into how your proposed plans for both the traveller's site and the housing development will affect the residents of Forsbrook, many of which have lived in the village all of their lives. Your plans are thoughtless and your actions are careless and this all seems as though it's a money making scheme for the council with no thought as to how this will impact the residents.</p>	<p>housing provision to be affordable</p> <ul style="list-style-type: none"> • See response top question 40 regarding the traveller site
PO9450	Ms Julie Lyons				Object	<p>I would like to take this opportunity to object to any further building in our village, as previously stated in my earlier objection, the services and the infrastructure cannot cope. I have lived in the village for the last 17 years and I feel that the quality of village life has somewhat diminished. Forsbrook has already lost its identity and has merged with Blythe Bridge, I don't want to end up living in a suburb of Stoke on Trent as I fear that will be the end result for our neighbour Caverswall. I cannot understand why the Council (government) want to cram developments into unsuitable locations, it should be looking for new locations and building the services and infrastructure to match. The site that has been put forward in the village will cause traffic issues on a daily basis. There</p>	<ul style="list-style-type: none"> • See response to PO781 regarding infrastructure, highways and PO9137 regarding affordable housing

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						is also a discrepancy as to the amount of houses that Staffs Moorlands requires and the differences between the two schemes that have been published haven't been fully explained to the public. If there are to be houses built will there be a restriction as to sold to local people or will it be as I fear they are sold to anyone, thus causing further problems with future housing. There has already been one large development and several smaller developments built between the two villages in the last ten years, swelling the population even further.	
PO2918	James Chadwick	Spatial Planning Policy Officer Staffordshire County Council			General comment	In Blythe Bridge site BB054 is likely to require improvements to Draycott Old Road.	<ul style="list-style-type: none"> • Comment noted
PO1275	Mr Yendole	Forward Planning Stafford Borough Council			Support	In terms of the Green Belt releases on the northern side of Blythe Bridge for housing development the Borough Council supports these proposals in the Preferred Options document .	<ul style="list-style-type: none"> • Support noted
PO9517	J.M. Belcher				Object	In the knowledge of the proposed developments, preferred options to meet your required housing need in Blythe Bridge, these two sites will significantly outweigh the benefits of your core strategy requirements. The closeness of the two sites (BB054 and BB041) will undoubtedly have an enormous impact on roads, traffic and transport as well as noise levels to surrounding environment, due to the large clusters of proposed housing. The roads referred to are already narrow, have no footpaths in places, and lead to junctions that are already with limited visibility and safe access. the schools would possibly cope but the concentration of these two developments has a longer, larger impact to everyday living. The landscape for these numbers of houses will again be affected by lessening natural wildlife and birdlife. In one statement you want to meet sustainability, control of environment issues but consider two heavily numbered housing clusters to be more preferable in meeting your SHLAA, but will surely have a detrimental impact on all sections of the existing community because you have extended your housing needs in two close sites instead of spreading the housing needs (over the next plan period) in a more fair, proportionate, environmentally friendly future for the area. I hope you will consider the above and view your current proposals, in view of the late addition of land BB041 to your Local Plan in a transparent, democratic, fair way.	<ul style="list-style-type: none"> • See response to PO781 regarding highways, need for site allocations, infrastructure, wildlife
PO9492	Victoria Stephenson				Object	It was with horror that I learned of the above proposal, the negative effects of which would be considerable for the residents of Blythe Bridge and Forsbrook. Draycott Old Road is completely	<ul style="list-style-type: none"> • See response to PO781 regarding highways, infrastructure, flooding and public footpath • See response top question 40 regarding the traveller site

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>unsuitable for the increased traffic volume which would be generated, the junction onto Cheadle road is difficult to exit with limited visibility, particularly in the Cheadle direction. This road is increasingly dangerous to cross for our children at Forsbrook school and Blythe Bridge High School, and to exacerbate this would put lives at risk. Inevitably the difficulty with the junction would also send more vehicles in the other direction along Draycott Old Road, which would be even more dangerous as this is only a narrow lane with passing places between the top of Tater Lane and Stewart Avenue, completely unfit for higher traffic volume, and highly dangerous for those who currently walk, run or cycle that way. Blythe Bridge has been subject to ongoing development over many years now - with housing being built on the site of the old Smithfield, the bottom of the High School grounds, the site of the old paper shop, opposite Glebe Close, on the site of the former factory by the Black Cock, the site of the White Cock, Off Adamthwaite Drive... Add to this the further traffic and congestion caused by the Tesco shop, and the village has now reached crisis point. To simply drive through Blythe Bridge has become almost impossible at certain times of day. The schools are already oversubscribed. So I would appreciate an explanation as to why further swathes of housing development are being dumped on our villages, whereas from the maps I can see that there are many Staffordshire Moorlands areas which will be subject to no development whatsoever. I take it the quality of life of Blythe Bridge and Forsbrook people is worth less than others? That being the case I suppose that the heartbreak and effects to my quality of life personally, will not be taken into account, but I still have to express them. Section 7 of defra's rights of way circular (1/09) state that the effect that a proposed development will have on a right of way must be considered by planning authorities. That planners have a responsibility to our 'green infrastructure'. Yet, of all the sites you considered you have chosen to take away a public footpath field which is a vital part of the lives of many Blythe and Forsbrook people. I myself have been walking these meadows all my life, and my heart will be broken should it be lost forever. This is not a footpath on a map unknown and unused, it is extremely well used and valued on a daily basis. But once my daily walk turns into a walk through a housing estate, following on to a country lane which is now dangerous and impassable for walkers, leading down the side of a travellers' site, something which has been a huge part of my life, that of my parents and of my children, will be gone forever, and much of my happiness with it. Oh and by the way, that land floods.</p>	
PO9537	Mrs Marion Wade				Object	<p>Summary of representation) I wish to lodge my objections to the change in use of this Green Belt, my reasons as follows: Infrastructure - Traffic/transport. This road is used as a short cut</p>	<ul style="list-style-type: none"> • See response to PO781 regarding highways, wildlife, residential amenity and flooding

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						and has a weight limit on it. It is a narrow road and floods at times. The junctions at the end of the road are very dangerous and parked cars affect visibility. There are also problems due to the volume of traffic at peak times of the day. Volume of traffic during construction would block the road. There are no pavements and many people walk and cycle along it. Landscape - development would adversely affect the character and openness of the area. No exceptional circumstances are evident. It would gradually merge with other villages. Nature Conservation - the site accommodates a diversity of wildlife. Changing the habitat and clearing vegetation will have a detrimental impact. Significant habitats along these hedgerows and in the grassland and agricultural pasture which would be greatly disturbed and potentially lost. Scale of Development - development would be intrusive on the landscape and decrease the biodiversity of this Green Belt land. There would be a loss of privacy, increased traffic and noise pollution. Flood risk - this land is notoriously boggy at the bottom of the field and has flooded in the past. Any development would require substantial groundworks.	
PO4853 PO4852	Miss Angela Hulse				Object	The preferred site BB054 for 70 houses potentially 140 cars will be using Draycott Old Road for access. The lane is notorious for annual flooding from the adjoining fields. You cannot safely access the road to Cheadle from Draycott Old Road without risk, due to the blind bend; some driver's drive around the village to turn around and take the Cheadle Road, this perpetual hazard will just be exacerbated by the increased traffic from the increased traffic from Draycott Old Road. Many villagers use this lane for recreational purposes, like horse riding, cycling, pedestrians, and dog walkers. This benefits health and wellbeing to all. This preferred housing site for 70 homes is on a precious area of Green Belt land and once it's gone it will be lost forever. This ignores David Cameron's pledge to protect Green Belt land. At the moment the roads in Forsbrook and Blythe Bridge are grid locked at certain times of the day. We already take the traffic for Alton Towers and surrounding JCB traffic and other HGV's. These roads are dangerous to pedestrians and particularly children and the elderly. We haven't even got a couple of safe places to cross in Forsbrook so a development on this site BB041, I believe has not been carried out, as confirmed at the Tean Meeting. This traffic will also add to the congestion in Forsbrook. We cannot see how such large developments in our village can't cope with the accumulative impact that it has on infrastructure. Schools, Dr's ,sewage, drainage already working at full capacity. All these concerns are and need to be addressed. Before finalising preferred sites.	<ul style="list-style-type: none"> See response to PO781 regarding flooding, ,highways, public footpath and infrastructure and PO9946 regarding the Green Belt

						and Drainage. (Already at full capacity) All these concerns need to be addressed before finalising preferred sites. Mr E W Hulse. Mrs L M Hulse.	
PO1065	Mr Thomas Allt				Object	The proposed development would be detrimental to the view of the countryside from existing properties. I enjoy walking on the field, and I enjoy watching wildlife on the field. I also enjoy exercising on the lane, but I have to stop running to let cars past. More cars from a development would make it difficult for me to stay fit.	<ul style="list-style-type: none"> • See response to PO104 regarding views and PO 781 regarding highways, wildlife and public footpaths
PO1106	Mrs L Henney				Object	The site you are choosing for 70 houses and let's face it 140 cars, will be using Draycott Old Rod might be, I add an old roman road' which is a single country road and a single country lane with only a few places to pass + have to go around another route. You cannot access the road to Cheadle - from Draycott old road, without being risk from the blind bend turning right – you have to either go into the village turning left + DOING U turn – either go look into the butchers arms pub windows to see what traffic is coming from the right from Cheadle – many villagers use the this beautiful country lane to walk their dogs – everyday there are horses and riders that use it too- besides lots off walkers use it too. You will be using a precious piece of land that greenbelt land, which also floods + children play in the brook etc. where else will they go and play in the brook etc.! I have seen quite a few hedgehogs there while walking my dog – which is a public right of way. We cannot take any more traffic in Forsbrook we have Alton Towers traffic and many more	<ul style="list-style-type: none"> • See response to PO781 regarding highways, flooding and public footpaths
PO1394	Ms Brenda Hewitt				Object	This extension of the boundary and land is green belt designated. The proposed building of 70 houses will impact on the local roads which do not cater for existing traffic. Congestion has been Caverswall Road and Uttoxeter Road where the railway crossing is. Pavements and inadequate and non-existent in places on Caverswall Road and Caverswall Old Road Noise pollution would increase Lighting will disrupt the flight paths of the bats Animal life will be affected and bird life with feeding areas developed Schools will not be able to cope with the number of children Drs Surgeries are full to capacity The village cannot sustain more houses and vehicles which with the proposed 70 houses could be 140 more cars. I strongly object.	<ul style="list-style-type: none"> • See response to PO9946 regarding Green Belt and PO781 regarding highways, wildlife and infrastructure • If the district council considered that a development they may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts. • There is a policy in the Local Plan regarding the pollution
PO1016	Mrs Win Allt				Object	This site is on a single track country lane, with poor visibility on the section of lane passing past it. There is frequent free water flowing down the lane past this site, and it is also bordered by the River Blythe, that the field partially drains into. There is a history of flooding further down the hill in the village of Forsbrook. The lane is not wide enough and has too many bends and blind spots to safely allow a significant number of extra vehicles to access this site from Draycott Old Road. There would be loss of amenity to walkers across the footpath even if access was maintained, if paved over it	<ul style="list-style-type: none"> • See response to PO781 regarding highways, flooding and public footpath

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						would not be as good for psychological and physical welfare as walking across an open field. The field is home to much wildlife, including pheasants, buzzards, sparrowhawk, and bats are all regularly seen flying over the field.	
PO375	Mr Roger Melville				Object	This site is still good Agricultural Land still currently being used for grazing. It is a very open space and has no defensible boundaries on three sides so leaving opportunity for village sprawl. Within the Greenbelt Study carried out for SMDC it says, "Site BB054 (Draycott Old Road) is not physically well enclosed, and would create an incongruous eastward extension of the village, leaving an illogical tongue of Green Belt to the west". It recommends that the land should only be considered for release in the context of wider land at Draycott Old Road/East of Tater Lane. BB044 Chapel St is a better option, not agricultural land and is not used for grazing and has never been used for grazing. Draycott Old Road is very narrow and is only single track for most of its length Highways report says, " Adjacent to the site Draycott Old Road is only single vehicle width in places and has no footway provision". Draycott Old Road a busy road being used for commuting and school traffic as people use it as access to the A50 avoiding Blythe Bridge if not they have to come out on to Cheadle Road which is blind if travelling towards Cheadle and pretty dangerous if turning towards Blythe Bridge. BB044 Chapel Street is a much better option as it is generally wider and most importantly is a no through road with only six dwellings north of the site. I would also like to make reference to a comment made by Highways when a previous application no 2003/0081/OUT was made I quote: "The Local Highway Authority has no objection and in any event the traffic would be less than generated previously by the Boarding Kennels". On the basis of these two sound planning reasons I believe BB054 should be removed as a preferred site and BB044 added and turned green .	<ul style="list-style-type: none"> • See response to PO781 regarding highways and PO9946 regarding the Green Belt • Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. The sites were assessed taking into account the consultation responses and evidence relating to the site. The site assessments provided a summary of the key issues and responses
PO1267	Mr G Hulme				Object	To many houses already and do not want a traveller site on my doorstep	<ul style="list-style-type: none"> • See response to PO781 regarding the need for site allocations • See response top question 40 regarding the traveller site
PO8979	Mr and Mrs John David and Susan Margaret Jackson				Object	We also consider that as there is already a development at Cresswell that has been approved for in excess of 160 homes and planned development to the extension of the business park there is no room for any further development to put added strain on the schools in Blythe Bridge, Tean and surrounding areas. Indeed the Primary school at Draycott is no longer there. There are no schools or any nearby services for the expansion of Cresswell so the already stretched services in Blythe Bridge will be expected to pull in the slack. This takes us on to the proposed housing sites BB041 /ADD011 and BB054 in Forsbrook/ Caverswall Road and Draycott Old Road. These sites are in the green belt and should not be used except in the most extreme circumstances. Furthermore Draycott Old Road just can't take the extra volume of traffic that a	<ul style="list-style-type: none"> • See response to PO781 regarding highways, the need for site allocations, infrastructure and PO9946 regarding Green Belt

						development such as this will generate. As for the area of green belt BB041 the road leading to that is the Same in as much as it's a single track for the most part. Our green belt is precious and must be preserved for future generations and not chipped away at until we have nothing left. We are most fortunate to live in a pretty rural area and it will be a sad day indeed when it's all gone. The junction in the centre of the village is already overcrowded and traffic is held up constantly with lorries etc. making their deliveries to Tesco express and the Co-op in Blythe Bridge, which usually coincides with the school run.	
PO1116	Mrs L Henney				Object	Please we do not want an entrance in Draycott Old Road it will spoil- the ambiance of the old lane – the lovely hedgerow and the lovely village feel we have in this area. Please whoever it matters to please come down and get a feeling we have & you will understand why we strongly don't want these houses in this field or the extra traffic. Please please listen to us all.	See response to PO781 regarding highways and village character

PO4848	Mrs S J Malpass				Object	<p>BB028 - Options Site I am a joint owner of land in Blythe Bridge marked by your reference as BB028 in your current new development plan to replace the local plan which allocates sites for housing. I understand that under the Strategic Housing Land Availability Study (SHLAA) housing requirements should be reviewed on an annual basis and I wish to confirm that the above area be included for consideration as an ongoing mid-term potential site 6-10 years to 11-15 years to meet further requirements in the Blythe Bridge area. You wrote to me on 17 June 2014 identifying my land for allocated housing and consideration within the next development plan. You asked for my intention as to whether I would be willing to release my land for development. I confirmed at that time my consent for the land to be identified and considered as a suitable area for proportionally extending the conurbation of Blythe Bridge. I believe that this marked area (your ref. BB028) for future housing would not be a detriment to the green belt area and surrounding environment. The land referred to would definitely meet the core strategy requirements re infrastructure (for schools, roads, traffic, transport, landscape (ie offering community leisure space) nature conservation (adjacent woodland to encourage wildlife, bird and insect life) and the diverted River Blythe already proves that any flood risk would be negligible because of your own developments in the same area)). Therefore this site still has a sustainable suitability with all services available as opposed to proposed preferred sites for large numbers of new housing currently being suggested. It is important to note that various properties have access along the lane adjacent to BB028 as well as the use for agricultural rights of way, that legally no one user/resident can own the land because of its historic, continuous, uninterrupted use by all. Again, I would appreciate that you consider the site which you identified for mid to long term development be annually renewed per SHLAA, and I would be pleased to hear from you following your request to me on 17 June 2014 and my co-operation in this matter.</p>	<ul style="list-style-type: none"> • A number of sites were dropped from the emerging Local Plan after the Site Options consultation. Not all sites were required to meet the Districts housing requirements. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website.. • The land in question is within the Green Belt. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. The review found that the site was not suitable for release from the Green Belt.
PO1430	Mr Craig Brough				Support	<p>BB027 I support the development of the above proposed site, my reasons for this are that my parents have owned this land for many years in hope that one day that they could build stables and a dwelling for themselves. This never materialised so my parents have tried to use the field</p>	<ul style="list-style-type: none"> • A number of sites were dropped from the emerging Local Plan after the Site Options consultation. PO9481	Mr T D Blairs				Object	<p>BB27/BB28 - Site Option 1. The landowners welcome the review of the Greenbelt that has been undertaken by the Council in an attempt to ensure that future housing requirements of the area are satisfied. Having established that the Greenbelt is impacting upon the Council’s ability to satisfy housing need, the landowners consider that the subject site, with an area of just over 2 hectares is better placed to provide a more balanced setting to any extension of the village as release of other sites would result in the loss of lands that have higher landscape value. 2. Throughout any consultation process the concerns of local residents needs to be taken into account. It is expected that local residents will want to preserve the village feel and setting that they currently enjoy. With this in mind it is suggested that the Council should consider the release of smaller sites in order to satisfy housing need for the area in order to preserve this village feel and setting. The release of a larger area in one block of over 30 houses would create a significant new estate within the village and affect the balance of village life. Smaller pockets should therefore be released to maintain the balance of the village. 3. It is acknowledged that the village is currently served by narrow roads and few pavements. The release of the subject sites would allow contributions to be made for the improvements to the current infrastructure network for the safety of all residents of the village, both existing and new. Any developer of the site ADD10 is likely to argue that they do not need to contribute towards any improvements for existing road such as Caverswall Road as their development will be serviced by Caverswall Old Road, which connects with the A521 Cheadle Road. This will be to</p>	See above

						<p>the detriment of residents in the village. 4. It is fair to say that the majority of sites being put forward in this area are within a flood risk area and all will need to be supported by a Level 2 SFRA. The diversion of the River Blithe will assist in the bringing forward of these sites in this regard. 5. It is acknowledged that access is currently gained via an unsurfaced and unadopted road. However, the owners of the land and access to it are supportive of the proposal and therefore the fact that it is currently unadopted and unsurfaced should not be seen as a barrier to its inclusion within the Local Plan as this can be upgraded at the time of development. 6. There have been concerns raised about the proximity of the sites to Blythe Bridge Wood. However, this should be seen as a positive for inclusion of the sites as their development would not only preserves the wood in full but also allow for the provision of the new access which could open up an access to Blythe Bridge Wood for many more people. 7. It is noted that the Council have confirmed that this site does not have any importance with regard to the landscape setting of the settlement.</p>	
PO9514	Mrs Doreen Brough				Object	<p>BB027 - Options Site I own land in Blythe Bridge marked as BB027 in your current new development plan to replace the local plan which allocates sites for housing. 						it is more accessible than your current proposed 'green belt' preferred sites for large numbers of new housing in the Blythe Bridge/Forsbrook area. I would appreciate your comments on the above in view of the SHLAA requirements which have to be reviewed by yourselves for changing housing needs. I would appreciate your comments on the above in view of the SHLAA requirements which have to be reviewed by yourselves for changing housing needs. I hope this letter gives you a clear indication of my wish to have my land, referred to as BB027, included at some near future date within your proposed new Development Plan as per SHLAA.	
PO875	mr jonathan broadhurst				Object	The green belt within the rural areas needs to be protected; once it's gone, it's gone forever. There are better alternative sites on the original consultation eg BB021 - this site is not an ecologically diverse and beautiful area and would be better as residential housing than BB041. BB087 was also a better option than BB041. Out of the two sites on the current proposal, BB054 would be preferential as it is not an ecologically diverse and does not have beautiful open views. Flooding - this area is prone to flooding. Caverswall Road is like a river during heavy rainfall. This collects at the bottom and it is frequently impassable to pedestrians and to cars. The other side of Caverswall Road between Blythe Bridge and Caverswall also regularly flood and cars get stranded or the road has to be closed. It was flooded again on 11.6.16 and impassable. Electricity cables currently run across the field adjacent to BB041 and across BB041. Some of these cables have recently been buried under the field. How would this affect these possible developments? Why wasn't BB041 on the previous proposal? People may well have made different comments had this been on the original proposal as some of the original sites may have been preferred over this particular site. As is stands, there are now only 2 sites to consult on. Our garden gets saturated after heavy rainfall and any further developments near to our property would make this matter worse and interfere with the natural soakaway that the fields provide.	<ul style="list-style-type: none"> • BB054 is a proposed site. • A number of sites were dropped from the emerging Local Plan after the Site Options consultation. Not all sites were required to meet the Districts housing requirements. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. • BM021 and BM087 were both assessed as red. The Highway Authority advised that BM021 had access issues, existing access onto A521 is single width and adjacent to a watercourse. Major access improvements would be required. BM087 had potential landscape impact.
PO9469	Linda Washington and Robert Brough				Object	Traveller Site TR015 Quabbs Lane This lane is off the main road from Blythe Bridge to Cheadle. It is not a particularly wide road but is used by all types of traffic including many HGV's and emergency vehicles. This road is very busy at all	<ul style="list-style-type: none"> • This is not a proposed traveller site

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						<p>times and vehicles towing caravans would cause untold problems for other road users. The road has a national speed limit and it would be an accident waiting to happen. Quabbs Lane is opposite Forsbrook cemetery where peoples loved ones are interred, everybody knows travellers have no respect for anybody that is not one of them. I would hate to see what would happen to the cemetery if they went in there. Our general concerns are personal. We moved to this area because we thought it was a pleasant low crime area. That will soon change if any of these sites happen. Property prices are bound to fall and crime will rise. The area would become somewhere people wanted to get out of rather than move to. Why are all the proposed sites in this area, Staffs moorlands covers 222 square miles so why all the proposed sites in one area? The Blythe Bridge sites are all close to the A50. When there is a problem on the A50, which happens frequently, Blythe Bridge and surrounding areas become gridlocked. Blythe Bridge is constantly busy with traffic and we do not need any more.</p>

						in this bringing forward of these sites in this regard. 5. It is acknowledged that access is currently gained via an unsurfaced and unadopted road. However, the owners of the land and access to it are supportive of the proposal and therefore the fact that it is currently unadopted and unsurfaced should not be seen as a barrier to its inclusion within the Local Plan as this can be upgraded at the time of development. Access to this site could be shared with access to the sites discussed under BBO27/28 and thus any costs involved in the creation of this access would be apportioned between the two sites. 6. It is noted that the Council have confirmed that this site does not have any importance with regard to the landscape setting of the settlement.	
PO9486	Mr T D Blairs				Object	Heath House Farm - Blythe Bridge At this point I would also like to put a case forward for the release of some of the lands adjoining Heath House Farm, situated on the northern side of Caverwsall Old Road. Heath House Farm has in recent year needed to diversify its interest in order to continue to operate in so much that there are large area of lands covered by greenhouses which serve the farm shop. This has effectively become a mini industry in itself and as such the lands should be considered "brown field." Accordingly, as the Council acknowledges that the it would prefer to release brownfield sites in order to satisfy the housing needs of the area, the Council should consider the release of some of the lands currently covered by the structures attached to Heath House Farm as it looks to satisfy the housing needs of the area.	<ul style="list-style-type: none"> The site is in the Green Belt. The NPPF states that once established Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt. In this instance it is considered there are no exceptional circumstances. There is some limited scope for brownfield sites to be developed under green belt policy.
PO8310	Mr Ben Weatherley				Object	Email containing covering letter and 6x supporting technical documents submitted: arguing for the inclusion of client's site "BB040" as additional housing allocation for Blythe Bridge and Forsbrook (and that allocating this site in combination with adjacent ADD011 is preferable to releasing BB054); encouraging the LPA to give further consideration to potential changes to the village and Green Belt boundaries in Blythe Bridge including to accommodate residential development on the land in client's ownership at Caverswall Old Road; arguing that Council should allocate further housing sites to improve housing delivery generally.	<ul style="list-style-type: none"> Site BB040 was previously included in the Site Options consultation 2015 consultation site was not taken forward. A number of sites were dropped from the emerging Local Plan after the Site Options consultation. Not all sites were required to meet the Districts housing requirements. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. The Environment Agency advised regarding BB040 that previous land uses may have caused contamination and a Preliminary Risk Assessment would be required.

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
							<p>Remediation and mitigation measures may be required and could impact on development potential.</p> <ul style="list-style-type: none"> • The Landscape & Settlement Setting Study identified BB040 as being important to the setting of the settlement. • The site is within the Green Belt. The NPPF states that once established Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land. The review found that BB040 could be considered for release from the Green Belt under exceptional circumstances. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt. In this instance it is considered there are no exceptional circumstances.
PO4847	J.M. Belcher				Object	<p>BB028 - Options Site I am a joint owner of land in Blythe Bridge marked by your reference as BB028 in your current new development plan to replace the local plan which allocates sites for housing. I understand that under the Strategic Housing Land Availability Study (SHLAA) housing requirements should be reviewed on an annual basis and I wish to confirm that the above area be included for consideration as an ongoing mid-term potential site 6-10 years to 11-15 years to meet further requirements in the Blythe Bridge area. You wrote to me on 17 June 2014 identifying my land for allocated housing and consideration within the next development plan. You asked for my intention as to whether I would be willing to release my land for development. I confirmed at that time my consent for the land to be identified and considered as a suitable area for proportionally extending the conurbation of Blythe Bridge. I believe that this marked area (your ref. BB028) for future housing would not be a detriment to the green belt area and surrounding environment. The land referred to would definitely meet the core strategy requirements re infrastructure (for schools, roads, traffic, transport, landscape (ie offering community leisure space) nature conservation (adjacent woodland to encourage wildlife, bird</p>	See comments on this site above

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						and insect life) and the diverted River Blythe already proves that any flood risk would be negligible because of your own developments in the same area)). Therefore this site still has a sustainable suitability with all services available as opposed to proposed preferred sites for large numbers of new housing currently being suggested. It is important to note that various properties have access along the lane adjacent to BB028 as well as the use for agricultural rights of way, that legally no one user/resident can own the land because of its historic, continuous, uninterrupted use by all. Again, I would appreciate that you consider the site which you identified for mid to long term development be annually renewed per SHLAA, and I would be pleased to hear from you following your request to me on 17 June 2014 and my co-operation in this matter.	
PO8418	Mr John Grantham				Support	Various emails with attachments submitted promoting land north of Caverswall old Road [sites BB042+BB043 in the SHLAA] for housing; and clarifying Mr Nixon's ownership of these: Write to you to include the above land in the Council's ongoing strategic land review. The land...is approximately 16 acres in size. I believe this land would make a good contribution to the Council's housing targets going forward. The land is 16 acres in total but with Public Open Space and allowing for the topography of said land I would envisage 10 acres of housing development land, equating to approximately 130 dwellings, being delivered. A phased development over 3-5 year period could be achievable and is economically viable. The land has good existing access off Springfield Drive, Beverley Crescent, Hillside Avenue and Caverswall Old Road. With the land sitting adjacent to the existing settlement it is sustainable having the following facilities within the settlement of Forsbrook, Primary and Secondary schools, 6th form college, shops, library, buses and benefitting from two post offices and a train station less than a half mile radius from the proposed development. I hope you agree that this land offers great potential in assisting SMDC improve their housing shortfall targets.	<ul style="list-style-type: none"> The site was assessed as a C site in the SHLAA and was not considered suitable for development. The site was identified in the L & SCA as being important to the landscape setting of the settlement it is considered the scale of site and landscape impact would make it unsuitable.
PO9108	Melanie Jackson				Object	SHLAA Site BB079 (not preferred option or site option) I would like to notify you of my objection to the proposed HOUSING SITE in Blythe Bridge: Caverswall Road, Site ref number 2082 as described in your planning proposal BB079 dated 26/06/2015. My primary reasons for objection	This is not a proposed site

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						<p>are that this proposal is in direct contravention of various components of the policies, government guidelines and previous statements made by the SMDC on this matter. Information of your Large Site Assessment form indicates that this land has limited potential for residential development and that it provides a logical extension to settlement and relates to the settlement plan. This land is surrounded by individually built houses of varying ages and styles which will not be enhanced by mass housing, block paving and little or no natural attributed to these type of developments. These fields where the proposal lies is a valuable commodity for the village. It is accessed on a daily basis by many people as the well trodden public footpath across it bears witness to. It is filled with wildlife, flora and fauna. Add to this at least two natural sources of water that rise into the fields. To eradicate it from the face of the village is a travesty. Across the lane from Caverswall Old Road, adjacent to Heath House, lie the fields that back onto an already developed housing estate with access roads that contain pedestrian pavements off Hillside Avenue. Surely a viable proposal. Caverswall Road and Caverswall Old Road has no network for pedestrians, is not wide enough to take any substantial amount of traffic and quite simply without a fortune of investment to reinforce the crumbling road surface will not survive.</p>	

ID	Consultee Name	Company/ Org	Agent Name	Agent Company / Org	Support/ object/ general comment	Comments	Officer Response
PO1369	Ms Rosamund Worrall	Heritage England			Object	Map 4.27 - Froghall - major mixed use site - It is not clear how the impact of the site allocation has been assessed in respect of the Grade II listed building Cottage Farmhouse in addition to the Caldon Canal Conservation Area and associated listed buildings, and the listed lime kilns and their settings, individually and cumulatively. Further information is required.	<ul style="list-style-type: none"> There is one Grade II Listed Building within the site boundary and an additional five Listed Buildings in the 400m buffer. A Conservation Area is adjacent to the northern boundary of the site. The Council's Landscape, Green Space and Heritage Impact Study(August 2016) includes a Heritage Assessment for this site which advises that the site is located in an area which has been predominantly used for industrial purposes in the past: the Listed Building is however set within an area of former orchard and land to its rear. The canal has a close association with the industrial and natural landscape and its setting contributes to its significance. Despite this, appropriate development can be mitigated through the setting back of development boundaries from the Listed Building and Conservation Area and through conservation of the Listed Building. Screening should be employed along the northern site boundary. The site is within the HLC type of industrial and extractive complex. Development would not affect this HLC.
PO2708	Mr Martin Ross	Environment Agency			Object	Froghall – Much of the site is within the floodplain. Although it is likely that the Local Authority will wish to see redevelopment here despite the flood risk, the Shirley Brook and Blackbank Brook that converge just to the north of the site bisecting the development area and running into the Churnet, are not modelled in detail and this will need to be done prior to allocation to understand what could be delivered there.	<ul style="list-style-type: none"> Comments noted. Further discussions have taken place with the Environment Agency regarding flood risk relating to this site.
PO2802	Mr Martin Ross	Environment Agency			General comment	This site (50) is Brownfield and according to information held by the Environment Agency it is located above a historic landfill site. The local council, as lead regulator for these sites, should be contacted for further information. The previous use also as a copper works is likely to have caused heavy contamination. There is a risk of pollution to the watercourse if not managed and remediated properly during redevelopment. So although it is unlikely that the issue of Brownfield Land will make any of the allocations undevelopable due to coast/constraint, Froghall may require lengthy remediation works, and sites within the Source Protection Zones and flagged up, will be subject to certain restrictions.	<ul style="list-style-type: none"> Comments noted. SMDC Environmental Health support redevelopment of the site but acknowledge that there is heavy contamination and that careful design should minimise very significant remediation costs by allocating low risk uses to the more contaminated areas.
PO2875	James Chadwick	Spatial Planning Policy Officer Staffordshire County Council			General comment	The Froghall Preferred Mixed Use Site needs to take account of the substantial historic built, historic landscape character and archaeological potential within the area of the scheme and the general vicinity. It should be aware of the nearby historic plateways (early railways), canals, limekilns etc which play an important part in defining the unique character of the Churnet Valley. Any proposal for the development of this site should consider how to incorporate this important cultural heritage and the development of opportunities to enhance the historic character of the area.	<ul style="list-style-type: none"> See response to PO1369 regarding historic character.
PO2889	James Chadwick	Spatial Planning Policy Officer Staffordshire County			General comment	The Froghall Preferred Mixed Use Site needs to take account of the substantial local biodiversity and of connectivity of habitats within the Churnet Valley in layout, design and distribution of use. The site should incorporate green infrastructure which maintains and enhances connectivity.	<ul style="list-style-type: none"> The Council has produced a Draft Green Infrastructure Strategy for consultation alongside the next draft version of the Local Plan. The strategy identifies green infrastructure corridors and lists particular issues in relation to that corridor which can be addressed as part of the relevant site policy and / or at the

ID	Consultee Name	Company/ Org	Agent Name	Agent Company / Org	Support/ object/ general comment	Comments	Officer Response
		Council					planning application stage.
PO199	Mrs Sue Higton				Support	Any development here will look better than the existing demolition site and the recent new business in what remains of the factory is a step in the right direction. It's important to get the right mix of use for this site and especially to include a healthy number of starter homes - youngsters in the local villages would like to stay in the area but can't afford to. Many people have objected to development of this site on the grounds of increased traffic but they conveniently choose to forget how much traffic the Boltons site generated in its hayday.	Comments noted.
PO831	Ms Alison Conybeare				Object	Ipstones is a smaller village, so should not be listed under the larger village allocations. Boltons is a contaminated area and has already been identified as a key tourist opportunity site.	<ul style="list-style-type: none"> Core Strategy Policy SS6a lists the larger villages which includes Ipstones. Bolton's site is included in the Churnet Valley Masterplan as an opportunity site.
PO431	Mr David John Allen				Object	Better confined to employment only for this site.	Comments noted.
PO566	Mr Peter Cowie				General comment	Housing should not be constructed at Bolton Copperworks since it is a severely contaminated site and unfit and unsafe for human habitation. All development in villages should follow local plan guidance and serve the needs of the village rather than central government requirements for house construction and financial incentives to local authorities.	Comments noted. Redevelopment of the site would require remediation of contaminated land.
PO1414	Mr P Price				Object	I believe the former copper works should be reserved and largely restored to a wildlife and amenity area as part of the churnet valley. Housing in this location is not sustainable as there would be no services available to its residents shops, schools, Dr's etc , resulting in this remote location in increased car used community in remote location. This area could become a real tourist/wildlife gem if restored sensitivity and not over developed. This is a once in a lifetime opportunity to set something special up for future generations. We should grasp it with both hands.	<ul style="list-style-type: none"> Comments noted. The Core Strategy identifies the Bolton Copperworks site as a major developed area in the countryside. Due to its location and the nature of the site it states that any housing permitted should be limited to that required to cross-subsidise other uses. The Churnet valley Masterplan suggests that this should be around 50 dwellings. See response to PO2889 regarding green infrastructure.

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
PO9538	Ms Kay Bartlam				Object	(Summary of comments - full version attached) Object for the following reasons: Highway safety - Willfield Lane, High Lane and Fairfield Avenue; Damage to habitats - birds, badgers, foxes, weasels, hedgehogs; Site is close to an ancient woodland (Tinster Wood); Flooding due to old drainage system; Area used for recreation e.g. dog walking; Loss of Green Belt land; and Loss of amenity for nearby residents including disturbance from building work. Prefer to see development on BE032 and infill plots.	<ul style="list-style-type: none"> Highway Authority have no objection in principle to the development of land for housing, subject to provision of adequate access, visibility, internal layout and design. The Extended Phase 1 Habitat Survey 2015 assessed the present and potential ecological value of the proposed site allocations. It found that the site has low to medium biodiversity value overall in terms of the area recommend trees and hedgerows are retain if the site is developed. The Environment Agency has not identified any site specific issues. They recommend that the ecological value of watercourses is enhanced where possible and the impact on water quality is assessed. The Council has completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. Mitigation measures will be taken as part of the site development to address any surface water issues. The land in question is within the Green Belt. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. The review found that the overall impact of development on the site on Green Belt purposes was moderate and recommended the site could be considered for release under exceptional circumstances and that development could be part of the enhancement of recreational opportunities in this location, the site bordering scrubland and well-used footpaths running southwards towards Stockton Brook. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt. Issues such as overlooking will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
							<p>that application. Problems arising from the construction period of any works, e.g. noise, dust, construction vehicles, hours of working (covered by Control of Pollution Acts) are not material planning considerations</p> <ul style="list-style-type: none"> • Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. The site options assessments provided a summary of the key issues and responses. • Site allocations are required to meet the District's proposed housing requirement. There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites have been proposed. Prioritising brown field land over greenfield in all circumstances is not part of Government policy. Any new development taking place will be subject to design policies contained within the new Local Plan..
PO9563	Mr Chadwick				Object	<p>(Summary of comments - full version attached) Object to development of BE041 for the following reasons: Site is Greenbelt; Site provides a significant contribution to the definition, context and setting of the village; Site prevents the village sprawling towards Stockton Brook and Endon; If development goes ahead here it will be difficult to refuse other landowners the right to develop their land; Do not agree that the site is an infill site; Development would blight surrounding countryside amenity permanently; Development would overlook my property; Adjoining footpath will become a short cut to the shops; Impact of building work on residential amenity; Should not put all the houses on one site; Object to Brown Edge being referred to as urban - it is a village, not Hanley; Ecological interest on the site - bats, newts, frogs, toads, kestrels, sparrowhawks, owls, badgers; and over the last 25 years various coins have been dug up in the area, one medieval and one roman found only 3 metres from the site boundary so the area does have historical interest.</p>	<ul style="list-style-type: none"> • See response to PO9538 regarding green belt, residential amenity & ecological issues • The Local Plan will provide certainty for local communities and developers through policies guiding the overall level and location of development. Planning applications must be determined in accordance with the Local Plan unless material considerations indicate otherwise. • The Council has recently undertaken a Landscape, Local Green Space and Heritage Impact Study 2016 to form part of the evidence base to support the Local Plan and assess the potential heritage and landscape impacts of the development allocations. The Study found the site is of low landscape sensitivity and is suitable for development in heritage terms. There are no designated heritage assets within the 400m buffer. It states that "Site comprises a field on the southern edge of Brown Edge, enclosed by a combination of existing residential development, or trees and hedgerows. The site slopes down from a track on the north-east boundary to Willfield Lane on the south-west boundary. Thus the higher land to the north-east of the site has higher visual prominence, with long distance views available to the south-west. However development would be viewed behind and adjacent to existing development. The existing settlement edge is strong but urbanised, existing established vegetation on the south-eastern

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
							<p><i>boundary could be strengthened in order to create a vegetated edge to the settlement."</i></p> <ul style="list-style-type: none"> • Brown Edge is classed as a larger village in the adopted Core Strategy.
PO10249	Mr Andy Brown	Harlequin Development Strategies (Crewe) Limited	Mr Alan Knott	Knights LLP	Support	<p>(Summary of comments - full version attached) Support inclusion of this site in the plan for housing development (on behalf of client) for the following reasons: Have previously sent technical information to the Council in response to the Site Options 2015 consultation supporting the development of this site, namely - access plan (re: services and facilities), landscape and visual appraisal, ecology study, vehicular access drawing and an indicative layout for 48 dwellings; Site has a willing landowner and willing developer; Highway Authority has no objections to development of 50 dwellings in principle; Green Belt Review recommends site is considered for release from Green Belt; An updated site specific landscape and visual appraisal has been prepared and concludes that the release of the site would have the least impact on landscape and visual amenity compared with the other sites which are potentially available and would have a limited impact on the wider landscape being barely visible from long range receptors on the Staffordshire Moorlands Walks and other footpaths; Further drainage investigations have been undertaken and demonstrate that foul and surface water can be discharged from the site in a suitable manner and a drainage system to adoptable standards can be achieved on this site without increasing flood risk or drainage issues elsewhere; Ecology - species specific studies for reptiles and bats are attached and conclude that there would be no constraint on the proposed allocation in this respect; Whilst the site is located within the Green Belt, it is required to meet the open market and affordable housing needs of Brown Edge given that opportunities to deliver housing on previously developed land and infill sites within the existing settlement boundary are severely limited; and Brown Edge is a large village in the rural area but with a good relationship to higher order settlements and as part of the overall strategy cannot be excluded from helping to meet the housing requirement for the rural area and the release of land from the Green Belt would also enable local affordable housing needs to be met.</p>	<p>Comments and landowners/developer support for development of the site is noted</p>
PO9558	Mrs J Simpson				Object	<p>(Summary of response - full comments attached) Object to the development of this site for the following reasons: Site is Green Belt and would extend the village boundary; There are issues with surface water nearby in parts of Meadow Road; 50 houses would create a lot of disturbance to existing residents during building work; Additional traffic onto Willfield Lane and High Lane would cause highway safety issues due to numbers of vehicles and speed; and Lack of infrastructure/schools to support new residents. New housing should be accommodated on brownfield sites in Stoke on Trent.</p>	<ul style="list-style-type: none"> • See response to PO9538 regarding green belt. flooding, residential amenity & highway issues • New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas. • National planning guidance states that the Council

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
							<p>should assess the quality and capacity of infrastructure/schools to meet forecast demands. An Infrastructure/schools Delivery Plan is being prepared which will identify the infrastructure/schools necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure/schools providers is ongoing and their feedback will inform the Infrastructure/schools Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered.</p> <ul style="list-style-type: none"> • See PO9538 regarding brownfield sites • The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change.
PO10253	Ms Debbie Evans				Object	After attending the meeting in May I realised how many people were against BE041 with many concerns about the very narrow road leading to Moss Hill, as I use this road every day I understand as sometimes it is almost impossible to get through reversing back many times for on coming traffic, more traffic would only make this situation even worse.	<ul style="list-style-type: none"> • See response to PO9538 regarding highway issues
PO1157	Mr GJ Perry				Object	As a long term resident of Brown Edge I would refer to the proposed development of Brown Edge and the confirmation of 50 houses required before 2021 I would like to comment as follows. I have no objection to the limited increase in the size of the village as I can appreciate the need for more housing as the population of the area increases. My main concern is that the proposal for 50 houses in one area only is not acceptable for the village and should be spread over several sites as linear development. As this is not possible at present, careful consideration should be given for the site location and the type of housing. A proposal for development off Willfield Lane on plot BE041 is inadvisable for several reasons such as severe congestion of the narrow lane, inadequate main services safe access to the main road, destruction of productive farmland and many species of wildlife including confirmation by the Staffordshire	<ul style="list-style-type: none"> • See response to PO9538 regarding the size and location of the site.

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						wildlife officer of the presence of polecats. A preferred location would be BE032 which has unimpeded access to the main highway, adequate main services and no desecration of an ancient lane, mature trees and wildlife.	
PO1061	Mr G Cooper				Object	Do not think we need such a large site to accommodate the houses required would be better with infill & small sites to retain the character & setting of the village.	<ul style="list-style-type: none"> • See response to PO9538
PO9437	Dr Vinod Patel				Object	Email received 22/05/16: Re sites BE 042 Wilfield Lane & BE 032 Breach road My knowledge of the area around these sites, dates as far back as 1970 when i started practicing and visiting as family doctor until 2001 when i retired. On that basis i would like say that there have been several accidents at Wilfield Lane, it being narrow and tortuous. This site ,042 , is marshy and floods heavily when it rains; water running down Meadow road eroding road surface. Problems also arise with increased frequency during winter months when the lane gets icy easily. In view of these facts and for the safety reasons, i would like to say that, site 032 - Breach road , be preferred for development rather than site 042. The Breach road site has direct access on to the main road which is wider and relatively safer.	<ul style="list-style-type: none"> • See response to PO9538 regarding highways, flooding & Site Options sites
PO1126	Mr Norman T Lomax				Object	Further to my remarks of site BE041, dated July 2015, copy enclosed, I herewith now list my objections for this proposal. Present Road Condition. Willifield lane unsuitable to accommodate the serious increase in traffic both during and following the development as my neighbour, Miss Glover and I have access to our driveways opposite the present field entrance, potential danger from manoeuvring vehicles at this point is paramount. A few metres past this point the lane bends and narrows considerably, causing regular blockades or accidents. Existing dwellings and mature trees would prevent any road improvements here. A dangerous stretch! Surface water Having occupied this address in willifield lane for several decades I have been able to observe the surface water leaving BE041 and its surrounding roads quite closely. Even taking into account the present capability of the ground to absorb the rainfall, the road quickly becomes flooded in storms or badly frozen over, submerging our footway and threatening our properties. My concern is that building on BE041 in this regard would make matters far worse. Aspect Now I'm in my ninth decade I am enjoying my garden and its open views opposite. I have mature trees, views of fields to the horizon and plenty of clear sky's to enjoy. This precious commodity would sadly be lost should this development go ahead.	<ul style="list-style-type: none"> • See response to PO9538 regarding highways, residential amenity & flooding
PO355	Mr T Hodgkinson				Object	I am 16 years old and have lived on Willfield Lane for all of my life. My house overlooks the field which has badgers, foxes, deer and numerous birds which is a joy to watch. I attend Stoke 6th Form College studying 4 A-levels. I walk down Willfield Lane to catch the	<ul style="list-style-type: none"> • See response to PO9538 regarding wildlife, flooding & highways

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						bus which is busy as its narrow with no pavement. If there were houses built on the lane this would make the possibility of accidents even greater. I know now that floods happen on the lane because the drains cannot take it, so more houses would make it even worse. I feel I am very lucky to have been brought up in such a beautiful area of Brown Edge and being so close to a lovely field with all of the wildlife. It would be very sad if houses were to be built right next door to my home.	
PO357	Suzanne Perry				Object	I am a resident of Willfields, Willfield Lane, Brown Edge, where my parents have lived since 1992. I am currently working in Ireland but have retained an interest in the village and visit regularly and consider Brown Edge my home. I am very unhappy to learn of the proposed development of the site on Willfield lane (BE041) for 50 new houses. When I drive home one of the real pleasures is to leave the city and cross the green belt into "country lanes" like Willfield Lane. These are historic stone walls and ancient trees that are an essential part of living in a village like Brown Edge. The lanes are just about coping with the volume of traffic we have currently but it is entirely unsustainable to expect up to another 100 cars, plus their visitors, moving trucks etc etc to use them without damaging them or causing a serious accident. In addition the BE041 site is used by dog walkers and hikers on their way up to Tinsters Wood and is a resource for the two estates already adjacent to Willfield lane as this is far closer than the village playground. It would be a shame to lose this resource and all the flora and fauna that go with proximity to ancient woodland. I appreciate there is a need for housing in the Moorlands, and that the village needs to offer space for development so I am not opposing any change. I understand that there is an alternative site being considered opposite Rock Cottage Nursing Home. This makes a lot more sense as a location for new development as it is closer to the village centre and is on a main thoroughfare. It is also closer to Endon School for those doing the school run in the mornings. It will allow the council to provide the required new houses and associated services without degrading what makes village life so special. As a current custodian of Willfield Lane I would like to preserve it for future generations to enjoy. Please register my objection to BE041.	<ul style="list-style-type: none"> • See response to PO9538 regarding highways, brownfields sites and wildlife • Public footpaths can be maintained or redirected.
PO1135	Mr Norman T Lomax				Object	I am free to confess a personal interest in this site having resided there for many years. Willfield Lane is completely unsuitable for access to BE041 and BE044. In fact a single pedestrian gate would be admirable. There would be no seating at this point but an official recreational gate and pathway through and the landscaped field would lead to the erstwhile football pitch. Here could be seating, small playground, with toilets, a pavilion, and a sports pitch. Brown Edge is in a dire need of bowls, cricket and football facilities! Many walking groups who use Bagnall to marshes hill route would greatly enjoy these facilities. A very sensible and much needed use of BE41	<ul style="list-style-type: none"> • An Open Space Sport and Recreation study is underway covering all designated public open spaces in the Staffordshire Moorlands, it will provide an audit of existing provision and highlight areas where there is a shortfall. New housing schemes depending on their size will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the consideration of new links in line with Local Plan policy.

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						instead of unsuitable houses.	
PO477	Mr M Snape				Object	I am opposed to the proposed development off the site in the above area mainly due to the very narrow country lane and the increased number of the vehicle problems it will create in that area	<ul style="list-style-type: none"> • See response to PO9538 regarding highways
PO1149	Mr M Leese				Object	<p>I am writing this letter in objection to the proposed building of 50 homes on the land at the back of my property, i am concerned about the lack of thought that has gone into this proposal. The people who live here have always believed their privacy to be protected by the Green Belt Land and the boundary of the said Green Belt has now been moved in order to accommodate up to 50 new homes. We who live here feel that our standard of living and privacy will now be affected by any new development and would like to outline the reasons for our objections and would also like to suggest an alternative site.</p> <p>1. Supplementary Planning Guidance;- Planning policy section CF2 (D) states that in rural areas the provision of new housing should be restricted to meeting local housing needs and it is doubtful whether fifty families will be found from the village to fill the new housing so will the new occupants be from elsewhere? Section 2.6 H1.5 of the planning guidance says that there must be a proven need for so many houses and it says in section (D) that the development should be of a character appropriate to the location. The homes adjacent to the proposed site are 3 bedrooomed semi-detached with large gardens to the rear and we would expect any new development to be of a like character and not a site crammed with low-cost homes with minimal gardens. We feel that any new development should respect local context and street pattern and in particular the scale and proportion of existing buildings.</p> <p>2. Traffic:- As councils are under constant pressure to increase up take of public transport and reduce the number of cars on the road, why would this site be classed as suitable when it will only increase the amount of traffic flow on to an already at peak times busy road, think Fifty homes with maybe two cars per household. It is unacceptable for this amount of traffic to flow on to Willfield Lane and the surrounding areas. Things to take into account are whether safety is compromised, visibility, car parking and the effect on the locality due to said increased traffic flow.</p> <p>3. Privacy:- We believe that as some of the land behind may be elevated, that the local planning department would in the future be able to give guidance as to what would be considered an unacceptable lost of light according to their policies. If the housing proposal was allowed to go ahead we believe it could result in us being severely over looked from the top rooms of the new development resulting in a serious invasion of our privacy. We would urge you to consider the responsibilities of the council under the Human Rights Act in particular Protocol 1, Article 1 which states "that a person has the right to peaceful enjoyment of all their possessions which includes the home and other land". We believe</p>	<ul style="list-style-type: none"> • See response to PO9538 regarding green belt, residential amenity, highways meeting housing need & the Site Options sites • Any new development taking place will be subject to policies contained within the new Local Plan, which seek to protect the character of the area consideration will be given to the scale of development and its impact on the surrounding area. • Policies in the Local Plan will require an element of new housing provision to be affordable

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						<p>any overlooking development would have a dominating impact on our home and our right to the quiet enjoyment of our property. Article 8 of the Human Rights Act states "that a person has the substantive right to respect for their private and family life" 4. Alternative Sites:- Many people believe pockets of land throughout the village could be used to accommodate the housing quota, thereby lessening the impact. Two sites we would like to recommend are BE056 Newfold Farm and BE032 Breach Road both owners of these sites have expressed a desire to make there land available for housing. Nether site will affect the boundary of the village detrimentally and both have better access than the proposed site off Willfield Lane. The site on Breach road is our preferred option as it lies off the main road and is easily and readily accessible and is a site that will not over look any existing properties. Any disruption would be down to a minimum on this site including drainage, cabling etc. At the parish council meeting the councillors informed us that the owner of the land wishes to release the site for Housing development, if that is the case then I would urge you to carefully consider this site over the proposed site at BE041 Willfield Lane in light of the impact that the current proposal would have on the locality. I trust that you will take our concerns on board when making your final decision.</p>	
PO1160	Mr AJ Cartlich				Object	<p>I am writing to make my objections to the proposed site BE041 and all other sites that are on existing green field sites as there are more than enough pockets of land within the existing village borders to accommodate the required housing stock. To build a probable 50 houses on this site would be detrimental to the area as they would increase the traffic flow in Willfield lane which is already overused and could not be widened past this site due to the narrowness between existing properties going southwards to the one way system As the owner of the house adjacent to the proposed site and living here for the last 45yrs and my wife was born here 70 years ago and having six windows overlooking this field I think I have as good a knowledge of this site including of both the good and bad as anyone. The good things about this site is the biodiversity as this field has not been used for many years for any purpose it has gradually gone back to nature thus bringing back many variety of wildlife including voles,field mice,weasels,foxes badgers and polecats The birds feed on the grasses and the buzzards are regularly seen hovering over the field,at night the bats fly around the hedgerow between the road and the field for this reason alone this site should not have been chosen. The bad things about using this site is the constant flooding from this field the field is fed by two natural springs one rising out of the ground under the hedgerow opposite Caroline crescent and the other used to rise in the centre of my drive as this used to be part of the field until it was purchased from the owner,to alleviate the problem that this caused permission</p>	<ul style="list-style-type: none"> • See response to PO 9538 regarding site size & location, highways, wildlife, flooding and residential amenity and PO9558 regarding infrastructure/schools

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						<p>was given by Mrs Clowes the late mother of the present owner to Carry out work in the field to divert the spring water back into the field this was done at great cost to myself a 3mtr deep trench was dug from the rear of my garage down to The bottom of the field where a 4mtrX4mtr soak-away was dug both the trench and the soak-away were filled with large hardcore and the ground relevelled this copes with the spring water but not the rain when it rains a small pond forms and the excess water runs through the sand stone wall across the grass verge and merges with the water from the other Spring in the gutter this overpowers the drains and the excess crosses the road and runs down Meadow road causing problems to the bungalows at the bottom The drains in meadow road overflow and during heavy rainfall sewage rises from the drains.so for this reason flooding this site should not be used.? Traffic is a constant problem and to widen the road this would require the removal of the existing hedgerow and trees thus losing the biodiversity that these give to the area. It is my opinion that the two sites on breach road are by far less detrimental to both biodiversity,traffic problems and flood nuisance than this site and can not understand why this site was chosen as preferential a response to this letter would be appreciated. These plans are objected to for the following reasons, Added congestion to Willfield Lane, Willfield Lane already struggles to deal with the amount of traffic which passes through this lane, the road is not wide enough for this traffic and there is no scope to widen this enough to cope with the extra traffic 50 additional houses will cause. Amount of accidents which have already occurred on Willfield Lane due to the speed which traffic uses this road. Additional traffic as a result of the housing development would only increase these risks. Amenities of the village are already stretched to the maximum threshold . Due to the fact that the field had been for planning many times previously including going as far as central government and was rejected, on this basis as green belt land I extended my home which contains 6 windows overlooking this field and therefore if houses were built this would not only spoil this view it would also have a detrimental affect to the value of my home. Brown Edge school does not have the capacity to take any more pupils , it struggles to cope with the demand of the existing village at the moment and therefore the houses proposed would attract the family market and in turn children who would need schools which are not available. The ongoing water problem which during heavy rain causes flooding from the field into Willfield lane , Caroline crescent and meadow road this would be increased due to the amount of houses and also the loss of the field which currently acts as a barrier and soaks away excess flood water. There has recently been 5 additional houses constructed on Willfield lane and these alone have caused congestion , road disturbances and have proven that if the road cannot cope with this additional traffic then</p>	

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						what would another additional 50 houses cause? The proposed field has for many years been used by the village community as green land and used for walking and enjoying the countryside and village community, this would reduce the amount of walking space available for this village community, lots of wild life has returned to this area over recent years including foxes, badgers and polecats the latter being a protected species. We would strongly recommend for safety and community reasons these plans are rejected.	
PO358	Nicholas Follett				Object	<p>I am writing to you about the proposal to build 50 houses on the site off Willfield Lane known as site BE041, and my utter disbelief that you could consider to put even more traffic down what is basically a single track lane for the majority of its length. This lane only last year had a serious traffic accident, in which a car ended up on its roof with two occupants inside, with fuel spilling from the fuel tank on to the road. The emergency services turned up entering from the proposed site end of Willfield Lane with the car in the middle section of the lane, the so called wider part, only to find that the fire engine could not get to the fuel spilling on the road because it could not fit through. By this time, traffic following on behind the emergency vehicle had blocked the lane from both sides. Only on quick thinking of the residences living on Willfield Lane, they allowed the traffic to back into their driveways, allowing the fire engine to reverse all the way back out of Willfield Lane till it could turn into Caroline Crescent, then go round through Ball Lane to enter from the other side of Willfield Lane to aid the over turned vehicle. This manoeuvre took approximately 20 minutes, luckily there was no fire and the occupants had managed to scramble out of the overturned car helped by residents. This accident all took place on a nice sunny Sunday afternoon where visibility was as good as it gets on the lane and possibly at the least busy time. If this accident could happen then, just imagine potentially another 100 cars using this narrow lane adding to the motoring rush hour to the schools. Also the same later in the day, with the normal stand-off between car drivers not wanting to give way to each other, all this blocking the lane. At the bottom of Willfield Lane, where it joins the top of Moss Hill, is possibly one of the worst corners in the local area, scene of many a coming together all year, due to the amount of traffic passing down the lane, at this current time. Living at 8 Willfield Lane, opposite the proposed site we also have an issue with drains, that barely cope with rain water and foul water, which in turn causes problems in Caroline Crescent, Meadow Road, even as far as Ball Lane. The site proposed has long been green belt with people from the local community enjoying the wildlife, foxes, badgers, rabbits and bats. To start losing these things is the start of Brown Edge not being a village. Services in the village are not the best. We have an hourly bus service, not a shop open after 6 PM and a school, that when my children went 15 years ago, had class sizes of 32 plus, and still are</p>	<ul style="list-style-type: none"> See response to PO9538 regarding highways, flooding wildlife green belt and Site Options sites

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						not better. I know there are other proposed sites with far better access from proper roads, i.e. Breach Road BE032 and High Lane BE060. Both sites probably have similar issues with drainage but neither of these sites could potentially cut off emergency vehicles reaching our village, liked the proposed use of Willfield Lane. Thank you for taking the time to read my objection and observations to the site at Willfield Lane BE041.	
PO371	Mrs G M Cooper				Object	I am writing with reference to the proposed site of 50 Houses to be erected on Willfield Lane.Brown Edge. These Plans are objected to for the following reasons. Willfield lane. already struggles to deal with the amount of traffic that passes through. The Lane is very narrow, There is no scope to widen the road to deal with the extra traffic this site would cause of 50 Houses. We have lived here for 17 Months. In the first 3 months of residence we had our wall knocked down, it was so bad it was an insurance claim.We also saw a dog killed, this was all caused by speeding drivers. it is used at times like a race track. Also the people that lived in the property before us told us the wall had been knocked down twice before. Across from us on the other side 5 houses have been erected and these have caused congestion, and road disturbance, If this has caused so much problem, I dread to think what another 50 Houses would do. I believe another site on Breach Road has been proposed to build these houses, which makes more sense as this is on a main road and more accessible. Thank You For Taking The Time To Read the objection I have Outlined And look Forward To Your Response	<ul style="list-style-type: none"> See response to PO 9538 regarding highways and Site Options sites
PO1298	Mr and Mrs A Powell				Object	We both appose of the above address would like to express our concerns about the planned green belt land in our village. There is plenty of building plots within the village boundary without extending out to the other green belt. Also there are other issues to be considered? The Village School will not be big enough. The wildlife we have bats newts and owls, foxes and even pole cats have been seen around the Willfield Lane and Carlton Avenue sites. Transport we only gave 1 bus and hour, a house sale has just fallen through on the Village because the people who wanted to buy it had not got a car, and couldn't get to work. If you want to put affordable housing for less well-off they too may not be able to afford a car. Jobs/employment there is no work in the village. Does brown edge need any more dwellings? There are at least 30 houses already for sale at this moment, and about 10 being built these 10 houses will take the village in danger of exceeding its infrastructure. Road any building on the Green Belt in Willfield Lane and Carlton Avenue and Woodside Avenue are all concrete under the Tarmac. Woodside is already seriously damaged and unadapted Roads which will leave residents fuming and Willfield lane will have to be seriously widened and so spoil the look of the village. We do not need a housing estate. Please consider our village the plan to build where it will not spoil our village	<ul style="list-style-type: none"> See response PO9538 regarding highways, ecology, need for new housing,

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
PO1152	Ms Janet M Clement				Object	I am writing with regard to above proposal for 50 houses to be built at the rear of my property on Fairfield Avenue, Brown Edge. I would appreciate it if you could take my valid points into consideration for the proposed application as I object due to the following reasons - - the access on Willfield Lane is not suitable for the extra traffic that these additional houses will bring and the lane itself is very narrow and follows from a one-way access with one pull-in available for passing and there has already been accidents in this area due to speed and the narrowness of the road, which will only increase with more through traffic. - the school etc are already at their limit. - I moved to the property over twenty years ago and one main selling point was that it was green belt (and knowing that planning permission had been rejected for this field on previous occasions) felt secure that my property would never be overlooked at the rear. - Also if these additional houses were to be built it would affect the value of my property (which is not acceptable as it is out of our hands -and this would not be compensated). - the height of the additional properties will overshadow my property greatly (with no additional coverage hedge wise or even a back entry being made available for vehicle parking). I really feel unhappy with this planning proposal in so many ways - I chose to live there because of the green belt and paid for that. Now to find that it can just be taken away by others -which is not acceptable. I know no-one really wants additional properties building in their back yard, but surely a more accessible location would be on the main Sytch Road/Breech going out of Brown Edge, where properties will not be affected in the same way. Also why not on the opposite side of the village. Needless to say I sincerely hope that you take my objections serious and if you want to talk about this directly I shall be available.	<ul style="list-style-type: none"> • See response PO9538 regarding highways, green belt, residential amenity, Site Options Sites • PO 9558 regarding infrastructure/schools/schools
PO352	Mrs Mary Perry				Object	I have been a homeowner in Brown Edge for nearly 40 years. I am actively involved in Village life and would like to see the Village preserved for future generations as the attractive Moorland Village that brought me to live here. I object strongly to an area of Green Belt being built on to provide 50 houses. There is no evidence that the Village will require this number of homes. As these houses are not needed by the Village, they will attract more people to the Village. This is unsustainable. There are no opportunities for employment, the local schools have few vacancies and public transport is poorly provided. New residents would be forced to drive to work and school on already severely congested roads. I am objecting to development that is unsustainable and is not required by the needs of the Village. There is no evidence for needing 50 more houses. The natural development of villages is linear, following the main roads and using infill where possible and only when necessary. This allows newcomers to the village to be absorbed into the community. Welcoming over a hundred new residents is challenging for a village. What is proposed in this Plan is an estate of	<ul style="list-style-type: none"> • See response PO9538 regarding green belt, size and location of development, highways, wildlife, Site Options sites and residential amenity • PO9558 regarding infrastructure/schools and the need for housing

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						<p>mainly new residents, unable to find work and schooling in the Village, with little chance of ever becoming assimilated. I want to specifically object to the development of BE041 (land off Willfield Lane). This site is much higher than the existing houses and will dominate them. There will be loss of an amenity particularly for walkers. Residents are extremely concerned that more houses would deplete the already inefficient mains services . It will also bring more traffic on to Willfield Lane adding to existing problems. The Lanes in Brown Edge are ancient, very attractive and immediately distinguish Brown Edge from the streets of the city. They are all worth preserving. Willfield Lane has very old beech and oak trees. Walkers on the Lane at night can often see owls near the trees. Riders from the nearby stables regularly ride along the Lane. Construction traffic will disrupt and damage the lane forever. Traffic from the proposed development would use the junction with High Lane. This junction is already very dangerous with poor sight lines. This field has been used for grazing and contributes to the natural diversity in the area; it has a high ecological value. On my nearby field we have seen hares, badgers, foxes, grass snakes, hedgehogs, newts, bats, toads, a weasel and a polecat. The undisturbed Green Belt habitat has allowed wildlife to flourish for generations. The field is very close to ancient woodland and high density housing would erode this surrounding area. The proposed field for development is on the south side of Brown Edge and will draw the Village closer to the Stoke-on-Trent conurbation. Is this a deliberate policy? The Green Belt was designed to separate the City and villages. This proposal reduces the separation. I am not against all development, but only planning which is against the best interest of the Village. New houses should as far as possible be infill and not draw the Village closer to Stoke-on –Trent. I had no objection to the proposed bungalows on Hough Hill that were approved by the Parish Council. I understand that Planning turned down this proposal in spite of little resistance to this development from the Village. I would support a very limited number of houses could be built on BE032, provided that they were kept close to Breech Road and did not extend too far into the field. These additional sites would better integrate new housing into the community in preference to allowing a developer to build 50 houses which would be his most economically viable option. I ask everyone involved in making these decisions to think very carefully about the long term damage that could be done to a Village community by making the wrong choices.</p>	
PO338	Mr Anthony john Cartlich				Object	<p>I strongly OBJECT to this site Could you please explain why this site has been chosen why should the village loose this it is probably the prettiest approach to the village surely the required properties can be found within the village borders.to open up this road and straighten out the bends would make this a much more dangerous and busy road thus causing more upset to the residents to the south</p>	<ul style="list-style-type: none"> • See response PO9538 regarding highways and size and location of the site

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						of this site. (Photos of the site also submitted)	
PO9700	Gary Turner				Object	I wish to forward my objections to the proposed development site BE041. I have lived in Caroline Crescent for 22 years, and chose this area for its rural appeal. My children have grown up surrounded by fields and trees, and have been able to see lots of different species of wildlife, including frogs, newts, badgers, bats and many species of birds. The development of BE041 would eliminate a vast amount of this, and that would be a terrible shame. I personally don't feel that Willfield Lane would be suitable to take the extra traffic, and any modifications to the road to allow the extra traffic would only increase the chances of motor collisions at the end of our road. This is a direct concern of mine. Also the volume of traffic that uses Caroline Crescent would be likely to massively increase, hence higher risk of someone getting knocked over. I also don't think the schools in Brown Edge or Endon could cope with a large increase in pupils, and the current pupils would suffer as a result. Weather conditions are another factor. I have seen a lot of flooding at the bottom of our road in extreme rain storms. The removal of the fields will remove drainage and cause extra water to gush down bank. This could be a serious problem.	<ul style="list-style-type: none"> See response PO 9538 regarding wildlife, highways, flooding and response PO9558 regarding infrastructure/schools
PO359	Susan Eason				Object	I wish to register my opposition to the above development. I feel that the site is unsuitable due to its position on a very narrow country lane which is hardly suitable for the volume of traffic at present. Building these extra houses not only will cause increased volume of traffic but will affect Fairfield Avenue as this will become like a rat run with cars taking short cuts to get to Endon and Leek. Fairfield Avenue is hardly wide enough for the owners cars which need to be parked on the road and the increased traffic will cause problems for the more elderly people with increased noise and problems crossing the road. I moved to Brown Edge years ago to be part of a village community with views over the back of my house for peace and quiet in my aging years. However if these houses are built not only will they bring extra cars extra people and also losing our privacy as the terrain is higher than our homes therefore we will be overlooked. At present we experience torrential downpours of rain which run down the road like a river as the drainage system cannot cope with the increased amounts of rain. If these houses are built it will encourage extra runoff problems. I look through my window and see the wildlife that is in the field and this would destroy their habitat and decrease the pleasure of the residents. If I had wanted to be enclosed on all sides by houses I would have bought a house on an estate. There are other places in Brown Edge to build on. One site could be Breach Road as access would be more adequate for these houses.	<ul style="list-style-type: none"> See response PO 9538 regarding wildlife, highways, residential amenity, flooding
PO339	Ms Shirley Hulme				Object	I wish to register my opposition to the proposed development of the site in Willfield Lane Brown Edge, numbered BE041. I feel this site is totally unsuitable for this proposed housing development. My	<ul style="list-style-type: none"> See response PO 9538 regarding wildlife, highways, residential amenity, flooding

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						<p>objection is due to its position on a very narrow country lane and the increased number of vehicle journeys it will generate in an area that already has a propensity for road traffic accidents. The lane in question connects the Brown Edge area with Stockton Brook and the A53. In places, this road is only wide enough for one vehicle to travel along at a time and, as a consequence of this, peak period usage is already treacherous. The possibility of a further 80+ cars using the lane will only further aggravate this already hazardous situation. I am also of the opinion that Fairfield Avenue will become a short cut for these additional vehicles wishing to access the A53 for journeys to Leek and beyond. Fairfield Avenue already has many cars and, indeed, larger vehicles parked outside its homes and the additional flow of traffic will make it a dangerous area for all concerned. Those who will use the exit of Willfield Lane onto High Lane will find that they already have very bad visibility in the easterly direction made all the more dangerous by the volume and speed of the traffic using this major arterial road. It is a dangerous and stressful manoeuvre which, again, is not going to be helped by an increase in the usage which BE041 being developed will create. At the present time, the change in weather patterns causing torrential downpours of rain is a problem for residents to the west of Willfield Lane due to the antiquated drainage system not being able to cope with the huge amounts of surface water. Flooding has been reported in the houses in Meadow Road and Caroline Crescent with manhole covers being lifted and raw sewage actually coming up in some homes. Increased housing on the Willfield Lane site will remove a large amount of natural water runoff exacerbating the problems now being experienced. The narrow lanes to the north of the site are already suffering due to the lack of parking facilities as they are unable to additionally park outside their own homes. They are, therefore, unsuitable for increased use as a thoroughfare and would not be safe or practical as such. Furthermore, this site is one of abundant wildlife which gives great pleasure to those people who live on its boundaries and who use the field for leisure activities. There are bats, badgers, foxes, deer and a myriad number of breeds of birds that will lose their habitat. This will greatly decrease the standard of life for residents. We in Fairfield Avenue and Willfield Lane do not want to be overlooked by houses built in this area. The terrain of BE041 is higher than our homes and we do not want to lose our privacy and the peace and quiet we currently enjoy. The increase in traffic is also unwanted by all concerned and we are most unhappy that our life and the area we love will be blighted by this proposed development. I look forward to receiving your written response in respect of the above issues as a matter of urgency.</p>	
PO349	Leigh Johnson				Object	I would like to register opposition to the proposed development of BE041 Willfield Lane. My reasons are: 1) The location of the houses	<ul style="list-style-type: none"> See response PO 9538 regarding wildlife, highways, residential amenity, location of the site, Site Options

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						is inhabited by a wide variety of wildlife including birds, foxes, rabbits, bees etc and would have a detrimental effect on the surrounding environment. 2) The proposed entrance to the site will be located very near a bad bend of a narrow country lane this will inevitably lead to accidents and a higher volume of traffic on this road and the fairfield ave road. 3) Endon high school is already oversubscribed and another fifty populated houses would put extra strain on the school. This could lead to residents children having to attend a school that is a lot further afield. 4) The privacy of many of the surrounding homes will be breached as the site is in an elevated position. I truly cannot understand why such a beautiful landscape is being targeted for such a development when there are many sites that are not greenbelt available in near by towns. Even though I disapprove of any development in the area the original proposed site of Breach Road had far better access and a lesser effect on the environment and surrounding houses. I look forward to your response and hope that these issues are seriously considered.	<p>sites</p> <ul style="list-style-type: none"> See response to PO9558 regarding infrastructure/schools
PO356	Linda Winkle				Object	I would like to voice my concerns regarding the proposed building of 50 houses on land off Willfield Road, Brown Edge for the following reasons: This would cause too much traffic on an already over used road. Flooding would also be a big problem. This field is a lovely nature area for all types of wildlife. The Breach Lane site would be far more appropriate.	<ul style="list-style-type: none"> See PO9538 regarding highways, flooding, wildlife and Site Options sites
PO5	MR DAVID MCGRATH				General comment	My personal concerns are with regards to the road access to this location. Wilfield Lane is a single track road with few passing points. It is already used as a rat run between the A53 at Stockton Brook and Brown Edge 50 houses could mean up to 100 more vehicles attempting to use this route along with the existing traffic. Measures would be required to prevent this. To add to this no planning applications should be accepted unless every property has space allocated for two vehicles to park off the road. To add to the increase in population I would also ask what will be considered for Schools and Public Transport which with regards to Buses is almost none existent.	<ul style="list-style-type: none"> See PO9538 regarding highways and PO 9558 regarding infrastructure/schools and schools
PO10254	Mr P F Bannister				Object	Proposed building site be041 Willfield lane, i strongly object to the plans to build 50 or so houses on this site the reasons been the road that links the site is just too narrow, your constantly have to give way or reverse to oncoming traffic it is impossible for this road to take any more traffic and 70 plus cars coming from a new estate would be a nightmare , turning right from the proposed site is a give way tee junction which is where my home is situated this also would not take any more access traffic waiting to get out of the junction .there has been numerous accidents over the past dogs been knocked down cars crashing on the bends , even cars taking the corners too quickly and over turning, i have also heard that you were planning a sports ground on the site ,having looked at the location the only parking would be in the surrounding streets which would not be at	<ul style="list-style-type: none"> See response to PO9538 regarding highways, The proposals do not include a sports ground or for existing dwellings to give up their gardens

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						all fair on the residents in and around Willfield lane , then we would have the noise don't forget there is 35 plus homes directly on the edge of the site that would be woken by shouting football fans not at all fair , if you decided to widen the road down the one way area there would probably 12 months of road closures which again cause that much disruption to the surrounding area of brown edgehomes would have to give up their gardens, tree with preservation orders on them would have to be destroyed.	
PO360	Lynne Marshall				Object	Reasons against: 1. Increased traffic on Willfield Lane towards Stockton Brook which is already an extremely hazardous country lane It has an horrendous single-lane 'S'bend which has just one passing place, once you have passed this the curvature & narrowness of the road still makes it impossible to view oncoming vehicles - there's usually a slamming of brakes & someone has to try to reverse a few hundred yards one way or the other! It becomes even more aggravated when there are more cars behind you!! 2. Fairfield Avenue is certain to become a 'Rat-run'. In an age when everyone is in a rush, drivers are sure to cut through Fairfield to join the B5051 which takes them on to the main A53 Leek Road. Fairfield Avenue has many cars & many vans parked on both sides of a road in which many school aged children live. This is a tragic accident waiting to happen 3. Flooding/Drainage. The present drainage system cannot cope with any downpour! Even after light rain there is always water on the carriageway (for several hundred yards) which runs from the field for days after the rain has stopped - removing a natural run off will make this a far far greater problem. Homes in Avenues below have often suffered flooding 4. Current mains power sources and overhead power lines which run the length of this site would need to be removed and channel underground at great cost. 4. This field has an abundance of wildlife - many breeds of birds - many ground nesting, bats are seen at night, foxes, badgers. These all give great pleasure. They would all lose their habitat. It is also the most popular of dog walking areas, somewhere dogs can actually run! Being able to access this natural area brings about enormous health benefits to the many residents, both adults and children, who use it daily. 5. The proposed terrain is higher than adjacent homes, said new homes would infringe on residents privacy - a privacy for which we paid a premium!	<ul style="list-style-type: none"> See response to PO 9538 regarding highways, flooding, wildlife and residential amenity and PO 9558 regarding infrastructure/schools
PO1159	Mr M Buckley				Object	The proposal to place up to 40 new houses on this plot will cause serious problems and I therefore wish to register my objection. 1. The narrow road from Stockton Brook - Willfield Lane - which links the proposed site is already dangerous and inadequate. 2. Residents in part of Woodside Avenue and Meadow Road already suffer some flood damage as water runs off the field and down Meadow Road and into Woodside Avenue. . With he removal of soil to be replaced by concrete/tarmac the frequency of flooding is bound to increase. 3. Woodside Avenue (still unadopted) and Meadow	<ul style="list-style-type: none"> See response to PO 9538 regarding highways, flooding, site BE032 PO9558 regarding infrastructure/schools National planning guidance states that the Council should seek to meet its own housing requirement

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						Road will be an obvious direct link or rat-run to the new properties from the direction of Norton. 4. The village can not sustain many more houses. The school is at present full; there is no Chemist or Doctor in the village; the Post Office is under threat - which also provides the only banking service to villagers. 5. But if houses have to be built - surely the proposed site with access off the main B5051 - Breech Road - would create least environmental, social and access problems 6. I must add that the principal is flawed - surely Brownfield sites in Stoke-on-Trent would be far more suitable for the proposed additional housing and far less damaging to rural life and be of great benefit to the City!	
PO51 PO43	Mr P Rushton				Object/general comment	<p>The selection of site BE041 at Brown Edge takes no account of the road and infrastructure/schools problems which would occur. The effect upon the heavily populated area would be catastrophic and traffic problems insurmountable. If additional homes must be provided, a sensible solution is in-filling around the village boundary or, if an estate is an insistence, the areas offering the least inconvenience to the community is BE032 and ADD06.</p> <p>In the not too distant past Brown Edge had considerable employment sites occupied by a multiplicity of businesses. The SMDC Planning Authority have consistently allowed their replacement with houses, creating a situation which obliges residents to seek facilities and services in the adjacent City. Even before the proposed major housing development, Brown Edge is in dire danger of losing identity as a large Moorlands village and of becoming yet another urban housing area on the lines of neighbouring Norton but without the facilities and services. .</p>	<ul style="list-style-type: none"> • See response to PO 9538 regarding highways, flooding, Site Options sites and the size and location of the site and PO9558 regarding infrastructure/schools • Comments noted
PO969 8	Rees Davies				Object	To the surveyor responsible for planning houses on Willfield Lane, Brown Edge, Stoke-on-Trent. My name is Rees Davies and I live in Woodside Avenue Brown Edge and I have walked these fields over many years and you need to be aware that living in the under growth are: Many varieties of wildlife there including voles and Pole Cats and their habitat will be destroyed. Willfield Lane is a very narrow road not wide enough to take two vehicles passing each other, no footpaths and only one passing layby, local councillors have been on site in an attempt to solve the problem , attached is a photograph showing the problem. There is a much more suitable site off Beech Road with easy access to the Main Road leading to Leek or Norton When we have heavy rain the field gets very wet from the natural springs, the water floods into the road then down Meadow road into Woodside Avenue and the houses on the lower side, (the odd numbers) are flooded and insurance companies have paid out thousands on pounds in compensation over the last couple of years. I realize that the government are using pressure to build houses but this site is just not suitable for many of the reasons listed, there must be other sites more suitable. Photos of road	<ul style="list-style-type: none"> • See response to PO 9538 regarding wildlife, highways, Site Options sites and flooding

						attached.	
PO353	Helen Aston				Object	To whom it may concern I am writing with reference to the plans for the application to build houses on the plot in Willfield Lane Brown Edge. Having relatives who live next to this proposed plot I regularly use this road to visit them and in turn leave my two young children in their care whilst at work. Having visited them at this location for over 40 years I am fully aware of how Busy and dangerous at times will field lane is. Whilst 5 houses were being built on it not long ago this caused numerous dangerous situations due to heavy goods vehicles used during the build. I am against the proposition to build these additional houses on Willfield Lane due to safety reasons, the road cannot sustain any more traffic and traffic which would obviously increase due to a housing estate being built by such a large amount. The road is currently used as a race track by some drivers and very unsafe at times for young children and old people especially, this risk would increase with additional houses. I as a young child played in these playing fields and now in turn see my own children playing in them along with many other dog walkers and also other families with children. This field has been used for many years by the community of Brown Edge. I question the ethos around removing a well-established facility within Brown Edge a small village and replacing it with a housing estate which would increase danger to young children and the elderly (vulnerable people) and in turn endanger lives by creating a flow of traffic that a lane cannot sustain. Even if this lane was widened this would not take away the danger element. Thank you for taking the time to read my opposition , I look forward to your response,	<ul style="list-style-type: none"> • See response to PO9538 regarding highways • New housing schemes depending on their size will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the consideration of new links in line with Local Plan policy. • Public footpaths can be maintained or redirected.
PO1158	Mr and Mrs B Dean				Object	We are two upstanding residents of the Brown Edge area, writing to express our opposition to the development of site BE041, it would negatively impact the surrounding community for various reasons, mainly the surrounding area can simply not sustain the suggested increase in the community due to the housing estate. We are very unhappy with this proposed development and enjoy the area as it is.	<ul style="list-style-type: none"> • See response to PO 9538 regarding the need for site allocations and PO9558 regarding infrastructure/schools
PO372	Mr and Mrs B Mountford				Object	We are writing in reference to the proposed build of new houses in Willfield Lane Brown Edge. Having been born in Willfield Lane Brown Edge and living on Endon Road Norton Green very close to the Brown Edge border for over 50 years we are fully aware of the village and it's surroundings. We currently travel across Willfield Lane frequently visiting relatives and have witnessed accidents and near misses on this road on many occasions. Construction a housing estate in an environment which is not suitable does not make any sense and only adds to the risk already in place for the community on such a busy lane. Surely as a council you have the responsible to ensure houses are built in a suitable environment? The village itself would not be able to accommodate another 50 houses as planned as its current facilities are already stretched there are only 2 spaces in	<ul style="list-style-type: none"> • See response to PO9538 regarding highways, and PO9558 regarding infrastructure/schools • See response to PO5558 regarding the need for housing

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						the whole school and as the new houses would attract families the village school would not be able to accommodate these children. Taking all of these points into consideration and a council which promotes being committed to providing the highest quality of service and excellent value for money to our customer. Why would you authorise these plans? What about the current customers of Brown Edge?	
PO340	Mr Peter Guest and D Turner				Object	<p>We wish to make our objection to the proposed development site formally known. We feel that this site is totally unsuitable for a variety of reasons. It is in an elevated position compared to where we are situated at the bottom of Caroline Crescent. In extreme weather conditions we have been known to experience flooding to the front of our property. The rain from the road will gush down the drive, and our drain trough at the bottom of the driveway is unable to cope, and so overflows into our garage under the door. The addition of a housing estate on Willfield Lane at the top of our street is only going to mean that the flooding will become a much worse problem for us. In all the time that we have lived here, we considered Willfield Lane to be a "Country Lane". There has already been a vast increase in the amount of traffic that uses this route for access between Brown Edge and Stockton Brook. If we take that route ourselves by car, we often have to stop and possibly reverse to allow oncoming traffic pass by. If we walk our dogs that way to gain access to the fields, we have to be vigilant and ensure that we are visible to drivers, and that us and our dogs are tucked right in to the edge. The addition of a housing estate is going to create a catastrophic increase in traffic along this route. It will remove the option of walking along that way, we feel that it would just be too dangerous. Access to the site would be another issue, and could possibly increase the risk of traffic collision on its junction. We have used that site for at least 20 years to walk our dogs and children up to the fields and woods. In doing so it eliminated us having to use neighbouring streets, and so the dogs would urinate on the grass and not on the pavement. We have been fortunate enough to witness the wildlife that currently exists around us, and building a housing estate would mean that bats, foxes, badgers and birds would lose their habitat. This would just be wrong for the area. We are a rural community, and want to stay that way. St Annes school would also be an issue. It is full to capacity as it is, how it could possibly accommodate a large increase in children. Surely this would mean our children who are already in attendance would suffer. Brown Edge may need more affordable housing, but how many of the houses will actually be affordable. They are quite likely to be bought by people who are financially stable, and will then go on to make money by charging rent to others who are not and never will be in a position to purchase their own property. The road where we live would be likely to become a cut through for their cars. Currently</p>	<ul style="list-style-type: none"> • See response to PO9538 regarding flooding, highways, wildlife and PO9558 regarding infrastructure/schools • Policies in the Local Plan will require an element of new housing provision to be affordable.

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						we live in a peaceful Crescent where our children can play, and we only occasionally have passing traffic. This is something else that would change, and it certainly wouldn't be for the better. We urge you to reconsider the proposition; we feel that it would be an all-round detriment.	
PO1312	Ms C Hollinsh ead				Object	<p>We wish to register our opposition to the proposed development of the site in Willfield Lane, Brown Edge, No BE041. We feel this site is totally unsuitable for the no of houses proposed. Our objection is due to its position on a very narrow country lane and the increased number of road traffic accidents. The lane in question connects to the Brown Edge area with Stockton Brook and the A53. In places this road is only wide enough for one vehicle to travel along it at one time. Consequently peak period usage is already treacherous. The possibility of a further 80 plus cars will only further aggravate an already hazardous situation. Those who will have to use the exit Willfield Lane onto High Lane, will find that they already have very bad visibility in the easterly direction made all the more dangerous by the volume and speed off traffic using the arterial road. It's very dangerous and difficult manoeuvre which again is not going to be helped by a already hazardous situation. After the present time the change in our weather patterns causing torrential downpours of rain is a problem for residents to the west off Willfield Lane due to the antiquated drainage system not being able to cope with huge amounts of surface water. Flooding has been reported in houses in meadow Road and Caroline Crescent with manhole covers being lifted and raw sewage actually coming into our homes. Increased housing Willfied Lane will remove a large amount of natural water run-off. The narrow road on the estate to the north of the site are suffering from due to lack of parking facilities and are not suitable for use as access to this area. It is a very much a family orientated area, which will not be suitable for uses as a thoroughfare and would not be safe or practical as such. Additionally there is one of the abundant wildlife which gives great pleasure to those who live on its boundaries and use the field for leisure activities. There are bats, badges, foxes, deer, and a myriad number of breeds of birds that will lose their habitat. This will greatly decrease our standard of life for residents. We do not want to be overlooked by houses built in this area. The terrain of BE041 is higher than our homes and we do not want to lose that feeling of privacy or live feeling like we are being constantly observed. As residents of Fairfield Avenue we are most unhappy that our life and the area that we love can be blighted by this proposed development.</p>	<ul style="list-style-type: none"> • See response PO9538 regarding highways, flooding, wildlife and residential amenity

We do not want to be overlooked by houses with built up areas. The terrain of BE041 is higher than our homes and we do not want to lose our privacy or live feeling we are constantly being observed. As residents of Fairfield Avenue we most unhappy that our life and our area that we love can be blighted by this proposed development.	
PO1334 PO1336	Miss L Chadwick				Object	We wish to register our opposition to the proposed development on this site of large field on Willfield Lane, Brown Edge, numbered BE041. This site we feel would be completely unsuitable for the proposed housing development. Our objection is due to increased traffic that will be generated on the narrow country lane, which has been the site of road traffic accidents in the past. This road is difficult to navigate as in places: it is only one car width wide. In winter it never gets gritted properly. Also without the field as a soak away the water would run down meadow road and into our street. There is an issue with the sewer system which was not built to accommodate the increased housing situation. In recent times of bad weather the manhole cover blew off, causing a torrent of water to flow down Meadow Road. Houses on the proposed site due to the foundations being dug etc will worsen the already limited drainage that's in place. If the proposed development were to go ahead various routes in the immediate area would experience increased traffic. These roads already have a large number of cars that have to park on the road/pavement. An increase of traffic negotiating these cars would almost certainly increase the risk of collisions, not to mention the children play near the roadside. Woodside Avenue is a private road that the residents and have to maintain themselves. This would mean that the residents will have to pay on behalf of all the new traffic utilising the road. This is unacceptable. We look forward to receiving your written response in respect of the above issues as a matter of urgency.	<ul style="list-style-type: none"> See response to PO9538 regarding highways, flooding

PO1090	Mr M Leese				Object	<p>We wish to register our opposition to the proposed site in Will field Lane Brown Edge which is numbered as BE041 for the following reasons: The site is totally unsuitable for this site is totally unsuitable for houses The terrain of the field is higher than of the surrounding area and will cause any housing to be overlooking the adjacent property. The antiquated drainage system in the area cannot cope with surface water at present and flooding, man hole covers being lifted and raw natural sewage entering people's homes occurs now. Taking this field over for the building and a natural water runoff will exacerbate the problems. Willfield Lane is a really narrow winding lane which has an enormous continual use of dangerous exit and access problems. The addition of more vehicles will create an even greater hazard. We will lose a area which will greatly lower recreational life of our village as well as reducing the wildlife habitat. The roads surrounding the areas already have parking problems and are not suitable as a thoroughfare for further traffic. We do not want to be overlooked by houses built on BD 041 as we feel it will invade our privacy and we are most unhappy that our life shall be blighted by this proposed development.</p>	<ul style="list-style-type: none"> See response to PO9538 regarding residential amenity, flooding, highways, wildlife
PO2046	Mr Bourne	Brown Edge Parish Council			Object	<p>Wish to make the following comments on the Preferred Allocation Site BE041: The general consensus was that the Green Belt should be preserved to keep the natural boundary between Brown Edge (Staffs Moorlands) and the City of Stoke on Trent. The site is within</p>	<ul style="list-style-type: none"> See response to PO9538 regarding green belt, flooding, highways and size and location of development

						the designated green belt area. Existing storm and foul sewer systems could not cope with any large development as they are already overloaded and subject to overflowing and flooding. Increased highway traffic would create problems on narrow Willfield Lane and with its dangerous junction with the B5051 High Lane. There are numerous infill sites around the village which could be utilised to develop and count towards the total number of houses required. These comments are similar to ones made on the site in previous consultations.	
PO1292	Mrs K Hodgekinson				Object	With ref to the above I strongly disagree with proposal for the reason below; Destroying a picturesque lane Spoiling a beautiful view Destruction of trees, wildlife, bats, foxes, deer, etd Danger for pedestrians especially children as they walk to school because of the increased traffic I brought my house in 1996 because of its location next to the fields Willfield Lane is beautiful tree lined lane which will be destroyed Disruption to Willfield Lane connects to Brown Edge to Stockton Brook and is already quite dangerous at peak times one of my only one car can pass at one time at certain times of the day. When it rains heavily flooding in Meadow Lane: Higher rise of accidents And Caroline Crescent because Willfield Lanes drains cannot cope with the Water	<ul style="list-style-type: none"> • See response to PO9538 regarding wildlife, highways, flooding •
PO354	Ms Kim Hodgkinson				Object	With reference to the above, I strongly disagree with the proposal to build 50 houses on the lane. I show below my reasons:- destroying a picturesque lane. spoiling a beautiful view. destruction of trees, wildlife, bats, foxes, deer etc. danger for pedestrians especially children as they walk to school because of increased traffic. the value of my property will decrease. I bought my house in 1996 because of its perfect location next to fields. Willfield Lane is a beautiful tree-lined Lane which will be destroyed. Disruption to Willfield Lane and surrounding areas because Willfield Lane connects Brown Edge to Stockton Brook and is already quite dangerous at peak times due to only one car can pass on a certain part of the lane - higher risk of accidents. When it rains heavily flooding occurs in Meadow Road and Caroline Cres because Willfield Lane drains cannot cope with the water. I look forward to hearing from you in due course.	<ul style="list-style-type: none"> • See response to PO 9538 regarding wildlife, highways, flooding
PO369	Mr John Dawson				Object	With reference to the proposed planning at BE041 in Willfield lane Brown Edge for 50 dwellings - as a resident whose garden backs on to the proposed green belt field and has lived in this location for 36years we feel there is other alternatives for developments within the village these being BE032 Breach Road, BE056 by Newfold Farm and BE 060 off High lane giving equivalent dwellings. We are concerned that the village and services and amenities are not capable to accommodate further developments. i.e no spare capacity at the local school ,no public transport for commuting to the city and surrounding areas for work or leisure. On Willfield Lane there is an ongoing issue with water causing flooding in heavy rain	<ul style="list-style-type: none"> • See response to PO9538 regarding Site Options sites, flooding, highways and wildlife • See response to PO9558 regarding infrastructure/schools

ID	Consultee Name	Company/Org	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer response
						to Caroline Crescent and Meadow Road and this will increase if the field is developed. Also the road has had numerous accidents from traffic as this road cannot take excessive further traffic. Since living in this location we have enjoyed having various wildlife including badgers, foxes, owls, squirrels and more recently polecats which will disappear if developments occur. We are strongly against the development for our own reasons and the community. Thank you for time in reading the above objections and I look forward to your response at your earliest convenience.	
PO370	Miss J Glover				Object	With reference to the proposed site to build 50 houses in Willfield Lane, my objection to this proposal are added traffic volume in the lane, with the dangerous bends near to the proposed site. There are ongoing water problems during heavy rain, which to my concern causes flooding in Meadow Road, Willfield Lane and Caroline Crescent. My concern is that building on BE041 in this regard would make matters far worse. There have already been five additional houses constructed recently in Willfield Lane leading to an access in traffic. We think that there are enough owners willing to sell sites for development within the existing boundary to sustain the required housing requirements.	<ul style="list-style-type: none"> See response PO9538 regarding highways, flooding
PO1327	Miss J Glover				Object	With reference to the proposed site to build 50 houses in Willfield Lane, my objection to this proposal are added traffic volume in the lane, with the dangerous bends near to the proposed site. 7	Mrs P Lewis					opposition. We feel the site is completely unsuitable for a housing development because of its position on Willfield Lane. The Lane in question connecting Brown Edge with Stockton Brook is a narrow country lane, which is not wide enough for two cars to pass in places. We would also like to point out that three quarters of Willfield Lane has no public footpath, and at present with the amount of traffic it can be hazardous for the residents trying to enter onto the lane from their properties. The speed of 60mph partly along the lane has been an issue with the residents for some considerable time and a letter was sent to the Parish Council raising the issue. Therefore with the extra vehicles that 50 houses would bring, plus the already mounting traffic, i.e. milk tanker, tractors, hay balers, horses, horse drawn vehicles, children walking to and from school, it would increase the dangers along the lane considerably. On one of the numerous accidents along the lane an emergency vehicle was unable to gain access. We feel there are far better sites around Brown Edge for development, enhancing the village in a more complimentary way.	
PO707	Mr Clive Brandon Proctor				Object	With regard to the new housing development of Brown Edge and the choice of site (BE041) which I am sure as been chosen with great thought, taking in consideration all possible elements of the for and against concerns i.e. (1) Will the existing school adequately accommodate 50 more dwellings? If not is there any kind of plan to provide a larger replacement school should the demand require it? (2) What of the inadequate sewerage system which I believe struggles presently? (3) The narrow country lanes adjoining this site are also a concern. I do realise that these questions apply to all of the designated plots and so with this in mind perhaps the answer is NOT to build further housing on Brown Edge at all! All of that aside my concerns for site BE041 are of erecting 50 houses on the one site which will create yet another housing estate on our village pulling it even further toward a Urban City Sprawl. Surely, if this extra housing is to be forced upon a community that is already struggling with inadequate amenities, they should be spread around as smaller plots allowing the village to at least appear to retain the village atmosphere. Many thanks for allowing us to share our thoughts on this matter. Clive and Sheila Proctor	<ul style="list-style-type: none"> See response to PO9558 regarding infrastructure/schools/schools and PO9538 regarding site size
PO1293	Mrs K Hodgekinson				Object	I do not agree or will support the building works on Willfield lane because of its rural, beautiful location breach road is on my preferred site. PO9438	Dr Vinod Patel				General comment	Email received 22/05/16: Re sites BE 042 Willfield Lane & BE 032 Breach road My knowledge of the area round these sites, dates as far back as 1970 when i started practicing and visiting as family doctor until 2001 when i retired. On that basis i would like say that there have been several accidents at Willfield Lane, it being narrow and tortuous. This site ,042 , is marshy and floods heavily when it rains; water running down Meadow road eroding road surface. Problems also arise with increased frequency during winter months when the lane gets icy easily. In view of these facts and for the safety reasons, i would like to say that, site 032 - Breach road , be preferred for development rather than site 042.The Breach road site has direct access on to the main road which is wider and relatively safer.	<ul style="list-style-type: none"> • These sites are not proposed for housing in the Preferred Options consultation
PO1124	Mr Norman T Lomax				Object	Further to my remarks of site BE041, dated July 2015, copy enclosed, I herewith now list my objections for this proposal. Present Road Condition. Willfield lane unsuitable to accommodate the serious increase in traffic both during and following the development as my neighbour, Miss Glover and I have access to our driveways opposite the present field entrance, potential danger from manoeuvring vehicles at this point is paramount. A few metres past this point the lane bends and narrows considerably, causing regular blockades or accidents. Existing dwellings and mature trees would prevent any road improvements here. A dangerous stretch! Surface water Having occupied this address in willfield lane for several decades I have been able to observe the surface water leaving BE041 and its surrounding roads quite closely. Even taking into account the present capability of the ground to absorb the rainfall, the road quickly becomes flooded in storms or badly frozen over, submerging our footway and threatening our properties. My concern is that building on BE041 in this regard would make matters far worse. Aspect Now I'm in my ninth decade I am enjoying my garden and its open views opposite. I have mature trees, views of fields to the horizon and plenty of clear sky's to enjoy. This precious commodity would sadly be lost should this development go ahead.	<ul style="list-style-type: none"> • Highway Authority have no objection in principle to the development of land for housing, subject to provision of adequate access, visibility, internal layout and design. • The Environment Agency has not identified any site specific issues. They recommend that the ecological value of watercourses is enhanced where possible and the impact on water quality is assessed. The Council has completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. Mitigation measures will be taken as part of the site development to address any surface water issues. • The Extended Phase 1 Habitat Survey 2015 assessed the present and potential ecological value of the proposed site allocations. It found that the site has low to medium biodiversity value overall in terms of the area recommend trees and hedgerows are retain if the site is developed.
PO1632	Mr F Turner				Object	Brown Edge. In my opinion this land is not suitable for housing. Woodhouse lane is far too narrow. Vehicle approaching in opposite directions have to stop and either one or the other have to reverse back on to Sytch Road or overland Drive to pass each other. Some years ago when Mr	<ul style="list-style-type: none"> • No sites are proposed on Woodhouse Lane Brown Edge

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						Hargreaves was the owner of the farm and land of Woodhouse Lane he applied for planning permission for a dwelling on the same land, but it was refused, now you want to build houses on it and that will destroy this small piece of Green Countryside. I therefore object to houses being built on woodhouse lane brown edge.	
PO2047	C F Stanyer				Object	BE056	<ul style="list-style-type: none"> This site was included in the Site Options consultation 2015 but is not a proposed site in the Preferred Options consultation.
PO2048	Mrs C Stanyer				Object	BE056	<ul style="list-style-type: none"> See response to PO2047
PO2049	Mrs C Stanyer				Object	BE056	<ul style="list-style-type: none"> See response to PO2047
PO9540	Ms Kay Bartlam				Support	SITE BE032 - BROWN EDGE This site has better access to the main road than BE041 and does not cause drainage and transport problems. As this is on the outskirts of Brown Edge it does not affect so many existing homes.	<ul style="list-style-type: none"> A number of sites were dropped from the emerging Local Plan after the Site Options consultation. Not all sites were required to meet the Districts housing requirements. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website.
PO9574	Mrs Mavis Slack				Support	(Summary only - full comments attached) Support the non-inclusion of site BE056 in the Local Plan. Site would be unsuitable for development because: Woodhouse Lane is a country lane and already accommodates many farm tractors, trailers, lorries and milk tankers throughout the day. There is also a dangerous bend to negotiate. I consider site BE056 most unsuitable for building houses. Agree with the Council's assessment of the site (see attached document) and would like to add that there is no sewer or grids within Woodhouse Lane.	<ul style="list-style-type: none"> Support noted
PO1025 5	Mr P F Bannister				Support	BE032 (Options site) having been to the meetings surely land be032 would be a much better option as this is on a main road much wider than Willfield lane , good visibility both ways and as limited homes surrounding it i count 6 homes directly on the site compared to 35 plus on Willfield lane , and would certainly cause limited if any disruption	<ul style="list-style-type: none"> A number of sites were dropped from the emerging Local Plan after the Site Options consultation. Not all sites were required to meet the Districts housing requirements. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website.
PO1633	Mrs K Morris				Object	As residents of Willfield lane we would like to raise our concerns about the development plans. On hearing the plans for the building of 40 houses we are very concerned	<ul style="list-style-type: none"> Highway Authority have no objection in principle to the development of land for housing, subject to provision of adequate access, visibility, internal layout and design.

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						<p>as to the increased problems we envisage from this development. There have already been a number of accidents due to the narrowness of the lane especially as the speed limit is way too high. The last accident involved a family who's car overturned. The lane was blocked for several hours, luckily no one was killed. This problem will only get worse as the traffic along this lane is increased. Another concern is that the area is semi-rural and the area is farmed. Tractors use this lane to get to the fields in order to cut grass. Milk waggons also use this on occasions. Even with the modest number of vehicles this land gets blocked when other traffic is passing. This again will only get worse when the traffic is increased due to this new development. In this rural area horse riding is very popular. Willfield Lane is frequently used by youngsters from the stables near Stockton brook. This lane has a relatively smaller amount of traffic at the moments and used by this group of people use in the morning, evenings and at weekends. We can see that the problems with horse riders will be exacerbated by this proposed development. Along much length with Willfield Lane there are no footpaths; traffic has to slow down because of walkers. Also many residents use this way to walk to the local shops Both Brown Edge and Stockton Brook. Again more problems will ensure as traffic will be increased if this development goes ahead.</p>	
PO1634	Mrs D Shufflebottom				General comment	I agree with your with you decision on BE056 The land into woodhouse has a blind bend that is why we have open fence grass verges. At last parish council meeting the grass verge and the lane become very busy with traffic resulting in the grass verge being damaged, which the parish council have concerns. Also we now have a large amount of horse rider, which are coming from fold farm.	<ul style="list-style-type: none"> • Comment noted
PO1635	Mr S Chadwick				General comment	I agree with the councils and support their decision on the site at brown edge woodhouse lane BE056. There is no street lighting in the length of the lane only 1 which is not the lane but off the road leading into the lane.	<ul style="list-style-type: none"> • Comment noted
PO1637	Mr A Shufflebotham				General comment	The road traffic has increased and at the last parish council meeting it was discussed that the grass verge had become damaged due to a large number of vehicles using the lane, which means the road is not suitable and the lane into large enough to take traffic. The entrance is to this site is not suitable enough and is dangerous in and out of BE056. I thank you and agree with all the discussions you have made	<ul style="list-style-type: none"> • Comment noted

						towards BE056	
PO1636	Mrs A Chadwick				General comment	In woodhouse lane there are no sewers no grids. The level of land opposite is not suitable, this will take out the light in front of our property. The land floods in places and the land BE056 is flood soak. In woodhouse lane we agree that there are no sewers at all in the length of the road or grids. At the property next to us they have horses which use the lane in woodhouse lane; this is not going to be suitable for these riders. The exit which I not suitable for access in to BE056 is dangerous as well so I agree to decision about the exits there are more suitable areas available with in the area of Brown Edge. I thank you very much for your decision you have made and I agree with BE056	<ul style="list-style-type: none"> • Comment noted
PO1025 2	Ms Debbie Evans				Object	I support the development of land off Breach Road, Brown Edge (BE032): It has only the amber and Willfield Lane (BE041) has green. After attending the meeting in May I realised how many people were against BE041 with many concerns about the very narrow road leading to Moss Hill, as I use this road every day I understand as sometimes it is almost impossible to get through reversing back many times for on coming traffic, more traffic would only make this situation even worse. We had an idea for the Council to help the community get more benefit from choosing site BE032, I propose. As I also own the 12.75 acres at the rear of BE032 (see attached map) I would be willing to give the council 2.75 acres adjoining BE032 for a sports ground (eg football pitch basketball netball courts) this would be safer away from busy roads. Also the other 10 acres (if required) could be purchased or rented by yourselves to include your community garden scheme (allotments) as this is a perfect position for this project having flat very fertile land that has been tended professionally for years, also the public footpath runs along the other side of the fence at the very top giving access from Broad Lane.	See response above

PO9547	Mr K Ede					Letter submitted [attached] clarifying that Mr Ede as landowner has no desire in releasing a plot of land in Checkley, as a permanent traveller site.	See comments above
PO7649	Mr and Mrs R Jones				Object	I am sorry but I am fully aware that people need somewhere to live. Questions what Council is trying to do. Checkley is a lovely village to live in. There is spare land "Fole Dairy" - it has obvious hardstanding - use that. Questions how we/our doctor's/our schools will cope. It is quite frightening. So much bad press - litter etc. We do not want this.	<ul style="list-style-type: none"> See response to PO7484
PO7663	Mr Nigel Roy Reade				Object	To close to existing development (Badgers Hollow). The village has no retail services to cope with extra intake. No suitable access to field to change this would cause considerable expense - question where would this come from. Visual impact of Green Belt land. Devaluation of present properties. Strongly object to this proposed development. Also object to the proposed development being hidden from the residence of Checkley.	<ul style="list-style-type: none"> See response to PO7484
PO7659	Cass Graham				Object	There have to be more appropriate sites in SMDC - you need to focus on removing unauthorised occupancy of existing site in 2017 + a considered extension is simply ridiculous.	<ul style="list-style-type: none"> See response to PO7484
PO7645	Mr J Tams				Object	We object to the site, this is green belt land. Not a camp for Travellers. They are also running a business from this site.	<ul style="list-style-type: none"> See response to PO7484
PO7665	Mr and Mrs Rommelrath				Object	I strenuously object to the inclusion of an extension to the temporary traveller site at Four Trees Uttoxeter Road. It is totally unacceptable to locate a larger traveller site in this location which is a special landscape area in the same way it	<ul style="list-style-type: none"> See response to PO7484

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						would be unacceptable to locate a commercial caravan leisure site. Totally out of context with the surrounding environment. Absurd.	
PO7675	Ms Heather Graham				Object	-the existing traveller site is TEMPORARY and existing travellers will be expected to move in 2017. It is TOTALLY UNACCEPTABLE that this site should even be considered in such circumstances. - I strenuously object to the existing occupation of the land at Four Trees by the travellers family and officers of the Council should be focussing on how to remove them - the very thought of an extension is completely ludicrous and makes all the actions and all the money spent in the last 9 years laughable. -it has been agreed that the location is inappropriate by a number of experts so this just is not an option.	<ul style="list-style-type: none"> • See response to PO7484
PO7673	Mrs P Leatherbarrow				Object	-no consultation -access no thanks	<ul style="list-style-type: none"> • See response to PO7484
PO7592	Mrs C Salt				Object	- Poor access to site on what is already a dangerous road. - Similar applications to SMDC have been refused. This should follow suit. -Access would be through a neighbour's land and on a dangerous bend.	<ul style="list-style-type: none"> • See response to PO7484
PO7880	Ms Kim West				Object	I object to the inclusion of an extension to the temporary traveller site at Four Trees, Checkley for the following reasons: it is inappropriate development of a "special landscape area" access is unsuitable utilities are insufficient development would have a detrimental impact on the area development is an extension of a temporary existing site so viability of existing smaller site is not yet satisfactorily agreed. I would like to add that i have previously supported the retrospective residential use of the existing site at Four Trees. When the land was bought i enquired about access to the fields behind Four Trees and was assured these would not be encroached upon or put up for development. I am disappointed that SMDC appear to be using the only temporarily authorised, use of Four Trees for residential use as a means of seeking to develop a much larger site. Checkley is a small village where the green fields aspect supports the historic and cultural value of the area as the primary parish village. The development of a significantly sized traveller site would be detrimental to the village. I can see no benefit in the development of such a site and the destruction of not only green fields but an area of "special landscape". I believe there must be far more suitable sites available elsewhere.	<ul style="list-style-type: none"> • See response to PO7484

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
PO7719	Ms Cynthia Brassington				Object	A traveller site at this location will spoil a beautiful village, especially as it is so near to our cricket club, a major village amenity. The club has already encountered trespass from a horse and dog from the private traveller site next to Rose Cottage. Strongly object.	<ul style="list-style-type: none"> • See response to PO7484
PO7826	Mrs C Moran				Object	STRONGLY OBJECT TO THIS PROPOSED SITE. TRAVELLERS MOVING IN AND OUT OF THIS SMALL VILLAGE WOULD LEAVE DEVASTATION AND CHAOS. WE ARE VERY PROUD OF OUR VILLAGE AND WE DO NOT WANT THIS PROPOSED SITE . WE HAVE LEARNED FROM OUR LOCAL PAPER THAT LEEK AND BIDDULPH HAVE BEEN TAKEN OFF THE LIST BOTH PLACES SO MUCH BIGGER THAN OUR SMALL VILLAGE.	<ul style="list-style-type: none"> • See response to PO7484
PO8520	Mr C Walker				Object	Checkley is an attractive well ordered village with an active village hall, school, cricket club and ancient church and surrounded by meadows and farmland. This 'suggested' development is strongly opposed and would be total anathema to the well being of Checkley. Any development of the traveller site would be inappropriate and insensitive and seriously affect the wellbeing of people and properties. The backdrop over the meadows from Badgers Hollow - to say nothing of Rose Cottage and others in the immediate vicinity plus the cricket club - would be an unregulated eyesore consisting of caravans, lorries, industrial waste and other detritus as so often happens with such sites. Property prices would, therefore, be considerably compromised. SMDC has a reputation of incompetence, indecision and poor planning control giving no notifications to residents, and should urgently address the existing problem of the travellers site instead of adding more issues and exacerbating the problem.	<ul style="list-style-type: none"> • See response to PO7484
PO7742	Mr Ronald Peter Massey				Object	We strongly object to this development because it is not designated as residential use.	<ul style="list-style-type: none"> • See response to PO7484
PO7771	Mr David Shooter				Object	WE STRONGLY OBJECT TO THE LACK OF PUBLIC CONSULTATION OVER THIS ISSUE. THE IMPACT OF AN EXTENSION TO THE EXISTING TRAVELLER SITE CAN ONLY BE EXPLAINED WITH FULL CONSULTATION BETWEEN THE SMDC AND LOCAL RESIDENTS.	<ul style="list-style-type: none"> • See response to PO7484
PO7851	Ms Julia Coughlan				Object	I strongly object to this plan for many reasons. The current site is due to expire and to develop it further would cause issues with road safety, utilities, traffic. This area is supposed to be a "special landscape area" and as such should not be utilised in such a manner. As residents we have not been consulted for our thoughts and opinions on a proposed permanent travellers site.	<ul style="list-style-type: none"> • See response to PO7484

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
PO7796	Mr B Walker				Object	On two occasions last year meetings for local residents were held in Checkley regarding future proposed residential developments in the Checkley Lower Tean area, however at these meetings there was no information forthcoming regarding the extension of the traveller site at Four Trees Uttoxeter Road adjacent to Checkley Cricket Club and Rose Cottage. We would strongly object to the extension to this temporary site as listed in this communication, and further request information forwarding to us as to why we have had no communication from you of this proposal.	<ul style="list-style-type: none"> • See response to PO7484
PO7821	Mr Roy Walker				Object	The existing site is temporary until 2017. Now Staffordshire Moorlands Council wish to extend this site for eight families. Totally against all the statements you have made in the past. This would be a blight on Checkley village and the surrounding area reflecting the value of all properties. All the objections on the attached are relevant and this proposal should not proceed.	<ul style="list-style-type: none"> • See response to PO7484
PO8028	Ms Mavis Morton				Object	I strongly object to the proposed extended development of the existing traveller site mentioned above. I feel it would seriously affect our local community and be a drain on local services and amenities.	<ul style="list-style-type: none"> • See response to PO7484
PO7815	Mr C N Gray				Object	We strongly object to proposed extension of the temporary travellers site as this will spill onto greenfield agricultural land, access to the proposed area will have to be through another landowner's property. There are lots of brownfield sites that can be better used for this need. It is likely that any site will become a long term home for travellers with large 'mobile' homes just being sited and creating a blot on the landscape. Once a green field site is used in this way even temporarily it will never be returned to its previous state.	<ul style="list-style-type: none"> • See response to PO7484
PO7991	D Brown				Object	This clearly is not in the best interest of our village.	<ul style="list-style-type: none"> • See response to PO7484
PO7679	S Homer				Object	No local consultations. Plan hidden from residents of Lower Tean and Checkley - dishonest. If current site is TEMPORARY question how can it be extended. The Plan is obviously to make it permanent and much bigger.	<ul style="list-style-type: none"> • See response to PO7484
PO7707	P W Alsopp				Object	I wish to strongly protest against the proposed traveller site at Four Trees Checkley. My main objections are: a) access to and from A522 is already an accident black spot and with the obscured visibility would only make it worse. b) this is not within the local residents interest, resulting in a possible devaluation of existing properties. c) concerns over supply of electricity, sewage and drainage facilities to support such a	<ul style="list-style-type: none"> • See response to PO7484

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						venture. d) the Council are elected to represent their constituents views and opinions and as such would expect them to vote against this proposal, reflecting their concerns.	
PO7680	Mr & Mrs Eric and Doreen Lomas				Object	We both strenuously object to such a development between Checkley and Lower Tean.	<ul style="list-style-type: none"> • See response to PO7484
PO7678	Mr Brian Whitehead				Object	I strongly object to this development being included in the Local Plan.	<ul style="list-style-type: none"> • See response to PO7484
PO7681	Mr and Mrs B A Prosser				Object	We strongly object to the travellers site being extended. We were led to believe the site as it is presently would remain, to accommodate no more than 3 caravans.	<ul style="list-style-type: none"> • See response to PO7484
PO7785	Mr Michael Shingler				Object	I strongly object.	<ul style="list-style-type: none"> • See response to PO7484
PO7786	Mrs S M Taylor				Object	I strongly object to this development being included in the local plan.	<ul style="list-style-type: none"> • See response to PO7484
PO7677	Tina and Terry Bellamy				Object	We strongly object to any expansion of the traveller site as the site should never have been allowed in the first place. However as we live at the edge of Checkley we already have problems with the inadequate electricity supply as the power is often too low due to the additional development which has already taken place over the years in the village. We also expect the Council to act in our best interests as we elected them and already pay a high price in Council tax. The internet provision is also very poor well below what the Government claim we should be receiving.	<ul style="list-style-type: none"> • See response to PO7484
PO7676	Mr Mick Roberts				Object	Apart from the obvious road safety aspect and the upset this project would cause to local residents an influx of probably one hundred plus people in a small village with no reason for it other than moving the problem the Council has to find the correct type of permanent site for the travellers. It appears that the travellers can set up sites in nice areas for very little or no outlay, whereas other residents have paid high prices to live in this area. I am totally opposed to any sites in our village. This is not a Council dump site.	<ul style="list-style-type: none"> • See response to PO7484
PO8524	Mrs D Brogarth				Object	We vehemently object to the possibility that plans to include provision to extend the existing travellers' site at Four Trees, will be in the new Local Development Plan (to be voted by SMDC on 13th April 2016. Any proposed plans for a travellers' site in the middle of a rural community Checkley, Fole, Lower Tean, and Tean would be to the detriment of that community. It would be an anathema and would greatly disrupt the harmony of village life. A travellers' site too, would be alien to the landscape. Moreover, it would have a	<ul style="list-style-type: none"> • See response to PO7484

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						considerable financial impact on residents of Checkley, Lower Tean, Tean and Fole. Property prices would suffer as a result of any proposal or resulting site. Property prices would tumble in the area and would not reflect market value. We have only just been notified of this vote on the LDP next week via village channels, rather than officials. We were under the impression that Council officials were voted in to represent the wishes of the community and are entrusted to keep them informed of anything that impacted on their community. Notwithstanding our comments above, we object to any proposal of a travellers' site on the points as follows: the site is immediately adjacent to Rose Cottage and Checkley Cricket Club and is "back development" and not "infill" between residential developments. It would be on land that is classified as a "special landscape area". Access to this "land locked" site is limited and would be via an "Agricultural Easement" across land owned by an adjacent neighbour, who is unlikely to allow access. SMDC have refused planning permission for this type of development. The "private" traveller site has been refused planning. there has been no local consultation for a permanent travellers' site or suitable locations. access to the site is on a bend and is on an accident blackspot. existing electricity supply would not support demands of the site. connection to mains drainage would require access across adjacent landowners.	
PO7093	Ms Heather Graham	Checkley Village Awareness Committee			Object	Covering letter and attached comments submitted, that object to potential expansion to existing temporary traveller site adjacent to Rose Cottage, Uttoxeter Road, Checkley, ST10 4NA. [Refer to attached file].	<ul style="list-style-type: none"> • See response to PO7484
PO7664	Mr Thomas Barrows				Object	To close to existing development (Badgers Hollow). The village has no retail services to cope with extra intake. No suitable access to field to change this would cause considerable expense - question where would this come from. Visual impact of Green Belt land. Devaluation of present properties. Strongly object to this proposed development. Also object to the proposed development being hidden from the residence of Checkley.	<ul style="list-style-type: none"> • See response to PO7484
PO7674	Louise Leatherbarrow				Object	-SMDC have previously refused planning for this type of development. Existing traveller site is subject of temporary planning. -'back development' NOT 'infill' - questions is this not special landscape area. -There has been NO consultation	<ul style="list-style-type: none"> • See response to PO7484

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						for permanent traveller sites. -Access is on a bend/accident black spot. -SMDC will have a lot of explaining to do after a well publicised objection to the travellers site.	
PO8616	Mr and Mrs Boorman				Object	STRONGLY OBJECT to an extension of this site and any proposed site at Checkley now or any time in the future. Checkley is too small to accommodate any more residents, buildings, it will affect schools, doctors, increase traffic on an already busy road. Question why would any 'true' "traveller" want to be on a permanent site. Question why should one group of people be 'given' a permanent place of residence - when [others] have to provide for [themselves].	<ul style="list-style-type: none"> • See response to PO7484
PO9586	Mrs J M Morris				Object	I object strongly to this proposal. The existing illegal site has been of great concern for the past 8 years. It has gradually accommodated more caravans, cars, vans and even a brick residential building , all without proper planning permission...[some text redacted]. We have been assured many times over the years that the site would be closed, but it is still there, and the prospect of an even bigger site is completely unacceptable on land so close to two quiet villages in a special landscape area. ...[some text redacted].	<ul style="list-style-type: none"> • See response to PO7484
PO9584	Mr and Mrs A Carr				Object	REASONS WHY THIS SITE IS UNSUITABLE FOR DEVELOPMENT: This falls adjacent to the existing cricket club which has been established since 1860. The amount of cricket that is now played at this scenic ground exceeds 100+ games a year, to which 60% of those games involve children from 6-17 year olds... The cricket club provides fantastic facilities for the local community..[some text redacted].	<ul style="list-style-type: none"> • See response to PO7484
PO9580	Mr T A Ketcher				Object	We strongly object to this development, as..it will decrease the value of our house.. We have worked hard to afford to be able to live in a village and not be surrounded by noise..despite what the 'do gooders' say!	<ul style="list-style-type: none"> •
PO9566	Ms Heather Graham	Checkley Village Awareness Committee			Object	Letter from Heather Graham to Simon Baker [attached], which attached correspondence between herself [Chair of CVAC] to Vice Chairman of Local Plan Steering group on 02/04/16.	<ul style="list-style-type: none"> • See response to PO7484

PO7662	Mr D Edwards				Object	Lack of infrastructure to support more population.	<ul style="list-style-type: none"> • See response to PO7484
PO7661	Miss V Wilkinson				Object	I strongly object to this plan as there is not the infrastructure in the village to support such a development. In addition to	<ul style="list-style-type: none"> • See response to PO7484

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						this Uttoxeter Road is already an accident blackspot and would struggle to cope with the extra traffic (combined with JCB works traffic and the continuing development of Uttoxeter). The area is also subject to a special landscape area and more development would have an impact on this as well as tourism to the local area.	
PO7660	Mr A Graham				Object	I strongly object to the extension of the present unauthorised site adjacent to Rose Cottage and cricket clubground for the following:- a) the land of the current temporary and the possible extension are both in the special landscape area and therefore i agree that as per the current Local Plan there would be a presumption against ANY type of development. b) the August 2015 PPTS specifically states in para 4(d) that planmaking should protect the green belt from inappropriate development. Para 3 requires the RESPECT of the settled community para (4) protect local amenity and environment. Policy E 16&17 specifically 'protect' the greenbelt from traveller development ie the proposed is not aligned with the requirements of the PPTS August 2015. c) there is no access from the A522. d) drainage and power supply do not exist.	<ul style="list-style-type: none"> • See response to PO7484
PO7658	Mr R Graham				Object	-Completely inappropriate -unauthorised occupation by travellers already. -extension not an option - vacation of existing site is the only option.	<ul style="list-style-type: none"> • See response to PO7484
PO7871	Mr N Beaumont				Object	This type of development is totally unsuitable for this area. It is unwanted by a large majority of existing residents. It is in a dangerous position for vehicles, entering or leaving the site. It will be extremely detrimental to the local area and will reduce the value of local properties. It will considerably reduce the desirability of the village as a good place to live and bring up a family, or retire after a lifetime of hard work.	<ul style="list-style-type: none"> • See response to PO7484
PO7789	Mrs J Chell				Object	On safety grounds alone this appears to be a silly plan. Traveller communities tend to have many young children, and the Uttoxeter Road so close by can only be considered an "accident waiting to happen"	<ul style="list-style-type: none"> • See response to PO7484
PO7656	Mr N Jackson				Object	TOTALLY UNSUITABLE SITE FOR ALL THE REASONS THE COUNCIL HAVE ONLY GIVEN TEMPORARY PLANNING TO THE GYPSIES ALREADY AT THE SITE. PLANNING SHOULD NEVER HAVE BEEN GRANTED IN THE FIRST PLACE. IF IT IS NOT SUITABLE FOR A HOUSE PLOT THEN IT CAN NEVER BE SUITABLE AS A GYPSY SITE.	<ul style="list-style-type: none"> • See response to PO7484
PO9582	Mr M Ratchford				Object	the existing Traveller site is 'temporary' and is clearly unsuitable for such developments . There are already numerous expansions and developments planned for the	<ul style="list-style-type: none"> • See response to PO7484

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						local area, surprising given that it is a 'Specialist Landscape Area' at a time of austerity question if it would be the taxpayer who fund site affordable homes are needed for local residents and their children The land is not easily accessed and is 'land locked' The existing temporary site has been refused . the land is blocked by electrical and agricultural means - in addition to drainage issues The road is an accident blackspot , hence the existing safety cameras and regular police presence.	
PO7672	Mr Mark Alford				Object	IF THE BLYTHE BRIDGE SITE (TR002) IS NOT APPROVED BY THE COUNCIL, WE OBJECT TO THE CHECKLEY SITE (TR005) AS IT WOULD BE UNSUSTAINABLE DEVELOPMENT IN AN ISOLATED LOCATION COMPARATIVELY.	<ul style="list-style-type: none"> • See response to PO7484
PO8023	Mrs S Gallimore				Object	I strongly object to a travellers site between Checkley - Lower Tean. SMDC needs to look at itself and understand it is the public who vote them into office. The small traveller site at Four Trees should not have been allowed to happen. There are specific planning reasons and technical reasons why the site is unsuitable for this development and further larger travellers site should not even be being considered.	<ul style="list-style-type: none"> • See response to PO7484
PO7667	Mr Derek Chesters				Object	We are in full agreement with the comments and contents of the enclosed form concerning a Local Development Plan for the residents of Checkley, Lower Tean, Fole and Tean residents. We strongly object to a travellers site being proposed at Checkley.	<ul style="list-style-type: none"> • See response to PO7484
PO7669	Mr Paul Rushton				Object	NO LOCAL CONSULTATION GIVEN CREATING MISTRUST. ADDITIONAL TRAFFIC IMPACT ON ENVIRONMENT.	<ul style="list-style-type: none"> • See response to PO7484
PO7670	L Turner				Object	A traveller site would also exacerbate the flood problems in the Lower Tean area.	<ul style="list-style-type: none"> • See response to PO7484
PO7654	Mr Joe Brown				Object	I STRONGLY OBJECT TO THIS DEVELOPMENT. -POOR VISIBILITY FOR ENTRANCE/EXIT FOR LARGE VEHICLES. -SMDC HAVE PREVIOUSLY REFUSED PERMISSION FOR SIMILAR SITES. -EXISTING PRIVATE SITE ONLY HAS TEMP AGREEMENT.	<ul style="list-style-type: none"> • See response to PO7484
PO7646	Mrs Elaine Jones				Object	There must be some brown sites more suitable to green fields in a special landscape area. Questions who will monitor/clear any debris left behind. Will it be taxpayer. This development would also decrease property prices in the area.	<ul style="list-style-type: none"> • See response to PO7484
PO7881	Mrs Brenda Robotham				Object	This has been strenuously opposed by both residents and SMDC. The reasoning behind the opposition is clear, the present site at Four Trees cannot accommodate the present family due to it being totally inappropriate for a traveller site. The site is on a bend on a very busy road, when the A50 is	<ul style="list-style-type: none"> • See response to PO7484

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						closed due to an accident traffic is diverted passed this site and all residential areas from Draycott to Uttoxeter. The schools in the area cannot cope with the present amount of pupils question how can they cope with a substantial site, this is also true for doctors, dentists etc. The present site constitutes "back development" and only has temporary planning permission until 2017 so question how can planning permission suddenly be granted for a considerably extended traveller site. The present site is bordered by a cricket club and residential dwellings, once again not suitable for a large traveller site. It would be appalling if further temporary planning permission is extended at Four Trees in 2017 as there are perfectly adequate traveller sites in both Sudbury and Stoke on Trent.	
PO7794	Ms Rosemarie Rushton				Object	Outdated and underhand politics once again. Residents have a right to know what is being proposed in their area and the people who get the privilege to serve them as councillors owe it to them to be honest fair and transparent. I wholeheartedly object to this plan. Let Leek or Biddulph take something for a change.	<ul style="list-style-type: none"> • See response to PO7484
PO8522	Thomas C. Kitt				Object	I strongly object to so called (temporary) site. Uttoxeter Road is already returning to the volume of traffic pre- A50 bypass days plus the possibility of fly tipping puts more cost for the Council. I wouldn't like to see a temporary site grow to DALE FARM size.	<ul style="list-style-type: none"> • See response to PO7484
PO7671	Mr D.R. Hanlon				Object	I strongly object to the extension of the site and am appalled that the temporary allowance was granted which effectively allows riding roughshod over the planning application process.	<ul style="list-style-type: none"> • See response to PO7484
PO7765	Mr Leigh Peach				Object	Strongly object!	<ul style="list-style-type: none"> • See response to PO7484

PO7777	Ms Patricia Alcock				Object	I OBJECT TO ANY FURTHER EXTENSION. THIS HAS GONE ON LONG ENOUGH. IT IS NOT AN AREA TO HAVE A TRAVELLERS SITE ON. THIS IS A BEAUTIFUL VILLAGE WITH PROPERTIES AND A WONDERFUL CRICKET CLUB THAT REFLECT THIS, AND YOU WANT TO SPOIL THIS WITH A CARAVAN PARK, WHERE IS ALL THIS GOING TO END.	<ul style="list-style-type: none"> • See response to PO7484
PO7734	Mr Clive Grainger				Object	Totally inappropriate site for many reasons. Mainly access onto A522 there has been fatalities on this bend in the past.	<ul style="list-style-type: none"> • See response to PO7484
PO7768	P J Thorley				Object	Our objection is due to the reasons stated and surely the travellers would prefer a more rural site.	<ul style="list-style-type: none"> • See response to PO7484

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
PO7750	Mr S T L Lowe				Object	The consequences of the above plan to go through planning, could be a total disaster. Increased risks, boundary protection, litigation, but most of all, what is most at risk. The beginning of the end, of over 150 YEARS provision of cricket played at 4 Trees. I could go on 80-100 junior members alone present on a Friday evenings with parents. It is for one reason, alone, that mentioned above we most strongly object to this development.	<ul style="list-style-type: none"> • See response to PO7484
PO7766	Mr Alex Thorley				Object	-Impact on landscape -increased traffic -land access We strongly object to this development being included in the local development plan. Same reasons given above.	<ul style="list-style-type: none"> • See response to PO7484
PO7758	Mrs P Oldroyd				Object	I agree with all comments as listed. Also question why has this been put forward so quickly and without any consultation with local residents and our local parish council. I strongly object to these proposals. Checkley is not in any way suitable for a traveller site.	<ul style="list-style-type: none"> • See response to PO7484
PO7647	Mr Raymond Sidney Jones				Object	There must be some brown sites more suitable to green fields in a special landscape area. Questions who will monitor/clear any debris left behind. Will it be taxpayer. This development would also decrease property prices in the area.	<ul style="list-style-type: none"> • See response to PO7484
PO7725	Mr W Rommelrath				Object	I strongly object to any development on land adjacent to Rose Cottage and Checkley Cricket Club. This is arable land and should remain as.	<ul style="list-style-type: none"> • See response to PO7484
PO7993	Mrs K Nash				Object	I wish to strongly object to the proposed and existing travellers sites. The existing site has had numerous extensions of evictions and i feel it's about time this was enforced. There is no reason they should not be removed from this site. There should not be one rule for [travellers] and another for the rest of the community. There are numerous reasons this site is unsuitable including access, site of beauty, lack of available amenities and many more.	<ul style="list-style-type: none"> • See response to PO7484
PO7792	Mr A Bartlam				Object	I STRONGLY OBJECT TO THE EXTENSION OF THE TRAVELLER SITE AT FOUR TREES. THE SPECIAL LANDSCAPE AREA SHOULD BE JUST FOR THAT PURPOSE ONLY. THERE ARE PLENTY OF BROWNFIELD SITES THAT COULD BE CONVERTED MORE EASILY.	<ul style="list-style-type: none"> • See response to PO7484
PO7992	Mrs J Cooke				Object	When the original unauthorised development was set up at Four Trees most of the residents were horrified. Most were too polite to voice their opinion. We strongly feel that the original and blatant breach of planning laws should be dealt with. If the planning committee don't take action and then allow more caravans onto the site it will send out the	<ul style="list-style-type: none"> • See response to PO7484

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						message to all the travelling community to set up unauthorised sites within the Moorlands. Your actions now could set the tone for the future.	
PO7790	Mr A Chandler				Object	I strongly object to this development.	<ul style="list-style-type: none"> • See response to PO7484
PO7787	Mr S Ideson				Object	OBJECT TO ANY EXTENSION TO THE PRESENT SITE AT FOUR TREES.	<ul style="list-style-type: none"> • See response to PO7484
PO7793	Mr and Ms Anthony and Josephine Prince				Object	POOR ACCESS, AGAINST PLANNING DIRECTIVES, NO AMENITIES.	<ul style="list-style-type: none"> • See response to PO7484
PO7795	Mr and Mrs M Jones				Object	For the reasons given, plus one dog running round worrying people is enough we don't want anymore. This is a lovely place to live please don't spoil it.	<ul style="list-style-type: none"> • See response to PO7484
PO7859	Mr Edward Byrne				Object	I strongly object to the proposed extension development. The site proposed is surely against the policy of the current Local Plan and previous planning policy. Clearly there are access issues to this development and SMDC have refused planning permission for this type of development previously. Myself and local residents will continue to object to any development of this site now and in future.	<ul style="list-style-type: none"> • See response to PO7484
PO9578	Mr Daniel Curtis				Object	I object to the proposal for an additional travellers site located at Four Trees. previous applications have all been refused, and the existing single family are only on a temporary licence. There is poor access and visibility at a possible junction with the main road. It is a greenfield site that would extend the village. The small village of Lower Tean could not cope with the integration of a large number of travellers. For this reason I also object. Surely a site with more local services nearby (near a larger settlement) would be preferable.	<ul style="list-style-type: none"> • See response to PO7484
PO9585	Mr Christopher Allen				Object	Question why we have not used the old COOP site to relocate the travellers...If I had brought that land and put a brick rest area on it the Council would have made me take it down, two sets of rules one for travellers and one for [others]. Not right in any shape or form. [some text redacted].	<ul style="list-style-type: none"> • See response to PO7484
PO9589	Ms P M Moss				Object	I wish to object to the idea of an extended travellers site at Four Trees. This is a shocking proposal as the existing travellers site is supposed to be a temporary arrangement, and they should..be moving off next year for all the right reasons previously listed. This special landscape area would be totally spoilt and from a practical point, local services are not readily available, and many problems would ensue. The road is very busy and would be a hazard. Question why are	<ul style="list-style-type: none"> • See response to PO7484

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						you possibly considering this when the general public are not allowed to have new residential properties in this area - surely not one law for some...[text redacted].	
PO9576	Mr J Eaton				Object	Firstly I don't understand the need for "permanent" traveller sites. I don't agree with them full stop. Question why a quiet..Parish such as Checkley being a suitable location. Whoever comes up with such plans must be from a different planet than the rest of us. We would anticipate. Our local village facilities ie community centre, local pubs, to be adversely affected not to mention our fantastic primary school. Our house values could be affected. I have lived here all my life (47 years). I never thought I would contemplate moving - until now.	<ul style="list-style-type: none"> • See response to PO7484
PO9577	Ms Jackie Rushton				Object	Unsuitable location, back development. Land is Special Landscape Area. Existing site is already subject to large local opposition, so in which world does it become a good idea to extend the gypsy site. I also have extensive experience with travellers, and have a little more insight into what happens at gypsy sites...Very few of the site proposed are actually suitable.	<ul style="list-style-type: none"> • See response to PO7484
PO9781	P J Thorley				Object	(From Councillor John Jones' Survey refer to PO8995) Plan C – All infill sites (maximum of 10-12 units per site) spread more widely around the village (likely to interest local and self builders).	<ul style="list-style-type: none"> • See table on Biddulph Moor
PO7866	Mr S Wareham				Object	We most strongly object to the above proposal. Residents have been assured that the current site would not be included in further plans, for the extension of the site. No consultation has taken place regarding a permanent site or suitable location: the proposal has been hidden from view. Several factors indicate that any extension is inappropriate - ie the site is immediately adjacent to Rose Cottage and Checkley cricket club and is a back development not infill. Adequate vision to the busy A522 is insufficient. It is on a bend and an accident blackspot indicated by frequent monitoring by safety cameras. Electricity and drainage would be inadequate due to age. We reiterate our most strong objections to this proposal.	<ul style="list-style-type: none"> • See response to PO7484
PO7791	Mrs J Smith				Object	I strongly object to the temporary traveller site at Four Trees, Checkley - and certainly do NOT think it is appropriate to the inclusion of an extension to that site. The residents in and around Checkley have opposed this traveller site and will continue to object to any further development.	<ul style="list-style-type: none"> • See response to PO7484

PO4502	Mr Gez Willard	Willardwillard Ltd			CD002	Support	Allocations CD002 and CD003 are supported [for the reasons set out in greater detail in the attachments to Question 1 response].	Comment noted
PO1467	Mrs D Bullock				CD002	Object	<p>Before listing my objections to area CD003 and CD002 in cheddleton staffs being passed of the building of 92 houses. I would question how anyone based in Glossop Derbyshire with a Stockport Postcode can know much about Cheddleton Staffs, with regard to building houses there why can't local councillors have control over this, and they know the area well to make the correct decisions. Objections On a number of occasions Planning has been applied for on sites CD002 and CD003 and been refused. In 1978 planning permission was refused. In 1978 planning permission was refused on the grounds of: Green Belt, traffic, and drainage problems on the site with the system. How has this situation changed in 2016 Green Belt still exists, with even make reason to preserve for the future generations. Traffic Since 1978 the traffic situation on the main road must have increased 20x + all the extra cars from the hospital site Basford Bridge Lane est and Leek brook estate all built in 1978. Drainage – No change in this situation either still the same problem as in 1978 so how can a site CD002 and CD003 suddenly become so acceptable in 2016. For example the traffic situation today 6/5/16. Tarmacking was taking place at Leek brook on the main road at 1.30pm the queue of traffic from Leek were back to the Britannia roundabout back to station road – a quiet time of the day imagine another 92 houses coming onto this road each day which is known as Williamsons Hollow a very dangerous spot to emerge onto main road where the speed limit is 50mph. The other entrance onto Folly Lane please note 'lane' with passing places totally unsuitable. Cars parked on the lane at all times from the houses. As CD003 and CD002 would connect to the boundary with Wetley Rocks village, this boundary defines the 2 villages so does this mean the 2 villages would then become 1, and if 3 in 10 houses would be started home with no doubt children, they would have to be driven to school as no schools are within walking distance. Surely the sensible thing to do in this situation would be spread the building of 92 houses over a few smaller areas more within the Cheddleton brown field sites – Leek brook est on a factory site. Why can this site be considered and keep the Green Belt sites safe for the future. Common sense should surely prevent and this important matter</p>	<ul style="list-style-type: none"> The decisions on the Local Plan will be made by Staffordshire Moorlands District Councillors before it is submitted to the Secretary of State for Communities and Local Government for Examination. Previous applications were refused under existing planning policy the proposed Local Plan will replace existing policy and seeks to allocate housing sites to meet objectively assessed need of the District. As a part of this process the existing Green Belt boundaries are being looked at. The Highways Authority advises that development acceptable subject to access design and provision of visibility splays. But preferable for CD002 to be developed in conjunction with CD003, with bulk of access through CD003. The land in question is within the Green Belt The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. It found the site's overall impact on Green Belt's purposes were moderate <i>"Despite being a relatively large edge-of-settlement site, development would not intrude into open countryside, being contained physically and visually by a drain and hedgerow between Folly Lane and the A520 Cheadle Road"</i> and recommended the site could be consider for release under exceptional circumstances. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
								<p>the overall suitability of the site for release from the Green Belt.</p> <ul style="list-style-type: none"> There is not enough brownfield land or sites or infill sites in settlements to meet the District’s proposed housing requirements so green field options have been proposed .Prioritising brown field land over greenfield in all circumstances is not part of Government policy
PO2366 PO2355	Mr Roger Hampson Ms J Pegg				CD002	Object	<p>I strongly object to CD002s inclusion in the local plan preferred options sites and boundary maps. I fully understand the need to develop a local plane however by including this site the SMDC has ignored. 1) Safety concerns relating to the A520 2) 2 The requirements of the town and country planning regulation’s 3) The views of the parish council 4) The views of the people living in Cheddleton. 5) The government policy to protect the green belt land 6) The lack of infrastructure, including schools and medical services 7) The spirit of the location act 2011 To expand. 1) The site is designated in green belt 2) This site doesn’t align with the National Planning Policy Framework regarding Green Belt. This proposed will effectively join Cheddleton to Wetley Rocks and encroaches onto the countryside. Site CD002 and CD003 provide the only green space between the 2 villages. 3) This site does not meet the sustainability objectives as detailed in the national planning policy framework. 4) No consideration has been given to the accessibility to and from this site by foot or cycle. 5) Site has an infrequent bus service to the other parts of North Staffs 6) The A520 between Ostlers Lane Wetley Rocks has significant History of road accidents. On the data shows that there have been 22 accidents between2005 and 2013, despite the installation of Cameras inclusion of this site will increase the safety risk at this location. 7) The pavement on the A520 is narrow (less than 1m) and on 1 side only. Cars travel legally at 50 mph and it is considered that this does not form a safe walking route for those accessing it. Such as schools etc. in the village centre. 8) The junction off Folly Lane and Cheadle Road has an accident history. Inclusion of this site will increase the safety risk at this location. 9) The site is 1.6 miles away from the catchment Primary schools. Given the lack of provisions for pedestrians, cycles and the infrequent bus service, the obvious method of accessing the schools and increase the Cheadle Road has an accident history. Inclusion of this site will increase the safety risk at this location. 10) Schools in this area cannot sustain a significant increase in population and are currently full or have a small number of vacant places. This proposed residential development would require significant investment to address this issue. I addition further buses would be required to transport 5 to 13 pupils to Leek as there is no provision in the village. 11) It is considered that the existing utilities</p>	<ul style="list-style-type: none"> See response to PO1467 regarding highways & Green Belt New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children’s play areas. National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered. The Extended Phase 1 habitat Survey 2015 assessed the present and potential ecological value of the proposed site allocations. It found that “The site has mostly low biodiversity value overall in terms of area. However, the major aspects of interest are the significant bat potential in the 5 trees and the species rich hedgerow which constitutes the site being given district importance.” The Core Strategy defines Cheddleton as a

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							in this area could not sustain an increase in demand significant investment. This has not been considered. 12) Site has no substantial access to GP surgery. 13) It is known that the developer has attempted to coerce the Parish Council/SMDC for over approximately 20 years to support the release this site from Green Belt. Every attempt has previously been blocked by the parish council and residents of Cheddleton. This demonstrates the strength of feeling 14) Site has numerous trees that are known habitat wildlife, including a known bat population.	larger village with a range of facilities and services
PO109	Dr Alan Jones				CD002	Object	Density of dwellings is greater than in adjacent areas. Loss of open space on approach from south will lead to a loss of distinction between Cheddleton and Wetley Rocks. Access to A520 in a dangerous position on 50mph road.	<ul style="list-style-type: none"> Any new development taking place will be subject to policies contained within the new Local Plan, which seek to protect the character of the area consideration will be given to the scale of development and its impact on the surrounding area. See response to PO1467 regarding the Green Belt The Council has recently undertaken a Landscape, Local Green Space and Heritage Impact Study 2016 to form part of the evidence base to support the Local Plan and assess the potential landscape impacts of the development allocations The Study found "Site is of medium landscape sensitivity. Site-specific landscape mitigation measures could include phased development (ensuring site is developed in combination with CD003)."
PO299	Ms Julie Brownhill				CD002	Object	Development of this site will join together the villages of Cheddleton and Wetley Rocks. The access onto the A520 is poorly located and is in a 50mph area. There has been no consideration given to the lack of infrastructure such as doctors and dentists and no consideration given to the provision of school places. The distance from Cheddleton village centre will result in more car journeys with the resultant increase in pollution. There will be loss of amenity to surrounding properties. The views of the Parish Council and residents have been ignored by the District Council.	<ul style="list-style-type: none"> See response to PO1467 regarding the Green Belt See response to PO2366 regarding infrastructure Issues such as overlooking and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application The views of residents and the Parish Council have been sought through the consultations. The Council must balance this evidence against all the other evidence relating to this site and reach a decision on whether or not to include it as a development site in the Local Plan.
PO3898	Mrs G & M Pyatt				CD002	Object	Exceptionally busy road, A520 which would access these sites. 96 Houses could mean another 150-200 extra cars using this road. It would mean that Cheddleton + Wetley Rocks would be joined	<ul style="list-style-type: none"> See response to PO1467 regarding highways and Green Belt See response to PO2366 regarding

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							together so no green space or area in-between. Lack of infrastructure i.e.: schools + medical services – both overloaded now. This land is in the Green Belt + provides habitat for wildlife. There are already lots of houses for sale in this area (see Leek Post and Times) which are not selling, so why do we need more.	<p>infrastructure and wildlife</p> <ul style="list-style-type: none"> The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change
PO3883	J.E. Keeling				CD002	Object	Hope me writing to you the 3 rd time is lucky. This is another objection to site: CD003 and CD002. Both lie in the green belt and in the past have been rejected twice as on unsuitable site for development it would go against the principle of greenbelt policy in joining the village of Cheddleton/Wetley rocks we would like to keep our villages separate – please – We have a unique identity in Staffordshire Moorlands and wish to retain it. It would create major road issues and road issues and other problems. 2 other site which residents and the parish council are in favour off is: CD115 in the centre of the village Staffordshire Farmers site which is a Brownfield Site. Please if possible when all parties meet to discuss our needs as well as finding a alternative site more suitable for development, I ask fir site CD003/CD002 to be removed from your plans.	<ul style="list-style-type: none"> See response to PO1467 regarding Green Belt, brownfield sites highways and previous application refusal
PO2030	Mrs Pilarczyk	Cheddleton Parish Council			CD002	Object	Site CD002 shown on the map and listed as land South of Rockend Drive/Millstone Edge, Cheddleton..... and Site CD003 shown on the map and listed as land West and South of 70-82 Folly Lane, Cheddleton. Both sites lie within the Green Belt and outside the village boundary. The Council strongly objects to the inclusion of both areas of land for development given that it would effectively link two villages and there would be major road/highway issues. As stated above, both sites lie within the Green Belt and outside the village boundary and any development of the site would degrade the natural gateway to the village of Wetley Rocks, which enhances the individuality of the village and contributes positively to the feeling of leaving or entering a place. If allocated it would go against two major principles of the Green Belt Policy. It would go against a major coalescent – the joining of two communities and the Council must ask for these two areas of land to be removed.	<ul style="list-style-type: none"> See response to PO1467 regarding Green Belt and highways
PO9557	Mr C J Coates				CD002	Object	Response form/letter submitted [attached] objecting to Preferred Options sited CD002 + CD003: Does not meet with Government Policy [in Green Belt and agricultural land] and requires change of village boundary [incorporate part of Wetley Rocks] A520 trunk road is not fit for purpose [already traffic accidents]. Addition of large number of heavy vehicles is overwhelming. site entrance at confluence of two opposing hills. Vehicles exceed speed limit [exceeds 80 decibels noise]. Health and safety an issue. Foot and	<ul style="list-style-type: none"> See response to PO1467 regarding Green Belt and highways See response to PO2366 regarding infrastructure and wildlife See response to PO3898 regarding the need for houses An assessment of the District's employment land requirements was

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>cycle access to local amenities requires crossing this road. narrow pavement, large passing vehicles. question the capability of the public utilities/services in the area; they are at their capacity limit. Significant major improvements required. site has many ancient trees and hedgerows. Many trees need TPO status as they had significant interest. Therefore site requires ecological survey, in public domain, prior to development. development will form coalescence of Cheddleton/Wetley Rocks. [historic appeal failed on these very grounds]. Core Strategy states that need to ensure any access routes to/from Churnet Valley should be maintained with attractive vistas. A520 is example of this. development would mean 132 houses in total will all need to access via Rock End Drive/A520. Folly Lane is narrow with major problems without major improvements. Without a Folly Lane access, any obstruction to Rock End access would isolate site from emergency vehicles. Primary school at Wetley Rocks (that children of site would attend) has dangerous junction of Mill Lane/A520 (HGVs mount narrow pavement). Would be exacerbated by on street parking at school. Properties in SMD/around CD002/CD003 hard to sell. There are thousands of empty properties in area. Therefore need for greenfield development not demonstrated, given brownfield sites could meet need. Equivalent employment prospects are not available, will lead to further commuting. Therefore need for properties in local area has not be shown. Lack of local employment prospects will lead to further commuting. 2012 Pointons consent had condition requiring applicant to coppice adjacent Staffordshire Farmers site. This was withdrawn as a Local Plan site option on the basis that many HGVs use A520 there. Argues that CD003 junction only 500m away, has similar characteristics, therefore both sites should be given equal consideration. Options sites CD015/030/008 would only require minor/no amendment to Green Belt, they are continuation of development area and will require no encroachment into Wetley Rocks.</p>	<p>carried out in The Employment Land Requirement Study the draft Local Plan proposes employment allocations/polices to meet this need.</p>
PO9550	Mr J B Williams				CD002	Object	<p>Response form/letter submitted [attached] objecting to both Preferred Options site CD002 and CD003: only access road to CD003 is totally inadequate. Major improvements required site entrance at confluence of two opposing hills. Vehicles exceed speed limit, many accidents have happened in this area. Foot and cycle access to local amenities requires crossing this road. narrow pavement, large passing vehicles. Need prior independent investigation [fatal traffic injuries] before further development. if future development incorporated Rock End Drive/A520, this would be ludicrous accident blackspot. Question why these sites being considered given they are Green Belt. development will form coalescence of Cheddleton/Wetley Rocks. [1970s appeal failed on these very grounds]. site has many ancient trees and hedgerows. Many trees need TPO status as they had significant interest. Consideration of landscape must be a paramount consideration [from Core Strategy]. 							<p>Churnet Valley should be maintained with attractive vistas. Council ignoring own policy. Development of 96 dwellings will result in grave infrastructure problems - local services will not cope. Local schools are near capacity, and access on foot to these dangerous. Sewage system, doctors, dentist, local electricity supply etc already over capacity. Distance to some of these facilities. only employment opportunity in local area without considerable travel, is Pointons factory. Questions need for more houses given lack of employment opportunities. CD003 forms part of natural shallow A520 valley [already current traffic noise problems, which would be exacerbated]. Pointons rendering factory [supply lorries] already source of smell complaints from residents. Brings into doubt whether any developers would be interested in developing this land for housing. Council's own housing requirement exceeds Government's by 2000. Questions if there is an ulterior motive for this. Lack of employment means lack of demand for properties. There are 2500 empty properties for sale in the Moorlands. Any land designated by Council for development, will BLIGHT all surrounding properties. Period of BLIGHT will be protracted, if interest to develop such a site fails to materialise. Before considering the development of this land both SCC+SMDC need to resolve current infrastructure problems, such as width of footpath, and improve A520 to a standard fit for purpose. if Council must consider additional houses, then must consider Leek/surrounding area brownfield sites first. eg Staffordshire Farmers Site [conditions to consent requiring reversion to coppice, not carried out - but recent planning application]. Options sites CD015/030/008/017/019/115 would only require minor/no amendment to Green Belt, they are continuation of development area and will require no encroachment into Wetley Rocks - this must be great advantage over sites CD002/CD003. Land at junction of Brookhouse Lane and A520 was offered to Council during Options consultation, but was rejected. In conjunction with abovementioned sites on west of A520, this site would form ideal infill development with little effect on Green Belt and village boundaries.</p>	
PO9554	Mrs Anita M. Williams				CD002	Object	<p>Response form/letter submitted [attached] objecting to Preferred Options site CD002: SMDC has ignored: safety concerns relating to A520; Folly Lane junction. Equivalent employment prospects are not available, will lead to further commuting. 2012 Pointons consent had condition requiring applicant to coppice adjacent Staffordshire Farmers site. This was withdrawn as a Local Plan site option on the basis that many HGVs use A520 there. Argues that CD003 junction only 500m away, has similar characteristics, therefore both sites should be given equal consideration.	
PO311	Dr Gordon Wright				CD002	Object	Major problems with building on this site include access, especially for children going to school in Wetley Rocks, contiguity between the largest village in Staffordshire and Wetley Rocks and waste removal. Several houses on Folly Lane opposite CD002 have drainage problems due to the adverse slope of the land in relation to the sump and the remote location of the pumping station on the western side of the A520. The building plans would need to include a complete revision of the existing drains. Alternative sites are available in Cheddleton. CD015 is classified as brown field land and could be used for housing development if the requirement for it to be converted to green belt was revoked. CD115 is also an obvious choice since it would avoid the problem of contiguity. Indeed, it would eliminate the anomalous separation of the north and south parts of Cheddleton.	<ul style="list-style-type: none"> See response to PO1467 regarding highways and Green Belt The Environment Agency recognise the site maybe at the top of a catchment area, there do not think flood risk will prohibit development but consider an assessment of flood risk should be undertaken at the planning application stage. The County Council consider there is a potential flooding issue and recommend any developer should liaise with the County Council Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website.
PO2514	Mr D Hartley				CD002	Object	the site cd002 shown on the map and listed as land south of rockend/millstone edge, cheddleton. and site Cd003 shown on the map and listed as land west and south of 70 - 82 folly lane, cheddleton, both site lie within the green belt outside the village boundary until the interference of the green belt body review took the arbitrary decision to change the green belt boarder there. I strongly object to inclusion of both areas of land for the development that would eventually link two villages and there	<ul style="list-style-type: none"> See response to PO1467 regarding the Green Belt

PO4503	Mr Gez Willard	Willardwillard Ltd			Support	Allocations CD002 and CD003 are supported [for the reasons set out in greater detail in the attachments to Question 1 response].	Comments noted
PO2194	Mrs S Brindley				Object	<p>I consider the removal; of site CD003 from the existing green belt is wrong and I strongly object to the proposal. The national Planning Policy framework (NPPF) clearly states that the green belt serves a purposes: 1 to check the unrestricted sprawl of large areas. 2 to prevent neighbouring towns merging into one another. 3 to assist in safeguarding the countryside from encroachment. 4 to preserve the setting and special character of historic town 4 to assist in the Urban regeneration, by recycling and derelict and other urban As page 14 of the Amec Foster Wheeler Green Belt review states the site CD003 was included within the existing North Staffs Green Belt to, I quote “to prevent the coalescence of the following towns and settlements around the potteries. This list includes, Cheddleton with Folly Lane and Folly Lane with Wetley Rocks” The term towns in the NPPF should I believe in this case be considered as towns and settlements, as per the original designation. By removing this is site from the greenbelt and allowing the building of houses this fundamentally undermines this original aim of designation and will indirect conflict with point 2 above. I consider page 40 of the Amec Foster Wheeler Green Belt review has wrongly stated that site C14 makes a limited contribution to preventing towns to towns merging where as it should state significant contribution in March 2015 the prime minister declared that protecting the green belt is paramount I consider that removing CD003 from the green belt undermines the objectives. The NPPF makes clear that once established green belt boundaries should only be altered in exceptional circumstances SMDC has failed to demonstrate that exceptional circumstances exist and all other options to meet housing needs in North Staffs have been exploring utilising the significant number of existing vacant properties in the area. Site CD003 is a known habitat for wildlife and has a known bat population. The lookwood Hall associates reports in its concluding remarks for site FIC 180 stated I quote, however the major aspects of interest are the significant bat potential in the 5 trees and the species rich hedgerow which constitutes the site being given district importance”. SDMC has failed to consider this fact when the allocation of CD003 as a potential site allocation for housing I consider the removal; of site CD003 from the existing green belt is wrong and I strongly object to the proposal. The national Planning Policy framework (NPPF) clearly states that the green belt serves a purposes: 1 to check the unrestricted sprawl of large areas. 2 to prevent neighbouring towns merging into one another. 3 to assist in safeguarding the countryside from encroachment. 4 to preserve the setting and special character of historic town 4 to assist in the Urban regeneration, by recycling and derelict and other urban As page 14 of the Amec Foster Wheeler Green Belt review states the site CD003 was included within the existing North Staffs Green Belt to, I quote “to prevent the coalescence of the following towns and</p>	<ul style="list-style-type: none"> The land in question is within the Green Belt The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. It found the site’s overall impact on Green Belt’s purposes were moderate “<i>Despite being a relatively large edge-of-settlement site, development would not intrude into open countryside, being contained physically and visually by a drain and hedgerow between Folly Lane and the A520 Cheadle Road.</i>” and recommended the site could be consider for release under exceptional circumstances. . In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt. The Extended Phase 1 habitat Survey 2015 assessed the present and potential ecological value of the proposed site allocations. It found that “<i>The site has mostly low biodiversity value overall in terms of area. However, the major aspects of interest are the significant bat potential in the 7 trees and species rich hedgerow which values the site as having district ecological importance</i>”.

PO585 PO933	Mrs Susan Buxton Mr John Buxton				Object	I most strongly object to the proposal to build approximately 76 houses on site CD003. Access to this site would appear to be primarily through Rockend Drive and Millstone Edge, both small, minor roads to a small community of houses. Residents' parking would be severely affected and the risk of damage to parked cars would increase massively. I would estimate that 76 houses would mean at least an increase of 100+ vehicles using these minor roads and attempting to access the A520 would be even more difficult and hazardous than it already is. This particular stretch of the A520 between Folley Lane and Wetley Rocks is already a dangerous road, access to which is right at the bottom of a steep hill in either direction, with a current speed limit of 50mph. Increasing the number of vehicles by such a large number would further increase the risk of accidents even if the speed limit was reduced.	<ul style="list-style-type: none"> The Highways Authority advises that development acceptable subject to access design and provision of visibility splays. But preferable for CD002 to be developed in conjunction with CD003, with bulk of access through CD003

PO9553 PO9555	Mr J B Williams Mrs Anita M. Williams				Object	Response form/letter submitted [attached to Rep PO9550] objecting to both Preferred Options site CD022 and CD003: only access road to CD003 is totally inadequate. Major improvements required site entrance at confluence of two opposing hills. Vehicles exceed speed limit, many accidents have happened in this area. Foot and cycle access to local amenities requires crossing this road. narrow pavement, large passing vehicles. Need prior independent investigation [fatal traffic injuries] before further development. if future development incorporated Rock End Drive/A520, this would be ludicrous accident blackspot. Question why these sites being considered given they are Green Belt. development will form coalescence of Cheddleton/Wetley Rocks. [1970s appeal failed on these very grounds]. site has many ancient trees and hedgerows. Many trees need TPO status as they had significant interest. Consideration of landscape must be a paramount consideration [from Core Strategy]. Also need to ensure access routes to/from Churnet Valley should be maintained with attractive vistas. Council ignoring own policy. Development of 96 dwellings will result in grave infrastructure problems - local services will not cope. Local schools are near capacity, and access on foot to these dangerous. Sewage system, doctors, dentist, local electricity supply etc already over capacity. Distance to some of these facilities. only employment opportunity in local area without considerable travel, is Pointons factory. Questions need for more houses given lack of employment opportunities. CD003 forms part of natural shallow A520 valley [already current traffic noise problems, which would be exacerbated]. Pointons rendering factory [supply lorries] already source of smell complaints from residents. Brings into doubt whether any developers would be interested in developing this land for housing. Council's own housing requirement exceeds Government's by 2000. Questions if there is an ulterior motive for	<ul style="list-style-type: none"> See response to PO585 regarding highways See response to PO2194 regarding Green Belt and trees See response to PO2438 regarding infrastructure The Council has recently undertaken a Landscape, Local Green Space and Heritage Impact Study 2016 to form part of the evidence base to support the Local Plan and assess the potential landscape impacts of the development allocations The Study found the site was of low landscape sensitivity An assessment of the District's employment land requirements was carried out in The Employment Land Requirement Study the draft Local Plan proposes employment allocations/policies to meet this need. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website.

PO3870	J E Keeling				Object	<p>No to this development on Greenbelt land No to joining two villages Cheddleton/Wetley Rocks. No to a dangerous road – A520 No to no infrastructure. No to more cars on the roads. No to noise and pollution. We live around here and want to stay semi rural – no no no to CD003. Please look at other alternatives sites preferred by residents and parish councils.</p>	<ul style="list-style-type: none"> See response to PO585 regarding highways See response to PO2194 regarding highways
PO1468	Mrs D Bullock				Object	<p>Before listing my objections to area CD003 and CD002in cheddleton staffs being passed of the building of 92 houses. I would question how anyone based in Glossop Derbyshire with a Stockport Postcode can know much about Cheddleton Staffs, with regard to building houses there why can't local councillors have control over this, and they know the area well to make the correct decisions. Objections On a number of occasions Planning has been applied for on sites CD002 and CD003 and been refused. In 1978 planning permission was refused. In 1978 planning permission was refused on the grounds of: Green Belt, traffic, and drainage problems on the site</p>	<ul style="list-style-type: none"> The decisions on the Local Plan will be made by Staffordshire Moorlands District Councillors before it is submitted to the Secretary of State for Communities and Local Government for Examination. Previous applications were refused under existing planning policy the proposed Local Plan will replace existing policy and seeks to allocate housing sites to meet objectively assessed need of the District.

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						with the system. How has this situation changed in 2016 Green Belt still exists, with even make reason to preserve for the future generations. Traffic Since 1978 the traffic situation on the main road must have increased 20x + all the extra cars from the hospital site Basford Bridge Lane est and Leek brook estate all built in 1978. Drainage – No change in this situation either still the same problem as in 1978 so how can a site CD002 and CD003 suddenly become so acceptable in 2016. For example the traffic situation today 6/5/16. Tarmacking was taking place at Leek brook on the main road at 1.30pm the queue of traffic from Leek were back to the Britannia roundabout back to station road – a quiet time of the day imagine another 92 houses coming onto this road each day which is known as Williamsons Hollow a very dangerous spot to emerge onto main road where the speed limit is 50mph. The other entrance onto Folly Lane please note 'lane' with passing places totally unsuitable. Cars parked on the lane at all times from the houses. As CD003 and CD002 would connect to the boundary with Wetley Rocks village, this boundary defines the 2 villages so does this mean the 2 villages would then become 1, and if 3 in 10 houses would be started home with no doubt children, they would have to be driven to school as no schools are within walking distance. Surely the sensible thing to do in this situation would be spread the building of 92 houses over a few smaller areas more within the Cheddleton brown field sites – Leek brook est on a factory site. Why can this site be considered and keep the Green Belt sites safe for the future. Common sense should surely prevent and this important matter	<ul style="list-style-type: none"> As part of this process the existing Green Belt boundaries are being looked at. See response to PO585 regarding highways See response to PO2194 regarding Green Belt The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field options have been proposed. Prioritising brown field land over greenfield in all circumstances is not part of Government policy
PO300	Ms Julie Brownhill				Object	Development of this site will join together the villages of Cheddleton and Wetley Rocks. The access onto the A520 is poorly located and is in a 50mph area. There has been no consideration given to the lack of infrastructure such as doctors and dentists and no consideration given to the provision of school places. The distance from Cheddleton village centre will result in more car journeys with the resultant increase in pollution. There will be loss of amenity to surrounding properties. The views of the Parish Council and residents have been ignored by the District Council.	<ul style="list-style-type: none"> See response to PO2193 regarding Green Belt See response to PO585 regarding highways See response to PO2438 regarding infrastructure See response to PO1897 regarding the consultation process Issues such as overlooking and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application
PO1400	Mr D Keeling				Object	Does anyone really listen? We strongly object to site CD003 been even considered for housing development – this site in the past has been refused planning permission twice – does anyone really listen? Building site CD003 would link Wetly Rocks which is fundamentally against Green belt principle. It would of course cause more traffic onto the busy A520 Cheadle Road which has in the past has had numerous accidents, how many times have the walls been knocked down by lorries, cars running along the back of	<ul style="list-style-type: none"> See response to PO1897 regarding the consultation process See response to PO1468 regarding previous application refusals See response to PO585 regarding highways See response to PO2438 regarding infrastructure See response PO2194 regarding Green Belt

						one of the other as traffic turns right into rock end drive. Where is this infrastructure going to go? We are a village, not a town we have no facilities i.e. shops, Dr Surgeries – etc. How will our schools cope with the extra pupils? Think of the noise and pollution we would have to endure. At the council meeting in Leek which we attended, it was said @plans are not set in stone’ so they can be changed. Please do not build on CD003, keep it green belt, other alternative sites are available as our councillors have identified – please listen? We live here. NO NO NO to the development of CD003	<ul style="list-style-type: none"> • If the district council considered that a development they may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts. In addition the district council continually monitors air quality across the district and regularly undertakes review and assessments of this data to identify areas where the traffic could have an unacceptable impact on local air quality. • There is a policy in the Local Plan regarding the pollution
PO3897	Mrs G & M Pyatt				Object	Exceptionally busy road, A520 which would access these sites. 96 Houses could mean another 150-200 extra cars using this road. It would mean that Cheddleton + Wetley Rocks would be joined together so no green space or area in-between. Lack of infrastructure i.e.: schools + medical services – both overloaded now. This land is in the Green Belt + provides habitat for wildlife. There are already lots of houses for sale in this area (see Leek Post and Times) which are not selling, so why do we need more.	<ul style="list-style-type: none"> • See response to PO585 regarding highways • See response to PO2194 regarding the Green Belt and wildlife • See response to PO1468 regarding the need for houses
PO3884	J.E. Keeling				Object	Hope me writing to you the 3 rd time is lucky. This is another objection to site: CD003 and CD002. Both lie in the green belt and in the past have been rejected twice as on unsuitable site for development it would go against the principle of greenbelt policy in joining the village of Cheddleton/Wetley rocks we would like to keep our villages separate – please – We have a unique identity in Staffordshire Moorlands and wish to retain it. It would create major road issues and road issues and other problems. 2 other site which residents and the parish council are in favour off is: CD115 in the centre of the village Staffordshire Farmers site which is a Brownfield Site. Please if possible when all parties meet to discuss our needs as well as finding a alternative site more suitable for development, I ask fir site CD003/CD002 to be removed from your plans.	<ul style="list-style-type: none"> • See response to PO2194 regarding the Green Belt • See response to PO1468 regarding previous application refusals • See response to PO585 regarding highways • See response to PO1468 regarding brownfield sites • See response to PO9553 regarding Site Options sites
PO111	Dr Alan Jones				Object	Housing density too high compared with adjacent development. CD002 and CD003 comprise over 90 homes, a huge increase in an already quite dense area. Access at this point to A520 is not good.	<ul style="list-style-type: none"> • See response to PO585 regarding highways • Any new development will be subject to the design policies in the new Local Plan
PO2701	Mr Martin Ross	Environment Agency			Object	If it is decided to continue with sites in the floodplain or likely to be following the application of the Sequential Test, then further work in the form of a Level 2 SFRA will be required for the following site: CD003 which along with CD002 is adjacent to Watercourses with no mapped floodplain. This does not mean the site is within Flood Zone 1.	<ul style="list-style-type: none"> • Comments noted • Further consultation with the EA indicated flooding would not prohibit development but issue would need further assessment at the planning application stage
PO314	Dr Gordon Wright				Object	Major problems with building on this site include access, especially for children going to school in Wetley Rocks, contiguity between	<ul style="list-style-type: none"> • See response to PO585 regarding highways • See response to PO1468 regarding

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						the largest village in Staffordshire and Wetley Rocks and waste removal. Planning permission has been refused twice previously partly due to the difficulty in achieving satisfactory waste removal. The building plans would need to include a complete revision of the existing drains and the pumping station on the western side of the A520. Alternative sites are available in Cheddleton. CD015 is classified as brown field land and could be used for housing development if the requirement for it to be converted to green belt was revoked. CD115 is also an obvious choice since it would avoid the problem of contiguity. Indeed, it would eliminate the anomalous separation of the north and south parts of Cheddleton.	<ul style="list-style-type: none"> previous application refusals See response to PO9553 regarding Site Options sites
PO9559	Mr C J Coates				Object	<p>Response form/letter submitted [attached] objecting to Preferred Options sited CD002 + CD003: Does not meet with Government Policy [in Green Belt and agricultural land] and requires change of village boundary [incorporate part of Wetley Rocks] A520 trunk road is not fit for purpose [already traffic accidents]. Addition of large number of heavy vehicles is overwhelming. site entrance at confluence of two opposing hills. Vehicles exceed speed limit [exceeds 80 decibels noise]. Health and safety an issue. Foot and cycle access to local amenities requires crossing this road. narrow pavement, large passing vehicles. question the capability of the public utilities/services in the area; they are at their capacity limit. Significant major improvements required. site has many ancient trees and hedgerows. Many trees need TPO status as they had significant interest. Therefore site requires ecological survey, in public domain, prior to development. development will form coalescence of Cheddleton/Wetley Rocks. [historic appeal failed on these very grounds]. Core Strategy states that need to ensure any access routes to/from Churnet Valley should be maintained with attractive vistas. A520 is example of this. development would mean 132 houses in total will all need to access via Rock End Drive/A520. Folly Lane is narrow with major problems without major improvements. Without a Folly Lane access, any obstruction to Rock End access would isolate site from emergency vehicles. Primary school at Wetley Rocks (that children of site would attend) has dangerous junction of Mill Lane/A520 (HGVs mount narrow pavement). Would be exacerbated by on street parking at school. Properties in SMD/around CD002/CD003 hard to sell. There are thousands of empty properties in area. Therefore need for greenfield development not demonstrated, given brownfield sites could meet need. Equivalent employment prospects are not available, will lead to further commuting. Therefore need for properties in local area has not be shown. Lack of local employment prospects will lead to further commuting. 2012 Pointons consent had condition requiring applicant to coppice adjacent Staffordshire Farmers site. This was withdrawn as a Local Plan site option on the basis that many HGVs use A520 there. Argues that CD003 junction only 500m away, has similar characteristics, therefore both sites should be given equal consideration. Options sites CD015/030/008</p>	<ul style="list-style-type: none"> See response to PO2194 regarding the Green Belt, wildlife & trees See response to PO585 regarding highways See response to PO2438 regarding infrastructure See response to PO2438 regarding infrastructure See response to PO1468 regarding the need for houses & brownfield sites See response to PO9553 regarding employment and landscape

						would only require minor/no amendment to Green Belt, they are continuation of development area and will require no encroachment into Wetley Rocks.	
PO2031	Mrs Pilarczyk	Cheddleton Parish Council			Object	Site CD002 shown on the map and listed as land South of Rockend Drive/Millstone Edge, Cheddleton..... and Site CD003 shown on the map and listed as land West and South of 70-82 Folly Lane, Cheddleton. Both sites lie within the Green Belt and outside the village boundary. The Council strongly objects to the inclusion of both areas of land for development given that it would effectively link two villages and there would be major road/highway issues. As stated above, both sites lie within the Green Belt and outside the village boundary and any development of the site would degrade the natural gateway to the village of Wetley Rocks, which enhances the individuality of the village and contributes positively to the feeling of leaving or entering a place. If allocated it would go against two major principles of the Green Belt Policy. It would go against a major coalescent – the joining of two communities and the Council must ask for these two areas of land to be removed.	<ul style="list-style-type: none"> • See response to PO2194 regarding the Green Belt • See response to PO9553 regarding landscape
PO4	Mr Peter Blakeman				Object	The proposed sites CD002 and CD003 are unsympathetic to the local community and its residents and commit to growth that is unsuitable, unsupportable and unsustainable for the current local facilities in Cheddleton and Wetley Rocks. The proposal represents an inappropriate form of development within the Green Belt and in the absence of any special circumstances would by its inappropriateness have a harmful impact on the open, rural and undeveloped character of the Green Belt. Greenbelt areas were created to stop neighbouring towns merging into one another. If the proposed sites CD002 and CD003 are used this removes any discernible boundary between Wetley Rocks and Cheddleton removing the original character of the separate towns. Tree protection orders should also be in place on the tree's and hedging running across the centre of the proposed sites discussed as they house a discernible amount of wildlife. These two sites are also outside of the current village boundary and therefore should not be considered for development. Local facilities in Cheddleton already struggle to support the needs of existing residents in terms of education, healthcare, unsuitable minor roads, shops and other facilities. There is no doctors surgery in Cheddleton, the closest one being Werrington Village Surgery which is already heavily oversubscribed. The closest school to these sites in St Johns in Wetley Rocks, which has a yearly intake of just 16 children. Given that there is no suitable footpath from Folly Lane or the sites mentioned it is also difficult to access Cheddleton and Wetley Rocks by foot. The development will have adverse effects on a huge number of properties exacerbated by the small gardens of the properties. These include but are not limited to overshadowing, overlooking and loss of privacy. The loss of existing views from neighbouring properties will adversely affect the residential amenity of neighbouring owners.	<ul style="list-style-type: none"> • See response to PO2438 regarding location/facilities and infrastructure • See response to PO2194 regarding the Green Belt and trees • See response to PO300 regarding residential amenity

Q37 Do you have any comments on the housing allocations for the Rural Areas?

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
PO529	Mrs V Millar				Object	This proposed location results in a removal of a rural landscape to those householders on the road. By putting houses in this area it adds to the traffic issue as more vehicles will be coming out on to the A520 which is currently a 50 mile limit, with potential to cause more accidents with more persons and the speed limit. It seems this has remained as a proposed location as the residents are not in the same numbers as those of other locations which have since been removed from the proposals. The impact on the local area would be extensive due to access, amenities, also the issues of losing the wildlife which occupies the fields proposed to be built upon.	<ul style="list-style-type: none"> The Highways Authority advises that they require more details/clarification regarding how access to site would be achieved, before can comment. Issues such as overlooking and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application The Extended Phase 1 Habitat Survey 2015 found the site was generally of low biodiversity value in overall terms of the area
PO2032	Mrs Pilarczyk	Cheddleton Parish Council			Object	Site CD017 shown on the map as land to the rear of 403-411 Cheadle Road, Cheddleton. The Council are opposed to the inclusion of this land on the grounds that it lies within the Green Belt and the fact that a detached house would have to be demolished to provide an access to the site. The Council ask for this site to be removed.	<ul style="list-style-type: none"> See response to PO529 regarding highways The land in question is within the Green Belt. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. The review found that the overall impact of development on the site on Green Belt purposes was limited and recommended the site could be considered for release under exceptional circumstances. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt.
PO110	Dr Alan Jones				Object	Not sensible at all to put over 20 homes on this site. Totally out of keeping with the present character of the site, which is low density larger homes, and road access is dangerous at this point, just after bend on 50mph A520	<ul style="list-style-type: none"> Any new development taking place will be subject to policies contained within the new Local Plan, which seek to protect the character of the area consideration will be given to the scale of development and its impact on the surrounding area. See response to PO529 regarding highways
PO1256	Ms Janet Pitt				Object	I feel that the preferred sample CD017 is unsuitable development it appears that a property would have to be demolished to provide access. A far more suitable site on the opposite side of the road CD015 would provide a safer access to a very busy main road and	<ul style="list-style-type: none"> See response to PO529

PO2513	Mr D Hartley				Support	CD088 - This site lies within the development boundary and I fully support and accept this site to form part of the forthcoming SM Local Plan.	<ul style="list-style-type: none"> Support noted CD088 is not included as an allocation as it is within the village boundary and could be developed as infill.
PO2515	Mr D Hartley				Support	CD017 - shown on the map as land at the rear off 403-411 Cheadle Road, Cheddleton. Planning permission has already been granted for a development and the Parish Council fully supports the inclusion of this site.	<ul style="list-style-type: none"> Support noted
PO2033	Mrs Pilarczyk	Cheddleton Parish Council			Support	With regard to the land at 397 Cheadle Road, Cheddleton. Planning permission has already been granted for a development and the Parish Council fully supports the inclusion of this site.	<ul style="list-style-type: none"> Support noted
PO2034	Mrs Pilarczyk	Cheddleton Parish Council			Support	CD115 the site lies within the Green Belt however, it is in the centre of the village and the Council would support the inclusion of this site in order to satisfy and meet the needs of this settlement's requirements.	<ul style="list-style-type: none"> A number of sites were dropped from the emerging Local Plan after the Site Options consultation. This included sites CD115 & CD015. Not all sites were required to meet the Districts housing requirements. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. The sites are within the Green Belt. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. The review found that the sites were not suitable for release from the Green Belt.
PO2035	Mrs Pilarczyk	Cheddleton Parish Council			Support	Staffordshire Farmers Site this is the only brownfield site in Cheddleton; it has an established access onto the A520 Cheadle Road and the Council must ask for this site to be included given that it will satisfy and meet the needs of this settlement's requirements.	<ul style="list-style-type: none"> This site has planning permission and will be taken into account in assessing the housing requirement for the Plan.
PO331	Mr Greg Bicker				Object	The Development of CD002 and CD003 would greatly change the character of the area in question, Cheddleton. The joining of Cheddleton and Wetley Rocks through abolishing greenbelt land would go against the entire ethos of green belt, to prevent urban sprawl and preserve open countryside in its permanence. The density of the development in question is out of proportion to the local area as Rockend drive and Millstone Edge have only 31 properties in the developments entirety. There are a further 21 houses that border the CD002 and CD003 plots from Folly lane. The proposed 96 houses in this area would significantly change the feel and characteristics of the area. CD002 and CD003 are Green belt areas, with established trees and minor waterways. There are thought to be 3 species of bat present in the local area, Common pipistrelle, Soprano pipistrelle and Brown Long-eared bat. I have	<ul style="list-style-type: none"> The proposed sites in Cheddleton are within the Green Belt The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. It found the all the sites in Cheddleton overall impact on Green Belt's purposes were moderate. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
						<p>witnessed bat activity at night in the area, but to my knowledge, no formal ecological surveys have been completed or published that demonstrate the impact on the local wildlife that development of these ecosystems would implicate. The development of CD002 and CD003 would bring in increase in population that would overwhelm local amenities, of which Cheddleton is not plentiful. I appreciate the long term vision, that increased population leads to increased development of amenities, but we live in the present, so plans for this should be put in place at the same time as development plans are hurriedly prepared. The population increase would also bring an increase in vehicles, with little local employment, most people will commute to work. With the development of affordable homes for working people, this could mean 1-2 (or even more) cars per developed property. This represents a possible 192 additional cars attempting to exit Rockend drive in the rush hour periods, onto a 50mph road which is already busy. The turn for Rockend drive falls within a natural dip, with speed cameras on the high pints each side, this encourages people to speed down/ up the road at the point where Rockend drive joins, then slow for the speed cameras when approaching the top of this hill. This is already dangerous. Increasing the number of vehicles making right turns in and out of this road will only increase the instances of accidents. CD002 received 50 comments with 48 objections, CD003 received 69 comments with 67 objections in the previous public consultation. considering the level of population in this part of Cheddleton, this is overwhelming objection to development of this pretty green belt land that provides a scenic backdrop to the end of the village boundary as well as maintaining the rural feel of the rural village. A common frustration is the lack of council interest in using suggested rather than enforced spaces. Cheddleton parish council are suggesting CD015 and CD115 as alternative development land. It is also confusing why brownfield infill is not being considered over greenbelt abolition. CD015 is adjacent to another brownfield site that still lies in disarray and is a local eye saw. The development of the “depot” that lies directly south of CD015 would be good use of brownfield and facilitate infill with less deviation from village boundaries. As a local resident, I have concerns that the land of CD002 and CD003 is, in my understanding, owned by a non-local developer. Due to this the land owner will be very keen for the process to go ahead with little concern for effect on local character/ amenities and quality of life. There is also concern about the current abundance of property in Cheddleton, of varied value, that is currently unsold. Why do we need more housing if the current stock is not in demand in our local area. Developing more affordable housing would ultimately limit those currently in this band of housing in the area to sell their property when they want to take a step up the property ladder, as there will be a saturated supply market of affordable housing for sale with low demand due to poor local amenities, employment, transport links and the ongoing environment agency issues regarding the unpleasant odour of the local rendering plant. Overall, unwanted, not required, poor reasoning for choice of greenbelt over brown field, incorrect housing density, loss of identity if Cheddleton and Wetley Rock are to be joined.</p>	<p>to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt.</p> <ul style="list-style-type: none"> • The Highways Authority advises that development of CD002 & CD003 is acceptable subject to certain provisos but require further information regarding the access for CD017. • There is not enough brownfield land or sites or infill sites in settlements to meet the District’s proposed housing requirements so green field options have been proposed .Prioritising brown field land over greenfield in all circumstances is not part of Government policy • The Council has recently undertaken a Landscape, Local Green Space and Heritage Impact Study 2016 to form part of the evidence base to support the Local Plan and assess the potential landscape impacts of the development allocations The Study found “CD003 was of medium landscape sensitivity and that site-specific landscape mitigation measures could include phased development (ensuring site is developed in combination with CD003).” CD003 and CD017 are of low landscape sensitivity • The Extended Phase 1 habitat Survey 2015 assessed the present and potential ecological value of the proposed site allocations. It found that all the Cheddleton sites had mostly low biodiversity value overall in terms of area. • An assessment of the District’s employment land requirements was carried out in The Employment Land Requirement Study the draft Local Plan proposes employment allocations/policies to meet this need. • See response to PO2034 regarding site CD115 • Brownfield sites within the Green Belt can be developed in accordance with existing green belt policy • There is not enough brownfield land or sites or infill sites in settlements to meet the District’s proposed housing requirements so green field options have been proposed .Prioritising brown field land over greenfield in all circumstances is not part of Government policy • Policies in the Local Plan will require an element of new housing provision to be affordable • Staffordshire Farmers site has planning permission

PO2505	Ms Patricia Cunningham				General comment	I support the alternative sites for development namely brown field site of staffs farmers land at heath house land.	<ul style="list-style-type: none"> See response to PO2034 & PO2425
PO2503 PO2324	Mrs J Plimley Mr Plimley				General comment	Preferred site CD115	<ul style="list-style-type: none"> See response to PO2034
PO315	Ms Julie Brownhill				General comment	Instead of developing sites CD002 and CD003 it would be preferable to develop CD115 because this site is closer to the village centre and it has better access onto the A520.	<ul style="list-style-type: none"> See response to PO2034
PO530	Mrs V Millar				Object	The smaller locations should not be disadvantaged as a result of fewer persons and no physical petition/signage being produced. The area is built up enough with Pointons behind this area and the traffic coming/going as a result of the industrial works.	<ul style="list-style-type: none"> See response to PO331
PO590	Mrs Susan Buxton				Object	I have grave concerns that increasing the number of dwellings and therefore residents in Cheddleton would mean great strain on local	<ul style="list-style-type: none"> New development is the main way to deliver new or improved infrastructure/local facilities e.g. more

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer Response
						schools, dentists and doctors. There is currently no doctor's surgery in Cheddleton and residents have to travel to Leek or Werrington to see a GP. Increasing the number of residents increases the number of people required to travel on an already busy road to access these services.	<p>residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas.</p> <ul style="list-style-type: none"> National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered.
PO934	Mr John Buxton				Object	Increasing the number of dwellings, and therefore residents, in Cheddleton would put great strain on local schools, dentists and doctors. There is currently no doctors' surgery in Cheddleton and residents have to travel to Leek or Werrington to see a GP. Increasing the number of residents increases the number of people required to travel on an already busy road to access these services	<ul style="list-style-type: none"> See response to PO590 and PO331
PO2407	Mr and Mrs A Harrison				General comment	There must be a lot of green belt sites around Leek area as quoted by Leek Post and Times many times. So why take the risk of more traffic etc in this area. Its already been turned down because its a green belt area so what's changed?	<ul style="list-style-type: none"> See response to PO331
PO2413	Mrs S Hathaway				General comment	Totally agree with the objections, additional parking would be a bigger issue.	<ul style="list-style-type: none"> Comment noted
PO2439	Mrs C Atkinson				General comment	To add further drainage of this site is a huge concern our gardens back onto the proposed development and naturally draws away into this site so what would happen becomes a concrete slab! Also as well as the noise/light pollution what about the wildlife and the extra pollution with regards to access to the development if 2 exits and 2 entrances we on mill brook this would make our very small estate a rat run for this proposed development.	<ul style="list-style-type: none"> See response to PO331
PO2324	Ms V Pegg				Support	I fully endorse all the comments and objections listed above. In addition from a personal point of view I have enjoyed the quiet rural beauty of this site for nearly 30 yrs. My peace and tranquility would be displaced by the development of this site. CD115 and CD015 as brownfield site alternatives have my support for development.	<ul style="list-style-type: none"> See response to PO20134 and PO331
PO2350	Mrs P Kelsall				General comment	Cheddleton should not be merged with Wetley Rocks.	<ul style="list-style-type: none"> See response to PO331
PO2393	Mrs P Kelsall				General comment	I have safety concerns on the A520. I had a accident there in broad daylight in 1982 and was never able to continue with my complete employment.	<ul style="list-style-type: none"> See response to PO331
PO2348	Mr M Cunningham				General comment	I support the development of the brown field site of Staffordshire Farmers and Heath House Farm land.	<ul style="list-style-type: none"> See response to PO2034 & PO2425
PO2473	Mrs O Thorley				General	I have attended local meeting as I have become aware that there are	<ul style="list-style-type: none"> See response to P0331

					comment	other areas of land that would offer a significantly lower level of, safety of residents in this neighbourhood must be paramount in any planning considerations as detailed above, this proposed site would be hazardous to residents (even more so than the current levels of danger).	
PO2471	Mr M Thorley				General comment	It would surely make sense to look at alternative sites for development eg CD115, and CD015, Building on these sites would do more to connect the 2 sections of Cheddleton village . Building on the CD002 and CD003 would effectively connect Cheddleton and Wetley Rocks as building at the other side of the A520 in Wetley Rocks. Thus creating urban sprawl.	<ul style="list-style-type: none"> See response to PO2034
PO2445	Mrs P Kelsall				General comment	I agree with the governments policy to protect green belt land.	<ul style="list-style-type: none"> Comment noted
PO2499	Mrs P Kelsall				General comment	I object to the properties being built on green belt land when there are brown field sites recommended by the Parish Council.	<ul style="list-style-type: none"> See response to PO2034 & P0331
PO2469	Mr And Mrs RJ/S Morris				General comment	Preferred sites CD115, CD015 & CD030	<ul style="list-style-type: none"> See response to PO2034 & PO2425
PO2316 PO2495 PO2443 PO2399	Mr. Martyn Findlow Mr. Martyn Findlow Mr. Martyn Findlow Mr ML Edwards				General comment	Preferred sites: CD030 Rockend Farm, CD069a & CD116.	<ul style="list-style-type: none"> See response to PO2034 & PO2425 CD069a is within the village boundary and can be developed as infill CD116 was classed a C in the SHLAA and was therefore not considered suitable for development
PO4889	Mr R Duncan	Rob Duncan Planning Consultancy			Support	Submits report [attached] on behalf of owner of land immediately east of preferred option CD017, promoting that land as residential preferred option as part of CD017: argues client's land makes a limited contribution to the purposes of the Green Belt and is therefore suitable for development [includes comparison of client's land against Council preferred options as per GB purposes]; client's site will have less of an important on the Green Belt than the preferred options sites CD02 and CD03, as well as the reserved site CD019. Client's land coupled with site CD017 therefore represents the least harmful option available site also constitutes previously developed land, as it is used for equestrian purposes; argues housing site options methodology applied to options/preferred options sites is flawed [introduction of new sites/re-consideration of existing 'C' sites etc]. Site CD019 is not suitable [ribbon development/infilling];	<ul style="list-style-type: none"> The sites are in the Green Belt and are not well related to the built up area. The NPPF states that once established Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt. In this instance it is considered there are no exceptional circumstances.

PO107	Mr John Clarke				Object	Traveller site Blythe Bridge This site in my opinion is contrary to the general guidelines that are adhered to nationally. It is a clear interference with neighbouring properties in that area. Travellers if given a free choice of land on which to reside would not choose land that is closely occupied by built up residences that have been occupied by neighbours for some time previously. Speaking to the land owner and his wife they in actuality have no intention of selling this land at all, for development of housing, commercial or traveller site. Their feelings and intentions should be considered primarily, any attempt to compulsory purchase this land would be resisted by a substantial number of rate-payers and should not be considered on moral grounds.	See response to question 40.
PO207	Mrs Jacqueline Leach				General comment	There has been little focus on tourism in Cresswell and Draycott. This will have less impact on roads but provide employment opportunities. No negotiations are going ahead between SMDC and Stoke City as was previously stated. There are alternative sites available such as units just off the A50 near Grindley Lane. These have far better access than Cresswell has to the A50. So many brown field sites are available in the City but SMDC are concentrating on the money side of things rather than common sense.	<ul style="list-style-type: none"> The council has a Duty to Co-operate with adjacent Local Planning Authorities and Staffordshire County Council, meeting regularly to discuss future development /growth across the area. There are policies in the Local Plan regarding development in the countryside and the rural economy
PO1039	Mrs Shelagh Wood		Mrs Shelagh Wood	VVSM	Object	Stoke on Trent City Council have many brown field sites that they wish to develop with employment opportunities and housing opportunities. many residents in Stoke-on-Trent and other urban areas have used the Staffordshire Moorlands for recreational purposes. This should remain and the main focus for the Staffordshire Moorlands should be safeguarding the Green Belt, the Greenfield sites and the Special Landscape Areas for future generations to enjoy. Preservation of wild life and protected species and the development of tourism. Why should this area become Urbanised when the urbanised areas we already have around the city of Stoke-on-Trent are in great need of financial support to achieve this. Staffordshire Moorlands District Council have not worked WITH Stoke-City-Council, quite the opposite they have worked entirely for themselves and to make money from housing and employment development without consulting any local people and the needs they require.	<ul style="list-style-type: none"> The council has a Duty to Co-operate with adjacent Local Planning Authorities and Staffordshire County Council, meeting regularly to discuss future development /growth across the area. National planning guidance states that the Council should seek to meet the development needs of their area. Housing allocations are needed to ensure the Districts housing requirement is met. Residents' views have been sought as part of the consultation.
PO1034	Mrs Shelagh Wood		Mrs Shelagh Wood	VVSM	Object	Once again Cresswell is NOT listed and any affordable housing built will not necessarily be allocated to local people as is needed. We have been told that Cresswell is NOT a preferred site by planning officers yet the planning committee ignored the recommendation for refusal of one of SMDC's planning officers regarding flooding, contamination, inadequate infrastructure and no sustainability as doctors, schools, dentists etc have to be reached by car.	<ul style="list-style-type: none"> Comments noted
PO203	Mrs Jacqueline				Object	168 houses in Cresswell not included on here. SMD/2014/0576 Disgraceful. Again Cresswell is a hamlet NOT a small village	<ul style="list-style-type: none"> Comments noted

	Leach					therefore the application should never have been passed as it was linked in with OC055 as a mixed development. Goes against NPPF AND SMDC Core Strategy. Also under police investigation at the moment. Should be suspended.	
PO9745	Not known Scentarea Ltd Not known	Scentarea Ltd	Ms Rosie Cotterill		Object	Covering letter and map submitted [refer to PO9731 attachments] supporting Preferred Options employment site OC055, and additionally proposing that adjacent land be allocated for housing: The intention of the proposed approved employment/housing approval SMD/2014/0576 is to create a sustainable addition to Cresswell by expanding a successful business park and bolstering the provision of residential dwellings, including much needed affordable housing. The proposed development will also be beneficial for the wider District providing housing and employment land to meet an identified need. as this permission has already granted industrial development on OC055 site, Scentarea Ltd therefore fully supportive of the Council's intention to allocate this site There are a number of existing businesses on the site who are committed to growing in this location once larger employment units have been developed and are available. Scentarea also often receives enquiries from other businesses looking to move to the site who, without the development of new units, cannot currently be accommodated. Given that western portion SMD/2014/0576 has already been granted residential planning permission, it would seem logical that the western portion of the site is also allocated for residential development. This will help meet the housing need identified in the adopted Core Strategy in line with para 47 NPPF. The site is not in the Green Belt and would therefore allow for the Council to meet some of their identified need on non-Green Belt land. The Environmental Impact Assessment submitted in support of the planning application demonstrates that there are no environmental constraints on site restricting development which could not be overcome through mitigation.	Support noted. The land to the west of OC055 has been granted planning permission for residential development and is counted as a commitment for the Local Plan

PO9128	Bev Reardon				Object	<p>Cumulative Impact of Proposed Northern Gateway Site, Proposed Traveller Site and BB041 and OC055. I write in reference to the above site options consultation and I also wish to include the impact of other sites namely BB041 (Caverswall Road) and OC055 (Blythe Park expansion, Cresswell) because if all sites are granted permission, it will result in the diminution of the quality of life for all residents of Blythe Bridge, Forsbrook, Draycott and Cresswell, along with increased traffic problems for residents of Hilderstone. With the overview of all the linked sites named above, I wish to draw your attention to the following information from The World Health Organisation website, where the full document is available for your perusal: (http://www.iarc.fr/en/media-centre/iarcnews/pdf/pr221_E.pdf 1st June 2016) Lyon/Geneva, 17 October 2013 – The specialized cancer agency of the World Health Organization, the International Agency for Research on Cancer (IARC), announced today that it has classified outdoor air pollution as carcinogenic to humans (Group 1). After thoroughly reviewing the latest available scientific literature, the world's leading experts convened by the IARC Monographs Programme concluded that there is sufficient evidence that exposure to outdoor air pollution causes lung cancer (Group 1). They also noted a positive association with an increased risk of bladder cancer. Particulate matter, a major component of outdoor air pollution, was evaluated separately and was also classified as carcinogenic to humans (Group 1). The IARC evaluation showed an increasing risk of lung cancer with increasing levels of exposure to particulate matter and air pollution. Although the composition of air pollution and levels of exposure can vary dramatically between locations, the conclusions of the Working Group apply to all regions of the world. It is therefore immediately apparent that increased air pollution created from the higher volume of traffic generated from ALL of the above sites will be a source of concern to the health and wellbeing of residents. If the proposals go ahead the identity of Blythe Bridge, Draycott and</p>	<ul style="list-style-type: none"> • National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on highways and school capacity, what additional capacity is needed and how this can be delivered. • The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change. • If the district council considered that a development they may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts. • There is a policy in the Local Plan regarding the pollution

					<p>Cresswell will be changed beyond recognition from small hamlets and a village to an extension and continuation of the urban sprawl of Stoke on Trent. Many of my neighbours I have discussed this matter with, purchased our properties and chose to live in the area because it is a non estate location, rural, with few houses and lots of green space. Therefore our views must be taken into consideration, when any major changes to the area in which we reside and pay council tax for are considered. Clearly this was not the case with the Blythe Park expansion, which will cause the volume of traffic on Cresswell Lane and Uttoxeter Road, Draycott to greatly increase the number of vehicles on an already very busy road-also used as a diversion for the frequent A50 closures. The vibration from this traffic has already caused damage to garden walls and with some HGV's you can feel the vibration through the house. I have spoken to residents groups in Leek who say they would welcome industrial parks and associated housing as they want to offer 'local jobs' to help with the ongoing, very successful regeneration of Leek . No one from SMDC has yet explained why no developments of the size planned for Blythe Bridge, Draycott and Cresswell have been proposed for Leek. No one from SMDC has explained why almost 80% of the district allocation for housing and industrial parks is being sited at Cresswell, Draycott and Blythe Bridge. No one from SMDC has explained why there is no allocation for a Traveller Site at Leek, there is clearly a demand for this, as unofficial traveller sites and occupation of land from the travelling community is not uncommon in Leek. I request that all of the above objections- and points within this objection document to be considered fully.</p>

PO3903	Mr J Silitlitoe				EN012	Object	Additional houses on this site would impact adversely on the flow of traffic volume on the estate and consequently on our access to the A53. The junction at the bottom of Hillswood Drive is hazardous at present and will become more so with increased traffic. The site together with adjacent to me, is an important soakaway for the estate, building on it will impact on the flooding issues, already causing problems. The roads on the estate are not suitable for increased traffic flow.	<ul style="list-style-type: none"> Hillswood Drive terminates at the gated entrance to this site. This access also leads to a playground. An extension to the adopted highway should be feasible at this point and this may be the best way to obtain access Potential flood risk issues, will require flood risk assessment/modelling and early engagement with County Council & Environment Agency
PO3904	Mr J Silitlitoe				EN012	Object	Any large scale development in Endon must address the flooding issues, currently being discussed with the Nation Flood Forum. The major junction at Station Road/Clay Lake must be resigned to cope with additional traffic – this is a hazardous junction and will become more so with increased traffic. Any development without solving these problems will be insensitive and lacking any common sense.	<ul style="list-style-type: none"> See response to PO3903 regarding highways and flooding
PO9465	Mr John Proffitt				EN012	Object	Email submitted 03/06/16: I am making contact to offer my support for the proposed Alternative option for the future housing projects in Endon Village. The initial proposal to use land opposite the Playing field at the top of Hillswood Drive would have the most negative effect on the functioning on this sector of Endon. Hillswood Drive is already a very busy road, especially at the times when parents are travelling through the estate to drop off or pick up their children from Endon Hall Primary School. During Winter when we have snow and ice (even with salting) Hillswood Drive becomes precarious if not a risky venture..... any additional traffic would only make things far more dangerous. Additionally, the initial proposal would mean traffic passing close to the access to the playing fields..which could add risk to the children using this facility. The alternative option looks far more balanced... this part of Endon is much less congested with fewer houses less traffic and much better access to the main A53.	<ul style="list-style-type: none"> See response to PO3903 regarding highways
PO9498	Mr Paul Stevens				EN012	Object	Email submitted objecting to Preferred Options site EN012 (and other sites): First of all I would like to state that I'm in favour of the alternative plans that are about to be submitted by the Endon with Stanley Parish council. I find the Staffordshire Moorlands plans ludicrous for the following reasons; The four fields on our estate (EN012,EN007,EN019 & EN101) are all Green Belt area's - question doesn't this mean anything anymore and if not why was it granted in the first place. I appreciate that only site EN012 has been given approval so far but question what's to stop the remaining 3 "Amber" fields from being granted the same permission. We currently have severe issues with drains and garden flooding (Extenuated over the last couple of years). So, with the possibility of an extra 131 houses question what's going to be done to solve this ever increasing problem. Thirdly,	<ul style="list-style-type: none"> See response to PO3903 regarding highways and flooding The land in question is within the Green Belt The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. It

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>what's going to be done about the substantial increase in traffic. The junction at the bottom of Hillswood Drive is an accident waiting to happen. Cars are left at the bottom of Hillswood Drive within metres of the junction resulting in reduced width of the road. Turning left is treacherous (With the pedestrian crossing approximately 10 metres to the left of the junction) and turning right at busy times is near on impossible!!!! Finally, I'm lead to believe that a third of these will be Social or Affordable housing. Surely this will lead to a drastic reduction in the values of property within the area and significant negative changes to the wonderful village life we currently enjoy and pay for the privilege of. A very concerned and disappointed resident.</p>	<p>found the site’s overall impact on Green Belt’s purposes were moderate. “ Whilst progressive extension of the built edge into open countryside is not ideal, there is in this case the opportunity to use a reasonable boundary feature as the clear extent of development in a location which not readily visible. These sites would need to be the subject of comprehensive masterplanning to ensure that the treatment of the outer edge is properly addressed, and built development does not extend to the north of the current open space.” It considered the site could be considered for release under Exceptional Circumstances. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt.</p> <ul style="list-style-type: none"> • Property values are not a material planning consideration • The Local Plan will allocate sites for residential development and will provide certainty for local communities and developers through policies guiding the overall level and location of development. Planning applications must be determined in accordance with the Local Plan unless material considerations indicate otherwise. • As part of the preparation for the emerging Local Plan the Council has assessed sites in the SHLAA and sites suggested through the consultation process. The Council has considered the alternative sites suggested in the responses to the previous consultation and where appropriate has included the additional sites in the proposed site allocations in the emerging Local Plan. The site assessments provided a summary of the key issues and responses.

								Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website
PO9443	MR ANDREW RENNIE				EN012	Object	<p>Email with comments form submitted objecting to Preferred Options site EN012. Comments form: ENO12 Infrastructure Schools- I am not sure how many children outside the Endon Schools catchment areas attend each of the three schools so I am not in a position to comment on their capacity or ability to take additional children from within the area. Infrastructure Traffic & Transport & Carbon Footprint. I have recently taken part in a traffic survey (the results of which are held by Parish Councillor Joe Porter) at the junction of the A53 Leek Road , Station Road Endon , the B5051 to and from Brown Edge and Hillswood Drive Endon.From the results of the survey it is clear that the junction which feeds three roads onto the A53 is not capable of handling any additional vehicles from the proposed development EN012. Traffic using the junction from Station Road entrance often goes straight across the junction towards Brown Edge which leads to a build up of because it is has to cross both lanes of traffic. If the proposed development site EN012 were to be approved as a suitable site it would make the A53 junction unfit for purpose and pose a health and safety hazard from the dangers of traffic, noise and air pollution to not just the local dwellings but also to the children who walk this way to school each day. Any proposed development on site EN012 would increase the vehicle volumes by at least twice the number of proposed dwellings on the site because the occupiers would have to travel at least ten miles per day either south to Stoke-On-Trent or north to Leek and the Moorlands to find suitable employment which was capable of servicing debt finance on the property. Quality employment paying reasonable salaries to service debt finance to purchase homes within the Stoke-On-Trent / Leek area is very difficult to find so occupiers of the properties will have to travel larger distances thereby increasing the carbon footprint of the Endon area and damaging the environment. Surely the longer term view should be to locate more homes closer to where the employment is rather than spreading it far and wide?</p> <p>Infrastructure Other: At present Endon has one village shop/store with another being built on the A53 which was formerly a car garage, one petrol filling station with a snack shop, one chemist shop, one doctors surgery, one hairdressers, two public houses with eating facilities and one hearing aid centre and a crèche for young children two churches and one village hall. I understand the Doctors Surgery is registered to its full capacity and unable to take additional patients to its register. The parking facilities at the village stores are limited and the size of the shop and range of products is limited. No doubt the Coop store being</p>	<ul style="list-style-type: none"> • New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas. • National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered. • See response to PO3903 regarding highways and flooding • The Core Strategy defines Endon as a larger village with a range of facilities and services • The Council has recently undertaken a Landscape, Local Green Space and Heritage Impact Study 2016 to form part of the evidence base to support the Local Plan and assess the potential landscape impacts of the development allocations The Study found the eastern section of the site is of medium landscape sensitivity. Site-specific landscape mitigation measures for this section could include additional advanced planting on the northern boundary. The western section of the site is of high landscape sensitivity.

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>built will address the parking and limitations of the village store but this will add even more strain to the A53 junction I eluded to in the first paragraph because more local people will drive to the Coop store rather than walking to the village store. Added to which the entrance and exit to this store will be extremely dangerous during school closing times. The location of Site EN012 is unsuitable because it is situated at the top of hill which means occupiers will inevitably resort to vehicular transport because of the steepness of the hill. It is unfriendly to disabled users and people with breathing difficulties. Because of the proposed proximity of the site it is often exposed to the worst of the inclement weather on the prevailing westerly winds being at the top of the hill. During the winter months when snow is lying for days and weeks people are unable to get to the top of High View Road by vehicle because the road and pavements are not on the core gritting routes this can lead to emergency services not being able to access residents. Any development on the proposed site EN012 would add to these current problems. Also I don't think the drain infrastructure in the Endon area will be able to cope with any increased demand from a proposed development. Landscape- The Landscape on the proposed development site EN012 is a sloping field on a gradient running down from Endon Bank Farm towards Hillswood Drive Playing Field. These fields including the trees which surround them act as sponge reducing the run off of surface water to the lower levels of Endon. The views from site EN012 are rural looking over towards Rushton and Macclesfield in one direction and over to Lask Edge in the south westerly direction. These views are beautiful and uninterrupted, but equally are the views if you walk up Holehouse Lane and look back towards Endon where at present you can barely see the top of any properties in High View Road from any point as you walk up Holehouse Lane. If a proposed development were to go ahead on site EN 101 it would break the vista not just from Endon looking outwards but also from the immediate countryside looking inwards towards Endon. Surely we should be looking to protect this site for future diary farming which will help secure local employment and reduce our carbon footprint? Nature Conservation - The proposed site EN012 would have serious implications for the local wildlife. The site has trees which are of the old British hardwood types and are used by the following birds: Perrigin Falcons, Kestrels, Buzzard, Sparrow Hawk, Owls, Woodpeckers and Lapwing on the soaked parts of the field during early spring. The birds of prey are attracted by the food supply of field mice, voles, weasels and other mammals which use the site, foxes, and badgers are also attracted by the pheasants which frequent the field. Flood Risk- Endon has a long history of flooding and its associated problems. As I mentioned in the landscape paragraph Site EN012 acts as a natural sponge relieving the run off of surface water from the</p>	<ul style="list-style-type: none"> • The Extended Phase 1 habitat Survey 2015 assessed the present and potential ecological value of the proposed site allocations. It found that “ <i>the site has mostly low biodiversity value overall in terms of area though the dry ditch to the east adds some extra biodiversity to the site.</i>” • New housing schemes (depending on their size) will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the consideration of new links. • An assessment of the District’s employment land requirements was carried out in The Employment Land Requirement Study the draft Local Plan proposes employment allocations/polices to meet this need. • Issues such as overlooking and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application • The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district’s full housing needs, including affordable housing, whilst taking into account migration and demographic change • There is not enough brownfield land or sites or infill sites in settlements to meet the District’s proposed housing requirements so green field options have been proposed .Prioritising brown field land over greenfield in all circumstances is not part of Government policy • As part of the preparation for the emerging Local Plan the Council has assessed sites in the SHLAA and sites suggested through the consultation process. The Council has considered the

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>upper levels. EN012 is at the top of four proposed development sites which could be enhanced with further trees to reduce surface water run off. If any proposed development took place on site EN012 then further consequences would be felt at lower levels because not matter what additional drains are put in the water has to run down bank somewhere causing more problems for people living lower down the estate and by the main road. You only have to look at the amount of times the A53 is being dug up from the Station Road junction to past Endon School to realise there are problems underground and these are a consequence of ground movement because of flooding. If you look in the history books of the local area Endon is always featured in the flood articles. If you walk from site EN101 to EN 012 in the middle of winter after snow has just melted you will witness how much of a sponge site EN012 actually is. The existing drainage system would not be capable of handling any resulting additional capacity. Amenity: Site EN012 would involve loss of light and privacy to the homes on High View Road but there are wider implications for the whole estate because the noise from increased traffic and people accessing the dwellings through the estate by vehicle would increase, and cause damage to air quality and noise levels on a permanent basis. In addition to the adult amenities there are also children amenities with the site EN012 as it exists because although it is private farmland local children use these fields as part of their habitat even though they maybe trespassing for such activities as sledging hide & seek and getting conkers in the autumn. Losing such an amenity would be damaging to the young children who can wander in a safe environment where there are no roads! Scale of Development: Any kind of development if it is absolutely necessary should be of a limited nature with low height buildings restricted to one level with a height restriction thus minimising any impact on the existing dwellings in High View Road and having minimum impact on the vista. Any large scale development would cripple the existing highway network system, deteriorate health and safety with noise and pollution and could not be handled by the local infrastructure as it stands. Government Policy: There is a government policy to build more housing to meet expected future demand. The demand for housing in the Endon area will be determined by sustainable employment opportunities within the local area. The local area in this context is Leek and Stoke for a reasonable long term employment period. These two area's are still going through a slow re-building process before quality sustainable employment opportunities become available. You have to get the employment in place first and then address the housing needs. The former is only in it's infancy as evidenced by the number of long term unsold existing properties on the estate adjacent to site EN012. The addition of further properties at the site EN012</p>	<p>alternative sites suggested in the responses to the previous consultation and where appropriate has included the additional sites in the proposed site allocations in the emerging Local Plan The site assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website.</p> <ul style="list-style-type: none"> • If the district council considered that a development they may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts. • There is a policy in the Local Plan regarding the pollution

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>would only exasperate the problem further which is what happened on a similar site on the edge of Shaftsbury Wiltshire where the cheap affordable housing was sold and taken up by people who did not care about the local people and area (with increased crime) and the dwellings which were built similar to the estate were left empty and could not be sold because there were no local quality employment opportunities. If affordable Social Housing needs to be built it should built closer to the existing employment opportunities Stoke & Leek thus minimising carbon footprint and focussing population growth closer to the amenities and infrastructure. The Government policy is to encroach onto greenbelt land only when absolutely necessary however just because a particular greenbelt site is beyond a village signpost does not mean that site is not less suitable than a site within a village boundary. A more suitable site which adjoins the A 53 just beyond the village sign post has been removed from the proposed site allocations because it did not come within the village boundary and was adjacent to a flood risk area. This site should be reviewed again because it is on the flat and is directly accessible from the A53 making vehicular access safer with less impact on the traffic junction I surveyed. Immediately opposite this site is a horticultural nursery with Polly tunnels so it is difficult to see how developing the other site would extend the village boundary when the nursery already exists. Other: Because of the slow employment rebuilding process in the Stoke & Leek area's many younger generations have left the Endon area to seek quality employment elsewhere. Endon is therefore becoming an elderly community which has specific housing needs. Building housing on Site EN012 at the top of an existing housing estate is not the solution. If affordable social housing needs to built it needs to be built away from site EN012 possibly opposite the poly tunnels site beyond the Endon village sign, which means the Endon village sign could be moved a few hundred yards to bring the site into the village along with the Nursery! Existing brownfields sites should be considered such as the disused railway running beyond Endon Station through to Stockton Brook this will never be brought back into use because the track and infrastructure between Endon and Stoke-on-Trent is in such a state beyond repair that it will never be used again. This land should be acquired from Network Rail and Moorland Railways and used for residential development in the Endon area. Further email comments: I understand one of the sites listed above EN012 has been designated a green status (draft potential allocations) and the other sites EN007,EN019 & EN101 have been designated amber (draft reserve sites) for the time being. It would be helpful to know why the only Draft Reserve Sites (Amber) are the only sites in the Endon area which have been designated this status when no other sites have been given this designation. I wish to continue to object regarding allocating</p>

							<p>any of these sites for development for the reasons outlined in the attached original consultation documents but additionally from the Infrastructure Highways point of view. Both the road way and road footpath's on and surrounding the existing estate are not capable of taking any further increase in traffic. Today 6th June 2016 was the first day back from half term holidays and I gave my wife a lift to work to Hanley and it took me five minutes to get a clear slot to leave Hillside Avenue and join the main A53 Leek Road at 7:20 AM this morning. If any major scale development took place at the top of the existing estate the whole junction would become grid locked and that is in fair weather conditions. The highways infrastructure is not fit for purpose which combined with the flooding issues on the existing estate should be the main reasons why the above sites should be removed from the local plan altogether. In addition I understand a site adjacent to Hallwater which would link both the old village to</p>	
PO9480	Mr Karl Mansfield				EN012	Object	<p>Email with response form submitted objecting to Preferred Options site EN012: The initial site assessments of the fields EN101, EN019, EN007 and EN012 contained several inaccuracies. For example EN101 was described as a 'flat overgrown field.' This is clearly not the case as the field slopes from Endon Bank Farm which is one of the highest points in the village. It was stated that there are semi rural views from the fields. In fact there are undisturbed views from the fields to the Roaches, and Cheshire. According to the Green Belt Review all four fields are classed as Grade 4 (poor agricultural land). Interestingly EN092 and EN 108, areas which have been taken out of any proposed development are also classed as Grade 4. The description also stated no flooding issues. Endon is renowned for flooding. The recently formed Flood Forum has established that there are 18 tributaries to the main Endon Brook and 54 properties within the village boundary which have been subject to flooding. We know that EN012, EN007, EN019 and EN101 fields act as 'soak away.' The lane running from Endon Bank Farm is the watershed for the estate. There are three culverts leading from EN101, EN019 and EN007. At present these culverts drain into pipes 9" diameter which then run under the estate. The field drains are connected to the storm water house drains. This is a relic from the 1960's planning regulations and would not be allowed today. We know that one of these culverts in EN007 resulted in one property in Houston Avenue having to be completely rebuilt. This can only get worse if building is allowed on these fields and climate change results in more rainfall. These inaccuracies undermine the SMDC decision-making process concerning these sites. A major concern for families living on the estate is the safety for residents, especially children who attend Endon Hall Primary School. The roads on the estate are only 4.83 meters wide, barely enough for two cars to pass, especially on corners. The</p>	<ul style="list-style-type: none"> • See response to PO3903 regarding highways and flooding • See response to PO9443 regarding landscape, recreational land, site assessments and wildlife • See response to PO9498 regarding Green Belt

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>estate is the major catchment area for the school and other Endon schools and many children walk to school each morning. However the situation outside the school in Hillside Avenue is extremely dangerous. Parents travelling from further afield park on the footpaths with the obvious danger to children and residents. The junction with the A53, Hillside Avenue and Church Lane is extremely hazardous. Residents recently undertook a traffic survey at this junction .At peak times there is one car every 10 seconds. Parents are encouraged by the school to park behind the Plough car park and walk down Church Lane to the junction with Hillside. Incredibly there is no footpath in Church Lane (in fact it is not wide enough to accommodate a footpath) and the school traffic warden has to help children and parents to cross both Church Lane and the main A53. With a potential 131 more houses built in the designated sites, this would have serious consequences and is a serious accident waiting to happen. Indeed there have already been a number of minor accidents at the junction including the traffic warden being injured within the last 12 months. As residents of High View Estate, we are very disappointed that the four identified sites remain either 'green' or 'amber'. We note that all sites in Bagnall , Stockton Brook or Stanley have now been removed from the consultation process with no rationale given. Other areas within the village have been identified by the Parish Council. These are local people with local knowledge and I urge the relevant authorities to seriously consider their options during the consultation period. Previously, many residents proposed EN108, EN092 and EN030. These three sites are all classed as Grade 4 and houses were built, within what is classed as the old village, since the High View Estate was completed. Houses built here would have their own access to the A53, no flooding issues and could be classed as infill as they would connect the old village to the newer part of the village. Any development in these areas would have minimal impact on existing residents. Furthermore it could not be classed as urban sprawl as it does not connect Endon with Longsdon but builds within the village boundary as infill. Current dwellings at the top of High View Estate are below the skyline. Any further development will result in the skyline being breached and houses would be clearly visible from several directions. SMDC have previously specifically refused planning permission under similar circumstances. It appears that SMDC will allow urban development to take place in Green field sites towards Brown Edge but do not appear keen to allow any kind of development connecting the two main parts of the village. Finally the trees bordering EN101, EN019 and EN007 are the foraging area for protected species of bats such as pipistrelle, and brown long eared bats. 'The large number of ash, oak and sycamore trees with bat potential is deemed to have the highest value, their loss as roosts could adversely affect regional bat</p>	

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							populations.' The major aspects of interest are the significant bat roosting potential in the 10 trees, connectivity to other more biodiverse habitats and the dry ditch that could support reptile populations which warrants the site being attributed regional ecological importance. (Staffordshire Ecological Records SER/15/427-Aug 2015). Please bear in mind the current problems with access to Hillswood Drive during icy conditions, due to width, road surface and the fact it is not prioritised in terms of gritting. We have been unable to get to work on a number of occasions. Cars have veered off the road onto pavements when children have been walking home from school. The width of the road is already an issue. We feel that it is beneficial to the health and wellbeing of the village's children that the playing field should adjoin green belt land rather than be surrounded by houses, concrete, tarmac and cars. At the moment, this is a peaceful place for dog walkers, children and parents, walkers enjoying nature and those using the newly installed "Green Gymn".	
PO1949	Mr Frank Poole				EN012	Object	I am very concerned that any additional building in the Endon area will add to a flooding problem, which is already significant. The Staffordshire Moorlands Authority is already aware of this problem as detailed in your Level 1 SFRA report dated October 2015. Section 4.6.1 states : "18 records (of floods) between 1997 and 2012 are shown in Endon along Leek Road, of which 8 incidents occurred in 2012". I am aware of past flooding difficulties on the High View Estate, which can only be increased if the planned development takes place on sections EN012, EN007, EN019 and EN101. I was present at a Parish Council meeting when the flooding on the High View were discussed with Staffordshire Moorlands representatives and to my knowledge these problems have not been resolved. The Endon Village has particular problems, being situated at the lowest point in the area, which is dissected by a brook, prone to overflowing its banks. In my view any development in Endon, without major investment to improve the main drains, will have an adverse affect on the Village. Inadequate drainage systems leads to flooding on Leek Road adjacent to Endon High School, this problem is increased because of significant water run off from the high ground at the Stoney Lane end of Brookfield Road. At times the volume of water is such that stones and other debris are swept along Brookfield, adding to poor drainage. I am concerned that additional building on section EN126 will significantly increase the current serious problems, because of additional dirty water entering the drains from new properties and surface water run off from an area, that currently acts as a soakaway. I also believe that additional water would be deposited on the Endon St Lukes School playing field, rendering it useless for a significant portion of the year. It is clear that the drainage system in Endon is inadequate and additional building	<ul style="list-style-type: none"> See response to PO3903 regarding flooding

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							will increase the current serious problems. In March 2014 Nick Boles , Minister for Local Planning, stated in Parliament - "We are issuing robust guidelines on flood risk, making it crystal clear that councils need to consider strict tests set out in national policy and where they are not met new developments should not be allowed." I trust that appropriate members and officials of the Local Authority will accept responsibility should their decisions have an adverse affect on properties in the area, and in particular my own property.	
PO1953	Mr Phil Matthews				EN012	Object	I wish to strongly object to the proposal of 24 hours to be built on the EN012 site in Endon. I have lived in Endon all my life, living on the estate in question. The site under threat has a commanding position overlooking glorious views over the surrounding countryside. Currently the estate does not impose itself and therefore damage these views. This area was until very recently "Green Belt", yet not suddenly it's a "Green site" and a preferred site for development. There are many other sites which should be considered well ahead of EN012 which be less detrimental to the surrounding area. The Hillswood Drive/A53 junction is already extremely dangerous. For instance, Hillswood drive is steep, narrow, and has parked cars, making it unsuitable for further traffic. The farmland (EN012) and the other three fields have always been well farmed and being used for cattle grazing and silage making. Endon suffers with flooding with drains being connected to the storm water system which shouldn't be the case. Moreover, additional housing will cause even greater problems. Therefore, for the reasons stated, I urge you to reconsider your proposal.	<ul style="list-style-type: none"> • See response to PO9443 regarding landscape • See response to PO9438 regarding Green Belt and site options sites • See response to PO3903 regarding highways and flooding • See response to PO9443 regarding assessment of previous sites
PO2919	James Chadwick	Spatial Planning Policy Officer Staffordshire County Council			EN012	General comment	In relation to Site EN012 intensification of traffic flows from this estate should be avoided without an improvement of junction onto A53. However, this plot on its own may be too small to facilitate this. Also both Hillside and Hillswood Avenue junctions are complicated as are Clay Lake and Church Lane onto the A53.	Comments noted
PO1941	Mrs Jane Ailsa Rennie				EN012	Object	Infrastructure Schools- I am not sure how many children outside the Endon Schools catchment areas attend each of the three schools so I am not in a position to comment on their capacity or ability to take additional children from within the area. Infrastructure Traffic & Transport & Carbon Footprint. I have recently taken part in a traffic survey (the results of which are held by Parish Councillor Joe Porter) at the junction of the A53 Leek Road , Station Road Endon , the B5051 to and from Brown Edge and Hillswood Drive Endon.From the results of the survey it is clear that the junction which feeds three roads onto the A53 is not capable of handling any additional vehicles from the proposed development EN012. Traffic using the junction from Station Road entrance often goes straight across the junction towards Brown Edge which leads to a build up of because it is has to cross both lanes of traffic. If the proposed development site EN012 were to be approved as a suitable site it would make	<ul style="list-style-type: none"> • See response to PO9443 regarding infrastructure, location/facilities, landscape, wildlife, need for houses, brownfield sites, residential amenity, site options sites and recreational use of site • See response to PO3903 regarding highways and flooding • See response to PO9443 regarding pollution

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>the A53 junction unfit for purpose and pose a health and safety hazard from the dangers of traffic, noise and air pollution to not just the local dwellings but also to the children who walk this way to school each day. Any proposed development on site EN012 would increase the vehicle volumes by at least twice the number of proposed dwellings on the site because the occupiers would have to travel at least ten miles per day either south to Stoke-On-Trent or north to Leek and the Moorlands to find suitable employment which was capable of servicing debt finance on the property. Quality employment paying reasonable salaries to service debt finance to purchase homes within the Stoke-On-Trent / Leek area is very difficult to find so occupiers of the properties will have to travel larger distances thereby increasing the carbon footprint of the Endon area and damaging the environment. Surely the longer term view should be to locate more homes closer to where the employment is rather than spreading it far and wide? Infrastructure Other: At present Endon has one village shop/ store with another being built on the A53 which was formerly a car garage, one petrol filling station with a snack shop, one chemist shop, one doctors surgery, one hairdressers, two public houses with eating facilities and one hearing aid centre and a crèche for young children two churches and one village hall. I understand the Doctors Surgery is registered to its full capacity and unable to take additional patients to its register. The parking facilities at the village stores are limited and the size of the shop and range of products is limited. No doubt the Coop store being built will address the parking and limitations of the village store but this will add even more strain to the A53 junction I eluded to in the first paragraph because more local people will drive to the Coop store rather than walking to the village store. Added to which the entrance and exit to this store will be extremely dangerous during school closing times. The location of Site EN012 is unsuitable because it is situated at the top of hill which means occupiers will inevitably resort to vehicular transport because of the steepness of the hill. It is unfriendly to disabled users and people with breathing difficulties. Because of the proposed proximity of the site it is often exposed to the worst of the inclement weather on the prevailing westerly winds being at the top of the hill. During the winter months when snow is lying for days and weeks people are unable to get to the top of High View Road by vehicle because the road and pavements are not on the core gritting routes this can lead to emergency services not being able to access residents. Any development on the proposed site EN012 would add to these current problems. Also I don't think the drain infrastructure in the Endon area will be able to cope with any increased demand from a proposed development. Landscape- The Landscape on the proposed development site EN012 is a sloping field on a gradient running down from Endon Bank Farm</p>	

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>towards Hillswood Drive Playing Field. These fields including the trees which surround them act as sponge reducing the run off of surface water to the lower levels of Endon. The views from site EN012 are rural looking over towards Rushton and Macclesfield in one direction and over to Lask Edge in the south westerly direction. These views are beautiful and uninterrupted, but equally are the views if you walk up Holehouse Lane and look back towards Endon where at present you can barely see the top of any properties in High View Road from any point as you walk up Holehouse Lane. If a proposed development were to go ahead on site EN 101 it would break the vista not just from Endon looking outwards but also from the immediate countryside looking inwards towards Endon. Surely we should be looking to protect this site for future dairy farming which will help secure local employment and reduce our carbon footprint? Nature Conservation - The proposed site EN012 would have serious implications for the local wildlife. The site has trees which are of the old British hardwood types and are used by the following birds: Perrigin Falcons, Kestrels, Buzzard, Sparrow Hawk, Owls, Woodpeckers and Lapwing on the soaked parts of the field during early spring. The birds of prey are attracted by the food supply of field mice, voles, weasels and other mammals which use the site, foxes, and badgers are also attracted by the pheasants which frequent the field. Flood Risk- Endon has a long history of flooding and its associated problems. As I mentioned in the landscape paragraph Site EN012 acts as a natural sponge relieving the run off of surface water from the upper levels. EN012 is at the top of four proposed development sites which could be enhanced with further trees to reduce surface water run off. If any proposed development took place on site EN012 then further consequences would be felt at lower levels because not matter what additional drains are put in the water has to run down bank somewhere causing more problems for people living lower down the estate and by the main road. You only have to look at the amount of times the A53 is being dug up from the Station Road junction to past Endon School to realise there are problems underground and these are a consequence of ground movement because of flooding. If you look in the history books of the local area Endon is always featured in the flood articles. If you walk from site EN101 to EN 012 in the middle of winter after snow has just melted you will witness how much of a sponge site EN012 actually is. The existing drainage system would not be capable of handling any resulting additional capacity. Amenity: Site EN012 would involve loss of light and privacy to the homes on High View Road but there are wider implications for the whole estate because the noise from increased traffic and people accessing the dwellings through the estate by vehicle would increase, and cause damage to air quality and noise levels on a permanent basis. In addition to the adult amenities there are</p>

							<p>or' amber'. We note that all sites in Bagnall , Stockton Brook or Stanley have now been removed from the consultation process with no rationale given. Other areas within the village have been identified by the Parish Council. These are local people with local knowledge and I urge the relevant authorities to seriously consider their options during the consultation period. Previously, many residents proposed EN108, EN092 and EN030. These three sites are all classed as Grade 4 and houses were built, within what is classed as the old village, since the High View Estate was completed. Houses built here would have their own access to the A53, no flooding issues and could be classed as infill as they would connect the old village to the newer part of the village. Any development in these areas would have minimal impact on existing residents. Furthermore it could not be classed as urban sprawl as it does not connect Endon with Longsdon but builds within the village boundary as infill. Current dwellings at the top of High View Estate are below the skyline. Any further development will result in the skyline being breached and houses would be clearly visible from several directions. SMDC have previously specifically refused planning permission under similar circumstances. It appears that SMDC will allow urban development to take place in Green field sites towards Brown Edge but do not appear keen to allow any kind of development connecting the two main parts of the village. Finally the trees bordering EN101, EN019 and EN007 are the foraging area for protected species of bats such as pipistrelle, and brown long eared bats. 'The large number of ash, oak and sycamore trees with bat potential is deemed to have the highest value, their loss as roosts could adversely affect regional bat populations.' The major aspects of interest are the significant bat roosting potential in the 10 trees, connectivity to other more biodiverse habitats and the dry ditch that could support reptile populations which warrants the site being attributed regional ecological importance. (Staffordshire Ecological Records SER/15/427-Aug 2015) Please note that all my previous objections are still applicable. Thank you for your response.</p>	
PO5942	Mrs M Duffy				EN012	Object	<p>Response form objecting to EN012 attached: there appears to be a "lemming like" dash to build properties within SMDC when Government projections show a requirement of some 50% less [housing] than SMDC proposals. Objective seems to be based on Government [financial] support. Latest figures show thousands houses up for sale and lying empty in SMD. The choice of En012 was undoubtedly chosen with easy access to Hillswood Drive. It is obvious that no survey was carried out prior to the decision by the SMDC; otherwise the following factors would have been raised as doubts about its potential as a development. Allegedly as being flat and rough. In fact apart from that a narrow strip to the top left side of the main field it slopes in 3 directions forming a bowl (see drawing) with 1 in 3 gradients. It is green belt and is</p>	<ul style="list-style-type: none"> • See response to PO9443 regarding the need for houses and infrastructure • See response to PO9498 regarding the Green Belt • See response to PO3903 regarding flooding and highways

							used during the summer months for cattle grazing. There is two active land drains situated lower centre of the main field which protrudes out of the ground (see drawing) the lower drain runs into a troughs supplying the cattle there drinking water, during rainy conditions both drains feed the bottom of the field and into a culvert. The culvert is known to flood in adverse conditions affecting several properties adjacent to the culvert. The sub soil in the areas is clay with a high elasticity level (from a private survey done in 1997) the property rebuild required the use of piles because of land slip. Any roads or properties built on the EN012 together with any major movement of earth and clay will without doubt cause an increase of water into the culvert. To cope with this situation the culvert had to be rebuilt. Please note it passes under Houston Avenue and then through the estate down the main road. There is a number of objections which include Hillswood Drive traffic congestion, local schooling facilities etc. etc. etc. which have been ignored totally. Drs Practices are full together with schools.	
PO9526	Mrs Sylvia Matthews				EN012	Object	Response form submitted [attached] objecting to Preferred Options site EN012: questions why Green Belt status of site amended and therefore under threat of housing. Quotes Green Belt Review findings, and NPPF. There are far more suitable sites than this site. Estate not extend since 1960s to not impact on prominent views. Decision makers may have not visited site. All other possible sites such as EN030, EN108, EN092 should be looked at. Question why not considered. Housing on those sites would not have same damaging impact. Sites EN033/EN126 more suitable for social housing. Brookfield Avenue site would have easy access onto A53. EN012 - long narrow steep estate road is unsuitable for the extra volume of traffic. Hillswood Drive/A53 junction is a nightmare, dangerous.[Sites EN030, EN108, EN092 would have safer access onto A523]. Sites EN007/012/019/101 have always been used for grazing or silage. Well managed, valuable agricultural land. Endon suffers flooding problems. Endon Flood Forum has identified that "Drains are connected to the stormwater system and shouldn't be. Additional housing will only cause greater problems".	<ul style="list-style-type: none"> • See response to PO9498 regarding Green Belt • As part of the preparation for the emerging Local Plan the Council has assessed sites in the SHLAA and sites suggested through the consultation process. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website

	Chadwick	Officer Staffordshire County Council					village envelope into the wider landscape with potential wider reaching effects. This is likely to require specific policy consideration within the Plan.	
PO1956	Mr Howard Kelsall				EN012	Object	<p>The initial site assessment of the field EN012 contained some inaccuracies. It was stated that there are semi rural views from the field. In fact there are undisturbed views from the fields to the Roaches, and Cheshire. According to the Green Belt Review the field EN012 is classed as Grade 4 (poor agricultural land). Interestingly EN092 and EN 108, areas which have been taken out of any proposed development are also classed as Grade 4. The description also stated no flooding issues. Endon is renowned for flooding. The recently formed Flood Forum has established that there are 18 tributaries to the main Endon Brook and 54 properties within the village boundary which have been subject to flooding. We know that EN012 field acts as ‘soak away.’ The lane running from Endon Bank Farm is the watershed for the estate. There are three culverts leading from EN101, EN019 and EN007. At present these culverts drain into pipes 9” diameter which then run under the estate. The field drains are connected to the storm water house drains. This is a relic from the 1960’s planning regulations and would not be allowed today .We know that one of these culverts in EN007 resulted in one property in Houston Avenue having to be completely rebuilt. This can only get worse if building is allowed on these fields and climate change results in more rainfall. These inaccuracies undermine the SMDC decision- making process concerning these sites. A major concern for families living on the estate is the safety for residents, especially children who attend Endon Hall Primary School. The roads on the estate are only 4.83 metres wide, barely enough for two cars to pass, especially on corners. The estate is the major catchment area for the school and other Endon schools and many children walk to school each morning. However the situation outside the school in Hillside Avenue is extremely dangerous. Parents travelling from further afield park on the footpaths with the obvious danger to children and residents. The junction with the A53, Hillside Avenue and Church Lane is extremely hazardous. Residents recently undertook a traffic survey at this junction .At peak times there is one car every 10 seconds. Parents are encouraged by the school to park behind the Plough car park and walk down Church Lane to the junction with Hillside. Incredibly there is no footpath in Church Lane (in fact it is not wide enough to accommodate a footpath) and the school traffic warden has to help children and parents to cross both Church Lane and the main A53. With a potential 131 more houses built in the designated sites, this would have serious consequences and is a serious accident waiting to happen. Indeed there have already been a number of minor accidents at the junction including the traffic warden being injured within the last 12 months. (Staffordshire Ecological Records SER/15/427-Aug 2015) Please bear in mind the current problems with access to Hillswood Drive during icy conditions, due to width, road surface and the fact it is not prioritised in terms of gritting. We have been unable to get to work on a number of occasions. Cars have veered off the road onto pavements when children have been walking home from school. The width of the road is already an issue. We feel that it is beneficial to the health and wellbeing of the village's children that the playing field should adjoin green belt land rather than be surrounded by houses, concrete, tarmac and cars. At the moment, this is a peaceful place for dog walkers, children and parents, walkers enjoying nature and those using the newly installed "Green Gymn". Please note that all my previous objections are still applicable. Thank you for your response.	
PO3890	Ms Valerie Harris				EN012	Object	The only access to this area would be from Stoney Lane which is on un-adapted roads; cars would still come down Brookfield Avenue to get to the A53 during school time the avenue is very busy with cars still parking there although there are parking notifications, other cars park on the roads at the top of Brookfield Avenue. This area also has problems with flooding. The residents are all against this proposal.	<ul style="list-style-type: none"> • See response to PO3903 regarding highways
PO743	Mr Trevor Clarke				EN012	Object	There is already significant development in the area, with limited access to the proposed site, this will impact greatly on the road/ traffic from an already very busy A53.	<ul style="list-style-type: none"> • See response to PO3903 highways
PO770	Mrs Dilys Clarke				EN012	Object	This area of Endon is already over-developed and further housing would only exacerbate the drainage, landscape and traffic problems.	<ul style="list-style-type: none"> • See response to PO3903 regarding flooding and highways • See response to PO9443 regarding landscape
PO1946	Ms Gillian Hassall				EN012	Object	This site is totally inappropriate for such development, it is water logged and the roads and drains in the area are unsuitable to cope with the extra usage. The initial site assessments of the fields EN101, EN019, EN007 and EN012 contained several inaccuracies. For example EN101 was described as a 'flat overgrown field.' This is clearly not the case as the field slopes from Endon Bank Farm which is one of the highest points in the	<ul style="list-style-type: none"> • See response to PO9498 regarding site assessments • See response to PO3903 regarding highways and flooding • See response to PO9443 regarding landscape, wildlife and recreational use of the site

Finally the trees bordering EN101, EN019 and EN007, are the foraging area for protected species of bats such as pipistrelle and brown long eared bats. The large number of ash, oak and sycamore trees with the bat potential, in the 10 trees, connectivity to other more biodiverse habitats and dry ditch that could be support the reptile populations warrant the site being attributed regional ecological importance (Staffordshire ecological records SER/15/427 – aug 2015) Pls note that all my previous objections are still applicable	
PO9453 PO9433 PO9488 PO9493 PO9504 PO9459 PO9512 PO9439	Mr Howard Broad Ms Yvonne St. Cyr Mrs Kim Bennett Mr Paul Matthews Mrs Sandra Broad Mr John Overend Mr Stanley Hurst Mr Thomas Bennett				EN012	Object	Email and response form submitted objecting to Preferred Options site EN012: The initial site assessments of the fields EN101, EN019, EN007 and EN012 contained several inaccuracies. For example EN101 was described as a 'flat overgrown field.' This is clearly not the case as the field slopes from Endon Bank Farm which is one of the highest points in the village .It was stated that there are semi rural views from the fields. In fact there are undisturbed views from the fields to the Roaches, and Cheshire. According to the Green Belt Review all four fields are classed as Grade 4 (poor agricultural land). Interestingly EN092 and EN 108, areas which have been taken out of any proposed development are also classed as Grade 4. The description also stated no flooding issues. Endon is renowned for flooding. The recently formed Flood Forum has established that there are 18 tributaries to the main Endon Brook and 54 properties within the village boundary which have been subject to flooding. We know that EN012, EN007, EN019 and EN101 fields act as 'soak away.' The	<ul style="list-style-type: none"> • See response to PO9498 regarding previous sites and site assessments • See response to PO3903 regarding highways and flooding • See response to PO9443 regarding wildlife, landscape and recreation use

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>lane running from Endon Bank Farm is the watershed for the estate. There are three culverts leading from EN101, EN019 and EN007 .At present these culverts drain into pipes 9” diameter which then run under the estate. The field drains are connected to the storm water house drains. This is a relic from the 1960’s planning regulations and would not be allowed today .We know that one of these culverts in EN007 resulted in one property in Houston Avenue having to be completely rebuilt. This can only get worse if building is allowed on these fields and climate change results in more rainfall. These inaccuracies undermine the SMDC decision- making process concerning these sites. A major concern for families living on the estate is the safety for residents, especially children who attend Endon Hall Primary School. The roads on the estate are only 4.83 meters wide, barely enough for two cars to pass, especially on corners. The estate is the major catchment area for the school and other Endon schools and many children walk to school each morning. However the situation outside the school in Hillside Avenue is extremely dangerous. Parents travelling from further afield park on the footpaths with the obvious danger to children and residents. The junction with the A53, Hillside Avenue and Church Lane is extremely hazardous. Residents recently undertook a traffic survey at this junction .At peak times there is one car every 10 seconds. Parents are encouraged by the school to park behind the Plough car park and walk down Church Lane to the junction with Hillside. Incredibly there is no footpath in Church Lane (in fact it is not wide enough to accommodate a footpath) and the school traffic warden has to help children and parents to cross both Church Lane and the main A53. With a potential 131 more houses built in the designated sites, this would have serious consequences and is a serious accident waiting to happen. Indeed there have already been a number of minor accidents at the junction including the traffic warden being injured within the last 12 months. As residents of High View Estate, we are very disappointed that the four identified sites remain either ‘green’ or ‘amber’. We note that all sites in Bagnall , Stockton Brook or Stanley have now been removed from the consultation process with no rationale given. Other areas within the village have been identified by the Parish Council. These are local people with local knowledge and I urge the relevant authorities to seriously consider their options during the consultation period. Previously, many residents proposed EN108, EN092 and EN030. These three sites are all classed as Grade 4 and houses were built, within what is classed as the old village, since the High View Estate was completed. Houses built here would have their own access to the A53, no flooding issues and could be classed as infill as they would connect the old village to the newer part of the village. Any development in these areas would have minimal impact on existing residents.</p>	

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>Furthermore it could not be classed as urban sprawl as it does not connect Endon with Longsdon but builds within the village boundary as infill. Current dwellings at the top of High View Estate are below the skyline. Any further development will result in the skyline being breached and houses would be clearly visible from several directions. SMDC have previously specifically refused planning permission under similar circumstances. It appears that SMDC will allow urban development to take place in Green field sites towards Brown Edge but do not appear keen to allow any kind of development connecting the two main parts of the village. Finally the trees bordering EN101, EN019 and EN007 are the foraging area for protected species of bats such as pipistrelle, and brown long eared bats. 'The large number of ash, oak and sycamore trees with bat potential is deemed to have the highest value, their loss as roosts could adversely affect regional bat populations.' The major aspects of interest are the significant bat roosting potential in the 10 trees, connectivity to other more biodiverse habitats and the dry ditch that could support reptile populations which warrants the site being attributed regional ecological importance. (Staffordshire Ecological Records SER/15/427-Aug 2015).</p>	
<p>PO9000 PO9506</p>	<p>Mrs Clare Poulton Mr Lee Poulton</p>				<p>EN012</p>	<p>Object</p>	<p>Development of this site would severely compromise highway safety along Hillswood Drive, particularly at the junction between Hillswood Drive and Leek Road. This junction is currently extremely difficult to use and indeed currently represents a real risk of road traffic collision. The resulting extra traffic would further increase the likelihood of vehicle collision and also pose a real danger for pedestrians (particularly children from the village who walk to local schools). Hillswood Drive and the surrounding roads are also not suitable for the range of large vehicles required to service any construction activity. In summary highway safety is an area I would expect the council to be promoting not disregarding. This site is within the greenbelt and development here should not be seen as an "easy option" rather than alternative brown field sites in surrounding authorities. Since there are no local employment opportunities this will create further harm to the environment due to the increased pollution from cars, etc. Local amenities are already stretched, particularly the doctors surgery, an influx of further residents would only seek to increase the pressure on these providers. Local schools have no capacity to accommodate an increase of this magnitude. Increased utility services, such as drainage and water supply, would add an extra burden to the existing aging pipeline network. The foul drainage system is already causing problems as it connects from Houston Avenue through Hillswood Drive, increased flow will no doubt make the issue worse. Proposed development of the site would have a detrimental impact upon residential amenities, namely the visual impact of said development, i.e. what it will be like to look at, not</p>	<ul style="list-style-type: none"> • See response to PO3903 regarding highways and flooding • See response to PO9438 regarding Green Belt • Site options • See response to PO9443 regarding infrastructure, landscape and residential amenity • See response to PO9443 regarding pollution

							necessarily the loss of a view. Development of the site would compromise the need to avoid town cramming. Residents in the surrounding area would likely suffer a loss of privacy and overlooking, in addition to overshadowing/loss of light. Open space vistas would be compromised, i.e. this is one of the highest places in Endon and once ruined future generations would undoubtedly be deprived of the obviously current benefits. The Parish Council has proposed an alternative range of sites which do NOT involve development here and I believe should be utilized.	
PO980 PO985 PO993	Mrs Hayley Sullivan Mr Michael Sullivan Mr Oliver Sullivan				EN012	Object	Housing Allocations I would like to record my view that there is a need for more houses across the whole of the UK and I appreciate that this can only be delivered through action by taken by local authorities in their Housing Strategies. I support the need to deliver more houses and in particular, more affordable housing. However, it is essential that this is delivered in a manner which supports the local area and can be supported by the local infrastructure. Endon is defined as a 'larger village' but has managed to retain much of the character of a village. The proposed site of EN012 (and most likely extending over time to EN007, EN019 and EN101 therefore providing 131 properties), will have a detrimental impact on the area as a village and the local infrastructure will be unable to support such a high number of additional properties / families. The scale of the proposed developments is far too great for this semi-rural village area. There are other sites in the Endon and surrounding area which should be developed before developing outside of the current development boundary. The approach should be to build in infill / windfall sites in brownfield areas, built in a manner which supports the current village footprint and which does not create even larger housing estates.	<ul style="list-style-type: none"> • See response to PO9443 regarding infrastructure • See response to PO9498 regarding site assessments • See response to PO9443 regarding the brownfield sites • Any new development taking place will be subject to design policies contained within the new Local Plan
PO9543 PO9544	Mr Peter Walker Mr J G Chetwin				EN012	Object	Letter attached to response form [attached] objecting to Preferred Options site EN012: The following factors raise doubts abouts site's suitability for development: Apart from narrow strip tio the top left, field slopes in three directions forming a bowl, with up to 1 in 3 gradients. Green Belt used in summer for grazing two active land drains in lower centre of field which protrude out of ground. One runs into cattle trough. During rainy conditions both drains feed excess water down field and into a culvert. this culvert is known to flood in adverse weather, affecting several adjacent properties. sub soil is high elasticity clay. [A property rebuild required piles because of land slip]. Any roads or properties built on site will cause increase of water into culvert. To cope, culvert would have to be rebuilt. Culvert passes under Houston Ave properties, through estate, down to main road. Other objections - Hillswood Drive traffic congestion, local school facilities etc.	<ul style="list-style-type: none"> • See response to PO3903 regarding highways and flooding • See response to PO9498 regarding Green Belt

PO9545	Dean Mr John Dean						EN007/EN012/EN019/EN101 is based on incorrect information and has not been informed by key facts relating to impact on flooding, traffic, rural vistas, greenbelt land and local wildlife. Field slopes significantly [is not flat] fields are not overgrown [cattle grazing] There is only one access point [not multiple points] There are completely undisturbed views [not semi-rural views]. There are issues with drainage and floodwater emanating from these fields. [Nearby] residences have been flooded on numerous occasions. Natural contours of these sites ends at a low point [near] 18 Houston Ave. A private culvert is subject to flooding. Additional housing on any of these sites will cause significant increase in not just volume of water but flow rates, causing flooding. The land being 'high plasticity clay' does not help situation. Traffic congestion/health and safety issues flooding rural vista/loss of light Green Belt / Special Scenic classification Wildlife key facilities within Endon are at capacity Preferred development areas - before any Green Belt land is reclassified in Endon all brownfield sites should be fully exhausted. My preference would be to have minimal impact to residents by considering EN130, site opposite it, EN125 etc first.	<ul style="list-style-type: none"> • See response to PO3903 regarding highways and flooding • See response to PO9443 regarding landscape, wildlife, infrastructure and brownfield sites
PO3907	Mrs H Hatcher					Object	We object to the plans for Hillswood Drive for the same reasons of access problems and noise plus scale of the development (with no plans to enhance amenities of infrastructure). Also we are concerned about the type of development planned for the canal side sites – being a safe and secure, beautiful setting it would be at the risk of crime and disturbance should travellers or social housing be given approval. We have just had our property valued, should any development diminish the financial investment we have made we will take all this up with the council directly.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways • See response to PO254 regarding design and residential amenity • See response to PO3872 regarding infrastructure • See response to PO148 regarding property value

						<p>Post Lane. Where the unnamed culvert passes beneath Post Lane in an enclosed section, the road has been rendered unpassable during previous flood events due to the height of rising flood waters when the flow capacity of the enclosed culvert has been exceeded. The loss of green belt land across the EN033 and EN126 sites would result in the loss of a large area of vegetated arable land with a high potential for rain water infiltration and storage. Combined with the construction of a significant area of new hardstanding, the volume of surface runoff water entering the culvert to the west of Post Lane is anticipated to greatly increase. Additionally, owing to the reduction in the current level of rain water storage and infiltration potential, the runoff duration of surface water entering the culvert would reduce. The cumulative effect of these these actions has the potential to significantly increase the likelihood, frequency and magnitude of flood events in the Post Lane area. The associated increase in short-term construction and long-term operation traffic related to the proposed EN033 and EN126 sites would increase traffic levels in an area which is already prone to high levels of traffic congestion. The canal crossing to the south east of the proposed sites is a traffic-light controlled single lane bridge which can become congested at peak times. Traffic flow and congestion around this area would surely increase with the construction a number of new dwellings reducing the quality of life for the existing residents, canal users and visitors. Taking into consideration the close proximity of the sites to a designated floodplain and the history of flooding over the roads in the Post Lane area, any plans to develop this area further should be subject to particular scrutiny. We consider it imperative that the proposed developers are questioned as to how they will ensure that the inevitable increase to the volume of drainage water directed to surface water drains will not exacerbate the current road flooding issues. In particular the proposed developers should address how the existing drainage bottleneck where the unnamed culvert passes below Post Lane shall not be exacerbated by the proposed development and associated increase in drainage water volume, whereby existing roads and properties will be put under increased risk of flooding. We would request that a full Environmental Scoping Report and Environmental Impact Assessment (incorporating a detailed flood risk assessment) is undertaken prior to any approvals being granted to confirm the anticipated effects on flood risk and traffic levels are acceptable.</p>	
PO4833					Object	<p>This is Green Belt area subject to flooding. There would be poor dangerous access on Post Lane additional traffic from 24 new houses would make the lane more congested.</p>	See response above

							<p>for release under exceptional circumstances. . In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt.</p> <ul style="list-style-type: none"> Any new developments would need to adhere to design policies in the Local Plan to ensure character of the area is maintained.
PO745	Mr Trevor Clarke				Support	Ease of access and the site would readily take development.	Comments noted
PO905	MRS SUSAN WILSON				Object	<p>Any development in Post Lane is an incursion into green belt land, on the Caldon Canal Conservation Area, will increase traffic onto a narrow lane, and is adjacent to the flood plain. I have lived in Post Lane for over 40 years and have benefited from the major flood relief work done in this area. This work would be severely compromised if current areas of arable land are built upon thus creating large areas of hard standing which in turn would increase the volume of of surface run off water entering the nearby culvert. I have watched the level of water in that culvert and feel strongly that the bad old days of flooding will return. The traffic issue is also a major concern. The access/egress to this site is directly on to a narrow country lane and very close to a single lane bridge which would be in danger of damage from construction and increased traffic. Turning right out of the proposed entrance would lead traffic to a sharp left hand bend which has already been the scene of accidents. Traffic flow and the danger of further road traffic accidents and incidents would inevitably increase. These comments apply to sites EN033 and EN126</p>	<ul style="list-style-type: none"> See response to PO318 regarding Green Belt The Highways Authority advises that sited on inside of a bend therefore appropriate visibility will be needed for any new junction and a footway provided. But otherwise, development is not ruled out. Potential flood risk issues, recommend flood risk assessment and early engagement with County Council & Environment Agency
PO4834					Object	<p>As above – but also above the canal is a conservation area. There are currently sufficient Brown Field site in both Leek add Stoke on Trent to accommodate all the required housing.</p>	<ul style="list-style-type: none"> Any new developments would need to adhere to design policies in the Local Plan regarding the Conservation Area There is not enough brownfield land or sites or infill sites in settlements to meet the District’s proposed housing requirements so green field sites have been proposed. Prioritising brown field land over greenfield in all circumstances is not part of Government policy National planning guidance states that the Council should seek to meet the development needs of their area. Housing allocations are needed to ensure the Districts housing requirement is met.

	Bagguley					schools so as to help the traffic problems and the access and services are good. The land is not good agriculturally.	
PO1067	Mr Stuart Davies				Object	Development of EN126 and EN033 will increase the amount of vehicles on Post Lane / Station Road and the dangerous junction with the A53, Leek Road. Better sites adjacent to the A53 should be considered before putting more traffic on side roads. The conservation area either side of Park Lane to the north of the A53 is a far better site for development and gives easy and safe access to the A53. Bus stops are also nearby.	<ul style="list-style-type: none"> • See response to PO905 regarding highways • See response to PO4834 regarding the Conservation Area
PO1948	Mr Frank Poole				Object	I am very concerned that any additional building in the Endon area will add to a flooding problem, which is already significant. The Staffordshire Moorlands Authority is already aware of this problem as detailed in your Level 1 SFRA report dated October 2015. Section 4.6.1 states : "18 records (of floods) between 1997 and 2012 are shown in Endon along Leek Road, of which 8 incidents occurred in 2012". I am aware of past flooding difficulties on the High View Estate, which can only be increased if the planned development takes place on sections EN012, EN007, EN019 and EN101. I was present at a Parish Council meeting when the flooding on the High View were discussed with Staffordshire Moorlands representatives and to my knowledge these problems have not been resolved. The Endon Village has particular problems, being situated at the lowest point in the area, which is dissected by a brook, prone to overflowing its banks. In my view any development in Endon, without major investment to improve the main drains, will have an adverse affect on the Village. Inadequate drainage systems leads to flooding on Leek Road adjacent to Endon High School, this problem is increased because of significant water run off from the high ground at the Stoney Lane end of Brookfield Road. At times the volume of water is such that stones and other debris are swept along Brookfield, adding to poor drainage. I am concerned that additional building on section EN126 will significantly increase the current serious problems, because of additional dirty water entering the drains from new properties and surface water run off from an area, that currently acts as a soakaway. I also believe that additional water would be deposited on the Endon St Lukes School playing field, rendering it useless for a significant portion of the year. It is clear that the drainage system in Endon is inadequate and additional building will increase the current serious problems. In March 2014 Nick Boles , Minister for Local Planning, stated in Parliament - "We are issuing robust guidelines on flood risk, making it crystal clear that councils need to consider strict tests set out in national policy and where they are not met new developments should not be allowed." I trust that appropriate members and officials of the Local Authority will accept responsibility should their decisions have an adverse affect on properties in the area, and in particular my own property.	<ul style="list-style-type: none"> • See response to PO905 regarding flooding

PO450	Mrs Patricia Bailey				Object	The proposed sites EN033 and EN126 are located directly adjacent to, and directly overlying along the south-west boundary, a 'medium' flood risk area and a 'Flood Zone 3' floodplain as designated by the Environment Agency. Experience living in the area has shown that the land directly to the west of the proposed sites has flooded a number of times in the last 30 years due to overtopping of the unnamed culvert to the west of Post Lane. Where the unnamed culvert passes beneath Post Lane in an enclosed section, the road has been rendered unpassable during previous flood events due to the height of rising flood waters when the flow capacity of the enclosed culvert has been exceeded. The loss of green belt land across the EN033 and EN126 sites would result in the loss of a large area of vegetated arable land with a high potential for rain water infiltration and storage. Combined with the construction of a significant area of new hardstanding, the volume of surface runoff water entering the culvert to the west of Post Lane is anticipated to greatly increase. Additionally, owing to the reduction in the current level of rain water storage and infiltration potential, the runoff duration of surface water entering the culvert would reduce. The cumulative effect of these these actions has the potential to significantly increase the likelihood, frequency and magnitude of flood events in the Post Lane area. The associated increase in short-term construction and long-term operation traffic related to the proposed EN033 and EN126 sites would increase traffic levels in an area which is already prone to high levels of traffic congestion. The canal crossing to the south east of the proposed sites is a traffic-light controlled single lane bridge which can become congested at peak times. Traffic flow and congestion around this area would surely increase with the construction a number of new dwellings reducing the quality of life for the	<ul style="list-style-type: none"> • See response to PO905 regarding flooding

Q37 Do you have any comments on the housing allocations for the Rural Areas?

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>existing residents, canal users and visitors. Taking into consideration the close proximity of the sites to a designated floodplain and the history of flooding over the roads in the Post Lane area, any plans to develop this area further should be subject to particular scrutiny. We consider it imperative that the proposed developers are questioned as to how they will ensure that the inevitable increase to the volume of drainage water directed to surface water drains will not exacerbate the current road flooding issues. In particular the proposed developers should address how the existing drainage bottleneck where the unnamed culvert passes below Post Lane shall not be exacerbated by the proposed development and associated increase in drainage water volume, whereby existing roads and properties will be put under increased risk of flooding. We would request that a full Environmental Scoping Report and Environmental Impact Assessment (incorporating a detailed flood risk assessment) is undertaken prior to any approvals being granted to confirm the anticipated effects on flood risk and traffic levels are acceptable.</p>

PO4836					EN128	General comment	Undecided.	<ul style="list-style-type: none"> • Comment noted
PO4469	Mr and Mrs F.A Downing				EN128	Object	As we were away when the meeting took place, we feel we must voice our objections, even at this late stage. Since living in Post Lane for 39 years the bulk of the traffic and speed at what it has increased tremendously, putting extreme stress on the old canal bridge in this old part of the Endon village. Putting up extra homes in the immediate vicinity will exacerbate the situation with a daily exit of cars and people using the country lane with little or no pavements now used as a short cut by HGV's! Surely these are accidents waiting to happen! Owing to the fact that the dwellings are to build on the low lying fields that are often flooded, is not a good idea. We would like you to consider the implications of this site and choose an alternative one as we deem this to be unsuitable.	<ul style="list-style-type: none"> • The Highways Authority advises that the site is developable subject to adequate visibility although will require access improvements/ third party land; or demolition of property if via Brookfield Avenue (and has not ruled out the latter as an option). • The Environment Agency did not raise any site specific issues. Staffordshire County Council as LLFA identified potential flood risk issues, recommend flood risk assessment and early engagement with County Council
PO3871	Mr G B Chatfield				EN128	Object	More properly on this lane would only increase traffic in in Brookfield Avenue which even now gets blocked at school times. The extra traffic would endanger school children. The proposed development, to gain access to Brookfield Avenue would not give sufficient room for the road that would give good site at Brookhouse Junction.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways
PO3872	Ms Pauline Daniels				EN128	Object	More houses in a very small area will cause further congestion on Brookfield Avenue as the Avenue is not very wide and already suffers from congestion at peak times when children attending St Lukes primary and Endon High School are dropped off. It is already difficult to get out onto the A53 without road fitting into Brookfield Avenue bringing congestion. Traffic convergages from other homes in Hazlewood Road, Cedar Avenue, Stoney Lane, Woodstone Avenue and Bassnetts Wood and so at peak times it is very busy and difficult to get onto the A53 building and construction traffic will add further problems. Cars have to park on the pavement to enable the traffic to get down the road – please see photographs attached – taken on a quiet day. More houses mean extra school places and demands on Drs Surgeries.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways • New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas. • National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what

								additional capacity is needed and how this can be delivered.
PO3874	Mr and Mrs S Tinsley				EN128	Object	Access to Dollisfield no double access at the present time. Question what options for access available if properties were built how would this affect the water flow of the stream, at the moment this is unhindered, concerns over damage to the stream during building and impact on surrounding properties size of suggested 20 properties and if access suitability of the area behind a school and if access from Brookfield which falls between two schools. Concerns rose over extra properties and number of extra residents and children. School places plus health services in surrounding area. Amount of increased road traffic on Brookfield Avenue is dangerous for children for the two schools. Extra traffic from Brookfield at busy times onto main Leek Road Endon.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways and flooding • See response to PO3872 regarding infrastructure
PO1418	Mr P Deaville				EN128	Object	Brookfield Ave being situated between 2 schools already has it problems with cars (parking to pick up children) the building of more houses on this site will mean more vehicles have to access the site and will cause more congestion at the junction of Brookfield Ave and A53	<ul style="list-style-type: none"> • See response to PO4469 regarding highways
PO3875	Mr and Mrs S Tinsley				EN128	Object	The access to this site wherever it is will make a big impact on this very busy Avenue at school times access from the A53 is often blocked making it impossible for emergency vehicles and dangerous for the children, more houses and building will make a bad problem worse and endanger life.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways
PO254	Mr and Mrs A.J. Eardley				EN128	Object	Brookfield Avenue was originally designed as a minor residential road. It now caters for the traffic delivering to and from a High School, a Primary School and houses along Stoney Lane, Hazelwood Road, Woodside Avenue and Basnetts Wood. To further increase this traffic by cars/lorries/emergency vehicles etc for a further 20 houses would overload the infrastructure and compromise the safety of pupils walking to and from school and traffic emerging from the junction at Leek Road. Our primary concerns are as follows: The proximity of the proposed access road via No. 14 Brookfield Avenue to our driveway (No 12) would be less than 2.5 metres (assuming a footpath of 2m alongside the proposed access road). We do not have space to turn cars around in our driveway so would therefore need to either reverse in or out across the face of the proposed access road junction. Any increase in volume of traffic using Brookfield Avenue would make it unsafe for children to play outside. Local children currently cycle, skateboard and play ball in the road outside our house and this would be unthinkable with another junction within Brookfield Avenue. Primary and High School children have to cross Brookfield Avenue twice a day in order to get to school and the junction with Leek Road, at which they cross, would become even more hazardous. Traffic noise and pollution levels would be raised from vehicles waiting to exit the junction from Brookfield Avenue onto Leek Road. This would	<ul style="list-style-type: none"> • See response to PO4469 regarding highways and flooding • Issues such as overlooking and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application • Any new developments would need to adhere to design policies to ensure character of the area is maintained. The • Whilst the site is currently identified as Visual Open Space, the site was not identified for retention as such in the 2008 Landscape and Settlement Character Assessment. The Council is not obliged to retain this designation. Therefore the site was included as a potential housing option. • New housing schemes depending on their size will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>further increase associated health problems for people living in the vicinity and at both the Primary and High schools. Brookfield Avenue is used as a pick up and drop off point for children using the two schools. Vehicles travel to the top of the road and turn at the end before dropping their children off. There is no through route for this so every vehicle travels up and down the road and a queue already develops at the junction to the main road, compromising safety of pedestrians and vehicles attempting to enter Brookfield Avenue from the main road. Traffic queues back onto the main road even though double yellow lines have been painted at the junction (cars still park on them). The extended traffic queues and the additional junction within Brookfield Avenue would compromise access to driveways. Specifically relating to the proposed access road as a result of demolishing No 14 Brookfield Avenue our concerns are as follows: There would be an unacceptable level of noise and pollution from traffic using the proposed access road directly alongside our property, which is built right up to the boundary between No 12 and No 14 Brookfield Avenue. There would be an unacceptable level of light pollution from traffic using the proposed access road and any necessary street lighting required for public safety in such close proximity to our property. The demolition of No.14 and the construction of the proposed access road would cause disturbance to our property, which is built right up to the boundary. Construction traffic in the process of building 20 new houses would create an unacceptable level of noise, dust and inconvenience. The space available between the boundaries of No 12 and No 16 would not provide sufficient width for an access road with the required visibility splay at the junction with Brookfield Avenue. Environmental issues regarding any building on Dollisfield (EN128) would severely impact on the current properties in the surrounding area. Flooding of Leek Road (and the houses alongside) in the vicinity of site EN128 is a recurrent issue due to rainfall runoff from the adjacent hillside. Any building on Dollisfield would exacerbate this, since the field currently serves as a natural soak-away. Previous flooding has resulted in failure of street lighting in Brookfield Avenue. The current drainage system is clearly insufficient and would only be further compromised by greater surface water due to increased development and lack of soak-away. Rivers have been seen and filmed coming down Brookfield Avenue within recent years with resultant damage to property. St Luke's Primary School playing fields are currently inaccessible to children until Easter each year due to the soggy nature of the field. Any development in Dollisfield would make this much worse. The Government's own planning policy demands new developments take into account the health and well being of residents. Children need their playing fields. EN128 has been designated Visual Open Space. This is essential to maintain the semi-rural feel of Endon and the</p>	<p>as the consideration of new links in line with Local Plan policy.</p> <ul style="list-style-type: none"> • The Extended Phase 1 habitat Survey 2015 assessed the present and potential ecological value of the proposed site allocations. It found that the site had fairly low biodiversity value <i>“The site has fairly low biodiversity value overall and the site is set within a mainly urban environment with poor connectivity to the wider countryside.”</i> • If the district council considered that a development they may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts • There is a policy in the Local Plan regarding the pollution

							health of people living here. The wildlife living within and around the field provides the soundtrack appropriate to a semi-rural neighbourhood and this would be obliterated by the proposed development.	
PO105	Mr James Shaw				EN128	Object	Building 20 extra houses just off Brookfield Avenue will make an already busy junction with the A53 (Leek Road) even busier as well as building on valuable green space.	<ul style="list-style-type: none"> See response to PO4469 regarding traffic and PO254 regarding open space
PO175	Mrs Heather Djuranovic				EN128	Object	<p>I attended the consultation session at Endon Village Hall and took the opportunity to talk to representatives of the Council about the proposed site EN128. It was explained to me that it would be highly unlikely that the council would support knocking down a semi detached house to create access for the site. It was suggested that Stony Lane would need to become an adopted road. I posed the question about the fact that it is a narrow lane; how would it work? This is what I understood to true: Once an adopted road Stony lane would have to become a 'one way street' If Developers can't get the road adopted the site would not be considered If the road is adopted and developers still wish to create another entrance to the site they can apply for permission to demolish the semi (owned by the land owner) My opposition for the consideration of EN128 is this: Traffic congestion in the vicinity of the proposed site, particularly at school opening and closing times, is a major problem, causing hold-ups and backlogs for up to 2 miles, and causing difficulty for joining traffic from side-roads, i.e. Platts Avenue, Kent Drive, Spencer Avenue, Greenmeadow Grove. Increased traffic flow on Brookfield Avenue, Stoney Lane, Hazelwood Road, Basnetts Wood and the parking of vehicles in these areas for up to 1 hour around school closing times, causes a traffic hazard due to the difficulty in gaining access and egress for other road users, residents, visitors, deliveries, emergency vehicles etc. Parking restrictions introduced in the last two years are largely ignored. Once adopted Stoney Lane would become a Rat Run for School traffic, with cars travelling in a loop around the proposed site. Residents of Brookfield Avenue already find it difficult to negotiate this traffic without the addition of even more residents that a new development presents. Brookfield Avenue is flanked on both sides by un-adopted roads (Basnetts Wood & Stoney Lane) which make the Brookfield Avenue turning a very busy one; even without School time traffic. Above all, the increase in traffic would be of greater danger to pedestrians walking to and from the schools either side of Brookfield Avenue. All of the CURRENT issues described within this comment can be evidenced with videos that clearly show the impact of heavy traffic.</p>	<ul style="list-style-type: none"> See response to PO4469 regarding highways
PO1075	Ms Carol Burton				EN128	Object	I strongly oppose the proposed development of this site en128 as a preferred option ' The site is wholly inappropriate: a concentration of houses in this area would result in increased problems with traffic , overloaded service infrastructure, damage	<ul style="list-style-type: none"> See response to PO4469 regarding highways and flooding See response to PO3872 regarding infrastructure

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>to the environment, negative impact to the wellbeing of local residents. I put forward the following points to substantiate my objection. Additional housing in this site would generate more traffic using the Brookfield Avenue approach already carries a large amount of traffic. In addition to its own houses it provides access to Stoney Lane, Hazelwood Avenue and its adjoining cul-de-sacs. The volume of traffic is added to at school times when car parking still causes congestion and considerable inconvenience to local residents. Parking restrictions are in place at school times but they are regularly ignored. Not only do drivers park on single yellow lines at the junction of Brookfield Avenue and the A53 Leek Road. The latter practice is hazardous as drivers turning into the avenue may still be faced with an unexpected obstruction. Pedestrians too, many of them school children, are particularly at risk at these times. The congestion from parked cars often causes passing vehicles to be driven on the pavement while it is being used by pedestrians. This is highly dangerous and illegal manoeuvre. Additional traffic from a further concentration of housing would undoubtedly add to the existing problems and dangers of an already overcrowded avenue may undoubtedly add to the existing problems and dangers of an already overcrowded avenue. Vehicle frequently use the junctions of Brookfield Avenue/A53 and Brookfield Avenue/Stoney Lane for turning. This is not limited to light vehicles but also trucks (not involved in deliveries in the Avenue) and more recently, a number of buses have been seen using the Avenue as a turning facility. If the access from Brookfield Avenue to a new development was to be as suggested on the original Site Assessment Form it would offer a 3rd turning area and in doing so, create another potentially dangerous. Brookfield Avenue is an attractive avenue – not just a subjective view but one frequently expressed by people from outside the area, including international visitors. The suggestion of using no 14, half a semidetached house as a possible access point as shown on the original plan in 2015, would ruin the whole character and aspect of the avenue for existing residents. In any case it doubtful whether the space occupied by this property is of sufficient width to provide a fully operational roadway and pavements within legal requirements. Furthermore, it appears perverse that the proposed demolition of a existing house would contribute to solving the housing shortage. The proposed site borders a Primary School with a playing field which would be overlooked by the proposed houses. Children engage in sports activities and play near the boundary. Development of this site would be of serious concerns about safeguarding of young pupils. Several Water courses exist in the vicinity. At times of heavy rain the drains struggle/fail to cope with that so that rainwater would significantly flowing down Brookfield Avenue leads to a build-up of water on the A53. Further strain and</p>	<ul style="list-style-type: none"> • See response to PO254 regarding village character and residential amenity • The Council has considered the alternative sites suggested in the responses to the previous consultation and where appropriate has included the additional sites in the proposed site allocations in the emerging Local Plan. • Resident’s views have been sought as part of the consultation. The Council must balance this evidence against all the other evidence relating to this site and reach a decision on whether or not to include it as a development site in the Local Plan.

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>pressure on the drainage infrastructure from additional housing would significantly increase the problem. The SMDC has gone to great lengths to involve residents across the district to engage in the consultation procedures. To discover that the site EN128 has emerged as a preferred option despite our local village council's representation on our behalf as well as many known objections submitted by residents makes one wonder whether the whole 'consultation process has simply been a cosmetic exercise to placate residents and give an impression of democratic involvement. A preferred option – preferred by whom? Other more suitable sites exist. The Endon Parish Council has I understand already objected to the development of this site. It has also formulated an alternative, more acceptable and more workable plan which would have resolve many of the problems which would be caused by the original plan put forward by SMDC. I strongly propose that SMDC should listen and take note of the views that this plan should be the 1 to follow for the benefit of all the Endon Residents who are affected. By this development issue.</p>	
PO693	MRS Melanie Thomas				EN128	Object	<p>I wish to object to this site on the following grounds: Infrastructure – schools Infrastructure – traffic Flood risk Amenity – noise/light pollution, loss of wildlife Scale of development Government Policy The site is designated as Visual Open Space to protect the semi rural feel of the village and offer a break in development. Due to significant house building in Endon over the last 20 years, which has seen infill development erode the majority of natural breaks between properties, it is now more vital than ever to protect remaining open spaces within the centre of the village. Although the site was not identified for retention as Visual Open Space in the 2008 Landscape and Settlement Character Assessment, Core Strategy directs that existing open spaces should be retained. 20 years ago planning applications for this site were rejected by the local Parish Council and Staffordshire Moorlands District Council, who both fully supported the community's view that this VOS was significantly important to Endon village. When the applicant appealed the decision to refuse planning consent, the Planning Inspector upheld the District council's decision, acknowledging the value of the open site as a community asset. Nothing has changed since to justify the destruction of this designation and it is even more vital to protect the few remaining open spaces to preserve the 'village' identity. The Parish council have recently reaffirmed their support to maintain the VOS on this site by voting, as part of this consultation exercise, to reject EN128 as suitable for development. The existing gateway to the site is on Stoney Lane, an unadopted, extremely narrow lane (and Bridleway) which is highly unsuitable to accommodate increased traffic volumes. The proposed alternative access via No. 14 Brookfield Avenue would require demolition of one semi</p>	<ul style="list-style-type: none"> • See response to PO3872 regarding infrastructure • See response to PO4469 regarding highways and flooding • See response to PO254 regarding wildlife, design, residential amenity and open space • See response to PO1075 regarding alternative sites and consultation responses from previous consultations • The previous planning application refusal was under the existing planning policy at the time the consultation is on proposals to update planning policy and provide a new Local Plan • See response to PO254 regarding pollution

							<p>detached property, which would adversely impact on the adjoining property (No, 16) and spoil the aesthetic appearance of the Avenue. One half of a pair of semi-detached houses left standing would look ridiculous and not in keeping with other remaining properties. It is highly doubtful that the space created by knocking down No.14 would provide an access road sufficiently wide enough for 2 passing vehicles and a pavement, in which case No.16 would also require demolition. To demolish well maintained, mature properties in order to build new homes is perverse and would undermine the site's capacity deliver the projected number of new homes. To create a mini estate off Brookfield Avenue would exacerbate the existing traffic problems, caused by pupils being dropped off and picked up from Endon High and St Luke's Primary schools. The Avenue is already blighted by heavy parking, congestion at both ends of the school day and dangerous manoeuvres by inconsiderate drivers, despite the installation of double yellow and single yellow line parking restrictions. 27 proposed properties on this site could realistically generate an additional 40-50 vehicles (plus visitors) per day using the bottom section of Brookfield Avenue, and at its busiest point - where it joins the A53. This would create more traffic chaos and further reduce the safety of schoolchildren and residents, as school parking would extend into the new cul-de-sac and drivers would use the access road as an additional turning point. EN128 is problematic as a potential site due to its proximity to a water course. To gain access from Brookfield Avenue it would be necessary to build a road/bridge over the existing brook. In recent years during heavy rainfall, the level of the brook has been extremely high. Additionally, following construction of a new house at the top of Brookfield Avenue, there have been flooding problems down the full length of the road. Any further development would only serve to seriously increase the risk of flooding. I strongly disagree with the Site Assessment Form's statement that ' a high density here would be in keeping with surroundings' . It is difficult to comprehend how a Density of 38.03 could possibly be justified. Taking account of the natural brook, which runs between the site and rear gardens on Brookfield Avenue, any new properties would need to be built some distance from the water course – which would reduce the available space. Considering also the need for access roads to each area of the site, it would seem highly unlikely that the site could accommodate anywhere near 27 properties, even if they were small 'affordable' starter homes. This reduces the viability of using this site to help deliver the required number of houses in the village. On one boundary of the site is an open school playing field, with a large detached property/gardens forming the second. Detached/semi-detached properties on good sized plots in Brookfield Avenue form the third boundary, with the characterful Stoney Lane forming the</p>	

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>fourth boundary. This comprises mature, predominantly large properties situated on very generous plots and the road is one of the oldest in the village, being an unadopted lane and bridleway. Therefore a high density housing development would be completely out of keeping in this location and would spoil the aesthetic appearance of the area. How can a site which has been recognised for many years as a valuable Visual Open Space and an amenity for the village now be deemed suitable for a high density housing development? Any construction on this site will cause significant loss of amenity to local residents; from loss of views/outlook onto an open meadow, to resulting light pollution and noise pollution. It would adversely impact on the habitats of the natural wildlife, particularly birds which thrive here, and destroy the peace and tranquillity which has benefitted generations of local residents. Those living in properties on Brookfield Avenue and Stoney Lane would see the quietness of this location destroyed. Even with the windows closed you can hear a constant and wonderful variety of birdsong, which creates a real sense of rural life and serves to enhance the local area for everyone. The loss of this open space, which was a major consideration when most of the residents moved here, would be immense and would also result in a significant reduction in the value of nearby properties. To infill this site would also have a detrimental impact on the open aspect of St Luke's school playing field. The semi-rural feel of the children's outdoor space would disappear and the view and noise arising from development would negatively impact on the quality of school life. Since the school was built generations of children have enjoyed the benefits of this meadow which borders their playing field. To develop in this location would not only ruin the semi rural feel of the school, and change its environment by completely enclosing it, but would also be failing to plan for the longer term future of the village and its need for recreational space. The proposed number of new houses to be built in Endon (Stanley & Brown Edge) will put further pressure on local schools, which the District Council already accepts are oversubscribed. St Luke's has already extended its buildings onto the adjoining playing field and removed the 'wildlife area' to compensate. With increased demand from more pupils there is a real risk that it would need to extend further onto its recreational field, reducing the openness even more. Rather than seek to destroy this open space for housing, I strongly believe it makes more sense to protect the Visual Open Space and retain the future option of utilising it as a recreational playing field for the schools/children in the community. Access could be gained off the A53 via St Luke's school. This would provide a much better use of the site and serve the longer term needs of the village and its school children. I believe that the District Council should listen more to the views of Endon with Stanley Parish</p>	

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>Council and local residents, as they will have to live with the consequences of any development in our village. Rather than build high numbers of properties in 4 locations I believe it is preferable to build a few homes situated around the village, to limit the impact of any development. I propose the following alternative sites as more suitable for development than EN128: EN030 - I support the construction of 4 dwellings, at the bottom of this site/close to the lane, as long as they are of a traditional design and in keeping with the immediate surroundings. If this was delivered in a similar way to the dwellings built on the site of the former smithy, there would be minimal impact on the old village. EN024 - I support some development on this site as density/capacity is extremely low and dwellings would be well screened from the A53 by trees, therefore impact on landscape would be minimal. Access already exists via Greenmeadow Grove and any increased traffic volumes would be small. Very few number of vehicles access the A53 from this point, so congestion would not be an issue. EN137 - I support a small number of properties on this site, as it is well screened from most sides. Even after development there would remain a significant area of open space in this location, which would help to minimise the impact.</p>	
PO275	Mrs Carol Burton				EN128	Object	<p>Letter submitted [attached] objecting to Preferred Options site EN128: There is a huge groundswell of opinion against this proposal. The number of objections outweighs the number of councillors who voted for this 'option' The site is within a few metres of a water course. The building of many more dwellings and attendant problems of substantial road and sewerage development would be unsustainable [photos attached to letter]. The plan shows access through one semi detached house on Brookfield Avenue, breaking it in two and causing disruption to already heavy traffic in the process. There is no room for an exit road through the centre of the avenue. Another alleged route is .. the junction of Stoney Lane. There is a high volume of traffic already on the avenue at school times. Children are already at considerable risk of traffic. Dollisfield has long been designated 'visual open space' and as such is essential to the well being of local residents who have to endure heavy traffic. Dollisfield borders the school playing field. St Luke's Primary School's quiet area is adjacent to this field. The VOS contributes to pupils' well being. More housing would mean that the school would be hemmed in. Dollisfield supports a wide variety of plant and animal life (includes oak TPO). Local residents and pupils get pleasure from observing wildlife. To build on this land would be to upset the eco-balance of the area. Queries different descriptions on site assessment form as being contradictory. Please restore faith in SMDC and represent the people who elected you. Use Endon Parish Council as the model to achieve the best for your constituents. Endon Parish Council</p>	<ul style="list-style-type: none"> • See response to PO4469 regarding highways and flooding • See response to PO254 regarding village character, wildlife, open space and residential amenity • The Council has considered the alternative sites suggested in the responses to the previous consultation and where appropriate has included the additional sites in the proposed site allocations in the emerging Local Plan. • The site assessments provided a summary of the key issues and responses.

							has not shied away from finding APPROPRIATE sites and coming up with a very viable alternative plan.	
PO148	Mr Malcolm Dale				EN128	Object	<p>Reasons for response Please identify the issues relevant to your response. Infrastructure - schools Infrastructure - traffic/transport Infrastructure - other Landscape Nature conservation Flood risk Amenity (e.g. noise, privacy, loss of light) Scale of development Other Do you have any comments? Impact on traffic volume and flow/Health and Safety A traffic survey undertaken approximately 2 years ago found that 17,000 vehicles a day pass through Endon on the A53. A letter dated 6th January 1984 (in our possession) from the Dept of Environment and Transport re proposed buildings on this site at that time (1983), in answer to an appeal by the executors of Harry Taylor (dec'd) states ".....the effect of your client's proposal upon the traffic flow along Brookfield Avenue. In my judgment the balance of argument is overwhelmingly that this appeal must fail". This is even more relevant now with the increased volume of traffic. Traffic congestion in the vicinity of the proposed site, particularly at school opening and closing times, is a major problem, causing hold-ups and backlogs for up to 2 miles, and causing difficulty for joining traffic from side-roads, i.e. Platts Avenue, Kent Drive, Spencer Avenue, Greenmeadow Grove. The junction of Station Road and Clay Lake with the A53 is already a difficult junction to negotiate with limited visibility. Increased traffic flow on Brookfield Avenue, Stoney Lane, Hazelwood Road, Basnetts Wood and the parking of vehicles in these areas for up to 1 hour around school closing times, causes a traffic hazard due to the difficulty in gaining access and egress for other road users, residents, visitors, deliveries, emergency vehicles etc. Parking restrictions introduced in the last two years are largely ignored and have only resulted in stationary traffic moving from Brookfield Avenue to Cedar Crescent and Hazelwood Road. This is a hazard to the increasingly elderly population in this vicinity. The current volume of traffic as detailed above is also a danger to school children, pedestrians and all other road users. When driving in these areas avoiding action is often needed to prevent accidents/collisions. Access . Proposed access to the site is from Brookfield Avenue. This alone would not provide a wide enough access to the site. The entry radii need to be sufficient to accommodate the swept path of all vehicles and would add further to the congestion. Access to and from the site via Brookfield Avenue could not support the potential increase of up to 54 residents' vehicles and additional related traffic throughout the day and particularly at school times and peak time traffic. Stoney Lane is an unadopted road and is not wide enough to provided suitable access to the site. Impact on schools. Increased demand on already over-subscribed schools in the area due to a potential increase in the size of the school population. Flooding . Heavy rain in recent years (notably 2013) caused flash flooding</p>	<ul style="list-style-type: none"> • See response to PO4469 regarding flooding and highways • See response to PO254 regarding wildlife, residential amenity, village character and open space • See response PO 3872 regarding infrastructure • Loss of property values are not a material planning consideration • There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites have been proposed. Prioritising brown field land over greenfield in all circumstances is not part of Government policy

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>throughout the village, particularly in Stoney lane and Brookfield Avenue to a depth of at least 18 inches, and extending on to the A53 and further afield, causing damage to some properties and severely restricting access. Designated Visual Open Space. The site has been designated a Visual Open Space for at least 20+ years. Regardless of what any owner of the space may do to restrict the visual impact, e.g. planting trees/hedges, the site remains a visual open space. This site occupies a visually prominent position and contributes to the spaciousness of this area. Any building on this site would harm the openness, character and appearance of the surrounding area and would not add visual value to the area. To build on this site would urbanise the area even further and impact detrimentally on the village character. Paragraph 9 of the NPPF states that pursuing sustainable development also involves seeking positive improvements to the quality of the built and natural environment. I consider that site EN128 should retain its current 'Designated Visual Open Space' status which has been in operation for at least 30 years. The loss of this open space would be visually, aesthetically and environmentally detrimental to the surrounding built-up residential area. Property values. Low cost housing would not be in keeping with the character of the surrounding properties and could have a detrimental effect on their value, with the subsequent negative impact on residents. Preferred Development Areas/Sites Before any Greenbelt land is reclassified in Endon village all Brownfield sites should be fully exhausted. In addition any proposed site should be considered which would have minimal impact to existing residents. One site, EN130, and the site opposite to EN130 between the Black Horse and lay-by (on the left while heading towards Longsdon) which I understand was removed from later versions; should be considered first. These would provide direct access onto the A53 without having a negative effect on existing junctions, would allow infrastructure to connect easily and would reduce the risk of flooding. It would also not impact any Green Belt vistas. I consider that this area could be sufficient to accommodate all the building requirements in Endon for the specified period.</p>	
PO1477	Mr Neville Mayer				EN128	Object	<p>Residents in bassnets wood road, hazelwood road, woodstone ave. Cedars cress and stoney lane have no reasonable access to the a53 except via Brookfield ave. The ave (along with parts of Stoney lane/hazelwood road already caters for vehicle taking twice a day for children attending St Lukes & the high street such parking also involves drivers making 360degree turns in the mouth of Brookfield avenue with the A%3 likewise on the right angle bend of brookfield ave with stoney lane. All this dangerous traffic movement are a conflict with pedestrians (particularly children) arriving on foot to attend the local 2 schools in addition the 2 pedestrian crossings, wardens for the schools generate traffic hold ups In both directions on the A53 itself, thereby</p>	<ul style="list-style-type: none"> See response to PO4469 regarding highways

							interfering with the flow of the traffic entering and exiting Brookfield venue. The added mix of pedestrian's movement generated by the erection of 27 dwellings on site EN128 surely makes this a non-starter Not with standing all of the above, if the site was to be developed I consider that planning permission should be granted on the basis of a section 107 agreement whereby bassnetts wood road was 'made up' the developer for its total length to the highway auth requirements. This would trouble the much needs additional access point onto the a53 work that's long overdue!	
PO9541	Miss Christine Daniels				EN128	Object	Response form submitted [attached] objecting to Preferred Options site EN128: more houses means more cars, more congestion, inconvenience to current residents. Narrow road. Additional strain on schools, doctors surgeries etc Brookfield Ave is narrow, which joins the extremely busy A53. Already traffic from nearby housing estate roads which converge on Brookfield Ave before joining A53. Extremely congested particularly at school times. if access is to be halfway along Brookfield Ave subsequent traffic would double bottleneck and enhance hazards to pedestrians/schoolchildren/drivers. refer to attached photos that demonstrate congestion.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways • See response to PO3872 regarding infrastructure
PO9542	Mr and Mrs J. Durber				EN128	Object	Response form/letter submitted [attached] objecting to Preferred Options site EN128: totally reject site for building land. Have been involved since 1995 in fighting to keep EN128 as field of local importance and from an amenity, noise and privacy point of view. In last Structure Plan SMDC with Parish Council and residents, won over the field to be retained as Visual Open Space. The [Government] Inspector recommended that the land be retained as VOS and that the land provided an important contribution to the open and semi-rural character of the neighbourhood and should be retained on amenity grounds. He also stated that there were no grounds for allocating additional land for housing in this location. We believe this is still the case. Question what has changed to this VOS in last 20 years Owner has removed this VOS for all concerned. Has grown dense hedges around boundaries of site, and removed oak trees. VOS has gradually been eroded against everything Inspector stated. site is landlocked unless houses demolished (unlikely), or if redevelopment of Stoney Lane. Stormwater drainage to site (also 3 streams in vicinity). Occasional flooding causing major problems. extra water to stormwater drainage will make drainage system worse, to ultimate outfall. safety concerns for schoolchildren and parents (Endon High and St Lukes schools). Car parking on nearby roads and pavements, double parking etc. A53 congested particularly at school times. Recent car smashes. schools presently over-committed. transport infrastructure not sufficient, need updating/renewing. Sewers and underground electric services need renewing. flooding a major problem in Endon low lying areas, caused by over development and lack of	<ul style="list-style-type: none"> • See response to PO254 regarding residential amenity, design open space and village character • See response to PO4469 regarding flooding • See response to PO1075 regarding alternative sites and consultation responses from previous consultations • The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change.

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							work to local watercourses. question whether Endon sewage works capable of taking additional sewage/water; whether would cause flooding. conservation - greenfields, woodlands etc being eroded for housebuilding. Question if there are "brownfield areas" that could be used first. local people's views ignored, or misled. QUESTION WHY WE NEED ALL THESE HOUSES - Council need to give justified reasons (other than raising £1000/year per new homes bonus). Thousands of properties for sale or empty. Council's proposals for Endon should be scrapped. Instead Council should adopt Endon Parish Council proposals (Hewitt & Carr).	
PO3887	Mrs Angela Jones				EN128	Object	School traffic still a terrible problem in Brookfield Avenue with drivers still waiting Brookfield Avenue even with yellow lines and restricted parking hours put into place with no-one policing this. Drivers are still stopping and picking up children here, especially on the corner of the avenue leaving vehicles mainly residents vehicles trying to access their properties queuing on the main road. The problem traffic has been pushed into Hazelwood Road leaving residents here sometimes having the same problems. Putting more houses and therefore more vehicles into an already nightmare is just an accident waiting to happen here.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways
PO708 PO704 PO741 PO755 PO733 PO738	MR Kevin Thomas MR Ray Austin MR James Thomas MR Joseph Thomas Miss Beth Thomas MR David Thomas				EN128	Object	The site is designated as Visual Open Space to protect the semi rural feel of the village and offer a break in development. Due to significant house building in Endon over the last 20 years, which has seen infill development erode the majority of natural breaks between properties, it is now more vital than ever to protect remaining open spaces within the centre of the village. Although the site was not identified for retention as Visual Open Space in the 2008 Landscape and Settlement Character Assessment, Core Strategy directs that existing open spaces should be retained. 20 years ago planning applications for this site were rejected by the local Parish Council and Staffordshire Moorlands District Council, who both fully supported the community's view that this VOS was significantly important to Endon village. When the applicant appealed the decision to refuse planning consent, the Planning Inspector upheld the District council's decision, acknowledging the value of the open site as a community asset. Nothing has changed since to justify the destruction of this designation and it is even more vital to protect the few remaining open spaces to preserve the 'village' identity. The Parish council have recently reaffirmed their support to maintain the VOS on this site by voting, as part of this consultation exercise, to reject EN128 as suitable for development. The existing gateway to the site is on Stoney Lane, an unadopted, extremely narrow lane (and Bridleway) which is highly unsuitable to accommodate increased traffic volumes. The proposed alternative access via No.14 Brookfield Avenue would require demolition of one semi-detached property, which	<ul style="list-style-type: none"> • See response to PO3872 • See response to PO4469 regarding highways and flooding • See response to PO254 regarding wildlife, design, village character, open space • See response to PO693 regarding previous planning refusal • See response to PO1075 & PO275 regarding alternative sites and consultation responses from previous consultations • See response to PO254 regarding pollution

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>would adversely impact on the adjoining property (No, 16) and spoil the aesthetic appearance of the Avenue. One half of a pair of semi-detached houses left standing would look ridiculous and not in keeping with other remaining properties. It is highly doubtful that the space created by knocking down No.14 would provide an access road sufficiently wide enough for 2 passing vehicles and a pavement, in which case No.16 would also require demolition. To demolish well maintained, mature properties in order to build new homes is perverse and would undermine the site's capacity deliver the projected number of new homes. To create a mini estate off Brookfield Avenue would exacerbate the existing traffic problems, caused by pupils being dropped off and picked up from Endon High and St Luke's Primary schools. The Avenue is already blighted by heavy parking, congestion at both ends of the school day and dangerous manoeuvres by inconsiderate drivers, despite the installation of double yellow and single yellow line parking restrictions. 27 proposed properties on this site could realistically generate an additional 40-50 vehicles (plus visitors) per day using the bottom section of Brookfield Avenue, and at its busiest point - where it joins the A53. This would create more traffic chaos and further reduce the safety of schoolchildren and residents, as school parking would extend into the new cul-de-sac and drivers would use the access road as an additional turning point. EN128 is problematic as a potential site due to its proximity to a water course. To gain access from Brookfield Avenue it would be necessary to build a road/bridge over the existing brook. In recent years during heavy rainfall, the level of the brook has been extremely high. Additionally, following construction of a new house at the top of Brookfield Avenue, there have been flooding problems down the full length of the road. Any further development would only serve to seriously increase the risk of flooding. I strongly disagree with the Site Assessment Form's statement that ' a high density here would be in keeping with surroundings'. It is difficult to comprehend how a Density of 38.03 could possibly be justified. Taking account of the natural brook, which runs between the site and rear gardens on Brookfield Avenue, any new properties would need to be built some distance from the water course – which would reduce the available space. Considering also the need for access roads to each area of the site, it would seem highly unlikely that the site could accommodate anywhere near 27 properties, even if they were small 'affordable' starter homes. This reduces the viability of using this site to help deliver the required number of houses in the village. On one boundary of the site is an open school playing field, with a large detached property/gardens forming the second. Detached/semi-detached properties on good sized plots in Brookfield Avenue form the third boundary, with the characterful Stoney Lane forming the fourth boundary. This</p>	

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>comprises mature, predominantly large properties situated on very generous plots and the road is one of the oldest in the village, being an unadopted lane and bridleway. Therefore a high density housing development would be completely out of keeping in this location and would spoil the aesthetic appearance of the area. How can a site which has been recognised for many years as a valuable Visual Open Space, and an amenity for the village, now be deemed suitable for a high density housing development? Any construction on this site will cause significant loss of amenity to local residents; from loss of views/outlook onto an open meadow, to resulting light pollution and noise pollution. It would adversely impact on the habitats of the natural wildlife, particularly birds which thrive here, and destroy the peace and tranquillity which has benefitted generations of local residents. Those living in properties on Brookfield Avenue and Stoney Lane would see the quietness of this location destroyed. Even with the windows closed you can hear a constant and wonderful variety of birdsong, which creates a real sense of rural life and serves to enhance the local area for everyone. The loss of this open space, which was a major consideration when most of the residents moved here, would be immense and would also result in a significant reduction in the value of nearby properties. To infill this site would also have a detrimental impact on the open aspect of St Luke's school playing field. The semi-rural feel of the children's outdoor space would disappear and the view and noise arising from development would negatively impact on the quality of school life. Since the school was built generations of children have enjoyed the benefits of this meadow which borders their playing field. To develop in this location would not only ruin the semi rural feel of the school, and change its environment by completely enclosing it, but would also be failing to plan for the longer term future of the village and its need for recreational space. The proposed number of new houses to be built in Endon (Stanley & Brown Edge) will put further pressure on local schools, which the District Council already accepts are oversubscribed. St Luke's has already extended its buildings onto the adjoining playing field and removed the 'wildlife area' to compensate. With increased demand from more pupils there is a real risk that it would need to extend further onto its recreational field, reducing the openness even more. Rather than seek to destroy this open space for housing, I strongly believe it makes more sense to protect the Visual Open Space and retain the future option of utilising it as a recreational playing field for the schools/children in the community. Access could be gained off the A53 via St Luke's school. This would provide a much better use of the site and serve the longer term needs of the village and its school children. I believe that the District Council should listen more to the views of Endon with Stanley Parish</p>

							Council and local residents, as they will have to live with the consequences of any development in our village. Rather than build high numbers of properties in 4 locations I believe it is preferable to build a few homes situated around the village, to limit the impact of any development. I propose the following alternative sites as more suitable for development than EN128: EN030 - I support the construction of 4 dwellings, at the bottom of this site/close to the lane, as long as they are of a traditional design and in keeping with the immediate surroundings. If this was delivered in a similar way to the dwellings built on the site of the former smithy, there would be minimal impact on the old village. EN024 - I support some development on this site as density/capacity is extremely low and dwellings would be well screened from the A53 by trees, therefore impact on landscape would be minimal. Access already exists via Greenmeadow Grove and any increased traffic volumes would be small. Very few number of vehicles access the A53 from this point, so congestion would not be an issue. EN137 - I support a small number of properties on this site, as it is well screened from most sides. Even after development there would remain a significant area of open space in this location, which would help to minimise the impact.	
PO1419	Mr D Barker				EN128	Object	This development is likely to cause massive disruption to Brookfield both during the building stage and the additional 30/40 vehicles which will result from a further 20 residences using out already overbooked road on a daily basis. As you are well aware Brookfield avenue has already had several problems with the traffic for several years and due to its proximity of two of the schools this is exacerbation would catastrophic. I am sure there are several much better site in Endon which will not cause problems for the residents	<ul style="list-style-type: none"> • See response to PO4469 regarding highways
PO147	mr neil baddeley				EN128	Object	this development would add to the problems of access in Brookfield Avenue during school drop offs and pick ups. There is already severe congestion with people parking their cars, sometimes on double yellow lines at peak times	<ul style="list-style-type: none"> • See response to PO4469 regarding highways
PO750	Mr Trevor Clarke				EN128	Object	This was originally an area designated as visual open space and was changed with little consultation. There are far too many properties proposed for the size of the plot. Access is proposed by knocking down an existing property(a semi-detached), the resulting space created would be too narrow to accommodate the resulting residential and service traffic. There would be a significant increase in general traffic using Brookfield Avenue which is already very high particularly at certain times of the day eg beginning and the end of the school day.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways and flooding • See response to PO254 regarding open space and design • See response to PO1075 regarding the consultation
PO801	Mrs Dilys Clarke				EN128	Object	This was originally designated visual open space but has been changed with little or no consultation. It is the only area of land in this vicinity to offer a reprieve from building development which, due to the close proximity of two schools and a large housing estate is very much needed. The undeveloped land adds	<ul style="list-style-type: none"> • See response to PO254 regarding open space, wildlife, design and village character • See response to PO1075 regarding the consultation

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							to the aesthetic value of the area and is a haven for flora and fauna. The consultation process has always listed that access to this site is off Brookfield Avenue which is not the case and is misleading. Access is off Stoney Lane which is not an adopted road. Access can only be off Brookfield Avenue if a semi-detached property is demolished. None of the other residents of Brookfield Avenue were consulted on this suggestion which should it be approved would completely ruin the look and feel of what is a traditional avenue. The demolition of just one semi-detached house would barely give enough space for the new residents and services to access the development. The scale of the development is also of a concern. The proposal to build twenty houses in comparison to the other preferred sites is of a very high density and would therefore impact negatively on the environment and local residents. The twenty properties would be very small and out of character with the very large properties on Stoney Lane and the traditional detached and semi-detached properties on Brookfield Avenue. Brookfield Avenue is the only adopted road for local residents and the nearby estate residents and heavily used hence the additional traffic would further increase dangers in the avenue and at the junction of the avenue and the A53 Leek Road. Parking is currently an unresolved issue at school times where double yellow lines have done little to prevent parents from both schools dropping off pupils, parking on the pavements, in front of residents drives or turning around in the avenue or at the junction itself. A new estate half way up the avenue would quickly become a new dropping off point, parking and turning around area. A small brook borders the edge of the site and any development would impact on drainage which can currently be overwhelmed in heavy rain.	<ul style="list-style-type: none"> See response to PO4469 regarding highways and flooding
PO847	Mr Paul Bradbury				EN128	Object	We are concerned about increased flood risk posed by adding 20 properties to an already over-stretched water disposal system. As you will be aware the locality has combined storm and waste water disposal which is already under severe pressure during heavy rainfall. Over the last 25 years we have witnessed incidents when the drains are unable to cope resulting in flooding along the main road. It cannot make good sense to add extra load onto a system which is already struggling to cope. Additional housing must not be considered until after existing capacity issues have been proven to be successfully resolved. At the recent drop in session we enquired about Severn Trent development plans for the area, We were assured by SMDC that questions had been asked but ST had not yet responded. Assuming ST make no significant changes and given that the council is aware of the current and future flood risk, would SMDC be prepared to accept liability if our home is flooded following the introduction of new housing.	<ul style="list-style-type: none"> See response to PO4469 regarding flooding
PO3858	Mr Spencer Hodgetts				EN128	Object	We are now writing to confirm our objections to the above which were listed on our letter of the 10 th September last in the hope	<ul style="list-style-type: none"> See response to PO254

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
PO3881 PO3880	Mr Clive Cartlidge Mr & Mrs P and J Salmon						that we are not wasting our own time and opinions with regard its development as forgone conclusion. The near residents and likeminded Endon residents can now only hope that, following thorough site inspection and site inspection of the properties Stoney Lane and Brookfield Avenue and view the lane itself, it will be realised by responsible counsellors and planning Officers alike how important it is to preserve the character of this last unique area of Endon for amenity it is and not build over it because the space is there to fill.	
PO3878	Mr Clive Cartlidge				EN128	Object	We are told that a certain number of houses are required to be built in Endon and we understand that several small pockets of land spread all around the village have been identified. Small sites more suitable for start homes would be less intrusive and cause less ill feeling and traffic problems. As it is, we, who live here, can rely on Councillors and planners to treat our area as would treat their own.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways • See response to PO148 regarding infill sites
PO1398	Mr A Dean				EN128	Object	We like many of our local residents are totally opposed to this development. It is going to increase the traffic problems of cars which is already a nightmare at peak periods during the school run – leaving hours cars are parked in Brookfield Avenue a lot part of Hazelwood Rd every day, blocking a part of section of the road) Not only is it madness to increase the problem but it will further urbanise the area that people pay high rates + house prices to retain the semi-rural aspects of Endon. I think it is the duty of the Council and its officers to serve the residents well. Knowing the majority is totally opposed to it	<ul style="list-style-type: none"> • See response to PO4469 regarding highways • See response to PO254 regarding village character and design
PO3907	Mrs H Hatcher				EN128	Object	We object to the plans for Hillswood Drive for the same reasons of access problems and noise plus scale of the development (with no plans to enhance amenities of infrastructure). Also we are concerned about the type of development planned for the canal side sites – being a safe and secure, beautiful setting it would be at the risk of crime and disturbance should travellers or social housing be given approval. We have just had our property valued, should any development diminish the financial investment we have made we will take all this up with the council directly.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways • See response to PO254 regarding design and residential amenity • See response to PO3872 regarding infrastructure • See response to PO148 regarding property value
PO3886	Mr and Mrs G Ruddle				EN128	Object	We reject this site as a possible building land to be included in the SMDC local plan and that it should remain as Private Visual Open Space as the previous plan. The visual open space makes a contribution to the open and semi-rural character of the neighbourhood and should be retained. There is no suitable access for proposed type of the development. Brookfield Avenue has a problem of school traffic with 2 schools adjoining which causes chaos at school time. The open space is important for wildlife, birds, etc. Both existing schools are currently oversubscribed. Flooding is a major problem in Endon in low lying areas caused by our lack of work to water courses and streams.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways and flooding • See response to PO254 regarding open space, village character and wildlife

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
PO1959	Mr and Mrs A & M Payne				EN128	Object	With regard to the proposed development of Dollis Field has the council taken into account the following problems which will be caused by this proposed development:- 1: At this moment in time the only access to Dollis Field is via Stoney Lane which is hardly suitable for the vehicles of residents who use it at present as this is only presumably what was originally a country lane. It is assumed therefore that houses on Brookfield Avenue will have to be demolished to allow an entrance to be made to the new houses and again the width of Brookfield Avenue is unsuitable for yet more vehicles due to the school traffic twice a day. You will probably say yes but there are single and double yellow lines the length of the road – these however are completely ignored by the school traffic and sometimes it can be quite dangerous driving up and down Brookfield Avenue as not only do you have to weave in and out of the parked vehicles but also have to keep an eye on the children who walk in groups across the pavement and sometimes spill out onto the road. 2: The other danger of additional vehicles on Brookfield Avenue is at the bottom with its junction with the A53 which as you will know is an extremely busy road and on some occasions there have been near misses due to congestion with vehicles attempting to enter and leave Brookfield Avenue. 3. Therefore it is very apparent that Brookfield Avenue cannot cope with any additional vehicles entering or leaving as one day there could be a serious accident. 4. The problems are compounded as this is also a route in and out for vehicles from Hazelwood Road and the roads leading off it as most people do not use Basnetts Wood at the other end as this road is unadopted and full of enormous holes. I trust you will take these points into account when making your decision.	<ul style="list-style-type: none"> See response to PO4469 regarding highways
PO1294	Mr Joseph Johnson				EN128		Traffic congestion at the a53 with Brookfield avenue why add to the present traffic congestion when there is 2 possible alternate sites. EN012 and the 2 on Highview Road Endon	<ul style="list-style-type: none"> See response to PO4469 regarding highways See response to PO1075 regarding alternative sites
PO424	Mr & Mrs J. A. & C Hamnett	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	EN128	Support	STONEY LANE, ENDON – SITE EN128 My clients Mr & Mrs J. A. & C Hamnett of Dollisfield, Stoney Lane, Endon, Stoke-on-Trent, ST9 9BX, who are the owners of Site EN128, welcome and support the inclusion of the site in the preferred draft allocations for inclusion in the Local Plan. The site is located within the built-up area and the existing development boundary of the village and is the only site, of the three proposed, which is within the built-up area of the village and does not require removal from the Green Belt. The site is well located within the village and would be a good site for affordable as well as open market dwellings. There are three possible accesses – from both ends of Stoney Lane which is an un-adopted road and via No. 14 Brookfield Avenue onto Brookfield Avenue. The latter property (a semi-detached house), which is owned by Mr & Mrs Hamnett, could be demolished, if required, to provide a third access. The 2015 SHLAA Site Assessment form identified that the site has	<ul style="list-style-type: none"> Comments noted

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>excellent residential potential for up to 27 houses. The SHLAA Site Assessment form scored the site’s availability as a “2” and the overall classification as a “B”. This was because ownership details had not been submitted. The ownership details and the fact that the site could be immediately available for development were sent to the Council as part of the Site Options consultation in 2015. I can re-confirm that the site is in single ownership and is available for immediate development. The Sustainability Appraisal in the Council’s “Options Assessment” considers that the proposed development of the site would have a positive effect as could the site’s proximity to services and facilities. The Council commissioned Ecological Survey concluded that the site has a fairly low biodiversity value overall although there is a tree with bat roosting potential and a species rich hedgerow. At this stage the client believes that the best way to develop the site is build three distinct cells/clusters of houses each with its own separate access – one cell accessed from Brookfields Avenue; one from the western end of Stoney Lane; and the other from the eastern end of Stoney Lane. However, the final design would depend on discussions with the Council and Highways. The site was previously identified in the former Local Plan as an important visual open space. This policy no longer applies and the site is no longer designated as such. In the Landscape and Settlement Character Assessments carried out in support of the Core Strategy the recommendation is that the site is not (my underline) suitable as Visual Open Space and that the site appears to be suitable for sympathetic development. Development on the site would not have an adverse impact on the local landscape character and would not be particularly visible. There is a Tree Preservation Order on the site however I am told that one of the two trees in question has been felled (relevant permission obtained) as it was badly diseased and dangerous and, that the other is in a poor condition.. Economically the development of the site will support the existing services in the village and, if required, would help improve services and facilities. Socially, development would help ease the shortage of housing land supply in the District and village and could provide much need needed affordable housing. Environmentally, development of this site lessens the pressure on the Green Belt.</p>	
PO264	mr anthony williamson				EN128	Object	<p>I am to strongly object about the building of houses in Endon, especially the proposed development off Stoney Lane. I live in Hazelwood Road and the Brookfield Avenue is already congested in the mornings and late afternoons with parents dropping their children off at the two nearby schools. Extra houses would equate to extra cars and even more congestion.</p>	<ul style="list-style-type: none"> • See response to PO4469 regarding highways

PO4836					EN128	General comment	Undecided.	<ul style="list-style-type: none"> • Comment noted
PO4469	Mr and Mrs F.A Downing				EN128	Object	As we were away when the meeting took place, we feel we must voice our objections, even at this late stage. Since living in Post Lane for 39 years the bulk of the traffic and speed at what it has increased tremendously, putting extreme stress on the old canal bridge in this old part of the Endon village. Putting up extra homes in the immediate vicinity will exacerbate the situation with a daily exit of cars and people using the country lane with little or no pavements now used as a short cut by HGV's! Surely these are accidents waiting to happen! Owing to the fact that the dwellings are to build on the low lying fields that are often flooded, is not a good idea. We would like you to consider the implications of this site and choose an alternative one as we deem this to be unsuitable.	<ul style="list-style-type: none"> • The Highways Authority advises that the site is developable subject to adequate visibility although will require access improvements/ third party land; or demolition of property if via Brookfield Avenue (and has not ruled out the latter as an option). • The Environment Agency did not raise any site specific issues. Staffordshire County Council as LLFA identified potential flood risk issues, recommend flood risk assessment and early engagement with County Council
PO3871	Mr G B Chatfield				EN128	Object	More properly on this lane would only increase traffic in in Brookfield Avenue which even now gets blocked at school times. The extra traffic would endanger school children. The proposed development, to gain access to Brookfield Avenue would not give sufficient room for the road that would give good site at Brookhouse Junction.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways
PO3872	Ms Pauline Daniels				EN128	Object	More houses in a very small area will cause further congestion on Brookfield Avenue as the Avenue is not very wide and already suffers from congestion at peak times when children attending St Lukes primary and Endon High School are dropped off. It is already difficult to get out onto the A53 without road fitting into Brookfield Avenue bringing congestion. Traffic convergages from other homes in Hazlewood Road, Cedar Avenue, Stoney Lane, Woodstone Avenue and Bassnetts Wood and so at peak times it is very busy and difficult to get onto the A53 building and construction traffic will add further problems. Cars have to park on the pavement to enable the traffic to get down the road – please see photographs attached – taken on a quiet day. More houses mean extra school places and demands on Drs Surgeries.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways • New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas. • National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what

								additional capacity is needed and how this can be delivered.
PO3874	Mr and Mrs S Tinsley				EN128	Object	Access to Dollisfield no double access at the present time. Question what options for access available if properties were built how would this affect the water flow of the stream, at the moment this is unhindered, concerns over damage to the stream during building and impact on surrounding properties size of suggested 20 properties and if access suitability of the area behind a school and if access from Brookfield which falls between two schools. Concerns rose over extra properties and number of extra residents and children. School places plus health services in surrounding area. Amount of increased road traffic on Brookfield Avenue is dangerous for children for the two schools. Extra traffic from Brookfield at busy times onto main Leek Road Endon.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways and flooding • See response to PO3872 regarding infrastructure
PO1418	Mr P Deaville				EN128	Object	Brookfield Ave being situated between 2 schools already has it problems with cars (parking to pick up children) the building of more houses on this site will mean more vehicles have to access the site and will cause more congestion at the junction of Brookfield Ave and A53	<ul style="list-style-type: none"> • See response to PO4469 regarding highways
PO3875	Mr and Mrs S Tinsley				EN128	Object	The access to this site wherever it is will make a big impact on this very busy Avenue at school times access from the A53 is often blocked making it impossible for emergency vehicles and dangerous for the children, more houses and building will make a bad problem worse and endanger life.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways
PO254	Mr and Mrs A.J. Eardley				EN128	Object	Brookfield Avenue was originally designed as a minor residential road. It now caters for the traffic delivering to and from a High School, a Primary School and houses along Stoney Lane, Hazelwood Road, Woodside Avenue and Basnetts Wood. To further increase this traffic by cars/lorries/emergency vehicles etc for a further 20 houses would overload the infrastructure and compromise the safety of pupils walking to and from school and traffic emerging from the junction at Leek Road. Our primary concerns are as follows: The proximity of the proposed access road via No. 14 Brookfield Avenue to our driveway (No 12) would be less than 2.5 metres (assuming a footpath of 2m alongside the proposed access road). We do not have space to turn cars around in our driveway so would therefore need to either reverse in or out across the face of the proposed access road junction. Any increase in volume of traffic using Brookfield Avenue would make it unsafe for children to play outside. Local children currently cycle, skateboard and play ball in the road outside our house and this would be unthinkable with another junction within Brookfield Avenue. Primary and High School children have to cross Brookfield Avenue twice a day in order to get to school and the junction with Leek Road, at which they cross, would become even more hazardous. Traffic noise and pollution levels would be raised from vehicles waiting to exit the junction from Brookfield Avenue onto Leek Road. This would	<ul style="list-style-type: none"> • See response to PO4469 regarding highways and flooding • Issues such as overlooking and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application • Any new developments would need to adhere to design policies to ensure character of the area is maintained. The • Whilst the site is currently identified as Visual Open Space, the site was not identified for retention as such in the 2008 Landscape and Settlement Character Assessment. The Council is not obliged to retain this designation. Therefore the site was included as a potential housing option. • New housing schemes depending on their size will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>further increase associated health problems for people living in the vicinity and at both the Primary and High schools. Brookfield Avenue is used as a pick up and drop off point for children using the two schools. Vehicles travel to the top of the road and turn at the end before dropping their children off. There is no through route for this so every vehicle travels up and down the road and a queue already develops at the junction to the main road, compromising safety of pedestrians and vehicles attempting to enter Brookfield Avenue from the main road. Traffic queues back onto the main road even though double yellow lines have been painted at the junction (cars still park on them). The extended traffic queues and the additional junction within Brookfield Avenue would compromise access to driveways. Specifically relating to the proposed access road as a result of demolishing No 14 Brookfield Avenue our concerns are as follows: There would be an unacceptable level of noise and pollution from traffic using the proposed access road directly alongside our property, which is built right up to the boundary between No 12 and No 14 Brookfield Avenue. There would be an unacceptable level of light pollution from traffic using the proposed access road and any necessary street lighting required for public safety in such close proximity to our property. The demolition of No.14 and the construction of the proposed access road would cause disturbance to our property, which is built right up to the boundary. Construction traffic in the process of building 20 new houses would create an unacceptable level of noise, dust and inconvenience. The space available between the boundaries of No 12 and No 16 would not provide sufficient width for an access road with the required visibility splay at the junction with Brookfield Avenue. Environmental issues regarding any building on Dollisfield (EN128) would severely impact on the current properties in the surrounding area. Flooding of Leek Road (and the houses alongside) in the vicinity of site EN128 is a recurrent issue due to rainfall runoff from the adjacent hillside. Any building on Dollisfield would exacerbate this, since the field currently serves as a natural soak-away. Previous flooding has resulted in failure of street lighting in Brookfield Avenue. The current drainage system is clearly insufficient and would only be further compromised by greater surface water due to increased development and lack of soak-away. Rivers have been seen and filmed coming down Brookfield Avenue within recent years with resultant damage to property. St Luke's Primary School playing fields are currently inaccessible to children until Easter each year due to the soggy nature of the field. Any development in Dollisfield would make this much worse. The Government's own planning policy demands new developments take into account the health and well being of residents. Children need their playing fields. EN128 has been designated Visual Open Space. This is essential to maintain the semi-rural feel of Endon and the</p>	<p>as the consideration of new links in line with Local Plan policy.</p> <ul style="list-style-type: none"> • The Extended Phase 1 habitat Survey 2015 assessed the present and potential ecological value of the proposed site allocations. It found that the site had fairly low biodiversity value <i>"The site has fairly low biodiversity value overall and the site is set within a mainly urban environment with poor connectivity to the wider countryside."</i> • If the district council considered that a development they may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts • There is a policy in the Local Plan regarding the pollution

							health of people living here. The wildlife living within and around the field provides the soundtrack appropriate to a semi-rural neighbourhood and this would be obliterated by the proposed development.	
PO105	Mr James Shaw				EN128	Object	Building 20 extra houses just off Brookfield Avenue will make an already busy junction with the A53 (Leek Road) even busier as well as building on valuable green space.	<ul style="list-style-type: none"> • See response to PO4469 regarding traffic and PO254 regarding open space
PO175	Mrs Heather Djuranovic				EN128	Object	<p>I attended the consultation session at Endon Village Hall and took the opportunity to talk to representatives of the Council about the proposed site EN128. It was explained to me that it would be highly unlikely that the council would support knocking down a semi detached house to create access for the site. It was suggested that Stony Lane would need to become an adopted road. I posed the question about the fact that it is a narrow lane; how would it work? This is what I understood to true: Once an adopted road Stony lane would have to become a 'one way street' If Developers can't get the road adopted the site would not be considered If the road is adopted and developers still wish to create another entrance to the site they can apply for permission to demolish the semi (owned by the land owner) My opposition for the consideration of EN128 is this: Traffic congestion in the vicinity of the proposed site, particularly at school opening and closing times, is a major problem, causing hold-ups and backlogs for up to 2 miles, and causing difficulty for joining traffic from side-roads, i.e. Platts Avenue, Kent Drive, Spencer Avenue, Greenmeadow Grove. Increased traffic flow on Brookfield Avenue, Stoney Lane, Hazelwood Road, Basnetts Wood and the parking of vehicles in these areas for up to 1 hour around school closing times, causes a traffic hazard due to the difficulty in gaining access and egress for other road users, residents, visitors, deliveries, emergency vehicles etc. Parking restrictions introduced in the last two years are largely ignored. Once adopted Stoney Lane would become a Rat Run for School traffic, with cars travelling in a loop around the proposed site. Residents of Brookfield Avenue already find it difficult to negotiate this traffic without the addition of even more residents that a new development presents. Brookfield Avenue is flanked on both sides by un-adopted roads (Basnetts Wood & Stoney Lane) which make the Brookfield Avenue turning a very busy one; even without School time traffic. Above all, the increase in traffic would be of greater danger to pedestrians walking to and from the schools either side of Brookfield Avenue. All of the CURRENT issues described within this comment can be evidenced with videos that clearly show the impact of heavy traffic.</p>	<ul style="list-style-type: none"> • See response to PO4469 regarding highways
PO1075	Ms Carol Burton				EN128	Object	I strongly oppose the proposed development of this site en128 as a preferred option ' The site is wholly inappropriate: a concentration of houses in this area would result in increased problems with traffic , overloaded service infrastructure, damage	<ul style="list-style-type: none"> • See response to PO4469 regarding highways and flooding • See response to PO3872 regarding infrastructure

							<p>to the environment, negative impact to the wellbeing of local residents. I put forward the following points to substantiate my objection. Additional housing in this site would generate more traffic using the Brookfield Avenue approach already carries a large amount of traffic. In addition to its own houses it provides access to Stoney Lane, Hazelwood Avenue and its adjoining cul-de-sacs. The volume of traffic is added to at school times when car parking still causes congestion and considerable inconvenience to local residents. Parking restrictions are in place at school times but they are regularly ignored. Not only do drivers park on single yellow lines at the junction of Brookfield Avenue and the A53 Leek Road. The latter practice is hazardous as drivers turning into the avenue may still be faced with an unexpected obstruction. Pedestrians too, many of them school children, are particularly at risk at these times. The congestion from parked cars often causes passing vehicles to be driven on the pavement while it is being used by pedestrians. This is highly dangerous and illegal manoeuvre. Additional traffic from a further concentration of housing would undoubtedly add to the existing problems and dangers of an already overcrowded avenue may undoubtedly add to the existing problems and dangers of an already overcrowded avenue. Vehicle frequently use the junctions of Brookfield Avenue/A53 and Brookfield Avenue/Stoney Lane for turning. This is not limited to light vehicles but also trucks (not involved in deliveries in the Avenue) and more recently, a number of buses have been seen using the Avenue as a turning facility. If the access from Brookfield Avenue to a new development was to be as suggested on the original Site Assessment Form it would offer a 3rd turning area and in doing so, create another potentially dangerous. Brookfield Avenue is an attractive avenue – not just a subjective view but one frequently expressed by people from outside the area, including international visitors. The suggestion of using no 14, half a semidetached house as a possible access point as shown on the original plan in 2015, would ruin the whole character and aspect of the avenue for existing residents. In any case it doubtful whether the space occupied by this property is of sufficient width to provide a fully operational roadway and pavements within legal requirements. Furthermore, it appears perverse that the proposed demolition of a existing house would contribute to solving the housing shortage. The proposed site borders a Primary School with a playing field which would be overlooked by the proposed houses. Children engage in sports activities and play near the boundary. Development of this site would be of serious concerns about safeguarding of young pupils. Several Water courses exist in the vicinity. At times of heavy rain the drains struggle/fail to cope with that so that rainwater would significantly flowing down Brookfield Avenue leads to a build-up of water on the A53. Further strain and</p>	<ul style="list-style-type: none"> • See response to PO254 regarding village character and residential amenity • The Council has considered the alternative sites suggested in the responses to the previous consultation and where appropriate has included the additional sites in the proposed site allocations in the emerging Local Plan. • Resident’s views have been sought as part of the consultation. The Council must balance this evidence against all the other evidence relating to this site and reach a decision on whether or not to include it as a development site in the Local Plan.

							<p>pressure on the drainage infrastructure from additional housing would significantly increase the problem. The SMDC has gone to great lengths to involve residents across the district to engage in the consultation procedures. To discover that the site EN128 has emerged as a preferred option despite our local village council's representation on our behalf as well as many known objections submitted by residents makes one wonder whether the whole 'consultation process has simply been a cosmetic exercise to placate residents and give an impression of democratic involvement. A preferred option – preferred by whom? Other more suitable sites exist. The Endon Parish Council has I understand already objected to the development of this site. It has also formulated an alternative, more acceptable and more workable plan which would have resolve many of the problems which would be caused by the original plan put forward by SMDC. I strongly propose that SMDC should listen and take note of the views that this plan should be the 1 to follow for the benefit of all the Endon Residents who are affected. By this development issue.</p>	
PO693	MRS Melanie Thomas				EN128	Object	<p>I wish to object to this site on the following grounds: Infrastructure – schools Infrastructure – traffic Flood risk Amenity – noise/light pollution, loss of wildlife Scale of development Government Policy The site is designated as Visual Open Space to protect the semi rural feel of the village and offer a break in development. Due to significant house building in Endon over the last 20 years, which has seen infill development erode the majority of natural breaks between properties, it is now more vital than ever to protect remaining open spaces within the centre of the village. Although the site was not identified for retention as Visual Open Space in the 2008 Landscape and Settlement Character Assessment, Core Strategy directs that existing open spaces should be retained. 20 years ago planning applications for this site were rejected by the local Parish Council and Staffordshire Moorlands District Council, who both fully supported the community's view that this VOS was significantly important to Endon village. When the applicant appealed the decision to refuse planning consent, the Planning Inspector upheld the District council's decision, acknowledging the value of the open site as a community asset. Nothing has changed since to justify the destruction of this designation and it is even more vital to protect the few remaining open spaces to preserve the 'village' identity. The Parish council have recently reaffirmed their support to maintain the VOS on this site by voting, as part of this consultation exercise, to reject EN128 as suitable for development. The existing gateway to the site is on Stoney Lane, an unadopted, extremely narrow lane (and Bridleway) which is highly unsuitable to accommodate increased traffic volumes. The proposed alternative access via No. 14 Brookfield Avenue would require demolition of one semi</p>	<ul style="list-style-type: none"> • See response to PO3872 regarding infrastructure • See response to PO4469 regarding highways and flooding • See response to PO254 regarding wildlife, design, residential amenity and open space • See response to PO1075 regarding alternative sites and consultation responses from previous consultations • The previous planning application refusal was under the existing planning policy at the time the consultation is on proposals to update planning policy and provide a new Local Plan • See response to PO254 regarding pollution

							<p>detached property, which would adversely impact on the adjoining property (No, 16) and spoil the aesthetic appearance of the Avenue. One half of a pair of semi-detached houses left standing would look ridiculous and not in keeping with other remaining properties. It is highly doubtful that the space created by knocking down No.14 would provide an access road sufficiently wide enough for 2 passing vehicles and a pavement, in which case No.16 would also require demolition. To demolish well maintained, mature properties in order to build new homes is perverse and would undermine the site's capacity deliver the projected number of new homes. To create a mini estate off Brookfield Avenue would exacerbate the existing traffic problems, caused by pupils being dropped off and picked up from Endon High and St Luke's Primary schools. The Avenue is already blighted by heavy parking, congestion at both ends of the school day and dangerous manoeuvres by inconsiderate drivers, despite the installation of double yellow and single yellow line parking restrictions. 27 proposed properties on this site could realistically generate an additional 40-50 vehicles (plus visitors) per day using the bottom section of Brookfield Avenue, and at its busiest point - where it joins the A53. This would create more traffic chaos and further reduce the safety of schoolchildren and residents, as school parking would extend into the new cul-de-sac and drivers would use the access road as an additional turning point. EN128 is problematic as a potential site due to its proximity to a water course. To gain access from Brookfield Avenue it would be necessary to build a road/bridge over the existing brook. In recent years during heavy rainfall, the level of the brook has been extremely high. Additionally, following construction of a new house at the top of Brookfield Avenue, there have been flooding problems down the full length of the road. Any further development would only serve to seriously increase the risk of flooding. I strongly disagree with the Site Assessment Form's statement that ' a high density here would be in keeping with surroundings' . It is difficult to comprehend how a Density of 38.03 could possibly be justified. Taking account of the natural brook, which runs between the site and rear gardens on Brookfield Avenue, any new properties would need to be built some distance from the water course – which would reduce the available space. Considering also the need for access roads to each area of the site, it would seem highly unlikely that the site could accommodate anywhere near 27 properties, even if they were small 'affordable' starter homes. This reduces the viability of using this site to help deliver the required number of houses in the village. On one boundary of the site is an open school playing field, with a large detached property/gardens forming the second. Detached/semi-detached properties on good sized plots in Brookfield Avenue form the third boundary, with the characterful Stoney Lane forming the</p>	

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>fourth boundary. This comprises mature, predominantly large properties situated on very generous plots and the road is one of the oldest in the village, being an unadopted lane and bridleway. Therefore a high density housing development would be completely out of keeping in this location and would spoil the aesthetic appearance of the area. How can a site which has been recognised for many years as a valuable Visual Open Space and an amenity for the village now be deemed suitable for a high density housing development? Any construction on this site will cause significant loss of amenity to local residents; from loss of views/outlook onto an open meadow, to resulting light pollution and noise pollution. It would adversely impact on the habitats of the natural wildlife, particularly birds which thrive here, and destroy the peace and tranquillity which has benefitted generations of local residents. Those living in properties on Brookfield Avenue and Stoney Lane would see the quietness of this location destroyed. Even with the windows closed you can hear a constant and wonderful variety of birdsong, which creates a real sense of rural life and serves to enhance the local area for everyone. The loss of this open space, which was a major consideration when most of the residents moved here, would be immense and would also result in a significant reduction in the value of nearby properties. To infill this site would also have a detrimental impact on the open aspect of St Luke's school playing field. The semi-rural feel of the children's outdoor space would disappear and the view and noise arising from development would negatively impact on the quality of school life. Since the school was built generations of children have enjoyed the benefits of this meadow which borders their playing field. To develop in this location would not only ruin the semi rural feel of the school, and change its environment by completely enclosing it, but would also be failing to plan for the longer term future of the village and its need for recreational space. The proposed number of new houses to be built in Endon (Stanley & Brown Edge) will put further pressure on local schools, which the District Council already accepts are oversubscribed. St Luke's has already extended its buildings onto the adjoining playing field and removed the 'wildlife area' to compensate. With increased demand from more pupils there is a real risk that it would need to extend further onto its recreational field, reducing the openness even more. Rather than seek to destroy this open space for housing, I strongly believe it makes more sense to protect the Visual Open Space and retain the future option of utilising it as a recreational playing field for the schools/children in the community. Access could be gained off the A53 via St Luke's school. This would provide a much better use of the site and serve the longer term needs of the village and its school children. I believe that the District Council should listen more to the views of Endon with Stanley Parish</p>	

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>Council and local residents, as they will have to live with the consequences of any development in our village. Rather than build high numbers of properties in 4 locations I believe it is preferable to build a few homes situated around the village, to limit the impact of any development. I propose the following alternative sites as more suitable for development than EN128: EN030 - I support the construction of 4 dwellings, at the bottom of this site/close to the lane, as long as they are of a traditional design and in keeping with the immediate surroundings. If this was delivered in a similar way to the dwellings built on the site of the former smithy, there would be minimal impact on the old village. EN024 - I support some development on this site as density/capacity is extremely low and dwellings would be well screened from the A53 by trees, therefore impact on landscape would be minimal. Access already exists via Greenmeadow Grove and any increased traffic volumes would be small. Very few number of vehicles access the A53 from this point, so congestion would not be an issue. EN137 - I support a small number of properties on this site, as it is well screened from most sides. Even after development there would remain a significant area of open space in this location, which would help to minimise the impact.</p>	
PO275	Mrs Carol Burton				EN128	Object	<p>Letter submitted [attached] objecting to Preferred Options site EN128: There is a huge groundswell of opinion against this proposal. The number of objections outweighs the number of councillors who voted for this 'option' The site is within a few metres of a water course. The building of many more dwellings and attendant problems of substantial road and sewerage development would be unsustainable [photos attached to letter]. The plan shows access through one semi detached house on Brookfield Avenue, breaking it in two and causing disruption to already heavy traffic in the process. There is no room for an exit road through the centre of the avenue. Another alleged route is .. the junction of Stoney Lane. There is a high volume of traffic already on the avenue at school times. Children are already at considerable risk of traffic. Dollisfield has long been designated 'visual open space' and as such is essential to the well being of local residents who have to endure heavy traffic. Dollisfield borders the school playing field. St Luke's Primary School's quiet area is adjacent to this field. The VOS contributes to pupils' well being. More housing would mean that the school would be hemmed in. Dollisfield supports a wide variety of plant and animal life (includes oak TPO). Local residents and pupils get pleasure from observing wildlife. To build on this land would be to upset the eco-balance of the area. Queries different descriptions on site assessment form as being contradictory. Please restore faith in SMDC and represent the people who elected you. Use Endon Parish Council as the model to achieve the best for your constituents. Endon Parish Council</p>	<ul style="list-style-type: none"> • See response to PO4469 regarding highways and flooding • See response to PO254 regarding village character,wildlife, open space and residential amenity • The Council has considered the alternative sites suggested in the responses to the previous consultation and where appropriate has included the additional sites in the proposed site allocations in the emerging Local Plan. • The site assessments provided a summary of the key issues and responses.

							has not shied away from finding APPROPRIATE sites and coming up with a very viable alternative plan.	
PO148	Mr Malcolm Dale				EN128	Object	<p>Reasons for response Please identify the issues relevant to your response. Infrastructure - schools Infrastructure - traffic/transport Infrastructure - other Landscape Nature conservation Flood risk Amenity (e.g. noise, privacy, loss of light) Scale of development Other Do you have any comments? Impact on traffic volume and flow/Health and Safety A traffic survey undertaken approximately 2 years ago found that 17,000 vehicles a day pass through Endon on the A53. A letter dated 6th January 1984 (in our possession) from the Dept of Environment and Transport re proposed buildings on this site at that time (1983), in answer to an appeal by the executors of Harry Taylor (dec'd) states ".....the effect of your client's proposal upon the traffic flow along Brookfield Avenue. In my judgment the balance of argument is overwhelmingly that this appeal must fail". This is even more relevant now with the increased volume of traffic. Traffic congestion in the vicinity of the proposed site, particularly at school opening and closing times, is a major problem, causing hold-ups and backlogs for up to 2 miles, and causing difficulty for joining traffic from side-roads, i.e. Platts Avenue, Kent Drive, Spencer Avenue, Greenmeadow Grove. The junction of Station Road and Clay Lake with the A53 is already a difficult junction to negotiate with limited visibility. Increased traffic flow on Brookfield Avenue, Stoney Lane, Hazelwood Road, Basnetts Wood and the parking of vehicles in these areas for up to 1 hour around school closing times, causes a traffic hazard due to the difficulty in gaining access and egress for other road users, residents, visitors, deliveries, emergency vehicles etc. Parking restrictions introduced in the last two years are largely ignored and have only resulted in stationary traffic moving from Brookfield Avenue to Cedar Crescent and Hazelwood Road. This is a hazard to the increasingly elderly population in this vicinity. The current volume of traffic as detailed above is also a danger to school children, pedestrians and all other road users. When driving in these areas avoiding action is often needed to prevent accidents/collisions. Access . Proposed access to the site is from Brookfield Avenue. This alone would not provide a wide enough access to the site. The entry radii need to be sufficient to accommodate the swept path of all vehicles and would add further to the congestion. Access to and from the site via Brookfield Avenue could not support the potential increase of up to 54 residents' vehicles and additional related traffic throughout the day and particularly at school times and peak time traffic. Stoney Lane is an unadopted road and is not wide enough to provided suitable access to the site. Impact on schools. Increased demand on already over-subscribed schools in the area due to a potential increase in the size of the school population. Flooding . Heavy rain in recent years (notably 2013) caused flash flooding</p>	<ul style="list-style-type: none"> • See response to PO4469 regarding flooding and highways • See response to PO254 regarding wildlife, residential amenity, village character and open space • See response PO 3872 regarding infrastructure • Loss of property values are not a material planning consideration • There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites have been proposed. Prioritising brown field land over greenfield in all circumstances is not part of Government policy

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>throughout the village, particularly in Stoney lane and Brookfield Avenue to a depth of at least 18 inches, and extending on to the A53 and further afield, causing damage to some properties and severely restricting access. Designated Visual Open Space. The site has been designated a Visual Open Space for at least 20+ years. Regardless of what any owner of the space may do to restrict the visual impact, e.g. planting trees/hedges, the site remains a visual open space. This site occupies a visually prominent position and contributes to the spaciousness of this area. Any building on this site would harm the openness, character and appearance of the surrounding area and would not add visual value to the area. To build on this site would urbanise the area even further and impact detrimentally on the village character. Paragraph 9 of the NPPF states that pursuing sustainable development also involves seeking positive improvements to the quality of the built and natural environment. I consider that site EN128 should retain its current 'Designated Visual Open Space' status which has been in operation for at least 30 years. The loss of this open space would be visually, aesthetically and environmentally detrimental to the surrounding built-up residential area. Property values. Low cost housing would not be in keeping with the character of the surrounding properties and could have a detrimental effect on their value, with the subsequent negative impact on residents. Preferred Development Areas/Sites Before any Greenbelt land is reclassified in Endon village all Brownfield sites should be fully exhausted. In addition any proposed site should be considered which would have minimal impact to existing residents. One site, EN130, and the site opposite to EN130 between the Black Horse and lay-by (on the left while heading towards Longsdon) which I understand was removed from later versions; should be considered first. These would provide direct access onto the A53 without having a negative effect on existing junctions, would allow infrastructure to connect easily and would reduce the risk of flooding. It would also not impact any Green Belt vistas. I consider that this area could be sufficient to accommodate all the building requirements in Endon for the specified period.</p>	
PO1477	Mr Neville Mayer				EN128	Object	<p>Residents in bassnets wood road, hazelwood road, woodstone ave. Cedars cress and stoney lane have no reasonable access to the a53 except via Brookfield ave. The ave (along with parts of Stoney lane/hazelwood road already caters for vehicle taking twice a day for children attending St Lukes & the high street such parking also involves drivers making 360degree turns in the mouth of Brookfield avenue with the A%3 likewise on the right angle bend of brookfield ave with stoney lane. All this dangerous traffic movement are a conflict with pedestrians (particularly children) arriving on foot to attend the local 2 schools in addition the 2 pedestrian crossings, wardens for the schools generate traffic hold ups In both directions on the A53 itself, thereby</p>	<ul style="list-style-type: none"> • See response to PO4469 regarding highways

							interfering with the flow of the traffic entering and exiting Brookfield venue. The added mix of pedestrian's movement generated by the erection of 27 dwellings on site EN128 surely makes this a non-starter Not with standing all of the above, if the site was to be developed I consider that planning permission should be granted on the basis of a section 107 agreement whereby bassnetts wood road was 'made up' the developer for its total length to the highway auth requirements. This would trouble the much needs additional access point onto the a53 work that's long overdue!	
PO9541	Miss Christine Daniels				EN128	Object	Response form submitted [attached] objecting to Preferred Options site EN128: more houses means more cars, more congestion, inconvenience to current residents. Narrow road. Additional strain on schools, doctors surgeries etc Brookfield Ave is narrow, which joins the extremely busy A53. Already traffic from nearby housing estate roads which converge on Brookfield Ave before joining A53. Extremely congested particularly at school times. if access is to be halfway along Brookfield Ave subsequent traffic would double bottleneck and enhance hazards to pedestrians/schoolchildren/drivers. refer to attached photos that demonstrate congestion.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways • See response to PO3872 regarding infrastructure
PO9542	Mr and Mrs J. Durber				EN128	Object	Response form/letter submitted [attached] objecting to Preferred Options site EN128: totally reject site for building land. Have been involved since 1995 in fighting to keep EN128 as field of local importance and from an amenity, noise and privacy point of view. In last Structure Plan SMDC with Parish Council and residents, won over the field to be retained as Visual Open Space. The [Government] Inspector recommended that the land be retained as VOS and that the land provided an important contribution to the open and semi-rural character of the neighbourhood and should be retained on amenity grounds. He also stated that there were no grounds for allocating additional land for housing in this location. We believe this is still the case. Question what has changed to this VOS in last 20 years Owner has removed this VOS for all concerned. Has grown dense hedges around boundaries of site, and removed oak trees. VOS has gradually been eroded against everything Inspector stated. site is landlocked unless houses demolished (unlikely), or if redevelopment of Stoney Lane. Stormwater drainage to site (also 3 streams in vicinity). Occasional flooding causing major problems. extra water to stormwater drainage will make drainage system worse, to ultimate outfall. safety concerns for schoolchildren and parents (Endon High and St Lukes schools). Car parking on nearby roads and pavements, double parking etc. A53 congested particularly at school times. Recent car smashes. schools presently over-committed. transport infrastructure not sufficient, need updating/renewing. Sewers and underground electric services need renewing. flooding a major problem in Endon low lying areas, caused by over development and lack of	<ul style="list-style-type: none"> • See response to PO254 regarding residential amenity, design open space and village character • See response to PO4469 regarding flooding • See response to PO1075 regarding alternative sites and consultation responses from previous consultations • The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change.

							work to local watercourses. question whether Endon sewage works capable of taking additional sewage/water; whether would cause flooding. conservation - greenfields, woodlands etc being eroded for housebuilding. Question if there are "brownfield areas" that could be used first. local people's views ignored, or misled. QUESTION WHY WE NEED ALL THESE HOUSES - Council need to give justified reasons (other than raising £1000/year per new homes bonus). Thousands of properties for sale or empty. Council's proposals for Endon should be scrapped. Instead Council should adopt Endon Parish Council proposals (Hewitt & Carr).	
PO3887	Mrs Angela Jones				EN128	Object	School traffic still a terrible problem in Brookfield Avenue with drivers still waiting Brookfield Avenue even with yellow lines and restricted parking hours put into place with no-one policing this. Drivers are still stopping of and picking up children here, especially on the corner of the avenue leaving vehicle's mainly residents vehicles trying to access their properties queuing on the main road. The problem traffic has been pushed into Hazelwood Road leaving residents here sometimes having the same problems. Putting more houses and therefore more vehicles into an already nightmare is just an accident waiting to happen here.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways
PO708 PO704 PO741 PO755 PO733 PO738	MR Kevin Thomas MR Ray Austin MR James Thomas MR Joseph Thomas Miss Beth Thomas MR David Thomas				EN128	Object	The site is designated as Visual Open Space to protect the semi rural feel of the village and offer a break in development. Due to significant house building in Endon over the last 20 years, which has seen infill development erode the majority of natural breaks between properties, it is now more vital than ever to protect remaining open spaces within the centre of the village. Although the site was not identified for retention as Visual Open Space in the 2008 Landscape and Settlement Character Assessment, Core Strategy directs that existing open spaces should be retained. 20 years ago planning applications for this site were rejected by the local Parish Council and Staffordshire Moorlands District Council, who both fully supported the community's view that this VOS was significantly important to Endon village. When the applicant appealed the decision to refuse planning consent, the Planning Inspector upheld the District council's decision, acknowledging the value of the open site as a community asset. Nothing has changed since to justify the destruction of this designation and it is even more vital to protect the few remaining open spaces to preserve the 'village' identity. The Parish council have recently reaffirmed their support to maintain the VOS on this site by voting, as part of this consultation exercise, to reject EN128 as suitable for development. The existing gateway to the site is on Stoney Lane, an unadopted, extremely narrow lane (and Bridleway) which is highly unsuitable to accommodate increased traffic volumes. The proposed alternative access via No.14 Brookfield Avenue would require demolition of one semi- detached property, which	<ul style="list-style-type: none"> • See response to PO3872 • See response to PO4469 regarding highways and flooding • See response to PO254 regarding wildlife, design, village character, open space • See response to PO693 regarding previous planning refusal • See response to PO1075 & PO275 regarding alternative sites and consultation responses from previous consultations • See response to PO254 regarding pollution

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>would adversely impact on the adjoining property (No, 16) and spoil the aesthetic appearance of the Avenue. One half of a pair of semi-detached houses left standing would look ridiculous and not in keeping with other remaining properties. It is highly doubtful that the space created by knocking down No.14 would provide an access road sufficiently wide enough for 2 passing vehicles and a pavement, in which case No.16 would also require demolition. To demolish well maintained, mature properties in order to build new homes is perverse and would undermine the site's capacity deliver the projected number of new homes. To create a mini estate off Brookfield Avenue would exacerbate the existing traffic problems, caused by pupils being dropped off and picked up from Endon High and St Luke's Primary schools. The Avenue is already blighted by heavy parking, congestion at both ends of the school day and dangerous manoeuvres by inconsiderate drivers, despite the installation of double yellow and single yellow line parking restrictions. 27 proposed properties on this site could realistically generate an additional 40-50 vehicles (plus visitors) per day using the bottom section of Brookfield Avenue, and at its busiest point - where it joins the A53. This would create more traffic chaos and further reduce the safety of schoolchildren and residents, as school parking would extend into the new cul-de-sac and drivers would use the access road as an additional turning point. EN128 is problematic as a potential site due to its proximity to a water course. To gain access from Brookfield Avenue it would be necessary to build a road/bridge over the existing brook. In recent years during heavy rainfall, the level of the brook has been extremely high. Additionally, following construction of a new house at the top of Brookfield Avenue, there have been flooding problems down the full length of the road. Any further development would only serve to seriously increase the risk of flooding. I strongly disagree with the Site Assessment Form's statement that ' a high density here would be in keeping with surroundings'. It is difficult to comprehend how a Density of 38.03 could possibly be justified. Taking account of the natural brook, which runs between the site and rear gardens on Brookfield Avenue, any new properties would need to be built some distance from the water course – which would reduce the available space. Considering also the need for access roads to each area of the site, it would seem highly unlikely that the site could accommodate anywhere near 27 properties, even if they were small 'affordable' starter homes. This reduces the viability of using this site to help deliver the required number of houses in the village. On one boundary of the site is an open school playing field, with a large detached property/gardens forming the second. Detached/semi-detached properties on good sized plots in Brookfield Avenue form the third boundary, with the characterful Stoney Lane forming the fourth boundary. This</p>	

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>comprises mature, predominantly large properties situated on very generous plots and the road is one of the oldest in the village, being an unadopted lane and bridleway. Therefore a high density housing development would be completely out of keeping in this location and would spoil the aesthetic appearance of the area. How can a site which has been recognised for many years as a valuable Visual Open Space, and an amenity for the village, now be deemed suitable for a high density housing development? Any construction on this site will cause significant loss of amenity to local residents; from loss of views/outlook onto an open meadow, to resulting light pollution and noise pollution. It would adversely impact on the habitats of the natural wildlife, particularly birds which thrive here, and destroy the peace and tranquillity which has benefitted generations of local residents. Those living in properties on Brookfield Avenue and Stoney Lane would see the quietness of this location destroyed. Even with the windows closed you can hear a constant and wonderful variety of birdsong, which creates a real sense of rural life and serves to enhance the local area for everyone. The loss of this open space, which was a major consideration when most of the residents moved here, would be immense and would also result in a significant reduction in the value of nearby properties. To infill this site would also have a detrimental impact on the open aspect of St Luke's school playing field. The semi-rural feel of the children's outdoor space would disappear and the view and noise arising from development would negatively impact on the quality of school life. Since the school was built generations of children have enjoyed the benefits of this meadow which borders their playing field. To develop in this location would not only ruin the semi rural feel of the school, and change its environment by completely enclosing it, but would also be failing to plan for the longer term future of the village and its need for recreational space. The proposed number of new houses to be built in Endon (Stanley & Brown Edge) will put further pressure on local schools, which the District Council already accepts are oversubscribed. St Luke's has already extended its buildings onto the adjoining playing field and removed the 'wildlife area' to compensate. With increased demand from more pupils there is a real risk that it would need to extend further onto its recreational field, reducing the openness even more. Rather than seek to destroy this open space for housing, I strongly believe it makes more sense to protect the Visual Open Space and retain the future option of utilising it as a recreational playing field for the schools/children in the community. Access could be gained off the A53 via St Luke's school. This would provide a much better use of the site and serve the longer term needs of the village and its school children. I believe that the District Council should listen more to the views of Endon with Stanley Parish</p>

							Council and local residents, as they will have to live with the consequences of any development in our village. Rather than build high numbers of properties in 4 locations I believe it is preferable to build a few homes situated around the village, to limit the impact of any development. I propose the following alternative sites as more suitable for development than EN128: EN030 - I support the construction of 4 dwellings, at the bottom of this site/close to the lane, as long as they are of a traditional design and in keeping with the immediate surroundings. If this was delivered in a similar way to the dwellings built on the site of the former smithy, there would be minimal impact on the old village. EN024 - I support some development on this site as density/capacity is extremely low and dwellings would be well screened from the A53 by trees, therefore impact on landscape would be minimal. Access already exists via Greenmeadow Grove and any increased traffic volumes would be small. Very few number of vehicles access the A53 from this point, so congestion would not be an issue. EN137 - I support a small number of properties on this site, as it is well screened from most sides. Even after development there would remain a significant area of open space in this location, which would help to minimise the impact.	
PO1419	Mr D Barker				EN128	Object	This development is likely to cause massive disruption to Brookfield both during the building stage and the additional 30/40 vehicles which will result from a further 20 residences using out already overbooked road on a daily basis. As you are well aware Brookfield avenue has already had several problems with the traffic for several years and due to its proximity of two of the schools this is exacerbation would catastrophic. I am sure there are several much better site in Endon which will not cause problems for the residents	<ul style="list-style-type: none"> • See response to PO4469 regarding highways
PO147	mr neil baddeley				EN128	Object	this development would add to the problems of access in Brookfield Avenue during school drop offs and pick ups. There is already severe congestion with people parking their cars, sometimes on double yellow lines at peak times	<ul style="list-style-type: none"> • See response to PO4469 regarding highways
PO750	Mr Trevor Clarke				EN128	Object	This was originally an area designated as visual open space and was changed with little consultation. There are far too many properties proposed for the size of the plot. Access is proposed by knocking down an existing property(a semi-detached), the resulting space created would be too narrow to accommodate the resulting residential and service traffic. There would be a significant increase in general traffic using Brookfield Avenue which is already very high particularly at certain times of the day eg beginning and the end of the school day.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways and flooding • See response to PO254 regarding open space and design • See response to PO1075 regarding the consultation
PO801	Mrs Dilys Clarke				EN128	Object	This was originally designated visual open space but has been changed with little or no consultation. It is the only area of land in this vicinity to offer a reprieve from building development which, due to the close proximity of two schools and a large housing estate is very much needed. The undeveloped land adds	<ul style="list-style-type: none"> • See response to PO254 regarding open space, wildlife, design and village character • See response to PO1075 regarding the consultation

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							to the aesthetic value of the area and is a haven for flora and fauna. The consultation process has always listed that access to this site is off Brookfield Avenue which is not the case and is misleading. Access is off Stoney Lane which is not an adopted road. Access can only be off Brookfield Avenue if a semi-detached property is demolished. None of the other residents of Brookfield Avenue were consulted on this suggestion which should it be approved would completely ruin the look and feel of what is a traditional avenue. The demolition of just one semi-detached house would barely give enough space for the new residents and services to access the development. The scale of the development is also of a concern. The proposal to build twenty houses in comparison to the other preferred sites is of a very high density and would therefore impact negatively on the environment and local residents. The twenty properties would be very small and out of character with the very large properties on Stoney Lane and the traditional detached and semi-detached properties on Brookfield Avenue. Brookfield Avenue is the only adopted road for local residents and the nearby estate residents and heavily used hence the additional traffic would further increase dangers in the avenue and at the junction of the avenue and the A53 Leek Road. Parking is currently an unresolved issue at school times where double yellow lines have done little to prevent parents from both schools dropping off pupils, parking on the pavements, in front of residents drives or turning around in the avenue or at the junction itself. A new estate half way up the avenue would quickly become a new dropping off point, parking and turning around area. A small brook borders the edge of the site and any development would impact on drainage which can currently be overwhelmed in heavy rain.	<ul style="list-style-type: none"> See response to PO4469 regarding highways and flooding
PO847	Mr Paul Bradbury				EN128	Object	We are concerned about increased flood risk posed by adding 20 properties to an already over-stretched water disposal system. As you will be aware the locality has combined storm and waste water disposal which is already under severe pressure during heavy rainfall. Over the last 25 years we have witnessed incidents when the drains are unable to cope resulting in flooding along the main road. It cannot make good sense to add extra load onto a system which is already struggling to cope. Additional housing must not be considered until after existing capacity issues have been proven to be successfully resolved. At the recent drop in session we enquired about Severn Trent development plans for the area, We were assured by SMDC that questions had been asked but ST had not yet responded. Assuming ST make no significant changes and given that the council is aware of the current and future flood risk, would SMDC be prepared to accept liability if our home is flooded following the introduction of new housing.	<ul style="list-style-type: none"> See response to PO4469 regarding flooding
PO3858	Mr Spencer Hodgetts				EN128	Object	We are now writing to confirm our objections to the above which were listed on our letter of the 10 th September last in the hope	<ul style="list-style-type: none"> See response to PO254

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
PO3881 PO3880	Mr Clive Cartlidge Mr & Mrs P and J Salmon						that we are not wasting our own time and opinions with regard its development as forgone conclusion. The near residents and likeminded Endon residents can now only hope that, following thorough site inspection and site inspection of the properties Stoney Lane and Brookfield Avenue and view the lane itself, it will be realised by responsible counsellors and planning Officers alike how important it is to preserve the character of this last unique area of Endon for amenity it is and not build over it because the space is there to fill.	
PO3878	Mr Clive Cartlidge				EN128	Object	We are told that a certain number of houses are required to be built in Endon and we understand that several small pockets of land spread all around the village have been identified. Small sites more suitable for start homes would be less intrusive and cause less ill feeling and traffic problems. As it is, we, who live here, can rely on Councillors and planners to treat our area as would treat their own.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways • See response to PO148 regarding infill sites
PO1398	Mr A Dean				EN128	Object	We like many of our local residents are totally opposed to this development. It is going to increase the traffic problems of cars which is already a nightmare at peak periods during the school run – leaving hours cars are parked in Brookfield Avenue a lot part of Hazelwood Rd every day, blocking a part of section of the road) Not only is it madness to increase the problem but it will further urbanise the area that people pay high rates + house prices to retain the semi-rural aspects of Endon. I think it is the duty of the Council and its officers to serve the residents well. Knowing the majority is totally opposed to it	<ul style="list-style-type: none"> • See response to PO4469 regarding highways • See response to PO254 regarding village character and design
PO3907	Mrs H Hatcher				EN128	Object	We object to the plans for Hillswood Drive for the same reasons of access problems and noise plus scale of the development (with no plans to enhance amenities of infrastructure). Also we are concerned about the type of development planned for the canal side sites – being a safe and secure, beautiful setting it would be at the risk of crime and disturbance should travellers or social housing be given approval. We have just had our property valued, should any development diminish the financial investment we have made we will take all this up with the council directly.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways • See response to PO254 regarding design and residential amenity • See response to PO3872 regarding infrastructure • See response to PO148 regarding property value
PO3886	Mr and Mrs G Ruddle				EN128	Object	We reject this site as a possible building land to be included in the SMDC local plan and that it should remain as Private Visual Open Space as the previous plan. The visual open space makes a contribution to the open and semi-rural character of the neighbourhood and should be retained. There is no suitable access for proposed type of the development. Brookfield Avenue has a problem of school traffic with 2 schools adjoining which causes chaos at school time. The open space is important for wildlife, birds, etc. Both existing schools are currently oversubscribed. Flooding is a major problem in Endon in low lying areas caused by our lack of work to water courses and streams.	<ul style="list-style-type: none"> • See response to PO4469 regarding highways and flooding • See response to PO254 regarding open space, village character and wildlife

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
PO1959	Mr and Mrs A & M Payne				EN128	Object	With regard to the proposed development of Dollis Field has the council taken into account the following problems which will be caused by this proposed development:- 1: At this moment in time the only access to Dollis Field is via Stoney Lane which is hardly suitable for the vehicles of residents who use it at present as this is only presumably what was originally a country lane. It is assumed therefore that houses on Brookfield Avenue will have to be demolished to allow an entrance to be made to the new houses and again the width of Brookfield Avenue is unsuitable for yet more vehicles due to the school traffic twice a day. You will probably say yes but there are single and double yellow lines the length of the road – these however are completely ignored by the school traffic and sometimes it can be quite dangerous driving up and down Brookfield Avenue as not only do you have to weave in and out of the parked vehicles but also have to keep an eye on the children who walk in groups across the pavement and sometimes spill out onto the road. 2: The other danger of additional vehicles on Brookfield Avenue is at the bottom with its junction with the A53 which as you will know is an extremely busy road and on some occasions there have been near misses due to congestion with vehicles attempting to enter and leave Brookfield Avenue. 3. Therefore it is very apparent that Brookfield Avenue cannot cope with any additional vehicles entering or leaving as one day there could be a serious accident. 4. The problems are compounded as this is also a route in and out for vehicles from Hazelwood Road and the roads leading off it as most people do not use Basnetts Wood at the other end as this road is unadopted and full of enormous holes. I trust you will take these points into account when making your decision.	<ul style="list-style-type: none"> See response to PO4469 regarding highways
PO1294	Mr Joseph Johnson				EN128		Traffic congestion at the a53 with Brookfield avenue why add to the present traffic congestion when there is 2 possible alternate sites. PO424	Mr & Mrs J. A. & C Hamnett	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	EN128	Support	STONEY LANE, ENDON – SITE EN128 My clients who are the owners of Site EN128, welcome and support the inclusion of the site in the preferred draft allocation s for inclusion in the Local Plan. The site is located within the built-up area and the existing development boundary of the village and is the only site, of the three proposed, which is within the built-up area of the village and does not require removal from the Green Belt. The site is well located within the village and would be a good site for affordable as well as open market dwellings. There are three possible accesses – from both ends of Stoney Lane which is an un-adopted road and via No. 14 Brookfield Avenue onto Brookfield Avenue. The latter property (a semi-detached house), which is owned by my client, could be demolished, if required, to provide a third access. The 2015 SHLAA Site Assessment form identified that the site has excellent residential potential for up to 27 houses. The SHLAA Site Assessment form scored the site's	<ul style="list-style-type: none"> Comments noted

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
							<p>availability as a “2” and the overall classification as a “B”. This was because ownership details had not been submitted. The ownership details and the fact that the site could be immediately available for development were sent to the Council as part of the Site Options consultation in 2015. I can re-confirm that the site is in single ownership and is available for immediate development. The Sustainability Appraisal in the Council’s “Options Assessment” considers that the proposed development of the site would have a positive effect as could the site’s proximity to services and facilities. The Council commissioned Ecological Survey concluded that the site has a fairly low biodiversity value overall although there is a tree with bat roosting potential and a species rich hedgerow. At this stage the client believes that the best way to develop the site is build three distinct cells/clusters of houses each with its own separate access – one cell accessed from Brookfields Avenue; one from the western end of Stoney Lane; and the other from the eastern end of Stoney Lane. However, the final design would depend on discussions with the Council and Highways. The site was previously identified in the former Local Plan as an important visual open space. This policy no longer applies and the site is no longer designated as such. In the Landscape and Settlement Character Assessments carried out in support of the Core Strategy the recommendation is that the site is not (my underline) suitable as Visual Open Space and that the site appears to be suitable for sympathetic development. Development on the site would not have an adverse impact on the local landscape character and would not be particularly visible. There is a Tree Preservation Order on the site however I am told that one of the two trees in question has been felled (relevant permission obtained) as it was badly diseased and dangerous and, that the other is in a poor condition.. Economically the development of the site will support the existing services in the village and, if required, would help improve services and facilities. Socially, development would help ease the shortage of housing land supply in the District and village and could provide much need needed affordable housing. Environmentally, development of this site lessens the pressure on the Green Belt.</p>	
PO264	mr anthony williamson				EN128	Object	<p>I am to strongly object about the building of houses in Endon, especially the proposed development off Stoney Lane. I live in Hazelwood Road and the Brookfield Avenue is already congested in the mornings and late afternoons with parents dropping their children off at the two nearby schools. Extra houses would equate to extra cars and even more congestion.</p>	<ul style="list-style-type: none"> • See response to PO4469 regarding highways

PO4495	Mr Gez Willard				Object	Close examination of the village boundary shows the revised settlement boundary at Clay Lake Road. This is inconsistent with the Green Belt overlay in this area. This is clearly a drafting error or a presentational matter and the Green Belt shading ought to be adjusted in this area so as to consistent with the village infill boundary. [Refer to image at Appendix A of letter document attached to Question 1 response].	Comments noted
PO1947	Mrs Judith Bridgett				Object	The plot EN 024 is a 'soak away' for much of the surrounding land. Gardens in the adjacent Greenmeadow Grove suffer badly from flooding and should development occur on EN024 then not only would any new developments more than likely flood, but there would be increased flooding in Greenmeadow Grove and the surrounding residential dwellings. Should development occur on EN024 then this would add to the congestion on the A53 through Endon with the additional entrance onto the main road from the new development. With many side roads joining the main road so close to Endon High School (Platts Avenue, Kent Drive, Brookfield Avenue.) then the risk to pedestrians would increase. There is no other access onto the field. The public footpath through EN024 is used by the public for recreational use -dog walking, enjoyment of nature, running, cycling. The field is used for farming for part of the year. The area is designated Green Belt land according to the district plan of 28 April 2016. This is a good decision and welcomed by the local residents. The plot EN024 is not within the parish of Endon's boundaries, according to the district plan, and so building on this would not count to the development number of houses required in the parish.	<ul style="list-style-type: none"> EN024 is not a proposed site in the Preferred Options 2016 consultation
PO4845	Mrs M Bates				Object	I am concerned about the extra volume of people and car which will result in the rural community of Endon which in my opinion will be spoilt. The schools the Dr's and surgeries will not be able to cope and the access roads to be able to cope to the planned areas will be more congested than they are now. All these leading onto the A53 which is now congested. Why these houses can't be built in towns e.g. the dilapidated Doultons site Burslem. Ps I have seen Endon Parish Council's alternative sites, and these seem much better and much more sensible.	<ul style="list-style-type: none"> New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas. National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered. Site allocations are required to meet the District's proposed housing requirement. There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites need to be included. Any new development taking place will be subject to design

							<p>policies contained within the new Local Plan</p> <ul style="list-style-type: none"> The Council has considered the alternative sites suggested in the responses to the previous consultation and where appropriate has included the additional sites in the proposed site allocations in the emerging Local Plan.
<p>PO979 PO986</p>	<p>Mrs Hayley Sullivan Mr Michael Sullivan</p>				<p>Object</p>	<p>Other Comments Regarding Rural Areas Flooding and Drainage / Level 1 Strategic Flood Risk Assessment Update (SFRA) (2015) My main concern and reason for lodging a formal objection to building on site EN012 (and most likely extending over time to EN007, EN019 and EN101 therefore providing 131 properties), relates to drainage and sewerage. It is clear that no formal survey has been undertaken prior to confirming site EN012 as a preferred site – as if a comprehensive survey had been completed it is highly likely that the characteristics of the land would have raised concerns about putting this site forward as a preferred site – as follows:</p> <ul style="list-style-type: none"> The area is described as being ‘flat and rough’ when in fact, apart from a narrow strip to the top left side of the main field, the area slopes in three directions forming a ‘bowl’ with up to 1 in 3 gradients. There are two active land drains situated lower centre of the main field which protrude out of the ground. The lower drain runs into a trough supplying cattle drinking water. During rainy conditions, both drains feed excess water down to the bottom of the field and into a private culvert. The culvert is known to flood in adverse weather conditions affecting several properties adjacent to the culvert. The sub-soil in this area is clay with a high elasticity level (sourced from a private survey at 18 Houston Avenue in 1997). The property rebuild required the use of piles because of land slip. Any roads or properties build on EN012 together with any major movement of earth and clay will without doubt cause an increase of water into the culvert. To cope with this situation the culvert will have to be rebuilt. This is a private culvert which passes under 18 Houston Avenue, under Houston Avenue and then on through the estate down to the main road. Many properties will be affected by this. Many of the properties built in this area were built using red ash as infill under concrete flooring as there was little information available regarding the proper selection of materials at that time. It is widely accepted that red ash contains sulphate which reacts badly when exposed to damp and in contact with concrete. I have fairly limited knowledge of this area but would appreciate assurance that a site survey to assess the likelihood of increased flood damage includes an assessment of the impact on local properties with red ash. My property is situated on land at a lower level to the proposed sites. I have lived in this property for approximately 12 years and the property has already been severely flooded on two occasions during heavy rain storms. I have photographic evidence and insurance claims to evidence this. The flooding has been caused by the land / current culvert being unable to cope with the amount of excess water and this situation will be made significantly worse should the sites be developed. Any development of the area will result in more concreted and tarmac areas and prevent excess water from being naturally absorbed. I understand that many other neighbours have experienced similar problems and Leek Road is often also flooded, as a result, there is 	<ul style="list-style-type: none"> The Council consults the Environment Agency and SCC regarding flooding and is informed by their comments. Potential flood risk issues, will require flood risk assessment/modelling and early engagement with County Council & Environment Agency Sites EN007/EN019/EN101 are not proposed sites in the Preferred Options 2016 consultation See response to PO4845 New housing schemes depending on their size will need to incorporate areas of open space and landscaping, and also maintain existing pedestrian links as well as the consideration of new links in line with Local Plan policy. Problems arising from the construction period of any works, e.g. noise, dust, construction vehicles, hours of working (covered by Control of Pollution Acts) are not material planning considerations

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Comment
						<p>a need for a comprehensive strategic flood risk assessment to be completed to assess the risk for the whole area before being assessed as a potential site for future development. Furthermore if this site is to go ahead, there is the need for assurance from SMDC as to who will be responsible for damage to properties should flooding incidents worsen. Is this the developer or SMDC or Severn Trent Water (who appear to be named in the Council's plans regarding having a duty to complete improvements to sewers etc.)? Other current objections There are a number of other objections already lodged with SMDC as part of the previous consultation process which have not been addressed: · No consideration has been given as to how local infrastructure would support a development of this scale · Recreational and Other Open Space : Regular communications from local MPs of all parties have referred to cases of antisocial behaviour and the need for more and improved open spaces and recreational areas for children and youths in the area. Such communications have indicated that there is already limited space available. The park area adjacent to proposed site EN012 would be fully enclosed by this housing development and when the other sites proceed, will be unable to respond to the demand from a further 131 properties. As such, any proposal to build so many properties in a village area should be accompanied by a proposal to extend the current recreational and open space available to the local residents. · Access to Schools : I am Chair of Governors at Endon Hall Primary School and as such have a good level of understanding regarding availability of school places at all three local primary schools (Endon Hall Primary, St Luke's Primary and St Anne's Primary). All three primary schools have a PAN of 30 children per school year and are either full, or oversubscribed for each intake period. At Endon Hall Primary School we have been operating above PAN in nearly every year group due to the current demand for places and this has reached a position where it is no longer viable to continue to accept such high pupil numbers. As a result, the School made a strategic decision during 2014/15 to close to any new admissions and to proactively manage pupil numbers to a level closer to the PAN. This decision was made to enable the teaching staff to be able to support all children to meet their expected levels of progress and to operate in a space conducive to learning. Current classroom sizes and public spaces prevent any further increase in pupil numbers. Endon Hall is situated on land surrounded on all sides by residential properties, is unable to expand. I understand that the situation is similar for the other primary schools. An increase in housing and in particular, starter homes, would naturally result in an increase in demand for primary school places which are not available. · Access during Development Process and Post Development Process : It would appear that the only access to the proposed site is via established and fully occupied housing estates. The housing estates have relatively narrow roads, many of which are in need of repair at the present time. A phased site approach could result in building work taking place over a three to five year period. Contractors' vehicles and all traffic associated with a development of this size will have a dramatic impact on local residents and village life. Once complete and all properties occupied, the developments will result in circa 260 additional vehicles (based on two cars per property) using the small roads</p>	

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Comment
						and lanes, access to Leek Road will be congested and the likelihood of road traffic accidents will increase. The roads on the adjoining estates from Endon Hall Primary School to Hillswood Drive will not be able to absorb the increased level of usage.	
PO1950	Mr Frank Poole				Object	<p>EN007 I am very concerned that any additional building in the Endon area will add to a flooding problem, which is already significant. The Staffordshire Moorlands Authority is already aware of this problem as detailed in your Level 1 SFRA report dated October 2015. Section 4.6.1 states : "18 records (of floods) between 1997 and 2012 are shown in Endon along Leek Road, of which 8 incidents occurred in 2012". I am aware of past flooding difficulties on the High View Estate, which can only be increased if the planned development takes place on sections EN012, EN007, EN019 and EN101. I was present at a Parish Council meeting when the flooding on the High View were discussed with Staffordshire Moorlands representatives and to my knowledge these problems have not been resolved. The Endon Village has particular problems, being situated at the lowest point in the area, which is dissected by a brook, prone to overflowing its banks. In my view any development in Endon, without major investment to improve the main drains, will have an adverse affect on the Village. Inadequate drainage systems leads to flooding on Leek Road adjacent to Endon High School, this problem is increased because of significant water run off from the high ground at the Stoney Lane end of Brookfield Road. At times the volume of water is such that stones and other debris are swept along Brookfield, adding to poor drainage. I am concerned that additional building on section EN126 will significantly increase the current serious problems, because of additional dirty water entering the drains from new properties and surface water run off from an area, that currently acts as a soakaway. I also believe that additional water would be deposited on the Endon St Lukes School playing field, rendering it useless for a significant portion of the year. It is clear that the drainage system in Endon is inadequate and additional building will increase the current serious problems. In March 2014 Nick Boles , Minister for Local Planning, stated in Parliament - "We are issuing robust guidelines on flood risk, making it crystal clear that councils need to consider strict tests set out in national policy and where they are not met new developments should not be allowed." I trust that appropriate members and officials of the Local Authority will accept responsibility should their decisions have an adverse affect on properties in the area, and in particular my own property.</p>	<ul style="list-style-type: none"> • See response to PO979

Flannigan Mrs Betty Flannigan Mr Andrew Walley Mrs Valerie Walley Mrs Vivian Machin Ms Anthea Marilyn Price Mr Martin Underwood Ms Claire Underwood Mrs Hilary M Wilcox Mr Philip N Wilcox Mr E J Wetherhill Mrs F E Wetherhill Mr K Bate Mrs Julie Bate Mr Lilton Biswas Mrs Natalie Biswas Mrs Tracy Roberts Mr Philip Bruce Dr Simon Evans Ms Joanne Bruce Mr David Bruce Mr Daniel				Object	The initial site assessment of the fields EN101, EN019, EN007 and EN012 contains several inaccuracies. For example EN101 was described as a '@flat overgrown field' this is clearly not the case as the filed slopes from Endon Bank Farm which is 1 of the highest points in the village. It was stated that there are semi-rural views from the fields. In fact there are undisturbed views from this field to the Roaches and Cheshire according to the green belt review 4 fields are classed as Grade 4 (poor agricultural land). Interestingly EN092 and EN108, areas which have been taken out any proposed site development are also classed as grade 4. The description also stated no flooding issues. Endon is renowned for flooding. The recently formed Flood Forum has established that there are 18 tributaries to the main Endon brook and 54 properties within the village boundary which have been subject to flooding. We know that En012, EN007, EN019, and EN101 fields act as a soakaway. The lane running from Endon bank farm is watershed for the estate. There are3 culverts leading from EN101, EN019, and EN007. At present these culverts drain in to pipes 9" diameter which then runs under the estate. The field's drains are connected to storm water house drains. This is a relic from the 1960'd planning regulations and would not be allowed today. We know that 1 of these culverts in EN007 resulted in 1 property in Houston Avenue having to be completely rebuilt. This can only get worse if building is allowed on the fields and climate change results in more rainfall. These inaccuracies undermine the SMDC decision-making process regarding these sites. A major concern for all the families living on the estate is safety for residents, especially children who attend Endon primary school. The roads on the estate are only 4.83mtrs wide, barley enough for 2 cars to pass, especially on the corner. The estate is the major catchment area for the schools and other Endon Schools many children walk to school each morning. However the situation outside school in Hillside Avenue is extremely dangerous. Parents have to travel further afield park on the footpaths with an obvious danger to the children and residents. The junction with the A53, hillside Avenue and church lane is extremely hazardous. Residents recently undertook a traffic survey as this school to behind the plough car park walk down church lane. At peak times this was 1 car every 10 seconds. Parents encouraged by the school to park behind the Plough Car Park and walk down Church Lane to the junction with Hillside. Incredibly there is no footpaths in church lane in fact it is not wide enough to accommodate a footpath and the school traffic warden has had to help children and parents t cross both church lane and the A53. With a potential 131 more houses built on the designated sites, this would have serious consequences and is serious accident waiting to happen. Indeed there has already been a traffic warden injured within the last 12mths. As residents of high view estate we are very disappointed that the 4 identified remain either green belt or amber. We note that all the site sin bagnall, Stockton brook, or Stanley have now been removed from the consultation process with no rationale given. Other areas within the village have been identified by the parish council. These are local people with local knowledge and I urge the relevant authorities to seriously consider their options during the consultation process. Previously, many residents proposed EN108, EN092 and EN030. These 3 sites are all classed as grade 4 and houses were built,	<ul style="list-style-type: none"> • Comments noted • The site options assessments provided a summary of the key issues and responses. • A number of sites were dropped from the emerging Local Plan after the Site Options consultation. Not all sites were required to meet the Districts housing requirements. These included sites EN101/EN019/EN007 which were assessed as amber • See response to PO4845 • Sites EN108/EN092 were assessed as C on the SHLAA and were not considered appropriate for development • EN030 is within the Green Belt. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. The review found that the site was not suitable for release from the Green Belt.

	Roberts Mr Andrew McCann Mr Charles Bennett Mr Paul Matthews Mrs L Ball Mr Scott Taylor Mr Terence Bate Mrs Eileen Bate Mr Michael Moore Mrs carolyn moore Mrs Wendy Taylor Mr Neil Taylor Mr J Pointon Mr N Roberts Mr C Ball Mr Howard Kelsall Mr Peter Walker Ms Yvonne St. Cyr Mrs Kim Bennett Mrs Sandra Broad Ms Katherine McCann Mr Thomas Bennett Mr Karl Mansfield Mr John Overend Mr Howard Broad Mr Stanley Hurst Mr Paul McCann					within what is classed as the old village. Since the high view estate was completed. Houses built here would have their own access to the A53, no flooding issues could be classed as infill as they would connect the old village and the newer part of the village. Any development to these would impact on existing residents. Furthermore it could not be classed as urban sprawl as it does not connect Endon with Longsdon but builds within the village boundary as infill. Current dwellings at the top of high view estate are below the skyline. Any further developments will result in skyline being breached and houses would be clearly visible from several directions. It appears that the SMDC will allow urban development will allow urban development to take place in green field sites towards brown edge but do not appear keen to allow any kind of development connecting the two main parts of the village. Finally the trees bordering EN101, EN019 and EN007, are the foraging area for protected species of bats such as pipistrelle and brown long eared bats. The large number of ash, oak and sycamore trees with the bat potential, in the 10 trees, connectivity to other more biodiverse habitats and dry ditch that could be support the reptile populations warrant the site being attributed regional ecological importance (Staffordshire ecological records SER/15/427 – aug 2015) Pls note that all my previous objections are still applicable

PO1944 PO9444	Mrs Jane Ailsa Rennie MR ANDREW RENNIE				Object	<p>EN101 Infrastructure Schools- I am not sure how many children outside the Endon Schools catchment areas attend each of the three schools so I am not in a position to comment on their capacity or ability to take additional children from within the area. Infrastructure Traffic & Transport & Carbon Footprint. I have recently taken part in a traffic survey (the results of which are held by Parish Councillor Joe Porter) at the junction of the A53 Leek Road , Station Road Endon , the B5051 to and from Brown Edge and Hillswood Drive Endon. From the results of the survey it is clear that the junction which feeds three roads onto the A53 is not capable of handling any additional vehicles from the proposed development EN101. Traffic using the junction from Station Road entrance often goes straight across the junction towards Brown Edge which leads to a build up of vehicles because vehicles have to cross both lanes of traffic. If the proposed development site EN101 were to be approved as a suitable site it would make the A53 junction unfit for purpose and pose a health and safety hazard from the dangers of traffic, noise and air pollution to not just the local dwellings but also to the children who walk this way to school each day. Any proposed development on site EN101 would increase the vehicle volumes by at least twice the number of proposed dwellings on the site because the occupiers would have to travel at least ten miles per day either south to Stoke-On-Trent or north to Leek and the Moorlands to find suitable employment which was capable of servicing debt finance on the property. Quality employment paying reasonable salaries to service debt finance to purchase homes within the Stoke-On-Trent / Leek area is very difficult to find so occupiers of the properties will have to travel larger distances thereby increasing the carbon footprint of the Endon area and damaging the environment. Surely the longer term view should be to locate more homes closer to where the employment is rather than spreading it far and wide? Infrastructure Other: At present Endon has one village shop/ store with another being built on the A53 which was formerly a car garage, one petrol filling station with a snack shop, one chemist shop, one doctors surgery, one hairdressers, two public houses with eating facilities and one hearing aid centre and a crèche for young children two churches and one village hall. I understand the Doctors Surgery is registered to its full capacity and unable to take additional patients to its register. The parking facilities at the village stores are limited and the size of the shop and range of products is limited. No doubt the Coop store being built will address the parking and limitations of the village store but this will add even more strain to the A53 junction I eluded to in the first paragraph because more local people will drive to the Coop store rather than walking to the village store added to which the entrance and exit to this store will be extremely dangerous during school closing times. The location of Site EN101 is unsuitable because it is situated at the top of hill which means occupiers will inevitably resort to vehicular transport because of the steepness of the hill. It is unfriendly to disabled users and people with breathing difficulties. Because of the proposed proximity of the site it is often exposed to the worst of the inclement weather on the prevailing westerly winds being at the top of the hill. During the winter months when snow is lying for days and weeks people are unable to get to the top of High View Road by vehicle because the</p>	<ul style="list-style-type: none"> EN101 is not a proposed site in the Preferred Options 2016 consultation

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Comment
						<p>road and pavements are not on the core gritting routes this can lead to emergency services not being able to access residents. Any development on the proposed site EN 101 would add to these current problems. Also I don't think the drain infrastructure in the Endon area will be able to cope with any increased demand from a proposed development.</p> <p>Landscape- The Landscape on the proposed development site EN 101 is a sloping field on a gradient running down from Endon Bank Farm towards Hillswood Drive Playing Field. These fields including the trees which surround them act as sponge reducing the run off of surface water to the lower levels of Endon. The views from site EN101 are rural looking over towards Rushton and Macclesfield in one direction and over to Lask Edge in the south westerly direction. These views are beautiful and uninterrupted, but equally are the views if you walk up Holehouse Lane and look back towards Endon where at present you can barely see the top of any properties in High View Road from any point as you walk up Holehouse Lane. If a proposed development were to go ahead on site EN 101 it would break the vista not just from Endon looking outwards but also from the immediate countryside looking inwards towards Endon. Surely we should be looking to protect this site for future diary farming which will help secure local employment and reduce our carbon footprint?</p> <p>Nature Conservation - The proposed site EN101 would have serious implications for the local wildlife. The site has trees which are of the old British hardwood types and are used by the following birds: Perrigin Falcons, Kestrels, Buzzard, Sparrow Hawk, Owls, Woodpeckers and Lapwing on the soaked parts of the field during early spring. The birds of prey are attracted by the food supply of field mice, voles, weasels and other mammals which use the site, foxes, and badgers are also attracted by the pheasants which frequent the field.</p> <p>Flood Risk- Endon has a long history of flooding and its associated problems. As I mentioned in the landscape paragraph Site EN101 acts as a natural sponge relieving the run off of surface water from the upper levels. EN 101 is at the top of four proposed development sites which could be enhanced with further trees to reduce surface water run off. If any proposed development took place on site EN101 then further consequences would be felt at lower levels because not matter what additional drains are put in the water has to run down bank somewhere causing more problems for people living lower down the estate and adjacent to the main road. You only have to look at the amount of times the A53 is being dug up from the Station Road junction to past Endon School to realise there are problems underground and these are a consequence of ground movement caused by flooding and drainage issues. If you look in the history books of the local area Endon is always featured in the flood articles. If you walk from site EN101 to EN 012 in the middle of winter after snow has just melted you will witness how much of a sponge site EN 101 actually is. The existing drainage system would not be capable of handling any resulting additional capacity.</p> <p>Amenity: Site EN101 would involve loss of light and privacy to the homes on High View Road but there are wider implications for the whole estate because the noise from increased traffic and people accessing the dwellings through the estate by vehicle would increase, and cause damage to air quality and noise levels on a permanent basis. In addition to the adult</p>	

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Comment
						<p>amenities there are also children amenities with the site EN101 as it exists because although it is private farmland local children use these fields as part of their habitat even though they maybe trespassing for such activities as sledging hide & seek and getting conkers in the autumn. Losing such an amenity would be damaging to the young children who can wander in a safe environment where there are no roads! Scale of Development: Any kind of development if it is absolutely necessary should be of a limited nature with low height buildings restricted to one level with a height restriction thus minimising any impact on the existing dwellings in High View Road and having minimum impact on the vista. Any large scale development would cripple the existing highway network system, deteriorate health and safety with noise and pollution and could not be handled by the local infrastructure as it stands. Government Policy: There is a government policy to build more housing to meet expected future demand. The demand for housing in the Endon area will be determined by sustainable employment opportunities within the local area. The local area in this context is Leek and Stoke for a reasonable long term employment period. These two area's are still going through a slow re-building process before quality sustainable employment opportunities become available. You have to get the employment in place first and then address the housing needs. The former is only in it's infancy as evidenced by the number of long term unsold existing properties on the estate adjacent to site EN101. The addition of further properties at the site EN101 would only exasperate the problem further which is what happened on a similar site on the edge of Shaftsbury Wiltshire where the cheap affordable housing was sold and taken up by people who did not care about the local people and area (with increased crime) and the dwellings which were built similar to the estate were left empty and could not be sold because there were no local quality employment opportunities. If affordable Social Housing needs to be built it should built closer to the existing employment opportunities Stoke & Leek thus minimising carbon footprint and focussing population growth closer to the amenities and infrastructure. The Government policy is to encroach onto greenbelt land only when absolutely necessary however just because a particular greenbelt site is beyond a village signpost does not mean that site is not less suitable than a site within a village boundary. A more suitable site which adjoins the A 53 just beyond the village sign post has been removed from the proposed site allocations because it did not come within the village boundary and was adjacent to a flood risk area. This site should be reviewed again because it is on flat land and is directly accessible from the A53 making vehicular access safer with less impact on the traffic junction I surveyed. Immediately opposite this site is a horticultural nursery with Polly tunnels so it is difficult to see how developing the other site would extend the village boundary when the nursery already exists. Other: Because of the slow employment rebuilding process in the Stoke & Leek area's many younger generations have left the Endon area to seek quality employment elsewhere. Endon is therefore becoming an elderly community which has specific housing needs. Building housing on Site EN 101 at the top of an existing housing estate is not the solution. If affordable social housing needs to built it needs to be built away from site EN101 possibly opposite the poly tunnels</p>	

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Comment
						<p>site beyond the Endon village sign, which means the Endon village sign could be moved a few hundred yards to bring the site into the village along with the Nursery! Existing brownfields sites should be considered such as the disused railway running beyond Endon Station through to Stockton Brook this will never be brought back into use because the track and infrastructure between Endon and Stoke-on-Trent is in such a state beyond repair that it will never be used again. This land should be acquired from Network Rail and Moorland Railways and used for residential development in the Endon area.</p>	
PO1945	Mrs Jane Ailsa Rennie				Object	<p>In addition to these original objections I would also like to add that any further development in and around the existing Endon estate will cause Air Pollution issues because of the static traffic waiting to leave the estate. I think the empty field at Hallswater which links the old and new village would be a more suitable site to develop with access directly onto the A53.</p>	<ul style="list-style-type: none"> • If the district council considered that a development they may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts. • There is a policy in the Local Plan regarding the pollution

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Comment
PO9444	MR ANDREW RENNIE				Object	Further email comments: I understand one of the sites listed above EN012 has been designated a green status (draft potential allocations) and the other sites EN007, EN019 & EN101 have been designated amber (draft reserve sites) for the time being. It would be helpful to know why the only Draft Reserve Sites (Amber) are the only sites in the Endon area which have been designated this status when no other sites have been given this designation. I wish to continue to object regarding allocating any of these sites for development for the reasons outlined in the attached original consultation documents but additionally from the Infrastructure Highways point of view. Both the road way and road footpath's on and surrounding the existing estate are not capable of taking any further increase in traffic. Today 6th June 2016 was the first day back from half term holidays and I gave my wife a lift to work to Hanley and it took me five minutes to get a clear slot to leave Hillside Avenue and join the main A53 Leek Road at 7:20 AM this morning. If any major scale development took place at the top of the existing estate the whole junction would become grid locked and that is in fair weather conditions. The highways infrastructure is not fit for purpose which combined with the flooding issues on the existing estate should be the main reasons why the above sites should be removed from the local plan altogether. In addition I understand a site adjacent to Hallwater which would link both the old village to	<ul style="list-style-type: none"> A number of sites were dropped from the emerging Local Plan after the Site Options consultation. Not all sites were required to meet the Districts housing requirements. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. The Council has considered the alternative sites suggested in the responses to the previous consultation and where appropriate has included the additional sites in the proposed site allocations in the emerging Local Plan.
PO9466	Mr John Proffitt				General comment	Email submitted 03/06/16: I am making contact to offer my support for the proposed Alternative option for the future housing projects in Endon Village. The alternative option looks far more balanced [than EN012]... this part of Endon is much less congested with fewer houses less traffic and much better access to the main A53.	Comments noted
PO9499	Mr Paul Stevens				Object	Email submitted objecting to sites EN007/EN019/EN101: First of all I would like to state that I'm in favour of the alternative plans that are about to be submitted by the Endon with Stanley Parish council. I find the Staffordshire Moorlands plans ludicrous for the following reasons; The four fields on our estate (EN012, EN007, EN019 & EN101) are all Green Belt area's - question doesn't this mean anything anymore and if not why was it granted in the first place. I appreciate that only site EN012 has been given approval so far but question what's to stop the remaining 3 "Amber" fields from being granted the same permission. We currently have severe issues with drains and garden flooding (Extenuated over the last couple of years). So, with the possibility of an extra 131 houses question what's going to be done to solve this ever increasing problem. Thirdly, what's going to be done about the substantial increase in traffic. The junction at the bottom of Hillswood Drive is an accident waiting to happen. Cars are left at the bottom of Hillswood Drive within metres of the junction resulting in reduced width of the road. Turning left is treacherous (With the pedestrian crossing approximately 10 metres to the left of the junction) and turning right at busy times is near on impossible!!!! Finally, I'm lead to believe that a third of these will be Social or Affordable housing. Surely this will lead to a drastic reduction in the values of property within the area and significant negative changes to the wonderful village life we currently enjoy and pay for the privilege of. A very concerned and disappointed resident.	See responses above

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Comment
PO252	Mr and Mrs A.J. Eardley				Object	With specific regard to site EN128..... if these areas are classed as rural areas ... or even semi rural areas.... it is imperative to maintain the visual open spaces within the village or Endon will just become a suburb of Stoke. The health of the children at St Luke's Primary School is already compromised by the proximity of the main road, with the ever increasing volume of traffic, and to be hemmed in on both sides would only exacerbate things. A more even distribution of more sites, each with fewer dwellings, would have less of an impact on the current infrastructure and nature of Endon.	See response to question 37 regarding this site
PO994	Mr Oliver Sullivan				Object	<p>Other Comments Regarding Rural Areas Flooding and Drainage / Level 1 Strategic Flood Risk Assessment Update (SFRA) (2015) My main concern and reason for lodging a formal objection to building on site EN012 (and most likely extending over time to EN007, EN019 and EN101 therefore providing 131 properties), relates to drainage and sewerage. It is clear that no formal survey has been undertaken prior to confirming site EN012 as a preferred site – as if a comprehensive survey had been completed it is highly likely that the characteristics of the land would have raised concerns about putting this site forward as a preferred site – as follows:</p> <ul style="list-style-type: none"> - The area is described as being 'flat and rough' when in fact, apart from a narrow strip to the top left side of the main field, the area slopes in three directions forming a 'bowl' with up to 1 in 3 gradients. - There are two active land drains situated lower centre of the main field which protrude out of the ground. The lower drain runs into a trough supplying cattle drinking water. During rainy conditions, both drains feed excess water down to the bottom of the field and into a private culvert. - The culvert is known to flood in adverse weather conditions affecting several properties adjacent to the culvert. - The sub-soil in this area is clay with a high elasticity level (sourced from a private survey at 18 Houston Avenue in 1997). The property rebuild required the use of piles because of land slip. - Any roads or properties build on EN012 together with any major movement of earth and clay will without doubt cause an increase of water into the culvert. To cope with this situation the culvert will have to be rebuilt. This is a private culvert which passes under 18 Houston Avenue, under Houston Avenue and then on through the estate down to the main road. Many properties will be affected by this. - Many of the properties built in this area were built using red ash as infill under concrete flooring as there was little information available regarding the proper selection of materials at that time. It is widely accepted that red ash contains sulphate which reacts badly when exposed to damp and in contact with concrete. I have fairly limited knowledge of this area but would appreciate assurance that a site survey to assess the likelihood of increased flood damage includes an assessment of the impact on local properties with red ash. My property is situated on land at a lower level to the proposed sites. I have lived in this property for approximately 12 years and the property has already been severely flooded on two occasions during heavy rain storms. I have photographic evidence and insurance claims to evidence this. The flooding has been caused by the land / current culvert being unable to cope with the amount of excess water and this situation will be made significantly worse should the sites be developed. Any development of the area will result in more concreted and tarmac areas and prevent 	See response to PO979

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Comment
						<p>excess water from being naturally absorbed. I understand that many other neighbours have experienced similar problems and Leek Road is often also flooded, as a result, there is a need for a comprehensive strategic flood risk assessment to be completed to assess the risk for the whole area before being assessed as a potential site for future development. Furthermore if this site is to go ahead, there is the need for assurance from SMDC as to who will be responsible for damage to properties should flooding incidents worsen. Is this the developer or SMDC or Severn Trent Water (who appear to be named in the Council's plans regarding having a duty to complete improvements to sewers etc.)? Other current objections There are a number of other objections already lodged with SMDC as part of the previous consultation process which have not been addressed: - No consideration has been given as to how local infrastructure would support a development of this scale - Recreational and Other Open Space : Regular communications from local MPs of all parties have referred to cases of antisocial behaviour and the need for more and improved open spaces and recreational areas for children and youths in the area. Such communications have indicated that there is already limited space available. The park area adjacent to proposed site EN012 would be fully enclosed by this housing development and when the other sites proceed, will be unable to respond to the demand from a further 131 properties. As such, any proposal to build so many properties in a village area should be accompanied by a proposal to extend the current recreational and open space available to the local residents. - Access to Schools: All three primary schools have a PAN of 30 children per school year and are either full, or oversubscribed for each intake period. An increase in housing and in particular, starter homes, would naturally result in an increase in demand for primary school places which are not available. Access during Development Process and Post Development Process : It would appear that the only access to the proposed site is via established and fully occupied housing estates. The housing estates have relatively narrow roads, many of which are in need of repair at the present time. A phased site approach could result in building work taking place over a three to five year period. Contractors' vehicles and all traffic associated with a development of this size will have a dramatic impact on local residents and village life. Once complete and all properties occupied, the developments will result in circa 260 additional vehicles (based on two cars per property) using the small roads and lanes, access to Leek Road will be congested and the likelihood of road traffic accidents will increase. The roads on the adjoining estates from Endon Hall Primary School to Hillswood Drive will not be able to absorb the increased level of usage.</p>	
PO9002 PO9003	Mrs Hayley Mansfield				Object	<p>Ref EN007 The initial site assessments of the fields EN101, EN019, EN007 and EN012 contained several inaccuracies. For example EN101 was described as a 'flat overgrown field.' This is clearly not the case as the field slopes from Endon Bank Farm which is one of the highest points in the village .It was stated that there are semi rural views from the fields. In fact there are undisturbed views from the fields to the Roaches, and Cheshire. According to the Green Belt Review all four fields are classed as Grade 4 (poor agricultural land). Interestingly EN092 and EN 108,</p>	See comments above

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Comment
						<p>areas which have been taken out of any proposed development are also classed as Grade 4. The description also stated no flooding issues. Endon is renowned for flooding. The recently formed Flood Forum has established that there are 18 tributaries to the main Endon Brook and 54 properties within the village boundary which have been subject to flooding. We know that EN012, EN007, EN019 and EN101 fields act as ‘soak away.’ The lane running from Endon Bank Farm is the watershed for the estate. There are three culverts leading from EN101, EN019 and EN007 .At present these culverts drain into pipes 9” diameter which then run under the estate. The field drains are connected to the storm water house drains. This is a relic from the 1960’s planning regulations and would not be allowed today .We know that one of these culverts in EN007 resulted in one property in Houston Avenue having to be completely rebuilt. This can only get worse if building is allowed on these fields and climate change results in more rainfall. These inaccuracies undermine the SMDC decision- making process concerning these sites. A major concern for families living on the estate is the safety for residents, especially children who attend Endon Hall Primary School. The roads on the estate are only 4.83 meters wide, barely enough for two cars to pass, especially on corners. The estate is the major catchment area for the school and other Endon schools and many children walk to school each morning. However the situation outside the school in Hillside Avenue is extremely dangerous. Parents travelling from further afield park on the footpaths with the obvious danger to children and residents. The junction with the A53, Hillside Avenue and Church Lane is extremely hazardous. Residents recently undertook a traffic survey at this junction .At peak times there is one car every 10 seconds. Parents are encouraged by the school to park behind the Plough car park and walk down Church Lane to the junction with Hillside. Incredibly there is no footpath in Church Lane (in fact it is not wide enough to accommodate a footpath) and the school traffic warden has to help children and parents to cross both Church Lane and the main A53. With a potential 131 more houses built in the designated sites, this would have serious consequences and is a serious accident waiting to happen. Indeed there have already been a number of minor accidents at the junction including the traffic warden being injured within the last 12 months. As residents of High View Estate, we are very disappointed that the four identified sites remain either ‘green’ or ‘amber’. We note that all sites in Bagnall , Stockton Brook or Stanley have now been removed from the consultation process with no rationale given. Other areas within the village have been identified by the Parish Council. These are local people with local knowledge and I urge the relevant authorities to seriously consider their options during the consultation period. Previously, many residents proposed EN108, EN092 and EN030. These three sites are all classed as Grade 4 and houses were built, within what is classed as the old village, since the High View Estate was completed. Houses built here would have their own access to the A53, no flooding issues and could be classed as infill as they would connect the old village to the newer part of the village. Any development in these areas would have minimal impact on existing residents. Furthermore it could not be classed as urban sprawl as it does not connect Endon with Longsdon but builds within the village boundary</p>	

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Comment
						<p>as infill. Current dwellings at the top of High View Estate are below the skyline. Any further development will result in the skyline being breached and houses would be clearly visible from several directions. SMDC have previously specifically refused planning permission under similar circumstances. It appears that SMDC will allow urban development to take place in Green field sites towards Brown Edge but do not appear keen to allow any kind of development connecting the two main parts of the village. Finally the trees bordering EN101, EN019 and EN007 are the foraging area for protected species of bats such as pipistrelle, and brown long eared bats. 'The large number of ash, oak and sycamore trees with bat potential is deemed to have the highest value, their loss as roosts could adversely affect regional bat populations.' The major aspects of interest are the significant bat roosting potential in the 10 trees, connectivity to other more biodiverse habitats and the dry ditch that could support reptile populations which warrants the site being attributed regional ecological importance. (Staffordshire Ecological Records SER/15/427-Aug 2015) Please bear in mind the current problems with access to Hillswood Drive during icy conditions, due to width, road surface and the fact it is not prioritised in terms of gritting. We have been unable to get to work on a number of occasions. Cars have veered off the road onto pavements when children have been walking home from school. The width of the road is already an issue. We feel that it is beneficial to the health and wellbeing of the village's children that the playing field should adjoin green belt land rather than be surrounded by houses, concrete, tarmac and cars. At the moment, this is a peaceful place for dog walkers, children and parents, walkers enjoying nature and those using the newly installed "Green Gymn". Please note that all my previous objections are still applicable. Thank you for your response.</p>	

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
PO31	Miss Gabrielle Bailey				Object	<p>This plan is fundamentally flawed - a massive concentration of land being used for employment, housing and a gypsy area are being proposed without any proposal on how the roads can support the extra people. It's gridlocked in this area frequently already. You can wait for 20 mins at the crossroads to Blythe Bridge. People park all the way down the main road in Blythe Bridge which means queues down the road as it's single file. Add this to waiting for the railway crossing at Blythe Bridge and what should be a short journey turns into one where you need to pack sandwiches! With new sites for housing and a massive area now allocated for building to support employment how on earth are residents supposed to get to work or indeed hope to cross Cheadle Road in Forsbrook village? It's dangerous and time consuming as it is. I haven't seen anything on the table as solutions to the infrastructure problems which need to be in place before or alongside any addition to the population. Additionally why on earth are we using green belt land re's brownfield sites available? Do we liaise with other councils to come up with a holistic strategy?</p>	<ul style="list-style-type: none"> National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. Site allocations are required to meet the District's proposed housing requirement. There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites need to be included. Any new development taking place will be subject to design policies contained within the new Local Plan The council has a Duty to Co-operate with adjacent Local Planning Authorities and Staffordshire County Council, meeting regularly to discuss future development /growth across the area.
PO9449	Ms Julie Lyons				Object	<p>BB045 - Housing Site Option I have objected to the plans for land release on Dilhorne Road, Forsbrook, BB045 along with a number of my neighbours. This parcel of land was classed as green belt and then mysteriously re classified as greenfield, as I was informed by one of your team at the Cheadle meeting in 2015. I attended the latest Parish meeting and was informed that the Parish Council had identified unsuitable/suitable land for release on a RAG status, but the plan that had been released from SMDC was different from the one submitted by Parish. The land on Dilhorne Road had now resumed it's original classification as greenbelt and had</p>	<ul style="list-style-type: none"> A number of sites were dropped from the emerging Local Plan after the Site Options consultation. Not all sites were required to meet the Districts housing requirements. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. BB045 is within the Green Belt. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan.

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						been marked as a Red. I attended another meeting on the 6th June and asked the question who had marked the parcel of land as a Red, I was informed that the body that releases greenbelt land had placed the flag. I was also informed that this land had now been removed from the consultation. If this is correct have the other 2 parcels of land on Dilhorne Road with site plans also been removed from any future at risk register. My question surely if this government body? had looked the plans before the initial release then this would have saved a lot of council and residents time, money and much more importantly spared the local community from a great amount of stress and anxiety.	<p>The Green Belt Review Study commissioned by the Council provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. The review found that the site was not suitable for release from the Green Belt.</p> <ul style="list-style-type: none"> The Preferred Options 2016 consultation proposed two housing sites in Blythe Bridge BB054 & BB041.
PO8259	Mr Roger Melville				Support	Email dated 09/06/16 and supporting report from agent Rob Duncan dated 10/06/16 submitted [both attached], comparing site BB044 against Preferred Options sites BB014 +BB054, concluding that BB044 is more suitable, and should become a preferred option for Blythe Bridge and Forsbrook.	<ul style="list-style-type: none"> A number of sites were dropped from the emerging Local Plan after the Site Options consultation. Not all sites were required to meet the Districts housing requirements. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website.
PO408	Mr Roger Melville				Support	BB044 Chapel Street. The Green Belt study report confirms that its overall impact on the purposes of the Green Belt will be limited, and scores higher in the report than either of the two preferred options. The report states site BB044 I quote: "Despite there being no significant northern boundary, the site is visually reasonably well enclosed (being set back from the road and having a strong wooded boundary). The northern boundary is weaker but still a reasonably substantial hedgerow/property boundary. Development would be a reasonable rounding-off of the village envelope in this location" In addition since the report planning permission for	<ul style="list-style-type: none"> See response to PO8259

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						<p>development on the former kennel site on the northern boundary has been granted (SMD/2015/0338) this means that the site will be almost wholly enclosed by residential development on three sides, and Chapel Street on the other, giving effective defensible boundaries on all sides of the site. This cannot be said about either of the two preferred sites Development Capacity Study Housing Site Suitability Ranking Table. BB044 is ranked no 52 across the Moorlands. With Category Rating 2xGreen 2xAmber No Red. Highest ranked site in Forsbrook and Blythe Bridge. Even higher than sites that has already been developed. i.e. Smithfield site. The two preferred sites AD011 (BB041) is ranked no 132 and BB054 is not even ranked Highways: BB044 Chapel Street a No Through Road its wider in most parts than both the Preferred Options Roads (Draycott Old Road & Caverswall Old Road) and only serves six dwellings to the north of the site so has very minimal traffic movement at any time of the day. In contrast both the Preferred Options Roads (Draycott Old Road & Caverswall Old Road) are extremely busy and dangerous certainly at peak times Commute and School Runs. Flooding: BB044 has attracted lots of adverse comments with regard to Flooding most of which are completely unfounded. The bottom right hand corner appears to be in the Flood Zone. However an independent flood report was commissioned on this site which was included in Representation to the Site Allocations Consultation last Year. This detailed report covers all aspects of Flooding and impact would not be significant and at worse could be overcome by addition of conditions on any development. Furthermore it would not be the intention to develop the bottom wooded area of the site but included an attractive green space to be enjoyed by the Residents of the Development. Surely this is a</p>	

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						better site than either of the two preferred options.	
PO1429	Mrs. J Fowell				Object	TR015 The land is green belt adjacent to the village cemetery. Not suitable for residential so why should it be used for this purpose. The area is close to properties that will suffer a loss of value should this site be prepared. The land is not adjacent to the A50.	<ul style="list-style-type: none"> This site is not proposed for development
PO8386	Mr David Nixon				Object	Emails and supporting attachments submitted which argue that three fields in Mr Nixon's ownership - namely ADD010(BB079) plus land across Caverswall Old Rd [termed "MG" in the correspondence but equivalent to BB042+BB043 in the SHLAA] should be considered as housing allocations in the Local Plan; and that these are more suitable than alternatives such as BB040, BB041 and BB054 in green belt/flood risk/sustainability etc terms.	<ul style="list-style-type: none"> A number of sites were dropped from the emerging Local Plan after the Site Options consultation. Not all sites were required to meet the Districts housing requirements. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. BB042 & BB043 were assessed as C in the SHLAA and were not considered suitable for development
PO9474	Mrs S Edwards				Object	Options Site BB044 - Blythe Bridge As a previous member of the district council and being involved with planning and the Local Development Frame Work (now I understand under a different name) same problems. You/We/Parish/Public have all to make a decision as to which are the best sites. Nobody wants it behind them, or in their street, or patch. Nobody wants to see the greenbelt changed, yet most of the people who object, live in areas that were all in the greenbelt not so many years ago. If not them, then their family or friends, We have a big problem, A BIG ONE. We need housing not only for first time buyers, or retiring people, families, that are expanding and wishing to move on and full-fill their needs. The government of the day. In fact all involved realise this has to happen. Numbers are given and deadlines have to be met. We unfortunately cannot please everyone. We need to make a decision, and	<ul style="list-style-type: none"> See response to PO8259

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						<p>that's not easy far from it. Greenbelt unfortunately has to be removed, so we can allow these things to happen. Difficult for everyone, I know. But the job has to be done. I feel we have already been at this choosing stage far to long. We must move on NOW. We cannot keep changing our minds, or introducing sites that now are being termed as preferred sites. We need to have an on going strategy and make a positive, considered choice. I don't think we are doing that right now. The numbers given, obviously does mean more than one site some large some small. Most have some problems. I don't know any sites that have none. I am not talking of the objections made by the general objectors bur the real problems, we need to choose those with the least, and also least costly, or dangerous. Ok so where do we go from here? Enough Instructions' The preferred sites in this area (Forsbrook & Blythe Bridge) are now being given priority. In some cases not as good as those as these we have looked at previously. Take only the genuine objections not personnel ones. Consider which have the most expensive difficulties and dismiss them if not viable. Highways have made comments on sites for example BB044 that is not likely to create more traffic than was created with its previous use by Boarding Kennels. The Highways do not have as many problems road wise when it's a No Through Road the number of dwellings beyond this site are a bungalow, two houses, and three properties over the unmade road over a long distance. The access to site BB044 is wide enough to support the services and a footpath to the highway. You are bound to say, well she would say that when she is involved in its ownership. The two preferred sites are both located on busy 'Rat Runs' that are too dangerous to take more through traffic. Difficulties at junctions with main thoroughfares, such as the Draycott Old</p>	

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						<p>Road and the junction with Cheadle Road on a very bad bend. Also if turning right out of this site the width of the carriageway is extremely narrow and very dangerous. This would surely be prohibitive to improve because of the cost. This site has no defensible boundaries. I therefore suggest that SMDC supports Site BB044 Chapel Street as being one of the approved sites for Forsbrook & Blythe Bridge.</p>	
PO9679	Brenda Matthews				Object	<p>(Summarised) Support for proposed Travellers site at Blythe Bridge however concerned about security of adjacent land which houses stables (and horses) due to the location of the site and adjacent footpath. Ask to consider moving the green belt boundary so it would allow us to put in a planning application for a 3 bedroom house within the curtilage of our stable block to allow us to be close to our horses. (Maps attached - showing location).</p>	Support noted

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer response
PO2561	Mrs Chadwick	Ipstones Parish Council			Object	SUMMARY ONLY - FULL COMMENTS ATTACHED Several letters have been received from the parish council regarding the site allocations for Ipstones and Foxt. Consider very strongly that the proposed sites for Ipstones and Foxt are not suitable for development and a 'flexible infill' policy would be suitable for both villages. Proposed site in Foxt is the only Industrial Site within the village and currently used for two existing businesses – important to keep. Allocation of houses should be flexible 'infill' to keep the character of the hamlet. Lists suggested infill sites for Foxt.	<ul style="list-style-type: none"> Site FO008 was not included as a preferred options site. Re-development of existing employment sites would need to be considered against national guidance and policies in the adopted local Plan. It is not intended to make specific allocations for housing in the smaller villages including Foxt. Suggested Infill Sites - there are likely to be suitable infill plots which could contribute towards the small windfall allowance for the rural area, subject to material planning considerations.
PO9649	Mr M Brindley				Object	Land off Mount Pleasant, Foxt I would like to put forward the small plot of land between Mount Pleasant and Greenbank Farm for consideration of outline planning for two small bungalows. This site has access to the main road and all services are nearby. It is a small plot of land that is not viable for agricultural use. It would have no adverse effect on the local environment and it would be ideal development for retirement properties.	<ul style="list-style-type: none"> This site is too small to be allocated and lies to the north of Foxt, outside the main part of the village.
PO1631 PO1618	Mrs Lisa Buckley Mr David Buckley				Support	I watch with interest the changing proposal for the housing development in Foxt. It was recently published that the suitable brown field on what on what is current land to the rear of and including Barks Garage was identified as being suitable for future housing development. I feel strongly that this proposed site is ideal for the following reasons. Because of its location it would have little or no impact on the overall visual nature and image of the village. There would be no access issues. A current brownfield site which may be unsustainable by the nature of its business and changing economic climate may become readily available. It would ideally fulfill part of the overall development plan for the district in what is a sensitive plan to become a area of outstanding natural beauty. Any other proposal of for the extension of our further inclusion of housing development would be wholly unacceptable as they would have a severe damaging effect and impact on the nature of the village its road infrastructure the environment and the people living within it . To contemplate the use of existing 'green spaces ' within the village for houses would destroy the very nature and feel of Foxt.	<ul style="list-style-type: none"> See response to PO2561 regarding FO008. Support for new housing in the village is noted. The smaller villages such as Foxt have a more limited role as service centres, but they are vital to the rural areas particularly in terms of providing for local housing and rural employment needs.
PO1630	Mr K Morris				Support	We used to own and run a guest house at Shay lane foxt for 13years successfully and loved the village so when we decided to retire just over 3 years ago we thought it would be nice to stay in the village, but unfortunately there was nothing available to purchase and it seems such a shame that this beautiful little village is in so much need for some revitalisation. We saw the closure of the pub the post office and	<ul style="list-style-type: none"> Comments noted. See response to PO1631.

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer response
						the village shop while we were there and landlords at the public house change quite often due to the lack of trade in such a small community. IT is very rare that once the children in the village are old enough to purchase a property for themselves they have to look further afield leaving there loved ones behind as there is nothing available for them to purchase. We do hope this village gets the revitalisation to needs to move with the next generation	
PO1612	Mrs Shirley Sugars				Support	Proposed site for building houses at the garage and land at the rear of W Barks and son. Foxt as I'm aware this land been up for development for a number of years. I regard this site as the best place in the village for Houses. It will enhance the village for the better to use this land than good meadow land. I have lived in the village for 45 years and fully support this site.	See response to PO1631 regarding site option FO008.
PO1611	Mr Vernon Whilock				Support	This proposed site has been recommended for development for many years. I have lived in the village for 45 years and I think this site is the most suitable for development and will be an advantage and the in keeping to the village. I most certainly give my full support for this site is and I hope you will look on it favourably.	See response to PO1631 regarding site option FO008.
PO1627	Mary Stenstrom-Blackburn				Support	We are aware that the district council has identified the land adjacent to our property (Oak Cottage Foxt) for possible future housing development and this land has been recognised as an Amber Area. We have no objection in principle to a small development as this would be regenerating a Brown Field site to the use of much needed housing. We would hope that this development would include the change of industrial buildings to residential housing as this would considerably improve the environment and landscaping adjacent to our property. We would strongly object to any further development either to the rear of our property or to the side, which is the land between our property and Brook Cottage as this land is agricultural. We believe the proposed development should be a small development with no more than 6-8 properties (we would be particularly supportive if the development did include 7 bungalows) we believe some of the elderly residents of Foxt identified this in particular need for the village, and because there are very few bungalows, several elderly residents have had to move out of Foxt into bungalows of the neighbouring villages. This letter is voluntary. We would appreciate that we keep informed of all the developments proposals regarding this issue. If you need to contact us, please do not hesitate to get in touch with us.	See response to PO1631 regarding site option FO008.
PO1626	Ms J A Walker				Support	It has recently come to our notice that there is a proposal to develop a brownfield site in the village of Foxt, on the land which is directly behind the garage belonging to Barry Barks and family, for the purpose of building new houses. We would welcome, approve and fully Support the development of this land for a suitable number of houses. (And	See response to PO1631 regarding site option FO008.

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support / Object / General Comment	Consultee Comments	Officer response
						appropriate type of housing) We have lived in Foxt for 30 yrs our house was the last house to be built in the village. We feel the development of this land will improve and enhance the village and the people that live in the surrounding area. Also access to land would not be an issue. The proposal for the development other parcels of land is welcome but the future over development of other parcels of land in Foxt should not be encouraged.	
PO1606	Mr Roger Walter Davies				Support	FO008 I am writing to you as a resident of Foxt for nearly 65 yrs, development in our village is greatly needed as it over 30yrs since any houses have been constructed. I would like to register my support of the suggested development of the area on which central garage and barks garage are situated, and the land to the rear off these buildings. This site would be the best area to situate new houses, rather than building them on green fields, and being in central part of the village, it would enhance the area rather than infill up and down. I am supporting this application on this site, as I know Mr Brindley and Mr Barks would like to relocate to a more suitable area. Mr Barks for logistical reasons Mr Brindley to a town centre with more passing trade. I hope my views will be considered in this matter.	See response to PO1631 regarding site option FO008
PO1615	Mr D Hammond				Support	As a resident of Foxt for the past 27 years, I am writing in full support of the proposed development of the land at the rear of the R Barks Garage premises, (including the existing Haulage yard) and incorporating the premises of MB Autos. Much press coverage both locally, has addressed the need to provide more housing, and the consequence necessity of villages being accepting of some development in this respect. The above proposal seems very limited intrusion to the overall aesthetics of Foxt village. Strong support of the villagers, to which I wish to add my 'our voice'.	See response to PO1631 regarding site option FO008
PO1608	Mr D Williams				Support	Having seen the proposals for Foxt I am concerned that the provision of housing by infill will not entirely the demand for starter homes and bungalows for older people. Several people in Fox have expressed the wish to remain here in their old age into suitable accommodation. Provided this is specified in any proposal for Foxt I am in favour of them, particularly if they are sensitive unobtrusive unlike modern constructions already in Foxt.	See response to PO1631 regarding site option FO008
PO9650	Mr M Brindley				Object	Further to the meeting at Ipstones last week, I propose to register an interest for change of use for my vehicle repair business due to a lack of trade and in need to move to a more populated area with more passing trade. Foxt is a very quiet village off the beaten track, and even with numerous advertising it has had very little effect so therefore I feel it is time to move the business to a more vibrant area. I feel this site would be an ideal site to be developed for residential use.	See response to PO1631 regarding site option FO008

PO1628	Mrs B Brindley				Support	I have resided in the village of foxt for 50years and have seen most of the children having to leave the village due to no affordable housing with the older generation in a similar situation. Having nowhere to downsize (i.e: retirement bungalows so they can vacate family homes for the younger generations). The village needs to generate more population in order to survive as we already lost the school, post office and shop and the local public house/restaurant is finding it trade hard.	Comments noted.
PO1607	Mrs M Cooke				Support	I write to support the idea of development of the current haulage ford of R Barks, together with the existing garage and that of its neighbour M.S Autos. This proposed development to provide additional much needed housing for Foxt, is very much ?? by many villagers, including myself , and I therefore commend it to you.	See response to PO1631 regarding site option FO008
PO1629	Mrs C Clowes				Support	I am writing in support of MB Autos and Barks Transport in their application to have housing on this site they both own. Foxt is in great need of pensioner’s bungalows, and affordable housing and as this would be brownfield site so not using green belt land I wish to support them	See response to PO1631 regarding site option FO008
PO569	Mr Peter Cowie				General comment	The villages of the Staffordshire Moorlands are unique in terms of landscape. Everything should be done towards their conservation and the retention of their special character. SMDC should make powerful representations to central govt on these grounds such that housing numbers are amended.	<ul style="list-style-type: none"> • Adopted Core Strategy SS6b – Smaller Villages Area Strategy strictly controls new development, both in terms of scale and type to ensure that the character of the village is not undermined. • The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district’s full housing needs, including affordable housing, whilst taking into account migration and demographic change.

PO2922	James Chadwick	Spatial Planning Policy Officer (SCC)			IP019	General comment	In Ipstones Site IP019 will require alterations to the carriageway to achieve visibility, which should be acceptable subject to detailed design.	Comments noted.
PO3865	Mr D Perry				IP019	Object	By building on their site it will effect and could end our animal Agricultural Show which is part of our Moorland heritage. This development will greatly increase traffic along Church Lane into High Street. It is almost impossible most days to into High Street. It is almost impossible most days to drive through our Ipstones with queuing. Emergency vehicles have reported serious delays getting through Ipstones. Our Parish Council has an infill policy in place and is confident the required number of new houses will be built.	<ul style="list-style-type: none"> Comments noted regarding the location of the Agricultural Show. There may be other sites in the village which could accommodate this event. The Highways Authority consider that highways & access to the site is acceptable subject to design and provision of visibility. The site will require alterations to the carriageway to achieve visibility, which should be acceptable subject to detailed design. Small infill sites that can accommodate residential development within the village boundary can contribute to the small site windfall allowance for the Rural Area.
PO3864	Ms Lesley Richards				IP019	Object	Church Lane already has a busy flow of traffic and gets extremely congested around the junction with High Street/Froghall Road. A further housing estate would escalate this problem. The proposed site is uses for the Agricultural Show each year which is an important part of this village. It provides access to the main show ground and it is where many other events take place including the Shire Horse Judging. I support the infill proposal.	<ul style="list-style-type: none"> See response to PO3865 regarding village show. See response to PO3865 regarding highways. See response to PO3865 regarding infill.
PO3885	Mr and Mrs P R Frazer				IP019	Object	Having come to Ipstones 48 years ago to live on the high street, we have noticed over the years the large increase in traffic though the village. Any increase in building would be unacceptable to those of us who already live here as this would affect a further increase in traffic and place and place an unsustainable strain on village facilities.	<ul style="list-style-type: none"> See response to PO3865 regarding highways.
PO1117	Ms M McGowan-Griffin				IP019	Object	I am writing again to reiterate my concerns over the 'preferred' site for development in Ipstones, i.e. the field situated directly behind my house. From a personal perspective this development would obviously be a disaster, having only recently purchased and redeveloped the plot to house a very expensive new build. The house was specifically designed to take in the views to the rear of our property (the preferred development site) and we are now in the process of completing a balcony (passed by planning) that directly overlooks this same site. The house has two very large picture windows downstairs and two patio doors to an upstairs balcony, all of which overlook the site in question. Housing on this site would of course not only spoil the views we thought we were buying, but also cause us and any residents we would overlook, privacy issues. Aside from how this proposal would affect me personally, it is just about the worst site choice from an access point of view and should it go ahead would be a disaster waiting to happen. Church Lane currently has major traffic problems at the junction with High Street, a narrow road with little or no pavement in some places. Virtually all the traffic in Church Lane travels in the	<ul style="list-style-type: none"> Loss of view and property values are non-material planning considerations. Amenity – issues such as overlooking, screening will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application. See response to PO3865 regarding highways. See response to PO3865 regarding infill.

ID	Consultee Name	Company/Org	Agent Name	Agent Company / Org	Site Reference	Support/object/general comment	Comments	Officer Response
							general direction of the High Street, so further housing development in this area of Church Lane would only compound this very real problem. Notwithstanding the above issues, there is the one of how access to the proposed site would be gained. As the current lane is inadequate for the proposed development, we have been approached more than once to sell part of our garden to enable access. As advised previously, we still have no intention of giving up any of our garden for this purpose. I realise that there is a need further affordable/single floor housing in Ipstones, for our old and young and that everyone could say 'not on my doorstep'. I hope however that all things considered, the council will reconsider the option of large scale developments, particularly those that affect Church Lane and instead consider an infill policy, which by all accounts is doable within the number and time constraints provided.	
PO1119	Ms Jackie Wilbraham				IP019	Object	I am writing to object most strongly to the allocation of housing to the village of Ipstones. I have set out my reasons below :- Additional housing in Ipstones is not required and would be totally out of character in such rural setting within the Churnet Valley. The proposed developments would ruin the aesthetic appeal of this area of the Staffordshire Moorlands which is rich in heritage buildings and reduce the attraction to tourists with the consequential loss in trade to businesses reliant on tourism. The roads are insufficient to accommodate any increase in traffic and are already congested at certain times in Ipstones already. There is no requirement for the additional housing proposed. The environmental impact of any additional housing would be significant. Such developments would increase the noise and light pollution, which would be detrimental to existing wild life in the area and detract from the peace and serenity of the countryside. The proposal is incongruous with the vision for the Churnet Valley as an area of outstanding natural beauty. Instead, there is a requirement for houses in Towns and the Potteries conurbation. In parts of Stoke, Hanley and the Potteries, large areas of houses have been demolished. That is exactly the place where new houses should be built. The infrastructure is already in place and employment opportunities are available. The SMDC local plan lacks a strategic approach, instead being a scatter gun style that places houses in every hamlet and village in the area. I propose that the SMDC transfer their allocation of housing from Foxt and Ipstones to Stoke City Council where housing is seriously required and work in partnership to ensure that SMDC retains the financial incentive for housing from Government which it would otherwise receive.	<ul style="list-style-type: none"> • See response to PO3865 regarding highways. • The Landscape, Local Green Space and Heritage Impact Study (2016) considers that the site is visually prominent when viewed from the cemetery and from land to the west . In order to reduce visual prominence development could be limited to the eastern part of the site, not extending beyond the gardens of development to the north. • There is one Grade II* and 27 Grade II listed buildings, and one Conservation Area within the 400mbuffer. Development would be likely to adversely affect the setting of the church to the north of the site. It suggests that these could be reduced by restricting development to the eastern half of the site. • The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change. • National planning guidance states that the Council should seek to meet the development needs of their area. Housing allocations are needed to ensure the Districts housing requirement is met.
PO3879	Mr & Mrs P and J Salmon				IP019	Object	I feel I must object to any plans to build a new estate on Church Lane Ipstones, firstly any new extra traffic would be danger and secondly the area of Stock Green ? Is one of if not one of the older areas of Ipstones, and is not suitable for any new developments,	<ul style="list-style-type: none"> • See response to PO3865 regarding highways. • See response to PO3865 regarding infill.

ID	Consultee Name	Company/Org	Agent Name	Agent Company / Org	Site Reference	Support/object/general comment	Comments	Officer Response
							which would be out of context with the present cottages. Infill in the village is needed and I am sure this can be sorted out.	
PO527	Mrs Elizabeth Fitzgibbon				IP019	Object	<p>I live on Church Lane, so obviously any housing development is going to affect me and my family directly, however the choice of IP019 off Church Lane as the preferred option is detrimental to the village as a whole and seems completely at odds with common sense. There were several other alternative sites proposed that would be far better options. I am not against increased housing in the village in principle as it will help keep the village 'alive' by increasing use of the school, shop, village hall and pubs. I just think the site chosen is the wrong one. An extra 35 houses off Church Lane will generate at least 70 more cars using Church Lane daily to access High Street/Froghall Road via the pinch point at the junction where the shop and The Marquis mean reduced access because of parked vehicles. This is already a known and much discussed highways problem which this housing development would make far worse. It is only a matter of time before an emergency vehicle is blocked with potentially fatal consequences. Please do not add to this problem when there are better alternatives. The use of this field for housing will also impact directly on Ipstones Show. This is the main public event in the village each year with visitors from far and wide. It would seem madness to put its continued success in jeopardy when better alternatives are available. A sensible option has been put forward in recent weeks using infill and reuse of part of the industrial estate on Froghall Road. I would support this alternative. Furthermore, The site on Froghall Road (IP014a) is a preferable option to the current proposal as it would not cause the same level of traffic congestion with direct access to the main road. Nor would it impact the Ipstones Show. In addition, the Land off High street to the west (which has not been considered at all) close to Daisy Bank Farm would also be a better choice providing the access road was linked through to Church Meadow. This option would in fact ease the congestion on Church Lane and actually reduce the traffic levels at the junction of Church Lane and High Street. it would provide an alternative route out of the village for those living in Church Lane, Church Meadow, and the new houses. My overriding feeling is that of all the possible sites in the village, the very worst choice has been made. Please reconsider.</p>	<ul style="list-style-type: none"> • See response to PO3865 regarding highways. • See response to PO3865 regarding the village show. • Far Lane Industrial Estate provides an opportunity for local businesses and employment and the Core Strategy safeguards good quality employment sites. Part re-development of the site for residential use could cause amenity issues. • IP014a was considered at the Site options stage. There are a number of constraints to this site such as no pedestrian access, affected by historic landfill and potential contamination issues, and important landscape to the setting of the village. • Sites off High Street, close to Daisy Bank Farm have been assessed in the Strategic Housing Land Availability (SHLAA). This area makes an important contribution to the Conservation Area including historic boundaries and walls and was not taken forward to the site options stage.
PO3892	Mr and Mrs JM Flint				IP019	Object	<p>I write to object to both sites IP011 and IP019 in Church Lane Ipstones on the following grounds: The traffic congestion at the junction of Church Lane and High Street Ipstones makes any development serves by Church Lane highly undesirable's the prospect of 35 new houses with 70+ cars is alarming. The new development of Grade 4 agricultural land is not desirable. IP011 will have a bad impact on the core of the ancient village. IP019 will have a bad effect on the agricultural show (horse events) IP011 will take the field sued as an essential carpark for the agricultural show I</p>	<ul style="list-style-type: none"> • See response to PO3865 regarding highways. • See response to PO3865 regarding infill.

ID	Consultee Name	Company/Org	Agent Name	Agent Company / Org	Site Reference	Support/object/general comment	Comments	Officer Response
							consider that for the Ipstones, infill is a much better solution.	
PO3895	Mrs G Shuttleworth				IP019	Object	Ipstones does not need a housing estate, as there is numerous infill sites which would blend more sympathetically planners should look at cottages in Brookfield Road and Stocks Green that have stood the test of time, and replicate this style for the future community lies in the hands of younger people. No movie 'execu hire' houses!	<ul style="list-style-type: none"> • See response to PO3865 regarding infill.
PO4700	Miss H Biddulph				IP019	Object	Last autumn, SMDC consulted us on a possible housing site for 2011 to 2031. They have narrowed the sites down as shown on the plan. IP019 (part of the Show Fields) is their "preferred" option. IP019 (the Show Car Park field between Church Meadows and the Vicarage) and IP014a (between Belmont Road and the 'Rec',) are now "Reserve" sites to be used if IP019 cannot be used. The sites adjacent to the Old Vicarage and New House Farm have been discarded. The numbers of houses have increased from 25 to 35. This leaves the preferred site and one of the reserves sites served off Church Lane. The present traffic problems in Church Lane and its junction with High Street make the extra traffic which is generated by 35 more houses highly undesirable. Site IP019 takes on agricultural lane, site IP019 takes Green Fields agricultural land, several large mature trees and seriously affects much used Public Footpath. Both will further expand the built-up Village rather than consolidating it with the selected infill sites.	<ul style="list-style-type: none"> • See response to PO3865 regarding highways. • Public footpath does not cross IP019.
PO3868	Mrs Deborah Leftwich				IP019	Object	Loss of view it over looks over Site IP019. Beautiful fields and view we do not want this to be taken away. Ipstones agricultural show also uses this land may threaten the future of this show. The show is important to Ipstones. Most importantly increased traffic on Church Lane. Already, in a particular at the start of Church Lane near the shops and the pub. There are currently problems with parking in Church Lane. Housing would further increase this. Access and exit onto Church Lane for proposed housing would be almost impossible and dangerous.	<ul style="list-style-type: none"> • See response to PO1119 regarding landscape • See response to PO3865 regarding the village show.
PO3869	Ms Amy Leftwich				IP019	Object	Loss of view, increased traffic onto Church Lane increased parking at junction on Church Lane, difficult exit/access, threat to agricultural show.	<ul style="list-style-type: none"> • Loss of view is a non-material planning consideration. • See response to PO3865 regarding highways. • See response to PO3865 regarding the village show.
PO3891	Mr and Mrs P & K Ashton				IP019	Object	Our major concerns refer to the effects of increased traffic flows along Church Lane, There are, with the existing volumes of traffic, occasions when the congestion and parking problems alongside the Marquis of Granby and the One Stop Shop present major problems for the motorists and pedestrians. It is worth noting that each school day a supervised crocodile of young children have to make its way along Church Lane to and from Playgroup to Ipstones Primary School. The final bend at the bottom of Church Lanes, leading to the junction with Froghall Road, is downhill, has an adverse camber and is blind with regard to parked or oncoming traffic. It can be cause problems at the best of times. These are problems exacerbated during icy snowy conditions, since Church Lane is no longer on the local authority gritting route. The increased	<ul style="list-style-type: none"> • See response to PO3865 regarding highways.

ID	Consultee Name	Company/ Org	Agent Name	Agent Company / Org	Site Reference	Support/ object/ general comment	Comments	Officer Response
							traffic flow caused by a new housing development involving Church Lane can only make the existing problems even worse.	
PO3867	Mrs Jeannette Simpson				IP019	Object	Solely on the traffic congestion. A real worry very difficult to negotiate the village at times now. Emergency services?	<ul style="list-style-type: none"> • See response to PO3865 regarding highways.
PO1011	Mrs Alison Cartledge				IP019	Object	The Church Lane proposed development land in Ipstones is wholly inappropriate as it will add massively to the already congested minor road and the blocked square in the village which is constantly choked with traffic. There is already a safety issue with cars pulling out onto Church Lane from the village hall car park and emergency vehicles cannot access the road around the Grove corner. As a resident at the top of church lane this is a highly alarming problem. The number of houses proposed is extremely excessive and all the extra cars and residents will place too much strain on a small Moorlands community. The utility supply to these extra homes would also impact upon other residents properties as the current water pressure is not sufficient to supply these homes.	<ul style="list-style-type: none"> • See response to PO3865 regarding highways.
PO3894	Mrs R Flint				IP019	Object	The dire traffic situation at the Junction of Church Lane and High Street is so so dangerous now- and any extra properties in Church Lane, thereby adding an extra 70 or so vehicles will be death to someone at this junction and for 100 yds in each direction from.	<ul style="list-style-type: none"> • See response to PO3865 regarding highways.
PO197	Mrs Sue Higton				IP019	General comment	The location seems fairly sensible but I'd suggest that any development would need to be supported by highway improvements and conditions. The village is already struggling with traffic issues, particularly in High Street and Church Lane, which wouldn't be helped by additional traffic from new housing. Villages like ours were not designed for cars - small terraced houses often have 2 or 3 vehicles and no parking facilities - so a resident's car park and sensible on-street parking restrictions would help.	<ul style="list-style-type: none"> • See response to PO3865 regarding highways.
PO258	Mr Graham Leftwich				IP019	Object	The proposed development site would lead to a significant increase in traffic along Church Lane. the junction of Church Lane and High Street is already too busy and unsuitable for increased traffic - particularly the heavy traffic that developing the site would entail. Using the site for housing would threaten the future viability of the Ipstones Show, the single most important community event of the year in Ipstones. There is no suitable access to the site from Church Lane. Development of the site would be visually intrusive for the neighbouring properties, my own included, which currently enjoy open views of the countryside. There are other, more suitable sites for further housing development in the village with access from High Street or Froghall Road - notably the land next to and behind the fire station, extending development along Belmont Road and the land between Church Meadow and High Street, marked on the map as Daisy Bank Farm. Indeed, the design of Church Meadow clearly shows it was anticipated to continue building towards High Street.	<ul style="list-style-type: none"> • See response to PO3865 regarding highways. • See response to PO3865 regarding the village show. • Loss of view is a non-material planning consideration. • IP015 (land adjacent to the fire station) was considered at the Site options stage. There are a number of constraints to this site such as the adverse impact on adjacent New House Farm and Tearn Farmhouse opposite which are both listed buildings, the land is identified as important landscape to the setting of the village and the availability of the site is unknown. • See response to PO527 regarding the land adjacent to Daisy Bank Farm.
PO14	Mrs Rachel Rickers				IP019	Object	The proposed site would see an unacceptable increase in traffic and congestion through the village as a whole but also on Church Lane where access for the new properties would lie. The road is	<ul style="list-style-type: none"> • See response to PO3865 regarding highways. • See response to PO3865 regarding the village show.

ID	Consultee Name	Company/ Org	Agent Name	Agent Company / Org	Site Reference	Support/ object/ general comment	Comments	Officer Response
							<p>extremely narrow around the corner past the Marquis of Granby public house and already over used by people using the pub and the shop. The building of more properties would see a substantial increase in traffic making it congested and unsafe in the long term let alone with building traffic in the short term. There is also a community impact with the loss of land used for village events through the year. In addition added pressure will be added to the school in the village.</p>	<ul style="list-style-type: none"> Staffordshire County Council have indicated that St Leonards CE(VA) First School is likely to be able to accommodate the additional children generated by the proposed allocated housing although there may be a need for education contributions to accommodate additional children.
<p>PO4692 PO4693</p>	<p>Mr A Maslen Mrs A Maslen</p>				<p>IP019</p>	<p>Object</p>	<p>We are writing in relation to the SMDC Consultation Document concerning the proposed allocation and siting of the new build housing for Ipstones. We have been extremely concerned over the Council's preferred site IP019 in Church Lane and the increase in the number of houses proposed from 25 (2015) to 35 this year. We have several objections to this site. Any increase in traffic from tenant's cars, and the delivery vehicles etc. would aggravate the already hazardous access into Church Lane from High Street and we consider being totally unacceptable, despite the Council Highways Department thinking there would be no problem with the site. Site IP019 plays an important occasion for village residents and visitors alike and represents the sharing of a village tradition. There is no obvious alternative adjacent to the field which can be used. So it is clear why Ipstones residents do not wish this site to be turned into housing. There have been several 'estate' developments in Ipstones in the past which in the eyes of older residents have already altered the character of the village. Our last point is this narrow access site form Church Lane itself and this would involve encroaching on the land of at least 2 adjacent properties. So after attending the Parish Council meeting and hearing the views of Councillor Sybil Ralph's, and reading the subsequent reports of this in the Leek Post, we wish to thank her for her reassurance's that the an infill and policy Is preferable for Ipstones, both from a safety angle and because it would safeguard the character of the village, but would still meet the required target numbers. Councillor Ralphs assured the meeting that the housing number now been revised down to the original 25. Of these at 5 infill houses have been built there already since 2011. We fully support the Parish Council proposed to have infill policy using the unoccupied premises on a small industrial site at the south end of Ipstones. This site could offer a minimum of 10 additional house's especially these are smaller 'affordable' homes more suited to the new buyers like younger people attending the Parish Council meeting want and support the Parish Council on this. There are several other possible 'one house' infill sites around the village which could make up the final total pf 25 houses. One example is on Froghall Road, a previous garden or allotment site between bungalows and ex council houses. I believe the Parish Council has other one off sites too. So please listen to what Ipstones residents want for their own village and accept the views</p>	<ul style="list-style-type: none"> See response to PO3865 regarding highways. See response to PO3865 regarding the village show. See response to PO527 regarding Far Lane Industrial Estate. See response to PO3865 regarding infill opportunities.

							of both our Parish Council and Councillor Ralphs and reject the site IP019 from your plans.	
PO3863	Mrs Linda Perry				IP019	Object	We have serious problems with traffic in Ipstones particularly on the High Street/Froghall Road due to parked cars. The junction of High Street gets seriously congested and emergency vehicles have problems getting along Church Lane. We do not need another housing estate in Ipstones. Our housing needs can be met by our Parish Councils infill policy. To build on the proposed site (which is used for our agricultural Show) could seriously affect a very important part of our village heritage. There are alternative Brownfield Sites I fully support the Infill Policy which will provide enough extra housing.	<ul style="list-style-type: none"> • See response to PO3865 regarding highways. • See response to PO3865 regarding the village show. • See response to PO3865 regarding infill.
PO3866	Mr and Mrs H and B Hart				IP019	Object	We object to the 'preferred' site IP019 of housing sites in Ipstones escalate the already dangerous traffic situation on Church Lane following a meeting of the Ipstones Parish Council on Tuesday the 31 st May 2016, attended by Sybil Ralphs, we unanimously against that the best solution would be to adopt an 'infill' policy whereby numerous small sites around the village be used to accommodate new houses. In addition a small estate of houses is built on land in the south end of the village, on land currently housing some small industrial units. The village would benefit some small starter homes & retirement bungalows. If there was a need to re-accommodate industrial units then I understand that there is suitable space down at Froghall.	<ul style="list-style-type: none"> • See response to PO3865 regarding highways. • See response to PO527 regarding Far Lane Industrial Estate. • See response to PO3865 regarding infill opportunities. • Refer to responses to QU37 relating to the Bolton Copperworks site at Froghall .
PO1082	Mr T Irwin				IP019	Object	With all the traffic congestion at junction of High Street and church, don't see how anybody with any common sense can put this plan forward. Sheer madness. Also taking up fields used by Ipstones show. What about land by fire station.	<ul style="list-style-type: none"> • See response to PO3865 regarding highways. • See response to PO258 regarding land by the fire station.

PO2561	Mrs Chadwick	Ipstones Parish Council			Object	<ul style="list-style-type: none"> SUMMARY ONLY. Several letters have been received from the parish council regarding the site allocations for Ipstones and Foxt. Consider very strongly that the proposed sites for Ipstones and Foxt are not suitable for development and a 'flexible infill' policy would be suitable for both villages. Suggest using the first two units on the industrial estate in Froghall Road for affordable houses. Understand owner would be agreeable to this. Lists included suggesting infill sites for Ipstones. Affordable housing for local young people is needed. Redundant barns that may be suitable for residential conversion should be taken into account. Planning approvals should be taken into account. 	<ul style="list-style-type: none"> Agreed that there is a need for affordable housing in the rural area. This is more difficult to achieve on infill sites compared to allocated housing sites. Far Lane Industrial Estate provides an opportunity for local businesses and employment and the Core Strategy safeguards good quality employment sites. Part re-development of the site for residential use could cause amenity issues. Suggested Infill Sites - There are likely to be suitable infill plots within the settlement boundary which can contribute towards the small windfall allowance for the rural area, subject to material planning considerations. There may also be opportunities for rural housing which are located outside the development boundary in sustainable locations such as barn conversions. These will also contribute towards the small windfall allowance for the rural area. Sites off High Street, close to Daisy Bank Farm and Hawes Farm have been assessed in the Strategic Housing Land Availability (SHLAA). This area makes an important contribution to the Conservation Area including historic boundaries and walls.
PO3862	Dr J Cope				Object	<p>IP011 - I am writing with reference to the proposed developments on land off Church Lane, Ipstones I must object in the strongest possible terms to these proposals as it would be a terrible loss to village community and a wide range of wildlife, not only that, it would be a detrimental to the character of the village as a whole. This is especially irking given the much more suitable proposed land at Froghall, just outside the village, which is crying out for re-development – it would clean up a depressing eye-sore and actually add to the local community. Coming back to the proposed site of Church lane, I and/or my wife walk there most days on the public footpath that runs through the site, with my dog and meet up with many other village residents who use and enjoy the footpath through this area. We have conversations and the dogs play together it's a special village community aspect that would be lost if the land were developed for housing. There is important wildlife that would be lost and impacted on too. I am a volunteer with the RSPB at nearby Coombes Valley and an active member of Staffordshire Wildlife Trust and see evidence of a wide variety of Wildlife every day, on the proposed site, that thrive in this area. Red list bird species such as, Song Thrush, Mistle Thrush and House Sparrow and Nuthatches. Tree Creepers, Great Spotted and Green Woodpeckers. Rooks and occasional Ravens, Swallows and Martins. The list goes on.</p>	<ul style="list-style-type: none"> Site IP011 was not included as a preferred options site. Refer to responses to QU37 relating to the Bolton Copperworks site at Froghall .
PO4702	Mr & Mrs J & F Mundy				Object	<p>SMDC. Staffordshire Moorlands Local Plan – April 2016 We attended a very well organised and well supported meeting at the Village Hall in Ipstones. The depth of feeling against the proposed development at Church Lane was demonstrated by a unanimous vote "against" the proposal by people present. By this time you</p>	<ul style="list-style-type: none"> Site IP011 was not included as a preferred options site.

						are probably aware of the details discussed at the meeting. Something not discussed however was how the elected minorities seek to impose their will on the majorities they respect – what happened to democracy? On Channel 4 Radio, on Sunday the 12 th June a very significant statement was made by Roger Screwton of the Princes Foundation. He said development of areas scheduled for house building was already decided when residents were informed true or not? The land scheduled for building new houses no 15 IP011 is agricultural land, owned by a farmer and presumably stored for cattle feed. The entrance to Church Lane from the High Street is circled by a one stop shop, a butcher and a public house, all of which take regular delivery vehicles in large delivery trucks. There are times when it is very difficult to turn into Church Lane from the High Street (there is a bus stop and the dropping off of school children) One can imagine the situation if as stated 35 much more cars (possible many more) will add to further congestion. Heaven help anyone who needs the ambulance or fire engine in an emergency. Ipstones is a village, not a dormitory town. Every year there is a long standing agricultural show guess where everyone parks their vehicles on this occasion No 15 IP011.	
PO3893	Mr and Mrs JM Flint				Object	<p>I write to object to both sites IP011 in Church Lane Ipstones on the following grounds:</p> <ul style="list-style-type: none"> • The traffic congestion at the junction of Church Lane and High Street Ipstones makes any development serves by Church Lane highly undesirable's the prospect of 35 new houses with 70+ cars is alarming. The new development of Grade 4 agricultural land is not desirable. • IP011 will have a bad impact on the core of the ancient village. • IP011 will take the field used as an essential carpark for the agricultural show. <p>I consider that for the Ipstones, infill is a much better solution.</p>	<ul style="list-style-type: none"> • Site IP011 was not included as a preferred options site.
PO949	Mr and Mrs Antelo				Object	<p>Further to your notification we would like to reiterate our objections to building on plot IPo11 We would be overlooked and enclosed in if this should happen. We have lived here 20 years and have now retired and do not want to hear the hum-drum of Lorries etc. thundering up and down our lane. As its name suggests this is a lane not a road. We would lose our views completely. We brought this property with the understanding that IP011 would never be built on. Church Lane cannot cope with extra traffic. It gets congested most days. The schools are not big enough to take all the extra pupils. The village would lose its facility for the annual show, and it's could possibly cause flooding The village does not need 35 houses. In fill would be quick quite sufficient and this plot is not on the village boundary according to your map.</p>	<ul style="list-style-type: none"> • Site IP011 was not included as a preferred options site

PO1464	Mrs Margaret Haywood				Object	<p>I would like to register my opposition to the proposed new housing adjoining the barn field est in Kingsley. Extra Traffic that a further 35 houses will bring to the estate will add to the danger posed to the children living there, Morton Ave is not suitable for up to 70 extra cars already they can only pose a serious problem to the residents. I strongly object to the area losing its green belt status just to accommodate the proposed new housing. Brownfield sites must be utilised before eroding green belt sites. New houses are usually purchased by young families, Kingsley St Werburghs School is full to capacity and the lack of facilities in the village adds to the problem. Kingsley has no shops, no capacity and the lack of facilities adds to the problem. Kingsley has no shops, no youth clubs, or anything for the youth of today. I appreciate there is a housing problem in the UK but in my opinion if each country built a new town complete with infrastructure that is geared up to support the town shops schools and drs etc. then that would be far better answer</p>	<ul style="list-style-type: none"> • The Highway Authority has not raised any issues which would prevent the development of this site. They consider development is acceptable subject to access design and visibility. Impact on Moreton Avenue would need to be considered. • The land in question is within the Green Belt. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. The review found that the overall impact of development on the site was moderate. It found <i>“Development would intrude into open countryside, creating a new settlement edge on land where there is no clear outer boundary. However, Cheadle Road leading to the Dams is a strong eastern boundary and the single field is reasonably well contained visually. Significant boundary treatment would be required.”</i> Considered the site was suitable for release under exceptional circumstances. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt. • New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children’s play areas. • National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
							<p>Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered.</p> <ul style="list-style-type: none"> • There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites have been proposed. Prioritising brown field land over greenfield in all circumstances is not part of Government policy
PO1092	Mr I Hough				Object	<p>Moreton avenues only wide enough to just allow passage of 2 cars all or most of the houses park in the road (not enough room for 2 cars) making extra traffic proposed by the plan will make the road very dangerous. Access to A52 from Barnfields lane is difficult and will be dangerous is difficult and dangerous with extra traffic. Suggest relocating the plan to off Holt Lane where access is good either at the back of the old rectory.</p>	<ul style="list-style-type: none"> • See response to PO1464 regarding highways • The Council has considered the alternative sites suggested in the responses to the previous consultation and where appropriate has included the additional sites in the proposed site allocations in the emerging Local Plan. The site assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website.
PO1415	Mr I Hough				Object	<p>Moreton Avenue is not wide enough for cars to pass with cars parked outside houses at the present. Having more houses would make this situation worse for all – emergency services, cars trying to get out and Wood Close and Rushton Ave, pedestrian's particular children – the safety aspect of alone the increased traffic is traffic is very worrying – getting in and out of the estate is already difficult and dangerous. (Thoroughfare for Alton Towers traffic) adding to the traffic would be even more dangerous.</p>	<ul style="list-style-type: none"> • See response to PO1464 regarding highways
PO1326	Mr JT Wells				Object	<p>My wife and I are totally devastated to learn the favoured site for development of the Barnfield estate on Moreton Avenue, Kingsley. We</p>	<ul style="list-style-type: none"> • See response to PO1464 regarding Green Belt

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						live on Ainsworth Avenue, which backs onto the proposed site. When we purchase our bungalow, there would be no further development in this area, it been green belt. My wife has debilitating illness called PSP progressive Supra Nuclear Pals this is a form of Parkinson disease of which there is no medication for and doesn't responds well to any treatment. She is unable to do to any tasks what so ever and relies on me to get her through the days and nights. She spends most of her days sat in the conservatory at the back, overlooking the proposed site. She also like to see the traffic on the A52 passing the Bulls Head Public House which is in full view from our conservatory. To build on this land would totally destroy our only bit off pleasure she has in life. Also the wildlife? We have no objections to any of the proposed sites. If you have to build houses in Kingsley why not consider Hazles Cross Road. To build there would not interfere with any ones privacy. Houses could be built on both sides of the road. All would have excellent views of the surrounding countryside. So in asking you please reconsider this matter	<ul style="list-style-type: none"> • See response to PO1092 regarding alternative sites • The Extended Phase 1 habitat Survey 2015 assessed the present and potential ecological value of the proposed site allocations. It found that • Loss of view is not a material planning considerations. • Issues such as overlooking and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application
PO971	Mr C Fowler				Object	Why are these houses being built on a Greenfield site In Kingsley, Who are they for who will be buying them? What about excess traffic in an already over used road?	<ul style="list-style-type: none"> • See response to PO1464 regarding highways • There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites have been proposed. Prioritising brown field land over greenfield in all circumstances is not part of Government policy
PO1624	Mr John Steele				Object	The careful consideration of Kingsley Parish Council which indicated a number of small developments within and just without the existing village boundary has been ignored in favour of one large development on the Green Belt KG049A. This is unacceptable to the residents of Kingsley on the following grounds: a) Poor access via Moreton Avenue and Barnfields Lane which are narrow, obstructed by legally parked vehicles and frequented by children playing in their quiet residential environment. b) The acknowledged hazardous issue from Barnfields Lane onto the A52. Cheadle Police are already active in trying to improve visibility problems due to parked cars in this part of Kingsley. c) There are no special circumstances which justify development on this part of the Green Belt. The proposal does not smooth the outline of the village boundary, it makes it more irregular. Overall SMDC would do well to adopt the Kingsley Parish Council proposal as the residents are not against new houses. However Kingsley already has more than it's share of lower end property in the form of Housing Association dwellings, so it would be well to encourage home owners who seek a proper integration into the village and who would contribute to village activity.	<ul style="list-style-type: none"> • See response to PO1464 regarding highways and Green Belt • Views have been sought as part of the consultation. The Council must balance this evidence against all the other evidence relating to this site and reach a decision on whether or not to include it as a development site in the Local Plan. • See response to PO971 regarding the need for site allocations
PO1619	Ms Linda Salmon				Object	I wish to object strongly to the above development: This is a very large extension of approximately 35 houses to the barnfields estate on a	<ul style="list-style-type: none"> • See response to PO1464 regarding Green Belt, highways and infrastructure

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>large piece of Greenbelt farmland with well used footpaths crisscrossing it with lots of wildlife including hares, pheasants, water vole and the great crested newt living on it or nearby. The access is off the main A52 near a dangerous bend, this is a very busy road with Alton Towers, quarry, tourist and local traffic, which is already congested with parked cars so a possibility of at least another 60 cars is frightening. In the last few years we have lost 5 shops 4 pubs and our post office. The shops and post office having been turned into houses, two pubs going the same way and the Plough on Holt Lane and its carpark being turned into a small housing development, this was a great loss to our village as the landlord aloud parents to use the carpark when dropping off and picking up children from St Werburghs primary school opposite, now you take you life in your hands negotiating this area at school times. Also speaking of the school having spoken to parents and members of staff i have been made aware that it is full to capacity is there any evidence that the arrival of further children would be catered for. The last pub closed this year partly because of a house being built on the carpark. Also there are plenty of houses for sale and to let in the village at the moment so have you surveyed who is going to want to live here? There has never been any thought or reason put into many planning aspects to our once thriving village where I have lived for the past 30 or so years, local people are moving out as it has no amenities. This development would be the final nail in Kingsleys coffin. Also I would like to know why these plans were not on show in Kingsley it being such a significant development that will affect everyone in our village?</p>	<ul style="list-style-type: none"> • See response to PO1326 regarding wildlife • The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change. • The consultation documents were available for view on the Councils website and in Council Offices and libraries
PO1445	Mrs J Dono				Object	<p>In my opinion you have not taken into consideration up to date and relevant evidence about the economic, social and environmental characteristics and prospects of Kinsley village. There are no shops of any kind, 9with no suitable premises to rent) there is no village community pubs and no facilities for our children or young adults. St Werburg's primary school is full to capacity and the areas surrounding the village offer few job/career prospects. If houses were built on a already busy through road my biggest concern is the health and safety aspect for children, pedestrians and car owners if access was along Moreton avenue. The current houses were built over 40 years ago when most families had 1 car however families have 2,3 or 4 cars making parking more difficult as cars parked on the road through the village from bottom of the green up through the high street is very busy route for heavy haulage, buses to Alton towers traffic. Adding further traffic will only increase the safety issues. I understand that is a proposed to change the status off the current green belt land to accommodate the building of 35 new homes. I believe that the green belt land cannot be changed only in exceptional circumstances. There are other sites within Kingsley- the area around the youth club along Holt lane and the field opposite which I understand is owned by the Diocese of Lichfield who wish to sell this land. If houses were built in this location there is ample opportunity to make the access roads wider and also increase the width of the road in How Lane. I am objecting to the proposed building of houses within Kinsley because the village</p>	<ul style="list-style-type: none"> • See response to PO1464 regarding infrastructure, Green Belt and highways • See response to PO1092 regarding alternative sites

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						infrastructure cannot cope with additional homes. There no facility or plans for any, the main road is not suitable to take additional traffic due to the width and layout there are significant landscape and environmental impacts residents In the village wish to keep the green belt land that we have I will also be emailing my objections to the Kingsley parish councillor Ivor Lucas	
PO1440	Mrs J Dono				Object	I would like to register my opposition to the new proposed housing adjoining to the Barnfield Est in Kinsley. Extra traffic that a further 35 homes will bring to the estate will add a danger posed to the children living there. Moreton Avenue is not suitable for 70 extra vehicles that the new houses will generate. The extra volume of traffic and the amount of cars already there can pose serious problems for the residents. I strongly object to the area losing the greenbelt status just to accommodate the proposed new housing. Brownfield sites must be utilised before eroding greenbelt sites. New houses are usually purchased by young families, Kingsleys St Werburghs School is full to capacity and the lack of facilities in the village adds to a problem. Kingsley has no shops, no youth clubs, or anything for the youth of others. Over the past few years Kingsley has had numerous new houses built in it, each time taking away the vital space that had previously been used for parking. I appreciate there is a housing shortage in the UK but in my opinion if each time we Country built a new town with infrastructure that is geared up to support the town the schools the shops dr etc. then that would be a far better answer than keep adding to the villages that just plainly	<ul style="list-style-type: none"> See response to PO1464 regarding infrastructure, Green Belt and highways
PO1417	Mrs K Thorley					Green belt land Village Infrastructure Traffic congestion/health and safety issues. Environment Conservation Pubic right of way footpath/heritage significance	<ul style="list-style-type: none"> See response to PO1464 regarding infrastructure, Green Belt and highways Any development will need to be in accord with Local Plan polices regarding Heritage Assets Existing public footpaths will be maintained or where appropriate redirected
PO1416	Mr c Thorley				Object	I strongly object to this proposal due to the fact that I brought this house because of the views and now you want to ruin that. Barnfields estate will not take any more extra traffic and this will cause uproar on our roads. Since you decided to build we notice the new street lighting, pot holes, being repaired and new road surface on the A52 from Kingsley Moor to Barnfield Lane, we also saw the counting of cars using the Barnfields Road but that was a school half term (how appropriate)	<ul style="list-style-type: none"> See response to PO1464 regarding highways See response to PO1326 regarding loss of view
PO1466	Mr S Sinclair				Object	Having seen the consultation plans at Cheadle Library I note that your preferred site for housing development plan in kingsley is behind the field behind the above address after all. My original objection to this draft proposed last year still apply and I enclose further copy of these objections. Nothing has changed to make the site any more acceptable. Last July I mentioned that we already had 2power cuts without any extra houses being there to supply. We had 2 more after July. The	<ul style="list-style-type: none"> See response to PO1464 regarding highways, infrastructure See response to PO1326 regarding residential amenity and loss of views Loss of property value is not a material planning consideration

PO562	Mrs Margaret May				Object	Longsdon We wish the site we put forward be reconsidered as potential infill area in the light of the proposal from the Longsdon Parish Council that the infill boundary be extended to include Micklea Lane. We submitted this site in September 2015 and it was rejected because it was not within what you had defined as the Spine of the village. The site is half an acre of the garden of High View, Micklea Lane, Longsdon. As we explained this is half the garden area. We have been trying to sell our bungalow for a year now, with two different agents and nobody wants to take on such a large garden with slopes. We are now going to sell the property without this area of land and believe the building of a suitable property to be the best solution for the unwanted garden.	The emerging Local Plan is no longer proposing to define village boundaries for smaller villages Development in these settlements will need to be in accord with the policies in the Local Plan the Spatial Strategy seeks to focus development to the main towns and larger villages limited growth may be acceptable in the smaller provided it is in scale with the settlement and does not have an adverse impact on the countryside. Applications will be determined on a site by site basis in line with policy in the Local Plan.
PO969 6	Mr David Edge	Demon Pension Fund	Mr Craig Barks	Bagshaws	Object	Promoting ribbons of land at Longsdon (SHLAA form and map submitted, attached): The site gives opportunity to develop a small housing development with each property have access onto either School Lane or the A53. The land has residential development on both sides and is within easy reach of local services and infrastructure. Route of the gas main will need to be excluded, however this provides access to the land behind. Availability of the site - with 5 years , 6-10 years and 11-15 years. Availability of utilities and services within the locality. Available means of access into the site f rom School Lane and the A53 main road.	<ul style="list-style-type: none"> The emerging Local Plan is no longer proposing to define village boundaries for smaller villages Development in these settlements will need to be in accord with the policies in the Local Plan the Spatial Strategy seeks to focus development to the main towns and larger villages limited growth may be acceptable in the smaller provided it is in scale with the settlement and does not have an adverse impact on the countryside/Green Belt. Applications will be determined on a site by site basis in line with policy in the Local Plan.
PO967 5	Mr David Edge	Demon Pension Fund	Mr Craig Barks	Bagshaws	Object	Promoting parcel of land at Longsdon (SHLAA form and map submitted, attached): The site gives opportunity to develop a housing development with access available from two roads. The land has residential development on both sides and is within easy reach of local services and infrastructure. Route of the gas main will need to be excluded, however could form part of the site access. Availability of site - with 5 years , 6-10 years and 11-15 years. Available means of access into the site f rom School Lane and the A53 main road. Availability of utilities and services in the locality.	<ul style="list-style-type: none"> The emerging Local Plan is no longer proposing to define village boundaries for smaller villages Development in these settlements will need to be in accord with the policies in the Local Plan the Spatial Strategy seeks to focus development to the main towns and larger villages limited growth may be acceptable in the smaller provided it is in scale with the settlement and does not have an adverse impact on the countryside/Green Belt. PO196	Mr David Cross	1 The Gables, Rudyard, ST13 8RN	Rudyard				Object	<p>RU016 / RU020 Both these sites are within the greenbelt and should not be built on. Rudyard additionally is important to the area due to the tourism that it generates. This should be protected. Building on these sites would be detrimental to tourism. SMDC is consulting on Rudyard being a conservation area due its special architectural and historic interest, which should be preserved and enhanced. RU016 - There is suggestion that access to this site would be via The Drive. As stated, The Drive is a private, unadopted road, which is of a rough, potholed nature. The agreement of the residents of The Drive, to the making good of this road, cannot be taken for granted, and may be actively opposed. Even if the road is made good, it is unlikely to be suitable for the traffic associated with 13 dwellings. RU020 - due to the elevated nature of this land in relation to Rudyard Road, the only obvious access is via the current access to Lakeland Lodge next to the roundabout in the village. The traffic associated with a further 14 dwellings would be substantial, and possibly cause for concern joining an already busy junction.</p>	<ul style="list-style-type: none"> There are no allocations proposed in Rudyard

UT012								
PO12	Mr Paul Quinton				UT012	General comment	On your Plans for Upper Tean you indicate a preferred site for new Housing. Does this mean that you will be abandoning the Planning application on Tenford Lane leading to Clarendon Park?	This site has planning approval for residential development.
PO1370	Ms Rosamund Worrall	Heritage England			UT012	Object	Map 4.44 - Upper Tean - housing allocation site UT012 - It is not clear how the impact of the site allocation has been assessed in respect of the Grade II Anchor Inn and any unknown archaeology in relation to the former mill site. Further information is required.	See response to PO12.
PO1250	Mr Martin Broadhurst				UT012	Object	Roads are too busy already esp the cross roads (Teanford Lane) Nothing to offer children here, little amenities schools oversubscribed. Flood Plains people who do buy will find out there are other sites to build on in other areas	See response to PO12.

PO1252	Mr JM Cotgreave				UT012	General comment	My house on Willow Close back onto a flood plain, and I must remind you on no account can you build anything whatsoever on it or by it. It does flood and I mean flood	See response to PO12.
PO1254	Miss L webberley				UT012	Object	This proposed development seems rather large with no additional amenities to support and would be built next to a river on a flood plain land which has proved to be a costly mistake in the other areas of the country over recent years surely there must be another brownfields site within Cheadle or close by which could better support this development	See response to PO12.
PO1123	Mr C Trumper				UT012	Object	UT012 The site by the Hope and Anchor public house is completely the opposite to UT019 as it is spreading the village out and owners are just as likely to shop locally in Cheadle as Tean as the car will have to be used due to the distance away from shops, schools and amenities.	See response to PO12.
PO2707	Mr Martin Ross	Environment Agency			UT012	Object	UT012 in Upper Tean is heavily impacted by Flood Risk. As well as the main river to the west, there is a smaller channel parallel to it within the site that will need to be modelled. Easements and/or floodplain may mean nothing can be developed between the main river and the smaller channel. We would question this site passing the sequential test and a Level 2 SFRA would be necessary if it did.	See response to PO12.
PO2890	James Chadwick	Spatial Planning Policy Officer Staffordshire County Council			UT012	Object	UT012 is located on an area identified as water vole habitat. Should allocation affect water vole habitat full mitigation of impacts will be required.	See response to PO12.
UT019								
PO1371	Ms Rosamund Worrall	Heritage England			UT019	Object	Map 4.44 - Upper Tean - housing allocation site UT019 - It is not clear how the impact of the site allocation has been assessed in relation to the Upper Tean Conservation Area. Further information is required.	<ul style="list-style-type: none"> The site is located within a Conservation Area. There are two Grade II* and ten Grade II Listed Buildings within the 400m buffer. The Council's Landscape, Green Space and

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Site Reference	Support/object/general comment	Comments	Officer Response
								Heritage Impact Study(August 2016) includes a Heritage Assessment for this site which advises that the site is currently used as a work yard which adversely affects the character of the Conservation Area and the Listed Buildings. Sensitive development could enhance the Conservation Area. Mitigation including vegetation screening along the southern boundary would reduce effects to the settings of the Listed Buildings. Development would be unlikely to cause adversely effects to the HLC zone UTHECZ 3 (Historic Environment Character Assessment 2010) and the Site is suitable for development in heritage terms with appropriate masterplanning.
PO1122	Mr C Trumper				UT019	Support	UT019 Within Tean quite logically the brown site in the village if developed for housing would remove industry from its centre which would only benefit the village. There would be more local trade for the local amenities and the schools and medical facilities are within very easy walking distance so would not increase local traffic on the school runs etc.	Support noted.
PO2822	Mr Martin Ross	Environment Agency			UT019	General comment	This site appears to be Brownfield. Although it is unlikely that the issue of Brownfield Land will make any of the allocations undevelopable due to cost/constraint, sites within the Source Protection Zones and flagged up, will be subject to certain restrictions.	Comments noted.

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Organisation	Support / Object / General Comment	Consultee Comments	Officer Response
PO2041	Mr J Camwell				Object	The crofted mill off Cheadle Road upper tean, that mill was stated in the late 1600 as dye work, for the Philips family so all the building is listed, I ask you this. In 1970's they pull down some building which were listed and nothing wrong with them. APC gas took over and had them pulled down. Isn't a protection order on a listed building his son got the mill now. I do understand that Mr Adcock's land comes under the Cheadle Ward. Please put a stop to the building in the countryside.	<ul style="list-style-type: none"> Comments noted. This site has not been identified as a preferred option housing site.
PO1121	Dr N.J. Wright				Object	I am raising my objections to proposed Housing Development Sites UT041 and UT018 in Upper Tean. Both these sites are accessed by rural single track roads. This is not clear from the map which gives a false impression of the roads around these proposed sites. It is in my view imperative that any sites considered for housing have good road access in and out to ensure the safety and accessibility for existing and new residents. This is a rural village so most residents use motor vehicles to access schools, shops, GP surgeries and other local amenities. If the above sites were used for new housing without significant alteration to the existing roads then this would result in traffic chaos. Having examined the plans my view is that proposed sites UT022 and UT024 would be most suitable as they have good existing road access for existing and new residents. In summary: The map gives a false impression of existing roads. UT041 and UT018 are unsuitable because access roads are single track rural roads. UT022 and UT024 are most suitable because they have good access roads.	<ul style="list-style-type: none"> Comments noted. None of these sites have been identified as a preferred option site for housing.
PO3882	Mr Justin Philips	Heath House Events Ltd			Support	Thank you for your time this evening at the Cheadle Guildhall and your helpful comments. As discussed, I am happy for land ref UT023 to be considered for planning by Staffordshire Moorlands together with the other 3 fields to the north of it up to Gorsty Hill Road [SK0139 5856, SK0139 5273 SK0139 4394] .	<ul style="list-style-type: none"> UT023 was previously included in the Site Options consultation 2015 and was not taken forward. A number of sites were dropped from the emerging Local Plan after the Site Options consultation. Not all sites were required to meet the Districts housing requirements. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. Development of the 3 fields to the north is not considered appropriate development of this extent would be out of scale with the settlement and would not be well related to the existing pattern of settlement.
PO1304	Miss J Newman				General comment	I am writing to you to ask you not to build houses on Teanford Lane. I am sad and worried about this because ever since I was a age of 2-3 years old I have deeply fallen in love with the horses, and it has become a tradition to feed them whenever I am out at my nanas house. One of my worries is that if you move the horses, my nana will have too many carrots in her fridge, as there will be no horses to feed. I am strongly	<ul style="list-style-type: none"> No sites are proposed on Tenford Lane in the Local Plan. Planning permission has been granted for residential development.

Upper Tean

Question 41 – Do you have any other comments regarding the Rural Areas?

						against moving horses from their home and disrupting their lives. Also I have grown so close to the horses, and have grown so close to them I have named them as such, Peggy, Chocolate and many more names. My sister and I hope you will not destroy their home. I hope you will take this into account and address this matter immediately.	
PO3873	Mr R Duncan	Rob Duncan Planning Consultancy			Support	This submission is made in support of the allocation of site option UT041 in Upper Tean for housing development [5 attachments are attached].	<ul style="list-style-type: none"> The site was previously included in the Site Options consultation 2015 and was not taken forward. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. A planning application has been submitted for development on this site.
PO1306	Miss E Newman				General comment	I am deeply troubled by the idea that the fields located in Staffordshire Moorlands are going to be destroyed and to be built over. One of my main concerns for the fields on Teanford Lane is that there are horses which are very friendly and live on this field. Therefore, I strongly believe that the horses it would be both unfair and cruel to move them from their homes to be relocated elsewhere. Not only that my sister and I both have a passion for both horses and riding. As a result whenever I come to visit my grandparents in Stoke we feed the horses. We have done this every time we come over and it has become a tradition. Consequently it would upset us both deeply if you took this tradition of us just for the sake of a few houses	<ul style="list-style-type: none"> No sites are proposed on Tenford Lane in the Local Plan. Planning permission has been granted for residential development.

Waterhouses

Q37 Do you have any comments on the housing allocations for the Rural Areas?

PO2827	Mr Martin Ross	Environment Agency			WA004	General comment	WA004: This site appears to be Brownfield. Although it is unlikely that the issue of Brownfield Land will make any of the allocations undevelopable due to cost/constraint, sites within the Source Protection Zones and flagged up, will be subject to certain restrictions.	The preferred options mixed use allocation includes the existing employment site. The rest of the site is greenfield.

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Organisation	Support / Object / General Comment	Consultee Comments	Officer Response
PO2556	Mr J Buxton	Waterhouses Parish Council			Object	SUMMARY - FULL COMMENTS ATTACHED Concerned about criteria used to categorise Waterhouses as a larger village. Consider data is flawed. Should be considered as a smaller village. Request clarification regarding population statistics and overlap with the part of the villages that falls within the Peak District National Park. Consider that proportion allocated to Waterhouses is excessive compared to its size. object to loss of existing industrial units on site WA004 – provides opportunity for local businesses and employment. Do not wish to see village boundary extended. Request a meeting to discuss.	<ul style="list-style-type: none"> The adopted Core Strategy defines the list of larger and smaller villages. Appendix J Village Assessment, indicates the estimated village population and facilities and services supporting the village. Waterhouses has a good range of services and facilities including a primary school, doctors surgery, shop, post office and community centre. The village population includes houses within the Peak District National Park (PDNP) boundary considered to be part of the village. Population is not the determining factor as to whether a settlement is defined as a 'larger' or 'smaller' village and Waterhouses is considered to provide an important service centre on the eastern edge of the district and on the edge of the PDNP. Site WA004 is a mixed use allocation and includes the re-provision of employment within the site. Agreed that this provides an opportunity for local businesses and employment. The preferred option site WA004 is located within the 1998 Local Plan village boundary.

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
PO53	Mr Wiggins				Object	Although building directly behind me will not affect me directly it will have an affect on any wildlife that currently enjoys an area that is both wild and unkempt. ..as I understand the is also the possibility of the underground well if disturbed affecting the current surrounding dwellings	<ul style="list-style-type: none"> The Extended Phase 1 habitat Survey 2015 assessed the present and potential ecological value of the proposed site allocations ,the Local Wildlife Assessment (2017) assessed sites to establish their potential SBI/BAS status against Staffordshire Wildlife Trust criteria They found that the site had mostly low biodiversity value overall with the exception of the trees which may have the potential to support roosting bats and recommended that a bat survey was carried out
PO95	Mr Nick Simpson				Object	As a resident of Salters Close Im concerned about the proposed development. My property at the rear would loose all it's privacy as I would be looked down from the new builds. Also the new builds would be looked down on from the current houses from the main road. Poor access would also be dangerous as its a very busy road & close to busy junction. The proximity to the prison is ridiculous. My house was built for prison worker as a I knew when I moved here. The prison as grown over the years & so' as the noise it emits. By noise in mean CONSTANT bad language & threats of violance towards inmates. I hear this ALL the time, evenings & weekends when out in my garden. The prison does employ local staff & it should not have to accommodate housing issues been built any closer to it.	<ul style="list-style-type: none"> Issues such as overlooking and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application The Highway Authority has expressed concerns about site access which require consideration to determine whether a solution is possible Any development of this site would be required to submit a noise impact assessment to consider the effect of the YOI and any mitigation measures. There is a policy in the Local Plan regarding pollution which includes noise.
PO1161	Mrs J Fryer				Object	As a Parish Councillor and resident of Werrington for 44 years I have to object to your proposals to develop site WE003. Officers making these decisions, who do not reside in this area, should listen to local people who do. Site WE003 is a greenbelt area with outstanding vistas which residents greatly value. At a public consultation meeting in 2015 an alternative site was put forward (land off the bottom of Ash Bank Rd, A52) with no real views but officers threw this out as it was on greenbelt land! This dichotomy needs addressing. Site WE003 would result in much more traffic joining the A52 at a point which would make an already dangerous route into the city even more dangerous	<ul style="list-style-type: none"> The land in question is within the Green Belt. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. The review found that the overall impact of

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>particularly for children using the local primary school. We lost the school crossing person on the A52 years ago. Other alternative sites were suggested by residents and these have also been rejected. These were 'infill' sites at the top of Hillside Rd, which is seldom used and then only as a 'short cut' and land off Radley Way which is used for the same purpose. I believe the views of residents should hold more sway than SMDC officers who have no idea of the geography of the area except on paper. Werrington residents deserve greater consideration than they are being offered at the moment. We know more houses have to be built (?) but we know where they SHOULD be built. Please listen to us. We will continue to resist inappropriate developments including a Traveller's Site which I have been informed could be put back into consideration.</p>	<p>development on the site on Green Belt purposes moderate. It recommends considering site WE003 for release from the Green Belt in exceptional circumstances with the northern part of the site being open space to preserve its openness. The capacity of this site has been lowered from 85 to 50 dwellings to take this into account. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt.</p> <ul style="list-style-type: none"> • The Council has considered the alternative sites suggested in the responses to the previous consultation and where appropriate has included the additional sites in the proposed site allocations in the emerging Local Plan. • A number of sites were dropped from the emerging Local Plan after the Site Options consultation. Not all sites were required to meet the Districts housing requirements. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. • There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites have been proposed. Prioritising brown field land over greenfield in all circumstances is not part of Government policy • See response to PO95 regarding highways
PO1437	Mrs J Hodgetts				Object	<p>Regarding the proposed housing on WE003, I would like to bring this to your attention my concerns – The noise from the street now is so noisy and starts at 6am until early hours. So much traffic, can homes etc. be supplied from the supermarket are so big and heavy. Being near the roads and traffic lights make it worse, stopping and starting etc. from four areas. Not able open</p>	<ul style="list-style-type: none"> • See response to PO95 regarding noise and highways • If the district council considered that a development they may adversely impact on local air quality then the applicant is required to undertake air quality

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						our windows in our front bedroom windows for fresh air because of the noise and pollution from the petrol fumes. Also the youth offending detention centre so close, they shout from there windows to each other rows outside, the echoes of that disturbing and at times unbearable to relax. Would you like to live in this development, would other people add to this situation? No safe entrance only by the detention centre	<p>assessments to identify these issues and develop options to mitigate these impacts.</p> <ul style="list-style-type: none"> • There is a policy in the Local Plan regarding the pollution
PO1384	Mrs Christine Meyrick				General comment	As a resident (i have lived in the area for 45years) I wish to object most strongly to the preferred site' WE003 for Werrington + Cellarhead . The parish council in the 2015 consultation suggested another site lower down Ash Bank with better access to the A52 why has this not been looked at? Why has this not been looked at? The preferred Site' will have upwards of 100 cars coming out onto the a52 at the top of a dangerous hill and close to the traffic lights where it is always congested. There are local builders who have been refused for a why? Officers should listen to the residents the schools and the surgeries are already oversubscribed. The site on a wet morning when the children are being taken to school by car, it is gridlocked.	<ul style="list-style-type: none"> • See response to PO95 regarding highways • See response to PO1161 regarding alternative sites
PO1432	Miss B Jack				Object	Response letter submitted [attached]: Object to development of site WE003 for the following reasons: Close proximity to HMYOI site. The anti-social impact of the prison should be taken into consideration, prior to any decision being made on the land. Have the council even considered how dangerous and inappropriate it is close to an institution such as HMYOI Werrington. Local residents currently face anti-social behaviours from the in mates at HMYOI often swearing and shouting till late into the night. Also drug dealing in the field to take the drug up to the prison fences, this has been reported to the police. Poor access onto A52 - Staffordshire County Council acknowledges that this site presents highways problems because it is situated on a busy main road on the brow of a hill. Given that building on WE003 gives the highways concern from a point of entry and that it is already a very busy road surely given that is also in close proximity to a school and bus stops both below and above by the local post office surely this will cause congestion that is already an issue. Infrastructure – Schools – Already oversubscribed schools. Schools some distance away increased car journeys required. A52 very dangerous especially around Washerwall Lane junction. Infrastructure – Other – doctors and dentists already at capacity. Few services in Werrington have to use car to go to other areas shops/schools etc. Demand on local churches. Where are the jobs to support increased population. Landscape – area is greenbelt and inappropriate use Greenbelt review should be undertaken and recommendations taken into account. Do not destroy our countryside. Openness of land should be preserved. Visual impact on landscape and SLA and historic park lands. View of area is wonderful. SCC has produced	<ul style="list-style-type: none"> • See response to PO95 regarding noise, residential amenity and highways • New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas. • National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered. • An assessment of the District's

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>a historic environment assessment for area. This document describes the heritage values of the landscape as of high historical value, high aesthetic and high evidential value. This document recommends 'there is little capacity to absorb change without fundamentally altering the historic landscape character.' Field retains historic hedgerows. Long distance views of Derbyshire and Wem Nature Conservation – natural habitat will be ruined for a wide range of wildlife including pond life. Since the closure of the Werrington prison community pathway this is now over grown and has become a haven for a variety of wildlife and gives a sense of country to what is a beautiful village. Land available and proposed in better areas should therefore be used. WE003 is full of wildlife many of the mature trees surrounding the site are inhabited by bats and many bird species - conserve and enhance biodiversity not destroy it. Flood Risk – land is boggy developing here could cause flooding elsewhere. Could create artificial flood plain on clay land. Amenity (e.g. noise, privacy, loss of light) – loss of privacy, views and amenity. In the comment made by the council in response to the consultation made last summer it states that amenity issues will be assessed in detail once the site has been laid out and planning application has been received. Surely when deciding if a site should be taken into consideration at the current time as this determines whether this land is suitable or not? i.e. if the land is substantially elevated regardless of the type of development residents will be overlooked and their privacy rights shall be affected. Impact of noise, disturbance, overlooking and overshadowing. Scale of development – potential to increase housing numbers in future as field large. Eradicate village status. It would be a shame that so near to the cenotaph that represents our war hero's could face constant traffic coming and going across from it when for years it as been a peaceful place to go and reflect on those we have lost to war. Ash Bank Road strong settlement boundary line. 50 dwellings is out of character with the open nature. Impact on Human Rights – see caselaw - (Bovis Homes Limited v New Forest District Council ADMN 2002 (2202) EWHC 483 "Everyone has the right to respect for his private and family life, his home and his correspondence. There shall be no interference by a public authority with the exercise of this right except such as is in accordance with the law and is necessary in a democratic society in the interests of national security, public safety or the economic wellbeing of the country, for the prevention of disorder or crime, for the protection of health or morals, or for the protection of the rights and freedoms of others. In the Sustainability Appraisal, the proposed delivery of circa 50 dwellings is considered to have a positive effect on the area, however the site is inaccessible to areas of existing employment, which would have a significant negative effect. Similarly, the sites inaccessibility to services and facilities and areas of open space is likely to have a negative</p>	<p>employment land requirements was carried out in The Employment Land Requirement Study the draft Local Plan proposes employment allocations/polices to meet this need</p> <ul style="list-style-type: none"> • See response to PO1161 regarding the Green Belt • The Council has recently undertaken a Landscape, Local Green Space and Heritage Impact Study 2016 to form part of the evidence base to support the Local Plan and assess the potential landscape and heritage impacts of the development allocations. It found the site was suitable for development in heritage terms. It was of medium landscape sensitivity. It recognised the site forms a gap with the existing development and fits well within the existing settlement pattern. It recommended landscape mitigation on the south-eastern and southern boundaries • See response to PO53 regarding wildlife • The Environment Agency has not identified any site specific issues. They recommend that the ecological value of watercourses is enhanced where possible and the impact on water quality is assessed. The Council has completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. Mitigation measures will be taken as part of the site development to address any surface water issues. • Any development will need to take account of the Cenotaph and the policies in the Local Plan regarding heritage assets • The local plan process is being followed is in accordance with the national planning policy

						<p>affect. Also, the sites district ecological importance is likely to have a negative affect, as could the development of greenfield grade 4 ALC land and the sites proximity to historic assets is assessed as having a negative effect.</p>	
PO1442	Mr Spencer Hodgetts				Object	<p>I am writing to oppose the above on environmental grounds. My wife and I moved into 386 Ash Bank during 8//2005. At this time behind our property there was a concrete lined footpath (leading to the detention centre) and simple wooden fence wildlife appeared to be very light. In the 11 years since we moved in we have trained a thick hedge along the fence line. The concrete path now has a leaf and mould covering – to form a substantial wildlife corridor. Subsequently y house sparrow, and starlings numbers both decline species have shown large increases in decline because of the fatal viruses) have shown a large no increase in gold finch, bull finch, and very recently green finches now regularly attend our garden feeders. The natural wildlife corridor the old walkway now supports several hedgehogs would quickly reverse. To build on this developing wildlife corridor would very quickly reverse – the encouraging recovery. As an alternative site – pls look again at in fill, perhaps along the lower end of ash bank where there is a clear gap/right hand side before brook house lane to complete this ribbon</p>	<ul style="list-style-type: none"> • See response to PO53 regarding wildlife • See response to PO1161 regarding alternative sites
PO1212	Miss Samantha Simpson				Object	<p>I wish to express my opinions on the development of area WE003. The development on the land here will not be sustainable for residents of Werrington Village. Those most affected will be living on Salters Close. The residents of Salters Close already have to deal with the chaotic foul language of which is bellowed by the inmates of Her Majesty's Youth Detention Center. They can be heard most nights and is more of a problem in the summer as it can ruin perfectly nice evenings sitting outside in the garden. The houses being built will be closer to the prison so the foul language will be louder and clearer. This is not ideal to young families who I believe are the target audience for these new houses. It immoral for young children to be brought up with this kind of language and behaviour so close to their homes where they should feel safe and at peace. The building of houses on this area will also be eradicating the privacy of the residents on salters close as the ground of which is being proposed, is slightly elevated compared to the current land that has been built on at Salters Close. This means that those in the new houses will be able to see everything in the current residents windows and gardens. They will also have no longer a view of Greenland and countryside, which is a key factor to why lots choose to purchase houses in werrington. This urban look is often unattractive to current residents of the area and is not wanted. The removal of the field will also kill wildlife present in its own habitat. Animals such as rabbits, foxes, badgers, pheasants and birds can be seen in the field regularly and the removal of the trees will leave birds with no place to nest and no place for bats</p>	<ul style="list-style-type: none"> • See response to PO95 regarding residential amenity, highways and proximity YOI • Loss of views is not a material planning consideration • See response to PO53 regarding wildlife

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						to live in either. These types of animals can be seen regularly and are lovely to watch and take photos of, especially in the spring while they raise their young. The development here will also cause a hazard to those on the road and pedestrians. The A52 which runs next to the development area is already extremely busy and can be dangerous at the best of times. The 40mph road is fast with a long hill which can be dangerous in wet conditions, even worse with ice and snow. I personally fear more so for the young children of Werrington Primary School, many of which need to cross this road to get their education. Children may not be road aware and are at more of a risk to stepping out on the road and getting injured or potentially death. No one should want to risk this to the young children who learn here. I hope this helps you towards your final decision of where you will develop.	
PO1413	Mr T D Hughes				Object	After residing in Werrington for over 40years I would like to make a strong objection to the above planning proposal. The panoramic views overlooking green belt and that I and my late wife have enjoyed over the year will disappear, and what will become of the wildlife sanctuary adjacent to the rear of property. Perhaps more importantly what worries me most of the time is the volume of traffic on Ashbank Road at certain times comes to a standstill, making it impossible to get out of ones driveway. In addition the local schools and off course the village surgeries are pretty much full to capacity. If Werrington expands anymore surely we will become part of Stoke on Trent and possibly lose our village status.	<ul style="list-style-type: none"> • See response to PO1212 regarding loss of views • See response to PO53 regarding wildlife • See response to PO95 regarding access • See response to PO1432 regarding infrastructure
PO1232	Mrs T Wiggins				Object	As a lifetime resident of Werrington I wish to express my concerns regarding the proposed site of WE003. During the last consultation and the consultation held by Werrington Parish Council it was discussed and agreed by the majority of the residents who attended the open meeting that the development of land known as WE003 was against the wishes of all residents. Alternative sites were put forward by the Parish Council and also the residents of Werrington, these sites have not been taken into consideration and in some cases have not been correctly investigated for potential development sites. I would request the officers involved in the proposed development sites regarding Werrington to actually visit the village to assess what damage would be caused by an on mass development proposal: <ul style="list-style-type: none"> • Greenfield Site • Close proximity to YOI site • Poor access onto site as suggested by Highways Department • Nature Staffordshire County Council acknowledges that this site presents highways problems because it is situated on a busy main road on the brow of a hill. Given that building on WE003 gives the highways concern from a point of entry and that it is already a very busy road surely given that is also in close proximity to a school and bus stops both below and above by the local post office surely this will cause congestion that is already an issue. There are many other reasons why the area marked WE003 	<ul style="list-style-type: none"> • Residents' views have been sought as part of the consultations. The Council must balance this evidence against all the other evidence relating to this site and reach a decision on whether or not to include it as a development site in the Local Plan. • There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites have been proposed. Prioritising brown field land over greenfield in all circumstances is not part of Government policy • See response to PO53 regarding wildlife • See response to PO95 regarding highways and proximity to YOI • See response to PO1432 regarding the Cenotaph • See response to PO1161 regarding alternative sites

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						should not be built on, since the closure of the Werrington prison community pathway this is now over grown and as become a haven for a variety of wildlife and gives a sense of country to what is a beautiful village. Land available and proposed in better areas should therefore be used. It would be a shame that so near to the cenotaph that represents our war hero's could face constant traffic coming and going across from it when for years it as been a peaceful place to go and reflect on those we have lost to war.	
PO1433	Mr M Cooper				Object	We003 School site already over capacity built on Again over capacity dangerous turning in on the brow of the hill A place of natural beauty underground spring bat population nesting birds on ground in field Noisy, loss of privacy unspoilt being overlooked one property. Conservation area is too much not acceptable Bats birds nesting underground spring Property purchased close for its quiet location and beauty and privacy as I mention above birds and bats nesting categorically the wrong site for development. Such an incompetent decision made by small minds we shall fight this all the way, of that you can be sure. Alternative site bottom of Werrington road right hand side going down still within the moorland boundary	<ul style="list-style-type: none"> • See response to PO1432 regarding infrastructure • See response to PO53 regarding wildlife • See response to PO95 regarding residential amenity • See response to PO1161 regarding alternative sites
PO1205	mrs sarah tweedie				Object	I am emailing to express my concerns for development on green belt land in werrington for building housing when there are alternative areas available not to mention the sustainability of already saturated services within the community for the doctors and schools. I believe destroying this piece of land to build housing is wrong and alternative locations should be considered.	<ul style="list-style-type: none"> • See response to PO1432 regarding infrastructure
PO851	Mr Peter Davies				Object	The WE003 site is unsuitable for additional housing for the following reasons. 1 Access, the potential access to this site is on the brow of a hill which has unsuitable visibility splays in either direction. I also understand the Highways Authority has also objected under safety grounds? 2 The traffic on the A52 is already too heavy and at rush hour times the queues are really bad and stretch all the way into the city.	<ul style="list-style-type: none"> • See response to PO95 regarding highways
PO1163	Ms J Morrison				Object	My name is Jocelyn Morrison and I am a former District Councillor and current Parish Councillor. I wish to object most strenuously to the proposed development of site WE003. Site WE300 is a greenbelt area with outstanding vistas which residents greatly value. The Parish Council held a public consultation meeting in 2015 where an alternative site was put forward which was land off the bottom of Ash Bank Rd, A52. This has no real views. Officers threw this out as it was on greenbelt land! I do not understand how one green belt site is acceptable and another is not! The A52 is a very busy main road. Site WE003 would result in much more traffic joining the A52 at a point which would make an already dangerous route into the city even more dangerous particularly for children using the local primary school. We lost the school crossing person on the A52 years ago. As a result of the Public Meeting other	<ul style="list-style-type: none"> • See response to PO1161 regarding Green Belt and alternative sites • See response to PO95 regarding highways

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>alternative sites were suggested by residents and these have also been rejected. These were 'infill' sites at the top of Hillside Rd, which is seldom used and then only as a 'short cut' and land off Radley Way which is used for the same purpose. Officers making these decisions, who do not reside in this area, should listen to local people who do. I believe the views of residents should hold more sway than SMDC officers who have no idea of the geography of the area except on paper. Werrington residents deserve greater consideration than they are being offered at the moment. We know more houses have to be built but we know where they SHOULD be built. Please listen to us.</p>	
PO1166	Mr and Mrs N Jack				Object	<p>1) I am extremely concerned about the access to the site known as WE003. No access to the site currently exists and anew access road will need to be created. A road at the northern end of the site next to the HMYOI would open onto Ashbank road on the brow of a hill which when considering how busy the road is and the limited vision that drivers will have both entering and leaving the site would be considered highly dangerous as even the highway code states that you must not stop on the brow of a hill. Access to the north western area of the site would again open up onto the busy A52 near the junction of Salters Lane/Washerwall lane, this is a busy junction at the best of times but when its rush hour and the hinderance of school traffic both for the primary and high school and bus stops in both directions just passed the traffic lights the traffic is often chaotic and grdlocked. Adding a further road to this chaos would surely only make matters worse and put drivers lives at risk? 2) The councils response to last years consultation stated that "Amenity issues will be assessed in detail once a site layout..... and application has been received"- surely when deciding on whether a site is suitable and appropriate concerns of privacy; loss of light and being overlooked should be taken into consideration i.e. If the land is substantially elevated (which WE003 is) residents privacy rights will be affected regardless of what sort of development there is. The anti-social impact of the prison should be taken into consideration. Has the council considered how dangerous and inappropriate the placement of homes would be being so close to the prison. Local residents currently have issues with inmates shouting and swearing during the day and night. Also drug dealers use the surrounding fields including WE003 to take drugs to the prison fences. Many residents commented on this at a local Parish meeting held recently. 3) Questions still remain unanswered surrounding the Werrington infrastructure an its ability to cope with more demand on the areas services. The doctors, dentist and schools are full or almost full to capacity surely adequate provisions need to implemented before any form of development is considered and implemented. 4)The council states in its "obligation to Co operate" policy that working with neighbouring / bordering authorities will be</p>	<ul style="list-style-type: none"> • See response to PO95 regarding highways, residential amenity and proximity to YOI • See response to PO1432 regarding infrastructure • National planning guidance states that the Council should seek to meet the development needs of their area. Housing allocations are needed to ensure the Districts housing requirement is met. • See response to PO1161 regarding alternative sites • The Green Belt Review recommended that site WE033 was not released from the Green Belt

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						discussed, surely these discussions need to take place prior to land being released from Green belt? SOT have an abundance of brown sites only a mile or two down the road regeneration partnerships should be a priority. 5) The site WE033 at cellarhead seems to have been dropped, this seems strange as the land has recently started to be developed (3 houses built in the last 12 months), the land owner is known locally as keen to proceed with further development however the council have decided to mark the site as "constrained" even though it is safer and easier to access has this been overlooked by the council as it seems a bit ridiculous to remove something that has already been started?	
PO1168	Mr and Mrs S Shaw				Object	<p>Following receipt of your recent flyer regarding a proposed new development I wish to write to you and strongly object to this proposal, I feel I have a number of valid reasons why planning permission should not be granted. We live at 396 Ashbank Road which backs onto the proposed development site. We are writing to ask that you refuse the planning application based on the following reasons: 1- We purchased our property on Ashbank Road with a view to retire in a peaceful and picturesque location surrounded by countryside. When viewing this property I fell in love with the view from my back door, how could you not surrounded by lush green fields, trees and wildlife. It is our dream retirement home. Upon purchase of the property my estate agent highlighted that the view added approximately £5,000 to the value of our property. Searches carried out at the time did not suggest any potential up and coming developments. We're absolutely horrified at the prospect of potential development; I can't believe you are considering building and over ruling the green belt policy. 2- We moved here from a busy town environment and wish to retire to a semi-rural community where we can live peacefully without the hustle and bustle of others. I feel the proposed building site will take this away from us. We have worked so hard and have always dreamed of living in a place like this. It really is a lovely quiet little village. 3- Currently we are not over looked and no one can see into our garden. The proposed site is an invasion of privacy and will definitely impact on the peaceful surroundings of our home, not to mention the adjoining properties. We feel the mass, bulk and proximity of the proposed development would present an overbearing and intrusive element to us and the neighbouring properties. The development is inappropriate for a Green Belt area and feel it has a harmful impact on the open, rural and undeveloped character of this Green Belt land. 4- The village is currently at capacity with an over subscribed school and a GP surgery with an appointment wait time of approx 2 weeks. What would another 40 households do to these already over stretched facilities? 5- If plans are granted and work is to commence I dread to think of the noise and pollution the building work will cause. This would also be visually over baring and make living in my home very</p>	<ul style="list-style-type: none"> • See response to PO1212 regarding loss of views • See response to PO53 regarding wildlife • Loss of property value is not a material planning consideration • See response to PO95 regarding residential amenity and proximity to YOI • See response to PO1161 regarding Green Belt • See response to PO1432 regarding infrastructure • See response to PO1437 regarding pollution

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						uncomfortable. 6- We live approximately 300 meters from Werrington Young Offenders Institute. On a daily basis when inmates are being exercised we hear inmates shouting and goading each other. Some of their use of language is colorful and am not sure this site is appropriate for developing a new estate where potential young families will be living. 7- We have a considerable amount of wildlife living within this green belt area and feel that there has been no consideration regarding this! Numerous surveyors have been to scope out the land but what will happen to the wildlife and habitats that surround? Have you considered this? We invite you to visit our home to verify that these objections are valid. Therefore, we ask Staffordshire Moorlands District Council to refuse this Planning Application and encourage it to be moved to a more suitable site within the Staffordshire Moorlands area.	
PO1170	Mr H Weston					These developments would have a monumental impact on the village. Ash bank Road at present cannot cope with the existing traffic. At times there is a tailback from Werrington traffic lights to Moorside school. This leads to not being able to enter or exit your own driveway. Also the volume and noise of the traffic which includes HGV's, Buses and other vehicles is horrendous. As Werrington's population is largely made up of older residents more building and extra road usage would impact on their safety and quality of life. Encroachment on the Green Belt and on Wildlife would be unthinkable. We live in an area of Natural Beauty with an abundance of Wildlife and feel this needs to be protected. Infill Building would be the more acceptable answer and would, in turn, protect the Green Belt and Village status.	<ul style="list-style-type: none"> • See response to PO95 regarding highways and proximity to YOI • See response to POPO53 regarding wildlife • See response to PO1161 regarding Green Belt and alternative sites
PO1177	Ms J Forster				Object	I have just attended a local residents /parish council meeting tonight to discuss the proposed development of 111 houses in Werrington. I wish to support the view put forward at the meeting, that Smdc revisit the previous sites identified and review it's proposals. In particular I object to the development at the back of Ash Bank Road. By allowing this to take place will increase the likelihood that you will allow further development along this stretch of road in the future. Congestion on the A52 is already an issue! Not to mention the greenbelt. A point was raised that the Young Offenders Institute may close in Werrington in the near future. A large area of land will become available.....	<ul style="list-style-type: none"> • See response to PO95 regarding highways and proximity of YOI • See response to PO1161 regarding Green Belt and alternative sites
PO1183	Ms V Williams				Object	I write in reference to the preferred housing sites WE003 and WE052, I am very concerned about the access to these sites being off the A52 Ash Bank Road. Being a resident on this road, it is already difficult enough to get into or out of our drive at times due to the volume and speed of traffic that travels on it. At certain times of day this road is already congested resulting in queuing traffic trying to get into Hanley. We do not have in infrastructure to support these houses in the village, we cannot register at the dentist, it can take 3 weeks to get a drs	<ul style="list-style-type: none"> • See response to PO95 regarding highways • See response to PO1432 regarding infrastructure, employment and impact on the Cenotaph • See response to PO53 regarding wildlife • See response to PO1437 regarding pollution

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>appointment and the schools are already at capacity. There is not work to support the families that would move into these houses so this would mean more commuters and more congestion which would impact negatively on the existing residents. The traffic noise and pollution would increase and Ash Bank road is noisy enough as it is. We have contacted Staffordshire county council on numerous occasions about our concerns regarding the safety of the 40mph speed limit on this stretch of road as two schools are accessed from it and it is an accident waiting to happen, adding another 75 homes into this area will only make this situation worse. Our war memorial is a place where people can go and reflect and remember our war heroes, this building will have a negative effect on this area. These areas are in the greenbelt and I have seen owls hunting on the area of land WE003 we need to protect our wildlife and open spaces in order to maintain the status of our village. During times of adverse weather this area of road becomes treacherous we have regularly seen cars sliding down past HMYOI, this would be even more dangerous with another access road on the left. The safety of the children walking to and from school should be paramount and adding all this extra traffic will have a negative effect on this. I would urge you to look at the parish councils proposed sites again and take into account the views of the local residents as we are the ones who will have to live with the decision that is made. Please consider this a formal objection to these proposed sites.</p>	
PO1186	Mr Darren Williams				Object	<p>I absolutely object to the plans to build houses in Werrington on the A52. My drive is directly accessed from this already dangerous road and I have emailed the County Council many times about my concerns-especially the 40mph limit. The large number of schoolchildren (who are socially urged to walk more) walking on a very narrow footpath (next to the chip shop/Chinese). I urge someone to carry out this task in the flesh as a HGV hurtles past at speed, believe me it is very unnerving! There WILL be an accident, my previous emails have stated this and my concerns are documented. It is only a matter of time. So instead of addressing this and introducing speed calming measures or speed reduction, the bright idea of an additional strain on the very dangerous stretch of road, incredible. Yes, you can then reduce the speed but can you reduce the number of cars? In each direction leaving Werrington, obviously people would HAVE to travel out of the VILLAGE to work, there is severe congestion. Towards Cheadle, Weston Coyney, Leek and in particular Hanley. I see the traffic daily and avoid it if at all possible. Werrington needs traffic REDUCING, not increasing. The obvious strains on doctors, churches, dentist, facilities for young people etc. will be felt but the most interesting strain is the one on schools. Ridiculously, there is currently building work ongoing putting 30 houses where</p>	<ul style="list-style-type: none"> • See response to PO95 regarding highways • See response to PO1432 regarding infrastructure

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>a school used to be! These are not yet completed and the effect and impact of the extra strain on the VILLAGE hasn't yet taken effect. Less than a mile away at Cellarhead, additional "affordable housing" has been built. Most of these have yet to impact the area with additional children. Let's take the 30 houses behind Oak Mount Road, averaging 2.4 children each=132 people, approximately 60 cars. Really, this hasn't even been absorbed into the area yet. How on Earth can the VILLAGE take more and more without monitoring the effect of the already bursting population? I urge someone to queue in the traffic taking children to Moorside High School, then turn around into more traffic to queue through Werrington into Hanley. Then try the walk to school, if you dare. Please document this as an absolute formal objection to these proposals and acknowledge receipt of this prior to the deadline date.</p>	
PO1195	Mr Paul Dean				Object	<p>I object to anymore houses being built in Werrington - it is an act of lunacy and disrespect to the existing residents! The tensions are building up and how much more are we expected to take before matters get out of hand, you have a social responsibility towards us and make our lives bearable. My proposition would be to build an entirely new village, if we really do have to be build in the Moorlands, preferably towards the Tean and Blythe Bridge area by the A50 where there is a large road in place for ease of access and transport. This would then offer people the selection of choice of either accessing Derby and Burton-on-Trent or Stoke on Trent for retail and employment. It can be seen Stoke on Trent is failing badly and by building houses in Werrington you are isolating them from opportunities, I personally try not to set foot in Stoke-on-Trent any longer and many in the village are of the same opinion. There are far too many houses in Werrington now and this started in the 1980s with the Meigh Road estate and especially in the 1990s when you built the Hill Village Road estate. Even now they are building more houses on the old Werrington First School site, in fact they are squeezing them in, causing a grotesque eyesore - ENOUGH IS ENOUGH! The junction at Washerwall Lane is not going to get any bigger and the gridlocks are a daily occurrence and this is not environmentally friendly, the pollution is getting out of hand as the road congestion increases. The A52 down into Stoke-on-Trent is not going to change and it is the same for the A53 from Leek, these roads were put in place a long time ago and there is nothing you can do to enable them to have a larger carrying capacity. Only foolish people will sit around loading data into a computer trying to come up with some solution to later find in practice it fails, this seems to be the approach they take in Stoke-on-Trent. Both the A52 and A53 are operating on maximum capacity and cannot carry anymore vehicles - have you conducted a recent traffic survey? There was no foresight back when they were built to increase capacity, so only the most ignorant of planners will</p>	<ul style="list-style-type: none"> • See response to PO95 regarding highways • See response to PO1166 regarding the need for development • See response to PO1432 regarding infrastructure and flooding • See response to PO1437 regarding pollution

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						attempt to try anything. Other infrastructure within Werrington is also at capacity such as the Doctors and School and we do not want any more shops or take aways being built here either! If people desire urban living they can go and live in the City - as this is a village. I am also concerned about the rising water table in the village and existing flooding problems as there are Springs everywhere, the road names Draw Well Lane and Washerwall Lane give indication of this. I see no evidence of any hydrological surveys and whether the existing drains can take anymore new builds. To build more houses in the Moorlands around the Stoke-on-Trent boundary is the wrong approach to take for future generations and we will only get sucked into the continuing failures of that City. Although there was recent talk of a boundary change and Werrington becoming a part of Stoke-on-Trent, so if you do decide to build more houses here it may be worth my time to start lobbying for a boundary change. I want to make representation and speak to somebody at the Council as soon as possible regarding this.	
PO1204	Mr Travis Simpson				Object	I wish to express my concerns with the plans proposed by Staffs Moorlands Council. I feel that there are many disadvantages to these plans and this could be costly to our local community as well as the wildlife surrounding it. One example of this is that the prisoners often make lots of noise, which even we, from Salters Close, can hear vividly. As you can expect, this language is not appropriate for anybody to hear. The houses that are proposed to be built will hear this much louder. This means that people wont be interested in living next door to a prison, thus meaning the houses will likely remain empty and a waste of council money. The proposed houses will also besmirch scenery and animals' habitat which is not worth sacrifice, especially considering that there are other places which wont ruin habitats which can still provide houses. I am also concerned that the houses will result in a lack of privacy for my family and myself. They would look directly down into my bedroom window where my bed is. I hope that you take everyone's concerns into consideration.	<ul style="list-style-type: none"> • See response to PO95 regarding residential amenity and proximity to YOI • See response to PO53 regarding wildlife
PO1206	Ms Sharon Meyrick				Object	I am writing to you re plans for the proposed site WE003 in Werrington. I am a very concerned home owner of Werrington who has lived in Werrington for most of my life. The infrastructure of our village is at breaking point already, with the schools over subscribed and it is almost an impossibility to get a doctors appointment within a decent amount of time unless it is an emergency. Also the main road will struggle to cope with any more traffic pouring onto its already too busy area of the young offenders and the oakmount estate. The area proposed for the WE003 site for the 50 houses I believe to be green belt anyway so I cannot understand why it has to be built on anyway. There are more and more houses being built in and around our village of Werrington which I think is ample for our area. In short the idea	<ul style="list-style-type: none"> • See response to PO1432 regarding Infrastructure • See response to PO95 regarding highways • See response to PO1161 regarding Green Belt

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						of the additional 50 houses to be built in that area is in my opinion ludicrous and should be scrapped.	
PO1213	Mr Steven Brown				Object	<p>Following the receipt of the recent flier regarding the new developments I am objecting strongly to the proposals for developing the area WE003 for housing for the following reasons.... 1. I bought my current property on Ashbank Road as I wished to be by green belt land / fields / countryside and as the enclosed photo "view" shows the reason why. The estate agent said the "view" added an extra £5000 to the value for the aspect and now you are proposing to over rule green belt policy and blot the landscape by building an estate on open grassland. Will I be compensated for the loss in property value? Will I have to pursue this issue to be compensated? My next door neighbour bought his house 12 months ago for the same reason and no searches at the time showed anything, and now he finds this proposal is now a reality. Do you think this is reasonable?? 2. From a personal perspective there are considerable wildlife habitats which you're so called "expert" surveyors when wandering around / "assessing" failed to notice. These will be affected. See the enclosed photos from my garden, it is awarded a mention by Staffordshire Wildlife Trust as a wildlife friendly garden and as these are nightly occurrences they will be adversely affected by destroying their habitats. Do you think this is reasonable?? 3. Building an estate on this greenbelt land will cause noise and traffic pollution for all the people adjoining the proposed site. Do you think this is reasonable ?? 4. Werrington now has over subscribed schools and a GP surgery full to capacity with appointment times running into weeks, how will adding additional houses and the consequent population increase help this ? Do you think this is reasonable ?? 5. Having lived here for a while and observing this almost daily occurrence in the evening there is a scenario for the "inmates" at the young offenders institution to be exercising/playing football etc and their shouting and swearing is readily heard from my house 300 metres away. Is this the place to site houses maybe with young families who will have to listen to this kind of language ? Do you think this is reasonable ?? 6. We are a designated village community and area WE003 is by and large inhabited by people who wished to live in a semi-rural area and not be blighted by housing estates and so bought properties near to open fields etc. There are various other sites within the Staffordshire Moorlands remit that could be developed without ruining the prospects of people who have saved up to live here or retire in this lovely village. Do you think this is reasonable ?? I don't expect any feedback from this but it is not solely my objection to this proposal, I am speaking for the residents affected by this matter. Photographs supplied (see attached).</p>	<ul style="list-style-type: none"> • See response to PO1161 regarding Green Belt • See response to PO1168 regarding loss of property value • See response to PO53 regarding wildlife • See response to PO1432 regarding infrastructure • See response to PO95 regarding the proximity to YO1 • See response to PO1437 regarding pollution
PO1216	Mrs Elizabeth				Object	Having lived in Werrington for most of my life, I have tonight attended a public meeting arranged by Werrington Parish Council	<ul style="list-style-type: none"> • Policies in the Local Plan will require an element of new housing provision to be

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
	Holdcroft					to discuss the District Council's proposals for housing in Werrington. I fully accept that additional housing is required in Werrington in the period up to 2031. I would particularly suggest that affordable housing is required for people who grew up in Werrington who want to return here and it would be good if that could be a condition put on some of the properties. However I do have concerns about the sites current being suggested by the Council. It is being suggested that 81 of the proposed houses will be at the "top" of Werrington. This is a very big development in a relatively concentrated area and will therefore intensify any existing issues. - Drainage in Werrington is already an issue and a development of this size will put tremendous pressure on the existing drains. - This will also cause traffic issues in a defined area on what is already a very busy main road. Already the traffic backs up to Johnson Avenue at busy times so this will be exacerbated further. I would like to suggest that any proposals for new housing should spread the developments throughout the village, and that this may be more acceptable to the current residents. A linear development on the YOI land, along the side of the road and in line with the existing houses, would be an acceptable compromise position between the need for additional houses in Werrington and the views of the local people. I also appreciate that this would not meet the quantity of houses required and therefore I would suggest that other sites in Werrington should be considered so that the impact in any one area is minimised. I realise that there may have to be some use of green belt land - as there is in the Council's own proposals - and would therefore suggest a further linear development at the bottom of Ash Bank (on the northern side of the road in between the existing two rows of houses), with the remainder of the houses being positioned in Clough Lane or in Winterfield Lane - where again the development could be linear rather than a large housing estate.	<p>affordable</p> <ul style="list-style-type: none"> • See response to PO1432 regarding flooding • See response to PO95 regarding highways • See response to PO1161 regarding alternative sites
PO1224	Mr Andrew Aston				Object	I wish to register my objection and dissatisfaction to the proposed housing allocation on Ash Bank Road on what is currently green belt land. Werrington is a small village on the outskirts of Stoke-On-Trent and any large development would detrimentally affect its character for numerous reasons. The doctor's surgery in particular is already under intense pressure from the elderly demographic. There is now just one Primary school for such an increasingly large catchment area and class sizes could only suffer. Traffic at the crossroads and surrounding environs, as well as residential parking is already at bursting point; a greater number of vehicles are likely to exacerbate this issue. Water run-off on that side of the road and bank is currently manageable, but it could be the case that this development would reduce water retention and result in localised flooding. I would hope that the planning committee take these points into consideration before making a hasty decision.	<ul style="list-style-type: none"> • See response to PO1432 regarding infrastructure and flooding • See response to PO95 regarding highways

PO1225	Mrs Karen Simpson				Object	I have lived in Salters Close, Werrington, for over 22 years and originally bought this house, with my husband, with one of the main reasons being the stunning rear view of country side from our garden, kitchen and bedroom windows. Please find attached a few photo's that have been done by my daughter. I wish to object to plans to build around the back of Salters Close for the following reasons: The ground proposed for building is Green Belt. Scenery will be lost. Wildlife will be killed. There will be no privacy. Our family home will loose financial value. With the ascending landscape at the back, our house will be grossly overlooked as the new houses will have an elevated advantage looking down over ours. The properties in Salters Close were built with a downstairs bathroom My family, including two teenage children, will be unable to open the downstairs bathroom window to release steam as houses would be able to see directly in our bathroom (photo's attached). Traffic volumes would be increased right by a school crossing that has many near misses as it is. We are already heavily burdened with shouting and swearing coming from the prison, sometimes fighting can be heard. People will not want to pay for a brand new house and have to put up with that sort of noise pollution. I believe, for that reason, if the new houses were to be built there would be a large number that would remain empty as they would be hard to sell. Selling new houses without informing new home owners of noise pollution from prison could cause legal problems for the Council in the future. The new houses will also be hard to sell because they will be grossly overlooked by the big houses on Ash Bank that will have an elevated advantage over new ones.	<ul style="list-style-type: none"> • See response to PO1161 regarding the Green Belt • See response to PO53 regarding wildlife • See response to PO95 regarding residential amenity and proximity to the YOI • See response to PO1437 regarding pollution
PO1228	Mrs Cheryl Holdcroft				Object	I had planned to attend the meeting regarding the building proposal for Werrington, at the Methodist Church. Unfortunately I am unable, but would like to register my feelings with regards to the proposals. I live at Ash Bank and the HMYOI is directly behind me. The last time any building work was done there, the proposal was an extension to visitor centre and car par. They tripled the size of the prison itself. I have no objection to the building of suitable properties, but I do object to them being built within 200 yards of the centre. I am a good 150-200 yards away, and I have to put up with the shouting out of the windows into the early hours of the morning. I pity anyone who would have to live closer to the centre than that. I also object to the building on green belt land. Please register my objection, I feel very strongly about this. I look forward to individual consultations.	<ul style="list-style-type: none"> • See response to PO1161 regarding the Green Belt • See response to PO95 regarding residential amenity and proximity to the YOI
PO1241	Mrs Christine Chadwick				Object	I write in connection with the above planning application. I have examined the plans and I know the site well. I wish to object strongly to the development of the proposed houses in this location. Why build on green belt land when there are brown field sites and other suitable locations in the area. Pressure on the village would be considerable; the reasons are the inadequacy of the Ashbank Road. It is heavily used by heavy	<ul style="list-style-type: none"> • See response to PO1161 regarding the Green Belt • See response to PO95 regarding highways, residential amenity and proximity to YOI • See response to PO1432 regarding infrastructure

						goods, buses, private cars. Rush hour is horrendous and at times I can not get in or out of my drive at these peak times. Schools, Doctors and other amenities would be subject to unsustainable pressure. The outstanding natural beautiful view from my home and the concern for the active wild life Foxes, Hares, Rabbits, and Birds etc. My other concerns to this development are: 1 Greenbeltland 2 Close proximity HMYOI site 3 Poor access onto the A52 as suggested by the Highways Department. Where I live near Washer wall Lane junction deeply concerns me due to the volume of traffic we get now with out adding to it. 4 Increased population is unsupportable for employment. 5 Eradicate village status. 6 50 Dwellings is out of character with the open nature, do not destroy our countryside, openness of land should be preserved. This development would deeply infringe on my privacy and family life.	<ul style="list-style-type: none"> • See response to PO1212 regarding loss of views • See response to PO53 regarding wildlife • See response to PO1432 regarding landscape
PO1412	Mrs Christine Chadwick				Object	I write in connection with the above planning application and I know the site well. I wish to object to the development of the proposed houses in this location. Why build on green belt land when there are brown field's sites and other suitable locations in the area. Pressure on the village would be considerable; the reasons are inadequacy of Ash Bank Road. It is used by HGVS, buses, private cars. Rush hour is horrendous and at times I cannot get in or out of my drive. Schools ad Drs and other amenities would be subject to a sustainable pressure. The outstanding natural beautiful view from my home and the concern for the active wild life, foxes, hares, rabbits, and birds etc.	<ul style="list-style-type: none"> • See response to PO1161 regarding the Green Belt • See response to PO1232 regarding brownfield sites • See response to PO1432 regarding infrastructure • See response to PO95 regarding highways
PO1243	Mr and Mrs Derek Brindley				Object	My wife and I have just returned from a Public Meeting in discussing plans to build 111 houses in Werrington from now to 2031. We are left with serious concerns after viewing plans of potential sites. We live at Oak Mount opposite a potential site for 50 houses. Whilst we recognise a need of housing we believe strongly they could be better located. We ask that original plans as submitted in September 2015 be reviewed. We OBJECT STRONGLY to current proposals. Our objections include: - all locations feed immediately onto an existing busy main road, the A52 is already difficult to negotiate and overcrowded with heavy vehicles. - there is lacking the infrastructure such as doctors, schooling etc. - further eating away green belt area which would leave it vulnerable for the future and further considerations for development.	<ul style="list-style-type: none"> • See response to PO1161 regarding the Green Belt • See response to PO1432 regarding infrastructure • See response to PO95 regarding highways
PO1261	Mr Paul Seabridge				Object	The meeting regarding release of land for a housing association building program is quite soon & I was only made aware of it on sunday the 30th. I am unable to attend the meeting you have set up, I do however have comments I wish to put forward. 1. I understand that the old infants school off stonehouse road is already set to be developed into a sizable housing project. 2. adding these additional plots of land for a housing association to develop into no doubt lots of smaller houses, will mean that	<ul style="list-style-type: none"> • See response to PO1432 regarding infrastructure • See response to PO95 regarding highways • See response to PO1168 regarding property value

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						the already over capacity doctors & local schools will be beyond bursting point & even more difficult or impossible to get into for the already existing residents. 3. the A52 main road to hanley / cellerhead is already gridlocked & at a standstill during a good part of the day (i.e.)school & work start/finish hours also clough lane - Hulme lane - Winterfield lane are both badly maintained & tricky to negotiate safely during rush hours or snow & ice conditions, especially at the end of Winterfield lane where it joins leek road, it is now normally blocked partly by the vehicle repair business recovery wagon & cars that seem to be parked up on the road most daytimes at the leek road end. 4. due to the additional traffic this can / will cause delays to the emergency services traveling up & down the A52 & could therefore at worst could have life threatening implications. 5. if these houses are for a housing association then I also believe the general values of the local property in the are will be affected adversely. 6. it is also questionable if adding a good number of people requiring a housing association property maybe introducing people who have loose morals & therefore a rise in crime or drugs/drink related behaviour could also become a problem. These are just off the top of my head & I am sure there are many other reasons that a scheme of this size should not go ahead. In summary I object strongly to these proposals.	
PO1409	Mrs E Weston				Object	We wish to strongly object to the following WE003, WE053, WE052. These developments would have a monumental impact on this village. Ash Bank Road at present cannot cope with the existing traffic. At times there is a tailback from Werrington traffic lights to Moorside School. This leads to not being able to enter or exit your own driveway. Also the volume and noise of the traffic which included HGV's buses and other vehicles is horrendous. As Werrington population is largely made up of older residents more building and extra road usage would impact on their safety and quality of life. Encroachment on the green belt on wildlife would be unthinkable. We live in an area of natural beauty with abundance of wildlife and feel this needs protected. Infill building would be the more acceptable answer and would, in turn, protect the green belt and Village Status	<ul style="list-style-type: none"> • See response to PO95 regarding highways • See response to PO1161 regarding the Green Belt • See response to PO53 regarding wildlife
PO1406	Mrs B Turnock				Object	About the preferred site WE003 in Werrington, how this site can be considered, I live across the road from it, especially in summer you can hear the prisoners shouting and swearing, so how do you think people in the house right on top of the prison will be,, no one in their right mind would want to live there, and the road in that area is chaos we have trouble getting off our drive now, as there needs some calming measures in on this new road now. Get in the Drs Now is difficult, now this village cannot cope now and we always thought this land was green belt? What about the school, you have put new housing on the old school, but I believe you have let them of get off without making provisions for affordable houses? This site is not suitable for house or anything	<ul style="list-style-type: none"> • See response to PO1432 regarding infrastructure • See response to PO95 regarding highways • See response to PO95 regarding proximity to YO1

						else where vehicles are involved, the way these cars/bike s etc. speed you would think it's a motorway.	
PO2076	Mr Andy Boys	Werrington Parish Council			Object	Object - Proximity to YOI, a significant encroachment into Green Belt and as identified by SCC presents traffic problems. (extract only - please read full response submitted).	<ul style="list-style-type: none"> • See response to PO1161 regarding the Green Belt and alternative sites • See response to PO1432 regarding infrastructure • See response to PO95 regarding highways
PO3859	Mr Spencer Hodgetts				Object	Following the well attended meeting organised by Werrington Parish Council on the 15th June 2016. We must further add our support to the voted on, and agreed proposal that all potential sites be revisited again with a view to looking at the far less intrusive and acceptable option of fulfilling the required housing numbers through in-fill along all the initially proposed sites and with linear development along existing building lines - rather than by block building down into greenfield sites. Yours faithfully, Spencer and Jean Hodgetts	<ul style="list-style-type: none"> • See response to PO1161 regarding alternative sites
PO9378	Mr Nick Simpson				Object	I have lived in Salters Close for over 24 years. I brought this property in mind to raise a family & to have a little piece of countryside with in green belt area. I feel that due to the land been owned by the prison & no longer wanted by them that it is in the government's best/own financial interest to sell & develop it regardless of the views of the people of Werrington. With any development at the rear of my house I would lose all of my privacy. With what would be raised elevation new builds they would look down directly into my home. Also houses behind them would be looking down into any new builds. There are a lot of mature trees with in the greenbelt area that would be lost. I have noticed an increase in birds & other wildlife in & around my garden. This also includes hedgehogs & bats which I am unsure where the roost. What I do know is they come out every evening. I feel has Werrington is known for its height/location & one of the main views overlooking miles of open countryside from the memorial monument would be lost forever. Access to very busy road is going to cause its own problems. Traffic currently backs quite a way from the crossroads & seems to have seen arise in the number of minor road accidents. More junctions – More risk. The houses in & around this area should be given the choice to stay as they were intended (built on edge of lovely countryside) & NOT become part of a housing estate. I would have thought a better all-round solution would be to consider building on land located to the south of the housing estate on Chatsworth drive as would have less impact. To build homes so close to a prison seems to me to be ridiculous. The noise from the prison can be very audible & constant. The inmates are not shouting the queens English, it's foul & abusive language. This goes on very late into the night & can obviously spoil evenings sitting in the garden – no one wants to hear it. Summer months I even have to close my windows to get to sleep. If I was to sell my home I	<ul style="list-style-type: none"> • See response to PO95 regarding highways, residential amenity and proximity to YOI • See response to PO53 regarding wildlife/trees • See response to PO1161 regarding alternative sites • See response to PO1437 regarding pollution

						believe I would legally be obliged to note on the sellers property information form the noise pollution from the prison. Surely the same would go for any new homes as this problem is obvious. To me & others Werrington is a special place to live and does not need to be spoilt by unwanted over development within green belt. My area is Staffordshire Moorland for a reason & I wish for it to remain so.	
PO9656	Mr Robert McGuinness				Support	I am writing on behalf of my clients concerning the latest consultation by SMDC regarding the Site Allocations Development Plans to re-affirm the following: That they confirm their willingness for land allocated to the western part of Site WE003 and known as land adjacent Stonehouse Farm, Werrington to continue to be included within said area for the purposes of proposed housing development (as a preferred site).	Comments noted
PO9528	Mr Nicholas Harding				Object	<p>Object to development of site WE003 for the following reasons: Close proximity to HMYOI site. The anti-social impact of the prison should be taken into consideration, prior to any decision being made on the land. Have the council even considered how dangerous and inappropriate it is close to an institution such as HMYOI Werrington. Local residents currently face anti-social behaviours from the in mates at HMYOI often swearing and shouting till late into the night. Also drug dealing in the field to take the drug up to the prison fences, this has been reported to the police. Poor access onto A52 - Staffordshire County Council acknowledges that this site presents highways problems because it is situated on a busy main road on the brow of a hill. Given that building on WE003 gives the highways concern from a point of entry and that it is already a very busy road surely given that is also in close proximity to a school and bus stops both below and above by the local post office surely this will cause congestion that is already an issue. Infrastructure – Schools – Already oversubscribed schools. Schools some distance away increased car journeys required. A52 very dangerous especially around Washerwall Lane junction. Infrastructure – Other – doctors and dentists already at capacity. Few services in Werrington have to use car to go to other areas shops/schools etc. Demand on local churches. Where are the jobs to support increased population. Landscape – area is greenbelt and inappropriate use Greenbelt review should be undertaken and recommendations taken into account. Do not destroy our countryside. Openness of land should be preserved. Visual impact on landscape and SLA and historic park lands. View of area is wonderful. SCC has produced a historic environment assessment for area. This document describes the heritage values of the landscape as of high historical value, high aesthetic and high evidential value. This document recommends 'there is little capacity to absorb change without fundamentally altering the historic landscape character.' Field retains historic hedgerows. Long distance views of Derbyshire and Wem Nature Conservation – natural habitat will</p>	<ul style="list-style-type: none"> • See response to PO95 regarding residential amenity, proximity of YOI and highways • See response to PO1432 regarding infrastructure, employment, landscape & heritage impact, impact on Cenotaph, local plan process and flooding • See response to PO53 regarding wildlife

						<p>be ruined for a wide range of wildlife including pond life. Since the closure of the Werrington prison community pathway this is now over grown and has become a haven for a variety of wildlife and gives a sense of country to what is a beautiful village. Land available and proposed in better areas should therefore be used. WE003 is full of wildlife many of the mature trees surrounding the site are inhabited by bats and many bird species - conserve and enhance biodiversity not destroy it. Flood Risk – land is boggy developing here could cause flooding elsewhere. Could create artificial flood plain on clay land. Amenity (e.g. noise, privacy, loss of light) – loss of privacy, views and amenity. In the comment made by the council in response to the consultation made last summer it states that amenity issues will be assessed in detail once the site has been laid out and planning application has been received . Surely when deciding if a site should be taken into consideration at the current time as this determines whether this land is suitable or not? i.e. if the land is substantially elevated regardless of the type of development residents will be overlooked and their privacy rights shall be affected. Impact of noise, disturbance, overlooking and overshadowing. Scale of development – potential to increase housing numbers in future as field large. Eradicate village status. It would be a shame that so near to the cenotaph that represents our war hero’s could face constant traffic coming and going across from it when for years it as been a peaceful place to go and reflect on those we have lost to war. Ash Bank Road strong settlement boundary line. 50 dwellings is out of character with the open nature. Impact on Human Rights – see caselaw - (Bovis Homes Limited v New Forest District Council ADMN 2002 (2202) EWHC 483 “Everyone has the right to respect for his private and family life, his home and his correspondence. There shall be no interference by a public authority with the exercise of this right except such as is in accordance with the law and is necessary in a democratic society in the interests of national security, public safety or the economic wellbeing of the country, for the prevention of disorder or crime, for the protection of health or morals, or for the protection of the rights and freedoms of others. In the Sustainability Appraisal, the proposed delivery of circa 50 dwellings is considered to have a positive effect on the area, however the site is inaccessible to areas of existing employment, which would have a significant negative effect. Similarly, the sites inaccessibility to services and facilities and areas of open space is likely to have a negative affect. Also, the sites district ecological importance is likely to have a negative affect, as could the development of greenfield grade 4 ALC land and the sites proximity to historic assets is assessed as having a negative effect.</p>

PO9335	Mrs Julie Smith				Object	As a lifetime resident of Werrington I wish to express my concerns regarding the proposed site of WE003. During the last consultation and the consultation held by Werrington Parish Council it was discussed and agreed by the majority of the residents who attended the open meeting, that the development of the land known as WE003 was against the wishes of said residents. Alternative sites were put forward by the Parish Council and also the residents of Werrington, these sites have not been taken into consideration and in some cases have not been correctly investigated for potential development sites, I would request the officers involved in the proposed development sites regarding Werrington to actually visit the village and assess what damage would be caused by an on mass development proposal: Greenbelt site. Close proximity to YOI site. Poor access onto A52 as suggested by Highways Department. Infrastructure – Schools – Already oversubscribed schools. Schools some distance away increased car journeys required. Infrastructure - Traffic / Transport – entrance to site is on to a dangerous road and near bad bend/brow of hill. Access to A52 difficult especially if on a bike. A52 very dangerous especially around Washerwall Lane junction. Infrastructure – Other – doctors already at capacity. Few services in Werrington have to use car to go to other areas shops/schools etc. Demand on local churches. Where are the jobs to support increased population. Landscape – area is greenbelt	<ul style="list-style-type: none"> • See response to PO1161 regarding alternative sites and the Green Belt • See response to PO95 regarding highways and residential amenity • See response to PO1432 regarding employment, infrastructure, flooding, landscape and local plan process • See response to PO53 regarding wildlife • It is not considered that development of this particular site would be out of proportion with the rest of the village. Any new development taking place will be subject to design policies contained within the new Local Plan

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>and inappropriate use Greenbelt review should be undertaken and recommendations taken into account. Do not destroy our countryside. Openness of land should be preserved. 						on a brow of a hill ! Also you are taking away the peaceful area where people go to remember people who were lost in the war , this area would no longer be a peaceful sanctuary with the addition of new houses already being built on the old school site.	
PO9340	Mrs Lynne Dodd				Object	In our opinion the house planning proposal for werrington is unacceptable no green belt should be used for houses.The original proposal for infill should be used.Ideally we do not want to see anymore new buildings as the roads are choked at certain times of the day.The village surgery cannot attract any new doctors waiting times are rising and with more housing can only get worse.We hope this will be taken into consideration after all we have to live here.	<ul style="list-style-type: none"> • See response to PO 1161 regarding the Green belt • See response to PO95 regarding highways • See response to PO1432 regarding infrastructure
PO9352	Mr Gavin Walters				Object	My property is close to this site - object for the following reasons: Residents are already disturbed by noise from the detention centre so bringing the building housing closer would exacerbate this problem; A clear boundary should be in place just for separation and safety to local residents; When i purchased the house, the report came back and said it was land that couldn't be built on as it was required by the centre; I moved to werrington to join a friendly, safe and quiet neighbourhood. I am worried that the over crowding would completely take this away as having houses all around salters close would obviously bring additional noise and spoil the views and country feel. Basically it ruins the main reasons that I moved to salters close; The entry on ashbank for these houses is dangerous. The brow of a hill is not ideal. Already its a nightmare for the post office visitors so adding this on the same stretch will no doubt cause more accidents; Sewage and drainage should be seriously considered as well. It's not looking too great around salters close and we dont want any errors that cause problems, especially with the unpredictable weather; A bigger concern is that some of the housing will be used for social housing. I am completely against any social houses being built around an area I live. Building in line with the road like what currently is in place down the road would be fine. This doesn't effect the boundary, spoil greenbelt areas and over crowd a quiet area in Werrington.	<ul style="list-style-type: none"> • See response to PO95 regarding proximity to YOI and highways • See response to PO1432 regarding flooding and infrastructure • See response to PO1161 regarding alternative sites
PO9358	Ms ROVEINA MITCHELL				Object	Object to this development for the following reasons: Safety: Ashbank road is an incredibly busy road. It's not only used by the residents of Werrington but by commuters travelling to other parts of the area and of course theres the school which attracts high volumes of traffic. The high volumes of traffic makes it difficult to cross the road on regular occasions. I also fear for the safety of children living close by. This can also lead to traffic accidents. Boundary of the HMYOI: Noise levels are surprising high, I can hear sirens and shouting at all hours. I can imagine this only increasing if houses at situated closer to the detention centre. I also believe this would be rather intimidating/scary for children living in close proximity. I think it's important to have some sort of boundary/space between residential housing and	<ul style="list-style-type: none"> • See response to PO95 regarding highways, residential amenity and proximity to YOI • See response to PO53 regarding wildlife • See response to PO1166 regarding the need for houses • See response to 1161 regarding the Green Belt • See response to PO9335 regarding development design

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>the detention centre. What if something we to go wrong or individuals were to escape. I realise that is an extreme case, but prisoners have escaped from prisons before in Britain so it's something to take into account. Having space (what there is now) in between the detention centre and residential homes increases safety. Extra minutes are vital in dangerous situations. Please take this into consideration! Quality of life: This is incredibly important There are several reasons why Werrington is a desirable place to live. The sense of space is one of those reasons. Thats why I believe the proposed areas would be better for the community - the new home quota is met and the sense of space and greenery is maintained. This isn't just about the existing residents but for the new residents too, they should be able to enjoy the same benefits. I moved here from London and the main reason I moved here is because of the sense of space. It's quiet and private, this is so important. Desirability of the area: This is a big factor when it comes to the prosperity of an area. There is always a direct correlation between prosperity and desirability. One of the best things about Werrington is that it actually has a village feel despite being so close to Stoke. By 'filling in the gaps' this will diminish. This will also destroy the spirit of the village. Considering Werrinton is so close to Stoke it's very attractive and pleasant. Because Stoke has a history within an industry there is a large volume of social housing, cramped areas and terence houses. Having places like Werrington helps with the city's overall living standards. It would be a great shame to loose this. I believe Longton was once considered a nice place to live especially as it has large family houses. But as the gaps were filled this destroyed the value of the area. Overcrowding definitely contributes to the demise of an area - another reason why I believe having the new houses spread around is much better. Please keep Werrington as a nice place to live and not just somewhere that use to be nice. Local factors: The roads are in a terrible state - This could only get worse with more houses squashed along Ashbank road. Green Belts - they are important. Not only for the local community but for local wildlife too. I see several foxes, rabbits, pheasants, numerous birds and several other animals. Because much of the surrounding land is farm land it's important to have something left somewhat wild for animals to live and flourish. House prices will be negatively affected by the district councils proposals. Overall, I understand new houses need to be built due to the demand but please consider carefully where these should be built. By following the parishes proposals you meet the quota and everything which makes the village a nice and safe place to live are maintained.</p>	
PO1386	Mr and Mrs C Beech				Object	<p>As a resident (i have lived in the area for 45years) I wish to object most strongly to the preferred site' WE003 for Werrington + Cellarhead . PO246	Mr Simon Freisner	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	Support	<p>SITE WE013 - LITTLE ASH FARM, ASH BANK ROAD, WERRINGTON</p> <p>On behalf of my I write in support of the site's draft Potential Allocation in the Local Plan and the presumed removal of the site and the adjoining potential allocated site WE027 from the Green Belt. Discussions have taken place with the owner of the adjoining site and (WE027) and both owners accept that the two sites would be best served by a joint access. The site's advantages are:</p> <ul style="list-style-type: none"> · 98 out of the 99 comments received by the Council supported the development of the land. · The site is partially 'brownfield' or previously developed land as there is already a house and substantial outbuildings there. The remainder of the site, whilst possibly greenfield land is garden laid to grass and includes a hard surface tennis court. · The land is immediately available. · There are trees on the boundaries bordering the green belt which would provide screening. · There would be relatively little impact on the openness of the Green Belt. The Green Belt Review carried out for the Council recommends the site's release. · The land has low ecological value such that it was not assessed in the Phase 1 ecological review carried out for the Council. · There is an existing access to the house which could be used as joint access to the adjoining land. · There is no flood or contamination risk. 	Support noted
PO485	Ms Lynne Boulton				General comment	<p>I have previously commented on the potential significant detrimental impact of this development, on the residents of those properties which back onto the proposed site, and the adjoining area (WE027); also the effect on drainage and the environment around those properties which are adjacent to the field to the rear of the site. The field provides a habitat home to a large number of wildlife species, including owls and badgers, which could be negatively affected. There will be inevitable disruption to us local residents during the development phase (noise, dust and traffic movements) and in future, loss of privacy and open views to the rear of our properties. There will also be a consequent reduction in value of those properties affected. Although there will be less impact on me and my close neighbours from housing in this preferred area, I am particularly concerned about ongoing development 'creep, ie once an access is created to the site, along with the infrastructure to support the properties being built (roadways and utility services), there is nothing to prevent the area expanding over time and occupying more of the open rural land. I would like reassurance that this will not happen. The ground space which will be occupied by this and the adjacent site, will also reduce the gap between our rural village in Staffordshire Moorlands, and the city of Stoke-on-Trent.</p>	<ul style="list-style-type: none"> • The site is not a designated wildlife site. It was not been assessed in Extended Phase 1 Habitat Survey 2015 if it is taken forward as an allocation consideration will need to be given to the biodiversity of the site. • Problems arising from the construction period of any works, e.g. noise, dust, construction vehicles, hours of working (covered by Control of Pollution Acts) are not material planning considerations • The land in question is within the Green Belt. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. The review found that the overall impact of development on the site on Green Belt purposes was limited. It recommended that the site could be considered for release under exceptional circumstances.

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
							<p>In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt.</p> <ul style="list-style-type: none"> • Issues such as overlooking, screening and other impacts on existing residents will be assessed in detail once a site layout has been determined at the time a planning application is received and residents will have the opportunity to comment on the content of that application. • The Local Plan will provide certainty for local communities and developers through policies guiding the overall level and location of development. Planning applications must be determined in accordance with the Local Plan unless material considerations indicate otherwise.
PO1178	Ms J Forster				Object	<p>I have just attended a local residents /parish council meeting tonight to discuss the proposed development of 111 houses in Werrington. I wish to support the view put forward at the meeting, that Smdc revisit the previous sites identified and review it's proposals. In particular I object to the development at the back of Ash Bank Road. By allowing this to take place will increase the likelihood that you will allow further development along this stretch of road in the future. Congestion on the A52 is already an issue! Not to mention the greenbelt. A point was raised that the Young Offenders Institute may close in Werrington in the near future. A large area of land will become available.....</p>	<ul style="list-style-type: none"> • See response to PO485 regarding future development and the Green Belt • The Highway Authority consider the site may be acceptable subject to detail of access design and visibility. It would need to be developed with WE027 to be adequate for adoption as highway.
PO1187	Mr Darren Williams				Object	<p>I absolutely object to the plans to build houses in Werrington on the A52. My drive is directly accessed from this already dangerous road and I have emailed the County Council many times about my concerns-especially the 40mph limit. The large number of schoolchildren (who are socially urged to walk more) walking on a very narrow footpath (next to the chip shop/Chinese). I urge someone to carry out this task in the flesh as a HGV hurtles past at speed, believe me it is very unnerving! There WILL be an accident, my previous emails have stated this and my concerns are documented. It is only a matter of time. So instead of addressing this and introducing speed calming measures or speed reduction, the bright idea of an additional strain on the very dangerous stretch of road, incredible. Yes, you can then reduce the speed but can you reduce the number of cars? In each direction leaving</p>	<ul style="list-style-type: none"> • See response to PO1178 regarding highways • New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. 						<p>Werrington, obviously people would HAVE to travel out of the VILLAGE to work, there is severe congestion. Towards Cheadle, Weston Coyney, Leek and in particular Hanley. I see the traffic daily and avoid it if at all possible. Werrington needs traffic REDUCING, not increasing. The obvious strains on doctors, churches, dentist, facilities for young people etc. will be felt but the most interesting strain is the one on schools. Ridiculously, there is currently building work ongoing putting 30 houses where a school used to be! These are not yet completed and the effect and impact of the extra strain on the VILLAGE hasn't yet taken effect. Less than a mile away at Cellarhead, additional "affordable housing" has been built. Most of these have yet to impact the area with additional children. Let's take the 30 houses behind Oak Mount Road, averaging 2.4 children each=132 people, approximately 60 cars. Really, this hasn't even been absorbed into the area yet. How on Earth can the VILLAGE take more and more without monitoring the effect of the already bursting population? I urge someone to queue in the traffic taking children to Moorside High School, then turn around into more traffic to queue through Werrington into Hanley. Then try the walk to school, if you dare. Please document this as an absolute formal objection to these proposals and acknowledge receipt of this prior to the deadline date.</p>	<p>is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered.</p>
PO1197	Mr Paul Dean				Object	<p>I object to anymore houses being built in Werrington - it is an act of lunacy and disrespect to the existing residents! The tensions are building up and how much more are we expected to take before matters get out of hand, you have a social responsibility towards us and make our lives bearable. My proposition would be to build an entirely new village, if we really do have to be build in the Moorlands, preferably towards the Tean and Blythe Bridge area by the A50 where there is a large road in place for ease of access and transport. This would then offer people the selection of choice of either accessing Derby and Burton-on-Trent or Stoke on Trent for retail and employment. It can be seen Stoke on Trent is failing badly and by building houses in Werrington you are isolating them from opportunities, I personally try not to set foot in Stoke-on-Trent any longer and many in the village are of the same opinion. There are far too many houses in Werrington now and this started in the 1980s with the Meigh Road estate and especially in the 1990s when you built the Hill Village Road estate. Even now they are building more houses on the old Werrington First School site, in fact they are squeezing them in, causing a grotesque eyesore - ENOUGH IS ENOUGH! The junction at Washerwall Lane is not going to get any bigger and the gridlocks are a daily occurrence and this is not environmentally friendly, the pollution is getting out of hand as the road congestion increases. The A52 down into Stoke-on-Trent is not going to change and it is the same for the A53 from Leek, these roads were put in place a long time ago and there is nothing you</p>	<ul style="list-style-type: none"> • See response to PO1187 regarding infrastructure • See response PO1178 regarding highways • Any new development taking place will be subject to policies contained within the new Local Plan, which seek to protect the character of the area is considered • The Environment Agency consider there are known flooding issues in the area and The Staffordshire Local Lead Flood Authority have it on their records as a flooding hotspot . The EA have requested a level 2 SFRA to be completed if the site is to be considered for allocation. • If the district council considered that a development they may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts • There is a policy in the Local Plan regarding the pollution

						<p>can do to enable them to have a larger carrying capacity. Only foolish people will sit around loading data into a computer trying to come up with some solution to later find in practice it fails, this seems to be the approach they take in Stoke-on-Trent. Both the A52 and A53 are operating on maximum capacity and cannot carry any more vehicles - have you conducted a recent traffic survey? There was no foresight back when they were built to increase capacity, so only the most ignorant of planners will attempt to try anything. Other infrastructure within Werrington is also at capacity such as the Doctors and School and we do not want any more shops or take aways being built here either! If people desire urban living they can go and live in the City - as this is a village. I am also concerned about the rising water table in the village and existing flooding problems as there are Springs everywhere, the road names Draw Well Lane and Washerwall Lane give indication of this. I see no evidence of any hydrological surveys and whether the existing drains can take anymore new builds. To build more houses in the Moorlands around the Stoke-on-Trent boundary is the wrong approach to take for future generations and we will only get sucked into the continuing failures of that City. Although there was recent talk of a boundary change and Werrington becoming a part of Stoke-on-Trent, so if you do decide to build more houses here it may be worth my time to start lobbying for a boundary change. I want to make representation and speak to somebody at the Council as soon as possible regarding this.</p>	
PO1209	Mr Philip Jones				Object	<p>I apologise for the late submission of my concerns regarding one of the proposed sites for housing in Werrington, I have only recently found the leaflet posted to us. I have attempted to use your portal but it appears to be inaccessible. I am writing to raise concerns regarding the proposed site opposite the road Bridal Path and adjacent to 244 Ashbank Road. (Site codes WE013 and WE027). 1) When we bought the house back in 2009 we were aware that the house had been subject to at least 2 floods which caused considerable damage to the inside of the property. After an investigation by the council department responsible, it was found that a small brook that runs behind the property had been covered over, with a pipe used to supposedly allow the water to run through. The council took steps to force the land owner to return the brook to its original condition. This seemed to have rectified the issue. 2) The land owner has also applied on a number of occasions to build on this land and it has been refused on both occasions. It seems ridiculous that the council is now looking at adding this site to build houses on. 3) We have issues with our garden being sodden for most of the year and if we now add the addition of more concrete going into the ground as foundations for the properties and the road I am worried that this will only exacerbate the problem. 4) As the number of vehicles on the road have increased over the years we have</p>	<ul style="list-style-type: none"> • See response to PO1197 regarding flooding • See response to PO1178 regarding highways

						found it more and more difficult to exit our drive onto the main road, the position of our drive and our neighbours including the proposed exit of the housing development makes it very difficult to view vehicles coming down the bank, also with the business premises directly opposite the new access/exit site we have at present constant near miss accidents with cars pulling onto and off the open car parking area this may be a risk factor you need to consider.	
PO1217	Mrs Elizabeth Holdcroft				Object	Having lived in Werrington for most of my life, I have tonight attended a public meeting arranged by Werrington Parish Council to discuss the District Council's proposals for housing in Werrington. I fully accept that additional housing is required in Werrington in the period up to 2031. I would particularly suggest that affordable housing is required for people who grew up in Werrington who want to return here and it would be good if that could be a condition put on some of the properties. However I do have concerns about the sites current being suggested by the Council. It is being suggested that 81 of the proposed houses will be at the "top" of Werrington. This is a very big development in a relatively concentrated area and will therefore intensify any existing issues. - Drainage in Werrington is already an issue and a development of this size will put tremendous pressure on the existing drains. - This will also cause traffic issues in a defined area on what is already a very busy main road. Already the traffic backs up to Johnson Avenue at busy times so this will be exacerbated further. I would like to suggest that any proposals for new housing should spread the developments throughout the village, and that this may be more acceptable to the current residents. A linear development on the YOI land, along the side of the road and in line with the existing houses, would be an acceptable compromise position between the need for additional houses in Werrington and the views of the local people. I also appreciate that this would not meet the quantity of houses required and therefore I would suggest that other sites in Werrington should be considered so that the impact in any one area is minimised. I realise that there may have to be some use of green belt land - as there is in the Council's own proposals - and would therefore suggest a further linear development at the bottom of Ash Bank (on the northern side of the road in between the existing two rows of houses), with the remainder of the houses being positioned in Clough Lane or in Winterfield Lane - where again the development could be linear rather than a large housing estate.	<ul style="list-style-type: none"> • Policies in the Local Plan will require an element of new housing provision to be affordable • See response to PO1197 regarding flooding • See response to PO1178 regarding highways • There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites have been proposed.
PO1245	Mr and Mrs Derek Brindley				Object	My wife and I have just returned from a Public Meeting in discussing plans to build 111 houses in Werrington from now to 2031. We are left with serious concerns after viewing plans of potential sites. We live at Oak Mount opposite a potential site for 50 houses. Whilst we recognise a need of housing we believe strongly they could be better located. We ask that original plans	<ul style="list-style-type: none"> • See response to PO1178 regarding highways • See response to PO1187 regarding infrastructure • See response to PO485 regarding Green Belt

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						as submitted in September 2015 be reviewed. We OBJECT STRONGLY to current proposals. Our objections include: - all locations feed immediately onto an existing busy main road, the A52 is already difficult to negotiate and overcrowded with heavy vehicles. - there is lacking the infrastructure such as doctors, schooling etc. - further eating away green belt area which would leave it vulnerable for the future and further considerations for development.	
PO2081	Mr Andy Boys	Werrington Parish Council			Support	Support - generally maintains line of buildings and not substantial encroachment into Green Belt. (extract only - please read full response submitted).	Support noted
PO2702	Mr Martin Ross	Environment Agency			Object	If it is decided to continue with sites in the floodplain or likely to be following the application of the Sequential Test, then further work in the form of a Level 2 SFRA will be required for the following site: WE013 which along with WE027 is adjacent to Watercourses with no mapped floodplain. This does not mean the site is within Flood Zone 1. It is imperative that the flood risk to these sites is quantified prior to final submission as it may affect the deliverability of the sites, particularly the smaller ones in Werrington. Because in both cases the sites are adjacent to each other, producing one model for each is more cost effective than needing to for individual sites.	Comments noted
PO2576	Mrs Maggie Taylor	Planning Manager Sport England			Object	The proposal appears to lead to the loss of a football pitch and tennis court. This is not in accordance with NPPF 74 unless the sports facilities are going to be replaced. If so this needs to be a requirement in the Local Plan document.	<ul style="list-style-type: none"> Comments noted. Awaiting results of the Open Space Study regarding open space provision. The facilities referred to are in private ownership.
PO9342	Mrs Lynne Dodd				Object	In our opinion the house planning proposal for Werrington is unacceptable no green belt should be used for houses. The original proposal for infill should be used. Ideally we do not want to see anymore new buildings as the roads are choked at certain times of the day. The village surgery cannot attract any new doctors waiting times are rising and with more housing can only get worse. We hope this will be taken into consideration after all we have to live here.	<ul style="list-style-type: none"> See response to PO485 regarding Green Belt See response PO1178 regarding highways See response to PO1187 regarding infrastructure
PO9353	Mr Gavin Walters				Object	Object to development here. Building in line with the road like what currently is in place down the road would be fine. 						available.	
PO1188	Mr Darren Williams				Object	<p>I absolutely object to the plans to build houses in Werrington on the A52. My drive is directly accessed from this already dangerous road and I have emailed the County Council many times about my concerns-especially the 40mph limit. The large number of schoolchildren (who are socially urged to walk more) walking on a very narrow footpath (next to the chip shop/Chinese). I urge someone to carry out this task in the flesh as a HGV hurtles past at speed, believe me it is very unnerving! There WILL be an accident, my previous emails have stated this and my concerns are documented. It is only a matter of time. So instead of addressing this and introducing speed calming measures or speed reduction, the bright idea of an additional strain on the very dangerous stretch of road, incredible. Yes, you can then reduce the speed but can you reduce the number of cars? In each direction leaving Werrington, obviously people would HAVE to travel out of the VILLAGE to work, there is severe congestion. Towards Cheadle, Weston Coyney, Leek and in particular Hanley. I see the traffic daily and avoid it if at all possible. Werrington needs traffic REDUCING, not increasing. The obvious strains on doctors, churches, dentist, facilities for young people etc. will be felt but the most interesting strain is the one on schools. Ridiculously, there is currently building work ongoing putting 30 houses where a school used to be! These are not yet completed and the effect and impact of the extra strain on the VILLAGE hasn't yet taken effect. Less than a mile away at Cellarhead, additional "affordable housing" has been built. Most of these have yet to impact the area with additional children. Let's take the 30 houses behind Oak Mount Road, averaging 2.4 children each=132 people, approximately 60 cars. Really, this hasn't even been absorbed into the area yet. How on Earth can the VILLAGE take more and more without monitoring the effect of the already bursting population? I urge someone to queue in the traffic taking children to Moorside High School, then turn around into more traffic to queue through Werrington into Hanley. Then try the walk to school, if you dare. Please document this as an absolute formal objection to these proposals and acknowledge receipt of this prior to the deadline date.</p>	<ul style="list-style-type: none"> • See response to PO1180 regarding highways • See response to PO486 regarding infrastructure
PO1198	Mr Paul Dean				Object	<p>I object to anymore houses being built in Werrington - it is an act of lunacy and disrespect to the existing residents! The tensions are building up and how much more are we expected to take before matters get out of hand, you have a social responsibility towards us and make our lives bearable. My proposition would be to build an entirely new village, if we really do have to be build in the Moorlands, preferably towards the Tean and Blythe Bridge area by the A50 where there is a large road in place for ease of access and transport. This would then offer people the selection of choice of either accessing Derby and Burton-on-Trent or Stoke</p>	<ul style="list-style-type: none"> • See response to PO1180 regarding highways • See response to PO486 regarding infrastructure, flooding, • See PO486 how the Local Plan would consider the future development • If the district council considered that a development they may adversely impact on local air quality then the applicant is required to undertake air quality

						<p>on Trent for retail and employment. It can be seen Stoke on Trent is failing badly and by building houses in Werrington you are isolating them from opportunities, I personally try not to set foot in Stoke-on-Trent any longer and many in the village are of the same opinion. There are far too many houses in Werrington now and this started in the 1980s with the Meigh Road estate and especially in the 1990s when you built the Hill Village Road estate. Even now they are building more houses on the old Werrington First School site, in fact they are squeezing them in, causing a grotesque eyesore - ENOUGH IS ENOUGH! The junction at Washerwall Lane is not going to get any bigger and the gridlocks are a daily occurrence and this is not environmentally friendly, the pollution is getting out of hand as the road congestion increases. The A52 down into Stoke-on-Trent is not going to change and it is the same for the A53 from Leek, these roads were put in place a long time ago and there is nothing you can do to enable them to have a larger carrying capacity. Only foolish people will sit around loading data into a computer trying to come up with some solution to later find in practice it fails, this seems to be the approach they take in Stoke-on-Trent. Both the A52 and A53 are operating on maximum capacity and cannot carry anymore vehicles - have you conducted a recent traffic survey? There was no foresight back when they were built to increase capacity, so only the most ignorant of planners will attempt to try anything. Other infrastructure within Werrington is also at capacity such as the Doctors and School and we do not want any more shops or take aways being built here either! If people desire urban living they can go and live in the City - as this is a village. I am also concerned about the rising water table in the village and existing flooding problems as there are Springs everywhere, the road names Draw Well Lane and Washerwall Lane give indication of this. I see no evidence of any hydrological surveys and whether the existing drains can take anymore new builds. To build more houses in the Moorlands around the Stoke-on-Trent boundary is the wrong approach to take for future generations and we will only get sucked into the continuing failures of that City. Although there was recent talk of a boundary change and Werrington becoming a part of Stoke-on-Trent, so if you do decide to build more houses here it may be worth my time to start lobbying for a boundary change. I want to make representation and speak to somebody at the Council as soon as possible regarding this.</p>	<p>assessments to identify these issues and develop options to mitigate these impacts</p> <ul style="list-style-type: none"> • There is a policy in the Local Plan regarding the pollution
PO1210	Mr Philip Jones				Object	<p>I apologise for the late submission of my concerns regarding one of the proposed sites for housing in Werrington, I have only recently found the leaflet posted to us. I have attempted to use your portal but it appears to be inaccessible. I am writing to raise concerns regarding the proposed site opposite the road Bridal Path and adjacent to 244 Ashbank Road. (Site codes WE013 and WE027). 1) When we bought the house back in 2009 we were</p>	<ul style="list-style-type: none"> • See response to PO486 regarding flooding • See response to PO1180 regarding highways

						<p>aware that the house had been subject to at least 2 floods which caused considerable damage to the inside of the property. After an investigation by the council department responsible, it was found that a small brook that runs behind the property had been covered over, with a pipe used to supposedly allow the water to run through. The council took steps to force the land owner to return the brook to its original condition. This seemed to have rectified the issue. 2) The land owner has also applied on a number of occasions to build on this land and it has been refused on both occasions. It seems ridiculous that the council is now looking at adding this site to build houses on. 3) We have issues with our garden being sodden for most of the year and if we now add the addition of more concrete going into the ground as foundations for the properties and the road I am worried that this will only exacerbate the problem. 4) As the number of vehicles on the road have increased over the years we have found it more and more difficult to exit our drive onto the main road, the position of our drive and our neighbours including the proposed exit of the housing development makes it very difficult to view vehicles coming down the bank, also with the business premises directly opposite the new access/exit site we have at present constant near miss accidents with cars pulling onto and off the open car parking area this may be a risk factor you need to consider.</p>	
PO1218	Mrs Elizabeth Holdcroft				Object	<p>Having lived in Werrington for most of my life, I have tonight attended a public meeting arranged by Werrington Parish Council to discuss the District Council's proposals for housing in Werrington. I fully accept that additional housing is required in Werrington in the period up to 2031. I would particularly suggest that affordable housing is required for people who grew up in Werrington who want to return here and it would be good if that could be a condition put on some of the properties. However I do have concerns about the sites current being suggested by the Council. It is being suggested that 81 of the proposed houses will be at the "top" of Werrington. This is a very big development in a relatively concentrated area and will therefore intensify any existing issues. - Drainage in Werrington is already an issue and a development of this size will put tremendous pressure on the existing drains. - This will also cause traffic issues in a defined area on what is already a very busy main road. Already the traffic backs up to Johnson Avenue at busy times so this will be exacerbated further. I would like to suggest that any proposals for new housing should spread the developments throughout the village, and that this may be more acceptable to the current residents. A linear development on the YOI land, along the side of the road and in line with the existing houses, would be an acceptable compromise position between the need for additional houses in Werrington and the views of the local people. I also appreciate that this would not meet the quantity of houses</p>	<ul style="list-style-type: none"> • Policies in the Local Plan will require an element of new housing provision to be affordable • See response to PO486 regarding flooding • See response to PO1180 regarding highways • There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites have been proposed.

						required and therefore I would suggest that other sites in Werrington should be considered so that the impact in any one area is minimised. I realise that there may have to be some use of green belt land - as there is in the Council's own proposals - and would therefore suggest a further linear development at the bottom of Ash Bank (on the northern side of the road in between the existing two rows of houses), with the remainder of the houses being positioned in Clough Lane or in Winterfield Lane - where again the development could be linear rather than a large housing estate.	
PO1246	Mr and Mrs Derek Brindley				Object	My wife and I have just returned from a Public Meeting in discussing plans to build 111 houses in Werrington from now to 2031. We are left with serious concerns after viewing plans of potential sites. We live at Oak Mount opposite a potential site for 50 houses. Whilst we recognise a need of housing we believe strongly they could be better located. We ask that original plans as submitted in September 2015 be reviewed. We OBJECT STRONGLY to current proposals. Our objections include: - all locations feed immediately onto an existing busy main road, the A52 is already difficult to negotiate and overcrowded with heavy vehicles. - there is lacking the infrastructure such as doctors, schooling etc. - further eating away green belt area which would leave it vulnerable for the future and further considerations for development.	<ul style="list-style-type: none"> • See response to PO1180 regarding highways • See response to PO486 regarding infrastructure and the Green Belt
PO2085	Mr Andy Boys	Werrington Parish Council			Support	Support and it is understood that the owner of site WE068 (SHLAA 2015) would release for development. (extract only - please read full response submitted).	<ul style="list-style-type: none"> • Support noted . • SHLAA site WE068 is located in the Green Belt and identified in the Landscape and Settlement Character Assessment as forming important landscape setting to the settlement. It was not taken forward as an option site in the 2015 consultation.
PO2703	Mr Martin Ross	Environment Agency			Object	If it is decided to continue with sites in the floodplain or likely to be following the application of the Sequential Test, then further work in the form of a Level 2 SFRA will be required for the following site: WE027 which along with WE013 is adjacent to Watercourses with no mapped floodplain. This does not mean the site is within Flood Zone 1. It is imperative that the flood risk to these sites is quantified prior to final submission as it may affect the deliverability of the sites, particularly the smaller ones in Werrington. Because in both cases the sites are adjacent to each other, producing one model for each is more cost effective than needing to for individual sites.	<ul style="list-style-type: none"> • Comments noted
PO2575	Mrs Maggie Taylor	Planning Manager Sport England			Object	The proposal appears to lead to the loss of a football pitch and tennis court. This is not in accordance with NPPF 74 unless the sports facilities are going to be replaced. If so this needs to be a requirement in the Local Plan document.	<ul style="list-style-type: none"> • Comments noted.
PO3860	Mr R Duncan	Rob Duncan Planning Consultancy			Support	Confirms that landowner of northernmost section of site has re-affirmed willingness to bring forward site for residential development. Also agrees with recommendations of Green Belt	<ul style="list-style-type: none"> • Comments noted

						Review with respect to WE027. Argues delivery of site is not dependent upon development of WE013.	
PO9344	Mrs Lynne Dodd				Object	In our opinion the house planning proposal for werrington is unacceptable no green belt should be used for houses.The original proposal for infill should be used.Ideally we do not want to see anymore new buildings as the roads are choked at certain times of the day.The village surgery cannot attract any new doctors waiting times are rising and with more housing can only get worse.We hope this will be taken into consideration after all we have to live here.	<ul style="list-style-type: none"> • See response to PO486 regarding the Green Belt and infrastructure • See response to PO1189 regarding highways
PO9354	Mr Gavin Walters				Object	Object to development here. Building in line with the road like what currently is in place down the road would be fine. This doesn't effect the boundary, spoil greenbelt areas and over crowd a quiet area in Werrington.	<ul style="list-style-type: none"> • See response to PO 1218 regarding infill sites
PO9360	Ms ROVEINA MITCHELL				Object	Object to this development for the following reasons: Safety: Ashbank road is an incredibly busy road. It's not only used by the residents of Werrington but by commuters travelling to other parts of the area and of course theres the school which attracts high volumes of traffic. The high volumes of traffic makes it difficult to cross the road on regular occasions. I also fear for the safety of children living close by. This can also lead to traffic accidents. Quality of life: This is incredibly important There are several reasons why Werrington is a desirable place to live. The sense of space is one of those reasons. Thats why I believe the proposed areas would be better for the community - the new home quota is met and the sense of space and greenery is maintained. This isn't just about the existing residents but for the new residents too, they should be able to enjoy the same benefits. I moved here from London and the main reason I moved here is because of the sense of space. It's quiet and private, this is so important. Desirability of the area: This is a big factor when it comes to the prosperity of an area. There is always a direct correlation between prosperity and desirability. One of the best things about Werrington is that it actually has a village feel despite being so close to Stoke. By 'filling in the gaps' this will diminish. This will also destroy the spirit of the village. Considering Werrinton is so close to Stoke it's very attractive and pleasant. Because Stoke has a history within an industry there is a large volume of social housing, cramped areas and terrace houses. Having places like Werrington helps with the city's overall living standards. It would be a great shame to loose this. I believe Longton was once considered a nice place to live especially as it has large family houses. But as the gaps were filled this destroyed the value of the area. Overcrowding definitely contributes to the demise of an area - another reason why I believe having the new houses spread around is much better. Please keep Werrington as a nice place to live and not just somewhere that use to be nice. Local factors: The roads are in a terrible state - This could only get worse with more houses	<ul style="list-style-type: none"> • See response to PO1180 regarding highways • See response to PO486 regarding the Green Belt, wildlife and village character

Q37 Do you have any comments on the housing allocations for the Rural Areas?

						<p>squashed along Ashbank road. Green Belts - they are important. Not only for the local community but for local wildlife too. I see several foxes, rabbits, pheasants, numerous birds and several other animals. Because much of the surrounding land is farm land it's important to have something left somewhat wild for animals to live and flourish. House prices will be negatively affected by the district councils proposals. Overall, I understand new houses need to be built due to the demand but please consider carefully where these should be built. By following the parishes proposals you meet the quota and everything which makes the village a nice and safe place to live are maintained.</p>

PO1172	Mr H Weston				Object	<p>These developments would have a monumental impact on the village. Ash bank Road at present cannot cope with the existing traffic. At times there is a tailback from Werrington traffic lights to Moorside school. This leads to not being able to enter or exit your own driveway. Also the volume and noise of the traffic which includes HGV's, Buses and other vehicles is horrendous. As Werrington's population is largely made up of older residents more building and extra road usage would impact on their safety and quality of life. Encroachment on the Green Belt and on Wildlife would be unthinkable. We live in an area of Natural Beauty with an abundance of Wildlife and feel this needs to be protected. Infill Building would be the more acceptable answer and would, in turn, protect the Green Belt and Village status.</p>	<ul style="list-style-type: none"> • The Highway Authority has expressed concerns about site access which require consideration to determine whether a solution is possible • The land in question is within the Green Belt. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. The review found that the overall impact of development on the site on Green Belt purposes was limited and considered the site could be considered for release under exceptional circumstances. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt. • The Extended Phase 1 habitat Survey 2015 assessed the present and potential ecological value of the proposed site allocations, the Local Wildlife Assessment (2017) assessed sites to establish their potential SBI/BAS status against Staffordshire Wildlife Trust criteria. They found that the site had low biodiversity value overall with the exception of the trees which may have the potential to support roosting bats and recommended that a bat survey was carried out. • There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites have been proposed. • See response to PO1184 regarding noise/pollution.

PO1181	Ms J Forster				Object	I have just attended a local residents /parish council meeting tonight to discuss the proposed development of 111 houses in Werrington. I wish to support the view put forward at the meeting, that Smdc revisit the previous sites identified and review it's proposals. In particular I object to the development at the back of Ash Bank Road. By allowing this to take place will increase the likelihood that you will allow further development along this stretch of road in the future. Congestion on the A52 is already an issue! Not to mention the greenbelt. A point was raised that the Young Offenders Institute may close in Werrington in the near future. A large area of land will become available.	<ul style="list-style-type: none"> • See response to PO1172 regarding highways and Green Belt • The Local Plan will provide certainty for local communities and developers through policies guiding the overall level and location of development. Planning applications must be determined in accordance with the Local Plan unless material considerations indicate otherwise. • A number of sites were dropped from the emerging Local Plan after the Site Options consultation. Not all sites were required to meet the Districts housing requirements. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website.
PO1184	Ms V Williams				Object	I write in reference to the preferred housing sites WE003 and WE052, I am very concerned about the access to these sites being off the A52 Ash Bank Road. Being a resident on this road, it is already difficult enough to get into or out of our drive at times due to the volume and speed of traffic that travels on it. At certain times of day this road is already congested resulting in queuing traffic trying to get into Hanley. We do not have in infrastructure to support these houses in the village, we cannot register at the dentist, it can take 3 weeks to get a drs appointment and the schools are already at capacity. There is not work to support the families that would move into these houses so this would mean more commuters and more congestion which would impact negatively on the existing residents. The traffic noise and pollution would increase and Ash Bank road is noisy enough as it is. We have contacted Staffordshire county council on numerous occasions about our concerns regarding the safety of the 40mph speed limit on this stretch of road as two schools are accessed from it and it is an accident waiting to happen, adding another 75 homes into this area will only make this situation worse. Our war memorial is a place where people can go and reflect and remember our war	<ul style="list-style-type: none"> • See response to PO1172 regarding highways , wildlife and Green Belt • New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas. • National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>heroes, this building will have a negative effect on this area. These areas are in the greenbelt and I have seen owls hunting on the area of land WE003 we need to protect our wildlife and open spaces in order to maintain the status of our village. During times of adverse weather this area of road becomes treacherous we have regularly seen cars sliding down past HMYOI, this would be even more dangerous with another access road on the left. The safety of the children walking to and from school should be paramount and adding all this extra traffic will have a negative effect on this. I would urge you to look at the parish councils proposed sites again and take into account the views of the local residents as we are the ones who will have to live with the decision that is made. Please consider this a formal objection to these proposed sites.</p>	<p>ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered.</p> <ul style="list-style-type: none"> • The Local Plan contains policies regarding heritage assets and the impact on any development on the war memorial will be taken into consideration. • The Environment Agency has not identified any site specific issues. They recommend that the ecological value of watercourses is enhanced where possible and the impact on water quality is assessed. The Council has completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. Mitigation measures will be taken as part of the site development to address any surface water issues. • If the district council considered that a development they may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts. • There is a policy in the Local Plan regarding the pollution
PO1190	Mr Darren Williams				Object	<p>I absolutely object to the plans to build houses in Werrington on the A52. Already the traffic backs up to Johnson Avenue at busy times so this will be exacerbated further. I would like to suggest that any proposals for new housing should spread the developments throughout the village, and that this may be more acceptable to the current residents. A linear development on the YOI land, along the side of the road and in line with the existing houses, would be an acceptable compromise position between the need for additional houses in Werrington and the views of the local people. I also appreciate that this would not meet the quantity of houses	<ul style="list-style-type: none"> • Polices in the Local Plan require an element of new housing to be affordable • See response to PO1184 regarding flooding • See response to PO1172 regarding highways and infill development

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						required and therefore I would suggest that other sites in Werrington should be considered so that the impact in any one area is minimised. I realise that there may have to be some use of green belt land - as there is in the Council's own proposals - and would therefore suggest a further linear development at the bottom of Ash Bank (on the northern side of the road in between the existing two rows of houses), with the remainder of the houses being positioned in Clough Lane or in Winterfield Lane - where again the development could be linear rather than a large housing estate.	
PO1247	Mr and Mrs Derek Brindley				Object	My wife and I have just returned from a Public Meeting in discussing plans to build 111 houses in Werrington from now to 2031. We are left with serious concerns after viewing plans of potential sites. We live at Oak Mount opposite a potential site for 50 houses. Whilst we recognise a need of housing we believe strongly they could be better located. We ask that original plans as submitted in September 2015 be reviewed. We OBJECT STRONGLY to current proposals. Our objections include: - all locations feed immediately onto an existing busy main road, the A52 is already difficult to negotiate and overcrowded with heavy vehicles. - there is lacking the infrastructure such as doctors, schooling etc. - further eating away green belt area which would leave it vulnerable for the future and further considerations for development.	<ul style="list-style-type: none"> • See response to PO1172 regarding highways and Green Belt • See response to PO1184 regarding infrastructure
PO1410	Mrs E Weston				Object	We wish to strongly object to the following WE003, WE053, WE052. These developments would have a monumental impact on this village. Ash Bank Road at present cannot cope with the existing traffic. At times there is a tailback from Werrington traffic lights to Moorside School. This leads to not being able to enter or exit your own driveway. Also the volume and noise of the traffic which included HGV's buses and other vehicles is horrendous. As Werrington population is largely made up of older residents more building and extra road usage would impact on their safety and quality of life. Encroachment on the green belt on wildlife would be unthinkable. We live in an area of natural beauty with abundance of wildlife and feel this needs protected. Infill building would be the more acceptable answer and would, in turn, protect the green belt and Village Status	<ul style="list-style-type: none"> • See response to PO1172 regarding highways, Green Belt, infill development and wildlife • See response to PO1184 regarding noise/pollution.
PO2100	Mr Andy Boys	Werrington Parish Council			Object	Object - would not maintain line of buildings encroaches into Green Belt. (extract only - please read full response submitted).	<ul style="list-style-type: none"> • See response to PO1172 regarding Green Belt
PO9345	Mrs Lynne Dodd				Object	In our opinion the house planning proposal for werrington is unacceptable no green belt should be used for houses. The original proposal for infill should be used. Ideally we do not want to see anymore new buildings as the roads are choked at certain times of the day. The village surgery cannot attract any new doctors waiting times are rising and with more housing can only get worse. We hope this will be taken into consideration after all we have to live here.	<ul style="list-style-type: none"> • See response to PO1172 regarding Green Belt, infill development and highways • See response to PO1184 regarding infrastructure

	Walters					what currently is in place down the road would be fine. This doesn't effect the boundary, spoil greenbelt areas and over crowd a quiet area in Werrington.	pattern of development and the need for site allocations
PO9361	Ms ROVEINA MITCHELL				Object	<p>Object to this development for the following reasons: Safety: Ashbank road is an incredibly busy road. It's not only used by the residents of Werrington but by commuters travelling to other parts of the area and of course there's the school which attracts high volumes of traffic. The high volumes of traffic makes it difficult to cross the road on regular occasions. I also fear for the safety of children living close by. This can also lead to traffic accidents. Boundary of the HMYOI: Noise levels are surprising high, I can hear sirens and shouting at all hours. I can imagine this only increasing if houses at situated closer to the detention centre. I also believe this would be rather intimidating/scary for children living in close proximity. I think it's important to have some sort of boundary/space between residential housing and the detention centre. What if something we to go wrong or individuals were to escape. I realise that is an extreme case, but prisoners have escaped from prisons before in Britain so it's something to take into account. Having space (what there is now) in between the detention centre and residential homes increases safety. Extra minutes are vital in dangerous situations. Please take this into consideration! Quality of life: This is incredibly important There are several reasons why Werrington is a desirable place to live. The sense of space is one of those reasons. Thats why I believe the proposed areas would be better for the community - the new home quota is met and the sense of space and greenery is maintained. This isn't just about the existing residents but for the new residents too, they should be able to enjoy the same benefits. I moved here from London and the main reason I moved here is because of the sense of space. It's quiet and private, this is so important. Desirability of the area: This is a big factor when it comes to the prosperity of an area. There is always a direct correlation between prosperity and desirability. One of the best things about Werrington is that it actually has a village feel despite being so close to Stoke. By 'filling in the gaps' this will diminish. This will also destroy the spirit of the village. Considering Werrinton is so close to Stoke it's very attractive and pleasant. Because Stoke has a history within an industry there is a large volume of social housing, cramped areas and terence houses. Having places like Werrington helps with the city's overall living standards. It would be a great shame to loose this. I believe Longton was once considered a nice place to live especially as it has large family houses. But as the gaps were filled this destroyed the value of the area. Overcrowding definitely contributes to the demise of an area - another reason why I believe having the new houses spread around is much better. Please keep Werrington as a nice place to live and not just somewhere that use to be nice. Local factors: The roads are in a</p>	<ul style="list-style-type: none"> • See response to PO1172 regarding highways, wildlife and Green Belt • Any development of this would be required to submit a noise impact assessment to consider the effect of the YOI and any mitigation measures.

PO219	Mr Steve Whiston	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	Support	The site's removal from the Green Belt would not have an adverse impact on the openness of the Green Belt because it lies between existing houses and would not protrude any further into the Green Belt than the neighbouring houses. Of the ten representations received at the Site Consultation stage nine of them, including the Parish Council, were in support of the proposal.	Comments noted
PO1220	Mrs Y Pointon				Object	<p>Having lived in Werrington for most of my life, I have tonight attended a public meeting arranged by Werrington Parish Council to discuss the District Council's proposals for housing in Werrington. I fully accept that additional housing is required in Werrington in the period up to 2031. I would particularly suggest that affordable housing is required for people who grew up in Werrington who want to return here and it would be good if that could be a condition put on some of the properties. However I do have concerns about the sites current being suggested by the Council. It is being suggested that 81 of the proposed houses will be at the "top" of Werrington. This is a very big development in a relatively concentrated area and will therefore intensify any existing issues. - Drainage in Werrington is already an issue and a development of this size will put tremendous pressure on the existing drains. - This will also cause traffic issues in a defined area on what is already a very busy main road. Already the traffic backs up to Johnson Avenue at busy times so this will be exacerbated further. I would like to suggest that any proposals for new housing should spread the developments throughout the village, and that this may be more acceptable to the current residents. A linear development on the YOI land, along the side of the road and in line with the existing houses, would be an acceptable compromise position between the need for additional houses in Werrington and the views of the local people. I also appreciate that this would not meet the quantity of houses required and therefore I would suggest that other sites in Werrington should be considered so that the impact in any one area is minimised. I realise that there may have to be some use of green belt land - as there is in the Council's own proposals - and would therefore suggest a further linear development at the bottom of Ash Bank (on the northern side of the road in between the existing two rows of houses), with the remainder of the houses being positioned in Clough Lane or in Winterfield Lane - where again the development could be linear rather than a large housing estate.</p>	<ul style="list-style-type: none"> • Policies in the Local Plan require an element of new housing provision to be affordable • The Environment Agency has not identified any site specific issues. They recommend that the ecological value of watercourses is enhanced where possible and the impact on water quality is assessed. The Council has completed a Level 1 Strategic Flood Risk Assessment for the District, the results of which are being used to inform the site selection process. Mitigation measures will be taken as part of the site development to address any surface water issues. • The Highway Authority has not raised any issues which would prevent development of this site. They consider individual units may be acceptable fronting onto Ash Bank Road, each unit would require sufficient space to provide turning facilities in addition to parking. Gradients of the drives would need to be agreed. • There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites have been proposed.
PO1174	Mr H Weston				Object	<p>These developments would have a monumental impact on the village. Ash bank Road at present cannot cope with the existing traffic. At times there is a tailback from Werrington traffic lights to Moorside school. This leads to not being able to enter or exit your own driveway. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. The review found that the overall impact of development on the site on Green Belt purposes was limited and recommended the site could be considered for release under exceptional circumstances. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt.</p> <ul style="list-style-type: none"> The Extended Phase 1 habitat Survey 2015 assessed the present and potential ecological value of the proposed site allocations. It found that the site has low biodiversity value overall in terms of the area.
PO1182	Ms J Forster				Object	I have just attended a local residents /parish council meeting tonight to discuss the proposed development of 111 houses in Werrington. I wish to support the view put forward at the meeting, that Smdc revisit the previous sites identified and review it's proposals. In particular I object to the development at the back of Ash Bank Road. By allowing this to take place will increase the likelihood that you will allow further development along this stretch of road in the future. Congestion on the A52 is already an issue! Not to mention the greenbelt. A point was raised that the Young Offenders Institute may close in Werrington in the near future. A large area of land will become available.....	<ul style="list-style-type: none"> The Local Plan will provide certainty for local communities and developers through policies guiding the overall level and location of development. Planning applications must be determined in accordance with the Local Plan unless material considerations indicate otherwise. See response to PO11220 regarding highways
PO1191	Mr Darren Williams				Object	I absolutely object to the plans to build houses in Werrington on the A52. My drive is directly accessed from this already dangerous road and I have emailed the County Council many times about my concerns-especially the 40mph limit. The large number of schoolchildren (who are socially urged to walk more) walking on a very narrow footpath (next to the chip shop/Chinese). I urge someone to carry out this task in the flesh as a HGV hurtles past at speed, believe me it is very unnerving! There WILL be an accident, my previous emails have stated this and my concerns are documented. It is only a matter of time. So instead of addressing this and introducing speed calming measures or speed reduction, the bright idea of an additional strain on the very dangerous stretch of road, incredible. Yes, you can then reduce the speed but can you	<ul style="list-style-type: none"> See response to PO1220 regarding highways New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas. National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast

						<p>reduce the number of cars? In each direction leaving Werrington, obviously people would HAVE to travel out of the VILLAGE to work, there is severe congestion. Towards Cheadle, Weston Coyney, Leek and in particular Hanley. I see the traffic daily and avoid it if at all possible. Werrington needs traffic REDUCING, not increasing. The obvious strains on doctors, churches, dentist, facilities for young people etc. will be felt but the most interesting strain is the one on schools. Ridiculously, there is currently building work ongoing putting 30 houses where a school used to be! These are not yet completed and the effect and impact of the extra strain on the VILLAGE hasn't yet taken effect. Less than a mile away at Cellarhead, additional "affordable housing" has been built. Most of these have yet to impact the area with additional children. Let's take the 30 houses behind Oak Mount Road, averaging 2.4 children each=132 people, approximately 60 cars. Really, this hasn't even been absorbed into the area yet. How on Earth can the VILLAGE take more and more without monitoring the effect of the already bursting population? I urge someone to queue in the traffic taking children to Moorside High School, then turn around into more traffic to queue through Werrington into Hanley. Then try the walk to school, if you dare. Please document this as an absolute formal objection to these proposals and acknowledge receipt of this prior to the deadline date.</p>	<p>demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered.</p>
PO1201	Mr Paul Dean				Object	<p>I object to anymore houses being built in Werrington - it is an act of lunacy and disrespect to the existing residents! The tensions are building up and how much more are we expected to take before matters get out of hand, you have a social responsibility towards us and make our lives bearable. My proposition would be to build an entirely new village, if we really do have to be build in the Moorlands, preferably towards the Tean and Blythe Bridge area by the A50 where there is a large road in place for ease of access and transport. This would then offer people the selection of choice of either accessing Derby and Burton-on-Trent or Stoke on Trent for retail and employment. It can be seen Stoke on Trent is failing badly and by building houses in Werrington you are isolating them from opportunities, I personally try not to set foot in Stoke-on-Trent any longer and many in the village are of the same opinion. There are far too many houses in Werrington now and this started in the 1980s with the Meigh Road estate and especially in the 1990s when you built the Hill Village Road estate. Even now they are building more houses on the old Werrington First School site, in fact they are squeezing them in, causing a grotesque eyesore - ENOUGH IS ENOUGH! The junction at Washerwall Lane is not going to get any bigger and the gridlocks are a daily occurrence and this is not environmentally friendly, the pollution is getting out of hand as the road congestion increases. The A52 down into Stoke-on-Trent is not going to change and it is the same for the A53 from Leek, these</p>	<ul style="list-style-type: none"> • See response to PO1220 regarding highways and flooding • See response to PO1191 regarding infrastructure • Any new development taking place will be subject to policies contained within the new Local Plan, which seek to protect the character of the area • If the district council considered that a development they may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts. In addition the district council continually monitors air quality across the district and regularly undertakes review and assessments of this data to identify areas where the traffic could have an unacceptable impact on local air quality. • There is a policy in the Local Plan regarding the pollution

						<p>roads were put in place a long time ago and there is nothing you can do to enable them to have a larger carrying capacity. Only foolish people will sit around loading data into a computer trying to come up with some solution to later find in practice it fails, this seems to be the approach they take in Stoke-on-Trent. Both the A52 and A53 are operating on maximum capacity and cannot carry anymore vehicles - have you conducted a recent traffic survey? There was no foresight back when they were built to increase capacity, so only the most ignorant of planners will attempt to try anything. Other infrastructure within Werrington is also at capacity such as the Doctors and School and we do not want any more shops or take aways being built here either! If people desire urban living they can go and live in the City - as this is a village. I am also concerned about the rising water table in the village and existing flooding problems as there are Springs everywhere, the road names Draw Well Lane and Washerwall Lane give indication of this. I see no evidence of any hydrological surveys and whether the existing drains can take anymore new builds. To build more houses in the Moorlands around the Stoke-on-Trent boundary is the wrong approach to take for future generations and we will only get sucked into the continuing failures of that City. Although there was recent talk of a boundary change and Werrington becoming a part of Stoke-on-Trent, so if you do decide to build more houses here it may be worth my time to start lobbying for a boundary change. I want to make representation and speak to somebody at the Council as soon as possible regarding this.</p>	
PO1221	Mrs Elizabeth Holdcroft				Object	<p>Having lived in Werrington for most of my life, I have tonight attended a public meeting arranged by Werrington Parish Council to discuss the District Council's proposals for housing in Werrington. 							<p>provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. The review found that the overall impact of development on the site on Green Belt purposes moderate. It recommends considering site WE003 for release from the Green Belt in exceptional circumstances with the northern part of the site being open space to preserve its openness. The capacity of this site has been lowered from 85 to 50 dwellings to take this into account. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt.</p> <ul style="list-style-type: none"> • There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites have been proposed. Prioritising brown field land over greenfield in all circumstances is not part of Government policy
PO487	Ms Lynne Boulton				General comment	While I accept there is need to plan for developments to support expanding populations, my concern is that this will be to the detriment of our rural communities, that there will be planning 'creep' going forward, and loss of open spaces and privacy for long standing residents who have chosen to live in those rural locations.	<ul style="list-style-type: none"> • Comment noted
PO57	Mr Wiggins				General comment	Rural areas should stay as such without them we won't have areas to go to walk .play or enjoy ...does it all have to be built on	<ul style="list-style-type: none"> • Comment noted
PO9519	Miss B Jack				Object	During the last consultation and the consultation held by Werrington Parish Council it was discussed and agreed by the majority of the residents who attended the open meeting, that the development of the land known as WE003 was against the wishes of said residents. Alternative sites were put forward by the Parish Council and also the residents of Werrington, these sites have not been taken into consideration and in some cases have not been correctly investigated for potential development sites, I	<ul style="list-style-type: none"> • A number of sites were dropped from the emerging Local Plan after the Site Options consultation. Not all sites were required to meet the Districts housing requirements. The site options assessments provided a summary of the key issues and responses. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website.

							<p>circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt. In this instance it is considered there are no exceptional circumstances. The NPPF allows for limited development on brownfield sites in the Green Belt.</p> <ul style="list-style-type: none"> • Open space off Radley Way/Whitmore Avenue are proposed as local green space in line with the findings of the Landscape, Local Green Space and Heritage Impact Study 2016 • WE033 is within the Green Belt. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Review Study provides a strategic review of Green Belt purposes and a more detailed site-based assessment of land which could be considered for review. The review found that the site was not suitable for release from the Green Belt. Limited development can take place in the green belt provided it is in accord with green belt policy.
PO2102	Mr Andy Boys	Werrington Parish Council			Object	<p>The following response is informed by:</p> <p>(a) A public meeting organised by Werrington Parish Council on September 3rd 2015 attended by over 100 residents, views contained in Site Options Response forms completed by residents and a public meeting held on June 15 th 2016 attended by 150 residents. (b) Concerns were expressed at the June 2016 public meeting that SMDC has, in effect, rejected proposals from the September 2015 public meeting. Especially in relation to proposals for alternative sites. Residents and the parish council question whether the ‘consultation’ process is nothing more than manipulation.</p> <p>(b) At both public meetings the following were highlighted: any increase in housing would result in a greater population which would exacerbate existing traffic problems (principally during the ‘rush hours’ especially along Ash Bank Road); existing services such as schools and Doctors Surgery are already at capacity; whilst recognising a need for new housing, wherever possible the Green Belt should be protected, especially from large-scale housing developments; and related, that potential for ‘infill’ sites be explored together with additional sites in preference to those contained in the Site Options Booklet, even though these might have been discounted during earlier assessments by SMDC.</p>	<ul style="list-style-type: none"> • See responses above

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Obejct/ General Comment	Consultee Comments	Officer Response
						With regard to suggested sites for housing development within Werrington & Cellarhead Werrington Parish Council acknowledges that whilst SMDC has undertaken assessments of sites which, for whatever reason it has discounted prior to identifying sites in the Site Options Booklet, the parish council believes that several should now be reconsidered based on criteria suggested in (b) on page 1 of this response. Consequently, in its response Werrington Parish Council has merged replies to questions 4a, 4b, 4c and 7a.	
PO2105	Mr Andy Boys	Werrington Parish Council			Object	<p>NOTES 1. Whilst recognising that SMDC has engaged in an exhaustive process of identifying suitable sites for future housing development and that Werrington Parish Council's proposals differ in several respects from those identified in the July 2015 and June 2016 Site Options Booklets the parish council's response are informed by local residents attending the public meetings on 3rd September 2015 and June 15th 2016. 2. Reasons given for rejecting alternative sites are, in the main, opinions of SMDC Officers (informed in some cases by advice from consultants). Meaningful consultation suggests that where consultees offer alternative proposals they should be seriously considered. On several of the sites the results of the Parish Council's public consultation 'conflict' with officers opinions about the merits of alternative sites. Taken to its ultimate conclusion, reiterating officers' opinions as reasons why alternatives should not be considered suggests that the consultation exercise is flawed. The Parish Council's own public consultations demonstrate overwhelming opposition to substantial intrusion into the Green Belt, suggesting instead an 'infilling' approach and support for the linear approach along Ash Bank Road and less intrusive encroachment into the Green Belt. SMDC acknowledges that in Werrington the prospect of any significant housing development is impossible without encroaching into the Green Belt. Whilst SMDC acknowledged land off Whitmore Avenue and Radley Way is designated as 'open space', following a meeting with SMDC Officers in December 2015 the parish council was advised that both sites " could be improved in the future ". Consequently it is requested that these sites should now be included as site options in order to reduce encroachment into the Green Belt. Whilst SMDC refers principally to the November 2015 Green Belt Review in rejecting several alternative sites supported in Werrington public consultations neither the opinions of officers or consultants should automatically override residents views, for obvious reasons! For example, local opinion considers 'trading off'</p>	<ul style="list-style-type: none"> • See responses above

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Obejct/ General Comment	Consultee Comments	Officer Response
						Green Belt at the southern end of Ash Bank Road even though, as the Green Belt Review 2015 states, it would result in closer merging of the boundary with Stoke-on-Trent. Interestingly, it appears that the extent of residents' objections to Site WE033 led to its removal as a site option. SMDC rejected development of the derelict builders yard in Winterfield Lane because it is outside of the village/development boundary (but the Green Belt Review recommended extending the boundary for several sites supported by SMDC), in the Green Belt, is relatively isolated from services and earmarked as an employment site. However, local opinion favours this site for housing development as less detrimental to the Green Belt than those identified by SMDC.	
PO3861	Mr Clifton Bradeley				Support	Clarify my wish to have the land beside my business (Sub-4 Ltd) at Cellarhead to be included in the proposed plans for the district of Staffordshire Moorland. I have attached two plans of the field adjacent to the building and carpark, which we would like to be considered for any use i.e. housing or commercial land (for jobs). The land is approximately one acre and would be ideal for development due to its location.	<ul style="list-style-type: none"> The emerging Local Plan is no longer proposing to define village boundaries for smaller villages Development in these settlements will need to be in accord with the policies in the Local Plan the Spatial Strategy seeks to focus development to the main towns and larger villages limited growth may be acceptable in the smaller provided it is in scale with the settlement and does not have an adverse impact on the countryside/Green Belt. Applications will be determined on a site by site basis in line with policy in the Local Plan.
PO9658	Mr Robert McGuinness				Object	WE021 - Option Site I am writing on behalf of my clients concerning the latest consultation by SMDC regarding the Site Allocations Development Plans to re-affirm the following: Land off Salters Lane, given the reference WE021 is also available for inclusion within the Council's proposals for Werrington. It is understood that SMDC have removed this site from the latest consultation proposals, but given the recently decided Court of Appeal case of Richborough Estates Partnerships LLP v Cheshire East Borough Council and Secretary of State for Communities and Local Government SMDC may wish to reconsider their stance on the matter. In addition the site is readily available for release by my clients, it is in a sustainable locations and reasonably flat, making development costs acceptable to developers.	<ul style="list-style-type: none"> The site was assessed as a C site in the SHLAA and was not considered suitable for development. Development would significantly alter the settlement edge and would be an intrusion into the open countryside. The site is in the Green Belt. The NPPF states that once established Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt. In this instance it is considered there are no exceptional circumstances.
PO1041 PO3910	Mr Grant Anderson	Fradley Estates	Mr Grant Anderson		Object	PREFERRED OPTIONS SITES AND BOUNDARIES CONSULTATION 4 : LARGER VILLAGES Question 41 The Site Options Consultation Exercise identified a housing requirement for Werrington of 200 houses as part of the Rural Areas wider requirement. ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Obejct/ General Comment	Consultee Comments	Officer Response
						<p>Options Sites and Boundaries Consultations identifies proposed allocations that will deliver 111 dwellings only. It is submitted that Werrington is one of the more sustainable larger villages and that a higher provision than 111 dwellings would be appropriate. We act for Fradley Estates, the owner of land off Tregaron Court/Langton Court, Werrington (“the Site”) which is put forward for housing development in this Plan. It is submitted that the Site should be allocated as one of the housing sites in Werrington. It is further submitted that it would be appropriate to increase the provision of housing for Werrington from 111 to 200. Site Information Site location: Land off Tregaron Court and Langton Court, Werrington – see plan attached. Site Area (ha) About 4.45 ha (including the woodland belts to the north west boundary). Current & most recent land use Agriculture (relatively low value grazing/hay production). Description of site Greenfield Site features The south east boundary of the Site is formed by the rear boundary fences of houses in Tregaron Court, Weston Close, Ferndale Close and Langton Court. The north west boundary is a natural and defensible boundary formed by a stream course. Further east, this stream course forms part of the Green Belt boundary. The south west boundary is formed by mature woodland vegetation comprising a substantial hedgerow and hedgerow trees with associated bridleway. The bridleway lies outside the site. Again, a strong defensible boundary. The north east boundary is represented in part by the stream course referred to above but in the main by the rear of dwellings fronting Uplands Croft. The Site is well contained visually by the hedgerow and hedgerow trees to the bridleway and by a substantial belt of woodland trees near the stream course. The Site is greenfield in character but has not been put to intensive agricultural use, merely used for grazing or for a hay crop. The Site is assessed as being of relatively low ecological value. Available means of access into the site Appropriate access to the Site is available from Tregaron Court and/or Langton Court. Land at the end of both these cul-de-sacs is retained by Fradley Estates following the construction of the adjacent housing estate and these roads were designed to accommodate future housing development beyond. The attached plan demonstrates the extent of the freehold ownership of Fradley Estates. Short term licences have been granted to adjacent householders to temporarily use the land at both points of access so that the land remains available for access purposes for housing development. A highway report by Sanderson Associates was submitted to the Council in</p>	<p>important landscape setting. It is understood access to the site maybe able to be achieved from Tregaron Court.</p> <ul style="list-style-type: none"> The site is in the Green Belt. The NPPF states that once established Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Additional Site Appraisals 2016 found that the site could be considered for release from the Green Belt under exceptional circumstances. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt. In this instance it is considered there are no exceptional circumstances.

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Obejct/ General Comment	Consultee Comments	Officer Response
						<p>December 2015 which concludes that access can be provided to serve the development of the Site which meets all current highway guidwlinwes. Availability of utilities and services All necessary utilities including potable water, foul and surface water drainage, gas, electricity, telecoms etc are available at the periphery of the Site and can be easily extended into the Site to facilitate development. Drainage connections are already available on-site. Public Right of Way/ Peripheral Planting The public right of way (outside the Site) which follows the south west boundary of the Site with hedgerows and hedgerow trees is located on the periphery of the Site and with vehicular access available elsewhere, neither the public right of way nor associated hedgerows and hedgerow trees will constrain the layout or development of the Site. Indeed, it is proposed that both features will be retained/enhanced and incorporated into the development of the Site – see the Concept Layout appended to the Bright & Associates landscape Evidence Report 2015. Constraints The Site is not at risk of flooding; there is no known land contamination; foul and surface water drainage etc is available; the Site is assessed as being of low ecological value; there is no known archaeological or heritage constraint and therefore there are no major impediments to the early development of this Site. Availability The Site and its points of access are wholly owned by Fradley Estates a development company which is of long standing and skilled in bringing forward land for housing development. Fradley Estates has been responsible for building a significant proportion of the existing housing in Werrington and is therefore very familiar with the locality and has a proven track record of delivery. Fradley Estates is willing and able to bring the Site forward for housing in the short term with a projected yield beginning within 5 years. Supporting comments Although the Site is located within the Green Belt, visually, it is well contained by the natural features that are the stream course and in particular by the well established tree belts and hedgerows on the Site periphery and outer boundary. The north east boundary of the Site is formed in part by existing housing development and in part the stream course which forms the outer boundary of the Site. A precedent has therefore been set for the use of this stream course as a defensible green belt boundary. A Landscape Evidence Report by Bright & Associates was submitted to the Council on behalf of Fradley Estates in December 2015 (“LER”). In the context of the need to find housing in a sustainable larger village such as Werrington, it is inevitable that Green Belt land will be</p>	

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Obejct/ General Comment	Consultee Comments	Officer Response
						<p>required. THE LER concluded that in landscape and visual terms the Site is visually well contained and that in terms of the Green Belt, allocation of the Site would be less damaging to the Green Belt than many of the sites considered by the Council including the preferred options. Fradley Estates and its advisers met with Mark James and Pranali Parikh in April 2016 to discuss the Site. It was agreed at that meeting that the Site had been incorrectly classified in the SHLAA as a category C site due to the Council’s misunderstanding of the access position and the incorrect assumption that access was not available. It was accepted that the Site should have been classified as category B in which case it would have been the subject of a more detailed review together with other potential sites for Werrington. It was agreed that the Site had “some catching up to do” and that Fradley Estates would submit further information in support of the Site addressing the Council’s strategic Green Belt review, the Council’s review of the historic landscape and the sustainability of the Site. A further report has been prepared by Bright & Associates which considers the Site and other potential sites in Werrington including the preferred options in terms of landscape and visual impact and Green Belt, which addresses any effects on the historic landscape and which assesses the sustainability of the Site. A copy of that report which also appends the earlier LER and Sanderson Associates highway report is submitted with these representations by way of separate email. It is clear from the June 2016 Bright & Associates report that:- the development of the Site will have no adverse effects on the historic landscape. the Site is more visually contained than the preferred sites for Werrington and that the allocation of the Site will improve the current sharp edge between housing and field space along the southern boundary of the Site. the Site has advantages over other sites in terms of not compromising the openness of the countryside and in visual terms it does not form part of the Green Belt. the development of the Site would meet the three dimensions of sustainable development within the National Planning Policy Framework. It is also clear from the above, that the Site has no technical constraints which would affect its delivery - indeed as stated above, the Site is owned by a developer with a proven track record of delivery in Werrington who is keen to bring the Site forward. The same cannot be said of other potential sites in Werrington (including the preferred options). Furthermore, it is considered that rather than allocate a number of relatively</p>	

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Obejct/ General Comment	Consultee Comments	Officer Response
						<p>small capacity sites in Werrington as in the case of the preferred options, the allocation of a relatively large site is preferable. The reasons for this include:- The Site is likely to have less impact in landscape and visual impact terms and less perceived impact on the Green Belt than sites currently under consideration. A larger site in the hands of a developer is more likely to deliver and, thereby, deliver a substantial element of the housing requirement for Werrington. A larger site such as the Site is more able to deliver affordable housing and other infrastructure contributions. On the other hand, some of the smaller sites will not be able to carry affordable housing requirements and other infrastructure contributions and so a relatively large site such as the Site is preferable in delivering overall on Development Plan objectives for sustainability. Fradley Estates also owns an area of land off Hillside Road, Werrington which could be brought forward in conjunction with the development of the Site for the delivery of open space and /or low cost housing. It is also submitted that the location and characteristics of the Site mean that a development of the Site would from a qualitative and marketing perspective be better than the Council's preferred options which locate development around the HMYO institution.</p> <p>We promote SHLAA sites WE042 and WE043 for residential development. [The 14 submitted attachments examine the suitability of these sites for residential development and for inclusion as housing Preferred Options/release from Green Belt].</p>	

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
PO198	Mrs Sue Higton				General comment	Seems to be the most sensible and least visually disturbing location but access would need to be designed carefully - access would have to be to Mill Lane which is quite steep in this area and close to the existing highway junction.	Comments noted
PO1397	Mrs K Bills				Support	We are writing to add out approval of the development plan (preferred option site allocations and boundaries) for Wetley Rocks	Comments noted
PO2037	Mrs Pilarczyk	Cheddleton Parish Council			Object	Site WR015 The site lies within the Green Belt and the Council cannot support this site for a development of 20 houses as there is ample room for infill down the lane.	The land in question is mostly within the Green Belt. In order for Wetley Rocks to accommodate new development, the Green Belt boundary will need adjustment as there are not enough sites in the existing settlement boundary to accommodate the level of development needed. The Council has recently completed a Green Belt Review in order to assess parts of the Green Belt where minor adjustments can be made without having an impact on the function of the Green Belt as a whole (as defined in government planning guidance). This study recommends considering site WR015 for release from the Green Belt.
PO2511	Mr D Hartley				Object	You have enlarged this site in spite all of our local worries about the traffic measures at that part of Mill Lane	The Highways Authority advises that there would be visibility requirements at Leek Road junction but otherwise; do not rule out the development of this site.

PO1094	Mr D Cotton				General comment	Whiston needs starter homes for the young.	<ul style="list-style-type: none"> Policies in the Local Plan will require an element of new housing provision to be affordable
PO835	Ms Alison Conybeare				General comment	I hope that SMDC will take more notice of the local residents this time, as opposed to the consultation on the Core Strategy, where minimal development was voted by 80%, but was ignored by SMDC despite this.	<ul style="list-style-type: none"> Residents views have been sought as part of the consultation. The Council must balance this evidence against all the other evidence relating to this site and reach a decision on whether or not to include it as a development site in the Local Plan.
PO3856	Mr H Wainscott	HLW Developments Ltd			Support	Whiston WH002 - support. Phase 2 of old copperworks site. Development of brownfield SHLAA site - would remediate contaminated site. Please refer to attached letter.	<ul style="list-style-type: none"> Support noted
PO3248	Mrs I Richardson		Mr Rob Duncan	Rob Duncan Planning Consultancy	Object	WH016 (summary only - please see full representation attached) Do not agree with the site being a 'reserve site' for the following reasons: vehicular access is unsuitable; highway safety concerns; substandard access onto the A52; and Phase 1 habitat survey identifies the need for further surveys and mitigation may be required.	<ul style="list-style-type: none"> The emerging Local Plan is no longer proposing to define village boundaries for smaller villages Development in these settlements will need to be in accord with the policies in the Local Plan the Spatial Strategy seeks to focus development to the main towns and larger villages limited growth may be acceptable in the smaller provided it is in scale with the settlement and does not have an adverse impact on the countryside. Applications will be determined on a site by site basis in line with policy in the Local Plan
PO3216	Mrs I Richardson		Mr Rob Duncan	Rob Duncan Planning Consultancy	Object	WH015 and WH018 (summary only - please see full representation attached) Local Authority do not consider it necessary to formally allocate a site in Whiston. The infill boundary as currently drawn will not deliver sufficient opportunities to deliver growth. WH015 and WH018 are less visually conspicuous than other sites. WH018 is in keeping with the established morphology of the village, enclosed by existing development (to the north). Village hall lies to the south with a play area to the SE. Relates well to the existing settlement and facilities. No technical reasons why site could not be developed and service connections are available. The site at the 'Copperworks' was granted outside of the proposed plan period and should not address the identified need. Revised proposed infill boundary to include WH015 and WH018.	<ul style="list-style-type: none"> The emerging Local Plan is no longer proposing to define village boundaries for smaller villages Development in these settlements will need to be in accord with the policies in the Local Plan the Spatial Strategy seeks to focus development to the main towns and larger villages limited growth may be acceptable in the smaller provided it is in scale with the settlement and does not have an adverse impact on the countryside. Applications will be determined on a site by site basis in line with policy in the Local Plan

Question 33: Do you have any comments on the village boundaries for the Rural Areas?

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
Alton								
PO428	Mr David John Allen				Alton	Support	Look fine.	Support noted.
PO1342	Ms K Dewey	Staffordshire Wildlife Trust			Alton	Support	We support the proposed Village boundary.	Support noted.
PO1614	Mrs Diana Gardner				Alton	Support	I would like to register my support for the proposed village boundary, which maintains most of the current village boundary. I feel that it is for the council to protect the rights of local people who bought homes in good faith wanting to enjoy life in a small rural community. Knowing that there was a village boundary would have given them the peace of mind that certain areas would not be built on. I feel it is wrong to now change these boundaries. The home owners should be allowed to have a peaceful life without out the threat of noise, disruption, loss of light which will be caused by development etc. Developers must not be allowed to develop green field sights in order to make money at the expense of the other residence of the village. There are few jobs and little public transport in this area to support new residence	Support noted.
PO1616	Reg & Janet Moss				Alton	Support	We would like to agree with the proposed plan of the village, No more new housing developments. They are not needed, the infrastructure will not cope with anymore, facilities are nil what is required is transport for the people without cars , toilets for people passing through and pavements to enable us to walk around. Most of all we need something to slow down the traffic going through the village, especially on the road from Uttoxeter to Cheadle.	Support noted.

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
PO1609	Mr Charles Harris				Alton	Support	I am writing to formally submit my comments on the above consultation. While some comments relate to the plan as a whole, my primary focus is on the village of Alton. I endorse and support this proposal the village boundary shown on the site plan for Alton i.e. identified within the consultation draft of the proposed village boundary, in so far as it restates the existing boundary amended for the inclusion of the site AL012 (for which planning permission for 18 dwellings has been granted). I wish to make it clear that I would not support the inclusion of any further sites (reserve sites) for Alton in the local plan. In addition to site AL012 there have been a number of recent building completions. I am aware of further new infill builds that are planned (some already having planning permission) within the existing village boundary which can be expected to add more than 10 dwellings to the existing housing stock. I am firmly of the view that Alton with a population of c1000 already has a more than adequate 5 year forward supply of housing and I can see no reason whatever for any further sites to be added outside of the revised village boundary. There are serious concerns about infrastructure and sustainability that naturally limits other than modest growth of this village. This plan as currently set is a sustainable plan that will ensure that the need for new housing in Alton for the next 30 years is satisfied through availability of appropriate sites encompassed by the proposed village boundary as described above. On this basis I support this plan for Alton village.	Support noted.
PO4711	Mr Gez Willard	Willardwillard Ltd			Alton	Support	The proposed village boundary for this part (Gallows Green) of Alton is supported.	Support noted.
PO9552		Alton Orchard Action Group	Mr M Sutcliffe		Alton	Support	Summary - see attached Housing Site Option AL024 Alton Orchard Action Group (AOAG) was formed with the aim of securing the future of the last traditional orchard in Alton. The site was previously identified as a housing option and although not a preferred housing allocation it is coded as a possible reserve site. AOAG supports the proposed development boundary in Tythe Barn, which includes only the cottage and its amenity space within the village and the bulk of the site and orchard in the open countryside. Support the exclusion of AL024 from the preferred sites and the retention of the development boundary as it affects the site.	Support for boundary noted.
Blythe Bridge and Forsbrook								

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
PO65	Mr Steve Hollinshead				Blythe Bridge & Forsbrook	Object	<p>Very difficult to comprehend the massive development planned for the Forsbrook and Blythe Bridge area given the vast area of the Staffordshire Moorlands.</p> <p>(Amended) We live less than 3 miles from the most impoverished city in the country with thousands of hectares of brownfield sites available for desperate development for both housing and industry. Yet the government and local authority deem it necessary to build on green belt land. What sort of a backward looking establishment are we. Even the local MP Bill Cash has expressed his concerns regarding the proposed development.</p> <p>The BB041 area earmarked for housing is untenable due to the following. 1. Caverswall Road is way too narrow to incorporate a junction- Road widening would be required including the installation of a footway for residents safety. This would require the removal of a hedgerow and long established trees with TPO on them. Environmental impact on local wildlife population. 2. Current infrastructure is not up to specification the current combined sewer on Caverswall Road overflows regularly at present following the tarmac car park installation at Foxfield Railway, the removal of green belt land will exacerbate this problem. 3.Existing Overhead power lines will require diverting. 4.What survey has proved the need for such a development given my first statement. And finally the proposed installation of a gypsy camp is the icing on the cake. I have friends who live on Uttoxeter road literally 30 metres away - put yourself in their shoes prior to ticking any box. I've previously had lots of faith in SMDC compared to other poor performing authorities this will test my faith in you as an organisation. Who do you put first the local residents who pay for you to exist or a bullying government which is clueless when it comes to understanding local communities passion and resilience regarding unjustified local development.</p>	See response to Question 37 – housing allocation BB041.

PO249	Mr John Dougherty	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	Blythe Bridge & Forsbrook	Support	<p>THEPROPOSED VILLAGE BOUNDARY TO THE WEST OF CAVERWALL ROAD AND THE REAR OF 73 CAVERSWALL ROAD I write on behalf of my client supporting the proposed Village Boundary to the west of Caverswall Road and the omission of Site BB086 from the proposed housing allocations. The reasons for my client's support of the proposed boundary and the omission of housing site BB086 were set out in a letter dated 7 September 2015. In brief the reasons are: -</p> <ul style="list-style-type: none"> • The access to site BB086 is poor. • Development to the west of the proposed Village Boundary would have as profound adverse impact on the green Belt because the land is highly visible from the south-west and the north-west. • The Council's Landscape and Settlement Character Assessment identifies the need for tree planting on the western boundary of the houses on Caverswall Road. • There are better sites elsewhere in the village. • In addition, the recent review of the Green Belt commissioned by the Council does not recommend release of the land from the Green Belt because it considers that development would be an arbitrary extension into open countryside in a significantly sensitive area. 	Comments noted. BB086 was included as a possible housing options site but not included as a preferred housing site in the 2016 preferred options sites and boundaries consultation.
PO873	mr jonathan broadhurst				Blythe Bridge & Forsbrook	Object	Changing the boundaries in this way will merge the villages of Blythe Bridge and Forsbrook into one large sprawling site as opposed to two separate smaller villages with their own identities.	Comments noted.
PO878	Mr Elliot Broadhurst		mrs diane broadhurst		Blythe Bridge & Forsbrook	Object	Changing the boundaries risks the two villages merging into one large residential area. They should remain as two separate areas.	Comments noted.
PO885	Miss Emily Broadhurst		mrs diane broadhurst		Blythe Bridge & Forsbrook	Object	The boundaries are starting to merge into one village. We need to keep our villages separate and avoid developing them into mass residential areas.	Comments noted.
PO892	mrs diane broadhurst		mrs diane broadhurst		Blythe Bridge & Forsbrook	Object	The boundaries need to keep the villages separate. There is a danger that they will all merge into one large residential area.	Comments noted.

PO1408	Mrs R Brough				Blythe Bridge & Forsbrook	Support	We are writing about the land BB027, that the moorlands are thinking of bringing it out of the greenbelt. This position of this land is ideal for families due to the local amenities of nursery's, schools, many useful transport links and local shops. East midlands are 45mins away. The countryside would not be tarnished by this sit being developed as the footpath runs alongside the site leads into vast countryside of Caverswall. We do understand that some of the local residents would object to this development, but feel this would have a minimum impact, as neighbours opposite are 35meters away from the boundary and have hedges and gates off 7ft high. We feel that this area would benefit due to the lack of affordable housing. Developing the site would provide this sort of housing to give the younger generation a greater chance to live a better lifestyle, which this area can provide. We would like to thank you for the opportunity to put our opportunities forward	Comments noted. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. The sites were assessed taking into account the consultation responses and evidence relating to the site. The site assessments provided a summary of the key issues and responses .
PO9943	St Modwen Development Ltd	St Modwen Developments Limited	Ms Stacey Green	Barton Willmore	Blythe Bridge & Forsbrook	Support	Email containing letter and Evidence Report submitted [both attached to PO9838]: St Modwen welcome the inclusion of their site within the Village Boundary, in the Preferred Options. The Village Boundary is constrained by the Local Plan Administrative Boundary to the west, and Green Belt to the North West, North, and East. The A50 forms a strong barrier to the south of the settlement, through to the roundabout with the A50/A521. The St Modwen site, and third party land to the south of the A50, south west of Blythe Bridge and Forsbrook, form a significant area of land that is not constrained by designations, e.g. Green Belt. St Modwen's land extends primarily to the north A50 and is a natural extension of the settlement. The site has previously been identified as suitable for development within the adopted Core Strategy (2014) and the Local Plan (1998). St Modwen remain supportive of the site being identified for development, and within the village boundary. Given the need for housing within Staffordshire Moorlands and the suitability of Blythe Bridge and Forsbrook as a location for new housing, St Modwen consider this supports a case for the identification of Blythe Vale as a mixed use development site.	Support for the proposed development boundary noted. See response to Question 39 – comments on the Northern Gateway Opportunity Site.
Brown Edge								
PO49	Mr P Rushton				Brown Edge	General comment	The Brown Edge village boundary could be tweaked in places to enable sympathetic in-filling of houses to cater for local family needs for affordable homes.	Brown Edge is surrounded by Green Belt and the village boundary follows the edge of this designation. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
								circumstances and the recent Housing White Paper reiterates this commitment. The NPPF does allow for limited affordable housing for local community needs in the Green Belt under policies set out in the Local Plan.
PO94	MRS DONNA JONES				Brown Edge	Object	The preferred chosen area is a unrealistic option that will endanger the lives of car uses and walkers. The access route to this area will not be able to cope with potentially 50 houses being built. The lane is used by school children walking to Endon High School, parents with pushchairs, there are no pavements and an increase in the flow of traffic will be a catastrophe, and a life will be lost. Accidents have already occurred on this lane and there is signs to say that the lane cannot be used by heavy vehicles, but it is, and again provides a risk to life. The existing school will not be able to cope with additional numbers and is of a poor standard, neither will the existing GP facility. The landowner may be willing to sell but this is not justification for a decision to build houses on a piece of land that is totally inadequate.	See response to Question 37 – housing allocation BE041.
Cheddleton								
PO1	Mr Peter Blakeman				Cheddleton	Object	Greenbelt areas were created to stop neighbouring towns merging into one another. If the proposed sites CD002 and CD003 are used this removes any discernible boundary between Wetley Rocks and Cheddleton removing the original character of the separate towns. These two sites are also outside of the current village boundary and therefore should not be considered for development. Sites within the current boundary should be used to maintain smaller town characteristics.	See response to Question 37 – housing allocations CD002 & CD003.
PO276	Mrs Shirley Sugars		Mr Paul Sugars		Cheddleton	Object	The adoption of sites CD002 and CD003 would require the extension of the Cheddleton South village boundary towards Wetley Rocks which would undermine the distinct geographical boundaries of these two settlements. Adoption of sites CD098, CD099 and CD088 would yield nearly as many dwellings without the need to extend the village boundary at all. The settlement on Cheadle Road between Cheddleton North and South appears to now be included as part of the village boundary. This is a retrograde step as it could act as a development "bridge" between Cheddleton North and South and ultimately lead to the merging in due course of these two separate and distinct settlements.	Comments noted. See response to Question 37 – housing allocations CD002 & CD003.

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
PO319	Mr Greg Bicker				Cheddleton	Object	The village boundary of Cheddleton is merging with Wetley Rocks due to the allocation of CD002 and CD003, this only lengthens the village rather than bring the two distinct areas of Cheddleton closer together with infill sites (such as CD015, CD115 and CD017).	Comments noted. See response to Question 37 – housing allocations CD002 & CD003.
PO215	Mr Steve Wood				Cheddleton	Object	333 Cheadle road. Our house is circled as being included in the village boundary but our full plot is not. The land and garden with our house runs along side the plots of CD017/ CD019 and up to Pointon park. As the plot has always been the same since approximately the year 1850 and as they have always belonged together, then I think the whole plot should be included in the boundary. I don't think it's right that half of my house will be in the village and half won't be included.	The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances and the recent Housing White Paper reiterates this commitment. Cheddleton is surrounded by Green Belt and it is proposed that the village boundary follows the edge of this designation. It is proposed to delete earlier proposed extensions to the village boundary such as this, as the site is 'washed over' by the Green Belt and exceptional circumstances have not been demonstrated.
PO218	Mr Andrew Smith	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	Cheddleton	Object	127 STATION ROAD, CHEDDLETON On behalf of my client I object to the omission of the houses – no's 81-205 Station Road, Cheddleton – north of Station Road from the proposed Village Development Boundary. The reasons for objecting to the exclusion of the above houses and gardens are: The houses on the north side of the road are well established with many dating back to the Victorian period and some to the late twentieth century. A reasonable person would consider these houses as being an integral part of the village. They are opposite a major industrial estate and are part of the same built-up area of the village. Many of the gardens here contain sheds, greenhouses and polytunnels and the houses and gardens here are part of the village townscape and are not rural in appearance but are part of the village fabric. Some of the houses have gardens separate from them running along the back of other gardens. For instance to the north of Mr Smith's garden is a garden belonging to a house to the east. A recent High Court judgement (Dartford BC v Secretary of State for Communities and Local Government concluded that the definition of "previously developed land" (brownfield land) only excludes residential gardens if they are in built-up areas. It follows based on this judgement that rural residential gardens are previously developed land and that both the houses and associated gardens north of Station Road are previously developed land. It is therefore logical and reasonable to include them in the village Development boundary. This part of Station Road is within the 30mph speed limit which is often used as rule of thumb measure for deciding where a village begins and ends. The proposals for Cheddleton	The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances and the recent Housing White Paper reiterates this commitment. Cheddleton is surrounded by Green Belt and it is proposed that the village boundary follows the edge of this designation. Exceptional circumstances have not been demonstrated to remove this section from the Green Belt and therefore it is not proposed to amend the village boundary either.

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
							include a smaller group of houses on the western side of Cheadle Road to the south of the Main part of the village. There are also two smaller discrete groups of houses within the proposed Village Development boundary which are much further away from the main village area than the houses on Station Road. It does not seem reasonable or logical to exclude the houses north of Station Road whilst smaller discrete groups of houses on Cheadle Road to the south of the main part of the village are included within the proposed development boundary. Ken Wainman [Refer to attached map suggesting amendments to proposed Cheddleton boundary].	
PO528	Mrs V Millar				Cheddleton	Object	The area identified within the Cheddleton plan CD017 does not account for the fact that this is a relatively small space but provides a standard of rural location for those houses located in front of planned area. It seems that as there are fewer households involved the position has been taken that their rural area is not considered on the same level as the area around the cricket ground or other locations which have been removed from the plans.	Comments noted. See response to Question 37 – housing allocations CD017.
PO583	Mrs Susan Buxton				Cheddleton	Object	I strongly object to any development of sites CD002 and CD003 which are outside the village boundary. Altering the boundary to include these sites would link Cheddleton and Wetley Rocks, constituting further urban sprawl and meaning there would be no defined boundary or natural gateway between the two villages. I would strongly support the recent application by John Pointon and Sons to vary the planning obligation of June 2010 and would urge the Council to allow development of what is already a brownfield site, known locally as Staffordshire Farmers, which would significantly contribute to the number of developments required by SMDC without having to alter the village boundary.	Comments noted. See response to Question 37 – housing allocations CD002 & CD003.
PO587	Mrs Susan Buxton				Cheddleton	Object	I strongly object to any development of sites CD002 and CD003 which are outside the village boundary. Altering the boundary to include these sites would link Cheddleton and Wetley Rocks, constituting further urban sprawl and meaning there would be no defined boundary or natural gateway between the two villages. Cheddleton is already a very large, sprawling village and this would only increase the sprawl. I would strongly support the recent application by John Pointon and Sons to vary the planning obligation of June 2010 and would urge the Council to allow development of what is already a brownfield site, known locally as Staffordshire Farmers, which would significantly contribute to the	Comments noted. See response to Question 37 – housing allocations CD002 & CD003.

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
							number of developments required by SMDC without having to alter the village boundary.	
PO931	Mr John Buxton				Cheddleton	Object	I strongly object to any development of sites CD002 and CD003 which are outside the village boundary. Altering the boundary to include these sites would link Cheddleton and Wetley Rocks, constituting further urban sprawl and meaning there would be no defined boundary or natural gateway between the two villages.	Comments noted. See response to Question 37 – housing allocations CD002 & CD003.
PO2516	Mr D Hartley				Cheddleton	Support	The council fully supports the extension of the village boundary to include the properties on the west side of the A520 Cheadle Road, which includes the land end of the property adjacent to the land known as Staffordshire Farmers site. The land known as the Staffordshire Farmers site is a brownfield site, it has a established access onto highway and I therefore ask for the 106 agreement place on it to be removed and for it to be included to form part the forth coming new SM local plan as it will satisfy and meet the needs of the settlements requirements. I must also point out that the local council has identified a much more sensible site for any major developments of the village, and that is on the land immediately south of the estate served by Boucher Road, west of the A520 and east of Ostlers Lane. This would just enlarge the built area of the village, and not join settlements together. It would provide an adequate situation for further housing needs as they emerge. It would be by local people and not by an external body such as green belt review body.	Support noted. An application for residential development has been approved by planning committee (subject to conditions and Section 106 agreement) for the Staffordshire Farmers site (Jan 2017).
PO4499	Mr Gez Willard	Willardwillard Ltd			Cheddleton	Support	The revised village boundary around Cheddleton is supported. The proposed village boundary will allow for infill housing within a clearly defined and defensible Green Belt and settlement boundary. [Refer to Question 1 attachments].	Support noted.
PO6937	Ms Joanne Harrison				Cheddleton	Object	I have also attached a plan of Cheddleton which shows again in red one area of land that I am asking could be included in the village boundary. Land is located at Basford Bridge and adjacent to the canal. Currently designated as visual open space.	The proposed development boundary has been extended out to Station Road which includes this area.
Cresswell								
PO1030	Mrs Shelagh Wood		Mrs Shelagh Wood	VVSM	Alton	Object	Cresswell and Draycott are not listed here and yet they have a major development included on the site allocations plan and 168 houses that are also NOT in the site allocations plan, therefore comments have been restricted by SMDC. The planning application for these two developments is under police investigation and we are awaiting a report from the Government	This site has outline planning approval. Committed sites will be shown on the proposals map.

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
							Ombudsman regarding the passing of application SMD/2014/0576.	
Endon								
PO60	Ms Wendy Birks				Endon	Support	I think the revised green belt boundary is appropriate at present.	Support noted.
PO316	Mr Robert G McCraight				Endon	Object	Endon is also known as Endon Basin. If you put a plug (houses and concrete) in the bottom of the basin, then you will obviously cause flooding. Because the plug (houses) is at the bottom of the basin, the flood water will have no where to go but will rise, thereby flooding more and more houses. Building on higher ground makes more sense, but build with feeders to take the water away from the properties below. This could be done in an attractive way and would help in keeping Endon flood free!	Comments noted. The Council has completed a Level 1 Strategic Flood Risk Assessment (SFRA) for the District, the results of which have been used to inform the site selection process.
PO1052	Mr Stuart Davies				Endon	Object	Endon is already too big and functions partly as a village and partly as a suburb of Stoke. Enlarging the village further will only worsen this. More space for infill should be found rather than building on green belt land and enlongating the village.	Comments noted. The housing requirement for the rural area makes an allowance for small windfall sites.
PO419	Mr & Mrs S and S Gibbins	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	Endon	Object	SHLAA SITE EN030 – THE VILLAGE, ENDON ST9 9EX On behalf of my clients I object to the omission of the potential residential site SHLAA EN030 from the preferred allocated sites; the site remaining in the Green Belt; and the proposed village boundary. It is appreciated that the site submitted in the Site Options Consultation did not have a good access. The County Council's Highway officer for the District indicated that it was not possible to achieve adequate visibility sight-lines from the proposed access to the west of the house, Meadow Cottage and that the road, The Village, would need to be widened. The Highway Engineer (the email from the engineer will be sent by email) considered that EN030 and EN125 – the field to the west – would need to be developed together and that to achieve adequate visibility about 100 metres of hedge would need to be removed. Following this an alternative scheme was submitted on 9 November 2015 after the consultation had ended which set out a proposal which would overcome the sight-line issues; avoid the removal of any significant length of hedgerow and allow the widening of the eastern part of the road, The Village, using my client's land. A location plan showing the site was sent to the Council in November 2015. The Council replied that they could not consider the alternative as the site consultations period had ended and that the next occasion when the site could	Comments noted. Responses to the comments received to the Site Options consultation in 2015 were reported to the Council Assembly on 13 April 2016 and are available on the Council's website. The sites were assessed taking into account the consultation responses and evidence relating to the site. The site assessments provided a summary of the key issues and responses .

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
							<p>be considered was in April 2016 when the preferred sites consultation would take place. The email dated 29 the November 2015 will be sent as a separate email as will a location plan (Drawing No.SOP16-01), showing the potential site. Mr. and Mrs. Gibbins are willing to add the existing house and surrounding buildings to the site. This would enable a new access road with satisfactory sight-lines to be provided on the site of the existing house and also enable the widening of the road and the possible provision of a pavement on the north side of the road. There is opportunity to move the possible access further east The eastern part of my clients land is flood zone (Category 2). However, the Environment Agency flood map shows the existing house and the garden to the east outside the nearby flood zone. The eastern part of the site is in the flood zone but it is possible that the land on which these buildings stand could be developed as my clients own the land upstream where it might be possible to provide flood attenuation and it would also be possible to design the housing scheme incorporating flood protection. If the Council did not wish the area to the east to form part of the site the reduced site would consist of EN030 plus the house and garden up to the red dash line on the plan. My clients ask that this alternative site is considered as part of this consultation and that the proposed village boundary is amended to include it. The reasons for objecting to the exclusion of the site are: It is contended that the two sites (EN030 and EN125) are not necessarily linked and that Site EN030 can be developed separate from Site EN125. The narrow width of the road near Site EN125 may prevent it being developed. However, the road in front of Site EN030, when measured on an Ordnance Survey map, has a minimum width of at least 6.1 metres which is greater than the Highway Engineer's requirement of a minimum width of 5.5 metres. A scheme could be designed so that all traffic exits and enters the site either from or towards the main road. This can be achieved by curving the access towards the main road and by the use of safety kerbs. Mr and Mrs Gibbins own the land north of the road from the drive to the two houses, Daisy Bank and Middle Meadow House in the west all the way eastwards past their house and outbuildings to the main road in the east. It would therefore be possible to provide a 2m wide pavement along the front of any development on the site and also possible to re-site the access to the possible development further east than originally suggested in</p>	

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
							<p>order to achieve adequate visibility. Drawing No.SOP16-01, which will be submitted separately by email, shows a possible access in front of the existing house but this access could be moved further eastwards if required to reduce the amount of hedge to be lost. Drawing No.SOP2016-01 shows a pavement along the entire frontage of the suggested site but the pavement does not necessarily need to go along the entire frontage of the development site; it could be restricted to lengths either side of the road access. In this way the hedge to the west of the existing house could be retained as part of a possible development. Reducing the amount of pavement would also allow the retention of two mature deciduous trees, protected by Tree Preservation Order, on the road frontage to the west of the existing house. 2. The site could be available for development in the next 2-3 years; possibly less. 3. The Council's SHLAA identified the site as suitable for appropriate residential development and that development would be economically viable. 4. The site is semi-improved grassland poor in flowering species. 5. The Green Belt Review commissioned by the Council assessed the two sites, EN030 and EN125, together and considered that although the sites are relatively well enclosed the two sites maintain a significant role in maintaining the open character of the northern part of the village. The Review does not recommend the release of the two sites from the Green Belt. As suggested above Site EN030 could be developed alone and if this were the case there would be clear views through into the countryside from the western and eastern sections of road and in this way development on Site EN030 would appear as part of the countryside and the Green Belt and The Village would still retain a countryside aspect. From the main road, to the north, the two houses Daisy Bank and Middle Meadow house, which are higher ground, are visible. These two houses are situated well into the countryside and are clearly visible from The Village as well as the north. The northern border of Site EN030 is in line with these houses. The southern and central parts of the Site are relatively flat whilst the north part rises relatively steeply. An indicative scheme for Site EN030 was submitted with the response on the Site Options Consultation in 2015. This showed the entire site excluding the house and garden being developed. If the Council considered that development on the northern part of the site would have too great an impact on the Green Belt this part of the land could be</p>	

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
							left undeveloped and tree planted to provide a backcloth to development; a definitive permanent Green Belt boundary and lessen the impact on the Green Belt. Development would only take place then on the flatter parts of the site minimising impact on the countryside. 6. It is accepted that if the site was to be developed it would extend into what is now Green Belt but it is contended that the shortage of deliverable housing land amounts to exceptional circumstances to justify the release of this land.	
PO995 PO982 PO989	Mrs H Sullivan Mr M Sullivan Mr O Sullivan				Endon	Object	In addition, the Council's plans refer to strictly controlling development outside of the development boundary. Site EN012 is outside of the development boundary. Endon is already identified as a 'larger Village' and should be protected from further development which extends beyond the current development boundary. In addition, there are other sites in the Endon and surrounding area not deemed to be Green Belt which should be developed before encroaching on the Green Belt. The approach should be to build in infill / windfall sites in brownfield areas, built in a manner which supports the current village footprint and which does not create even larger housing estates.	Comments noted. See response to Question 37 – housing allocation EN012.
PO911	Mr & Mrs J. A. & C. Hamnett	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	Endon	Support	STONEY LANE, ENDON – SITE EN128 My clients who are the owners of Site EN128, welcome and support the inclusion of the site in the preferred draft allocations for inclusion in the Local Plan. The site is located within the built-up area and the existing development boundary of the village and is the only site, of the three proposed, which is within the built-up area of the village and does not require removal from the Green Belt. The site is well located within the village and would be a good site for dwellings that accord with the Council's housing development policies. There are three possible accesses – from both ends of Stoney Lane which is an un-adopted road and via No. 14 Brookfield Avenue onto Brookfield Avenue. The latter property (a semi-detached house), which is owned by Mr & Mrs Hamnett, could be demolished, if required, to provide a third access. The 2015 SHLAA Site Assessment form identified that the site has excellent residential potential for up to 27 houses. The SHLAA Site Assessment form scored the site's availability as a "2" and the overall classification as a "B". This was because ownership details had not been submitted. The ownership details and the fact that the site could be immediately available for development were sent to the Council as part of the Site Options consultation in	Support noted. See response to Question 37 – housing allocation EN128.

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
							<p>2015. I can re-confirm that the site is in single ownership and is available for immediate development. The Sustainability Appraisal in the Council's "Options Assessment" considers that the proposed development of the site would have a positive effect as could the site's proximity to services and facilities. The Council commissioned Ecological Survey concluded that the site has a fairly low biodiversity value overall although there is a tree with bat roosting potential and a species rich hedgerow. At this stage the client believes that the best way to develop the site is build three distinct cells/clusters of houses each with its own separate access – one cell accessed from Brookfields Avenue; one from the western end of Stoney Lane; and the other from the eastern end of Stoney Lane. However, the final design would depend on discussions with the Council and Highways. The site was previously identified in the former Local Plan as an important visual open space. This policy no longer applies and the site is no longer designated as such. In the Landscape and Settlement Character Assessments carried out in support of the Core Strategy the recommendation is that the site is not (my underline) suitable as Visual Open Space and that the site appears to be suitable for sympathetic development. Development on the site would not have an adverse impact on the local landscape character and would not be particularly visible. The two trees protected by Tree Preservation Order which were previously on site are no longer there; one tree which was diseased was felled with permission and the other blew down. Economically the development of the site will support the existing services in the village and, if required, would help improve services and facilities. Socially, development would help ease the shortage of housing land supply in the District and village. Environmentally, development of this site lessens the pressure on the Green Belt.</p>	
PO4494	Mr Gez Willard	Willardwillard Ltd			Endon	Support	<p>The revised village boundary for Endon is supported. The slightly stretched village boundary will allow for a "handful" of organic small infill housing plots to be built within the village. This will provide good opportunities for local builders and tradespeople in addition smalls sites suitable for self build schemes. [Refer to Question 1 attachments].</p>	Support noted.
Ipstones								

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
PO176 PO909	Mr Howard Leeson		Mr Kenneth Wainman	Ken Wainman Associates Ltd	Ipstones	Object	LAND ADJACENT TO HAWES FARM, HIGH STREET, IPSTONES Object to the proposed Village Development boundary excluding the field to the north of Hawes Farm and Dairy House Farm. It is appreciated that Hawes Farm is a listed building but in at least one other village (Rushton) the proposed boundary goes up to a listed building and there is already a well established long row of twentieth century houses to the north of the field. These are of average design. The quality of development and the number of houses (one is suggested) that could be built on this land can be controlled by the council. Further, the site has good road access and any dwelling could be set well back from the road in line with houses to the north and Daisy Bank Farm to the south and it would not have an adverse impact on the listed building. Setting the house back from the road would ensure that the listed building was visible from both north and south on High Street. Inclusion of this land within the Village Development Boundary would also be in accord with Core Strategy Policy SS6a and with what I understand is a general feeling in the village that the residents would prefer small scale infill to larger developments particularly where they are not likely to add to the traffic problems in the village.	This area was previously included within the village boundary, it is adjacent to a Listed Building and within a Conservation Area. Agreed that the boundary could follow the previous village boundary and provide an opportunity for infill, however any planning applications would need to be assessed against heritage impacts.
PO259	Mr Graham Leftwich				Ipstones	General comment	The village boundary seems to have been drawn deliberately in order to select by default the preferred site for housing development and to exclude other options. It makes no sense to exclude the vicarage, the Mount, Daisy Bank Farm, the school, New House Farm, Churchfields Farm etc from the village, when they are so obviously part of Ipstones. Do you really believe that the vicar of St Leonard's does not live in Ipstones? Or that the school is outside the village? It's nonsense.	The village boundary is a planning designation and relates to policies in the development plan. It is drawn tightly around the village to prevent encroachment into the wider countryside.
PO2561	Mrs Chadwick	Ipstones Parish Council			Ipstones	Object	Consider that the village boundary should include the whole garden to No 70 High Street.	Comments noted. The site is in a sustainable location and would offer an opportunity for infill along Park Lane.
PO1295	Mr Glyn Dyer				Ipstones	Object	The draft village development boundary includes a potential infill plot along Park Lane. The Parish Council requested that the original boundary be retained. I strongly disagree with this and ask that the rear of 70 high street is included.	See response to PO1295 regarding village boundary at 70 High Street.
PO7547	Mr Glyn Dyer				Ipstones	Support	Summary of representation- see full response (attached). Ipstones Parish Council supported the inclusion of the rear garden of 70 High Street, Ipstones within the village development boundary (as shown on the site options consultation map) at the AGM on the 31st May 2016. The current boundary dissects the garden.	See response to PO1295 regarding village boundary at 70 High Street.

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
Kingsley Holt								
PO666	mrs karen parkin				Kingsley	Object	Objection to draft reserve site Lockwood Rd Kingsley Holt for 50 dwellings. This site is outside the existing village boundary which were introduced to stop 'creeping' development.	Comments noted. There are no draft reserve sites included in Kingsley Holt.
Upper Tean								
PO25	Mrs Victoria Hughes				Upper Tean	General comment	Whilst relieved to see that UT041 no longer appears to be included for preferred housing allocation, the land also appears to be outside of both Checkley parish and Cheadle Ward boundaries, therefore we are still concerned and seeking reassurance as to what this means for any current or future independent planning applications such as the one currently being proposed by Mr Alcock and the architects Hewitt & Carr of Cheadle.	UT041 was included as a possible housing options site but not included as a preferred housing site in the 2016 preferred options sites and boundaries consultation. However a planning application has been submitted for residential development on the site.
PO255	mrs barbara keeling				Upper Tean	Object	I have lived in the area for the last 47 years. There has been no significant improvement in infrastructure in that time. The one site that is screaming out to be developed is the old dairy site at Fole. It has access to the main road & would take the pressure of development off Checkley, Lower Tean & Upper Tean. The drainage would enter the river lower down, lessening the fear of flooding. The council should grasp the mettle & get this site cleaned up for the benefit of the whole area. Development in Hollington has been turned down, time after time, for residents wanting to build on their homesteads. This is preventing a younger generation to live in their village. The proposed development in Hollington took no notice of the traffic flow already in the village especially JCB employees using the road as a rat run to Upper Tean & Cheadle. This will only get worse as the new traffic island works continue towards Uttoxeter & JCB open their new golf course.	Fole Dairy has planning permission for residential development and has been taken into account within the housing commitment figure for the rural area.
Werrington & Cellarhead								
PO1235	Mrs T Wiggins				Werrington & Cellarhead	Object	It is essential that as a village community that we maintain our boundaries and if these have been compromised then they should be reinstated as per council existing registers.	Comments noted.

PO1025	Mr Grant Anderson	Fradley Estates	Mr Grant Anderson		Werrington & Cellarhead	Object	<p>PREFERRED OPTIONS SITES AND BOUNDARIES CONSULTATION 4 : LARGER VILLAGES Question 33 We act for Fradley Estates, the owner of land off Tregaron Court/Langton Court, Werrington ("the Site") which is put forward for housing development in this Plan. Fradley Estates objects to the village boundary for Werrington and submits that the development boundary should be amended to include the Site. Site Information Site location: Land off Tregaron Court and Langton Court, Werrington – see plan attached. Site Area (ha) About 4.45 ha (including the woodland belts to the north west boundary). Current & most recent land use Agriculture (relatively low value grazing/hay production). Description of site Greenfield Site features The south east boundary of the Site is formed by the rear boundary fences of houses in Tregaron Court, Weston Close, Ferndale Close and Langton Court. The north west boundary is a natural and defensible boundary formed by a stream course. Further east, this stream course forms part of the Green Belt boundary. The south west boundary is formed by mature woodland vegetation comprising a substantial hedgerow and hedgerow trees with associated bridleway. The bridleway lies outside the site. Again, a strong defensible boundary. The north east boundary is represented in part by the stream course referred to above but in the main by the rear of dwellings fronting Uplands Croft. The Site is well contained visually by the hedgerow and hedgerow trees to the bridleway and by a substantial belt of woodland trees near the stream course. The Site is greenfield in character but has not been put to intensive agricultural use, merely used for grazing or for a hay crop. The Site is assessed as being of relatively low ecological value. Available means of access into the Site Appropriate access to the Site is available from Tregaron Court and/or Langton Court. Land at the end of both these cul-de-sacs is retained by Fradley Estates following the construction of the adjacent housing estate and these roads were designed to accommodate future housing development beyond. The Site plan which is submitted separately by email demonstrates the extent of the freehold ownership of Fradley Estates. Short term licences have been granted to adjacent householders to temporarily use the land at both points of access so that the land remains available for access purposes for housing development. A highway report by Sanderson Associates was submitted to the Council in December 2015 which concludes that access can be provided to</p>	Comments noted. See responses to Question 37 – Werrington housing allocations.

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
							<p>serve the development of the Site which meets all current highway guidelinwes. Availability of utilities and services All necessary utilities including potable water, foul and surface water drainage, gas, electricity, telecoms etc are available at the periphery of the Site and can be easily extended into the Site to facilitate development. Drainage connections are already available on-site. Public Right of Way/ Peripheral Planting The public right of way (outside the Site) which follows the south west boundary of the Site with hedgerows and hedgerow trees is located on the periphery of the Site and with vehicular access available elsewhere, neither the public right of way nor associated hedgerows and hedgerow trees will constrain the layout or development of the Site. Indeed, it is proposed that both features will be retained/enhanced and incorporated into the development of the Site – see the Concept Layout appended to the Bright & Associates landscape Evidence Report 2015. Constraints The Site is not at risk of flooding; there is no known land contamination; foul and surface water drainage etc is available; the Site is assessed as being of low ecological value; there is no known archaeological or heritage constraint and therefore there are no major impediments to the early development of this Site. Availability The Site and its points of access are wholly owned by Fradley Estates a development company which is of long standing and skilled in bringing forward land for housing development. Fradley Estates has been responsible for building a significant proportion of the existing housing in Werrington and is therefore very familiar with the locality and has a proven track record of delivery. Fradley Estates is willing and able to bring the Site forward for housing in the short term with a projected yield beginning within 5 years. Supporting comments Although the Site is located within the Green Belt, visually, it is well contained by the natural features that are the stream course and in particular by the well established tree belts and hedgerows on the Site periphery and outer boundary. The north east boundary of the Site is formed in part by existing housing development and in part the stream course which forms the outer boundary of the Site. A precedent has therefore been set for the use of this stream course as a defensible green belt boundary. A Landscape Evidence Report by Bright & Associates was submitted to the Council on behalf of Fradley Estates in December 2015 (“LER”). In the context of the need to</p>	

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
							<p>find housing in a sustainable larger village such as Werrington, it is inevitable that Green Belt land will be required. THE LER concluded that in landscape and visual terms the Site is visually well contained and that in terms of the Green Belt, allocation of the Site would be less damaging to the Green Belt than many of the sites considered by the Council including the preferred options. Fradley Estates and its advisers met with Mark James and Pranali Parikh in April 2016 to discuss the Site. It was agreed at that meeting that the Site had been incorrectly classified in the SHLAA as a category C site due to the Council's misunderstanding of the access position and the incorrect assumption that access was not available. It was accepted that the Site should have been classified as category B in which case it would have been the subject of a more detailed review together with other potential sites for Werrington. It was agreed that the Site had "some catching up to do" and that Fradley Estates would submit further information in support of the Site addressing the Council's strategic Green Belt review, the Council's review of the historic landscape and the sustainability of the Site. A further report has been prepared by Bright & Associates which considers the Site and other potential sites in Werrington including the preferred options in terms of landscape and visual impact and Green Belt, which addresses any effects on the historic landscape and which assesses the sustainability of the Site. A copy of that report which also appends the earlier LER and Sanderson Associates highway report is submitted with these representations by way of separate email. It is clear from the June 2016 Bright & Associates report that:- the development of the Site will have no adverse effects on the historic landscape. the Site is more visually contained than the preferred sites for Werrington and that the allocation of the Site will improve the current sharp edge between housing and field space along the southern boundary of the Site. the Site has advantages over other sites in terms of not compromising the openness of the countryside and in visual terms it does not form part of the Green Belt. the development of the Site would meet the three dimensions of sustainable development within the National Planning Policy Framework. It is also clear from the above, that the Site has no technical constraints which would affect its delivery - indeed as stated above, the Site is owned by a developer with a proven track record of delivery in Werrington who is keen to bring the Site forward. The</p>	

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
							<p>same cannot be said of other potential sites in Werrington (including the preferred options). Furthermore, it is considered that rather than allocate a number of relatively small capacity sites in Werrington as in the case of the preferred options, the allocation of a relatively large site is preferable. The reasons for this include:- The Site is likely to have less impact in landscape and visual impact terms and less perceived impact on the Green Belt than sites currently under consideration. A larger site in the hands of a developer is more likely to deliver and, thereby, deliver a substantial element of the housing requirement for Werrington. A larger site such as the Site is more able to deliver affordable housing and other infrastructure contributions. On the other hand, some of the smaller sites will not be able to carry affordable housing requirements and other infrastructure contributions and so a relatively large site such as the Site is preferable in delivering overall on Development Plan objectives for sustainability. Fradley Estates also owns an area of land off Hillside Road, Werrington which could be brought forward in conjunction with the development of the Site for the delivery of open space and /or low cost housing. It is also submitted that the location and characteristics of the Site mean that a development of the Site would from a qualitative and marketing perspective be better than the Council's preferred options which locate development around the HMYO institution. Fradley Estates therefore objects to the village boundary for Werrington and submits that the development boundary should be amended to include the Site.</p>	
PO2050	Mr Andy Boys	Werrington Parish Council			Werrington & Cellarhead	Object	Werrington Parish Council believes that the village boundary should be coterminous with the parish council boundary. It notes that the 2015 Green Belt Review agreed to an extension of the boundary to accommodate sites favoured by SMDC and this should be allowed in respect of alternative sites recommended by the parish council.	The village boundary is a planning designation and relates to policies in the development plan. It is drawn tightly around the village to prevent encroachment into the wider countryside.
PO9520 PO9525 PO9600 PO9595 PO9598	Miss B Jack Mr N Harding Mr N Meakin Mrs A Meakin Mr J Meakin				Werrington & Cellarhead	Object	Extend the Werrington Village Boundary to be coterminous with the Werrington Parish Council Boundary. It is essential that as a village community we maintain our boundaries and if these have been compromised then they should be reinstated as per Council existing registers.	See response to PO2050 regarding village boundary.

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
PO9364	Mr Alan Bradshaw				Werrington & Cellarhead	Object	<p>We would like to make the following comments regarding the "Preferred Housing Allocation" and the changes to the "Village Boundary" proposals, that if adopted would have a devastating effect on our way of life. Due to the location and elevation of the bungalow we are able to enjoy a magnificent and uninterrupted view overlooking "Park Hall" and its surrounding area, which is part of the current land deemed as "Green Belt". When the original owners applied for planning permission and submitted plans for the bungalow the view had a major influence on the design:- Kitchen and Bathroom situated at the front of the bungalow, Bedrooms and Lounge facing the rear.(All our activities are spent at the rear of the bungalow) In 1998 outline planning permission was applied for (SMD/1998/1183) for a property to be built within the existing boundary adjacent to the bungalow. The application was refused primarily that the development would encroach onto the "Green Belt", there were other reasons for refusal, however I do not have access to the refusal documentation. In 2003 we applied for planning permission (SMD/2003/0992) for a conservatory extension linking a large room that could only be accessed via outside steps. The application was again refused on the basis that the development would overlook the "Green Belt", we were told by planning that we had not considered "The Eyes of the Green Belt" and that we should look at ways of accessing the room internally, (This we did in 2011). The reasons for refusal are the same now as they were in 1998 and 2003 and should be applied to any possible development. The land that has been earmarked for possible development at the rear of our bungalow would cover 80% of our boundary, no other property would be effected like ours. Our privacy at the rear of the bungalow would be totally compromised, the height and elevation of the land would make it impossible to create any screening for ourselves, or for the families and houses that we would overlook. Overnight we would go from being totally private to becoming overlooked (amended) " for the total development. There have been several accidents and fatalities close to where access to the development would be, and despite the presence of a speed camera, I have witnessed over the last fourteen years many driving incidents outside our bungalow, the problem is compounded by having the "Wise Owl" nursery opposite with families dropping off and picking up their children. It would be an accident waiting to happen. We</p>	<p>Comments noted. WE070 was included as a possible housing options site but not included as a preferred housing site in the 2016 preferred options sites and boundaries consultation.</p> <p>The property currently lies within the Green Belt and outside the village development boundary. No change is proposed to this area as part of the new Local Plan.</p>

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
							currently have access to our rear garden from the farm track that leads off Ash Bank Road, this would be compromised if a road was constructed to the development, the track is narrow, and when whoever was either, entering, or exiting the garden, vehicles would not be able to pass. I have attached several photographs for your attention to support our comments. Also it appears that we are no longer within the village boundary, could you please clarify?	
Wetley Rocks								
PO2038	Mrs Pilarczyk	Cheddleton Parish Council			Wetley Rocks	Object	The comments raised before have not been taken into consideration and on this latest map the boundary has been drawn wrongly, taking out an area of land to the rear of Oaklands Close where outline approval for a development has already been granted The Council ask for the village development boundary to be extended; to incorporate the properties on both sides of Mill Lane; from the junction with the A520 Main Road – on the South side of the lane from St. John’s Church down to ‘Lodge Side’ and on the North side of the lane from the boundary of 31 Main Road down to ‘Foxdale.’ On the West side of the A520 Leek Road from ‘Silver Springs’ the Council ask for the village boundary to follow the existing line to the proposed new boundary line where it incorporates the property and land at the top of Mill Lane. The Council must ask for their comments to be taken into consideration.	<ul style="list-style-type: none"> The Wetley Rocks development boundary follows the edge of the Green Belt boundary. The NPPF states that once established, Green Belt boundaries should only be altered in exceptional circumstances and the recent Housing White Paper reiterates this commitment. . The NPPF also states that the construction of new buildings in Green Belt is inappropriate, however limited infilling in villages is listed as an exception. Therefore decisions on planning applications for new buildings falling outside the development boundary in the Mill Lane area will be determined on a case by case basis and have regard to national planning policy, Green Belt policy and policies in the Local Plan.
PO912	Mr winston sylvester				Wetley Rocks	Object	The development area of Wetley Rocks needs expanding as per the submission by Cheddleton Parish Council namely that the village development boundary be extended to incorporate both sides of Mill Lane to "Lodge Side" and "Foxdale". This would facilitate the possibility of infill sites that would meet the housing needs of the village for the foreseeable future. It would also correct the anomaly that the new(ish) Primary School would be included within that area !	See response to PO2038 regarding the development boundary.
PO1439	Mrs R Hartley				Wetley Rocks	Object	I am writing to you to express my concerns/views regarding your choices of site in Wetley Rocks you consider as a potentially suitable site for development. For many years Wetley Rocks was a black spot as a result of this Local MP Councillors and the inhabitants of our village, traffic calming measures were taken which dramatically reduced these accidents. You have selected site WR015, with access from Mill Lane. If this site was used for more than 3 or 4 houses, there would be considerable number of vehicles entering onto Mill Lane, close to the junction with the A520. There are	<ul style="list-style-type: none"> Comments noted. See response to Question 37 – housing allocation WR015. See response to PO2038 regarding the development boundary.

ID	Consultee Name	Organisation Details	Agent Name	Company / Organisation	village boundary	Support/object/general comment	Consultee Comments	Officer Response
							vehicles parked on mill lane from yellow lines down to below the village hall. Spaces are left for property access. On some evening and at weekends, there is often parking on the double yellow lines down to the village hall. Spaces are left for property access. The passage up to Mill Lane is very difficult on the frontage of WR015, and any development would need to be taken into careful consideration. I readily accept the need for more houses in Wetly Rocks and would suggest that the village boundary be extended to the depth of one property to include the property on both sides of Mill Lane, from junction with the A520 – on the North Side of the lane down to Lodge Side and on the south side from the 31 Main Road down the west side of Foxdale. Together with the building plans already approved Mill Lane would thus provide a source of sites that would cover our development needs for many years. Due to the apparent disregard for the views of the electorate in SM district, many people are off the opinion (see letters in the last years copies of leek Post times) that there councillors are making their views known to the officers. The electorate are heavily criticizing the councillor's I know that the councillors are passing our views on to you, but after 4 more meetings organised by my council, to explain the changes to us, there is a different plan each time and none of them seem to want to be what local people want. We then have the green belt review body totally changing things again It is not surprising that the electorate are becoming more and more disenchanted with their council.	
PO1395	Mrs K Bills				Wetley Rocks	Support	We are writing to add our approval of the development plan (preferred option site allocations and boundaries) for Wetley Rocks.	Support noted.
PO2512	Mr D Hartley				Wetley Rocks	Object	I would ask for the village development boundary to be extended to incorporate both sides of Mill Lane from the junction with the A520 - on the north side of the lane from the boundary of 31 Main Road to Foxdale. I also think the whole of the village site St Johns Church down to Lodge side of the church yard being the corner of A520 and Mill Lane should be within the village boundary as should the whole of the village school site. On the west side of the A520 from Silver Springs the council ask for the village boundary to follow the existing line to the proposed new boundary line where it incorporates the property and land at the top of Mill Lane. With houses already planned, any infill sites in Mill Lane, will satisfy and meet the needs of the settlements requirements for some time to time to	See response to PO2038 regarding the development boundary.

							come.	

Question 34: Do you have any comments on the infill boundaries for the Rural Areas?

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
Bagnall								
PO9305	Mr David Edge	Senior Trustee Demon Pension Fund			Bagnall	Object	I would like to suggest that the infill boundary for Bagnall is extended to include the Stanley Moor settlement. This is on the basis that within the Bagnall parish only Stockton Brook and Bagnall are recognised settlements in the March 2014 Core Strategy. I believe that if the opportunity does arise in the future then the Stanley Moor settlement, which is a similar size to the Bagnall settlement, should be designated a small village in 'Core Strategy' terms and have its own Infill Boundary, which will allow a mix of dwellings rather than the possibility of them having to be all affordable / starter homes.	Bagnall is inset into the Green Belt and has an infill boundary defined in the 1998 Local Plan. The proposed approach is no longer to identify a defined infill boundary on the policies map for smaller villages and to determine decisions on planning applications on a case by case basis in accordance with Policy H1 – New Housing Development, having regard to national planning policy (including Green Belt policy) and other policies in the Local Plan.
Checkley								
PO7384	Ms Heather Graham				Checkley	Object	I strenuously object to a change in the Development Boundary for Checkley village & the proposed inclusion of pasture land sites CK0007 & CK0008 adjacent to the A522. Any changes in boundary should come under the remit of the new Neighbourhood Plan where residents work in consultation with the council & officers. The brown field site at Fole Dairy will inevitably be developed before 2031 and the council should find ways of supporting this POSITIVE development, which will enhance the area. The surrounding villages will need to improve their facilities to support this development. The government has recognised the importance of residents becoming involved in their local area and the planning decisions in the Local Plan should listen to their views.	Checkley has an infill boundary defined in the 1998 Local Plan. The proposed approach is no longer to identify a defined infill boundary on the policies map for smaller villages and to determine decisions on planning applications on a case by case basis in accordance with Policy H1 – New Housing Development, having regard to national planning policy and other policies in the Local Plan.
PO7378	Mr Andy Graham				Checkley	Object	Checkley Village submitted a very comprehensive objection to the potential inclusion of sites CK0007 & CK0008m (2 areas of pasture land on the NORTH side of the A522) in September 2015 during the first round of consultations. Despite this these two sites remained in the proposed newly termed "infill boundary". An increasing number of local residents have been working with residents from Tean, Lower Tean & Hollington & members of Checkley Parish Council to become involved with the implementation of the Neighbourhood Development Plan from a Government initiative to allow residents to become more involved in how their community develops. I was very disappointed, that despite this initiative and the work of many residents and the support of many more the wishes and views of residents have been ignored in the first stage of the consultation process. We are all hoping that the Neighbourhood Development Plan and the views of the residents of Staffordshire Moorlands Villages will carry some weigh in the second round of consultations. CK0007 & CK0008 should be removed from the proposed development boundary and the NEIGHBOURHOOD DEVELOPMENT PLAN should be allowed an input into the future of Checkley Village. These sites are unsuitable for the following reasons: Fole Dairy will be developed before 2031 and will provide approx. 60 houses & Checkley & Lower Tean need to be able support this development through their infrastructure. Therefore, there is nor a NEED for housing in Checkley with this site less than 1 mile away. Special landscape area designated land should not be used for residential development when other sites	See response to PO7384 regarding Checkley infill boundary.

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
							are available. The two areas of farmland are significantly larger than is required for a proposed five dwellings. They access directly onto the A522 – on a particularly dangerous section. Development would unnecessarily impact on the landscape, environment & surrounding countryside.	
PO7368	Mr R Graham				Checkley	Object	SITES CK0007 & CK0008 I have attended several meetings. There was a huge response from residents AGAINST bringing these fields into the DEVELOPMENT BOUNDARY. We were led to believe that residents views would be taken into account this is clearly NOT the case. Please listen this time. Fole Dairy is a brown field site which NEEDS developing NOT fields in a rural village on a dangerous main road, this will provide an extension to Checkley anyway! My step son was nearly knocked off his bike last week by a car pulling out of Cranberry Avenue this part of the A522 is a dangerous fast section of highway. More exits here would be endangering life. The village does not need an opportunity for 2 further building areas there are a number of small infill sites available for a few houses that do not impinge on the countryside, if required. Please develop sympathetically.	See response to PO7384 regarding Checkley infill boundary.
PO7398	Ms Heather Graham	Chair Checkley Village Awareness Committee			Checkley	Object	In September 2015 Checkley Village Awareness Committee entered into extensive consultation and involved residents in responding to the proposed boundary changes for the village. There was a huge response: from the circa. 126 residential dwellings, 81 documents were received. 79 Oppose the inclusion of CK007 & CK008 into the development boundary. 2 support. These documents were submitted en bloc and handed personally to Ruth Wooddisse at Moorlands House during the first consultation period and we ask that these documents be retained for future reference and also form part of this objection to the proposal to amend Checkley Village Development Boundary. The message was very clear: PLEASE REMOVE SITES CK0007 & CK0008 from the proposed village boundary. These sites should remain in the “special landscape area” and allow local residents to help to decide if Checkley does need more housing, where this should be & the nature of it through the “Neighbourhood Plan” initiative, currently being formulated by Checkley Parish Council. It is proposed that the Development Boundary should not be changed from 1998 and should NOT be re-classified as “infill” boundary. There are “infill” sites available within the existing boundary that could be considered for development, if deemed necessary and appropriate. At recent meetings of the residents’ association it was decided unanimously that we would not ask residents to re-submit the views they had taken time to formulate and submit in September 2015, as it was offensive. So please refer to our responses of then because NOTHING has changed in respect of these sites but there have been significant changes and advances made with Checkley Parish’s initiative to implement the Neighbourhood Plan and the resultant residents’ involvement. It is understood that Forward Planning will afford councillors & residents the opportunity to work more closely with them & when the current local plan is finally adopted it will take account of councillors & residents’ views. Therefore, changes made should be the result of working together not dictated from above and imposed upon the community at this stage. If residents are going to become involved in the new “Neighbourhood Plan” initiative & take ownership of their localities they need to see that their voice is heard and their views are taken into consideration and acted upon. This has not been demonstrated in “Round 1” of this consultation process.	See response to PO7384 regarding Checkley infill boundary.

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
							<p>Under the new Localism Bill it is understood that residents will have the opportunity to have more input in the future development of their village & communities, without having decisions imposed upon them. We resubmit our views as to why these two particular sites are TOTALLY inappropriate for extension to our village and would like you to take these on board and make the necessary adjustments to the boundaries on the final development plan when implemented, as you have rightly done in our neighbouring village of Lower Tean. Checkley should retain its unique, rural character. SITES CK007 & CK008 - GENERAL COMMENTS: VERY SIGNIFICANTLY : The development of the site at Fole Dairy MUST be taken into account when considering the housing allocation for Checkley, Lower Tean & Hollington. A significant residential development is planned on this 5 acre site within Checkley Parish, which will actually transform Fole into a rural village and at the same time provide significant aesthetic improvement to the area, but will also inevitably impact all three neighbouring villages. The decisions for future housing in Checkley Parish should take account of the development of this brown field site and the development of Checkley Parish Councils' Neighbourhood Plan initiative which should encourage significant community involvement in future planning decisions, otherwise it will be under mined before it is implemented. Adoption of fields, currently in the special landscape area, into potential building land should be a last resort when all other opportunities have been utilised. Why include fields when there are more suitable potential infill sites within and directly adjacent to the existing village boundary, (13 sites were considered) many are true infill sites & would be more than adequate for a total of FIVE dwellings? Any such a decision should once again be resultant from consultation within the Neighbourhood Plan framework. These 2 proposed sites are NOT infill sites in the true sense of the word they are 2 large areas of pasture, which if included would provide the opportunity for developers to build two estates opening directly onto the busy A522 which has a history of accidents and incidents. 1. SITE OPTIONS INFRASTRUCTURE – schools. There is one village school. There is a 5 acre development scheduled for Fole less than a mile away which is in the catchment of Hutchinson Memorial CE(A) School, a small village first school, where intake numbers have recently been reduced. Any future residential development potential would need to be worked through with the school and its governors and the Neighbourhood Plan. INFRASTRUCTURE – Traffic/transport New development should not take place adjacent to the A522, when other options are available. Significantly, the A522 is a fast, busy road and a notorious blackspot. The area is regularly patrolled by speed control vehicles. The proposed developments would make direct access to the road on a particularly dangerous section where there is poor visibility and there have been a number of accidents and fatalities caused by slower traffic pulling onto the race track! Many families use the footpaths along the A522 to walk to school – there is no longer a “lollypop” lady at the school and in recent times there have been a couple of incidents with vehicles and children on this footpath. More accesses would increase risk to the families who regularly use this footpath which is adjacent to the proposed developments. INFRASTRUCTURE – other In recent times there have been problems with the electricity supply to Uttoxeter Road, Cranberry Avenue &</p>	

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
							<p>Badger's Hollow – any development could not join this electrical supply system effectively. At present, there is only one small play area for younger children adjacent to Checkley Community Centre. Any significant expansion of the villages of Checkley & Lower Tean, which would be the case when development goes ahead at Fole would need to review this provision for this area as it is already inadequate. LANDSCAPE – The previous development guidance and local plans for Checkley have always been insistent that extension to village boundaries are on the South side of the A522, where the village has been developed in a controlled manner in recent years, with safer road access and confined boundaries. Previous local plans and SMDC policies have positively discouraged development on the North of the A522. There is no reason why this should be amended, as this will change the village character. NATURE CONSERVATION – The loss of pastureland will inevitably impact on the environment & surrounding countryside; this should not be considered when a brown field site is available and existing housing needs of this area can be met in this manner. SCALE OF DEVELOPMENT – The sites being considered are much bigger than the requirement for five dwellings required in Checkley. This would inevitably provide the opportunity for developers to build two larger scale housing developments. There are infill sites available for the development of five dwellings within and on the edge of the existing village boundary on the South side of the A522 where access to the main road already exists. These two sites CK0007 & CK0008 CANNOT be considered as infill boundary. The Neighbourhood Plan initiative would allow community involvement and would encourage residents to help decide how their villages should grow and evolve. The development of the FOLE DAIRY site HAS to be taken into account when considering the future need for residential development in Checkley. The development of this 5 acre site within a mile of the village, will almost certainly take place before 2031. CHECKLEY village does not need to be extended but should be able to support the development of this residential community by helping to provide adequate facilities for such a positive potential neighbouring development. 13 sites have been considered in Checkley and have been identified for potential development but this should now be carried out through the new "Neighbourhood Plan" with consideration for local need & the suitability of any proposed developments, as opposed to, a dictatorial policy from above, which will inevitably threaten the success of this new initiative. If consultation for the future is not allowed at this stage the neighbourhood plan will not work effectively up to 2031 and beyond. The government has recognised that local residents have the best local knowledge so please afford us the opportunity of working with you to make the very best decisions for everyone so that we have "ownership" of our area.</p>	
Cresswell / Draycott								
PO200	Mrs Jacqueline Leach				Cresswell / Draycott	Object	No site boundary for Cresswell and for preferred site OC055. Cresswell is a rural hamlet NOT a small village and is not registered as a small village by SMDC therefore this goes against the NPPF and SMDC's adopted Core Strategy.	This site has outline planning approval. Committed sites will be shown on the proposals map.
PO1030	Mrs Shelagh		Mrs Shelagh		Cresswell / Draycott	Object	Cresswell and Draycott are not listed here and yet they have a major development included on the site allocations plan and 168 houses that are also NOT in the site	See response to PO200 regarding the approved site.

	Wood		Wood				allocations plan, therefore comments have been restricted by SMDC. The planning application for these two developments is under police investigation and we are awaiting a report from the Government Ombudsman regarding the passing of application SMD/2014/0576.	
Dilhorne								
PO422	Mr Howard Leeson		Mr Kenneth Wainman	Ken Wainman Associates Ltd	Dilhorne	Object	The boundary is drawn so tight that there is little, or no, scope for housing that meets a local need or for affordable housing. There are potential infill sites outside the proposed boundary where both local need housing could be provided but based on policy SS6b these would have to be rural exception housing which need to be underpinned financially by some market housing particularly given the uncertainty as to the future of affordable housing and the introduction of starter homes. The village is linear in nature and it would be reasonable to expand the Infill Development Boundary to include the houses on Godley Lane northwards to the 30mph sign. The boundary need not be continuous (see Cheddleton). The Infill boundary could consist of discrete groupings with the larger green gaps outside the boundary. It could exclude the larger gaps to maintain the overall character. This would be more consistent with national policy in para. 55 of the NPPF. It would also be useful if "local needs" was defined because this is often translated as just affordable housing and it should be much wider than this.	Dilhorne is washed over by Green Belt. The NPPF states that the construction of new buildings in Green Belt is inappropriate, however limited infilling in villages is listed as an exception. The proposed approach is no longer to identify a defined infill boundary on the policies map for smaller villages and to determine decisions on planning applications on a case by case basis in accordance with Policy H1 – New Housing Development, having regard to national planning policy (including Green Belt policy) and other policies in the Local Plan.
PO126	Mr Anthony Wheat		Mr Kenneth Wainman	Ken Wainman Associates Ltd	Dilhorne	Object	The boundaries are drawn so tight that there is little, or no, scope for housing that meets a local need or for affordable housing within the proposed boundary. Dilhorne is a village which could accommodate more housing without damaging its essential character particularly if this housing were to be infill development in the smaller gaps that exist. The village is basically linear and there are several smaller gaps particularly on the eastern side of Godley Lane which could be infilled without damaging the character of the village. It is contended that it would be reasonable to expand the Infill Development Boundary to include the houses on Godley Lane northwards to the 30mph sign. The boundary need not be continuous; it could exclude the larger gaps to maintain the overall character and consist of discrete pockets/groups of houses and potential infill sites and exclude the larger green spaces between existing development. This approach is proposed in Draycott, Longsdon, Oakamoor and Cheddleton. There are potential infill sites outside the proposed boundary where both local need housing could be provided but based on policy SS6b these would have to be rural exception housing which need to be underpinned financially by some market housing particularly given the uncertainty as to the future of affordable housing and the introduction of starter homes. The consultee has a small potential infill site where he would like to construct a house for a farm worker and a possible affordable house or starter home in a small infill gap to the south of Ash Cottage. The farm worker's dwelling would help make the affordable house viable. It would also be useful if "local needs" housing was defined as often local needs and affordable dwellings are treated as being the same thing and they are not.	See response to PO422 regarding Dilhorne infill boundary.
PO4716	Mr Michael Bamford	Planning Design			Dilhorne	Object	Agent (on behalf of landowner) reiterates representations submitted to 2015 Options consultation; namely a supporting letter proposing a wider infill boundary for Dilhorne than proposed; a 2015 Options response form (proposing this, and	See response to PO422 regarding Dilhorne infill boundary.

							also a site for housing south of School Lane), a SHLAA form, and a map of this site. Refer to attachments.	
Foxt								
PO1118	Ms J Wilbraham				Foxt	Object	I am writing to object most strongly to the allocation of housing to the ancient hamlet of Foxt. I have set out my reasons below :- Additional housing in Foxt is not required and would be totally out of character in such rural setting within the Churnet Valley. The proposed developments would ruin the aesthetic appeal of this area of the Staffordshire Moorlands which is rich in heritage buildings and reduce the attraction to tourists with the consequential loss in trade to businesses reliant on tourism. The roads are insufficient to accommodate any increase in traffic and are already congested at certain times in Ipstones already. The road through Foxt is only single track. There is no requirement for the additional housing proposed. The environmental impact of any additional housing would be significant. Such developments would increase the noise and light pollution, which would be detrimental to existing wild life in the area and detract from the peace and serenity of the countryside. The proposal is incongruous with the vision for the Churnet Valley as an area of outstanding natural beauty. Instead, there is a requirement for houses in Towns and the Potteries conurbation. In parts of Stoke, Hanley and the Potteries, large areas of houses have been demolished. That is exactly the place where new houses should be built. The infrastructure is already in place and employment opportunities are available. The SMDC local plan lacks a strategic approach, instead being a scatter gun style that places houses in every hamlet and village in the area. I propose that the SMDC transfer their allocation of housing from Foxt and Ipstones to Stoke City Council where housing is seriously required and work in partnership to ensure that SMDC retains the financial incentive for housing from Government which it would otherwise receive.	Foxt does not have an infill boundary defined in the 1998 Local Plan. The proposed approach is no longer to identify a defined infill boundary on the policies map for smaller villages and to determine decisions on planning applications on a case by case basis in accordance with Policy H1 – New Housing Development, having regard to national planning policy and other policies in the Local Plan.
PO474	Mr P Stimpson		Mr John Wren	JMW Planning Limited	Foxt	Object	Like many of the boundaries around smaller villages that for Foxt has been drawn too tightly. Core Strategy Policy SS6b commits your Council to allowing "appropriate development which enhances community vitality or meets a local social or economic need of the settlement and its hinterland." Your Council appears now to be interpreting that policy as allowing infill development only which is incompatible with the government guidance in the NPPF that the planning system should be significantly boosting the supply of housing- guidance that your Council has so far failed to comply with. It is also incompatible with paragraph 50 of the NPPF which requires the delivery of a wide choice of high quality homes. Where a boundary is drawn tightly around a settlement the opportunities for infill are limited often leaving the only option as the demolition of existing properties and their replacement. Where this has happened more dwellings are inevitably proposed on the site leading to "cramming" which is usually visually inappropriate and detrimental to the existing character of the village. The initial 2015 consultation and consideration of the responses to it gave the Council the opportunity to identify areas in the smaller villages where SS6b could be implemented positively and it is disappointing that the opportunity has been missed to be replaced by an essentially negative approach to these villages, based it would seem on the fact that in many cases the only realistic means of transport	See response to PO1118 regarding Foxt infill boundary.

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
							is the private car. That is a fact of life and it should not be given as much weight as it appears to have been given. There are many other aspects of sustainability which are equally as important, if not more so. That is the case in Foxt which is a settlement that has not had any new dwellings built in it for over 40 years. The western infill boundary is acceptable but that on the eastern side has omitted SHLAA site FO003 which is available for development now and could be the subject of a low density development of bungalows including one-third 'affordable' dwellings which would allow existing residents in the village or its hinterland to downsize and stay in the village. The site is of no particular landscape merit and could well accommodate a modest scheme of appropriate housing as an infill scheme. The vision for the District speaks of sustainable and balanced rural communities and that requires villages like Foxt to have more growth than is currently planned. The eastern boundary should be extended to accommodate limited infilling on currently undeveloped land as suggested.	
PO563	Mr Peter Cowie				Foxt	Object	In my experience infill prohibits open views which in turn leads to an urban sense of being closed in. This is counter productive to the health and well being of residents and leads to the development of urban sprawl where villages join with each other and become a conurbation with a gross lack of identity.	See response to PO1118 regarding Foxt infill boundary.
PO564	Mr Peter Cowie				Foxt	Object	Foxt was formerly open country. Residents live here because they like open country and there is no good reason to change its status.	Comments noted.
PO4465	Mr R Duncan	Rob Duncan Planning Consultancy			Foxt	Support	Letter submitted by agent on behalf of landowner that supports inclusion of their premises [Central Garage Foxt Road] within Preferred Option infill boundary. [Refer to attached letter].	See response to PO1118 regarding Foxt infill boundary.
PO4466	Mr R Duncan	Rob Duncan Planning Consultancy			Foxt	Object	Letter submitted from agent on behalf of owner of Central Garage premises, Foxt Road, which objects to exclusion of SHLAA site FO008 from Preferred Options infill boundary of village. This also clarifies that access is available through Central Garage premises to the site as they are both in same ownership. [Refer to letter attached to comment PO4465].	See response to PO1118 regarding Foxt infill boundary.
Hollington								
PO429	Mr David John Allen				Hollington	Object	The infill shown now appears to be limited to the area immediately surrounding the Church. I do not see any possibility in building within this tight area as a good proportion appears to be the grave yard. The infill should be extended to cover from one end of Hollington to the other, allowing development on spaces between existing properties and the development on existing homesteads. I do however feel to go with this the speed limit through the whole village should be reduced to 30 MPH when considering the volume of JCB commuting traffic between Cheadle and Rocester.	Hollington does not have an infill boundary defined in the 1998 Local Plan. The proposed approach is no longer to identify a defined infill boundary on the policies map for smaller villages and to determine decisions on planning applications on a case by case basis in accordance with Policy H1 – New Housing Development, having regard to national planning policy and other policies in the Local Plan.
PO581	Mrs Sandra Peck				Hollington	General comment	The infill area would not be able to accommodate new homes. This area is no longer regarded as the centre of the village by locals. This area does not enable any brown field sites to be taken into account.	See response to PO429 regarding Hollington infill boundary.
PO597	DR William Callender				Hollington	Object	This boundary is unsuitable because it covers an area where there is no suitable space to build and concentrates development around an area where the roads are particularly narrow and hazardous due to restricted visibility whilst being subject to large traffic flows, particularly from commuting workers to the JCB factory in Rocester. Furthermore, Hollington is a linear village and the infill area is at one	See response to PO429 regarding Hollington infill boundary.

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
							end, it should be more to the centre, around the village hall, located at the junction between Quarry Bank and Hollington Road.	
PO684	mr ivor moseley				Hollington	Object	The infill site is exceedingly small and includes the church and graveyard. The area selected doesn't have the space to put more than 1 house as far as I can see - unless there is extensive earth removal on the Hollington to Denstone Rd. It would have been much better to have had a more sympathetic attitude to local residents previous planning applications which are seemingly routinely turned down.	See response to PO429 regarding Hollington infill boundary.
PO7417	Mr Derek Wragg				Hollington	General comment	Housing Issues - Many applications for infill housing have been refused in the past in favor of tourism or holiday accommodation some of which have not been fully utilised for this purpose or not used at all. Solutions - Extend the village development boundary or rezone to release land for affordable homes for the younger generation. Preferred Sites and Infill Boundaries Hollington is a dispersed settlement where development proposals should be considered very carefully: uncharacteristic infilling could ruin the fabric of the village while estate development would overwhelm it. The protection of the villages visual, historic and landscape qualities is also a key factor in keeping the status of a working village and rural environment, the village having 3 fully operational stone quarries which are major contributors to the County of Staffordshire's mineral wealth. My personnel opinion is that the Infill / Development Boundary should be revised or expanded into zones taking into consideration two major requirements. One to enable the residents to build on homesteads to meet their personnel accommodation needs be it for younger or older relative. A thing that has been denied in the past in favour of holiday accommodations. The village could also benefit in the sustainability of its assets be it for proposed environmental recreational or retail use by its residents in the long term by implementing this strategy'. Secondly it would not conflict with the integrity of the Minerals Planning Strategy and any future Procurement of natural stone reserves or inherent minerals for future generations And the possibility of releasing sterilized land for future development or other use in keeping with the criteria of the existing Green Belt status of the village. A minerals extraction or boundary plan should also be considered for publication with the Local Plan.	See response to PO429 regarding Hollington infill boundary.
PO7437		Hollington Residents' Steering Group			Hollington	Object	Housing The problem for the 2015 housing site allocation exercise is that the current combination of the amber status of the two sites identified in the village and the highly restrictive village development boundary means that there is little chance of any house building in Hollington in the near future. There is a demand for affordable housing that should combat the further decline in village amenities. Furthermore the strong objections to the two sites near the Cross regarding the size of these plots and the traffic problems that new housing on this very narrow section of road indicate to many in the village that these sites are unsuitable for housing development. The housing market is further distorted by the amalgamation of small terraced quarrymen's cottages into larger housing units which in many cases like other housing units, are often under occupied by elderly couples or individuals. There are very few opportunities for downsizing in the village because planning permission for such developments on homesteads like starter homes has usually been refused. On the other hand, applications to build new holiday cottages, some of which are out of character with the stone built	See response to PO429 regarding Hollington infill boundary.

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
							housing stock in the village have been much more successful. Extending the development boundary and giving more balanced consideration to new units aimed at downsizing or affordable starter homes would permit stronger geographical family links. Another strategy would be to identify brown field or designated quarrying land more central to the overall structure of the village e.g. at or near the junction between Main Road and Quarry Bank, for housing with stronger affordability and downsizing opportunities. Employment Hollington is a working village with jobs in agriculture, quarrying and increasingly recreation and tourism. The main problem is that young people who were born in the village cannot afford to buy properties in the village. An affordable housing development and/or a relaxation of planning restrictions on building on homesteads (see Housing) would make the village a more vibrant community with a lower age profile. Retailing The village has lost 2 shops, a mobile library and a post office in the last thirty years. A recent application to open a shop in the village was refused. The Hollington Residents' Steering Group are interested in creating an opportunity to develop markets for the sale of local produce in the village hall but a limitation to this development is the limited public car parking space near the hall. It would also be appropriate to revisit the application to SMDC for permission to open a shop in the village. Infrastructure Traffic is the major issue here. The ridiculous situation we have now is that three speed limits meet at the Quarry Bank- Main Road junction. Going east is a 30 mph, going west is 40 mph and going north it is national speed limit. Ironically the roads get narrower going north and west and there are no pavements in the village. There should be a rationalisation of the limit to 30 mph supported by traffic calming measures to combat speeding along Main Road. A speed watch survey recently identified a traffic flow Of 166 cars in an hour of which around 17% were exceeding the 30 mph limit. The narrowness of the roads in the village combined with blind junctions on Main Road at Quarry Bank, the Cross, Ground Hollow and Firbob Lane are all accident spots. Appropriate measures such as mini roundabouts should be put in place to reduce car speeds and the associated accident risk. The planning process needs to be looked at as part of the social infrastructure. Residents of the village feel that they are caught in a catch 22 situation where residential facilities are approved for tourism but not for long term occupation.	
PO7546		Hollington Residents' Steering Group			Hollington	Object	The proposed development boundary provides little or no capacity for development, encompassing gardens and a churchyard. There are numerous smaller sites elsewhere within the village boundary that would better assimilate new housing, without impairing the character of the village.	See response to PO429 regarding Hollington infill boundary.
Hulme								
PO4461	Mr R Duncan	Rob Duncan Planning Consultancy			Hulme	Support	Submits report on behalf of landowner that supports the inclusion of site HU002 within the settlement infill boundary for the village. However states that, having regard to the conclusions of the Local Authority's Green Belt Review, also considers that there is merit in extending the proposed infill boundary to include another parcel of land in client's ownership to immediate east. [Refer to attached Report].	Hulme does not have an infill boundary defined in the 1998 Local Plan. The proposed approach is no longer to identify a defined infill boundary on the policies map for smaller villages and to determine decisions on planning applications on a case by case basis in accordance with Policy H1 – New Housing Development, having regard to national planning

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
								policy and other policies in the Local Plan.
Leekbrook								
PO3925 PO3922	Mr John Coxon	Emery Planning Partnership			Leekbrook	Object	Emery Planning is instructed by Wainhomes (North West) Limited to submit representations to the Preferred Option Site and Boundaries Consultation Booklet. The representations are made specifically with regard to our client ' s site adjacent to Wardle Gardens, Leekbrook. [Refer to Report attached to Question 1 which also covers this question].	Leekbrook has an infill boundary defined in the 1998 Local Plan. The proposed approach is no longer to identify a defined infill boundary on the policies map for smaller villages and to determine decisions on planning applications on a case by case basis in accordance with Policy H1 – New Housing Development, having regard to national planning policy and other policies in the Local Plan.
Longsdon								
PO217	Mr & Mrs Anthony & Gillian Laverick	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	Longsdon	Object	RIDGEWAY HOUSE, LEEK ROAD, LONGSDON, ST9 9QF On behalf of my clients I write in support of the inclusion of their property in the proposed Village Infill Development Boundary. Ridgeway House and garden is part of the group of properties along Leek Road and is located close to the village church and village hall and as such the proposal to include the property in the Infill Development Boundary is supported. However, I object, on my clients' behalf to the fact that the proposed Infill Boundary line arbitrarily crosses their garden at a point roughly halfway across it. The proposed line does not follow any physical feature and excludes the northern part of the garden from the proposed Infill Boundary area. The proposed boundary in the neighbouring house to the east – Holly Grange – also arbitrarily crosses the garden there at roughly the halfway point. Next door to the west the proposed boundary line at The Old Smithy follows the stream which forms the northern boundary of the property. The same stream also forms the north-eastern boundary of the gardens at both Ridgeway House and Holly Grange. Yet at Ridgeway House and Holly Grange an arbitrary boundary is proposed which does not follow any physical feature. The reasons for objecting to the proposed Infill Development Boundary line are: 1. The line appears to be purely arbitrary. It is generally accepted that it is good planning practice for planning boundaries to follow physical features on the ground. Advice in paragraph 85 of the National Planning Policy Framework with regard to Green Belt boundaries is that physical features that are readily recognisable and likely to be permanent should be used. The same essential approach should apply to the proposed Infill Development Boundary particularly as the village is in the Green Belt. The stream that forms the northern garden boundary is a readily recognisable and permanent feature and it is contended that the Infill Boundary line should follow this feature which is also the garden boundary at Ridgeway House and Holly Grange. 2. The position of the infill boundary line at Ridgeway House would in effect prevent the land being used for infill development given that there are mature trees, which are worthy of retention, around the garden edges and it would be extremely difficult to construct a house with parking and turning space and an adequate garden within the space available . If the Infill Boundary were to be amended to follow the stream to the north-east then there would be sufficient space in the eastern part of the garden to enable a house and facilities to be built there without causing any	Longsdon is washed over by Green Belt. The NPPF states that the construction of new buildings in Green Belt is inappropriate, however limited infilling in villages is listed as an exception. The proposed approach is no longer to identify a defined infill boundary on the policies map for smaller villages and to determine decisions on planning applications on a case by case basis in accordance with Policy H1 – New Housing Development, having regard to national planning policy (including Green Belt policy) and other policies in the Local Plan.

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
							harm to the trees or the character of the area and to provide access with good visibility sight-lines. 3. The proposed line of the Infill Boundary across the garden seems to negate the purpose of the Infill Development Boundary which is to define/indicate where appropriate development will be allowed and not, instead, prevent development. General comment Longsdon village in reality consists of clusters of houses along Leek Road, Sutherland Road, Denford Road and Micklea Lane. It is contended that the clusters of houses along Micklea Lane and Denford Road should be included in the Infill Boundary.	
PO561	Mrs Margaret May				Longsdon	Object	The SMDC policy that has been applied to smaller villages development is to put infill boundaries around the spine of the village. Longsdon does not have a spine as such as it has low density housing spread over several roads - ribbon development. Sutherland Road has no more houses per metre than Micklea Lane or Denford Road for example and it is unclear why it has been identified as the spine. Longsdon is the village that proves the exception to this rule with regard to this policy. In order not to spoil its character the infill boundary needs to be extended to cover several roads in the village and rules put in place that ensure that the building requirement for Longsdon which we believe should be nearer 12 than 20 is spread evenly throughout the village. Existing planning permissions already account for about 5 of those required. Many householders have large gardens already designated as residential land and sites have already been put forward for consideration in Denford Road and Micklea Lane, including our own half acre, which makes up half our garden. We believe this is also the view of the Longsdon Parish Council. We also have concerns about further development along the A53 as that appears to be in direct contravention of the recommendations in the Green Belt Review (2015), which states, "Part of the central core of the Green Belt in this locality, which strategically ensures that there is a proper separation between the Stoke conurbation and Leek and that the accessible countryside in this location is protected from encroachment, particularly along key transport corridors such as the A53." In the circumstances, we think this should be excluded from the infill boundary.	See response to PO217 regarding Longsdon infill boundary.
PO758	Mr Paul Webb	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	Longsdon	Object	SITES LO007 AND LO021 - LAND TO THE SOUTH-WEST AND EAST OF WHITEHAVEN, LEEK ROAD, LONGSDON, STOKE-ON-TRENT, ST9 9QF. On behalf of my client I write objecting to the proposed Infill Development Boundary in so far as it affects the Site LO007 and, to the omission of potential development sites LO007 and LO021 from the proposed allocated sites and their omission from the proposed Infill Development Boundary. Mr Webb is representing the owners of the site, Anne Webb, David Sigley Ferns and Miles Sigley-Brown. In more detail my client's objections and reasons for those objections are: 1. The proposed Infill Development Boundary line I object, on my client's behalf, to the fact that the proposed Infill Development Boundary line arbitrarily crosses the Site LO007 and does not follow any physical feature excluding the southern part of the land from the proposed Infill Boundary area. The proposed boundary follows the rear boundary of the houses to the west, on the same side of Leek Road, until it gets to the house (Wynn Dene) next to my client's site where it cuts across the corner of the rear garden of Wynn Dene and then continues, not following any recognisable physical feature, in a diagonal arbitrary line to the east where it meets the rear	See response to PO217 regarding Longsdon infill boundary.

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
							<p>boundary of Whitehaven. From there it continues eastwards along the rear boundary of Whitehaven, the next door house to the east and the Village Hall. Elsewhere in the proposed Infill Boundary the boundary line follows physical features including site and garden boundaries. The reasons for objecting to the proposed Infill Development Boundary line are: The line appears to be purely arbitrary. It is general good planning practice for planning boundaries to follow physical features on the ground. Advice in paragraph 85 of the National Planning Policy Framework with regard to Green Belt boundaries is that physical features that are readily recognisable and likely to be permanent should be used. The same essential approach should apply to the proposed Infill Development Boundary as much as the actual Green Belt boundary because the village is in the Green Belt where it is important that boundaries are recognisable and permanent. The southern boundary of the site is in line with the rear garden boundaries of the three houses to the immediate west. It is reasonable and logical for the proposed Infill Development boundary to follow the southern boundary of the site because the hedge and trees along this boundary are recognisable and permanent physical features which continue the line of the gardens to the west. Moving the proposed boundary to the southern site boundary would be consistent with the plot size of the houses to the west; allow adequate garden, parking and turning space; and allow a development in keeping with the character of the adjoining houses. The proposed Infill Boundary across the site creates an irregular shaped site which would be more difficult to develop. The position of the infill boundary line at Site LO007 would restrict the amount of infill development that could be built on the land or may prevent any infill development at all. It is recognised that access from Leek Road to this site is difficult and that an outline planning application (SMD/2015/0634) for two houses on the site has been refused in 2016. One of the three reasons for refusal was that it was not considered possible to construct an access on the site with adequate visibility splays on land under the applicant's control. Following this refusal discussions have been held with the owner of the adjoining property, Wynn Dene, and it seems possible, and likely, that an agreement could be reached whereby access to the site could be provided from Wynn Dene westernmost access (it has two). This would enable infill development on the site. Even if this access could not be provided it would be possible to access the site from the south as part of a development of Site LO021. This is explored in more detail below in the objection to the omission of the two sites from the preferred allocated residential development sites. The proposed line of the Infill Boundary across the site seems to negate the purpose of the Infill Development Boundary which is to define/indicate where appropriate development will be allowed, and not instead, prevent or restrict development. 2. The omission of Sites LO007 and LO021 from the preferred allocated sites These two sites adjoin Site LO002 on Sutherland Road and all three sites were put forward in the Site Options Consultation in 2015 as possible development sites. The three sites adjoin each other and are situated close to the junction of Sutherland Road and the A53 (Leek Road). These sites are assessed in the supporting documents to this present consultation including the Green Belt Review. Sites LO007 and LO021 belong to Anne Webb, David Sigley-Brown and Miles Sigley-Brown who are represented by</p>	

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
							<p>Mr Paul Webb of 22 Admiralty Way, Eastbourne, BN23 5PP . Site Lo002 is in different ownership. All three sites are in the Green Belt and were included in the draft Infill Boundary for the village. I am not acting for the owner of Site LO002 and the site is only mentioned because the three sites were assessed together in the Green Belt Review and form a contiguous potential development area. Access to Sites LO007 and LO021 can be best provided through Site LO021. In the proposed Sites and Boundaries documents Site LO007 and Site LO021 are not shown as proposed residential sites. Site LO002 (fronting onto Sutherland Road) is not shown as a proposed draft allocation but the site is included in the proposed Infill Development Boundary. Only part of Site LO007 and none of Site LO021 are included in the proposed Infill Boundary. In practice, if the proposed Infill Boundary remains the same Site LO002 could be developed for Infill Housing leaving Sites LO007 and LO021 potentially landlocked and undevelopable. Yet in the Site Options Assessment, the Sustainability Appraisal and the Green Belt Review the site is assessed as generally favourable and suitable for development. If Sites LO002 and Sites LO021 were released for development vehicular access could be provided to the rear of Site LO007 releasing the whole of the site for development. Mr Webb on behalf of the site owners objects to the omission of these sites from the proposed site allocations and requests that both sites are included for residential development in the Local Plan and that both sites are included within the proposed Infill Development Boundary for the following reasons: In the Green Belt Review all three sites were appraised as one and the recommendation was that the three sites be considered for release whilst Longsdon should remain washed over to contribute to wider strategic purposes of preventing sprawl along the A53. The Review considered that release of the three sites would have a very limited overall impact on Green Belt purposes. In terms of the Green Belt the development of the sites would not reduce the gap between Stoke and Leek or gaps between the village and Leek and Endon. The Sustainability Appraisal considered that the development of the two sites for dwellings (LO007 and LO021) would have a positive effect as would the sites' accessibility to areas of open space. It is contended that the stated negative effects mentioned in the Sustainability Appraisals do not give a true picture. The negative effects (shown in italics) mentioned in the Appraisal are:</p> <ul style="list-style-type: none"> o The sites are inaccessible to services and facilities and employment areas Whilst there are relatively few services in the village the sites are close to the A53 (Leek Road) which is the main route between Leek and Stoke and Hanley and along which there is a regular bus service between Hanley/Stoke and Leek all of which contain ample services and employment opportunities. The nearest shop is on Ladderedge less than a kilometre away and there are shops, doctors, schools and other services in Endon which is about 4 kilometres (2.5 miles) to the east on the A53. Leek centre is about 3-3.5 kilometres (1.9-2.2 miles) away. The two sites are situated close to the Village Hall, the church and a pub; closer than many other parts of Longsdon. o Involves the development of greenfield land This is correct but the sites are not in active use for agriculture and are isolated from farms. On balance it is contended that the benefits of housing on the sites would outweigh the loss of this land. o The site's proximity to designated historic assets. No details are given in the Appraisal but 	

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
							<p>the sites are not in or near a Conservation Area nor are there any listed buildings on or near the site. The two sites do not flood (source: Environment Agency Map on the Web). The sites could be accessed from Sutherland Road through site LO002. If the Council were to allocate the three sites for development it could stipulate that the development the three sites must be developed in effect as one site with shared access. Site LO021 is identified in the Options Site Assessment as a draft Reserve Site which indicates that the Council consider that it probably could be developed with access from Sutherland Road. Site LO007 is shown on the Site Options Appraisal map as constrained. This is probably because of the issue of access. There is potential that the site could be accessed through sites LO021 and LO002 which would make development possible. Also, there is strong possibility that Site LO007 can be accessed through the western entrance to Whitehaven. It is appreciated that there is strong local opposition, including from the Parish Council, to the development of these two sites (and also LO002) and that there is a public preference for extending the Infill Boundary to include other parts of Longsdon and providing for housing need through infill development. There is also a history of planning refusals for single houses on Site LO002. However, it is contended that development on the two sites together with Site LO002 would create a compact development which would have little adverse impact on the Green Belt or village character. It is considered that the benefits of development on the site would significantly outweigh the disbenefits. The Council in its comments in the Options Site Assessment stated that development on both sites would not be out of proportion with rest of the village. The Council in its comments in the Options Site Assessment stated that it is not possible to meet the requirements of the village upon brownfield sites alone. Whether possible infilling within the proposed Infill Development Boundary can meet this need is not indicated. General Comment It is contended that the Council's approach allocating particularly proportions of development to the towns and rural areas is too regimented and arbitrary and that allocations or requirements for specific areas rather being allocated on a percentage or formula basis should be based on the capacity of a town or village to absorb or provide for development without material harm. It is possible that Longsdon could accommodate more that the target of twenty houses particularly if the Infill Development boundaries were extended without any environmental harm. This could mean that some proposed sites in the District which cause environmental harm could either be reduced in size or omitted altogether. Paragraph 55 of the National Planning Framework states that to promote sustainable development in rural areas housing should be located where it would enhance or maintain the vitality of rural communities. This is such a case.</p>	
PO1156	Mr L Leigh				Longsdon	General comment	<p>I have recvd the draft plan for the future housing in Longsdon. Could you please explain to me why my also me also my neighbours land Highview and Woodview have not been included in the infill boundary. This does not seem to make sense as they are only small parcels of land in Sutherland road. Those are available. If you was too walk down Sutherland Road from the top down there is only 3 field entrances on the right not infills. No infills in limes Ave and a small paddock keeps horses , near the bottom of Sutherland road. I know there is going to be public meetings where the public can have their say, but the last public consultations</p>	See response to PO217 regarding Longsdon infill boundary.

							comments were not taken into account, I have also spoke to an officer many times could you supply me with the governments dept. address where final say is. Could you please answer my letter, and not just a postcard thanking me for my comments?	
PO3909	Mr G Messenger				Longsdon	Object	I support the principle of infill development boundaries to ensure there is delivery of windfall housing in the heart of small villages. However, larger individual sites need to be identified by the local authority to ensure that the housing target is delivered and the policy approach is 'effective'. The absence of identified development sites in small villages is not 'justified' or the most appropriate strategy. I request that larger development sites such as LO002 continue to be identified for development in the Local Plan. [Letter attached].	See response to PO217 regarding Longsdon infill boundary.
PO3908	Mr R Duncan	Rob Duncan Planning Consultancy			Longsdon	Object	I object to my client's land (and the parcel of land beyond to the north), not being included within said residential infill boundary. [Two attachments].	See response to PO217 regarding Longsdon infill boundary.
PO9703	Mr David Edge	Senior Trustee Demon Pension Fund			Longsdon	Object	Email and map [attached] submitted: I would like to suggest that the infill boundary for Longsdon is extended from Henshaw Brow towards St. Chad's Church as far as the planners deem appropriate. Similarly along School Lane from Henshaw Brow and Highfield House, which are both at the junction of School Lane and the A53. See attached amendment to a snapshot of the Longsdon Draft Infill Boundary. With regard to the land adjoining the A53 between its junction with School Lane and St. Chad's Church, the access onto the A53 along most, if not all, of this boundary is very good and conforms to all the highways requirements for a 40mph zone, which cannot be said of most of the land on the opposite side of the A53. There is also the possibility of providing a single access point onto the A53 by the use of a service road behind the existing hedge and trees so as to diminish any visual impact that may be caused by this development. The strategy of a service road behind the existing hedge and trees could also be used if the infill boundary was extended further along School Lane from its junction with the A53.	See response to PO217 regarding Longsdon infill boundary.
PO9699	Mr David Edge	Senior Trustee Demon Pension Fund	Mr Rob Ford		Longsdon	Object	Representation submits earlier 2015 representations/correspondence from Rob Ford promoting a number of sites for residential development; and a boundary adjustment to the proposed infill boundary, for Longsdon: On behalf of Mr and Mrs Edge, I have earlier submitted a site suggestion (for housing) at Longsdon. The site being to the west of School Lane at it's junction with the main road. Having regard to the ongoing consultation process and the comments made by the Longsdon Parish Council in respect of site allocations thus far, I have produced a sketch drawings showing 8 no. possible houses for part of the above site. This shows 4 affordable dwellings and 4 open market , 2 of which are shown as single storey. This is intended to be helpful in the ongoing process of selection. We have chosen to show development at this end of the larger site proposed because it is particularly less prominent than other sites in the area and development is thereby less intrusive within the Green Belt.	See response to PO217 regarding Longsdon infill boundary.
Lower Tean								
PO332	Mr Richard Brittleban	Director Ken Wainman Associates Ltd	Mr Kenneth Wainma	Ken Wainman Associates	Lower Tean	Object	SITE LT009 LOWER TEAN – LAND EAST OF TEANHURST ROAD . On behalf of my client I object to the omission of site LT009 from the proposed residential allocations. The reasons for objecting to the exclusion of the site are: · The	Lower Tean has an infill boundary defined in the 1998 Local Plan. The proposed approach is no longer to identify a defined infill boundary on the policies

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
	k		n	Ltd			<p>Council's SHLAA assessment form for site LT009 states that development here would adversely affect the settlement pattern and lead to undesirable encroachment into the countryside. This is disputable – it would add to the settlement certainly but it is contended that it is not correct that the proposed development would harm the settlement pattern or the countryside. It would consolidate development in the village. It would be in keeping with the basic settlement pattern of the village which is a rough acorn shape rather than linear development. Also, the site is adjacent to modern housing and development and would not be out of character with this part of the village. · The whole site can be developed whereas the Council's SHLAA assessment of the other potential sites that were assessed in the consultation process is that they should only contain frontage development. · LT009 contains mature trees which with careful design to retain the trees would create an attractive development. · The proposed Infill Development Boundary for the Lower Tean is tightly drawn and leaves very few, if any, sites where infill could take place and effectively means that no new housing for local needs or affordable housing could be provided in the village. · Site LT009 is large enough to require affordable housing under current national planning guidance and this may be the only way. The village is in Checkley Parish and a housing needs survey was published in 2012. The survey report did not recommend a specific number of affordable houses or local need houses that need to be provided in the Parish. However, it did identify 13 potential returnees plus the survey identified 29 responders in housing need and in favour of an affordable housing scheme. It is accepted that there are some potential infill sites in Checkley but no specific site that might accommodate the possible need has, as far as I am aware, been identified in the Parish. Outline permission for up to 60 houses was granted in June 2014 but there does not appear to be any affordable housing in the scheme. · The site has good access and does not have the issues that the other sites in the village which were appraised as part of the site assessment process. My client asks that Site LT009 be put forward as a preferred site for Lower Tean.</p>	map for smaller villages and to determine decisions on planning applications on a case by case basis in accordance with Policy H1 – New Housing Development, having regard to national planning policy and other policies in the Local Plan.
PO473		Staffordshire Rural Development Ltd	Mr John Wren	JMW Planning Limited	Lower Tean	Object	<p>Like many of the boundaries around smaller villages that for Lower Tean has been drawn too tightly. Core Strategy Policy SS6b commits your Council to allowing "appropriate development which enhances community vitality or meets a local social or economic need of the settlement and its hinterland." Your Council appears now to be interpreting that policy as allowing infill development only which is incompatible with the government guidance in the NPPF that the planning system should be significantly boosting the supply of housing- guidance that your Council has so far failed to comply with. It is also incompatible with paragraph 50 of the NPPF which requires the delivery of a wide choice of high quality homes. Where a boundary is drawn tightly around a settlement the opportunities for infill are limited often leaving the only option as the demolition of existing properties and their replacement. Where this has happened more dwellings are inevitably proposed on the site leading to "cramming" which is usually visually inappropriate and detrimental to the existing character of the village. The initial 2015 consultation and consideration of the responses to it gave the Council the opportunity to identify areas in the smaller villages where SS6b could be</p>	See response to PO332 regarding Lower Tean infill boundary.

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
							implemented positively and it is disappointing that the opportunity has been missed to be replaced by an essentially negative approach to these villages, based it would seem on the fact that in many cases the only realistic means of transport is the private car. That is a fact of life and it should not be given as much weight as it appears to have been given. There are many other aspects of sustainability which are equally as important, if not more so. Your approach to Lower Tean is inconsistent based I suspect on the locally organised opposition to the outline planning application submitted for site LT001 rather than any consideration of the facts. Less than a year ago your Council said there was a need for over twenty new dwellings in this settlement and that they could not be provided within the existing development boundary. Appeal decisions have confirmed that the original development boundary is out of date and the need for new housing which you identified has not gone away yet you have drawn a boundary which offers no reasonable prospects of infilling to provide the housing you have said is needed. Site LT001 offers the opportunity for development now. There are no technical reasons why it cannot be developed as confirmed by the responses to the planning application. What is needed is a layout that keeps the development away from the northern boundary and concentrates development on the Uttoxeter Road frontage where it will be seen as filling an existing gap between dwellings. Approximately nine dwellings could be accommodated on this basis including three affordable dwellings or starter homes. The development boundary should be repositioned to allow this to happen.	
Rudyard								
PO195	Mr David Cross				Rudyard	Object	Extending the infill boundary of Rudyard would be detrimental to the village having a negative affect on the villages tourist appeal, and contrary to the villages unique historical nature, prompting SMDC to consult on conservation area status for the village.	Rudyard is washed over by Green Belt. The NPPF states that the construction of new buildings in Green Belt is inappropriate, however limited infilling in villages is listed as an exception. The proposed approach is no longer to identify a defined infill boundary on the policies map for smaller villages and to determine decisions on planning applications on a case by case basis in accordance with Policy H1 – New Housing Development, having regard to national planning policy (including Green Belt policy) and other policies in the Local Plan.
PO1479	H & M Beswick				Rudyard	Object	This site is now included in the proposed village boundary, it is near to the highway which is served by public transport. Several houses can be built on this site which would keep traffic out of the busy lake road	See response to PO195 regarding Rudyard infill boundary.
PO1469	Mr H Wilson				Rudyard	General comment	Appeal at the end of The Drive Lake Road Rudyard I am surprised that you had not included the land at the end of the Drive Lake Road, Rudyard in your infill area proposed. The land is the most suitable to be included in the infill areas being the following: More than the require dwellings approx 6 could be built on the land the land has all the utilities nearby the land is not overlooked only from the rears of 4 dwellings the previous assessment was very suitable to include infill areas. The shortage of housing requires more dwellings to be built in the area. Grouping village areas is not acceptable and does not reflect each village needs and	See response to PO195 regarding Rudyard infill boundary.

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
							assumption are not accurate. The assumption made by the council not to include more land in the proposed infill areas and the amount of housing that is required over the next few years is not acceptable and most of the area allowed in the proposed infill area is not suitable for building. Two areas have been enlarged without colouring the areas pink. There has been no consideration given to the amount of dwellings that will be required in the next few years. It seems the decisions have been made NOT to enlarge the infill areas and to be as they are now, and not to follow the wishes of the government to increase building areas. You had requested representation's with the proposed sites in which at least a number of dwellings could be built and as far as the land is mentioned above you designated it. To be a suitable site in your assessment. What has changed? You do not seem to have included any additional sites for the building. I would therefore ask you to include the land in your infill area.	
PO3900	Mr R Duncan	Rob Duncan Planning Consultancy			Rudyard	Support	Supports client's site (RU020) being incorporated into draft infill boundary; and site RU016 being excluded. [1 attachment submitted].	See response to PO195 regarding Rudyard infill boundary.
PO3896	Mr Roger Yarwood	Roger Yarwood Planning Consultant Ltd			Rudyard	Object	[Letter attached to email]: I wish to comment as follows on the above Plan. I represent the owners of the Hotel Rudyard. The way in which some settlements have been "washed over" with a Green Belt designation, and some have been excluded from, but surrounded by, the Green Belt is inconsistent and illogical. A consistent approach should be adopted. This should be achieved by excluding land within the "infill boundaries" from the Green Belt. The definition of infill boundaries has been undertaken inconsistently. In general they are too tightly drawn to the extent that the Council will not achieve its housing target which relies on 10% windfall provision. In particular, it is totally illogical to leave the Hotel Rudyard outside the infill boundary. The Hotel Rudyard is clearly a part of the core of the settlement and leaving it outside the infill boundary will stifle any future development plans needed to increase its tourism potential and its viability. The hotel and its grounds should be within the infill boundary and, preferably, Green Belt should not wash over the area within the infill boundary.	See response to PO195 regarding Rudyard infill boundary.
Rushton Spencer								
PO213	Mr Richard Bailey		Mr Kenneth Wainman	Ken Wainman Associates Ltd	Rushton Spencer	Support	STATION ROAD, RUSHTON On behalf of my client Mr. Richard Bailey. I welcome the proposal to extend the development boundary along Station Lane down to the Knott Inn. Mr. Bailey owns the site on Station Road to the immediate east of the Knott Inn. On the west side of the site is a small brook and the Environment Agency flood risk map does not identify the site as being at risk from flooding. The site has the advantage that it is sandwiched between existing developed sites – Cherry Brook to the east and the Knott Inn to the west. There are existing services along Station Lane and development on the site would be a continuation of the existing modern development along Station Lane. As part of the Site Options consultation in 2015 Mr. Bailey submitted a plan showing the land which he wished to see included in the proposed infill development boundary. The proposed Infill Development Boundary runs along the southern side of the agricultural building on the land and roughly in line with the southern boundary of the Knott Inn car park. Now Mr. Bailey has seen the proposed boundary and the proposals	Rushton Spencer is located on the edge of the Green Belt and has an infill boundary defined in the 1998 Local Plan. The NPPF states that the construction of new buildings in Green Belt is inappropriate, however limited infilling in villages is listed as an exception. The proposed approach is no longer to identify a defined infill boundary on the policies map for smaller villages and to determine decisions on planning applications on a case by case basis in accordance with Policy H1 – New Housing Development, having regard to national planning policy (including Green Belt policy) and other policies in the Local Plan.

							for the village he asks that consideration be given to moving the southern infill boundary south to a point in line with the southern edge of the Knott Inn car park and the rear boundary of the two houses, Cherry Brook and the Willows, to the north-east along Station Road. A location plan showing the suggested revised Infill Development Boundary is..[attached]. The purple line on the location plan shows the current proposed boundary and the red line shows the suggested amended boundary. With regard to site RS009 on the Macclesfield road my client, Mr Bailey has a lifelong agricultural tenancy on this land and therefore objects to this land to the land being developed as it would have a significant effect on his business and livelihood.	
PO816	Mrs K Foschtinski				Rushton Spencer	Object	RS005 which is the only infill without a red light, has already been turned down by the Inspector when the owners applied to have the land turned into a garden area. The Inspector dismissed the appeal as the site was very visible throughout Rushton and was the gateway to the village. There should be no encroachment on either greenfield or greenbelt sites, houses should be dispersed around the village on brownfield sites.	See response to PO213 regarding Rushton Spencer infill boundary.
PO571	Mrs & Miss B & L D Brown	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	Rushton Spencer	Object	Land to the north of Tea Cottage, Macclesfield Road, Rushton Spencer, SK11 0QU On behalf of my client Mrs B Brown of Wuthering Heights, Heaton, Rushton Spencer, and Miss L D Brown of 3, St Luke's Court, Leek I object to the omission of an area of land north of the track on the north of Tea Cottage from the proposed Infill Village Development Boundary and the continued inclusion of this land in the Green Belt. The track north of Tea Cottage leads to Lime Tree Cottage, Mole Hill and The Limes. In January 2012 I wrote a letter on behalf of Mr F B Brown (now passed), the husband of Mrs Brown, seeking the inclusion of the land in the housing land availability assessment. This did not happen probably because the site was too small as it can only accommodate one house and was therefore below the threshold for inclusion in the Strategic Housing Land Availability Assessment (SHLAA). Mrs Brown would now ask that the site is omitted from the Green Belt and included in the proposed Village Infill Boundary for the following reasons: The site is the former garden belonging to Tea Cottage which lies immediately south of the track/drive. The land is now overgrown but there are still several signs on the site, including two sheds, that the site was used as a garden. When Tea Cottage was sold to another person in October 2001 by Mr F B Brown and Miss L D Brown only the house was sold and not the garden which remained in Mr Brown and Miss Brown's ownership. Whilst there are three mature trees on the site which are protected by Tree Preservation Order I met with the Council's tree officer on site in 2012 and it was agreed that it would be possible to site a house on the site without harming the protected trees. The Tree Preservation Orders on the site are addressed "Tree Cottage, Macclesfield Road, Rushton" which confirms the link between the cottage and the site. The previous village development boundary for Rushton Spencer in the now defunct Local Plan (1998) was much more tightly drawn than the proposed boundary focussed on the southern part of the village including Sugar Lane. The northern part of the village was not in the village development boundary and was washed over by the Green Belt. The present proposed boundary now includes all the intervening houses that were there in 1998 and several newer houses on Station Lane (which is just to the south) and	See response to PO213 regarding Rushton Spencer infill boundary.

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
							these newer houses include the three houses down the track/drive which borders the south side of the site which Mrs Brown would like to see released from the Green Belt. It is contended that this it is unreasonable and not to exclude what is residential land, albeit it is garden, from being in the Village Infill Boundary particularly as the site boundaries are clear and permanent. To the south is the track and Tea Cottage; to the north there is a mature hedge and a pond and willow carr; to the west is the Limes and a stream and field boundary and to the east is Macclesfield Road. The pond and the willow carr would be difficult to develop because of the problems of drainage, because of its landscape value and its likely ecological value. The willow carr and the mature hedge and trees on the site and the nearby buildings create a "contained" development of which with good design would not harm the openness of the Green Belt and not conflict with the purposed of the Green Belt. It is possible that there might be newts including great crested newts, which are protected in the pond, but it is considered that suitable and effective mitigation measures could be provided if required. That would allow a house to be built on the site. The site is part of the group of three houses - Lime Tree Cottage, Mole Hill and The Limes – served off track and residential development for one house, possibly a bungalow, would be in context. The recent High Court judgement (Dartford BC v Secretary of State for Communities and Local Government) concluded that the definition of "previously developed land" (brownfield land) only excludes residential gardens if they are in built-up areas. It follows based on this judgement that rural residential gardens are previously developed land and that the site is previously developed land. It is appreciated that this judgement may be tested in the Court of Appeal and beyond. However, given the planning history of the site and its location as part of a group of houses it is contended that it would be reasonable to exclude the site from the Green Belt and include it within the proposed Village Infill Development Boundary.	
PO670	Dr John Pears				Rushton Spencer	Object	There is no justification for proposing infill on green belt land in and around Rushton Spencer. I object to the use of green belt land for housing on principle, but especially in this case where the number of new houses required by the plan for Rushton Spencer can be easily met by in fill from other land which is not green belt.	See response to PO213 regarding Rushton Spencer infill boundary.
PO1185	Mr Malcolm Matravers				Rushton Spencer	Object	I do not believe that the development boundary should be extended to include any green belt areas as it is determined to be a village. Similarly, as behind the area behind the Ivy House between Sugar Street is about to be developed, the area of land between Sugar Street, Macclesfield Road, and alley Lane would result in over development in that part of the village	See response to PO213 regarding Rushton Spencer infill boundary.
PO1478	Mr Malcolm Matravers				Rushton Spencer	Object	I do not believe that it is necessary to extend the development infill boundary to include the green belt The Jim Hallam site for green public open sensible site for the green open public space and should not be used for development	See response to PO213 regarding Rushton Spencer infill boundary.
PO1227	Mrs Amanda Hughes				Rushton Spencer	Object	The infill boundary should be changed to exclude the land at the vicarage 7 land between alley lane& Leek old road. The rationale is that development ongoing opposite this site will already cause chaos to the road structure. No, not all cars can be accommodated easily. I am also against losing green field areas & therefore would be grateful infill excluding	See response to PO213 regarding Rushton Spencer infill boundary.
PO868	Mr Robin				Rushton	Object	All development should be on brownfield sites. RS005 should not be included as	See response to PO213 regarding Rushton Spencer

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
	Foschtinski				Spencer		it's redesignation from field to garden has already been turned by the Planning Inspector as it is a prominent site with a visual impact on the whole village. It is also much too steep to be developed without excessive terracing and stabilisation of the hillside. RS009 is in the Greenbelt contributes greatly to the rural nature of the village and is prone to frequent flooding. There are an adequate number of infill sites to the west of this site whose development would have little impact on the character of the village.	infill boundary.
PO4832	Mrs Donna Kettle				Rushton Spencer	Object	I would like to make a formal representation on the Staffordshire Moorland Local Plan Site Allocation document. I understand that the formal consultation period has now closed, but unfortunately I was not aware of it at the time. I hope you will be able to take any comments into account, and the published timetable on your website suggests that this should be possible, particularly given that their focussed nature. If you are not able at this time, then I will send them through again as a formal representation on the Publication version of the plan. Could you add my details to your consultation basis so that I can be kept informed of future stages and opportunities for involvement?' I would like to see an amendment to the infill boundary for Rushton Spencer, so that it includes the site shown on the attached plan. This would be a very minor modification that would be fully consistent with the plan strategy and the Green belt designation. The site is surrounded by existing buildings on one side and trees on the others, and a barely visible from the road or the other parts of the Green Belt. A small infill development on this site would have no material impact on the openness of the Green Belt, but would form a coherent part of the existing village and would be clearly within its boundaries. The large garage and forecourt on the opposite side of the road is a highly urbanising feature, extending the built up area of the village beyond this site. Furthermore, the building on the main road frontage immediately to the South-East of the site is very prominent given its proximity to the road, its height, and views of its North-West elevation. In this context, the visual impact of any development on this site would be negligible, particularly as it would be set back from the main road. The inclusion of the site within the infill boundary would therefore be fully consistent with the protection of the character of Rushton Spencer and the openness of the Green Belt. It would also be consistent with the approach to rural areas set out in the adopted Core Strategy, delivering the sensitive growth referred to on page 42. This site would provide an opportunity to gradually increase the housing supply in the village without any significant adverse impacts. The draft plan includes an assumption that a average of 30 net additional dwellings per annum will come forward on village infill sites, providing a total of 570 additional dwellings over a 19 year period. Although it covers 41 villages, this would seem quite optimistic giving the site allocations in the other villages are in addition to it. It will therefore be important to take all the opportunities to deliver sustainable housing developments within the villages, and this site provides a low impact opportunity. It is also notable that this site performs well in comparison to other land within the infill boundary for Rushton Spencer that could be subject to applications for residential development on land East of The Knott Inn. In summary, this site provides an ideal opportunity to support a modest in the housing supply within Rushton Spencer in a way that has negligible impact on the openness of the Green	See response to PO213 regarding Rushton Spencer infill boundary.

							Belt and is consistent with both local and national planning policy.	
Stockton Brook								
PO557	Mr Nicholas Mountford	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	Stockton Brook	Object	<p>Land to the north of Leek Road, Stockton Brook, Stoke-on-Trent, ST9 9NW. On behalf of my client, the site owner, Mr Nicholas Mountford of Quarry House Farm, Moss Hill, Stockton Brook, Stoke-on-Trent, ST9 9NW I object to the omission of an area of land north of Leek Road, Stockton Brook from the proposed Infill Development Boundary for Stockton Brook and ask that the site is released from the Green Belt and included in the Infill Development Boundary. The site was not submitted as part of the Site Options Consultations in 2015 but the site is well situated in terms of communications, services, the wider area and the village. The site is situated close to the junction of Moss Hill and Leek Road and runs to the north and north-west from Leek Road up to modern housing at Heather Hills and west to Moss Hill. There are houses and the village hall along the frontage of Moss Hill opposite the site and residential development and services on the other side of Leek Road which is a regular bus route between Hanley and Leek. Immediately opposite the site on the opposite side of Leek Road is Stockton Brook Post Office and shop. To the north of the site is an area of about 45 modern houses stretching into the countryside towards Brown Edge and towards Endon. A location plan showing the site boundaries is submitted separately by email. At the Leek Road/Moss Hill cross-roads there are a barbers, a beauty shop and a kitchen and bedroom fitters shop. There is a Spar grocery shop at a petrol station at Baddeley Green which is about 350-400 metres away to the west along Leek New Road. About 95 metres to the west of Moss Hill is the Caldon Canal Conservation Area and Green Belt land. To the east of the proposed site the land consists of Green Belt pasture fields. Quarry House Farm (house, outbuildings and stables) is located in the north west of the site and the house garden stretches down almost the full frontage on Moss Hill. The site is situated in the Green Belt and there is a formal row of lime trees along the entire southern (Leek Road) frontage of the site, a row of deciduous trees along part of the western frontage onto Moss Hill; an informal line of trees along the northern boundary with Heather Hills; and a mature hedgerow along the entire eastern boundary. There are a number of mature deciduous trees in the northern part of the hedge along the eastern boundary. There is also an isolated tree near to the Quarry House stables. All the trees mentioned are protected by Tree Preservation Order. There is an access to the site and to Quarry House Farm off Moss Hill and a plan (No.00554_AL(0)03 showing the current access has been sent separately by email. This latter drawing also shows the visibility splays for the access. This access could be moved further northwards to improve the visibility splays. Drawing No.00554_AL(0)04 shows a potential access further to the north on Moss Hill which has better sight-lines. It is also proposed that a further access could be created onto Leek Road. Two drawings (No's No.00554_AL(0)01 and No.00554_AL(0)02) show two possible alternative access points. The first of these drawings shows the access constructed at the point where there is an existing gate. There is also a possibility that an alternative access could be provided further east along Leek Road – see later. The impact of these access points on the protected trees is discussed later in this</p>	Stockton Brook is washed over by Green Belt. The NPPF states that the construction of new buildings in Green Belt is inappropriate, however limited infilling in villages is listed as an exception. The proposed approach is no longer to identify a defined infill boundary on the policies map for smaller villages and to determine decisions on planning applications on a case by case basis in accordance with Policy H1 – New Housing Development, having regard to national planning policy (including Green Belt policy) and other policies in the Local Plan.

							<p>document. The Green Belt Review commissioned by the Council split the Green Belt into sub-zones assessed the contribution each sub-zone made to the Green Belt purposes. The proposed site lies in sub-zone N22 with sub-zone N21 immediately to the west. The Review considers that both sub-zones make a significant overall contribution to the purposes of the Green Belt. In particular, it is considered that the sub-zones make a significant contribution to checking unrestricted sprawl and safeguarding from encroachment; make a contribution to assisting regeneration in Stoke; and make a limited contribution to preventing towns merging and the setting of towns. The Review describes the two sub-zones together with parcels N19 and N20 as forming an arc of parcels preventing the absorption of Brown Edge and Endon into the Stoke-on-Trent conurbation to the south-west. Mr Mountford asks that the site is omitted from the Green Belt and included in the proposed Village Development Boundary for the following reasons: Assessment of the impact of possible development on the site. The area of modern housing to the immediate north of the site already stretches towards Brown Edge and Endon. Looking from Leek Road this housing appears, and is generally accepted, as being part of Stockton Brook, The eastern boundary of the proposed site extends only slightly further eastwards than the modern housing the eastern boundary of which is demarcated by mature tree planting and for part of its length by a road. A similar approach could be adopted on this potential site with access in the south-east of the site onto Leek Road and a road and substantial tree planting forming the eastern boundary. All houses would be to the west of this road and tree planting. Development of the land would fill a gap between existing developments and as such it would not extend development towards Brown Edge and not add to the absorption of Brown Edge into the Stoke conurbation. With regard to reducing the gap between Stoke and Endon the modern houses to the north already extend towards Endon and whilst the site boundary lies slightly to the east of that of the houses to the north this could be tree planted and the reduction in the gap between Stockton Brook and Endon would be minimal. Whilst development on the site would create a break in the Green Belt between east and west the Green Belt would sweep around the site on either side and the rural feeling of the area would remain. Residential development on the site would appear as a part of the village and would not be discordant or have a significant visual impact or impact on the overall openness of the Green Belt or the character of the Green Belt. It is contended that if the site were to be developed it would not add to sprawl nor would be encroachment but would be a consolidation of existing development between two existing parts of the village. Both sub-zones 21 and 22 are described in the Green Belt review as making a limited contribution to preventing towns merging and the setting of towns. In terms of assisting regeneration it is considered that development of this site would have a limited effect as it would form part of the housing figure/targets for the District. Overall, it is contended that whilst the development of the site would mean loss of some of the Green Belt it would not have a major impact on the openness of the Green Belt and would, for the reasons outlined above, not conflict significantly with the purposes of the Green Belt given that the shortage of deliverable housing land in the Borough amounts to exceptional circumstances. The site, compared to most, if</p>

							<p>not all the small villages in the Moorland, is well placed with respect to services. There are two regular bus services along Leek Road; Hanley to Leek and Hanley to Buxton. Immediately opposite the site is the village post office and local shop. There is a grocery (Spar) shop about 400 metres walk away towards Stoke. There is also a barber, a beauty shop and a kitchen fitters shop nearby. There are various small shops further along the road to Stoke and Hanley and restaurants nearby. There are doctors' surgeries relatively nearby in Baddeley Green and Endon and there is a primary school (Greenways PS) about 530 metres away to the south-west and primary and secondary schools in Endon the nearest of which is about a kilometre away. There is a children's nursery (Moorlands Nursery) about 250 metres towards Endon on Leek Road. The site is about 1.8 hectares in size and could accommodate between 44-50 houses at average densities. The number of houses could be less if the density of development was lower. The Council's policies would require the provision of affordable housing as part of the development. The site is a particularly good one for affordable housing because of the range of services locally. As described earlier there are several potential access points. Those alternatives on Leek Road would need to go through the row of lime trees on the frontage. A small number of trees may need to be removed to construct a road but as drawings no's. No.00554_AL(0)01 and No.00554_AL(0)02) reveal it would be possible to prune the trees to create the necessary visibility. On Moss Hill the re-located access (drawing no. 00554_AL(0)04) shows that adequate visibility can be created northwards and whilst a wall obstructs a small part of the visibility splay this wall belongs, I believe, to the Parish Council and it may be possible to negotiate a reduction in its height. Also, traffic approaching from the south would be on the opposite side of the road and would be visible within the required distances. The vast majority of the lime trees along the Leek Road frontage would be retained and designed as an integral part of the any scheme as would the other protected trees on the site. Part of the site is already in residential use – Quarry House Farm. Overall, it is contended that the benefits of a development on the proposed site would outweigh the disbenefits.</p>	
PO919	Mr Nick Mountford	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd	Stockton Brook	General comment	<p>Site ADD008 - Land to the north of Leek Road, Stockton Brook, Stoke-on-Trent, ST9 9NW. On behalf of my client, the site owner, Mr Nicholas Mountford of Quarry House Farm, Moss Hill, Stockton Brook, Stoke-on-Trent, ST9 9NW I object to the omission of Site ADD008 from the proposed Infill Development Boundary for Stockton Brook and ask that the site is released from the Green Belt and included in the Infill Development Boundary. The site, which is well situated in terms of communications, services, the wider area and the village, was not submitted as part of the Site Options Consultations in 2015 but was submitted later as an additional site (ref:ADD008) and is assessed in the Site Options Assessment document. The recommendation in the Options Assessment was that the site is constrained and should not be released from the Green Belt. The issues raised in the Options Assessment are addressed later in this response. The site is situated close to the junction of Moss Hill and Leek Road and runs to the north and north-west from Leek Road up to modern housing at Heather Hills and west to Moss Hill. There are houses and the village hall along the frontage of Moss Hill opposite the site and residential development and services on the other side of Leek Road</p>	See response to PO557 regarding Stockton Brook infill boundary.

							<p>preventing the absorption of Brown Edge and Endon into the Stoke-on-Trent conurbation to the south-west. Mr Mountford asks that the site is omitted from the Green Belt and included in the proposed Village Development Boundary for the following reasons : 1. Assessment of the impact of possible development on the Green Belt. The area of modern housing to the immediate north of the site already stretches towards Brown Edge and Endon. Looking from Leek Road this housing appears, and is generally accepted, as being part of Stockton Brook, The eastern boundary of the proposed site extends only slightly further eastwards than the modern housing the eastern boundary of which is demarcated by mature tree planting and for part of its length by a road. A similar approach could be adopted on this potential site with access in the south-east of the site onto Leek Road and a road and substantial tree planting forming the eastern boundary. All houses would be to the west of this road and tree planting. Development of the land would fill a gap between existing developments and as such it would not extend development towards Brown Edge and not add to the absorption of Brown Edge into the Stoke conurbation. With regard to reducing the gap between Stoke and Endon the modern houses to the north already extend towards Endon and whilst the site boundary lies slightly to the east of that of the houses to the north this could be tree planted and the reduction in the gap between Stockton Brook and Endon would be minimal. Whilst development on the site would create a break in the Green Belt between east and west the Green Belt would sweep around the site on either side and the rural feeling of the area would remain. Residential development on the site would appear as a part of the village and would not be discordant or have a significant visual impact or impact on the overall openness of the Green Belt or the character of the Green Belt. It is contended that if the site were to be developed it would not add to sprawl nor would be encroachment but would be a consolidation of existing development between two existing parts of the village. Both sub-zones 21 and 22 are described in the Green Belt review as making a limited contribution to preventing towns merging and the setting of towns. In terms of assisting regeneration it is considered that development of this site would have a limited effect as it would form part of the housing figure/targets for the District. Overall, it is contended that whilst the development of the site would mean loss of some of the Green Belt it would not have a major impact on the openness of the Green Belt and would, for the reasons outlined above, not conflict significantly with the purposes of the Green Belt given that the shortage of deliverable housing land in the Borough amounts to exceptional circumstances. The Site Options Assessment implies that the site may have an impact on the function of the Green Belt as a whole but without the site specific review it is difficult to comment precisely. However, it strongly contended that this would not be the case for the reasons described in the preceding paragraphs. Development on the site would not reduce the Green Belt between the existing development on Moss Hill and Stoke; it would "square off" and consolidate development linking the housing to the north to the built-up area south of Leek Road without protruding significantly beyond the eastern boundary of the existing housing to the north. Whilst development on the site could not be considered to be limited infill houses in practice it would in practice be "infill" of what is a gap between existing built</p>

							<p>development without significantly impinging on either the openness or the key purposes of the Green Belt. 2. Access to Services, Facilities and Employment Contrary to the comments in the Council's Sustainability Appraisal Report the site is well placed with respect to services. The Appraisal states that the site is inaccessible to services and facilities. This is not correct. In fact it is much better served than most, if not all of the small villages in Moorlands. There are many services nearby - many within walking distance - and the site is on a regular bus route. The site is situated immediately to the north of the A53 (Leek Road) which is the main route between Leek and Hanley and Stoke. There are two regular bus services along Leek Road; Hanley to Leek and Hanley to Buxton. Immediately opposite the site is the village post office and local shop. There is a grocery (Spar) shop about 400 metres walk away towards Stoke. There is also a barber, a beauty shop and a kitchen fitters shop nearby. There are various small shops further along the road to Stoke and Hanley and restaurants nearby. There are doctors' surgeries relatively nearby in Baddeley Green and Endon and there is a primary school (Greenways PS) about 530 metres away to the south-west and primary and secondary schools in Endon the nearest of which is about a kilometre away. There is a children's nursery (Moorlands Nursery) about 250 metres towards Endon on Leek Road. 3. The site is about 1.8 hectares in size and could accommodate between approximately 40 houses at average densities. The number of houses could be less if the density of development was lower. The Council's policies would require the provision of affordable housing as part of the development. The site is a particularly good one for affordable housing because of the range of services locally. 4. The Sustainability Appraisal Report states that the site is inaccessible to existing employment areas. It is contended that this is incorrect. The bus journeys from Stockton Brook to Hanley and Leek take about minutes respectively 5. As described earlier there are several potential access points. Those alternatives on Leek Road would need to go through the row of lime trees on the frontage. A small number of trees may need to be removed to construct a road but as drawings no's. No.00554_AL(0)01 and No.00554_AL(0)02) reveal it would be possible to prune the trees to create the necessary visibility. On Moss Hill the re-located access (drawing no. 00554_AL(0)04) shows that adequate visibility can be created northwards and whilst a wall obstructs a small part of the visibility splay this wall belongs, I believe, to the Parish Council and it may be possible to negotiate a reduction in its height. Also, traffic approaching from the south would be on the opposite side of the road and would be visible within the required distances. 6. The vast majority of the lime trees along the Leek Road frontage would be retained and designed as an integral part of the any scheme as would the other protected trees on the site. 7. Part of the site is already in residential use - Quarry House Farm. 8. Overall, it is contended that the benefits of a development on the proposed site would outweigh the disbenefits.</p>	
PO3888	Mr R Duncan	Rob Duncan Planning Consultancy			Stockton Brook	Object	On behalf of my client I wish to object to the exclusion of my client's land [SB014 and other land] from the proposed residential infill boundary for Stockton Brook, as it is considered that the site is surrounded by residential development and its inclusion within the infill boundary would present opportunities for a low density form of development to come forward that will respect and reinforce the spacious	See response to PO557 regarding Stockton Brook infill boundary.

ID	Consultee Name	Company/ Organisation	Agent Name	Company / Organisation	Infill Boundary	Support Object General comment	Consultee comments	Officer Response
							character of the surrounding area. [Two attachments submitted].	
PO9572	Mr & Mrs Thomas Bloor				Stockton Brook	Object	The Council wrote to us last year regarding the fact that the council officers in your team were considering the use of our land (see attached plan - land is marked in red) for housing development. Following the council's identification of the possibility of being included in the proposed infill area for Stockton Brook, the land was included in the Site Options Consultation held in 2015. However, the Preferred Options document excludes our land from the infill boundary. The current infill proposal for Stockton Brook is directly adjacent to our boundary on two aspects (east and south) with the other two boundaries (west and north) having existing housing located directly adjacent. We do not understand why the current infill boundary appears to exclude our property and suggest that it makes more sense if the boundary is "squared off" to the west of Willfield Lane as shown on the attached plan.	See response to PO557 regarding Stockton Brook infill boundary.
Whiston								
PO825	Ms Alison Conybear e				Whiston	Object	Why has the boundary to the north of the garage extended into the field? This should remain close to the garage buildings as previously.	Whiston has an infill boundary defined in the 1998 Local Plan. The proposed approach is no longer to identify a defined infill boundary on the policies map for smaller villages and to determine decisions on planning applications on a case by case basis in accordance with Policy H1 – New Housing Development, having regard to national planning policy and other policies in the Local Plan.
PO9516	Mr Paul Housiaux				Whiston	Object	(Summary of response) Object to the ongoing consultation process and how it affects the village boundary of Whiston. 1. SMDC does not have a sound Core Strategy that provides the basis for the Site Allocations process. SMDC is both out of time and has failed to comply with the required process. 2. SMDC has failed to comply with the strict requirements of consultation and is therefore invalid as to procedural requirements, NPPF and the Localism Act. 3. Lack of documents at the consultation events.	<ul style="list-style-type: none"> Comments noted. The Core Strategy was found sound and is adopted.

Question 35: Do you have any comments on the visual and public open spaces for the Rural Areas?

ID	Consultee Name	Company/ Organisation	Agent Name	Agent Company / Organisation	Area of visual/public open space	Support/object/ general comment	Consultee Comments	Officer Response
General								
PO2570	Mrs Maggie Taylor	Planning Manager Sport England			All	Object	I note some of the open space designations are formal sports facilities (which is supported) but it is very important that all sports sites are captured otherwise those excluded will have lesser protection. I note that the Football Ground off Orchard Court/Grace Street for example is not designated whereas the cricket club site just to the north is - why? I also note that the playing fields associated with the secondary school are not designated – should they not be? It will be important to clarify what is designated and why (or why not) and to ensure all playing fields are clearly protected (as it is a defined function/use of open space), whether it is in Council ownership or not (Birchall Playing Fields appears to be included?) so there is a consistent level of protect for all open space, whatever its use. This principle applies across ALL THE PROPOSED PLANS.	The Council is undertaking a review of open space, sport and recreation facilities which includes an updated playing pitch strategy. Any inconsistencies will be investigated as part of this updated work.
PO2865	James Chadwick	Spatial Planning Policy Officer Staffordshire County Council			All	Object	In relation to the areas of Open Space identified throughout the site options document it is noted that all school playing fields have been categorised as open space, some in their entirety and others appear to only include certain parts. There is no definition in the plan as to what 'Open Space' constitutes or whether it needs to be accessible to the general public. As the Plan progresses it is unclear what policy restrictions may be imposed to such land. We therefore reserve our position on 'Open Space' at school fields and suggest that further discussion is required on whether the identification of school playing fields as 'Open Space' is required given the protection afforded to playing fields already through National Planning legislation and school premises legislation?	<ul style="list-style-type: none"> Not all the open spaces marked on the map are accessible to the public and should be indicated as 'open space' rather than 'public open space'. See response to PO2570.
PO1291	Justin Milward	Lead Government Affairs Officer (Local), Woodland Trust			All Sites	Support	Support provision of Open Space in the Local Plan. (Further detail in the attached comments).	Support noted.
PO430	Mr David John Allen				General - all	General comment	Open Space should be part of any reasonable size development.	Comment noted.
Alton								
PO1346	Ms K Dewey	Staffordshire Wildlife Trust			Alton	General comment	Consideration should be given to protecting key areas with Visual Open Space status.	<ul style="list-style-type: none"> The Council's Landscape, Local Green Space and Heritage Impact Study (2016) has recommended sites for inclusion as Local Green Space.
Blythe Bridge								
PO877	mr jonathan broadhurst				BB041	Object	As a visual open space this particular site is extremely valuable. The public have the right of way to pass through the centre of it which is important as it allows people to enjoy it.	<ul style="list-style-type: none"> The site is not recommended for designation as Local Green Space in the Landscape, Local Green Space and Heritage Impact Study (2016).

							It is a beautiful area with an abundance of wildlife and plants, including very well established trees which we understand have preservation orders on them. These must be protected at all costs.	<ul style="list-style-type: none"> See response to Question 37 – housing allocation BE041.
PO879	Mr Elliot Broadhurst		mrs diane broadhurst		BB041	Object	As a visual open space this particular site is extremely valuable. The public have the right of way to pass through the centre of it which is important as it allows people to enjoy it. It is a beautiful area with an abundance of wildlife and plants, including very well established trees which we understand have preservation orders on them. These must be protected at all costs.	See response to PO977 regarding site BB041.
PO886 PO893	Miss Emily Broadhurst mrs diane broadhurst		mrs diane broadhurst mrs diane broadhurst		BB041	Object	The green belt within the rural areas needs to be protected; once it's gone, it's gone forever. There are better alternative sites on the original consultation eg BB021 - this site is not an ecologically diverse and beautiful area and would be better as residential housing than BB041. BB087 was also a better option than BB041. Out of the two sites on the current proposal, BB054 would be preferential as it is not an ecologically diverse and does not have beautiful open views. Flooding - this area is prone to flooding. Caverswall Road is like a river during heavy rainfall. This collects at the bottom and it is frequently impassable to pedestrians and to cars. The other side of Caverswall Road between Blythe Bridge and Caverswall also regularly flood and cars get stranded or the road has to be closed. It was flooded again on 11.6.16 and impassable. Electricity cables currently run across the field adjacent to BB041 and across BB041. Some of these cables have recently been buried under the field. How would this affect these possible developments? Why wasn't BB041 on the previous proposal? People may well have made different comments had this been on the original proposal as some of the original sites may have been preferred over this particular site. As it stands, there are now only 2 sites to consult on. As a visual open space this particular site is extremely valuable. The public have the right of way to pass through the centre of it which is important as it allows people to enjoy it. It is a beautiful area with an abundance of wildlife and plants, including very well established trees which we understand have preservation orders on them. These must be protected at all costs. Our garden gets saturated after heavy rainfall and any further developments near to our property would make this matter worse and interfere with the natural soakaway that the fields provide.	See response to Question 37 – housing allocation BE041.
Cheddleton								
PO171	Mr Steve Wood				CD019 CD115	Object	Although these two plots (CD019 and CD115) have been dropped from consideration, I feel that if there were a need for alternative plots that these two would still not be suitable.	Comments noted. CD019 and CD115 were included as possible housing options sites but were not included as a preferred housing site in the 2016

ID	Consultee Name	Company/ Organisation	Agent Name	Agent Company / Organisation	Area of visual/public open space	Support/object/ general comment	Consultee Comments	Officer Response
							As you drive or walk through the "S" bend in the road between these two sites it is clear and with large open aspects. If you were to infill these areas you would make it into a chicane type road, with houses both side of the road from here and all the way down the bank in cheddleton. This would block the openness completely. Also according to Leek Heritage, Heath house farm CD115 and Holly house farm CD019 are some of the oldest houses in Cheddleton and remain little changed after all these years. It would be a shame to change that now when other plots, if needed could be used. I don't think these should be used in reserve.	preferred options sites and boundaries consultation.
PO2	Mr Peter Blakeman				cheddleton	Object	The development will have adverse effects on a huge number of properties exacerbated by the small gardens of the properties. These include but are not limited to overshadowing, overlooking and loss of privacy. The diminished visual open space entering the area has negative connotations on the perception of the area.	Comments noted. See response to Question 37 – housing allocations CD002 and CD003.
PO277	Mrs Shirley Sugars		Mr Paul Sugars		Cheddleton - south of Caudon Canal opposite western end of Churnetside Business Park	Object	The designation of the land south of the Caudon Canal, immediately east of the Red Lion public house and south of the western end of the Churnetside Business Park as Public Open Space is incorrect. This land is privately owned and has been for many years and is therefore NOT Public Open Space. Furthermore the site does not conform to the definition of Visual Open Space ("VOS") contained in the Review of Landscape and Settlement Character Assessment of Staffordshire Moorlands. The site does not allow the public to enjoy significant internal and external views across the open area. The site itself is overgrown scrubland and the views beyond it are to the highly industrialized and unattractive Churnetside Business Park. The site has no amenity or recreational value to the public, nor would it do so if there was a public right of access to it, which there is not. The site does not contribute to the character of the surrounding neighbourhood or settlement. Accordingly it cannot and should not be designated as VOS.	<ul style="list-style-type: none"> The land is privately owned and therefore should not be designated as Public Open Space. The site has been assessed in the Landscape, Local Green Space and Heritage Impact Study (2016) (Site 31 Section A). It is described as a large open space that rises up from the canal which is visually prominent and provides a gap in development. It was not found to be suitable for a Local Green Space designation but it is suggested in the document that it could be protected under a different designation within the Green Infrastructure Strategy.
PO8240	Mr R Duncan	Rob Duncan Planning Consultancy			CN01	Object	Submits report [attached doc and map] on behalf of Sugden Homes Ltd. Report is made in respect of the parcel of Visual Open Space at Ox Pasture, Cheddleton and seeks to demonstrate that this site is available, suitable and deliverable for residential development, and that the proposed visual open space designation should be removed. Report: disagrees with the conclusions of the Landscape and Settlement Character Assessment that this site should remain as Visual Open Space; re-affirms client's commitment to releasing part of this land for designation as Public Open if remainder can be considered for residential purposes; states a means of vehicular access to this site from Ox Pasture to the south has furthermore been agreed [refer	<ul style="list-style-type: none"> The land is privately owned and therefore should not be designated as Public Open Space. The site has been assessed as Local Green Space (LGS) in the Landscape, Local Green Space and Heritage Impact Study (2016) (Site 29). It is considered that the site provides very attractive views from the footpath on southern boundary out towards wider countryside (including the church and roaches). It is also tranquil and there is wildlife value in hedgerows. It is recommended that the whole site is designated as LGS meaning that new development would have to demonstrate very special circumstances.

							to map attachment].	
PO211	Mr Kevin Benfield				The strip of land fronting Churnet Canal to west of The Boat Inn Cheddleton, which includes the terraced cottages fronting the canal & land to the north of dwellings on Cheddleton Park Avenue	General comment	Generally support this inclusion. However, some is shown POS & other Visual Open Space. I feel that if you are to look at this land the POS allocation would be greater as there are footpaths which link the land to residents who live on Cheddleton Park Ave & the wider village. I have previously written to the Enforcement Officer regarding the present use & development of this land. (Amended) However, I am concerned that this land adj the end cottage continues to be developed & maintained so that its appearance becomes more built-up & residential & less "open"/natural. Therefore, whilst I support the allocation of such land I am concerned that your designation will be undermined by activities of residents, who may not be the land owners, which will lead to further development of the canal/water frontage to the visual detriment of this part of the village. I'm not sure of land ownership in this area.....Parish Council....Local Authority...Canal Trust....One of the Cottages????	Support noted. The site has been assessed as Local Green Space (LGS) in the Landscape, Local Green Space and Heritage Impact Study (2016) (Site 32). It is considered that the site has high wildlife value, important for setting of the Caudon Canal Conservation Area. Canal towpath well used by walkers. It is recommended that the site is designated as LGS meaning that new development would have to demonstrate very special circumstances.
Draycott								
PO942	Mrs Kathleen Bradshaw				Draycott	General comment	I was quite amused to see what is deemed as public open space in Draycott. The church and graveyard, the old primary school which is now a special school and the area owned and run by Draycott Sports Centre. Apart from the church area none of the other areas are actually open to the public. There is no public play space for children in the village - Staffordshire County Council kindly sold off the only small area at the front corner of the old primary school when they sold the land the school stands on. It's not accessible now to local people and the actual play area is shortly being converted to a playground to take the 30+ staff cars for the special school.	<ul style="list-style-type: none"> The Council is undertaking a review of open space, sport and recreation facilities which includes an updated playing pitch strategy. Any inconsistencies will be investigated as part of this updated work. Not all the open spaces marked on the map are accessible to the public and should be indicated as 'open space' rather than 'public open space'.
PO201	Mrs Jacqueline Leach				OC055	Object	This is in a Special Landscape Area. There are several red listed birds which were not considered. Lapwings, Skylarks and Curlews, brown hares, grass snakes etc. There is also St Mary's Church which is a grade 2 listed building. This was also not considered.	This site has outline planning approval.
PO1032	Mrs Shelagh Wood		Mrs Shelagh Wood	VVSM	OCO55	Object	Again this area has not been included. It is in a Special Landscape area with a Grade 2 listed building that has not been considered, many red listed species that have not been considered and a medieval water meadow which entices these species that also has not been considered.	This site has outline planning approval.
Endon								
PO996 PO983	Mrs H Sullivan Mr M Sullivan				Adjacent to EN012	Object	Open Space Regular communications from local MPs of all parties have referred to cases of antisocial behaviour and the need for more and improved open spaces and recreational areas for children and youths in the area. Such	<ul style="list-style-type: none"> The Council is undertaking a review of open space, sport and recreation facilities which includes provision for children and young people. See response to Question 37 – housing

ID	Consultee Name	Company/ Organisation	Agent Name	Agent Company / Organisation	Area of visual/public open space	Support/object/ general comment	Consultee Comments	Officer Response
PO991	Mr Oliver Sullivan						communications have indicated that there is already limited space available. The park area adjacent to proposed site EN012 would be fully enclosed by this housing development and when the other sites proceed, will be unable to respond to the demand from a further 131 properties. As such, any proposal to build so many properties in a village area should be accompanied by a proposal to extend the current recreational and open space available to the local residents.	allocation EN012.
PO3906	Mr J Silitlitoe				EN012	Object	Designated green belt – should be left alone – no need to encroach Skyline development – current homes below skyline Impact on wildlife.	Comments noted. See response to Question 37 – housing allocation EN012.
PO174	Mrs Heather Djuranovic				EN128	Object	The site has been designated a Visual Open Space for at least 20+ years. Regardless of what any owner of the space may do to restrict the visual impact, e.g. planting trees/hedges, the site remains a visual open space. This site occupies a visually prominent position and contributes to the spaciousness of this area. Any building on this site would harm the openness, character and appearance of the surrounding area and would not add visual value to the area. To build on this site would urbanise the area even further and impact detrimentally on the village character. Paragraph 9 of the NPPF states that pursuing sustainable development also involves seeking positive improvements to the quality of the built and natural environment. All previous planning applications to change the use of this land have been turned down. Even stables were turned down! How can such a significant change be considered when this history is presented? The suggestion that a Semi detached house built in the 30's on Brookfield Avenue be knocked down to gain access would be of even further detriment to the visual feel of the area. I consider that site EN128 should retain its current 'Designated Visual Open Space' status which has been in operation for at least 30 years. The loss of this open space would be visually, aesthetically and environmentally detrimental to the surrounding built-up residential area.	<ul style="list-style-type: none"> Whilst the site is currently identified as Visual Open Space, the site was not identified for retention as such in the 2008 Landscape and Settlement Character Assessment. The Council is not obliged to retain this designation. Therefore the site was included as a potential housing option. See response to Question 37 – housing allocation EN128.
PO253	Mr and Mrs A.J. Eardley				EN128	Object	With specific regard to site EN128..... if these areas are classed as rural areas ... or even semi rural areas.... it is imperative to maintain the visual open spaces within the village or Endon will just become a suburb of Stoke. The health of the children at St Luke's Primary School is already compromised by the proximity of the main road, with the ever increasing volume of traffic, and to be hemmed in on both sides would only exacerbate things. This would equally apply to the health and well-being of adjacent residents.	Comments noted. See response to Question 37 – housing allocation EN128.
Hollington								
PO685	mr ivor moseley				Hollington	General comment	Provision for parking for the village Hall and Church would be extremely welcome.	Core Strategy Policy C1 supports the enhancement of existing community facilities. Evidence of need

ID	Consultee Name	Company/ Organisation	Agent Name	Agent Company / Organisation	Area of visual/public open space	Support/object/ general comment	Consultee Comments	Officer Response
								would need to be demonstrated and this assessed against other potential impacts such as landscape, heritage, highways etc.
Kingsley Holt								
PO667	mrs karen parkin				mid churnet valley	Object	Draft reserve site off Lockwood Rd, Kingsley Holt for 50 dwellings. On southern slope of mid Churnet valley. Any development would have a significant & negative effect on the visual impact of valley.	Comments noted. There are no draft reserve sites included in Kingsley Holt.
Ladderedge								
PO1229	Mrs A Hollings				Ladderedge	Object	We are concerned that the proposed site goes well beyond the SCC depot and takes over the field adjacent which is currently a part off Ladderedge Country Park? We would also want an assurance that the access to the country park and no car park would be preserved.	Comments noted. Site LE249 covers the area of the depot only and does not extend into Ladderedge Country Park.
Werrington								
PO2051	Mr Andy Boys	Werrington Parish Council			Land off Whitmore Ave, Werrington	Object	SMDC has classed the following as 'open space' - Land off Whitmore Ave. Werrington Parish Council believes that land off Whitmore Avenue and Radley Way should be re-classified as potential housing	<ul style="list-style-type: none"> The southern part of the land is privately owned and therefore should not be designated as Public Open Space. The site has been assessed as Local Green Space (LGS) in the Landscape, Local Green Space and Heritage Impact Study (2016) (Site 35). It is considered that the site has recreational value, clear paths and 3 points of public access. It is tranquil, away from roads and has some views out to the north. It also has wildlife value in the overgrown higher area. It is recommended that the site is designated as LGS meaning that new development would have to demonstrate very special circumstances.
PO1444 PO1462 PO1452 PO1455 PO1399 PO1449 PO1451 PO1456 PO1458	Ms Julie Whitehall Ms Jane Wheat Mr Albert Hodgetts Mrs Dorothy Hodgetts Mr B Hawe Ms S Hawe Mr E G Clewlow Mr & Mrs R Clapcott Mr A				Hillside Road/Lansdowne Cres, Werrington	Support	I wish to submit representations to the Staffordshire Moorlands Local Plan - draft Site Allocations and in particular wish to support the identification of the Visual and Public Open Space at Hillside Road/Lansdowne Crescent, Werrington (the Land). The Land has been identified in the Staffordshire Moorlands Local Plan as open space for a number of years and is a valuable piece of both public and visual open space in the middle of Werrington. The Land contains several footpaths which provide an important connection between the east and west of Werrington linking both Washerwall Lane and Moorland/Moss Park Avenue making a valuable contribution to the sustainability of the settlement. The Site Allocations Document itself demonstrates that there are very few areas of open space within the built up settlement of Werrington. Whilst Werrington is surrounded by the green belt and Wetley Moor Common these open spaces are only	See response to PO2051 regarding Local Green Space at Whitmore Avenue.

ID	Consultee Name	Company/ Organisation	Agent Name	Agent Company / Organisation	Area of visual/public open space	Support/object/ general comment	Consultee Comments	Officer Response
PO1461	Bentley Mr M A Shingler						<p>accessible to people who are able to access them and are not generally available to elderly people or those who are unable to drive/walk further afield. The Land provides an important accessible open space located close to existing residents and allows residents who are unable to access other further open spaces access to an immediately accessible form of open space. Green belt land is available on the periphery of Werrington that would adequately meet the need for new housing without affecting the openness of the greenbelt and avoiding the need to impact on existing open spaces which provide such an important facility for existing residents. It is clear that the need for new housing still cannot be met by using up all of the open spaces within Werrington to the detriment of existing residents of the settlement. The release of green belt land is inevitable to serve future generations of Werrington. The Land is a small site and would provide little contribution in meeting the identified housing need. In the 2008 assessment the Land was only 1 of 2 sites on the east of Washerwall Lane which were considered 'suitable' for identification as visual open space. We consider that the open space on the west of Washerwall located at Meigh Road is too far away to be able to add any value to the residents surrounding the Land or residents on the east side of Washerwall Lane. There has been no change of circumstances, appearance or use of the Land since the assessment in 2008 which would justify any change to the suitability of the Land for Visual Open Space. The suggestion that the identified need for housing can be met by building on all open space within the settlement is fundamentally flawed and completely fails to appreciate the need for new housing (and in particular starter homes) in Werrington. Such a strategy fails to understand the needs of the existing residents in the village and in particular certain groups of the community to have access to valuable open spaces. I therefore wish to support the identification of the Land as Visual and Public Open Space in the Site Allocations Document.</p>	
PO9603 PO9602	Mr & Mrs Day Elks Cllr W Day				inbetween Lansdowne Crescent/ Moss Park Ave, Werrington	Support	<p>Letter received [attached] SUPPORTING retention of this site as VOS/POS in Preferred Options: land serves substantial amount of existing housing land contains several footpaths, linking east and west of Werrington two recent residential refusals on this land - circumstances have not changed. Questions remain over suitability of site for housing, including whether safe access can be achieved 2008 VOS assessment considered land suitable for VOS retention - with high amenity value, etc. TPOs on site. 1 of only 2 such sites in village [but considers other Meigh Road site too far away from residents to serve them] With regards Council's updated VOS review,</p>	See response to PO2051 regarding Local Green Space at Whitmore Avenue.

ID	Consultee Name	Company/ Organisation	Agent Name	Agent Company / Organisation	Area of visual/public open space	Support/object/ general comment	Consultee Comments	Officer Response
							consider above circumstances have not changed Core Strategy recognises important functions that VOS sites serve - therefore not appropriate to develop on them The site allocations document demonstrates a shortage of open space in the village (whilst there is adjacent Green Belt/Wetley Moor this is peripheral, not accessible to all). Existing open spaces are more accessible to residents Recognise need for new Werrington housing, but this should be through peripheral Green belt release [which I support]. Such peripheral sites are available without affecting the openness of the Green Belt - avoiding the need to develop existing open spaces that serve residents. Using such open spaces would be to the detriment of existing residents [and are small so housing yield would be small]. Green Belt release in village is inevitable to serve future generations. The allocation of larger Green Belt is more advantageous than smaller open spaces, because the former could attract more meaningful planning contributions (such as starter homes) Quotes NPPF para 74 regarding protecting of existing open spaces. This para makes no distinction between POS and VOS Council's recent open space assessment shows POS shortage across District, so loss of this site, would be contrary to policy. Further to para 74, any alternative reprovion would not be in a "suitable location" Even if the land were "unkempt", this would not be a reason to declassify as open space (Section 215 notices).	
PO1043	Mr Grant Anderson	Fradley Estates	Mr Grant Anderson		Open Space off Landsdowne Crescent/Hillside Road Werrington	General comment	We act on behalf of Fradley Estates which owns land off Tregaron Court/Langton Court, Werrington (the Site). Fradley Estates is proposing the Site should be allocated as a housing site in Werrington (see our comments on questions 33, 36, 37 and 41 of the Preferred Options Sites and Boundaries Consultation exercise). Fradley Estates also owns land off Landsdowne Crescent/Hillside Road Werrington. Fradley Estates is keen to engage with the Council to discuss how the latter site might contribute as part of a comprehensive proposal in terms of contributing either to open space or low cost housing provision as part of a comprehensive proposal.	See response to PO2051 regarding Local Green Space at Whitmore Avenue.
Whiston								
PO826	Ms Alison Conybeare				Whiston	General comment	Why hasn't the jubilee garden and pinfold been identified as public open spaces?	The Council is undertaking a review of open space, sport and recreation facilities which includes a number of different 'typologies' of open space. In accordance with best practice recommendations a size threshold of 0.2 ha has been applied to the inclusion of some typologies.
PO2518	Mrs C Wainscott				Whiston N of A52	Object	I wish to object the allocation of public open space as shown on the attached plan as owner of this site. I would not be willing to dispose of this area for any other use that may be associated with the allocation and furthermore consider that	The area mapped in the preferred sites and boundaries consultation intended to relate to cemetery/churchyard land in conjunction with the Whiston Methodist Centenary Church. This has

ID	Consultee Name	Company/ Organisation	Agent Name	Agent Company / Organisation	Area of visual/public open space	Support/object/ general comment	Consultee Comments	Officer Response
							<p>this location is unsuitable due to lack of access onto to the adjoining A5. The area is located on a periphery of the village of Whiston and distant from the main area around black lane and central village hall. Public open space located on this site would either pedestrians who would need to access the site along the busy A52 for pedestrians for which there is no footpath available without crossing the A52 or vehicular traffic which would require parking and access arrangements encroaching on an area that has always been countryside Topographically the site is dished forming a natural basin which is regularly water logged in winter and would be unsuitable for use during the winter months. There are clearly far more centralised easily accessible and drier sites available in Whiston which could provide the public open space deemed necessary by the LPA.</p>	<p>included land in private ownership by error. Amend area to reflect correct ownership.</p>

Question 36: Do you have any comments on the suggested Green Belt amendments?

ID	Consultee Name	Company/ Org	Agent Name	Agent Company / Org	Site reference Green Belt	Support object general comment	Consultee comments	Officer comments
General Comments								
PO565	Mr Peter Cowie					Object	All green belts should be preserved at all costs.	Comment noted.
PO2871	James Chadwick	Spatial Planning Policy Officer Staffordshire County Council				General comments	The proposed amendments to Green Belt are generally modest small scale amendments, which are considered likely to have limited effects on the wider area; however it is recommended that their appropriateness is considered in the context of local landform and vegetation pattern, to ensure that potential effects would be contained. Also recommended is that there is a requirement for an adequate buffer or new planting at the boundary between development and the countryside to ensure the remaining Green Belt is not eroded by development.	Comments noted. The Council's Landscape, Green Space and Heritage Impact Study(August 2016) includes a Landscape Assessment for each preferred option site and suggests site-specific landscape mitigation measures which includes planting.
Blythe Bridge								
PO202	Mrs Jacqueline Leach				BB041/ADD 011	Object	A huge amount of Green belt will be used up by the Northern Gateway and another area submitted for Blythe Bridge. Unacceptable	The Northern Gateway site is not located within the Green Belt.
PO181	Mr Brian Hannah				BB041/ADD 011	Object	As a resident of Forsbrook I chose to live in a green belt area. Now I see that taken away from me to build houses. There are sufficient brown belt areas within stoke on trent. MAKE USE OF THEM. this will have a direct effect on my quality of life.	The National Planning Policy Framework requires that local planning authorities identify the objectively assessed need for housing in their areas, and that Local Plans translate those needs into land provision targets. The Council has prepared a Strategic Housing Market Assessment to assess the district's full housing needs, including affordable housing, whilst taking into account migration and demographic change.

ID	Consultee Name	Company/ Org	Agent Name	Agent Company / Org	Site reference Green Belt	Support object general comment	Consultee comments	Officer comments
PO402	Mr Roger Melville				BB041/ADD 011	Object	AD011 (BB041) Caverswall Old Road. In the original Shla document was Classified as a C and was dropped from the process because of its classification due to suitability and was not included in Last year's Consultation. Now it's a preferred site!! Owner of Site currently not known. Its agricultural land still being used for grazing. Within the Green Belt Study Report it has been classified as having a moderate overall impact on the Green Belt purposes of Development. In contrast BB044 Chapel St is not agricultural land never been used for grazing and within the Green Belt Study has been identified as having only limited impact on the Green Belt. Looking at the Development Capacity Study Housing Site Suitability Ranking Table . AD011 (BB041) Caverswall Old Road was Ranked no 132 across Moorlands With Category Rating of 3x Amber 1x Red. Compared to BB044 Chapel St which was ranked no 52 across the Moorlands. With Category Rating 2xGreen 2xAmber No Red. Highest ranked site in Forsbrook and Blythe Bridge. Even higher than sites that has already been Developed. i.e. Smithfield site. Highways: Caverswall Old Rd into the village of Forsbrook is not too bad, however turning left out of the site heading towards the Potteries the road becomes very narrow in parts and at the junction of Caverswall Rd is quite dangerous, as identified by highways on assessment of site BB040. This would be residents preferred route to avoid Blythe Bridge cross roads and the railway crossing. Apart from any new residents Caverswall Old Road is already a busy road with through traffic both ways avoiding Blythe Bridge especially at commute times and School traffic to and from Caverswall. Surely BB044 Chapel Street would be a better site as it is a No Through Road its wider in most parts and only serves six dwellings to the north of the site so has very minimal traffic movement at any time of the day.	Comments noted. See response to Question 37 – housing allocation BB041 and response to PO375 regarding BB044.
PO872	mr jonathan broadhurst				BB041/ADD 011	Object	This is a valuable piece of green belt land. It is home to a diverse and varied wildlife habitat including plants, trees, birds, badgers, foxes, hedgehogs, toads and possibly newts (there are a number of ponds on the site). Some of the trees have tree preservation orders. There is a substantial amount of hedgerows throughout the site which shouldn't be destroyed. The public right of way through the site enables local people to enjoy the wildlife and countryside and the fabulous views which this site offers. It is essential that such beautiful greenbelt land is preserved for the wildlife and for future generations to enjoy. Far less ecologically valuable sites could be used for housing development. The public right of way also allows local people to walk between Blythe Bridge and Forsbook without walking along lanes with no pavements, making it a safer option.	Comments noted. See response to Question 37 – housing allocation BB041.
PO1051	Mr David Nixon				BB041/ADD 011	Object	The inclusion of Site BB041 would be counter to the principle of the Green Belt in that it would infill and merge the two separate	Comments noted. See response to Question 37 – housing allocation BB041.

ID	Consultee Name	Company/Org	Agent Name	Agent Company / Org	Site reference Green Belt	Support object general comment	Consultee comments	Officer comments
							settlements of Blythe Bridge and Forsbrook ~ Blythe Bridge being a linear settlement following the Roman road and Forsbrook a nuclear settlement over the ridge at the valley bottom. This condition is highlighted in the Wardell Armstrong Landscape and Settlement Character Assessment. In this drawing ST10553-7b points to the existing strong settlement edge for Blythe Bridge. Infilling of BB041 would be a confusing contradiction of this. Conversely Wardell Armstrong point to the more porous edge to the North of Forsbrook and recommend its reinforcement. This boundary has been excluded despite the 2015 Green Belt Review clearly identifying this as an area offering scope for some release of land for housing	
PO881 PO887 PO894	Mr Elliot Broadhurst Miss Emily Broadhurst Mrs Diane Broadhurst		Mrs Diane Broadhurst Mrs Diane Broadhurst Mrs Diane Broadhurst		BB041/ADD 011	Object	The green belt within the rural areas needs to be protected; once it's gone, it's gone forever. There are better alternative sites on the original consultation eg BB021 - this site is not an ecologically diverse and beautiful area and would be better as residential housing than BB041. BB087 was also a better option than BB041. Wildlife such as foxes, badgers, owls and a wide variety of birds inhabit this site. Out of the two sites on the current proposal, BB054 would be preferential as it is not an ecologically diverse and does not have beautiful open views. Flooding - this area is prone to flooding. Caverswall Road is like a river during heavy rainfall. This collects at the bottom and it is frequently impassable to pedestrians and to cars. The other side of Caverswall Road between Blythe Bridge and Caverswall also regularly flood and cars get stranded or the road has to be closed. It was flooded again on 11.6.16 and impassable. Electricity cables currently run across the field adjacent to BB041 and across BB041. Some of these cables have recently been buried under the field. How would this affect these possible developments? Why wasn't BB041 on the previous proposal? People may well have made different comments had this been on the original proposal as some of the original sites may have been preferred over this particular site. As it stands, there are now only 2 sites to consult on.	Comments noted. See response to Question 37 – housing allocation BB041.
PO887 PO894	Miss Emily Broadhurst Mrs Diane Broadhurst		Mrs Diane Broadhurst Mrs Diane Broadhurst		BB041/ADD 011	Object	As a visual open space this particular site is extremely valuable. The public have the right of way to pass through the centre of it which is important as it allows people to enjoy it. It is a beautiful area with an abundance of wildlife and plants, including very well established trees which we understand have preservation orders on them. These must be protected at all costs. Our garden gets saturated after heavy rainfall and any further developments near to our property would make this matter worse and interfere with the natural soakaway that the fields provide.	The site is not recommended for designation as Local Green Space in the Landscape, Local Green Space and Heritage Impact Study (2016). Comments noted. See response to Question 37 – housing allocation BB041.
PO30	Miss Gabrielle Bailey				BB054	Object	This means more people which means more traffic which simply cannot be supported without complimentary infrastructure. The main roads through Blythe Bridge and Forsbrook are already	Comments noted. See response to Question 37 – housing allocation BB054.

ID	Consultee Name	Company/ Org	Agent Name	Agent Company / Org	Site reference Green Belt	Support object general comment	Consultee comments	Officer comments
							gridlocked at certain times of day with queues right back into Forsbrook waiting at the crossroads to Blythe Bridge. People park all the way down the main road in Blythe Bridge which means queues down the road as it's single file. Add this to waiting for the railway crossing at Blythe Bridge and what should be a short journey turns into one where you need to pack sandwiches! With new sites for housing and a massive area now allocated for building to support employment how on earth are residents supposed to get to work or indeed hope to cross Cheadle Road In Forsbrook village? It's dangerous and time consuming as it is. I haven't seen anything on the table as solutions to the infrastructure problems which need to be in place before or alongside any addition to the population. In addition I fundamentally object to green belt land being used when brownfield sites are available.	
PO38	Mr Daniel Newton				BB054	Object	I am objecting to the proposed site off Draycott Old Road for the following reasons: 1. The destruction on local nature; 2. Would cause harm to the character and appearance of the area;	Comments noted. See response to Question 37 – housing allocation BB054.
PO262	Mrs S Allt				BB054	Object	I am against Government policy to build on greenbelt land. There is still brownfield available once you remove Greenbelt land there is no turning back. This has an impact on local wildlife, public access, people's leisure activities (this particular site is extremely popular with dog walkers) not to mention spoiling the view and local landscape. Whilst the Government have made changes to the policy it does not seem in the remotest bit fair for those people who have chosen and paid to live alongside greenbelt fields to have the rules changed and the land built on.	Comments noted. See response to Question 37 – housing allocation BB054.
PO435	Mrs Gillian Jackson				BB054	Object	This site is green belt with no definable boundaries which is currently used as a working farm with animals grazing practically all year round. Development of this site would be severely detrimental to the wildlife there. The brook at the bottom of this site frequently floods during heavy rainfall, additional housing would cause this to happen more often.	Comments noted. See response to Question 37 – housing allocation BB054.
PO782	Dr Jules Allt				BB054	Object	Development of this site would be another step of the villages expanding and coalescing. The villages are losing their defining boundaries. There is a public right of way across the site, in almost constant use by the public for walking / dog walking allowing enjoyment of the countryside. Development of the site with 70 properties would significantly increase traffic noise on Draycott Old Road and spoil the tranquil nature of the lane Development of the site would entail loss of natural habitat to wildlife, including hedgerow and trees	Comments noted. See response to Question 37 – housing allocation BB054.
PO999	Ms Natasha Allt				BB054	Object	Taking this out of the greenbelt would lose a great area that is enjoyed by many locals, and allow the built up part of the village to move further up Draycott Old Road	Comments noted. See response to Question 37 – housing allocation BB054.
PO1004	Mrs Carol Harrison				BB054	Object	This is a public green space, owing to the footpath on it, enjoyed by many, particularly dog walkers. I would be forced to walk up	Comments noted. See response to Question 37 – housing allocation BB054.

ID	Consultee Name	Company/Org	Agent Name	Agent Company / Org	Site reference Green Belt	Support object general comment	Consultee comments	Officer comments
							the lane with no pavement to enjoy green pace instead. This would be more dangerous than currently because of increased traffic. It would allow creep of the village boundary up what is currently a lovely peaceful lane	
PO1070	Mr Thomas Allt				BB054	Object	There is a public right of way which I use to enjoy the countryside, and would not be the same if it was turned into a housing estate. I am worried that it would be the start of development of the lane away from the peaceful lane it is now	Comments noted. See response to Question 37 – housing allocation BB054.
PO1014	Mrs Win Allt				BB054	Object	Poor choice of land to allow for release from green belt, further losing the definition between the villages. Loss of amenity use - I have enjoyed using the public footpath across this pleasant field.	Comments noted. See response to Question 37 – housing allocation BB054.
Brown Edge								
PO50	Mr P Rushton				BE041	Object	The proven need for additional homes in the SMDC area does not justify incursions into the present areas of green belt. The green belt countryside is the Staffs Moorlands greatest asset.	Comments noted. See response to Question 37 – housing allocation BE041.
PO1025 1	Mr Andy Brown	Harlequin Development Strategies (Crewe) Limited	Mr Alan Knott	Knights LLP	BE041	Support	The review of settlement and Green Belt boundaries required to apply the Core Strategy proposals i.e. releasing this land from the Green Belt is supported.	Support noted. See response to Question 37 – housing allocation BE041.
Biddulph Moor								
PO437	Miss Philippa Whalley				BM013	Object	Taking these 2 fields (they are actually two fields, and not one field as the plan shows) out of the Green Belt but leaving in sites BM020 and BM021, seems illogical as the other fields would also form a suitable village boundary and would allow suitable development against already relatively modern housing and a good ready built road.	Comments noted. See response to Question 37 – housing allocation BM013.
PO1022	Mr Leonard Hill				BM013	Object	I wish to object to the planning proposal BM013 in Biddulph Moor for the following reasons: 1) The site in question is within the green belt. No building should be allowed. 2) The proposed access onto Hot Lane would be a safety hazard. Most of that area off Hot Lane is single track and is unsuitable for extra traffic. 3) The proposed site is immediately opposite a children's playground and would present a significant danger to the children with additional traffic using hot lane. 4) A stream runs along side the Parklands and that area of land is subject to flooding after heavy rains, also extending in to Hot Lane. 5) Any further development off housing on Biddulph Moor should be limited to in fill only. Additional building to the area of BM013 would spoil the beauty of that area and lose its aspect the countryside	Comments noted. See response to Question 37 – housing allocation BM013.
Cheddleton								
PO2059	Mrs Lucinda Kavanagh				CD002	Object	I consider the removal; of site CD002 from the existing green belt is wrong and I strongly object to the proposal. The national	Comments noted. See response to Question 37 – housing allocation CD002.

PO2056	Mr and Mrs D Foster						<p>Planning Policy framework (NPPF) clearly states that the green belt serves a purposes: 1 to check the unrestricted sprawl of large areas. 2 to prevent neighbouring towns merging into one another. 3 to assist in safeguarding the countryside from encroachment. 4 to preserve the setting and special character of historic town 4 to assist in the Urban regeneration, by recycling and derelict and other urban As page 14 of the Amec Foster Wheeler Green Belt review states the site CD002 was included within the existing North Staffs Green Belt to, I quote "to prevent the coalescence of the following towns and settlements around the potteries. This list includes, Cheddleton with Folly Lane and Folly Lane with Wetley Rocks" The term towns in the NPPF should I believe in this case be considered as towns and settlements, as per the original designation. By removing this is site from the greenbelt and allowing the building of houses this fundamentally undermines this original aim of designation and will indirect conflict with point 2 above. I consider page 40 of the Amec Foster Wheeler Green Belt review has wrongly stated that site C14 makes a limited contribution to preventing towns to towns merging where as it should state significant contribution in March 2015 the prime minister declared that protecting the green belt is paramount I consider that removing CD002 from the green belt undermines the objectives. The NPPF makes clear that once established green belt boundaries should only be altered in exceptional circumstances SMDC has failed to demonstrate that exceptional circumstances exist and all other options to meet housing needs in North Staffs have been exploring utilising the significant number of existing vacant properties in the area. Site CD002 is a known habitat for wildlife and has a known bat population. The Lockwood Hall associates reports in its concluding remarks for site FIC 180 stated I quote, however the major aspects of interest are the significant bat potential in the 5 trees and the species rich hedgerow which constitutes the site being given district importance". SDMC has failed to consider this fact when the allocation of CD002 as a potential site allocation for housing</p>

PO2337	Wheel Mrs M Turner						<p>regarding Green Belt. This proposed will effectively join Cheddleton to Wetley Rocks and encroaches onto the countryside. Site CD002 and CD003 provide the only green space between the 2 villages. 3) This site does not meet the sustainability objectives as detailed in the national planning policy framework. 4) No consideration has been given to the accessibility to and from this site by foot or cycle. 5) Site has an infrequent bus service to the other parts of North Staffs 6) The A520 between Ostlers Lane Wetley Rocks has significant History of road accidents. On the data shows that there have been 22 accidents between 2005 and 2013, despite the installation of Cameras inclusion of this site will increase the safety risk at this location. 7) The pavement on the A520 is narrow (less than 1m) and on 1 side only. Cars travel legally at 50 mph and it is considered that this does not form a safe walking route for those accessing it. Such as schools etc. in the village centre. 8) The junction off Folly Lane and Cheadle Road has an accident history. Inclusion of this site will increase the safety risk at this location. 9) The site is 1.6 miles away from the catchment Primary schools. Given the lack of provisions for pedestrians, cycles and the infrequent bus service, the obvious method of accessing the schools and increase the Cheadle Road has an accident history. Inclusion of this site will increase the safety risk at this location. 10) Schools in this area cannot sustain a significant increase in population and are currently full or have a small number of vacant places. This proposed residential development would require significant investment to address this issue. In addition further buses would be required to transport 5 to 13 pupils to Leek as there is no provision in the village. 11) It is considered that the existing utilities in this area could not sustain an increase in demand significant investment. This has not been considered. 12) Site has no substantial access to GP surgery. 13) It is known that the developer has attempted to coerce the Parish Council/SMDC for over approximately 20 years to support the release this site from Green Belt. Every attempt has previously been blocked by the parish council and residents of Cheddleton. This demonstrates the strength of feeling 14) Site has numerous trees that are known habitat wildlife, including a known bat population.</p>

PO278	Mrs Shirley Sugars		Mr Paul Sugars		CD002	Object	Development can be achieved in Cheddleton without encroachment onto Green Belt through the development of sites CD098, CD099 and CD088. These sites are all contiguous with existing developments and so pose no intrusion onto the Green Belt and can readily be connected with existing infrastructure. There is therefore no need for approval of site CD002 with its adverse ramifications for Green Belt development.	Comments noted. See response to Question 37 – housing allocation CD002.
PO296	Ms Julie				CD002	Object	Removal of Green Belt land on this site would allow the	Comments noted. See response to Question 37 – housing allocation

ID	Consultee Name	Company/Org	Agent Name	Agent Company / Org	Site reference Green Belt	Support object general comment	Consultee comments	Officer comments
	Brownhill						coalescence of Wetley Rocks and Cheddleton. There is evidence of a bat population on the site. Curlew and Lapwing have been seen in the vicinity. Since both these species have 'red list' status it would be detrimental to the recovery of their population to allow development on this site. The removal of green belt status should only happen in 'exceptional circumstances'. The desire to build houses cannot be deemed 'exceptional'.	CD002.
PO322	Mr Greg Bicker				CD002	Object	CD002 according to the council's sustainability report is grade 4ALC green belt, development of which would be negative to the sites ecological importance. I am aware of nocturnal bat activity in the area and can see no evidence that a full bat survey has been carried out. Before further action is taken, public availability of detailed ecological reports needs to be provided.	Comments noted. See response to Question 37 – housing allocation CD002.
PO310	Dr Gordon Wright				CD002	Object	CD002 is classified as grade 4 ALC, but it is rented by a local farmer. Building houses on this site would deprive the farmer of a valuable part of his resource in an already challenging environment. Allowing building on this site would make the largest village in Staffordshire contiguous with the much smaller village of Wetley Rocks.	Comments noted. See response to Question 37 – housing allocation CD002.
PO4500	Mr Gez Willard	Willardwillard Ltd			CD002	Support	The removal of sites CD002 and CD003 from the Green Belt are supported. [Refer to Question 1 attachments].	Support noted. See responses to Question 37 – housing allocations CD002 and CD003.
PO3	Mr Peter Blakeman				CD003	Object	Greenbelt areas were created to stop neighbouring towns merging into one another. If the proposed sites CD002 and CD003 are used this removes any discernible boundary between Wetley Rocks and Cheddleton removing the original character of the separate towns. Tree protection orders should also be in place on the tree's and hedging running across the centre of the proposed sites discussed as they house a discernible amount of wildlife. Wildlife includes active bat roosts which have not been investigated or treated in line with Government guidelines so far.	Comments noted. See response to Question 37 – housing allocation CD003.
PO297	Ms Julie Brownhill				CD003	Object	Removal of Green Belt land on this site would allow the coalescence of Wetley Rocks and Cheddleton. There is evidence of a bat population on the site. Curlew and Lapwing have been seen in the vicinity. Since both these species have 'red list' status it would be detrimental to the recovery of their population to allow development on this site. The removal of green belt status should only happen in 'exceptional circumstances'. The desire to build houses cannot be deemed 'exceptional'.	Comments noted. See response to Question 37 – housing allocation CD003.
PO320	Mr Greg Bicker				CD003	Object	CD003 according to the council's sustainability report is grade 4ALC green belt, development of which would be negative to the sites ecological importance. I am aware of nocturnal bat activity in the area and can see no evidence that a full bat survey has been carried out, or a full ecological survey of the minor waterway that bisects the CD003 area. Before further action is taken, public availability of detailed ecological reports needs to be provided.	Comments noted. See response to Question 37 – housing allocation CD003.

PO313	Dr Gordon Wright				CD003	Object	The use of CD003 for housing would cause a great deal of noise and pollution for existing residents, who have long understood that this land would continue to be part of the green belt.	Comments noted. See response to Question 37 – housing allocation CD003.
PO584 PO932	Mrs Susan Buxton Mr John Buxton				CD003	Object	I most strongly object to amending the Green Belt at site CD003 which has previously been assessed as having a negative effect. This site has had planning permission refused in the past because of its importance as part of the Green Belt and the fact that it goes against at least 2 major principles of the Green Belt Policy. Including this site in the Local Plan would, in effect, join the two communities of Cheddleton and Wetley Rocks constituting a major coalescent. As an alternative, I would strongly support the recent application by John Pointon and Sons to vary the planning obligation of June 2010 and would urge the Council to allow the development of an already brownfield site, at what is known locally as Staffordshire Farmers, which would significantly contribute to the number of houses required by SMDC without amending the Green Belt and be more central to the village itself.	Comments noted. See response to Question 37 – housing allocation CD003. An application for residential development has been approved by planning committee (subject to conditions and Section 106 agreement) for the Staffordshire Farmers site (Jan 2017).

Endon								
PO263	mr anthony williamson				EN012	Object	I strongly object to all the Green Belt amendments as the Green Belt should always be protected for future generations.	Comments noted. See response to Question 37 – housing allocation EN012.
PO981 PO984 PO992	Mrs Hayley Sullivan Mr Michael Sullivan Mr Oliver Sullivan				EN012	Object	Green Belt Amendments Comments in relation to Green Belt and Development Boundary and Green Belt Review 2015: Government Policy and the National Planning Policy Framework (NPPF) clearly outline the need to protect Green Belt areas. The NPPF specifies that the Green Belt is of great importance in order to prevent urban sprawl by keeping land permanently open and the essential characteristics of Green Belts are their openness and their permanence. The NPPF is clear that "once established, Green Belt boundaries should only be altered in exceptional circumstances". The adopted Core Strategy committed the District Council to	Comments noted. See response to Question 37 – housing allocation EN012.

ID	Consultee Name	Company/ Org	Agent Name	Agent Company / Org	Site reference Green Belt	Support object general comment	Consultee comments	Officer comments
							undertake a review of the Green Belt for the whole District in order to determine the scope for development sites to help meet requirements. The review considered the scope to release land from the Green Belt by appraising sites against the five purposes of the Green Belt as set out in the NPPF. The study concluded that generally the extent of the Green Belt should be retained. However, several areas were identified as suitable for release from the Green Belt in exceptional circumstances through a Local Plan review as required by the NPPF. In making a decision that 'exceptional circumstances' apply, it is essential that all other routes to meeting the housing targets are fully exhausted therefore safeguarding the countryside from encroachment and preventing unrestricted sprawl of large built up areas. Site EN012 is not only categorised as 'Green Belt' but is clearly used in such a manner as it is currently used for cattle grazing over the summer months. Endon is already identified as a 'larger Village' and should be protected from further development which extends beyond the current development boundary. In addition, there are other sites in the Endon and surrounding area not deemed to be Green Belt which should be developed before encroaching on the Green Belt. The approach should be to build in infill / windfall sites in brownfield areas, built in a manner which supports the current village footprint and which does not create even larger housing estates. In addition, the Council's plans refer to strictly controlling development outside of the development boundary. Site EN012 is outside of the development boundary.	
PO6	Mr Alan Dale				EN033	Object	Taken from the 'Planning Practice Guidance'. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. Of the 5 purposes served by Green Belt, the proposed change at EN033 and EN126 is in clear contravention of " to assist in safeguarding the countryside from encroachment". Chapter 83 goes on to say " Once established, Green Belt boundaries should only be altered in exceptional circumstances". Until now, due to the important contribution which the open character of the village makes to the openness of the Green Belt, it has been protected under such an agreement. Thus, while alternative land remains available, the proposal to infill areas EN033 and EN126 should be revoked. Furthermore, as area EN126 especially is prone to flooding, it makes little sense to build new housing on what is saturated ground.	Comments noted. See response to Question 37 – housing allocation EN033.
PO10	Mr Alan Dale				EN033	Object	Taken from the Planning Practice Guidance " The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are	Comments noted. 							their openness and their permanence". Of the 5 purposes served by Green Belt, this proposal is in clear contravention of " to assist in safeguarding the countryside from encroachment" and serves to undermine the Government's very own ethos. Para 83 goes on to say " Green Belt boundaries should only be altered in exceptional circumstances". Endon village has until now been protected by a Green Belt because of the important contribution which the open character of the village makes to the openness of the Green Belt. Therefore, while many alternatives sites remain available, this proposal should be revoked.	
PO317	Mr Robert G McCraight				EN033	Object	This Green Belt brings the countryside to Endon. If you fill this with houses and concrete, the whole feeling of Endon being a village will disappear, as the canal will be like a barrier. Keep the building sites compact and don't spread them out like wings.	Comments noted. See response to Question 37 – housing allocation EN033.
PO447	Mrs Patricia Bailey				EN033	Object	The proposed sites EN033 and EN126 are located directly adjacent to, and directly overlying along the south-west boundary, a 'medium' flood risk area and a 'Flood Zone 3' floodplain as designated by the Environment Agency. Experience living in the area has shown that the land directly to the west of the proposed sites has flooded a number of times in the last 30 years due to overtopping of the unnamed culvert to the west of Post Lane. Where the unnamed culvert passes beneath Post Lane in an enclosed section, the road has been rendered unpassable during previous flood events due to the height of rising flood waters when the flow capacity of the enclosed culvert has been exceeded. The loss of green belt land across the EN033 and EN126 sites would result in the loss of a large area of vegetated arable land with a high potential for rain water infiltration and storage. Combined with the construction of a significant area of new hardstanding, the volume of surface runoff water entering the culvert to the west of Post Lane is anticipated to greatly increase. Additionally, owing to the reduction in the current level of rain water storage and infiltration potential, the runoff duration of surface water entering the culvert would reduce. The cumulative effect of these actions has the potential to significantly increase the likelihood, frequency and magnitude of flood events in the Post Lane area. The associated increase in short-term construction and long-term operation traffic related to the proposed EN033 and EN126 sites would increase traffic levels in an area which is already prone to high levels of traffic congestion. The canal crossing to the south east of the proposed sites is a traffic-light controlled single lane bridge which can become congested at peak times. Traffic flow and congestion around this area would surely increase with the construction a number of new dwellings reducing the quality of life for the existing residents, canal users and visitors. Taking into consideration the close proximity of the sites to a designated floodplain and the history of	Comments noted. See response to Question 37 – housing allocation EN033.

ID	Consultee Name	Company/Org	Agent Name	Agent Company / Org	Site reference Green Belt	Support object general comment	Consultee comments	Officer comments
							flooding over the roads in the Post Lane area, any plans to develop this area further should be subject to particular scrutiny. We consider it imperative that the proposed developers are questioned as to how they will ensure that the inevitable increase to the volume of drainage water directed to surface water drains will not exacerbate the current road flooding issues. In particular the proposed developers should address how the existing drainage bottleneck where the unnamed culvert passes below Post Lane shall not be exacerbated by the proposed development and associated increase in drainage water volume, whereby existing roads and properties will be put under increased risk of flooding. We would request that a full Environmental Scoping Report and Environmental Impact Assessment (incorporating a detailed flood risk assessment) is undertaken prior to any approvals being granted to confirm the anticipated effects on flood risk and traffic levels are acceptable. [Refer to attached response form, and its attachments].	
PO904	MRS SUSAN WILSON				EN033	Object	EN 033 and EN126. I oppose any incursion into greenbelt land on the grounds that I understand that there is enough brownfield sites available in the area to satisfy any housing requirements thus protecting our precious greenbelt	Comments noted. See response to Question 37 – housing allocation EN033.
PO9592 PO9564	Mrs P Bailey Mr Richard Bailey				EN033	Object	Response form submitted [attached] objecting to Preferred Options site EN033: EN033/EN126 are located directly adjacent to medium flood risk area and Flood Zone 3. Land directly west has flooded in the past due to overtopping of a nearby culvert. Road has been unpassable during previous flood events. The loss of these Green Belt sites would result in loss of large area for rain water infiltration and storage. Along with new development hardstanding, surface water run off into culvert would increase. Surface water run off duration into culvert would reduce. Would increase risk of flood events. Construction and operational traffic associated with these sites would increase traffic levels in already congested area. Traffic lights hump bridge gets congested at peak times. Increased traffic would reduce quality of life. Given these flood risks, plans should be subject to particular scrutiny. Developers must ensure increase in drainage water will not exacerbate current road flooding issues. Request full scoping report + EIA (incorporating detailed FRA) is undertaken prior to any approvals being granted.	Comments noted. See response to Question 37 – housing allocation EN033.
PO1062	Mr Stuart Davies				EN126	Object	The proposed development site, EN126 adjoins the Caldon Canal, which is a historic and attractive feature well used by boaters, walkers and cyclists. There are other sites in Endon along the A53 Leek Road, which would be preferable to be developed. These sites are also green belt and part of a conservation area, however they do provide better sites than EN126 and EN033. If any development does proceed on EN126 then it should be low key, away from the canal and in keeping with the surroundings. Street	Comments noted. See response to Question 37 – housing allocation EN126.

							detailed flood risk assessment) is undertaken prior to any approvals being granted to confirm the anticipated effects on flood risk and traffic levels are acceptable.	
Kingsley								
PO829	Ms Alison Conybeare				KG049A	Object	The greenbelt must not be altered for development.	Comments noted.
PO489	Mr Arthur Brown				KG049A	Object	I think the proposed site is not suitable for development for the following reasons: The land would need to be accessed from either Moreton Avenue or Cheadle road. Neither of these roads are suitable for increased traffic and will certainly not stand up to construction traffic. Local residents will suffer as a result. There is currently insufficient infrastructure within the village and this will only add to traffic and people commuting, causing more pollution, noise and danger to existing residents. The site extends the boundary of the village and will result in loss of farmland which is frequented by many mammals, amphibians and birds, which will be either displaced or destroyed. The development would ruin the outlook for local residents adjoining the site and those overlooking it. Although I believe the village cannot accommodate the extra houses, should this be unavoidable, a more suitable site was initially proposed within the village which would cause less distribution and less sprawl. There are other developments locally which should be taken into account to reduce the allocation. Several houses are already for sale in the village and have been for some time.	Comments noted. See response to Question 37 – housing allocation KG049A.
Northern Gateway Opportunity Site								
PO1033	Mrs Shelagh Wood		Mrs Shelagh Wood	VVSM	Northern Gateway Opportunity Site	Object	All of this is in Green Belt.	The site is not located within the Green Belt.
PO9944	St Modwen Development Ltd	St Modwen Developments Limited	Ms Stacey Green	Barton Willmore	Northern Gateway Opportunity Site	Support	Email containing letter and Evidence Report submitted [both attached to PO9838]: site that comprises part of the allocated site known as Blythe Vale, is not within the designated Green Belt of Staffordshire Moorlands, and neither does the development of this site require the further release of Green Belt land. The Local Plan (1998) replaced the North Staffordshire Green Belt Local Plan and made amendments to the inner boundaries of the Green Belt around Blythe Bridge and Forsbrook, associated with the construction of the A50 which created enclosed land which could be readily parcelled for development. These amendments left what the SMDC Green Belt Review (2015) terms as a 'rather incongruous boundary' with land between the St Modwen land and the land that comprises the remainder of the RIS, south of the A50. We support the suggested realignment of the inner Green Belt Boundary in the Preferred Options, and consider it	Support noted. See also responses to Question 37 – regarding housing allocations in Blythe Bridge and Forsbrook and Question 39 – regarding the Northern Gateway Opportunity Site.

							appropriate that the Site, which has been identified for development in excess of 20 years, is brought firmly within the settlement boundary of Blythe Bridge and Forsbrook. The Green Belt Review assessed 6 out of 10 suggested sites as having potential to be released from the Green Belt at Blythe Bridge and Forsbrook. It concludes for these sites 'release under exceptional circumstances, plus amendment of the village boundary to accommodate proposed development.' We are not aware of the Local Plan or Evidence Base presenting any exceptional circumstances that would justify the need for Green Belt release at Blythe Bridge and Forsbrook, or that have been used to support the identification of two potential housing sites (BB041 and BB054) for a total of 120 new homes. It is our view that in seeking to accommodate the housing requirement (or any additional requirement) afforded to Blythe Bridge and Forsbrook, that the Local Plan and its evidence base should have considered the opportunity of locating residential development at Blythe Vale, as opposed to remaining silent on it. [Notwithstanding that both BB041 and BB054 are assessed as 'well enclosed,' this is far from being an 'exceptional' circumstance, etc.] the principle of development at Blythe Vale has been established firmly through the continued allocation of the site for employment use and the Outline Planning Permission (11/00405). Its development in part for housing would not require the alteration of the Green Belt boundary. Indeed the potential to accommodate housing on this site is further evidence to suggest that exceptional circumstances do not exist to justify removing BB054 or BB041 from the Green Belt.	
Stockton Brook								
PO920	Mr Nick Mountford	Director Ken Wainman Associates Ltd	Mr Kenneth Wainman	Ken Wainman Associates Ltd		Object	Object to the omission of Site ADD08 from the proposed residential sites. The reason for this objection are contained in the response to Question 34.	See response to Question 34 – suggested site ADD08.
Werrington								
PO106	Mr Nigel Meakin				WE003	Object	Letter with response form submitted [attached] objecting to Preferred Options site WE003: The preferred development site carries several objections to it. Development too close to young offenders buildings Green belt Outside of village existing development boundary SCC Highway rejected original proposal along with Werrington parish council Residents views from existing dwellings Open space rural and natural beauty There are other sites available in the village to develop as chosen by the residents of the village.	Comments noted. See response to Question 37 – housing allocation WE003.
PO1236	Mrs T Wiggins				WE003	Object	The 2015 Green Belt review was selective by concentrating only on existing housing sites proposed by the District Council e.g.	Comments noted. See response to Question 37 – housing allocation WE003.

							ignoring potential sites including land in south Ash Bank Road. Why is it that land already earmarked as appropriate for build can be moved to an area that already holds existing issues as outlined in Q37 that have not been fully looked at before. WE003 represents a substantial encroachment into the Green Belt	
PO845	Mr Peter Davies				WE003	Object	Although I am responding on WE003 my comments are for the Green Belt in all areas. As stated in Government policy the Green Belt should be preserved unless there are exceptional circumstances. Having the Green Belt protects the village amenity of these areas and to infill these areas with more housing destroys the rural feel of these villages. They just become part of the wider urban sprawl. There are vast brownfield sites around Stoke on Trent which are real eyesores and would benefit from redevelopment.	Comments noted. See response to Question 37 – housing allocation WE003.
PO1031	Mr Grant Anderson	Fradley Estates	Mr Grant Anderson		WE003	Object	PREFERRED OPTIONS SITES AND BOUNDARIES CONSULTATION 4 : LARGER VILLAGES Question 36 We act for Fradley Estates, the owner of land off Tregaron Court/Langton Court, Werrington (“the Site”) which is put forward for housing development in this Plan. Fradley Estates objects to the Green Belt amendments for Werrington (WE003,WE013,WE027,WE052,WE069)and submits that the Green Belt boundary should be amended to include the Site. Site Information Site location: Land off Tregaron Court and Langton Court, Werrington – see plan attached. Site Area (ha) About 4.45 ha (including the woodland belts to the north west boundary). Current & most recent land use Agriculture (relatively low value grazing/hay production). Description of site Greenfield Site features The south east boundary of the Site is formed by the rear boundary fences of houses in Tregaron Court, Weston Close, Ferndale Close and Langton Court. The north west boundary is a natural and defensible boundary formed by a stream course. Further east, this stream course forms part of the Green Belt boundary. The south west boundary is formed by mature woodland vegetation comprising a substantial hedgerow and hedgerow trees with associated bridleway. The bridleway lies outside the site. Again, a strong defensible boundary. The north east boundary is represented in part by the stream course referred to above but in the main by the rear of dwellings fronting Uplands Croft. The Site is well contained visually by the hedgerow and hedgerow trees to the bridleway and by a substantial belt of woodland trees near the stream course. The Site is greenfield in character but has not been put to intensive agricultural use, merely used for grazing or for a hay crop. The Site is assessed as being of relatively low ecological value. Available means of access into the Site Appropriate access to the Site is available from Tregaron Court and/or Langton Court. Land at the end of both these cul-de-sacs is retained by Fradley Estates following the construction of the adjacent housing estate and these roads were	Comments noted. See responses to Question 37 – Werrington housing allocations.

ID	Consultee Name	Company/ Org	Agent Name	Agent Company / Org	Site reference Green Belt	Support object general comment	Consultee comments	Officer comments
							<p>designed to accommodate future housing development beyond. The Site plan which is submitted by separate email demonstrates the extent of the freehold ownership of Fradley Estates. Short term licences have been granted to adjacent householders to temporarily use the land at both points of access so that the land remains available for access purposes for housing development. A highway report by Sanderson Associates was submitted to the Council in December 2015 which concludes that access can be provided to serve the development of the Site which meets all current highway guidelines. Availability of utilities and services All necessary utilities including potable water, foul and surface water drainage, gas, electricity, telecoms etc are available at the periphery of the Site and can be easily extended into the Site to facilitate development. Drainage connections are already available on-site. Public Right of Way/ Peripheral Planting The public right of way (outside the Site) which follows the south west boundary of the Site with hedgerows and hedgerow trees is located on the periphery of the Site and with vehicular access available elsewhere, neither the public right of way nor associated hedgerows and hedgerow trees will constrain the layout or development of the Site. Indeed, it is proposed that both features will be retained/enhanced and incorporated into the development of the Site – see the Concept Layout appended to the Bright & Associates landscape Evidence Report 2015. Constraints The Site is not at risk of flooding; there is no known land contamination; foul and surface water drainage etc is available; the Site is assessed as being of low ecological value; there is no known archaeological or heritage constraint and therefore there are no major impediments to the early development of this Site. Availability The Site and its points of access are wholly owned by Fradley Estates a development company which is of long standing and skilled in bringing forward land for housing development. Fradley Estates has been responsible for building a significant proportion of the existing housing in Werrington and is therefore very familiar with the locality and has a proven track record of delivery. Fradley Estates is willing and able to bring the Site forward for housing in the short term with a projected yield beginning within 5 years. Supporting comments Although the Site is located within the Green Belt, visually, it is well contained by the natural features that are the stream course and in particular by the well established tree belts and hedgerows on the Site periphery and outer boundary. The north east boundary of the Site is formed in part by existing housing development and in part the stream course which forms the outer boundary of the Site. A precedent has therefore been set for the use of this stream course as a defensible green belt boundary. A Landscape Evidence Report by Bright & Associates was submitted to the Council on behalf of</p>	

ID	Consultee Name	Company/ Org	Agent Name	Agent Company / Org	Site reference Green Belt	Support object general comment	Consultee comments	Officer comments
							<p>Fradley Estates in December 2015 (“LER”). In the context of the need to find housing in a sustainable larger village such as Werrington, it is inevitable that Green Belt land will be required. THE LER concluded that in landscape and visual terms the Site is visually well contained and that in terms of the Green Belt, allocation of the Site would be less damaging to the Green Belt than many of the sites considered by the Council including the preferred options. Fradley Estates and its advisers met with Mark James and Pranali Parikh in April 2016 to discuss the Site. It was agreed at that meeting that the Site had been incorrectly classified in the SHLAA as a category C site due to the Council’s misunderstanding of the access position and the incorrect assumption that access was not available. It was accepted that the Site should have been classified as category B in which case it would have been the subject of a more detailed review together with other potential sites for Werrington. It was agreed that the Site had “some catching up to do” and that Fradley Estates would submit further information in support of the Site addressing the Council’s strategic Green Belt review, the Council’s review of the historic landscape and the sustainability of the Site. A further report has been prepared by Bright & Associates which considers the Site and other potential sites in Werrington including the preferred options in terms of landscape and visual impact and Green Belt, which addresses any effects on the historic landscape and which assesses the sustainability of the Site. A copy of that report which also appends the earlier LER and Sanderson Associates highway report is submitted with these representations by way of separate email. It is clear from the June 2016 Bright & Associates report that:- the development of the Site will have no adverse effects on the historic landscape. the Site is more visually contained than the preferred sites for Werrington and that the allocation of the Site will improve the current sharp edge between housing and field space along the southern boundary of the Site. the Site has advantages over other sites in terms of not compromising the openness of the countryside and in visual terms it does not form part of the Green Belt. the development of the Site would meet the three dimensions of sustainable development within the National Planning Policy Framework. It is also clear from the above, that the Site has no technical constraints which would affect its delivery - indeed as stated above, the Site is owned by a developer with a proven track record of delivery in Werrington who is keen to bring the Site forward. The same cannot be said of other potential sites in Werrington (including the preferred options). Furthermore, it is considered that rather than allocate a number of relatively small capacity sites in Werrington as in the case of the preferred options, the allocation of a relatively large site is</p>	

ID	Consultee Name	Company/Org	Agent Name	Agent Company / Org	Site reference Green Belt	Support object general comment	Consultee comments	Officer comments
							preferable. The reasons for this include:- The Site is likely to have less impact in landscape and visual impact terms and less perceived impact on the Green Belt than sites currently under consideration. A larger site in the hands of a developer is more likely to deliver and, thereby, deliver a substantial element of the housing requirement for Werrington. A larger site such as the Site is more able to deliver affordable housing and other infrastructure contributions. On the other hand, some of the smaller sites will not be able to carry affordable housing requirements and other infrastructure contributions and so a relatively large site such as the Site is preferable in delivering overall on Development Plan objectives for sustainability. Fradley Estates also owns an area of land off Hillside Road, Werrington which could be brought forward in conjunction with the development of the Site for the delivery of open space and /or low cost housing. It is also submitted that the location and characteristics of the Site mean that a development of the Site would from a qualitative and marketing perspective be better than the Council's preferred options which locate development around the HMYO institution. Fradley Estates therefore objects to the Green Belt amendments for Werrington (WE003,WE013,WE027,WE052,WE069)and submits that the Green Belt boundary should be amended to include the Site.

						<p>Langton Court. The north west boundary is a natural and defensible boundary formed by a stream course. Further east, this stream course forms part of the Green Belt boundary. The south west boundary is formed by mature woodland vegetation comprising a substantial hedgerow and hedgerow trees with associated bridleway. The bridleway lies outside the site. Again, a strong defensible boundary. The north east boundary is represented in part by the stream course referred to above but in the main by the rear of dwellings fronting Uplands Croft. The Site is well contained visually by the hedgerow and hedgerow trees to the bridleway and by a substantial belt of woodland trees near the stream course. The Site is greenfield in character but has not been put to intensive agricultural use, merely used for grazing or for a hay crop. The Site is assessed as being of relatively low ecological value. Available means of access into the Site Appropriate access to the Site is available from Tregaron Court and/or Langton Court. Land at the end of both these cul-de-sacs is retained by Fradley Estates following the construction of the adjacent housing estate and these roads were designed to accommodate future housing development beyond. The Site plan which is submitted by separate email demonstrates the extent of the freehold ownership of Fradley Estates. Short term licences have been granted to adjacent householders to temporarily use the land at both points of access so that the land remains available for access purposes for housing development. A highway report by Sanderson Associates was submitted to the Council in December 2015 which concludes that access can be provided to serve the development of the Site which meets all current highway guidwlinwes. Availability of utilities and services All necessary utilities including potable water, foul and surface water drainage, gas, electricity, telecoms etc are available at the periphery of the Site and can be easily extended into the Site to facilitate development. Drainage connections are already available on-site. Public Right of Way/ Peripheral Planting The public right of way (outside the Site) which follows the south west boundary of the Site with hedgerows and hedgerow trees is located on the periphery of the Site and with vehicular access available elsewhere, neither the public right of way</p>	<p>boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. The Green Belt Additional Site Appraisals 2016 found that the site could be considered for release from the Green Belt under exceptional circumstances. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to determine the overall suitability of the site for release from the Green Belt. In this instance it is considered there are no exceptional circumstances</p>

Q37 Do you have any comments on the housing allocations for the Rural Areas?

						<p>nor associated hedgerows and hedgerow trees will constrain the layout or development of the Site. Indeed, it is proposed that both features will be retained/enhanced and incorporated into the development of the Site – see the Concept Layout appended to the Bright & Associates landscape Evidence Report 2015. Constraints The Site is not at risk of flooding; there is no known land contamination; foul and surface water drainage etc is available; the Site is assessed as being of low ecological value; there is no known archaeological or heritage constraint and therefore there are no major impediments to the early development of this Site. Availability The Site and its points of access are wholly owned by Fradley Estates a development company which is of long standing and skilled in bringing forward land for housing development. Fradley Estates has been responsible for building a significant proportion of the existing housing in Werrington and is therefore very familiar with the locality and has a proven track record of delivery. Fradley Estates is willing and able to bring the Site forward for housing in the short term with a projected yield beginning within 5 years. Supporting comments Although the Site is located within the Green Belt, visually, it is well contained by the natural features that are the stream course and in particular by the well established tree belts and hedgerows on the Site periphery and outer boundary. The north east boundary of the Site is formed in part by existing housing development and in part the stream course which forms the outer boundary of the Site. A precedent has therefore been set for the use of this stream course as a defensible green belt boundary. A Landscape Evidence Report by Bright & Associates was submitted to the Council on behalf of Fradley Estates in December 2015 (“LER”). In the context of the need to find housing in a sustainable larger village such as Werrington, it is inevitable that Green Belt land will be required. THE LER concluded that in landscape and visual terms the Site is visually well contained and that in terms of the Green Belt, allocation of the Site would be less damaging to the Green Belt than many of the sites considered by the Council including the preferred options. Fradley Estates and its advisers met with Mark James and Pranali Parikh in April 2016 to discuss the Site. It was</p>	

Q37 Do you have any comments on the housing allocations for the Rural Areas?

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>agreed at that meeting that the Site had been incorrectly classified in the SHLAA as a category C site due to the Council's misunderstanding of the access position and the incorrect assumption that access was not available. It was accepted that the Site should have been classified as category B in which case it would have been the subject of a more detailed review together with other potential sites for Werrington. It was agreed that the Site had "some catching up to do" and that Fradley Estates would submit further information in support of the Site addressing the Council's strategic Green Belt review, the Council's review of the historic landscape and the sustainability of the Site. A further report has been prepared by Bright & Associates which considers the Site and other potential sites in Werrington including the preferred options in terms of landscape and visual impact and Green Belt, which addresses any effects on the historic landscape and which assesses the sustainability of the Site. A copy of that report which also appends the earlier LER and Sanderson Associates highway report is submitted with these representations by way of separate email. It is clear from the June 2016 Bright & Associates report that:- the development of the Site will have no adverse effects on the historic landscape. the Site is more visually contained than the preferred sites for Werrington and that the allocation of the Site will improve the current sharp edge between housing and field space along the southern boundary of the Site. the Site has advantages over other sites in terms of not compromising the openness of the countryside and in visual terms it does not form part of the Green Belt. the development of the Site would meet the three dimensions of sustainable development within the National Planning Policy Framework. It is also clear from the above, that the Site has no technical constraints which would affect its delivery - indeed as stated above, the Site is owned by a developer with a proven track record of delivery in Werrington who is keen to bring the Site forward. The same cannot be said of other potential sites in Werrington (including the preferred options). Furthermore, it is considered that rather than allocate a number of relatively small capacity sites in Werrington as in the case of the preferred options, the allocation of a relatively large site is</p>	

Q37 Do you have any comments on the housing allocations for the Rural Areas?

ID	Consultee Name	Company/Organisation	Agent Name	Company / Organisation	Support/object/general comment	Comments	Officer Response
						<p>preferable. The reasons for this include:- The Site is likely to have less impact in landscape and visual impact terms and less perceived impact on the Green Belt than sites currently under consideration. A larger site in the hands of a developer is more likely to deliver and, thereby, deliver a substantial element of the housing requirement for Werrington. A larger site such as the Site is more able to deliver affordable housing and other infrastructure contributions. On the other hand, some of the smaller sites will not be able to carry affordable housing requirements and other infrastructure contributions and so a relatively large site such as the Site is preferable in delivering overall on Development Plan objectives for sustainability. Fradley Estates also owns an area of land off Hillside Road, Werrington which could be brought forward in conjunction with the development of the Site for the delivery of open space and /or low cost housing. It is also submitted that the location and characteristics of the Site mean that a development of the Site would from a qualitative and marketing perspective be better than the Council's preferred options which locate development around the HMYO institution. Fradley Estates therefore objects to the preferred options/proposed allocations for Werrington (WE003,WE013,WE027,WE052,WE069) and submits that the Site should be allocated for housing.</p>	
PO127	Mr Steve Wood				General comment	<p>There is a better layout and an available brownfield plot to complement the usage of CD017, before we build on greenfield sites. Currently there is a large opposition to the proposed houses in CD002 and CD003, mainly because of the dangerous access onto the main road via Rock end drive and the merging of the villages. To date there isn't really any opposition to CD017 and 35- 38 additional houses could be accommodated here. I own a brownfield plot of land that runs alongside the proposed plot of CD017 and CD019, which would significantly increase the size of the land available and afford more houses to be built in this area. The access to CD017 is on a straight piece of road and it is even wide enough for mini round about if needed. When we had the call for sites I submitted our plot for review and this was noted and given a number. The only real objection to this was the green belt. All these proposed plots of CD002,</p>	<ul style="list-style-type: none"> The site suggested is in the Green Belt and not well related to the built up area. The NPPF states that once established Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. In order to release a site from the Green Belt the Council must be able to demonstrate that exceptional circumstances exist. Consideration needs to be given to all the relevant evidence to

						<p>CD003 and CD017 are in green belt land. Reasons why our land would make a better alternative/ complementary site are mainly that it was incorrectly labelled as green belt, rather than being inside the green belt. In reality most of it has old stables and a menage on it, meaning it is actually classed as brownfield land. Such equestrian developments fall within the definition of previously developed land as set out in the national planning policy framework, and thus the development of this site is supported by the provisions of policy SD1, principle 8, which seeks to encourage the reuse of previously developed (brownfield) sites. When we first moved here three of our borders backed against open fields. Since then the sports park has been built against one and CD017 is being proposed against another. You will not be able to see this land from the road. All in all I do not think you should develop green belt land before brownfield land. Brownfield land is rare across the Cheddleton area and I have some that has been dismissed. This does not make sense to me. If anyone from the council planning department want to come and have a look at this in person, I will be more than happy to accommodate them.</p>	<p>determine the overall suitability of the site for release from the Green Belt. In this instance it is considered there are no exceptional circumstances.</p>

Question 38 Do you have any comments on the employment site for the Rural Areas?

ID	Full Name	Full Name	Company / Organisation	Support/ Object/ General	rural emp comments - Please explain your views	Officer response
PO832	Ms Alison Conybeare			General comment	Please seek the local residents views. These are the most important.	Comments noted.
PO2709	Mr Martin Ross		Environment Agency	General comment	Due to the size of the site, it will be possible to design the layout around the floodplain. However, the Ordinary Watercourse running into the River Blithe along the northern edge, will need to be remodeled at the application stage.	Comments noted. The Council sought the views of the Environment Agency in its role as statutory consultee for planning application SMD/2014/0576. The Planning Officer's committee report considers that the scheme is acceptable in flood risk terms subject to the subsequent consent imposing conditions requiring that the scheme be carried out in accordance with the submitted FRA; that on-site SuDS be integrated; and other requirements.
PO204	Mrs Jacqueline Leach			Object	OC055 should never have been passed or put on the site allocations plan. Went against Government Inspectors recommendations when he looked at the draft Core Strategy. He declared it unsound. It was removed from the adopted Core Strategy. Councillor Worthington dismissed this at the planning application meeting SMD/204/0576 declaring that it should never have been taken out. Councillor Davies read from the DRAFT Core Strategy and it was passed as a mixed development with 168 houses. There is a police investigation going ahead and my complaint against councillors Worthington and Davies is with the Government Ombudsman awaiting resolution. Meanwhile the standards committee have declared that Worthington breached the code of conduct on the Endon Ridaing school application and the application was reversed. Why hasn't a breach of the the code of conduct been declared regarding this application and having it overturned?	The reasons for the approval of the mixed industrial/housing application SMD/2014/0576 are set out in the associated Planning Applications Committee report/minutes, along with the responses of statutory consultees to the application, such as SCC Highways. Consequently there is no longer a requirement to take forward the industrial component of this site in to the emerging Local Plan.
PO465	Mr Louie Horleston			Object	The OC055 (Cresswell) site of 8.58 hectares was asked to be removed by the government inspector Patrick Whitehead for the updated core strategy, he stated it has no consideration of the impact it would have on the residents of Cresswell Hamlet, nor has it considered the contamination and flood risks. there is also no mention of the 168 houses that are not in the site allocation to comment on but will have to be considered as they will increase the impact of the expansion of the industrial estate as they have been passed together in the same application. the fact the SMDC have purposely presented the site allocation plan draft in such a way that the public can not comment on the houses with the expansion of the industrial estate is shocking and appalling behaviour for a responsible council to act in this way, I would ask that the following questions be responded to Why would a responsible council issue a decision notice knowing full well that there is a police investigation going on with Cresswell contributing a major part to that police investigation, the cost of putting the hamlet back to its original state would be a considerable burden on the tax payers' pockets and then there is the consideration of the council being sued by the developer for its original decision to pass the development after the developer has spent the money to develop the project and this developer has already been successful in doing this to east borough council. With 3 parish councils objecting to this development representative of approximately 7,000 residents why would a council allow this decision and not return it to the planning committee considering the above points. With a little over a 100 houses in the hamlet to then put another 168 into the rural landscape with no infrastructure begs belief, the fact that it is flood plain and some of the development will be in flood plain 3b is just plain stupid and irresponsible, there is also documented buried contamination from the old colour works that could track straight into the blythe and kill everything down its course into Blithfeild reservoir, why would a council risk this and	See response to PO 204 above.

					subject the public to these risks. This takes away the housing allocation from the towns where there is supposed to be substantial housing for the people who deserve to be accommodated. The expansion of the industrial estate apart from the government inspector telling the council that they should not expand it and remove it from the core strategy was totally ignored and knowing that a false document was used to pass the development was appalling behaviour for a committee to conceive and a responsible council to accept and not return it to the committee. In round figures there is nearly 10 hectares of rural development which is development in rural countryside SMDC have allocated 8.58 hectares of it in the hamlet of Cresswell how is that fair to the other rural communities to have their allocation given to one developer in Cresswell, shocking behaviour. The site allocations document that you have all seen does not even have the houses on it the councils response is below Council has told residents in relation to new housing and repeated the statement as in an email from Mr Gavin Clark responding to an email from VVSM that – The Core Strategy does not identify Cresswell as a village for housing development and therefore we will not be looking to identify housing sites in the Cresswell area. This has been repeated by various council officers over the last few weeks and after the decision notice was issued. A further meeting held between the Council planning department and two Draycott parish councillors a while ago demonstrated that in order to reach housing needs they would need to build 25 houses in Draycott. The proposed development in this application is therefore far too large for Cresswell as a hamlet. You have to consider the points above and have to ask what on earth are SMDC doing ? and they should be held totally responsible for their actions with regard to the Cresswell application and other developments passed that are under investigation by the police.	
PO943	Mrs Kathleen Bradshaw			Object	Totally unnecessary in my opinion. Should never have been granted planning permission for expansion. More units mean more traffic of the heavy goods type. This is a village - no shop, no post office, no infrastructure but lots of goods vehicles bad mix.	The reasons for the approval of the mixed industrial/housing application SMD/2014/0576 are set out in the associated Planning Applications Committee report/minutes, along with the responses of statutory consultees to the application, such as SCC Highways.
PO1035	Mrs Shelagh Wood	Mrs Shelagh Wood	VVSM	Object	OC055 is 8.58 hectares in a rural location where Blythe Business Park already has room within it's existing site for expansion without moving in to the Special Landscape Area..	The reasons for the need for additional employment land by the applicant are set out in their application particulars to SMD/2014/0576. Note that since the adoption of the SMDC Core Strategy in 2014 there is no longer a special landscape area designation across the District.
PO1494	Mr Roger Holdcroft			Object	We bought our house, the above address, 9 years ago, delighted with the rural Moorlands aspect and have been happy here ever since. Last year I was elected to the Parish Council and became Chair in May 2015. However, this letter represents my own view and is not the result of a parish Council discussion, though I am sure that many in the community share my views. I have to say that I am appalled at recent planning decisions and latest proposals affecting our Parish. The recently passed plans for Blythe Park, Cresswell, suggesting that 160 houses should be built there as well industrial units is completely overwhelming for the hamlet community, that boasts no amenities, no shop, no medical services and very limited public transport. The Northern Gateway plan can only be seen as preposterous addition to the already massive effects planned for the Parish of Draycott-in-the-Moors. The effect of all of this development on the Parish will be devastating, mainly in terms of traffic congestion and traffic danger. Uttoxeter Road is already desperately overloaded, as are the rat runs of Cheadle Road, Breach Lane and Cresswell Lane/Road.	The reasons for the approval of the mixed industrial/housing application SMD/2014/0576 are set out in the associated Planning Applications Committee report/minutes, along with the responses of statutory consultees to the application, such as SCC Highways, SMDC Environmental Health, and the Environment Agency. The reasons for the need for additional employment land by the applicant are set out in their application particulars to SMD/2014/0576.

				<p>These three lanes are dangerous, have pinch points, indeed our wall has been run into 3 times in nine years. Uttoxeter Road by the Draycott Arms is a very dangerous junction and the road up to Totmonslow is almost a pinch point in itself. The thought of the planned roundabout on Uttoxeter Road/Cresswell Lane junction as well as all of extra vehicles can only back up traffic in all directions increasing hazards and the risk of more accidents. The other main issue is the lack of infrastructure in the parish, no school, nearby schools full, no medical services, no public transport, no shop, not suitable for an extra 160 house nor for a traveller's site, which would again increase traffic. Sad to say, there is also no social infrastructure to welcome these extra people into the community. Surely there are brown field sites nearby which could be used for the industrial units to ease the burden on Draycott and especially Cresswell. The former Fole dairy site and the Blythe Bridge/Meir Heath Creda site would both preferable to using the Blythe Park Cresswell land with its additional issues of contamination and flooding. It has to be said, finally, that if any of the Cresswell development takes place and it is now passed, then surely nothing else should or need to be imposed upon the Parish in the Local Plans. It would seem that SMDC holds Draycott in little regard, no doubt due to its distance from Leek, on the edge of the Moorlands area.</p>	<p>In the event of allocation of the Northern Gateway opportunity area for the uses set out in the preferred options consultation; subsequent applications would still need to demonstrate that they were acceptable against policy. The Council would assess schemes having significant transport impacts against relevant NPPF and Local Plan policy (including requirement to submit transport statements, and provide highways improvements where deemed appropriate).</p> <p>New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas. National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered.</p> <p>Fole Dairy already has permission under SMD/2013/0028 for mixed residential employment scheme. In the event this scheme expires unimplemented existing employment sites in the District are already protected under Local Plan Policies.</p> <p>The Creda site lies outside the Staffordshire Moorlands therefore would be subject to separate policies.</p> <p>Future proposals arising within the Draycott area of the Staffordshire Moorlands would be assessed against all relevant Local and National</p>

Question 38 Do you have any comments on the employment site for the Rural Areas?

						Policies.
PO8996	Mr Nick Holdcroft			Object	<p>Reference: SMD/2014/0576 - Land at Blythe Park, Sandon Road, Cresswell Planning Application Site Allocations – Ref OC055 Blythe Park, 8.58 Ha Employment I am writing as a very concerned and disgusted resident of Sandon Close, Cresswell, in order object in the strongest possible terms to this totally inappropriate and unnecessary development, which is proposed in the most unsuitable of locations. Summary of Objections - The Facts Cresswell is a 'small' hamlet of around a 130 properties; to allow the construction of an additional 168 houses, would more than DOUBLE the size of the hamlet (an increase in size of around 125%). To allow the expansion of the business park from 31,500 sqm to 64,980 sqm by adding a further 33,480 (an increase of 106%) would more than DOUBLE the size of the business park Both areas of land proposed for development by the developer are green field sites which are home to an abundance of wildlife and parts are classed as flood plain by the Environment Agency Building on this green field land would also exacerbate the problem of flooding The rural road infrastructure was not built for nor is suitable for the large increase in traffic that this development would bring. Cresswell is not even mentioned once by name and it doesn't even feature on the map contained within the SMDC Core Strategy In the report to the SMDC Planning Applications Committee the Planning Officer stated: In summary: Given the open countryside greenfield location, the housing element has not been justified in terms of location or scale and neither has the scale of industrial expansion to Blythe Business Park been justified. An exploration of brownfield alternatives has not occurred and the location seems unsustainable in terms of the proposed housing, given the Spatial Strategy's identifications of settlements elsewhere as the basis of future sustainable housing. Even if Cresswell were deemed to be a village, the scale of housing bears no relation to its current size and role. With regard to the National Planning Policy Framework (NPPF), paragraph 52, the Council did not consider the new settlement 'option' as a sustainable alternative during Core Strategy preparation. The scheme raises substantial sustainability concerns if NPPF paragraph 14 applies. Refer also to NPPF paragraph 55. The housing does not appear to be required under an enabling arrangement to the business park expansion. The proposals do not appear to avoid Flood Zones 2 and 3 within the site or provide a sequential search of alternatives. Given the substantial policy concerns, the proposal cannot be supported. JMPTransport Solutions (renowned consultants within the sustainable transport planning field) who independently review the Transport Assessment (TA) and Framework Travel Plan (FTP) submitted as part of this planning application, concluded that: The Traffic Assessment and Framework Travel Plan cannot be considered sound. Without considerable investment in sustainable transport provision this site cannot be promoted as sustainable. A properly arranged residential development of around 2000 households could justify a new commercial – and more importantly – viable bus service. This highlights that the proposed development cannot justify a viable bus service. The scale of proposed development is not considered appropriate to the rural nature of the road network. the fundamental suitability of the proposed development is unacceptable on transport grounds and located in a wholly unsuitable location for a development of this size Traffic – Rat Run It is well known that any traffic problems on the A50 result in traffic trying to avoid hold ups by travelling through Tean, Draycott, Cresswell, Saverley Green, Fulford, Hilderstone and Blythe Bridge. This is without additional industrial traffic as well as residents from another 168 dwellings which will severely compound the existing traffic problems. Quite simply, the rural lanes were not built for such volumes of traffic. Cresswell Road – Road Width Cresswell lane is only 5.16m wide at the pinch point just above the Isaac Walton public house. The maximum width of an HGV is 2.55m (excluding the mirrors), which means there is only a gap of 6cm between two passing HGVs (refer to JMP report). The Motion (applicant's consultants) TA claimed the road was 5.2m</p>	<p>If the Council considered that a development may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts. In addition the Council continually monitors air quality across the District and regularly undertakes review and assessments of this data to identify areas where the traffic could have an unacceptable impact on local air quality. Policy SD4 in the emerging Local Plan covers controls of all forms of pollution arising from development.</p>

					<p>wide. Increasing the volume of traffic to / from the business park, in particular HGV's increases the risk of accidents given the narrow width of the lane; it could also create a regular back log of traffic on to the level crossing. Approving this planning application would result in a serious health and safety risk, due to a huge increase in HGV construction traffic on a very narrow unsuitable country lane. I am aware from fellow residents of Cresswell, that Paull Hurdus (SCC Highways Authority), was due to meet residents on site to review the dangerous and narrow nature of Cresswell Road, but he failed to attend. SMDC are reliant on SCC Highways Authority for their highways related expertise when evaluating planning applications and it is our considered opinion based on evidence we have gathered, that the highways elements of this planning application have not been properly considered. T-Junction – Cresswell Road / Uttoxeter Road At peak times, there is a tail back of traffic at this extremely busy junction on Cresswell road, this is without an increase in traffic from another 168 houses and further expansion of the industrial estate into green belt. The introduction of a roundabout will exacerbate this problem and create access difficulties for the adjacent residents in Draycott. Proposed Roundabouts in Cresswell and Draycott Relocating the site entrance, would mean creating the proposed roundabout even closer to existing homes which is totally unacceptable and would cause further stress and anxiety for the residents of Cresswell and Draycott. As the SMDC Planning Officer highlighted in the report to Planning Committee, an evaluation of alternative brown field sites has not been undertaken. Brown field sites in or near to larger towns which are much better served by an adequate transport network, existing bus routes or near to train stations and access to amenities such as schools, hospitals, doctors and shops, must surely rank more favourably, are far more sustainable and fit more closely with your Core Strategy and NPPF than any development proposed for a small rural hamlet? In general terms the role of the planning authority must be to ensure that only necessary and appropriate developments are approved in suitable locations. Surely any development must be proportional and incremental to the existing size of a village or hamlet ? For instance say, 1 or 2% over an appropriate period of time, but not to increase the size of a hamlet by 125% in terms of houses or 106% in terms of an employment site ? This it totally unacceptable and disproportionate and really requires serious reconsideration. Allowing this unnecessary development would: totally destroy the hamlet result in increased traffic problems and the potential for accidents, not only in Cresswell but in surrounding villages and hamlets result in the increased risk of flooding destroy the habitat of an abundance of rare wildlife disturb land that has not been tested for contamination result in houses built close to a remediated tip and it would ruin the views and areas of open countryside Quite simply, the small hamlet of Cresswell is not an appropriate location for the construction of 168 residential dwellings or an additional 33,480 sqm of industrial development.</p>	
PO9529	Mr K Tunncliffe			Object	<p>I write in reference to the above site options consultation and I also wish to include the impact of other sites namely BB041(Caverswall Road) and OC055 (Blythe Park expansion, Cresswell) because if all sites are granted permission, it will result in the diminution of the quality of life for all residents of Blythe Bridge, Forsbrook, Draycott and Cresswell, along with increased traffic problems for residents of Hilderstone. With the overview of all the linked sites named above, (Northern Gateway Site/Proposed Traveller Site/BB041/OC055) I wish to draw your attention to the following information from The World Health Organisation website, where the full document is available for your perusal: (http://www.iarc.fr/en/media-centre/iarcnews/pdf/pr221_E.pdf 1st June 2016) Lyon/Geneva, 17 October 2013 – The specialized cancer agency of the World Health Organization, the International Agency for Research on Cancer (IARC), announced today that it has classified outdoor air pollution as carcinogenic to humans (Group 1). After thoroughly reviewing the latest available scientific literature, the world's leading experts</p>	<p>The Council consults internally with its own Environmental Health Team and they did not raise objections to TR002 or OCC055. EH Conditions were attached to consent SMD/2014/0576 .</p> <p>If the Council considered that a development may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts. In addition the Council continually monitors air quality across the District and regularly</p>

Question 38 Do you have any comments on the employment site for the Rural Areas?

				<p>convened by the IARC Monographs Programme concluded that there is sufficient evidence that exposure to outdoor air pollution causes lung cancer (Group 1). They also noted a positive association with an increased risk of bladder cancer. Particulate matter, a major component of outdoor air pollution, was evaluated separately and was also classified as carcinogenic to humans (Group 1). The IARC evaluation showed an increasing risk of lung cancer with increasing levels of exposure to particulate matter and air pollution. Although the composition of air pollution and levels of exposure can vary dramatically between locations, the conclusions of the Working Group apply to all regions of the world. It is therefore immediately apparent that increased air pollution created from the higher volume of traffic generated from ALL of the above sites will be a source of concern to the health and wellbeing of residents. If the proposals go ahead the identity of Blythe Bridge, Draycott and Cresswell will be changed beyond recognition from small hamlets and a village to an extension and continuation of the urban sprawl of Stoke on Trent. Many of my neighbours I have discussed this matter with, purchased our properties and chose to live in the area because it is a non estate location, rural, with few houses and lots of green space. Therefore our views must be taken into consideration, when any major changes to the area in which we reside and pay council tax for are considered. Clearly this was not the case with the Blythe Park expansion, which will cause the volume of traffic on Cresswell Lane and Uttoxeter Road, Draycott to greatly increase the number of vehicles on an already very busy road-also used as a diversion for the frequent A50 closures. The vibration from this traffic has already caused damage to garden walls and with some HGV's you can feel the vibration through the house.</p>	<p>undertakes review and assessments of this data to identify areas where the traffic could have an unacceptable impact on local air quality. Policy SD4 in the emerging Local Plan covers controls of all forms of pollution arising from development.</p> <p>The reasons for the approval of the mixed industrial/housing application SMD/2014/0576 are set out in the associated Planning Applications Committee report/minutes, along with the responses of statutory consultees to the application, such as SCC Highways, SMDC Environmental Health, and the Environment Agency.</p>
PO9534	Mr C Salt		Object	<p>I write in reference to the above site options consultation and I also wish to include the impact of other sites namely BB041(Caverswall Road) and OC055 (Blythe Park expansion, Cresswell) because if all sites are granted permission, it will result in the diminution of the quality of life for all residents of Blythe Bridge, Forsbrook, Draycott and Cresswell, along with increased traffic problems for residents of Hilderstone. PO9947	St Modwen Development Ltd	Ms Stacey Green	Barton Willmore	Object	Email containing letter and Evidence Report submitted [both attached to PO9838]: Consultation Document allocates site OC055 (Cresswell) for employment use, amounting to 8.58 hectares. The 35ha of land (Gross Requirement) for SMDC is distributed across Leek, Biddulph, Cheadle and the Rural Areas. The Rural Areas receive 10.5 ha of this total, of which the residual requirement is 6.37ha. It is not clear from the Document or evidence base how this 6.37ha residual requirement relates to the Gross Allocation of 8.58ha and request this be clarified. We would also refer to our earlier comments in response to question 2, regarding the rural area allocation at Cresswell. Within Blythe Bridge and Forsbrook, there are no employment land allocations made to serve local needs. [Our] advisors have indicated that the principal market sectors that could be attracted to Blythe	<p>The preferred options consultation document explains that completions/commitments were deducted from the 2011-2031 employment land requirements for each of the four areas, leaving the corresponding residual requirements.</p> <p>Note that the emerging Local Plan proposes the allocation of 48.5ha for mixed employment/residential uses as Blythe Vale,</p>

Question 38 Do you have any comments on the employment site for the Rural Areas?

					<p>Bridge and Forsbrook are likely to include small to medium size industrial and warehousing (i.e. local market) as well as more strategic requirements. Whilst Blythe Bridge and Forsbrook boast excellent road and rail connectivity, new homes, and a strong and varied base of facilities and services, the Local Plan has failed to allocate any employment land to serve local needs to this area. [The nearest local employers are beyond the District boundary eg Meyer Timber factory]. The St Modwen proposals present an opportunity for a mixed use development site. The principle of employment use has already been accepted - extant planning permission. St Modwen have extended the time on the original planning permission in 2011 (11/00405/REM), and having previously secured consent for access. However site has been difficult to progress, largely because of the development's viability and the market for office accommodation in this location. St Modwen have applied for Growth Funding in an effort to unlock the potential of this site, but there is no certainty as to whether this bid will be successful and it will take time for the bid to be processed. the site's potential is arguably best unlocked by a mix of uses, residential and employment that can be delivered through a more flexible and attractive, market facing planning permission. Moving away from the restrictions of the Development Brief to reflect the requirements of modern business will also be important, for example ensuring the use class is not limited to Class B1.</p>	<p>Blythe Bridge. The allocation Policy DSR1 does not specify that employment uses be restricted to B1 use.</p> <p>A masterplan will be prepared for the site which will look at the details of the development and sustainable transport and rail and road links to and from the site to Blythe Bridge and the surrounding area.</p>
PO9731	Scentarea Ltd	Ms Rosie Cotterill		Support	<p>Covering letter and map submitted [attached] supporting Preferred Options employment site OC055: The intention of the proposed approved employment/housing approval SMD/2014/0576 is to create a sustainable addition to Cresswell by expanding a successful business park and bolstering the provision of residential dwellings, including much needed affordable housing. The proposed development will also be beneficial for the wider District providing housing and employment land to meet an identified need. as this permission has already granted industrial development on OC055 site, Scentarea Ltd therefore fully supportive of the Council's intention to allocate this site There are a number of existing businesses on the site who are committed to growing in this location once larger employment units have been developed and are available. Scentarea also often receives enquiries from other businesses looking to move to the site who, without the development of new units, cannot currently be accommodated. Given that western portion SMD/2014/0576 has already been granted residential planning permission, it would seem logical that the western portion of the site is also allocated for residential development. This will help meet the housing need identified in the adopted Core Strategy in line with para 47 NPPF. The site is not in the Green Belt and would therefore allow for the Council to meet some of their identified need on non-Green Belt land. The Environmental Impact Assessment submitted in support of the planning application demonstrates that there are no environmental constraints on site restricting development which could not be overcome through mitigation.</p>	<p>Support for OC055 noted.</p> <p>As Cresswell is not identified as a 'larger' or 'smaller' village in the emerging Local Plan (subject to the rural area strategy), the Council does not consider it appropriate to make an allocation for housing at this location.</p>

Question 39 – Do you have any comments on the Northern Gateway Opportunity Site?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Consultee Comment	Support / Object/ General Comment	Officer Response
PO1277	Mr Yendole	Stafford Borough Council			Stafford Borough Council has a border with Staffordshire Moorlands in the Cresswell and Blythe Bridge areas. A Regional Investment Site is proposed at Blythe Vale alongside the A50 to support the Northern Gateway regeneration initiative; Stafford Borough Council supports a focus on economic development in this locality through the Regional Investment Site, an employment allocation of 8.5 hectares proposed as an extension to Blythe Business Park at Cresswell as well as the Hadleigh Park Major Developed Site within Stafford Borough.	Support	<ul style="list-style-type: none"> Comments noted
PO205	Mrs Jacqueline Leach				Takes up too much Green belt land and will cause chaos on the Blythe Bridge Roundabout especially if the A50 is closed due to an accident. All traffic will be redirected through Blythe Bridge, Draycott and Tean.	Object	<ul style="list-style-type: none"> The site is not within the Green Belt The site is located on a main road with substantial road frontage and it is considered subject to appropriate masterplanning it will be possible to achieve a satisfactory access to the site.
PO1348	Ms K Dewey	Staffordshire Wildlife Trust			The Northern Gateway Opportunity Site has not been covered by the Extended Phase 1 Habitat Surveys.	Object	<ul style="list-style-type: none"> The Local Wildlife Assessment (2017) found the site had some biodiversity value notably one of the hedgerows and two of the ponds. The Study recommended further survey to assess the site.
PO944	Mrs Kathleen Bradshaw				Totally unnecessary - just completely the wrong location. With the local focus on the Cresswell/Blythe Park application and the local action group opposing it the Northern Gateway option suddenly rears its head. In the Draycott map it doesn't show at all - I have to look at the Blythe Bridge map to see its potential impact. The A50 is not a good road to develop along unless you consider more the location near Toyota with its proximity to the M1.	Object	<ul style="list-style-type: none"> Site allocations are required to meet the District's proposed housing requirement. There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites need to be included. The site is designated in the Core Strategy for high quality employment use.
PO1036	Mrs Shelagh Wood		Mrs Shelagh Wood	VVSM	This alongside the Blythe Business Expansion, 25 houses in Draycott, 168 houses in Cresswell and very poor road infrastructure will plus a traveller's site will lead to utter chaos on the roads.	Object	<ul style="list-style-type: none"> Development on the site would be subject to appropriate masterplanning which would consider the impact of the site on the surrounding area
PO1493	Mr Roger Holdcroft				We bought our house, the above address, 9 years ago, delighted with the rural Moorlands aspect and have been happy here ever since. Last year I was elected to the Parish Council and became Chair in May 2015. However, this letter represents my own view and is not the result of a parish Council discussion, though I am sure that many in the community share my views. I have to say that I am appalled at recent planning decisions and latest proposals affecting our Parish. The recently passed plans for Blythe Park, Cresswell, suggesting that 160 houses should be built there as well industrial units is completely overwhelming for the hamlet community, that boasts no amenities, no shop, no medical services and very limited public transport. The Northern Gateway plan can only be seen as preposterous addition to the already massive effects planned for the Parish of Draycott-in-the-Moors. The effect of all of this development on the Parish will be devastating, mainly in terms of traffic congestion and traffic danger. Uttoxeter Road is already desperately overloaded, as are the rat runs of Cheadle Road, Breach Lane and Cresswell Lane/Road. These three lanes are dangerous, have pinch points, indeed our wall has been run into 3 times in nine years. Uttoxeter Road by the	Object	<ul style="list-style-type: none"> See responses above New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas. National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered.

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Consultee Comment	Support / Object/ General Comment	Officer Response
					<p>Draycott Arms is a very dangerous junction and the road up to Totmonslow is almost a pinch point in itself. The thought of the planned roundabout on Uttoxeter Road/Cresswell Lane junction as well as all of extra vehicles can only back up traffic in all directions increasing hazards and the risk of more accidents. The other main issue is the lack of infrastructure in the parish, no school, nearby schools full, no medical services, no public transport, no shop, not suitable for an extra 160 house nor for a traveller's site, which would again increase traffic. Sad to say, there is also no social infrastructure to welcome these extra people into the community. Surely there are brown field sites nearby which could be used for the industrial units to ease the burden on Draycott and especially Cresswell. The former Fole dairy site and the Blythe Bridge/Meir Heath Creden site would both preferable to using the Blythe Park Cresswell land with its additional issues of contamination and flooding. It has to be said, finally, that if any of the Cresswell development takes place and it is now passed, then surely nothing else should or need to be imposed upon the Parish in the Local Plans. It would seem that SMDC holds Draycott in little regard, no doubt due to its distance from Leek, on the edge of the Moorlands area.</p>		
PO912 7	Bev Reardon				<p>Now to summarise my objections for the Northern Gateway Site: Increased traffic on the A50 Increased traffic on adjoining roads. For 1 & 2: Reasons for objections are: Health and wellbeing: (as above) noise pollution, light pollution, congestion, increased travel time, speeding, vibration and associated damage to property. The road noise from the A50 can be heard in my garden on Uttoxeter Road. It is very loud and almost like white noise. It is impossible to sleep with windows open because of this. Any increase in traffic will seriously affect my health and wellbeing and create a stressful environment which will be in detriment to my mental health. Increased Travel Time: I travel to Derby from Blythe Bridge roundabout everyday. It takes almost 20 minutes in a queue of traffic to get to the roundabout from my home on Uttoxeter Road because the traffic is always backed up to The Chandni Cottage Restaurant by 7.15am. Congestion: The A50 traffic is also congested and quite frequently at a standstill along the A50 level with Checkley, queuing to the first roundabout for JCB. Accidents: When a lorry overturns at Blythe Bridge junction, the traffic stops in all directions, affecting both the M6 and M1 as well as surrounding routes that are used as diversions for the A50. There have been many collisions on the A50 to date, which will surely become more frequent with extra traffic and an entrance to the business park. 24/7 Noise and light pollution from the Northern Gateway development. I will be very affected by noise and light from the development as my home backs onto the proposed site. The fields at the side of the A50 are currently home to a wide range of wildlife, which I have witnessed from my back garden, including Kingfishers, Great Crested Newts, Foxes, Buzzards, Badgers, Rabbits, Hares, Curlews, Swifts, Woodpeckers, Herons, Dormice and other fabulously diverse</p>	Object	<ul style="list-style-type: none"> • If the district council considered that a development they may adversely impact on local air quality then the applicant is required to undertake air quality assessments to identify these issues and develop options to mitigate these impacts. • There is a policy in the Local Plan regarding the pollution • See responses above

The Northern Gateway Development must be considered along with the Blythe Park extension, the Traveller Site and the Caverswall Road proposals to fully digest and understand the impact it will have on the surrounding hamlets and villages. The Northern Gateway Development is a massive and very obtrusive development, which would be to the permanent detriment of the rural landscape, there is no "Aesthetic compatibility with the local environment", as all development proposals made by the SMDC are in fact destroying the local environment. I write in reference to the above site options consultation and I also wish to include the impact of other sites namely BB041(Caverswall Road) and OC055 (Blythe Park expansion, Cresswell) because if all sites are granted permission, it will result in the diminution of the quality of life for all residents of Blythe Bridge, Forsbrook, Draycott and Cresswell, along with increased traffic problems for residents of Hilderstone. With the overview of all the linked sites named above</p>		
PO9948	St Modwen Development Ltd	St Modwen Developments Limited	Ms Stacey Green	Barton Willmore	<p>Email containing letter and Evidence Report submitted [both attached to PO9838]: St Modwen own part of the land that is allocated as the Northern Gateway Opportunity Site [see Evidence Report] The NPPF recognises and emphasises the importance of using up to date market signals. In addition, due reference is made to market factors in PPG, particularly the three principal tests of allocating development land - suitability, availability and achievability. Refer to example of Blythe Valley Business Park RIS(Solihull MBC) . The Solihull Local Plan - Inspector's Report stated that this RIS, which was originally restricted to B1 uses, should allow proposals to incorporate new housing (because) with RSS revocation and changes in the economy and business demand, there is a need for this concept to evolve and for these business parks to be reinvigorated, without detracting from their regional economic significance. It would also help to provide a more sustainable, multi-dimensional community. it would be very difficult to deliver and complete this business park without a vital element of residential development. Other former RISs in the West Midlands include residential uses in their development (such as at i54 & Longbridge). The PBA/JLL West Midlands Strategic Employment Site Study (September 2015) (WMSESS) notes that the RISs serving the metropolitan area of Birmingham have been successful, with high occupancy. However..it is particularly apparent that there are a significant number of locally based operators that have located to RISs.Report also states the distinction between B1c/B2 and B8 not always being possible to make. Blythe Vale only approved for B1 uses in Council's development brief (but Core Strategy para 8.1.78 recognises the need for the original 1997 development brief to be reviewed, include scope for further uses).We support such a revision and consider that the Local Plan should equally make this reference when new policies are prepared in subsequent stages of the Local Plan. Allocation of employment</p>	Object	<ul style="list-style-type: none"> • Comments noted.

Question 39 – Do you have any comments on the Northern Gateway Opportunity Site?

					land at Blythe Vale (including if this is part of a mixed use scheme) should not be restricted to specific sectors, and should be market driven and include both ancillary and enabling development. The introduction of a more flexible range of employment uses which meet a local need alongside a regional one, coupled with a residential element on part of the site is necessary. This will open up the opportunities for cross funding, early delivery, the provision of infrastructure etc. There are also opportunities to deliver ancillary development – a local centre or public house. Connectivity to the urban area of Blythe Bridge and Forsbrook can be enhanced through off site highway improvements etc		
PO52	Mr P Rushton				SMDC involvement in the Northern Gateway Opportunity is to be applauded but the Moorlands strength within that partnership is as a gateway to the countryside and prestigious Peak District. Tourism and attractive market towns can provide a prosperous Moorlands future but the natural and irreplaceable resource of countryside must be protected.	General comment	<ul style="list-style-type: none"> • Comment noted

Question 40 Do you have any comments on the travellers site?

ID	Full Name	Company / Organisation	Support / Object / General	Consultee Comments	Officer Response
PO13	Mr Robert Llewellyn		General comment	There are significant road safety risks to the vehicular access of this site. The exit and entry are directly from and onto a dangerous bend on an unrestricted speed dual carriageway. This is further complicated by the close proximity to a major junction providing access to Blythe Bridge. There is no right turn out of this site and vehicles exiting the site will be required to turn left and traverse the east bound carriageway within less than 100 metres in order to access the west bound carriageway sliproad, in conjunction with the traffic exiting the Blythe Bridge turn off. A number of the vehicles from the travellers site will be large twin axle caravans which are not particularly manoeuvrable or responsive. A solution would be to instal a new roundabout system at this junction but this may be economically unviable for the establishment of 8+ pitches. Some consideration should also be given to the potential increase in road traffic that may occur along this stretch of road, should the development at OCO55 Cresswell and the Blythe Vale Northern Gateway Site go ahead.	<p>Note that site TR002 has been removed from the emerging Local Plan.</p> <p>The Council consults with SCC Highways/SCC Transportation during Local Plan preparation. SCC did not raise any objections to development of TR002 for traveller use subject to junction assessments; local pedestrian and cycle links will also require consideration. Note that the Cresswell site OC055 was granted outline employment consent in 2016. In the event of future planning applications the Council would assess schemes having significant transport impacts against relevant NPPF and Local Plan policy (including requirement to submit transport statements, and provide highways improvements where deemed appropriate).</p>
PO834	Ms Alison Conybeare		General comment	Please seek the local residents views. These are the most important.	Residents views have been sought as part of the consultation.
PO432	Mr David John Allen		General comment	None at Present	Comments noted.
PO568	Mr Peter Cowie		General comment	These need to be very sensitively sited with local resident support and stringent regulation and monitoring.	<p>Note that site TR002 has been removed from the emerging Local Plan.</p> <p>The Council uses evidence to justify its selection of 'Preferred' allocation sites from wider sites. This includes landscape impact evidence. The most recent 2016 landscape</p>

Question 40 Do you have any comments on the travellers site?

					<p>impact study concluded site TR002 has low visual prominence due to screening provided by the mature hedgerows and trees which enclose the site, therefore is of low landscape sensitivity. Note that landscape evidence must be weighed against all other relevant evidence when the Council selects 'Preferred' sites.</p> <p>Residents views have been sought as part of the consultation.</p>
PO871	Rommelrath		General comment	<p>My comments relate to travellers sites. The council and the independent government officer should ensure that any travellers sites should be sited on only suitable locations. They need to consider personally how they would like to live next to one of these sites. The sites should NOT be adjacent to houses where the impact will be detrimental to the homes of local people and have a significant impact on the value of their properties. There are many brown field/ employment sites throughout Staffordshire Moorlands which can be used for such sites and it is unfortunate that the public was not given an opportunity to put these sites forward. (This should be re-visited by both the council and the independent government officer to make the process a fair one) There are brown field sites unsuitable for housing which are suitable traveller sites. These areas should be chosen and NOT landscape areas.</p>	<p>Note that site TR002 has been removed from the emerging Local Plan.</p> <p>The policy expectations concerning location of new traveller sites, is set out in the Government's NPPF, and its resultant 'Planning Policy for Traveller Sites', as well as the Council's own Local Plan Policy. These set out the importance of sustainability/accessibility of sites, to enable provision of suitable accommodation from which travellers can access education, health, welfare and employment infrastructure; and that development in open countryside that is away from existing settlements should be very strictly limited. Councils must also consider local amenities and impacts upon landscape and local infrastructure; and the scale of sites should relate to their surroundings. Brownfield sites are also preferred. In the case of sites within the Green belt (such as here) the Council would need to demonstrate exceptional circumstances to justify their</p>

PO2789	Mr Martin Ross	Environment Agency	General comment	TR002: According to information held by the Environment Agency this site is located above historic landfill sites. The local council, as lead regulator for these sites, should be contacted for further information.	The Council consults internally with its own Environmental Health Team and they did not raise objections to this site, subject to appropriate conditions.
PO7381	Mr Andy Graham		General comment	A great many local residents were incensed when the existing unlawful traveller site was being seriously considered to be extended. Thankfully, this was rejected and officers have categorically said that this site would not be considered as appropriate. It is envisaged that once a suitable traveller site is developed that this family will be moved when their temporary planning permission expires in 2017. We would really appreciate you taking on board all that residents have taken the	The current temporarily approved travellers site adjacent to Rose Cottage Checkley, was not included in the 2016 Preferred Options consultation. <p>Future proposals to extend use of this site would be assessed against relevant Development Plan policies including the Government's NPPF & PPTS, and the</p>

Question 40 Do you have any comments on the travellers site?

				time to communicate both now and in Round 1 of the consultation period.	Council's Local Plan policy and GTAA evidence.
PO7404	Ms Heather Graham	Checkley Village Awareness Committee	General comment	The unlawful occupation of the land at Four Trees by a traveller family has continued since 2007. It is understood that the temporary planning permission will expire in 2017 and it is hoped that the council will give precedence for this family to move to an authorised site. Many residents believe that the village is vulnerable to a possible extension of this site as long it is allowed to remain in situ, as had recently been the case. Very significantly, this site and its potential extension threatens the long term future of the Cricket Club. The government has recognised the need to encourage sports in the community and Checkley Cricket Club is a prime example of the importance of such a facility in a rural community where it makes an indeterminate contribution to the community.	<p>Temporary consent SMD/2014/0572 will expire on 06/01/2018. Therefore the current presence on the site is not unlawful.</p> <p>The Council's adopted open space/playspace policies already protect existing areas of open space of the District. This includes Checkley Cricket Club.</p> <p>The Council is currently updating its evidence regarding the quantity and quality of existing open spaces across the District which will include an updated playing pitch strategy: this evidence will assist the Council in the preparation of its emerging Local Plan.</p>
PO9	Mrs Steele Jill		Object	Access to the main road in this location is very difficult and busy – also there is good quality housing very close to the site and this will have a major detrimental effect on the value and desirability of this housing stock. Again local schools are already oversubscribed for those residents who actually pay council tax and have lived in their chosen area for many years. Although 8 pitches may seem low I would suspect that this is the thin end of the wedge and the site could well attract many more travellers, pitching illegally with all the associated problems this brings for police, council and residents.	<p>Note that site TR002 has been removed from the emerging Local Plan.</p> <ul style="list-style-type: none"> • See para response to PO13 on highways <p>Property values are not considered as material considerations under the Planning Acts.</p> <p>The Council consults with SCC Education during Local Plan preparation. SCC have indicated that education contributions from developers may be required to fund additional school places at Forsbrook CE(VC); and potentially other middle- and high schools including Blythe Bridge High</p>

Question 40 Do you have any comments on the travellers site?

					School. Future proposals at this site would be assessed against relevant Development Plan policies including the Government's NPPF & PPTS, and the Council's Local Plan policy and GTAA evidence.
PO28	Miss Gabrielle Bailey		Object	I object to this traveller site in Blythe Bridge. It is not clear how many pitches there will be – all I can see is that there will be 8 plus; but it means more people which means more traffic and potentially slow horse and cart traffic which simply cannot be supported without complimentary infrastructure. The main roads through Blythe Bridye and Forsbrook are already gridlocked at certain times of day with queues right back into Forsbrook waiting at the crossroads to Blythe Bridge. People park all the way down the main road in Blythe Bridge which means queues down the road as it's single file. Add this to waiting for the railway crossing at Blythe Bridge and what should be a short journey turns into one where you need to pack sandwiches! With new sites for housing and a massive area now allocated for building to support employment how on earth are residents supposed to get to work or indeed hope to cross Cheadle Road In Forsbrook village? It's dangerous and time consuming as it is. I haven't seen anything on the table as solutions to the infrastructure problems which need to be in place before or alongside any addition to the population.	Note that site TR002 has been removed from the emerging Local Plan. <ul style="list-style-type: none"> • See para response to PO09 about which policies future traveller schemes would be assessed against • See para response to PO13 on highways <p>National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered.</p>
PO58	Mr David		Object	From personal experience, and as an older person, I felt	The Planning, Environmental Protection,

Question 40 Do you have any comments on the travellers site?

	Williams			<p>very threatened and worried indeed by the presence of travellers when their caravans were close to my home – as they have been in the past when they were about 2km away. Crime, both reported and unreported, in the area increased significantly and the amount of dirt and refuse in the area of their caravans proliferated considerably too. I have friends of a similar age to myself who live in Blythe Bridge and they are all greatly concerned, particularly the female ones, by this proposal and I'll be encouraging them to express their opposition to this site as soon as possible. SMDC should think again and change this proposal such that traveller sites are never constructed close to any town or village of the Staffs Moorlands.</p>	<p>and Public Health Acts provide various legal remedies regarding the removal of waste that Councils can implement, where they deem appropriate (in addition to littering legislation). The landowner is responsible for site maintenance, under the Public Health Acts.</p> <ul style="list-style-type: none"> • See para response to PO871 about policy expectations concerning location of new traveller sites
<p>PO261</p> <p style="writing-mode: vertical-rl; transform: rotate(180deg);">Page 4789</p>	Mrs S Allt		Object	<p>Why are all the proposed traveller sites in all Blythe Bridge? We have no problems with travellers setting up sites within Forsbrook and Blythe Bridge surely SMDC should be proposing sites where there are issues with travellers setting up camp on local sites. I cannot understand the justification of it being close to the A50 and therefore the best option if this were the case we would have problems with travellers accessing sites within these villages and as stated above we do not. Have the council asked travellers where they want a permanent site? It would seem these sites have been picked at random and will not address any issues of illegal camp sites by travellers within the Moorlands. If this site is to go ahead this will put significant pressure on the very limited services and the already high volumes of traffic within the villages of Blythe Bridge and Forsbrook.</p>	<p>The Preferred Options consultation document sets out a single proposed traveller allocation at Blythe Bridge (TR002).</p> <p>Note that site TR002 has been removed from the emerging Local Plan.</p> <p>The Council takes into account national and local planning policy and guidance on traveller sites when generating site options. The Council included a 'call for sites' in its 'site options' in 2015. The suitability/sustainability characteristics of all original site options deemed to be deliverable, are set out on the Council's website.</p> <p>The broad justification for the Council's selection of 'preferred' sites over other sites, is set out in the 'Options Site Assessments' on the website. All proposed</p>

Page 4790					<p>sites must also be the subject of sustainability appraisal (the Council's S.A. will be published as part of its evidence base).</p> <ul style="list-style-type: none"> • See para response to PO871 about policy expectations concerning location of new traveller sites • The Council consults with recognised traveller organisations, during Local Plan preparation • See para response to PO13 on highways • See para response to PO28 about Infrastructure Delivery Plan
PO206	Mrs Jacqueline Leach		Object	Once again too near the Blythe Bridge Roundabout increasing traffic.	<ul style="list-style-type: none"> • See para response to PO13 on highways
PO183	Mr Brian Hannah		Object	The proposed travellers site in Blythe bridge is too close to the local community based on all the controversy and reputation which surrounds them. Why do you have to provide a permanent location for travellers when they never stay still and leave a trail of problems in their wake?	<ul style="list-style-type: none"> • See para response to PO871 about policy expectations concerning location of new traveller sites • See para response to PO58 regarding removal of waste
PO257	mr john brown		Object	Site ref tr002 (BLYTHE BRIDGE) Traffic currently exiting blythe bridge at this junction joins the A521 uttoxeter road dual carriageway towards draycott (east direction). Anyone returning to blythe bridge must cross the two lanes of traffic and enter a right turn slip road, turn through 180 deg, and travel along a similar slip road on the opposite carriageway, where it mingles with west bound traffic trying to also turn right into blythe bridge. This stream of traffic then crosses the east bound dual carriageway. The proposed travellers site will introduce a new junction approx 10m from the existing. During the	<p>Note that site TR002 has been removed from the emerging Local Plan.</p> <ul style="list-style-type: none"> • See para response to PO13 on highways

Question 40 Do you have any comments on the travellers site?

				inevitable “school run” there will be 2 sets of traffic either crossing each other (BB exit traffic going east vs travellers traffic crossing to right turn slip road), or both heading for the same spot on the right turn slip road. Both sets of traffic will have their vision of eastbound traffic impaired by traffic crossing from westbound to enter BB. On the return from the school run the travellers traffic will exit uttoxeter road onto the dual carriageway, and virtually stop, immediately, to execute the left turn into the site. This will happen twice a day at rush hour, and a further complication is that this identical turning manouvre is used by buses three times every hour. I believe this site will create a very dangerous junction.	
PO436	Mrs Jamie Steadman		Object	I wish to object to the proposed traveller site as feel this will have an adverse effect on the area. The site proposed is an accident hotspot already with numerous car accidents at the junction with the a50/uttoxeter road. This junction is immediately before the proposed site and further traffic turning immediately after the junction would only add to the issue. Access to the site would be directly off the A50 dual carriageway. This is a 60 mph road and I feel allowing further traffic to enter and exit here would create a serious hazard. ..[redacted]... Insurance premiums would increase on our properties in the area. Schools are already oversubscribed, where would the traveller children go to school? Our doctors surgeries and dental practises in the area are also oversubscribed. I wish to reiterate that I strongly object to the proposed traveller site	Note that site TR002 has been removed from the emerging Local Plan. <ul style="list-style-type: none"> • See para response to PO13 on highways Property values are not considered as material considerations under the Planning Acts. <ul style="list-style-type: none"> • See para response to PO09 about educational requirements • See para response to PO28 about Infrastructure Delivery Plan
PO874	mr jonathan broadhurst		Object	This site would be better as a residential housing site. It is near to large roads making it a better option than BB041. This site is too close to other residential areas for it to be used as a travellers site.	Note that site TR002 has been removed from the emerging Local Plan. <ul style="list-style-type: none"> • See para response to PO871 about policy expectations concerning

					<p>location of new traveller sites</p> <ul style="list-style-type: none"> • See para response to PO261 about option sites assessments and sustainability appraisal
PO784	Dr Jules Allt		Object	<p>The proposed site in Blythe Bridge does not seem to have involved discussion of locations in other parts of Staffordshire Moorlands. It does not seem logical to site it on the periphery of the Moorlands. Placing a legal site there will not stop illegal use of sites in Leek or Biddulph. There has, for example, been recent illegal use of sites in Leek. I have lived near Blythe Bridge for well over a decade and have never known this to be an issue locally. Local councillors have been quoted as saying 'they use the A50' as a reason for suggesting sites in Blythe Bridge, with no evidence to back this up. I would suggest as 'travellers', 'they' can travel to where they seem to want to go, and there is no evidence of a demand to use a site in Blythe Bridge, but plenty of evidence of a wish to use, and an ability to travel to, sites elsewhere in Staffs Moorlands. There is inadequate local infrastructure, eg policing. The police station in Blythe Bridge was shut around a decade ago, and we have minimal local police presence.</p>	<p>Note that site TR002 has been removed from the emerging Local Plan.</p> <ul style="list-style-type: none"> • See para response to PO261 regarding the 2011 Gypsy and Traveller Issues and Options Consultation Document • See para response to PO261 about generating traveller site options • See para response to PO871 about call for sites • See para response to PO871 about policy expectations concerning location of new traveller sites <p>Councils record evidence of unauthorised stops by travellers and report it bi-annually to Government. These records then form part of the evidence of need for future traveller accommodation contained in District's GTAA's.</p> <ul style="list-style-type: none"> • See para response to PO28 about Infrastructure Delivery Plan
PO945	Mrs Kathleen Bradshaw		Object	<p>TR002 I fail to see how placing a traveller site in close proximity to two villages – Blythe Bridge and Draycott. 	PO1476	Mr T Brian		Object Please accept this letter of my comments and objections to the proposed housing development in Forsbrook, particularly BB041 and the travellers camp TR002 The field is green belt and should remain so as it has onto been proven that more housing is needed in Forsbrook,	<p>Note that site TR002 has been removed from the emerging Local Plan.</p> <ul style="list-style-type: none"> • See para response to PO871 about justification for Green Belt sites

			<p>which at this time is a village To develop on green belt requires exceptional circumstances. I don't believe this is the case. None of the residents in Manifold Road, Trent Road, Dove Road, Hillside Avenue in the immediate vicinity of BB041 have been notified by any communication from SMDC or its planning department. This could have been In the form of flyers, newsletters, trade locally magazines etc. There has been no postal communication of the intended proposal. It may have been decided that more housing is required in SMDC, but given the size of the area there are certainly more suitable locations than BB041. All properties in Manifold Road which back on to BB041 will be devalued as they will lose the privacy and views from there back garden. It could put some of our younger and most recent residents in Manifold Road at significant risks of negative equity. Trading for health house and garden centre and Foxfield railway could be significantly reduced as its present visitors have a perception of being in the countryside, which in fact are green belt. Due to the location of forsbrook and the fact that it is a village with Ltd amenities and most families with younger children find necessary to own and run 2 cars. More new housing will create more traffic problems. At present the section Caverswall Old Road which was affected is actually a country lane with passing places. This section of road has a national speed limit. Roads used to access this area are country lanes. During school opening times these roads are at present extremely busy. Winter months create more problems using them, Snow ploughs and gritter's would be needed more frequently. That said these roads are part of our area and are wholly acceptable to the current residents my side of forsbrook. To develop them would completely change the area of this countryside. Creating a new junction at</p>	<ul style="list-style-type: none"> • Residents views have been sought as part of the consultation. <p>The Council must conduct public consultation concerning its emerging Local Plan as set out in the Local Plan regulations (or exceeding these requirements); and in also in accordance with the Council's adopted Statement of Community Involvement. Pedestrian links into Blythe Bridge will require consideration. • Disposal of surface water upon public highways is the legal responsibility of the Highways Authority or Highways England.
--	--	--	--	---

Question 40 Do you have any comments on the travellers site?

				Caverswall Old Road will require major development of this roadway. More houses on Caverswall Road area will create even more delays for the vehicles traversing and joining the A50 at blythe bridge railway crossing. The 2 regular trains each hour 7 days a week already cause chaos. Roads are not too good whichever direction you go in plus they are prone to local flooding.	
PO1495	Mr Roger Holdcroft		Object	The effect of all of this development on the Parish will be devastating, mainly in terms of traffic congestion and traffic danger. Uttoxeter Road is already desperately overloaded, as are the rat runs of Cheadle Road, Breach Lane and Cresswell Lane/Road. These three lanes are dangerous, have pinch points, indeed our wall has been run into 3 times in nine years. Uttoxeter Road by the Draycott Arms is a very dangerous junction and the road up to Totmonslow is almost a pinch point in itself. The thought of the planned roundabout on Uttoxeter Road/Cresswell Lane junction as well as all of extra vehicles can only back up traffic in all directions increasing hazards and the risk of more accidents. The other main issue is the lack of infrastructure in the parish, no school, nearby schools full, no medical services, no public transport, no shop, not suitable for an extra 160 house nor for a traveller's site, which would again increase traffic. Sad to say, there is also no social infrastructure to welcome these extra people into the community. There should be no extra buildings planned whatsoever and a traveller's site so close to the Draycott Moor College could exacerbate local difficulties for residents. I fail to see why none of the proposed such sites were in Biddulph or Leek, but rather located in our vicinity. It would seem that SMDC holds Draycott in little regard, no doubt due to its distance from Leek, on the edge of the Moorlands area.	Note that site TR002 has been removed from the emerging Local Plan. <ul style="list-style-type: none"> • See para response to PO13 on highways • See para response to PO28 about Infrastructure Delivery Plan • See para response to PO09 about educational requirements • See para response to PO871 about policy expectations concerning location of new traveller sites. • The Council consults with recognised traveller organisations, during Local Plan preparation
PO4850	Miss Angela		Object	During the meeting at Greatwood Community Hall,	Note that the Preferred Options does not

Question 40 Do you have any comments on the travellers site?

	Hulse			<p>Tean, on the 12/05/16, the office confirmed that the preferred site TR002 would not be sold by Mr Jackson as traveller's site and here would be no compulsory purchase. If Quabbs Lane is reconsidered as a preferred site we wish to object most strongly. This would be in green belt area and access to it would be dangerous as it is meters away from a blind bend. Any slow moving vehicle's i.e. caravans, carts etc. turning onto an unmade lane opposite the cometary would be a major concern on this fast road. Over the past few years there have been several fatalities. Traveller's children would be at risk near this road. The site has poor access to roads (A50) Many family members and friends are buried in this Cemetery and the thought of it being opposite a Travellers Site is a sanctuary of peace and quiet which the village appreciates greatly.</p>	<p>contain any site proposals at Quabbs Lane. Every future stage of the emerging Local Plan must be subject to full public consultation, and Council Assembly approval.</p>
<p>4852 page 4801</p>	Miss Angela Hulse		<p>Object</p> <p>The preferred site BB054 for 70 houses potentially 140 cars will be using Draycott Old Road for access. The lane is notorious for annual flooding from the adjoining fields. You cannot safely access the road to Cheadle from Draycott Old Road without risk, due to the blind bend; some driver's drive around the village to turn around and take the Cheadle Road, this perpetual hazard will just be exacerbated by the increased traffic from the increased traffic from Draycott Old Road. Many villagers use this lane for recreational purposes, like horse riding, cycling, pedestrians, and dog walkers. This benefits health and wellbeing to all. This preferred housing site for 70 homes is on a precious area of Green Belt land and once it's gone it will be lost forever. This ignores David Cameron's pledge to protect Green Belt land. At the moment the roads in Forsbrook and Blythe Bridge are grid locked at certain times of the day. We already take the traffic for Alton Towers and surrounding JCB traffic and other HGV's. These roads</p>	<p>See Question 37 table regarding site BB054</p>

Every future stage of the emerging Local Plan must be subject to full public consultation, and Council Assembly approval.</p> <p>The Council will consider all public responses to the Preferred Options consultation, including responses from landowners of sites. Sites must have landowner support to be deemed 'deliverable' to carry forward to Examination. The Council will have to reach a view regarding the number of outstanding traveller pitches it is required to provided for (as per its GTAA evidence), whether it is expedient to allocate a site(s); and if so the best location to do so.</p>
PO8254	Mr Roger Yarwood	Roger Yarwood Planning Consultant Ltd	Object	I wish to comment as follows on the above Plan. I represent Mr and Mrs Price, the owners of a Traveller site at Checkley with a temporary planning permission (application ref. 2014/0572). The site identified at Blythe Bridge (TR002) is located in the Green Belt, has a history of enforcement action and refusals for various types of development and it is located very close to	<p>Comments noted.</p> <p>Note that site TR002 has been removed from the emerging Local Plan.</p> <p>The policy expectations concerning location of new traveller sites, is set out in the</p>

Question 40 Do you have any comments on the travellers site?

<p>Page 4804</p>				<p>housing development and immediately adjacent to a site approved for a house. On these grounds, the delivery of the site may be problematic. A single site for 8 pitches is too large. Sites should not exceed 5 pitches as larger sites give rise to management problems. Small family sized pitches present the best option for assimilation into the community and minimise conflict. If site TR002 is allocated, the number of pitches should be limited to 5 and additional site(s) should be allocated. My clients' site at Checkley should be allocated as a Traveller site. It is already in use as a Traveller site and has the advantage of being located outside the Green Belt. It should be allocated as a permanent site to partly address the Council's obligation to provide a choice of Traveller pitches.</p>	<p>Government's NPPF, and its resultant 'Planing Policy for Traveller Sites', as well as the Council's own adopted Core Strategy Policy H3. These set out the importance of sustainability/accessibility of sites, to enable provision of suitable accommodation from which travellers can access education, health, welfare and employment infrastructure; and that development in open countryside that is away from existing settlements should be very strictly limited. Councils must also consider local amenities and impacts upon landscape and local infrastructure; and the scale of sites should relate to their surroundings. Brownfield sites are also preferred. In the case of sites within the Green belt (such as here) the Council would need to demonstrate exceptional circumstances to justify their allocation at Examination.</p> <p>Councils can meet their residual traveller requirements across one or more sites. National traveller policy does not state that sites must be either large or small, but does state for example that the number of pitches proposed should relate to the circumstances of the specific size and location of the site and the surrounding population's size and density; and Councils should consider local environmental quality, and avoid undue pressure on local infrastructure.</p>

Question 40 Do you have any comments on the travellers site?

					<ul style="list-style-type: none"> The Council refers to relevant guidance, such as DCLG 2008 Designing Gypsy and Traveller Sites <p>Were the Council to allocate TR002 (or another) single site; this would not preclude fair determination of schemes arising in other areas of the District, as per PPTS and other relevant policy.</p>
PO9123	Bev Reardon		Object	<p>Proposed Traveller Site TR002: My primary reasons for my objection to a Traveller site at TR002 are listed in detail below: The TR002 proposal is in direct contravention of various components of the following policies, government guidelines and previous statements made by the SMDC on this matter. In particular I shall be referring to the following document: DCLG (2008) Designing Gypsy and Traveller Sites: Good Practice Guide This document contains the following numbered statements which indicate that the SMDC proposal for a traveller site at TR002 is in breach of the 2008 good practice guidelines, as follows: 3.8 Consideration must be given to the relationship of sites to the surrounding community. For this purpose it is important to ensure that proposals to develop a site link in with other broader strategies in place for improving community cohesion and be regarded as a key issue within them. Response: The established community has made it overwhelmingly clear (by over 400 petition votes and attendance at public meetings) that they do not want community cohesion forced upon them. The SMDC has not been active in promoting any broader strategies to improve community cohesion. 3.9 The site must be sustainable, offering scope to manage an integrated coexistence with the local community. This will include consideration of noise and possible disturbance to Gypsy and Travellers</p>	<p>Note that site TR002 has been removed from the emerging Local Plan.</p> <p>The Council refers to relevant guidance, such as DCLG 2008 Designing Gypsy and Traveller Sites.</p> <ul style="list-style-type: none"> See response to PO8254 above <p>New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas. National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and</p>

Question 40 Do you have any comments on the travellers site?

Page 4806

			<p>living on the site, and possible noise and disturbance to the wider community, in particular from movement of Gypsy and Traveller vehicles. Response: The proposal for TR002 does not take noise into consideration, this is a residential area, located within the existing settled community. Commercial vehicles would be entering and leaving the proposed site at all hours, including night time, as is common practice and can be witnessed at other traveller sites within the Staffordshire area. 4.1 Sites should be developed in accordance with existing planning policies and designations, with particular regard made to:</p> <ul style="list-style-type: none"> • Convenience for residents • Safety for residents <p>Response: Traffic, this site is located facing a high speed road, there is insufficient acceleration space to allow slow moving vehicles safe egress.</p> <ul style="list-style-type: none"> • Visual and acoustic privacy – both for people living on the site and those living nearby <p>Response: See comment relating to point 4.14 below. In addition the settled community have heavily invested in property in these particular locations to ensure an enhanced degree of privacy due to the semi-rural location, a site at TR002 would destroy this privacy.</p> <ul style="list-style-type: none"> • Aesthetic compatibility with the local environment <p>Response: A traveller site at location TR002 would in no way be in keeping with the local environment, this is a quiet residential areas comprising of a mix of late Victorian properties and mid 1930's semi-detached properties.</p> <ul style="list-style-type: none"> • Scope for social integration with the local community. <p>Response: NO evidence provided that substantiates the theory that the G&T community want social integration, in fact the opposite is the case (according to Planning Policy documents), in that the Gypsy and Traveller community prefer an enclosed settlement on the edge of a rural setting. 4.14 As with housing for the settled community, site layout and design should ensure a degree of privacy for</p>	<p>work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered.</p> <p>The Council consults with statutory consultees including its internal Environmental Health Team, who did not raise amenity concerns to TR002.</p> <p>The Council consults with SCC Highways/SCC Transportation during Local Plan preparation. SCC did not raise any objections to development of TR002 for traveller use subject to junction assessments/; local pedestrian and cycle links will also require consideration. In the event of future planning applications the Council would assess schemes having significant transport impacts against relevant NPPF and Local Plan policy (including requirement to submit transport statements, and provide highways improvements where deemed appropriate).</p> <p>Loss of view and property values are non-material planning considerations.</p> <p>In the event of allocation, subsequent planning schemes would need to conform with local and National amenity and design</p>

Question 40 Do you have any comments on the travellers site?

Page 4807			<p>individual households. Response: any traveller accommodation at TR002 would be overlooked by residents on one side, and from the elevated property directly opposite. 4.17 Account needs to be taken of a more recent tendency for members of the Gypsy and Traveller communities to favour the use of a mobile home in place of the traditional caravan, and some mobile homes could be up to around 25 metres in length. Response: Vehicles of this size would require a suitably large turning space to allow entry and exit from the site, high traffic volumes on the A521 Uttoxeter Road, often travelling in excess of the speed limit, combined with the regular movement of large slow vehicles at this location would introduce a substantial safety risk to road users. 4.36 To avoid disputes and provide defensible space, it is important to provide clear delineation of public communal areas eg play areas and private space, with boundaries that indicate clearly where individual pitches begin and end. It is recommended that communal areas without a clear usage are avoided in the design as they may attract vandalism, fly tipping or unauthorised caravans. Response: This government 'statement of fact' reinforces the fear that a degree of unlawful activity can be associated with some traveller sites, this does nothing to ensure community cohesion as it outlines particular behaviour traits that the established community are very much concerned about. 5.32 The site should be designed so that post can be delivered separately for each pitch. Experience has shown that postal deliveries to pitches can be disrupted by complaints about harassment by dangerous dogs so the provision of an individual box at the entry to a pitch would be advisable. Response: This government 'statement of fact' based on past experiences with</p>	<p>policies.</p> <p>The Council formulated a series of options sites for traveller allocation, which appear on the website. These were the subject of sustainability appraisal, which considered road links, access to facilities etc. This assisted the Council in its decisionmaking with regards TR002.</p>

Question 40 Do you have any comments on the travellers site?

				'steamroller' tactic of SMDC to push all developments that are unwanted in other parts of the SMDC district into small hamlets, primarily inhabited by retired persons who do not have internet access and are therefore clearly deemed a soft target.	
PO9162	Mr and Mrs J Cooper		Object	<p>I write to notify you of my objection to the proposed traveller site at 459, Uttoxeter Road, Blythe Bridge ("the Site "). Whilst my objection is based upon a number of reasons, fundamentally the primary reason for my objection is that the proposal Site put forward by South Moorlands District Council ("SMDC") is in direct contravention of various components of government guidelines and previous statements made by SMDC on this issue. Please note that, amongst other things, I shall be referring to the following documents: 1. DCLG (2008) Designing Gypsy Traveller Sites and Good Practice Guide DCLG (2012) Planning and policy for traveller sites SMDC 2014 Core Strategy Development Plan Document (inter alia pages 120-121) Gypsy and Traveller Site Options and Issues Appraisal DCLG (2008) Designing Gypsy and Traveller Sites: Good Practice Guide I note that SMDC, when allocating the site as a potential permanent traveller site, have failed to consider the relationship with local landowners and the views of the wider community. The local community has made it abundantly clear by the existing petitions, votes, attendance to public meetings and drop in centres that they do not this want this Site forced upon them. Whilst the local community have set out their reasons for the objections to the Site, the Council does not appear to be actively locating alternative sites (whether green-belt or brown field). This evidences a lack of transparency in the decision making process and, the whole decision making process appears to be based upon the landowner's willingness to sell the Site to the Council – a</p>	<p>Note that site TR002 has been removed from the emerging Local Plan.</p> <ul style="list-style-type: none"> Refer to PO9123 response <p>The Council formulated a series of options sites for traveller allocation, which appear on the website. These were the subject of sustainability appraisal, which considered road links, access to facilities etc. This assisted the Council in its decisionmaking with regards TR002.</p> <p>The Council will consider all public responses to the Preferred Options consultation, including responses from landowners of sites. Sites must have landowner support to be deemed 'deliverable' to carry forward to Examination. The Council will have to reach a view regarding the number of outstanding traveller pitches it is required to provided for (as per its GTAA evidence), whether it is expedient to allocate a site(s); and if so the best location to do so.</p> <p>In the case of sites within the Green belt (such as here) the Council would need to demonstrate exceptional circumstances to justify their allocation at Examination.</p>

			<p>premise which has, on numerous occasions been vocalised by the landowner and the wider local community as simply not being true. Indeed, SMDC will, by now, have received an objection to the Site from the current landowners. I set out below a snapshot of the reasoning for the allocation of the Site being SMDC's preferred option: The owner has ruled out traveller site and SMDC have been made aware of this. This does not appear to have been referenced in the allocation proposal. Notwithstanding the fundamental flaws of the allocation process, SMDC have failed to realise the wider constraints and pressures such a site will have on Blythe Bridge Generally – these reasons I set out in sub clauses below, together with a brief analysis of the impact likely to be occasioned by such a site going ahead. A) Implications on traffic and road safety measures. The A50 is widely used as a short cut for HGVs linking the M6 with the M1. This means there are often considerable traffic burdens to the A50 and surrounding roads. The A50 Blythe Bridge roundabout is a notorious hotspot for accidents. So much so that traffic signs have been placed on the roundabout emphasising and warning traffic users of the same. Having the Site in such close proximity to this notorious hotspot would not only be dangerous but borderline negligent. Having a site which, in all likelihood is going to have a number of large vehicles turning into a hidden turning on a fast road (being a national speed limit road). Coupled with the existing entrance to Uttoxeter Road, is likely to have significant detrimental impact to the road layout and structure – which of course, has the knock on effect of additional costs to the site and increase the risk of severe road traffic accidents. Additionally, there is a busy public footpath that is used by children, runners and people walking dogs. Again, the volume of traffic</p>	<p>The Council uses evidence to justify its selection of Preferred Options, including ecological evidence. The 2014 Lockwood Hall Phase I survey of the site concluded that <i>“Although the site has mostly low biodiversity value overall there is a building with potential to support roosting bats and potential for protected species to be present due to the fairly close proximity of two ponds, under refugia and potentially using the area as a basking opportunity”</i> and therefore recommends a number of predevelopment surveys.</p> <p>In 2017 ECUS assessed the potential of the site to qualify as a 'local wildlife site' (such as S.B.I.), concluding <i>“The site has medium ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However, more information is required regarding the potential for bats, great crested newts and reptiles”</i>, and therefore recommends a number of further surveys.</p> <p>The Council would expect subsequent schemes to take account of this evidence; further Policy NE1 allows for the Council to require ecological mitigatory or compensatory measures where appropriate. Note that ecology evidence must be weighed against all other relevant evidence when the Council selects</p>

Question 40 Do you have any comments on the travellers site?

<p>Page 4811</p>			<p>entering the Site throughout the day is likely to increase the likelihood of a pedestrian being injured when doing something as simple as walking/jogging. B) environmental and ecological impact As a resident of Uttoxeter Road, I know first-hand the importance of retaining the green belt. There are a number of animals within close proximity to the site including amphibians, badgers, foxes and various birdlife – I see evidence of these most evenings when relaxing at home. I have concerns that sites such as the Site proposed are renowned for high levels of noise. Such noise pollution would (coupled with the larger scale development proposed by SMDC) be hugely detrimental to the wildlife surrounding the Site. Whilst the costs of carrying out the relevant ecological surveys are vast, alternative sites within close proximity to the site proposed are all viable alternatives. Viable alternatives which appear to not have been considered by SMDC in its allocation process. SMDC are obliged pursuant to the DGLC Designing Gypsy and Travellers Sites Guidance consider the sustainability of the Site including (without limitation) the consideration of noise, pollution and disturbances. Sites such as the Site proposed within the surrounding areas are well known for associated noise and the number of vehicles passing at various times of the day – more importantly, early mornings and late at night. The Site should be developed in accordance with existing planning policies and designations. The proposed site is a green-belt site and, has seemingly been denied planning permission for this reason previously. I understand that planning guidance states that land can only be taken out of a green-belt in ‘exceptional circumstances’ I shall be grateful if SMDC would care to elaborate on this ‘exceptional circumstance’ as the allocation document does not</p>	<p>‘Preferred’ sites. According to the 2006 NERC Act, the Council must in its Planmaking, have regard to the purpose of conserving biodiversity.</p> <p>The broad justification for the Council’s selection of ‘preferred’ sites over other sites, is site out in the ‘Options Site Assessments’ on the website. All proposed sites must also be the subject of sustainability appraisal (the Council’s S.A. will be published as part of its evidence base).</p>
------------------	--	--	--	---

Question 40 Do you have any comments on the travellers site?

Page 4812			<p>appear to state this. Similarly, the Planning and Policy for Traveller Sites 2002 (at page 1, Item 4) suggests that “the plan making and decision-taking should protect Green Belt from inappropriate development” – have alternative brownfield sites been considered. There are a number of brownfield sites which would be suitable for such a Site which appear to have been ignored by SMDC generally. Additionally, the same guidance states that “Inappropriate development is harmful to the Green Belt and should not be approved, except in very special circumstances” as set out above, the proposed Site not only detrimentally impacts the Site itself but ecologically the wider greenbelt that remains protected in SMDC’s allocation. Furthermore, the proposed Site would be in a quiet residential area with almost no industrial/noise polluting uses nearby. Such a site would in no way keeping with the local environment nor be within the characteristics of nearby property. I am yet to find any evidence from SMDC that the Gypsy and Traveller community have substantiated the SMDC’s claims that the community wish for social integration. The local site of similar make-up in Cresswell has evidenced the exact opposite. C) inadequate services In addition to the negative traffic implications with the proposed site, the existing services are also in need of upgrading. The Uttoxeter Road junction where the Site is to be located is well known for problems with flooding when there is a severe downpour of rain. Frankly, the existing sewers and drains are inadequate before the proposed Site is developed never mind after such development. The existing use itself has borderline insufficient capacity and the proposed Site is likely be the tipping point. Again, associated costs make the Site not only detrimental to the locality but will also require a large degree of expensive associated works which would be costly. In</p>

Question 40 Do you have any comments on the travellers site?

				<p>conclusion during a time of austerity and cut-backs and an unwillingness for the current landowner to sell the Site to the Council for such purposes, coupled with the complete disregard of planning guidelines and guidance means that I would like to formally object to the Site being allocated to the SMDC local plan. Unbeknown for anyone other than SMDC is the complete disregard to consider alternative brownfield sites. Indeed, the majority of the proposed gypsy sites appear to be within the Blythe Bridge area and the only logical justification is because SMDC wish to dedicate the A50 window to the proposed occupiers of the site. There are a number of brownfield sites within close proximity to the A50 which would be suitable for the proposed Site and would not have the negative implications such a site would have to the Blythe Bridge area. I would respectfully request the Council consider these alternatives of which there are many.</p>	
<p>Page 4813 09155</p>	<p>Mr S Bailey</p>		<p>Object</p>	<p>I strongly object to the proposed travellers' site in Blythe Bridge and the proposed new build houses to be built on Draycott Old Road. The later will create extra traffic along a beautiful stretch of country lane which is very popular with walkers and will spoil an idyllic area of natural beauty. Both sites will extend the urban sprawl ruining a semi rural cluster of villages. Gypsie sites generally bring rubbish and untidiness and will ruin unspoilt countryside, plus they generally exceed the specified population of the sites creating further problems in due time. I also believe these plans will lower the value of property's in the area as Blythe Bridge, Forsbrook and Draycott are currently desirable and popular locations to live.</p>	<p>Note that site TR002 has been removed from the emerging Local Plan.</p> <p>The Council consults with SCC Highways/SCC Transportation during Local Plan preparation. SCC did not raise any objections to development of either TR002 or BB054 subject to junction assessments and other road improvements. Local pedestrian and cycle links will also require consideration. In the event of future planning applications the Council would assess schemes having significant transport impacts against relevant NPPF and Local Plan policy (including requirement to submit transport statements, and provide highways improvements where</p>

Page 4814					<p>deemed appropriate).</p> <p>In the event of allocation, subsequent planning schemes would need to conform with local and National amenity and design policies.</p> <ul style="list-style-type: none"> • See para response to PO58 about the Planning, Environmental Protection, and Public Health legislation <p>In the case of planning approval of a gypsy site, planning conditions would control the number of pitches on site, and may also control the number of caravans permitted on site.</p> <p>Property values are not considered as material considerations under the Planning Acts.</p>
PO9149	Mr Richard James		Object	<p>I would like to notify you of my objection to the proposed traveller site proposed to be located on Land to the east of 459 Uttoxeter Road, Blythe Bridge, as described in your planning proposal 'strategic land housing viability study'. My primary reasons for objection are that this proposal is in direct contravention of various components of the following policies, government guidelines and previous statements made by the SMDC on this matter – I have listed a few below (although not extensive) to help you in your proposal. In particular I shall be referring to the following documents: DCLG (2008) Designing Gypsy and Traveller Sites: Good Practice Guide DCLG (2012) Planning and policy for traveller sites Site Assessment Form – your ref:</p>	<ul style="list-style-type: none"> • See response to PO9123 • See response to PO9162

Question 40 Do you have any comments on the travellers site?

<p style="writing-mode: vertical-rl; transform: rotate(180deg);">Page 4815</p>			<p>BB087 – Land to the east of 459 Uttoxeter Road My first set of objections are reference to: DCLG (2008) Designing Gypsy and Traveller Sites: Good Practice Guide This document contains the following statements which indicate that the SMDC proposal for a traveller site located on land at 459 Uttoxeter Road, Blythe Bridge - is in breach of the 2008 good practice guidelines, in particular: 4.1 Sites should be developed in accordance with existing planning policies and designations, with particular regard made to: • Visual and acoustic privacy – both for people living on the site and those living nearby Response: See comment relating to point 4.14 below. In addition the settled community have heavily invested in property in these particular locations to ensure an enhanced degree of privacy due to the semi-rural location, a site at 459 Uttoxeter road would destroy this privacy. • Aesthetic compatibility with the local environment Response: A traveller site at location would in no way be in keeping with the local environment, 459 Uttoxeter Road is a quiet residential area comprising of a mix of modern detached desirable properties and mid 1930’s semi-detached properties. • Scope for social integration with the local community. Response: NO evidence provided that substantiates the theory that the Blthe Bridge and Forsbrook community want social integration, in fact the opposite is the case, in that the Blythe Bridge and Forsbrook community prefer an enclosed settlement on the edge of a rural setting. Relationship to surrounding land use 3.8 Consideration must be given to the relationship of sites to the surrounding community. For this purpose it is important to ensure that proposals to develop a site link in with other broader strategies in place for improving community cohesion and be regarded as a key issue within them. Response: The</p>	
--	--	--	--	--

Question 40 Do you have any comments on the travellers site?

Page 4816			<p>established community has made it overwhelmingly clear (by petition votes and attendance at public meetings) that they do not want community cohesion forced upon them. Particularly since there are no existing links with travellers within the village, nor history of travellers using the areas as a temporary stop off. The SMDC has not been active in promoting any broader strategies to improve community cohesion. 3.9 The site must be sustainable, offering scope to manage an integrated coexistence with the local community. This will include consideration of noise and possible disturbance to Gypsy and Travellers living on the site, and possible noise and disturbance to the wider community, in particular from movement of Gypsy and Traveller vehicles. Response: The proposal for land to the west of 459 Uttoxeter Road, Blitythe Bridge – do not take noise into consideration, these are both residential areas, located within the existing settled community. Commercial vehicles would be entering and leaving the proposed site at all hours, including night time, as is common practise and can be witnessed at other traveller sites within the Staffordshire area. Health and safety considerations 3.16 Sites must not be located on contaminated land. Only where land has been properly decontaminated should development be considered on that land. Remedial work should only be undertaken by approved contractors in accordance with relevant standards, to ensure the contamination has been remedied to the standard on which housing development would take place. These processes can be prohibitively expensive and should be considered only where it is financially viable from the outset. Response: The subjective ‘Site Assessment Form’ carried out by SMDC (although very amateurish in nature) clearly identifies that the proposed site (land to the east of 459</p>	
-----------	--	--	---	--

Question 40 Do you have any comments on the travellers site?

<p>Page 4817</p>			<p>Uttoxeter Road) has “possible contamination from land fill”. This is clearly at odds with the Health and Safety considerations needed when considering such a development. It is clear that this has not been done by the SMDC. 4.14 As with housing for the settled community, site layout and design should ensure a degree of privacy for individual households. Response: any traveller accommodation at 459 Uttoxeter road would be overlooked by residents on either side, and from the elevated property directly opposite. 4.17 Account needs to be taken of a more recent tendency for members of the Gypsy and Traveller communities to favour the use of a mobile home in place of the traditional caravan, and some mobile homes could be up to around 25 metres in length. Response: Vehicles of this size would require a suitably large turning space to allow entry and exit from the site, high traffic volumes on Uttoxeter Road, often travelling in excess of the speed limit, combined with the regular movement of large slow vehicles at this location would introduce a substantial safety risk to road users. Furthermore vehicle leaving the site to re-join the A50 would inevitably have to head toward the direction of Tean and perform a dangerous U-turn to correct their direction of travel, addition risk when towing caravans as such. 4.36 To avoid disputes and provide defensible space, it is important to provide clear delineation of public communal areas eg play areas and private space, with boundaries that indicate clearly where individual pitches begin and end. It is recommended that communal areas without a clear usage are avoided in the design as they may attract vandalism, fly tipping or unauthorised caravans. Response: This government ‘statement of fact’ re-enforces the fear that a degree of unlawful activity can be associated with some traveller sites, this</p>	
------------------	--	--	--	--

Question 40 Do you have any comments on the travellers site?

<p>Page 4818</p>			<p>does nothing to ensure community cohesion as it outlines particular behaviour traits that the established community are very much concerned about. 5.32 The site should be designed so that post can be delivered separately for each pitch. Experience has shown that postal deliveries to pitches can be disrupted by complaints about harassment by dangerous dogs so the provision of an individual box at the entry to a pitch would be advisable. Response: This government 'statement of fact' based on past experiences with traveller sites highlights further problems that the established community are concerned about, the prospect of dangerous dogs roaming the proposed site at 459 Uttoxeter Road and close proximity to the public open space to the rear of the village hall, this of grave concern, especially to the immediate neighbouring families with young children. Page 52 Evidence provided to Select Committee "Gypsy and Traveller families often wish to have small compact and well-managed sites located in areas where they have historically resided and have a network of local family support. Response There is no evidence to suggest that there has been any gypsy family has historically resided at , or near the proposed site at 459 Uttoxeter Road There is no evidence that local family support existing in the vicinity of these sites. Page 52: Caution should be used when seeking locations for sites to ensure that they are based on need in a particular area. + 10.20 It will be important to demonstrate the need for new site provision in any consultation with the settled community, and the steps that the council or private developer will take to address concerns and deal with problems should they arise. Response: Where is the evidence that there is need for a site at this particular location 459 Uttoxeter Road. This information has not been provided. 10.18 As for other</p>	
------------------	--	--	--	--

Question 40 Do you have any comments on the travellers site?

<p>Page 4819</p>			<p>kinds of development, it is important that members of the local community, whether Gypsies and Travellers or settled residents, are able to feed in views on plans for new sites. Response When will the detailed site plans be made available? If not available at the start of the consultation period then this is surely a serious breach of government planning guidelines. 10.19Councils and other developers need to plan for the possibility of such opposition at an early stage in the development and provide accurate information to help overturn negative stereotypes and allay concerns. Response: The government document 'Designing Gypsy sites..' provides information that is allegedly based on fact, negative stereotyping is of little concern if the true negative aspects are openly publicised in official documentation and policy (see points 5.36 and 5.32 from the above document). My objections continued with reference to following document: DCLG (2012) Planning and policy for traveller sites 11. Criteria should be set to guide land supply allocations where there is identified need. Where there is no identified need, criteria-based policies should be included to provide a basis for decisions in case applications nevertheless come forward. Criteria based policies should be fair and should facilitate the traditional and nomadic life of travellers while respecting the interests of the settled community. Response: Clearly given the initial (oversubscribed attendance within the village Hall) public petition to the proposals of the Gypsy and Traveller sites around the Blythe Bridge area, the SMDC has not respected the interests of the settled community who are clearly at odds with this type of development and land use. To finish this is clearly an emotive issue, moreover it will have an extremely negative impact of the community cohesion, which is currently thriving.</p>	
------------------	--	--	---	--

Question 40 Do you have any comments on the travellers site?

				<p>Furthermore, given the residents and the wider community this will affect, it would appear a 'under handed tactic' by the SMDC to hold a drop in session within Upper Tean, Greatwood community Hall approximately 3.2 miles away from the development, when there is an ample facility located at the Blythe Bridge – Forsbrook village hall less than 0.1 miles. Please accept this letter as a clear objection to your proposals, and I trust you will keep me informed of further developments in relation to this matter.</p>	
PO9113	Mr A Hayes		Object	<p>I would like to notify you of my objection to the proposed traveller site at land at 459 Uttoxeter Road Blythe Bridge which is currently being considered by yourselves under your planning strategy and Strategic Housing Land Availability Study. My primary reasons for objection are that this proposal is in direct contravention of various components of the various relevant policies, government guidelines and previous statements made by the SMDC on this matter. PO8978	Mr and Mrs John David and Susan Margaret Jackson		Object	Re: Sites TR002. Travellers site. [We] are writing to object to your proposed local draft plan and particularly site TR002 notably preferred traveller site at 459 Uttoxeter Road Blythe Bridge ST11 9NT. This land has been in the Jackson family since 1900 and was previously to that the home of [our] Great-great grandmother Sarah Bagnall. We wish to reiterate that under no circumstances are we prepared to sell our land the site at 459 Uttoxeter Road Blythe Bridge ST11 9NT for the use as a Travellers site. Furthermore SMDC claims that we have not ruled out allowing a travellers site and published in your consultation document and presented to the press is a complete fabrication and at no point have we ever agreed to allow a travellers site to be placed on our land. Also we object most strongly the claims voiced at Greatwood meeting and Cheadle Guild Hall by your planning officers and a District Councillor that we have sold you the land and that it is 95% passed. This is a gross misrepresentation and completely untrue. These comments have caused ourselves and our family much anguish and distress and smeared our name in the community. Our land that you have marked as TR002 is in the green belt and is therefore by our Governments policy not available for a	<p>Note that site TR002 has been removed from the emerging Local Plan.</p> <p>The Council will consider all public responses to the Preferred Options consultation, including responses from landowners of sites. Sites must have landowner support to be deemed 'deliverable' to carry forward to Examination.</p> <p>the Council will have to reach a view regarding the number of outstanding traveller pitches it is required to provided for (as per its GTAA evidence), whether it is expedient to allocate a site(s); and if so the best location to do so.</p> <p>In the case of sites within the Green belt (such as here) the Council would need to demonstrate exceptional circumstances to justify their allocation at Examination.</p> <p>The broad justification for the Council's</p>

Page 4827

Question 40 Do you have any comments on the travellers site?

Page 4828				<p>travellers site. Not only that, you have included in this site our own barn that you have recently allowed planning permission to convert to a two bedroom dwelling and which we hope to start very soon. This barn is to remain in our family as our retirement home as my husband has been very poorly. You have also included a large septic tank that services two homes, our current house and the house of our neighbours... The barn has it's own septic tank. You may also not be aware that there is no access to the sewer from this land and does not have facilities for caravans and the necessary utilities to service them. Further adding to the argument against this development is the fact that just over the street from this proposed preferred travellers site there is a grade 2 listed building built circa 1600 and as such it would be a travesty to think that the land can be used for such a purpose. In fact the whole area and some of the properties around is in the area known as Stonehouses and is an historic area. [Our] father and Grandfather and Great great grandmother were born in the grade 2 Stonehouse across the street that was in this family's ownership. We also consider that as there is already a development at Cresswell that has been approved for in excess of 160 homes and planned development to the extension of the business park there is no room for any further development to put added strain on the schools in Blythe Bridge, Tean and surrounding areas. Indeed the Primary school at Draycott is no longer there. There are no schools or any nearby services for the expansion of Cresswell so the already stretched services in Blythe Bridge will be expected to pull in the slack.</p>	<p>selection of 'preferred' sites over other sites, is site out in the 'Options Site Assessments' on the website. This includes consideration of heritage impacts, following consultation with the Council's Conservation Officer, and the heritage impact recommendations of the most recent 2016 landscape impact study. All proposed sites must also be the subject of sustainability appraisal (the Council's S.A. will be published as part of its evidence base).</p> <ul style="list-style-type: none"> • See response to PO9123 • See response to PO9162 <p>SCC Highways comments for all preferred options, pre-suppose the allocation of all preferred options as set out in the 2016 consultation.</p>
	PO9121	Mr and Mrs W Marsden		Object	<p>I would like to notify you of my objection to the proposed traveller site(s) at location(s): TR008 75 Uttoxeter Road, Blythe Bridge, and TR002 459 Uttoxeter Road, Blythe Bridge also Land behind TR033 Chandni Cottage,</p>

Question 40 Do you have any comments on the travellers site?

Page 4829			<p>Uttoxeter Road], as described in your planning proposal [title: Traveller and Gypsy Sites]. I am a property owner close to three of these sites. My primary reasons for objection are that this proposal is in direct contravention of various components of the following policies, government guidelines and previous statements made by the SMDC on this matter. In particular I shall be referring to the following documents: DCLG (2008) Designing Gypsy and Traveller Sites: Good Practice Guide DCLG (2012) Planning and policy for traveller sites SMDC (2014) Core Strategy Development Plan Document (pages 120-121) SMDC (2011) Gypsy and Traveller Site Options and Issues Appraisal Letter from SMDC to Frank Hopley.dated 23 February 2015, ref: DL/JF This document contains the following statements which indicate that the SMDC proposal for a traveller site at 75 Uttoxeter Road and 459 Uttoxeter Road Land behind Chandni Cottage, Uttoxeter Road is in breach of the 2008 good practice guidelines, in particular: Relationship to surrounding land use 3.8 Consideration must be given to the relationship of sites to the surrounding community. For this purpose it is important to ensure that proposals to develop a site link in with other broader strategies in place for improving community cohesion and be regarded as a key issue within them. Response: The established community has made it overwhelmingly clear that they do not want community cohesion forced upon them. The SMDC has not been active in promoting any broader strategies to improve community cohesion. 3.9 The site must be sustainable, offering scope to manage an integrated coexistence with the local community. This will include consideration of noise and possible disturbance to Gypsy and Travellers living on the site, and possible noise and disturbance to the wider community, in</p>	<p>potential traveller allocation in the 2016 Preferred Options consultation. Every future stage of the emerging Local Plan must be subject to full public consultation, and Council Assembly approval.</p> <ul style="list-style-type: none"> • See response to PO9123 • See response to PO9162

Question 40 Do you have any comments on the travellers site?

<p>Page 4830</p>			<p>particular from movement of Gypsy and Traveller vehicles. Response: The proposal for land to the west of 75 Uttoxeter Road and 459 Uttoxeter Road Land behind Chandni Cottage, Uttoxeter Road do not take noise into consideration, these are both residential areas, located within the existing settled community. Commercial vehicles would be entering and leaving the proposed site at all hours, including night time, as is common practise and can be witnessed at other traveller sites within the Staffordshire area. 4.1 Sites should be developed in accordance with existing planning policies and designations, with particular regard made to: Response: The proposed site at 75 Uttoxeter Road and 459 Uttoxeter Road is green belt land, therefore the proposal is NOT in accordance with existing planning policies. Ref: DCLG Planning and Policy for traveller sites 2012, page 1, item 4, bullet point 4: “that plan-making and decision-taking should protect Green Belt from inappropriate development”, Ref: DCLG Planning and Policy for traveller sites 2012, page 5, item 14: “Inappropriate development is harmful to the Green Belt and should not be approved, except in very special circumstances. Traveller sites (temporary or permanent) in the Green Belt are inappropriate development.” There have been several previous declined planning applications (quote ref numbers) • Convenience for residents • Safety for residents Response : Traffic and proximity to railway line [detail comment on this point is dependent on location proposed] • Visual and acoustic privacy – both for people living on the site and those living nearby Response: See comment relating to point 4.14 below. In addition the settled community have heavily invested in property in these particular locations to ensure an enhanced degree of privacy due to the semi-rural location, a site at 75 Uttoxeter Road and</p>

Question 40 Do you have any comments on the travellers site?

<p>Page 4831</p>			<p>459Uttoxeter Road would destroy this privacy.</p> <ul style="list-style-type: none"> • Aesthetic compatibility with the local environment Response: A traveller site at location 75 Uttoxeter Road and 459 Uttoxeter Road would in no way be in keeping with the local environment, [75 and 459 Uttoxeter Road] are both quiet residential areas comprising of a mix of late Victorian properties and mid 1930's semi-detached properties. • Scope for social integration with the local community. Response: NO evidence provided that substantiates the theory that the G&T community want social integration, in fact the opposite is the case (quote from Planning Policy doc ?????), in that the G&T community prefer an enclosed settlement on the edge of a rural setting. <p>4.14 As with housing for the settled community, site layout and design should ensure a degree of privacy for individual households. Response: any traveller accommodation at 75 Uttoxeter road would be overlooked by residents on either side, and from the elevated property directly opposite. Similar at 459 Uttoxeter Land behind Chandni Cottage, Uttoxeter Road + limited statement for Quabbs Ln? 4.17 Account needs to be taken of a more recent tendency for members of the Gypsy and Traveller communities to favour the use of a mobile home in place of the traditional caravan, and some mobile homes could be up to around 25 metres in length. Response: Vehicles of this size would require a suitably large turning space to allow entry and exit from the site, high traffic volumes on Uttoxeter Road, often travelling in excess of the speed limit, combined with the regular movement of large slow vehicles at this75 Uttoxeter Road and 459Uttoxeter Road would introduce a substantial safety risk to road users. 4.29 To increase potential access points for emergency vehicles, more than one access route into the site is recommended.</p>	
------------------	--	--	---	--

Question 40 Do you have any comments on the travellers site?

<p>Page 4832</p>			<p>Where possible, site roads should be designed to allow two vehicles to pass each other (minimum 5.5m). Response: The existing track at Calverhay Farm (75 Uttoxeter Road) provides access to Network Rail engineers on a regular basis to the Caverswall sidings and cattle crossing (Stoke – Derby railway line). It is also a public footpath. The utilisation of this access route for traveller vehicles is not feasible and could result in obstruction of Network Rail vehicles. 4.36 To avoid disputes and provide defensible space, it is important to provide clear delineation of public communal areas eg play areas and private space, with boundaries that indicate clearly where individual pitches begin and end. It is recommended that communal areas without a clear usage are avoided in the design as they may attract vandalism, fly tipping or unauthorised caravans. Response: This government ‘statement of fact’ re-enforces the fear that a degree of unlawful activity can be associated with some traveller sites, this does nothing to ensure community cohesion as it outlines particular behaviour traits that the established community are very much concerned about. 5.32 The site should be designed so that post can be delivered separately for each pitch. Experience has shown that postal deliveries to pitches can be disrupted by complaints about harassment by dangerous dogs so the provision of an individual box at the entry to a pitch would be advisable. Response: This government ‘statement of fact’ based on past experiences with traveller sites highlights further problems that the established community are concerned about, the prospect of dangerous dogs roaming the proposed site at 75 Uttoxeter Road and 459 Uttoxeter Road is of grave concern, especially to the immediate neighbouring families with young children. Page 52 Evidence provided</p>	
------------------	--	--	--	--

Question 40 Do you have any comments on the travellers site?

<p>Page 4833</p>			<p>to Select Committee “Gypsy and Traveller families often wish to have small compact and well-managed sites located in areas where they have historically resided and have a network of local family support. Response There is no evidence to suggest that there has been any gypsy family has historically resided at, or near the proposed site at 75 Uttoxeter Road and 459 Uttoxeter Road or Land behind Chandni Cottage, Uttoxeter Road . There is no evidence that local family support existing in the vicinity of these sites. Page 52: Caution should be used when seeking locations for sites to ensure that they are based on need in a particular area. + 10.20 It will be important to demonstrate the need for new site provision in any consultation with the settled community, and the steps that the council or private developer will take to address concerns and deal with problems should they arise. Response: Where is the evidence that there is need for a site at these particular location 75 Uttoxeter Road and 459 Uttoxeter Road also Land behind Chandni Cottage, Uttoxeter Road. This information has not been provided. 10.18 As for other kinds of development, it is important that members of the local community, whether Gypsies and Travellers or settled residents, are able to feed in views on plans for new sites. Response: When will the detailed site plans be made available? If not available at the start of the consultation period then this is surely a serious breach of government planning guidelines. 10.19Councils and other developers need to plan for the possibility of such opposition at an early stage in the development and provide accurate information to help overturn negative stereotypes and allay concerns. Response: The government document ‘Designing Gypsy sites.’ Provides information that is allegedly based on fact, negative stereotyping is of little concern if the true</p>

Question 40 Do you have any comments on the travellers site?

<p style="writing-mode: vertical-rl; transform: rotate(180deg);">Page 4834</p>				<p>negative aspects are openly publicised in official documentation and policy (see points 5.36 and 5.32 from the above document). This map indicates the approximate locations of all sites originally identified within the Blythe Bridge area, back in 2015. Note that of the 7 possible sites, 3 are within 3/4 of a mile of the centre of Blythe Bridge and one is 1.4 miles away! It would seem that someone is determined to get the site located in this area, Staffordshire Moorlands comprises of 222 sq miles, so exactly why they have decided on such a concentration in and around Blythe Bridge deserves explanation. (Map showing location of Cresswell Station, Calverhay Farm/459 Uttoxeter Road/Quabbs Lane/Mobberley) I request that all of the above objections- and points within this objection document to be considered fully.</p>	
<p>PO9136</p>	<p>Mr and Mrs M Jackson</p>		<p>Object</p>	<p>I would like to strongly oppose the plans for a proposed traveler's site in Forsbrook on the plot next to Wards Fencing opposite Forsbrook cemetery for the reasons stated below:- * I believe it's green belt land therefore why are you building on it? I'm sure that there is plenty of other land elsewhere in the county or even better out of the county that isn't green belt land where the site could be placed. * My father is buried in Forsbrook cemetery which is directly opposite the site that you are proposing and I think it's beyond disrespectful, how would you feel if one of your parents was buried in the cemetery with a traveler's site across the road? I'm sure that many local people that have relatives buried in the cemetery feel the same about this, it's a thoughtless act with no care for the community that is already based in the village of Forsbrook and the surrounding area's. * The entrance/ exit to the cemetery is on a very busy road as it is which can be quite dangerous at times to increase the flow of traffic on this road would not only be</p>	<ul style="list-style-type: none"> • See response to PO9123 • See response to PO9162 • See para response to PO58 about the Planning, Environmental Protection, and Public Health legislation <p>All Planning Authorities are eligible to receive New Homes Bonus which was introduced by the Government to reflect and incentivise housing growth in their areas. It is based on the amount of extra Council Tax revenue raised for new homes and is payable annually over a 6 year period.</p>

Question 40 Do you have any comments on the travellers site?

<p>Page 4835</p>			<p>dangerous but also a careless act. * I often walk to the cemetery from my house and I have seen alot of wildlife such as hedgehogs in the field this would all be disrupted when surely it's supposed to be protected on green belt land? * Not to tarnish all travelers with the same brush BUT I work at Keele University and they have a permanent traveler's site down the road, many times I have seen children running around the roundabout and across the roads when they should be at school. There is rubbish all around the entrance to the site and it generally has a very untidy look about it. Dogs are also often roaming freely and I have seen them messing on the pavements around the edge of the site and nobody has cleaned this up. The clientele of the people going in and out of the site also leaves alot to be desired. We do not want this in our village, Forsbrook is a lovely place to live ..[redacted].. * If the traveler's site was to be approved on this plot it would without a shadow of a doubt decrease the value of our property, at present property in Forsbrook is desirable and generally sells very quickly however this would not be the case if the traveler's site was to be approved. It would massively affect our property prices, my husband and I work very hard to maintain our property to keep/increase it's value as I'm sure that many people do in the village. If the traveler's site was approved nobody would want to buy property in Forsbrook particularly where I live because it is so close to the site and let's be honest would you because I wouldn't? This is most disheartening after we have worked so hard to purchase our house. It seems to me and my husband and to many of the local residents that you have put no thought into how your proposed plans for both the traveler's site and the housing development will affect the residents of Forsbrook, many of which have lived in the village all of</p>	
------------------	--	--	--	--

Question 40 Do you have any comments on the travellers site?

				their lives. Your plans are thoughtless and your actions are careless and this all seems as though it's a money making scheme for the council with no thought as to how this will impact the residents.	
PO9139	Mr Mat Turner		Object	I have recently heard of the proposed traveller sight on uttoxeter road Blythe Bridge and I wish to express my opposition to this plan. I am unsure of any formal way to stress this issue and I have been told to contact this email. I live at 39 Highfield close, Blythe Bridge, just across from the purposed site. In the mean time please except this email as my official opposition to the proposed traveller site at 75 uttoxeter road and 459 uttoxeter road.	Comments noted.
PO9152	Mrs Pam Thompson		Object	I am notifying you of my objection to your proposed traveller site at 459 Uttoxeter Road, Blythe Bridge. My primary objection is that this proposal is in direct contravention of various components of Government guidelines. My front door is approximately 400yds from this proposed site, it may be behind a large hedge but it's still there. ..[redacted].. We already have the A50 completely blocking one side of our village, with lorries "tipping" over regularly and disrupting traffic flow, increasing noise level and reducing safety for our children. Please don't further pick on us and force community cohesion on us. Travellers are proven to have commercial vehicles coming and going all times of the day and night. Please reconsider your proposal to a site outside the Green Belt and away from a happy and traditional English Village.	<ul style="list-style-type: none"> • See response to PO871 • See response to PO13
PO9153	Zoe Degg		Object	Hi we are currently doing a house up in Blythe bridge making it our family home. We chose Blythe bridge for the lovely setting that it's in. The green belt land should stay. So I oppose to the site.	<p>Note that site TR002 has been removed from the emerging Local Plan.</p> <p>In the case of sites within the Green belt (such as here) the Council would need to demonstrate exceptional circumstances to</p>

Question 40 Do you have any comments on the travellers site?

					justify their allocation at Examination.
PO9606			Object	Letter objecting to Preferred Options sites TR002, and BB041 submitted [attached]. This also attaches letter to Bill Cash MP regarding TR002: improper use of Green Belt land – incongruous to local community; we should be preserving views, wildlife. Existing Council owner brownfield sites should be used instead	<ul style="list-style-type: none"> • See response to PO9123 • See response to PO9162 • See response to PO871
PO9607			Object	Letter objecting to Preferred Options sites TR002 and BB041 (and attaching correspondence to Bill Cash MP) submitted [attached]:	<ul style="list-style-type: none"> • See response to PO9123 • See response to PO9162 • See response to PO871
PO9511	Mr Chris Stevenson		Object	Summary of representation (full representation attached). My primary reasons for my objection to a Traveller Site at TR002 are as follows: SMDC proposal is in breach of the 2008 good practice guidelines. The established community is clear (petition and attendance at public meetings) that they do not want community cohesion forced upon them. Noise has not been taken into consideration. This is a residential area and commercial vehicles will be entering and leaving the site at all hours. Traffic – the site faces a high speed road and there is insufficient space to allow vehicles safe egress. Privacy would be destroyed. Would not be inkeeping with the local environment which is a quiet residential area comprising victorian and mid-1930s properties. No evidence provided that the G&T community want social integration. Traveller accommodation would be overlooked. Regular movement of large slow vehicles would introduce a substantial safety risk to road users. Fear of problems associated with some traveller sites. No evidence of gypsy families residing in the vicinity of the site. No evidence of need at this particular location. Information should be based on fact and openly publicised.	<ul style="list-style-type: none"> • See response to PO9123 • See response to PO9162
PO9536	Mr P Thys		Object	Summary of representation (representation attached). My primary reasons for my objection to a Traveller Site	<ul style="list-style-type: none"> • See response to PO9123

Question 40 Do you have any comments on the travellers site?

PO9171	Gillian Armstrong		Object	<p>I wish to object most strongly to the above-mentioned proposed Gypsy site. This is right on the edge of what is currently a very pleasant, relatively crime-free place to live. Surely there must be more suitable sites, away from residential areas, and not on green belt land. ..[redacted]... We do not want this in Blythe Bridge. PLEASE RECONSIDER!</p>	<p>Note that site TR002 has been removed from the emerging Local Plan.</p> <p>The Council formulated a series of options sites for traveller allocation, which appear on the website. These were the subject of sustainability appraisal, which considered road links, access to facilities etc. This assisted the Council in its decisionmaking with regards TR002.</p>
PO9452	Ms Julie Lyons		Object	<p>I am replying to the recent release of the preferred option for a travellers site in Blythe Bridge and Forsbrook. At the last Parish meeting it was stated that the owner of the land marked as site T002, didn't</p>	<ul style="list-style-type: none"> • See reponse to PO8978

Question 40 Do you have any comments on the travellers site?

				wish to sell the land to for this purpose. This information was also discussed at a Parish meeting in late 2015. I have now been informed (6 th June) that this option has now been deleted from any further consultation. I have looked at your traveller site plans, which are flagged with the owners preference as not known or owner unknown. I think it is really remiss of the Council at this late stage to have not investigated further and a very least been aware of owners views before publishing the plans. The subject of Traveller Sites are very emotive and this alone has caused the local community stress, anxiety and anger. SMDC should have done more to have limited the damage to the community it serves.	
PO9505	Mrs Rosemary Henson		Object	I grew up on the above property which has been named as a potential traveller site and still regularly visit my parents, more so since my fathers stroke last year. Since this proposal it has greatly distressed both my parents, myself, my husband and my siblings, particularly my father, who's family has resided in Blythe Bridge as far back as we can remember. In our opinion to use this land as a traveller site would have absolutely no benefit to the village, local community and the surrounding houses of whom it equally distresses. Not only this but some day we hope to inherit this property and surrounding countryside, home to many indigenous species of birds and wildlife. Not to mention two ponds which were put there by my father, home to many fish and wildlife of which would be greatly affected by the invasion of people. Sentimental value aside, this land is most importantly within green belt, and as such has been used for agricultural purposes only and should not under any circumstances be used for anything other than farm land. It is not on the local sewer, the two current properties and the barn with granted planning permission share a septic tank only of which has been	<ul style="list-style-type: none"> • See reponse to PO8978 • See response to PO9123 • See response to PO9162

Question 40 Do you have any comments on the travellers site?

Page 4840				<p>paid for by the properties that share it. Until recently my parents house was of the last in the village, but we now have direct neighbours to consider and the possibility of future neighbours in the adjacent barn, of which has even been included within the proposed gypsy site. My parents have plans to move to this barn, as my father is unable to use the stairs and there has been absolutely no consideration to this in the plans of TR002. It is outrageous that the land he has lived on all his life and his future retirement home will be in the centre of a travellers site. I ask you, would you place your disabled father and mother in the centre of a traveller site? I imagine you would say no. Further more, I find it an insult that my parents name has been dragged through the dirt. Local village people are under the assumption, thanks to false journalism, that my parents wish to go ahead with plans for the traveller site. This is false and we wish to clear our name. The green belt is there to preserve what remains of countryside in this country. Having lived in the city of Manchester I have seen first hand what housing expansion and further settlers can do to an already congested area. We should protect our green belt land. We do not have the infrastructure or local facilities here to support additional settlers. There is no longer a public school in the area Draycott and the A50 is already a very congested road, having first hand witnessed the countless road collisions on the bypass. Not to mention the additional houses being built at Cresswell and expanding business park, all of which will have to accommodate at our local schools and roads. I feel very strongly about my objection to these plans and will support my family and the local community to oppose this decision.</p>	
PO9468	Linda Washington		Object	We would like to register our objections to the proposal for traveller sites in Blythe Bridge/Forsbrook. We would	Note that site TR002 has been removed from the emerging Local Plan.

Question 40 Do you have any comments on the travellers site?

Page 4841	and Robert Brough			<p>like to object to all the sites but in particular we object very strongly to the following two sites: (TR002 and TR015). TR002. 459 Uttoxeter Road. This proposed site leads onto a busy dual carriageway with a national speed limit. Slow moving and turning vehicles towing caravans can only be a hazard. Close to the site is a doctors surgery and behind the surgery is a sports field. How long would it be before the travellers on the proposed site saw this and told others. The field/doctors has a flimsy barrier that could easily be removed. It could end up being used illegally and tax payers having to foot the bill for the clean up. This does happen. Our general concerns are personal. ..[redacted].. The area would become somewhere people wanted to get out of rather than move to. Why are all the proposed sites in this area, Staffs moorlands covers 222 square miles so why all the proposed sites in one area? The Blythe Bridge sites are all close to the A50. When there is a problem on the A50, which happens frequently, Blythe Bridge and surrounding areas become gridlocked. Blythe Bridge is constantly busy with traffic and we do not need any more.</p>	<p>Note only site TR002 is identified as a potential traveller allocation in the 2016 Preferred Options consultation. Every future stage of the emerging Local Plan must be subject to full public consultation, and Council Assembly approval.</p> <ul style="list-style-type: none"> • See response to PO9123 • See response to PO9162
PO9470	Mrs Sarah Tinsley		Object	<p>I must object in the strongest terms to the preferred travellers site TR002 in Blythe Bridge. This land adjoins my grazing paddocks and I fear for the security of my livestock and property if this was to go ahead knowing that many travellers have a multitude of dogs as well as ponies that they graze by the roadside. Additionally, I know that [the owners] have informed Staffordshire Moorlands Council that they will not sell their land for a travellers site. This position is not documented in the public consultation and appears to have been completely ignored in the council assessments.</p>	<p>Note that site TR002 has been removed from the emerging Local Plan.</p> <ul style="list-style-type: none"> • See reponse to PO8978
PO9593	Mrs A Appleby		Object	<p>Letter submitted [attached] objecting to Preferred Options traveller site at Blythe Bridge: site included in</p>	<ul style="list-style-type: none"> • See reponse to PO8978

Question 40 Do you have any comments on the travellers site?

				consultation proposals despite numerous contacts from owner that site not available for this use question why seven of the traveller site options were located within 2 mile radius of Blythe Bridge, when rest of District available; and brownfield possibilities elsewhere, eg Stoke on Trent Blythe Bridge/Blythe Marsh has outstanding open countryside quotes relevant policies from Government's Planning Policy for Traveller Sites, arguing site not suitable (in Green Belt/ no mains drains/site elevated and enclosed/ pressure on local services etc)	Note that site TR002 has been removed from the emerging Local Plan. Note only site TR002 is identified as a potential traveller allocation in the 2016 Preferred Options consultation. Every future stage of the emerging Local Plan must be subject to full public consultation, and Council Assembly approval.
PO9522	Mr K Tunncliffe		Object	Summary of representation (representation attached). My primary reasons for my objection to a Traveller Site at TR002 are as follows: SMDC proposal is in breach of the 2008 good practice guidelines. The established community is clear (petition and attendance at public meetings) that they do not want community cohesion forced upon them. Noise has not been taken into consideration. This is a residential area and commercial vehicles will be entering and leaving the site at all hours. Traffic – the site faces a high speed road and there is insufficient space to allow vehicles safe egress. Privacy would be destroyed. 	PO9608	Mrs K Robertson		Object	<p>Letter objecting to Preferred Options sites TR002, and BB041 (correspondence sent to Bill Cash MP attached): improper use of Green Belt – using this land would be incongruous; we should be preserving views/wildlife; existing Council-owned brownfield sites should be used instead. Proximity of gypsy site – understand that the Gypsy Council have already met with SMDC (said they are NOT to be sited next to houses or too close to local communities); most residents agree with this. So question why TR002 being proposed. Other more appropriate sites – question why Council have selected TR002 over Checkley site option (when latter site scored more 'pluses' [on published sustainability</p>

Question 40 Do you have any comments on the travellers site?

Page 4844				<p>appraisal]). Traffic issues – volume of traffic already a concern, and will get worse with additional Cheadle, Alton traffic. Cheadle Road is only local through road. Village cannot cope with axtra gypsy traffic (such as large vehicles). Therefore increased noise/pollution/congestion/traffic accidents. Strain on public services – local dentists/doctors/schools already full. Wildlife – propose that site be inspected for protected wildlife, before proceeding further. Land cost – time of austerity – abhorrent you are considering purchasing green belt sites. Use Council-owned brownfield sites first. Blight – if you use green belt land inappropriately and it impinges on the rights, well being and values of the local houses, this will cause distress to villagers, and house valuations/ability to sell houses. Council will be responsible for subsequent blight. Argues that that site TR008 is in breach of DCLG Best Practice Traveller Guidance on numerous grounds. Alternative suggestion is that a traevller site should be sited away from villages but within 2miles of them, eg Checkley, Mobberley. Question why most traveller site options are around Blythe Bridge – should widen search to look at all SMD starting with brownfield sites away from villages. Both the gypsies and local community would be happy with this; would creat cultural cohesion. Letter to Bill Cash, re-iterating objections to TR002 and BB041.</p>	
PO9458	Mrs P Marsden		Object	<p>With the overview of all the linked sites named above,(Northern Gateway Site/Proposed Traveller Site/BB041/OC055) I wish to draw your attention to the following information from The World Health Organisation website, where the full document is available for your perusal: (http://www.iarc.fr/en/media-centre/iarcnews/pdf/pr221_E.pdf 1st June 2016) Lyon/Geneva, 17 October 2013 – The specialized cancer agency of the World Health Organization, the</p>	<p>Note that site TR002 has been removed from the emerging Local Plan.</p> <p>The Council consults internally with its own Environmental Health Team and they did not raise objections to either site TR002, or site OC055, (subject to appropriate conditions). Note all proposed major developments are required to have their</p>

			<p>International Agency for Research on Cancer (IARC), announced today that it has classified outdoor air pollution as carcinogenic to humans (Group 1). After thoroughly reviewing the latest available scientific literature, the world's leading experts convened by the IARC Monographs Programme concluded that there is sufficient evidence that exposure to outdoor air pollution causes lung cancer (Group 1). They also noted a positive association with an increased risk of bladder cancer. Particulate matter, a major component of outdoor air pollution, was evaluated separately and was also classified as carcinogenic to humans (Group 1). The IARC evaluation showed an increasing risk of lung cancer with increasing levels of exposure to particulate matter and air pollution. Although the composition of air pollution and levels of exposure can vary dramatically between locations, the conclusions of the Working Group apply to all regions of the world. It is therefore immediately apparent that increased air pollution created from the higher volume of traffic generated from ALL of the above sites will be a source of concern to the health and wellbeing of residents. If the proposals go ahead the identity of Blythe Bridge, Draycott and Cresswell will be changed beyond recognition from small hamlets and a village to an extension and continuation of the urban sprawl of Stoke on Trent. Many of my neighbours I have discussed this matter with, purchased our properties and chose to live in the area because it is a non estate location, rural, with few houses and lots of green space. Therefore our views must be taken into consideration, when any major changes to the area in which we reside and pay council tax for are considered. Clearly this was not the case with the Blythe Park expansion, which will cause the volume of traffic on Cresswell Lane and Uttoxeter Road, Draycott to greatly increase the number</p>	<p>potential environmental impacts assessed prior to the granting of planning permission.</p> <p>The Council consults with SCC Highways/SCC Transportation during Local Plan preparation. SCC did not raise any objections to development of TR002 for traveller use subject to junction assessments; local pedestrian and cycle links will also require consideration. In the event of future planning applications the Council would assess schemes having significant transport impacts against relevant NPPF and Local Plan policy (including requirement to submit transport statements, and provide highways improvements where deemed appropriate).</p> <ul style="list-style-type: none"> • See response to PO9123 • See response to PO9162 <p>The reasons for the distribution of development across the District are set out in the Spatial Strategy policies of the Local Plan.</p>

Question 40 Do you have any comments on the travellers site?

<p style="writing-mode: vertical-rl; transform: rotate(180deg);">Page 4846</p>			<p>of vehicles on an already very busy road-also used as a diversion for the frequent A50 closures. The vibration from this traffic has already caused damage to garden walls and with some HGV's you can feel the vibration through the house. My primary reasons for my objection to a Traveller site at TR002 are listed in detail below: The TR002 proposal is in direct contravention of various components of the following policies, government guidelines and previous statements made by the SMDC on this matter. In particular I shall be referring to the following document: DCLG (2008) Designing Gypsy and Traveller Sites: Good Practice Guide This document contains the following numbered statements which indicate that the SMDC proposal for a traveller site at TR002 is in breach of the 2008 good practice guidelines, as follows: 3.8 Consideration must be given to the relationship of sites to the surrounding community. For this purpose it is important to ensure that proposals to develop a site link in with other broader strategies in place for improving community cohesion and be regarded as a key issue within them. Response: The established community has made it overwhelmingly clear (by over 400 petition votes and attendance at public meetings) that they do not want community cohesion forced upon them. The SMDC has not been active in promoting any broader strategies to improve community cohesion. 3.9 The site must be sustainable, offering scope to manage an integrated coexistence with the local community. This will include consideration of noise and possible disturbance to Gypsy and Travellers living on the site, and possible noise and disturbance to the wider community, in particular from movement of Gypsy and Traveller vehicles. Response: The proposal for TR002 does not take noise into consideration, this is a residential area, located within the existing settled</p>

Question 40 Do you have any comments on the travellers site?

<p>Page 4848</p>			<p>Traveller communities to favor the use of a mobile home in place of the traditional caravan, and some mobile homes could be up to around 25 metres in length. Response: Vehicles of this size would require a suitably large turning space to allow entry and exit from the site, high traffic volumes on the A521 Uttoxeter Road, often travelling in excess of the speed limit, combined with the regular movement of large slow vehicles at this location would introduce a substantial safety risk to road users. 4.36 To avoid disputes and provide defensible space, it is important to provide clear delineation of public communal areas eg play areas and private space, with boundaries that indicate clearly where individual pitches begin and end. It is recommended that communal areas without a clear usage are avoided in the design as they may attract vandalism, fly tipping or unauthorized caravans. Response: This government 'statement of fact' re-enforces the fear that a degree of unlawful activity can be associated with some traveller sites, this does nothing to ensure community cohesion as it outlines particular behavior traits that the established community are very much concerned about. 5.32 The site should be designed so that post can be delivered separately for each pitch. Experience has shown that postal deliveries to pitches can be disrupted by complaints about harassment by dangerous dogs so the provision of an individual box at the entry to a pitch would be advisable. Response: This government 'statement of fact' based on past experiences with traveller sites highlights further problems that the established community are concerned about, the prospect of dangerous dogs roaming the proposed site at TR002 is of grave concern, especially to the immediate neighboring families with young children. Page 52: Evidence provided to Select Committee</p>

Question 40 Do you have any comments on the travellers site?

<p>Page 4849</p>			<p>“Gypsy and Traveller families often wish to have small compact and well-managed sites located in areas where they have historically resided and have a network of local family support. Response: There is no evidence to suggest that there has been any gypsy family has historically resided at, or near the proposed site at TR002. There is no evidence that local family support existing in the vicinity of these sites. Page 52 : Caution should be used when seeking locations for sites to ensure that they are based on need in a particular area. 10.20 It will be important to demonstrate the need for new site provision in any consultation with the settled community, and the steps that the council or private developer will take to address concerns and deal with problems should they arise. Response: Where is the evidence that there is need for a site at this particular location TR002. This information has not been provided. 10.19: Councils and other developers need to plan for the possibility of such opposition at an early stage in the development and provide accurate information to help overturn negative stereotypes and allay concerns. Response: The government document ‘Designing Gypsy sites’ provides information that is allegedly based on fact, negative stereotyping is of little concern if the true negative aspects are openly publicized in official documentation and policy (see points 4.36 and 5.32 from the above document). I cannot stress enough that the proposed siting of these developments, in particular TR002 are particularly ill-considered, Yet again another ‘steamroller’ tactic of SMDC to push all developments that are unwanted in other parts of the SMDC district into small hamlets, primarily inhabited by retired persons who do not have internet access and are therefore clearly deemed a soft target. My neighbor has spoken to residents groups in Leek who say they would welcome</p>

Question 40 Do you have any comments on the travellers site?

			<p>industrial parks and associated housing as they want to offer 'local jobs' to help with the ongoing, very successful regeneration of Leek . No one from SMDC has yet explained why no developments of the size planned for Blythe Bridge, Draycott and Cresswell have been proposed for Leek. No one from SMDC has explained why almost 80% of the district allocation for housing and industrial parks is being sited at Cresswell, Draycott and Blythe Bridge. No one from SMDC has explained why there is no allocation for a Traveller Site at Leek, there is clearly a demand for this, as unofficial traveller sites and occupation of land from the travelling community is not uncommon in Leek. I request that all of the above objections- and points within this objection document to be considered fully.</p>	
<p>Page 4850 PO9467</p>	<p>Ms Nicola Davis</p>		<p>Object I would like to notify you of my objection to the proposed traveller site(s) in and around Blythe Bridge area as described in your planning proposal. My primary reasons for objection are that this proposal is in direct contravention of various components of the following policies, government guidelines and previous statements made by the SMDC on this matter. In particular I shall be referring to the following documents: DCLG (2008) Designing Gypsy and Traveller Sites: Good Practice Guide DCLG (2012) Planning and policy for traveller sites SMDC (2014) Core Strategy Development Plan Document (pages 120-121) SMDC (2011) Gypsy and Traveller Site Options and Issues Appraisal Letter from SMDC to Frank Hopley. Dated 23 February 2015, ref: DL/JF DCLG (2008) Designing Gypsy and Traveller Sites: Good Practice Guide This document contains the following statements which indicate that the SMDC proposal for a traveller sites in and around Blythe Bridge is in breach of the 2008 good practice guidelines, in particular: Relationship to surrounding land use 3.8</p>	<ul style="list-style-type: none"> • See response to PO9123 • See response to PO9162

Question 40 Do you have any comments on the travellers site?

Page 4851			<p>Consideration must be given to the relationship of sites to the surrounding community. For this purpose it is important to ensure that proposals to develop a site link in with other broader strategies in place for improving community cohesion and be regarded as a key issue within them. Response: The established community has made it overwhelmingly clear that they do not want community cohesion forced upon them. The SMDC has not been active in promoting any broader strategies to improve community cohesion. 3.9 The site must be sustainable, offering scope to manage an integrated coexistence with the local community. This will include consideration of noise and possible disturbance to Gypsy and Travellers living on the site, and possible noise and disturbance to the wider community, in particular from movement of Gypsy and Traveller vehicles. Response: The proposal for land to the west of 75 Uttoxeter Road and 491 Uttoxeter Road do not take noise into consideration, these are both residential areas, located within the existing settled community. Commercial vehicles would be entering and leaving the proposed site at all hours, including night time, as is common practise and can be witnessed at other traveller sites within the Staffordshire area. In addition to this there is also the impact on the community with increased traffic, the roads in and around Blythe Bridge are busy at all times of the day and night and increasing this with constant increase in vehicular traffic would increase the noise pollution in the surrounding areas as well as increasing the incidence of accidents for the numerous children in and around these areas at peak times. 4.1 Sites should be developed in accordance with existing planning policies and designations, with particular regard made to: Response: The proposed sites in Blythe Bridge are is green belt</p>

Question 40 Do you have any comments on the travellers site?

<p>Page 4853</p>			<p>substantial safety risk to road users. These are areas of heavy congestion through the daytime and at peak times often leading to disruption, in addition to the increased incidence of injuries, there are three schools in this vicinity plus two supermarkets whose traffic causes issues throughout the day. 4.29 To increase potential access points for emergency vehicles, more than one access route into the site is recommended. Where possible, site roads should be designed to allow two vehicles to pass each other (minimum 5.5m). Response: The existing track at Calverhay Farm (75 Uttoxeter Road) provides access to Network Rail engineers on a regular basis to the Caverswall sidings and cattle crossing (Stoke – Derby railway line). It is also a public footpath. The utilisation of this access route for traveller vehicles is not feasible and could result in obstruction of Network Rail vehicles. 4.36 To avoid disputes and provide defensible space, it is important to provide clear delineation of public communal areas eg play areas and private space, with boundaries that indicate clearly where individual pitches begin and end. It is recommended that communal areas without a clear usage are avoided in the design as they may attract vandalism, fly tipping or unauthorised caravans. Response: This government ‘statement of fact’ re-enforces the fear that a degree of unlawful activity can be associated with some traveller sites, this does nothing to ensure community cohesion as it outlines particular behaviour traits that the established community are very much concerned about. Page 52 Evidence provided to Select Committee “Gypsy and Traveller families often wish to have small compact and well-managed sites located in areas where they have historically resided and have a network of local family support. Question 40 Do you have any comments on the travellers site?

<p>Page 4854</p>			<p>there has been any gypsy family has historically resided at , or near the proposed sites in and around Blythe Bridge. There is no evidence that local family support existing in the vicinity of these sites. Page 52: Caution should be used when seeking locations for sites to ensure that they are based on need in a particular area. + 10.20 It will be important to demonstrate the need for new site provision in any consultation with the settled community, and the steps that the council or private developer will take to address concerns and deal with problems should they arise. Response: Where is the evidence that there is need for a site at these locations. 10.18 As for other kinds of development, it is important that members of the local community, whether Gypsies and Travellers or settled residents, are able to feed in views on plans for new sites. Response When will the detailed site plans be made available? If not available at the start of the consultation period then this is surely a serious breach of government planning guidelines. 10.19Councils and other developers need to plan for the possibility of such opposition at an early stage in the development and provide accurate information to help overturn negative stereotypes and allay concerns. Response: The government document ‘Designing Gypsy sites..’ provides information that is allegedly based on fact, negative stereotyping is of little concern if the true negative aspects are openly publicised in official documentation and policy (see points 5.36 and 5.32 from the above document). I trust these views and others shared by residents of the villages will be considered, Greenbelt areas are a necessary area in a rural environment, and a proposal to build albeit “temporary” structures is a complete disregard of the nature of these areas, The Staffordshire moorlands district covers in excess of 200square miles</p>	
------------------	--	--	--	--

Question 40 Do you have any comments on the travellers site?

				and within this a number of brownfield sites with better access to services that the current proposed sites. Surely in line with the governments environmental commitments areas such as these should be developed if they are indeed necessary for these groups.	
PO9494	Victoria Stephenson		Object	The access directly onto the dual carriageway at that point would not be safe for caravans or other large vehicles, it is an accident waiting to happen. And children, horses, dogs would be straight out onto an extremely busy dual carriageway. There would be no privacy at this site for the travellers nor those who neighbour them. Also that land has been used for landfill in the past and is contaminated ground, making it completely unfair to expect the travelling people to live, let their children play, keep their pets/livestock on it. Quite aside from anything else, [the owner] has declared repeatedly, and has put in writing several times to state that she is not willing to sell the land for this purpose. We were told at the residents' development meeting that forced purchase cannot be made, yet it seems that planning permission is still going ahead.	<ul style="list-style-type: none"> • See response to PO013 <p>Note that site TR002 has been removed from the emerging Local Plan.</p> <p>The Council consults internally with its own Environmental Health Team and they did not raise objections to this site, subject to appropriate conditions.</p> <ul style="list-style-type: none"> • See response to PO8978
PO9503	Rebekah Wilbur		Object	I grew up on the above property which has been named as a potential traveller site. It has always been the intention of my parents to pass this land on to their children, as it has been within our family for several generations and holds both great personal and sentimental value to us. In the 20 years I and my siblings have lived at this address, this land has remained within green belt, and as such has been used for agricultural purposes only. My parents have resided in Blythe Bridge their whole lives. They have been hard working, honest and caring members of this community. They have worked hard to service the local people, community and economy. I find it incredulous that this is the only named potential site deemed	<ul style="list-style-type: none"> • See response to PO8978 • See response to PO9162 <p>Note that site TR002 has been removed from the emerging Local Plan.</p>

Question 40 Do you have any comments on the travellers site?

Page 4856				<p>adequate to house travellers in over 220 parishes. This decision is unfair to not only the owners of this property but also the village in which it resides. My parents and the land they own are being held to ransom; their good name is being publicly tarnished by the misinformation circulating among the general public about the sale of this land. Having lived in Blythe Bridge for most of my life, it concerns me that we are potentially subjecting long standing home-owners to the problems associated with such a site..[redacted]..; along with the possibility of more travellers settling illegally on unauthorized or public land, which has been the case in other communities and villages throughout the country. In fact there have been land-mark court rulings in recent years, protecting villages from illegal camping and traveller sites. Long fought and hard won court battles, backed by entire communities of people. It is my opinion that the sale of this land is NOT in the best interest of our community and I am confident that the community of Blythe Bridge won't stand for an imposed or mandated traveler site. Having spoken to my parents, in great depth, on this matter, they have serious objections to the sale and use of this land as a traveller site. As their daughter, I strongly object to this land being used as a traveller site and have informed my parents that I object to the sale of any of this land. My siblings have taken similar measures. I can assure you, we, as a family have no intentions to sell this land at all, for any purpose. I am in full support of my parents taking any precautionary measures or legal action deemed necessary to prevent this land becoming a traveller site.</p>

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
PO265	mr anthony williamson				Object	I feel strongly that all of these extra houses being built in rural areas will destroy the local communities and put immense strain on local services. It is not needed and there are plenty of brown field land that could be used.	<ul style="list-style-type: none"> • New development is the main way to deliver new or improved infrastructure/local facilities e.g. more residents may support more local facilities, shops and services. Some infrastructure needs specifically related to a new development will be provided as part of that development e.g. children's play areas. • National planning guidance states that the Council should assess the quality and capacity of infrastructure to meet forecast demands. An Infrastructure Delivery Plan is being prepared which will identify the infrastructure necessary to support the Local Plan proposals. It builds on the findings of the Development Capacity Study for the Core Strategy. Consultation and work with infrastructure providers is ongoing and their feedback will inform the Infrastructure Delivery Plan and the Local Plan. The Council is working with the Staffordshire County Council to assess the impact proposed development on school capacity, what additional capacity is needed and how this can be delivered. • Site allocations are required to meet the District's proposed housing requirement. There is not enough brownfield land or sites or infill sites in settlements to meet the District's proposed housing requirements so green field sites need to be included. Any new development taking place will be subject to design policies contained within the new Local Plan
PO1071	Mr Stuart Davies				Object	Most if not all villages in the Staffordshire Moorlands are large enough as they are and have developed infrastructure to support them. Future developments should either be limited to infill.	<ul style="list-style-type: none"> • See response to PO265
PO2698	Mr Martin Ross	Environment Agency			Object	There is no commentary around the issue of flood risk and how the sites have been chosen with the Sequential process in mind. However, we do note that the sites we previously identified as being the most severely impacted due to flood risk, have not been taken forward to this stage, which we welcome. We have however, identified some sites where further work is necessary and we wish to remind the Local Planning Authority that Sequential Test evidence should be provided and reiterate if these sites are to be taken forward, then a Level 2 SFRA should also be undertaken. At this Preferred Options stage, this work should already be done. However, there is one final chance for this to be undertaken, prior to the Publication Draft towards the end of this year. If it is not done by that stage, the Site Allocation Document risks being found unsound as it will be at odds with the guidance set out in the SFRA Level 1 and potentially, Flood Risk policies that will be set out in the next consultation.	<ul style="list-style-type: none"> • Comments noted. The Council will continue to work with the Environment Agency regarding the Local Plan. There is a specific policy regarding flood risk and where appropriate the individual site policies reference flood risk issues.

						<p>proposed site allocations. These should be completed to CIEEM guidelines namely to identify and evaluate the ecological features of interest and potential impacts upon them. The mitigation hierarchy should be employed from the outset of any design and development planning to avoid, minimise, mitigate, offset impacts, both direct and indirect. Many proposed allocations are adjacent to priority habitats and statutory and non-statutory designated sites, including watercourses. In line with the mitigation hierarchy and relevant NPPF sections, i.e. 109, every effort should be made to re-naturalize watercourses, including de-culverting where technically feasible. The main impact on any sites from a developable point of view, are easements from watercourses to help promote Green and Blue corridors and networks where migration and movement along the watercourse banks can occur. This is likely to be between 5 metres, up to 10 metres on some main river stretches. Impacts on water quality need to be assessed, particularly the cumulative impact to ensure the relevant WFD waterbodies do not deteriorate in status and listed measures in the RBMP are taken into account. Collective contributions from specific areas could be used to support innovative land management schemes upstream in the catchment delivering natural flood management to reduce flood risk in the new developments and wider communities downstream. We would recommend and welcome the opportunity to comment on pre-applications to ensure the best opportunities and outcomes are realised.</p>	
PO2581	Consultation Service	Natural England			General comment	<p>With regard to baseline data and additional new sites : The Council may need to check that up to date information on local wildlife sites (Sites of Biological Interest and Biodiversity Alert Sites in Staffordshire) has been referenced when identifying preferred sites. Our previous advice letter dated 14.9.15 gave detailed advice on themes and issues including these non-statutory sites. Natural England no longer has access to this dataset and the as the preferred sites consultation includes a number of additional sites (not considered as part of last year's consultation) the Council will need to access up to date information to check on any impacts on these sites. Please contact the Staffordshire Wildlife Trust (01889 880 100 or email info@staffswt.org.uk) for further information if you do not hold the relevant dataset in house.</p>	<ul style="list-style-type: none"> • Comments noted
PO2629	Consultation Service	Natural England			Support	<p>Natural England welcomes the deletion of those site options described in our advice letter dated 14.9.15 where selection would involve the expansion of the village closer to the Wetley Moor Site of Special Scientific Interest (SSSI), to within 150m of the SSSI at the closest point. Those sites are: WE019 WE040 WE041 This deletion of these site options is consistent with NPPF para 118 and adopted local plan policies including DC1 Design Considerations and NE1 Biodiversity and Geological Resources.</p>	<ul style="list-style-type: none"> • Comments noted

PO4467	Mr Matthew Stafford	Co-operative Group Limited (COOP)			Object	Letter, map, and 3x corresponding response forms submitted [relating to Questions 34/37/38] which object to Fole not having been identified in the Preferred Options, as a 'smaller village' with an infill boundary, pursuant to Core Strategy Policies; and that this should be corrected in forthcoming review of these policies. A map attachment of Fole is submitted to showing what is argued should constitute this new boundary - including the 2014 Fole Dairy mixed housing/ employment planning permission, and some other buildings. It is also argued that the new Local Plan proposals maps should identify the respective housing and employment areas already approved at Fole dairy, as housing and employment commitments. [Refer to letter, map and 3x form attachments].	<ul style="list-style-type: none"> The emerging Local Plan is no longer proposing to define village boundaries for smaller villages Development in these settlements will need to be in accord with the policies in the Local Plan the Spatial Strategy seeks to focus development to the main towns and larger villages limited growth may be acceptable in the smaller provided it is in scale with the settlement and does not have an adverse impact on the countryside. Applications will be determined on a site by site basis in line with policy in the Local Plan.
PO1308	Ms Melanie Lindsley	The Coal Authority			General comment	(Summary - please see attached file for full version) As you will be aware, the Staffordshire Moorlands area contains coal resources which are capable of extraction by surface mining operations. These resources cover an area amounting to approximately 22.07 of the Council area. The Coal Authority is keen to ensure that coal resources are not unnecessarily sterilised by new development. Where this may be the case, The Coal Authority would be seeking prior extraction of the coal. Prior extraction of coal also has the benefit of removing any potential land instability problems in the process. The area has been subjected to coal mining which will have left a legacy. Whilst most past mining is generally benign in nature, potential public safety and stability problems can be triggered and uncovered by development activities. Problems can include collapses of mine entries and shallow coal mine workings, emissions of mine gases, incidents of spontaneous combustion, and the discharge of water from abandoned coal mines. These surface hazards can be found in any coal mining area, particularly where coal exists near to the surface, including existing residential areas. Within the Plan area there are approximately 1,225 recorded mine entries and around 205 coal mining related hazards have been reported to The Coal Authority. A range of other mining legacy features are present, in total The Coal Authority High Risk Development Area covers approximately 6.98% of the Council area. Mining legacy is concentrated in and around the Towns of Biddulph and Cheadle and many of the villages south-west of the A523. Mine entries may be located in built up areas, often under buildings where the owners and occupiers have no knowledge of their presence unless they have received a mining report during the property transaction. Mine entries can also be present in open space and areas of green infrastructure, potentially just under the surface of grassed areas. Mine entries and mining legacy matters should be considered by Planning Authorities to ensure that site allocations and other policies and programmes will not lead to future public safety hazards. No development should take place over mine entries even when treated. Although mining legacy occurs as a result	<ul style="list-style-type: none"> Comments noted. The Council will continue to work with the Coal Authority. Consideration has been given to mining legacy issues and where appropriate there are site specific policies

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						<p>of mineral workings, it is important that new development recognises the problems and how they can be positively addressed. However, it is important to note that land instability and mining legacy is not always a complete constraint on new development; rather it can be argued that because mining legacy matters have been addressed the new development is safe, stable and sustainable. In our previous response on the 14 September 2015 we stated: "In assessing potential site allocations, it would therefore be prudent to include a criterion which assesses coal mining data. In accordance with NPPF guidance (paras. 109, 120, 121 and 166), this would be a due diligence check to ensure that potential development sites do not contain any mine entries or other coal related hazards which would require remediation or stabilisation prior to development. This assessment should be undertaken by the LPA using the GIS data provided by the Coal Authority. The Coal Authority notes that the Development Risk product and Surface Coal Resource product were downloaded by the LPA on the 8 June 2015. The LPA should use the most up to date information available to inform its assessments." I note and welcome the fact that the site assessment documents covering the site options does identify ground instability arising from mining legacy and as such The Coal Authority supports the broad approach taken to site selection. We have no views on the actual sites chosen as this is a matter for local determination following consideration of all relevant factors.</p>	
PO1299	Justin Milward	Woodland Trust			Object	<p>(Summary - please see attached document for full version) ASNW - Ruelow Wood at Grid Ref SK022474 is adjacent PAWS/ASNW - MoseyMoor Wood at Grid Ref SK024475 is adjacent ASNW - Straight Hills Wood at Grid Ref SK027471 is adjacent We are concerned that proposed development adjacent or in proximity to the woods will have negative impacts on them, causing damage and potential loss. Ancient woodland is defined as an irreplaceable natural resource that has remained constantly wooded since at least AD1600. The length at which ancient woodland takes to develop and evolve (centuries, even millennia), coupled with the vital links it creates between plants, animals and soils accentuate its irreplaceable status. The varied and unique habitats ancient woodland sites provide for many of the UK's most important and threatened fauna and flora species cannot be re-created and cannot afford to be lost. With Staffordshire Moorlands District Council showing a valuable above average ancient woodland resource at 3.09% of land area compared to a UK average of 2.5%, it is critical that this irreplaceable natural resource is absolutely protected in this Document and highlighted appropriately. Development impacts on ancient woodland in a number of ways: Chemically through acidification, eutrophication and toxic pollution, Disturbance by noise, light, trampling and other human activity, Fragmentation as a result of the destruction of adjacent semi-natural habitats,</p>	<ul style="list-style-type: none"> • Comments noted

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						Development provides a source of non-native plants and aids their colonisation, Any effect of development can impact cumulatively on ancient woodland - this is much more damaging than individual effects. We would recommend a buffer zone of at least 50 metres of semi-natural vegetation would be required to protect the woodland from the change in land use on the site for each allocation. This 50m should be included as part of the policy for each site.	
PO817	Mrs K Foschtinski				General comment	Rural areas should remain just that. If you concrete over all the greenfield space in rural areas you end up with an urban area. Housing should be distributed where it is most needed - in a sustainable location with access to services.	<ul style="list-style-type: none"> Comments noted
PO1343	Ms K Dewey	Staffordshire Wildlife Trust			Support	Support the exclusion of Ivy Cottage and its orchard from the proposed housing allocations.	<ul style="list-style-type: none"> Comments noted
PO1345	Ms K Dewey	Staffordshire Wildlife Trust			General comment	The habitat surveys reported a number of features of value in Alton such as species-rich hedgerows – these should also be assessed for potential LWS status.	<ul style="list-style-type: none"> Comments noted
PO1332	Ms K Dewey	Staffordshire Wildlife Trust			Object	Not all the proposed allocation sites have had ecological surveys carried out. We understand around 11 sites have been added to the proposed allocation sites that were not consulted upon in 2015, and these have not been assessed for their ecological value. The SMDC Local Plan Policy C3 Sustainable Communities - Green Infrastructure 8.7.16 and 8.7.17 references the production of a Green Infrastructure Strategy, which “ will inform the production of the Site Allocations Development Plan Document and will establish appropriate objectives and targets.” No Green Infrastructure Strategy has as yet been produced. Therefore, we are concerned that this lack of evidence base will not enable good decisions to be made on allocation sites. The Extended Phase 1 Habitat Surveys carried out by Lockwood Hall Associates Ltd in 2015 do not comprehensively cover all natural features that the NPPF and Planning Practice Guidance list as needing to be mapped as part of ecological networks: the location and extent of internationally, nationally and locally designated sites; Existing designated sites are recognised, but identification of all Local Wildlife Sites (LWS) is not as yet comprehensive. In terms of potential allocation sites, there are several where information from the Extended Phase 1 Habitat Surveys, other ecological survey reports for planning applications, and habitat data from MAGIC indicate potentially high value habitats, which should be assessed against the Staffordshire Local Wildlife Sites criteria. the distribution of protected and priority habitats and species ; Priority habitats and species are taken to mean those listed as habitats or species of Principal Importance for Conservation in England according to the list under section 41 of the NERC Act 2006, plus those listed on the Staffordshire, and any more local, Biodiversity Action Plan. The Extended Phase 1 Habitat Surveys do provide data that	<ul style="list-style-type: none"> Comments noted. A further Ecological Study has been undertaken and the Council has prepared a Green Infrastructure Strategy. There are specific policies in the Local Plan regarding biodiversity, trees and woodlands.

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						<p>would allow identification of some priority habitats, but do not highlight priority habitats where they are present or use the definitions to describe habitats found. Recommendations for further protected and priority species surveys are made, but full information on their presence has not been gathered. areas of irreplaceable natural habitat , such as ancient woodland or limestone pavement, the significance of which may be derived from habitat age, uniqueness, species diversity and/or the impossibilities of re-creation; This includes veteran trees and ancient hedgerows. Records for these features are not comprehensive. Some veteran tree records are available on http://www.ancient-tree-hunt.org.uk/discoveries/interactivemap It does not appear that this database was searched in the desk studies informing the habitat surveys in 2014. The survey reports do not specifically mention irreplaceable habitats. habitats where specific land management practices are required for their conservation; Some mention is made of current land management in the Extended Phase 1 Habitat Surveys, but important areas are not highlighted. main landscape features which, due to their linear or continuous nature, are important for the migration, dispersal and genetic exchanges of plants and animals, including any potential for new habitat corridors to link any isolated sites that hold nature conservation value, and therefore improve species dispersal; Good habitat links and recommended buffer areas are mentioned in the Extended Phase 1 Habitat Surveys, and the information within the surveys could be used to identify corridors and stepping stones, but specific identification of these features is not part of the report or clearly and consistently highlighted. Corridors and stepping stones need to be recognised and protected, and their other benefits to visual and access amenity in urban areas recognised. areas with potential for habitat enhancement or restoration, including those necessary to help biodiversity adapt to climate change or which could assist with the habitats shifts and species migrations arising from climate change; The ecology surveys would help identify such areas, and some Visual Open Space and Public Open Space areas are proposed in the allocations plans, but areas to be enhanced in terms of habitat value are not specifically identified. information on the biodiversity and geodiversity value of previously developed sites and the opportunities for incorporating this in developments; Previously developed sites are among those proposed for allocation and covered by ecological surveys, which give some recommendations. However geodiversity is not covered. If ecological networks and other GI features could be mapped for each settlement, this would give a good basis for allocating sites, both for hard development, and for green space and environmental enhancements. This would also provide a framework for any CIL monies, partnership projects etc. to target priorities in the area and improve the environmental</p>	

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						quality of each town and village.	
PO2860	James Chadwick	Staffordshire County Council			General comment	<p>Whilst we have not assessed each site in detail it is clear that many of them will be crossed by public rights of way which will need to be considered in full as part of any proposed development. We are also in the process of preparing the 4th Review of the Definitive Map and Statement for Staffordshire Moorlands area and the District Council will be provided with copies of the maps and Statement to indicate the alignment of all recorded routes. Staffordshire Moorlands District Council currently hold copies of the existing Definitive Map and Statement which should form part of any discussions with developers regarding the proposed sites. As the Plan progresses we suggest policy provision to ensure that all public rights of way are protected and, where possible, enhanced in conjunction with any development. If any Public Path Orders are required to enable the development to take place these should be processed alongside the planning application by the District Council. Many of the sites chosen are close to existing urban areas and it is likely that there are non-definitive routes across the sites which should be considered by any applicants. In many cases these routes could have become rights of way by virtue of established usage over many years and should be treated as public. There will also be sites where such usage or historic evidence has already resulted in applications being made to the County Council under Section 53 of the Wildlife and Countryside Act 1981 to add or modify the Definitive Map of Public Rights of Way, which affects the land in question. As the Plan evolves it would be useful to provide guidance to developers/applicants around enhancing the existing path network where possible in line with Staffordshire County Council's Rights of Way Improvement Plan. This could include: - the creation of public bridleways or the upgrading of public footpaths to bridleways to improve provision for horse riders and cyclists across Staffordshire where there is currently a shortfall in available access routes. - the creation and promotion of short circular walks to promote the health benefits of walking - the replacement of stiles with gaps (where there are no stock) or gates (where there are) in line with Staffordshire County Council's Least Restrictive Principle for path furniture The County Council is able to provide further advice and guidance as and when required.</p>	<ul style="list-style-type: none"> Comments noted.
PO2882	James Chadwick	Staffordshire County Council			General comment	<p>In relation to more general matters regarding the Local Plan's approach and considering the incorporation of policies for the next iteration the following should be considered. A Historic Environment Assessment (HEA) has previously been prepared for the Staffordshire Moorlands and its focus and extent was informed through discussion with the District Council. The statement regarding the need for further evidence including a 'Heritage Impact Study' (s1.16) of the Staffordshire Moorlands</p>	<ul style="list-style-type: none"> Comments noted. The Landscape Local Green Space and Heritage Impact Study provides an assessment of the sites impact on heritage assets. There are policies in the Local Plan regarding heritage assets

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						<p>Local Plan booklet is to be supported and should also be welcomed by Historic England. This Heritage Impact Study should review the previous work of the HEA (and update where required), extend the boundaries of the previous study where necessary and enhance the assessment where appropriate. It should cover all aspects of the historic environment and be undertaken by a suitably experienced historic environment specialist following a detailed brief agreed in advance with Historic England, the SMDC Conservation Team and the Staffordshire County Council Historic Environment Team. We have not assessed each site in detail as it is considered that the Heritage Impact Study (identified in s1.16) will undertake this work with reference to all relevant documentary information and databases (Staffordshire County Council Historic Environment Record, National Heritage List for England etc). The Heritage Impact Study should also make use of all available recent studies to inform its assessment including, where appropriate, the relevant Extensive Urban Survey (available on www.staffordshire.gov.uk/ search under EUS) and the historic farmsteads guidance available on the same web pages. Bearing in mind the scale of many of these developments, where appropriate applicants should be encouraged to undertake, as a minimum, a Heritage Statement in support of any application in order to '...describe the significance of any heritage assets affected, including any contribution made by their setting.' (NPPF, s.128). Where more complex remains or larger developments are being considered, then a full Historic Environment Desk-Based Assessment should be prepared. In all cases these documents should be prepared at an early stage by appropriately experienced historic environment specialists and they will inform discussions with the Local Planning Authority and their historic environment advisors regarding the need for and scale of any historic environment interventions including opportunities (where appropriate) to enhance heritage assets within a scheme. The Staffordshire County Council Historic Environment Team would be happy to be consulted by the historic environment specialist appointed to undertake the Heritage Impact Study. We would also be content to advise on the production of Heritage Statements/Historic Environment Desk-Based Assessments to inform development proposals and can advise the LPA on, in particular, the archaeological and historic landscape character aspects of specific developments at the planning application stage.</p>	
PO2896	James Chadwick	Staffordshire County Council			General comment	<p>In relation to the rural area in our previous response we suggested that in sites selection process consideration should be given to the proximity of the site to essential infrastructure and services in order to maximise potential for sustainable modes of transport to be utilised. For example family housing located in close proximity to schools could encourage more journeys to be made on foot to school, which ties into the</p>	<ul style="list-style-type: none"> Comments noted. Sites have been allocated in line with the Spatial Strategy which seeks to focus development in the main towns with some development in the larger villages.

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						health agenda. We are keen to understand how this has been taken on board in the sites proposed and whether future policy could address areas where it was not possible to provide new homes near to essential infrastructure and services. In relation to the distribution of housing it should be noted that in general, secondary school aged students living beyond three miles from their nearest or catchment area school or without access to a safe walking route are eligible for free school travel provided by Staffordshire County Council. Consideration was given to the potential for additional provision of free mainstream secondary school transport due to the location of Local Plan housing sites. A number of villages in our initial assessment have shown the potential to be eligible including Alton, Bagnall, Biddulph Moor, Boundary, Cookshill, Caverswall, Checkley, Cheddleton, Cotton, Foxt, Frogghall, Heaton nr Rushton, Hollington, Ipstones, Kingsley, Kingsley Holt, Lower Tean, Meerbrook, Oakamoor, Rudyard, Rushton Spencer, Stanley, Swinscoe, Waterhouses, Whiston and Winkhill. For the larger villages where indicative housing numbers are provided this amounts to approximately 284 new homes. This will create additional budgetary pressures for Staffordshire County Council and consideration should be given to the requirement for developer contributions to offset this additional cost.	
PO2926	James Chadwick	Staffordshire County Council			General comment	See attached transport site comments.	•
PO2930	James Chadwick	Staffordshire County Council			General comment	In relation to surface water flood risk you have provided to us recently a GIS mapping layer of the proposed allocations that we have run through our flood risk software. Attached are our initial comments on the sites and it is hoped that these should help identify any potential issues at each site and assist in framing policy for assessment and SuDS requirements. However, we have only been able to undertake a high level initial assessment at this stage and would welcome the opportunity to discuss with you further and perhaps identify sites that require further detailed consideration.	• Comments noted

							Local Plan
PO1314	Mr Andrew Leysens	United Utilities Water Limited			General comment	<p>With respect to the site selection process, we feel it is important to highlight that new development sites are more appropriately located away from locations which are identified as Groundwater Source Protection Zone 1 (SPZ1). Groundwater is a vital resource, supplying around one third of mains drinking water in England, however groundwater supplies are under pressure from development associated with an increasing population. United Utilities owns and operates boreholes which are used for public water supply purposes in Rushton Spencer. You should also note that there are a number of groundwater protection zones in alternative locations in your borough which are not assets operated by United Utilities. The details for these locations can be found at http://maps.environment-agency.gov.uk/wiyby/wiybyController?lang=_e&topic=groundwater&layer=default&ep=map&layerGroups=default&scale=2&x=357683&y=355134#x=389418&y=357472&lg=1,10,&scale=6</p> <p>Whilst we recognise it is not currently proposed to allocate any sites for development in the village of Rushton Spencer, United Utilities wishes to emphasise our strong preference for development to take place outside of the Environment Agency designated SPZ1s in this area. The land is designated as such owing to the presence of United Utilities boreholes. It is important to note that these boreholes are a primary source for providing public water supply and represent a key infrastructure resource. As you will appreciate, the safeguarding of the quality of this water supply is critical to United Utilities. As a statutory consultee in the development plan process it is appropriate for us to identify to you where we would prefer development to not take place so that we are able to most appropriately manage the impact on infrastructure in the most sustainable way possible. For your future reference, the Environment Agency has produced the document 'Groundwater protection: Principles and practice (GP3)', which sets out principles and policy guidance for groundwater protection.</p>	<ul style="list-style-type: none"> Comments noted. See response above
PO1375	Ms Rosamund Worrall	Heritage England			General comment	<p>Paragraph 126 of the NPPF requires Local Plans to set out a positive strategy for the conservation and enjoyment of the historic environment. This means that the plan, as a whole (including the sites it is putting forward as allocations) has to set out a framework which is likely to conserve the historic environment of the Plan area. The Plan puts forward a number of sites which, if developed, appear likely to affect the significance of one or more designated heritage assets in their vicinity. The Allocation of a site for development within the Local Plan is, in effect, establishing that the principle of development in that particular location is acceptable. However, in the case of this Local Plan, at present, there is no clear meaningful evaluation of what impact the development of</p>	<ul style="list-style-type: none"> Comments noted. The Landscape Local Green Space and Heritage Impact Study provides an assessment of the sites impact on heritage assets

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						<p>these areas might have upon those heritage assets. The evidence base relies on the Historic Environment Character Assessment of 2010 and the Landscape and Settlement Character Assessment (LSCA) of 2008 amongst others. It is also noted that the SHLAA methodology includes reference to constraints and opportunities in relation to the LSCA but does not mention the Historic Environment Character Assessment. In addition, it is noted that the Halcrow Toolkit of 2011 used for the Core Strategy information has been used in respect of the current SHLAA. Table 2.1 of the site rating criteria includes reference to designated heritage assets, but there is no reference to non-designated heritage assets, setting or harm. As such, it is not clear how impact on the historic environment has been assessed and subsequently applied to the site options in relation to them being put forward as allocation sites, other than where mentioned in the associated SA. Even in the SA it is not clear how the sites have been assessed in respect of the historic environment. It is also of concern that Para 1.16 of the draft plan sets out that further evidence base studies will be completed to inform the Local Plan including Landscape and Heritage Impact Study. In the Options Sites Assessments tables, part of the evidence base, it is also noted that Heritage Impact Assessments will be undertaken during the plan production if sites, where negative effect on the historic environment and heritage assets has been identified, are taken forward. These assessments should be undertaken and considered at this stage to ensure that the preferred allocation sites are deliverable in respect of the historic environment but, at present, Part 7 of the SA does not deal with this. In the absence of any assessment of the degree of harm which the proposed Allocations might cause to the historic environment or, indeed, what measures the Plan might need to put in place in order to ensure that any harm is minimised, at present, the authority cannot demonstrate that the sites it is putting forward for development is compatible with the Plan's own policies for the protection of the historic environment. Moreover, in terms of national policy guidance, the Plan also fails to demonstrate that:- (a) The sites that it is putting forward for development will deliver a "positive strategy for the historic environment" as is required by NPPF Paragraph 126. (b) The sites that are allocated will be likely to "contribute to protecting or enhancing the historic environment". Therefore, it has not shown that it is likely to deliver sustainable development in terms of the historic environment [NPPF Paragraph 7]. (c) The sites which it has allocated are likely to "conserve heritage assets in a manner appropriate to their significance". Therefore it has not shown that it will be likely to deliver the Government's objectives for the historic environment [NPPF Paragraph 17]. (d) It has complied with the statutory duty under S72 of the Planning (Listed Buildings and Conservation Areas) Act, 1990 to pay</p>

Question 41 – Do you have any other comments regarding the Rural Areas?

ID	Consultee Name	Company / Org	Agent Name	Agent Company / Org	Support/ Object/ General Comment	Consultee Comments	Officer Response
						<p>“special attention” to “the desirability of preserving or enhancing the character or appearance” of its Conservation Areas. Moreover, from the information available there is no evidence that, in preparing the Plan, the local planning authority has had “special regard to the desirability of preserving” any of its Listed Buildings. Whilst it is accepted that S66 of the Planning (Listed Buildings and Conservation Areas) Act, 1990 does not apply, specifically, to Plan making, the absence of any evaluation potentially brings into question the deliverability of some sites and, for some, the amount of development they can accommodate. When the requirements of the Act are eventually undertaken, it may be found that the quantum of development on some of the sites is, either, unachievable or, at worst, that the need to safeguard the setting of the building actually renders them largely undevelopable. Please note that these comments are based on known heritage assets at a national level and do not include local information available through heritage environment records which should be considered by the local authority.</p>	
PO570	Mr Paul Holdcroft				Support	<p>The strategy of providing 30 dwellings p.a. for infill in the smaller rural areas appears more realistic and appropriate thereto than the previously specific identification of larger sites, and thus mini estates, in some of the smaller villages, which would have ruined their characters and demonstrably been against overwhelming public opinion, strongly expressed in some cases. If this revision be the approved result after final consultation then the Council is to be congratulated on its revised approach as a thoughtful compromise in respect of many of its smaller villages.</p>	Comments noted
