COUNCIL ASSEMBLY AGENDA

Date: Wednesday, 19 July 2017

Time: 6.30 pm

Venue: The Council Chamber, Moorlands House, Leek

11 July 2017

1. Apologies for absence, if any.
2. Urgent items of business, if any (24 hours notice to be provided to the Chairman).
3. Declarations of interest:
 - (a) Disclosable Pecuniary Interests
 - (b) Other Interests
4. Approval of Dispensation
To consider, in accordance with Section 85 of the Local Government Act 1972, the approval of a dispensation to Councillor D. Trigger from attending meetings of the Council and its constituent bodies due to his ongoing treatment for a medical condition until the next meeting of the Council when the situation will be reviewed.
5. To suspend Council Procedure Rules of Debate in accordance with Rules 30.3 and 26 of the Council Meeting Procedure Rules.
6. Local Plan Preferred Options Consultation (**Pages 3 - 4872**)

SIMON BAKER
CHIEF EXECUTIVE

STAFFORDSHIRE MOORLANDS DISTRICT COUNCIL

Report to Council Assembly

19th July 2017

TITLE:	Local Plan Preferred Options Consultation
PORTFOLIO HOLDER:	Councillor Wain – Portfolio Holder for Planning, Development & Property
CONTACT OFFICER:	Pranali Parikh – Regeneration Manager
WARDS INVOLVED:	All areas outside of the Peak District National Park

Appendices Attached

Appendix 1 – Draft Local Plan Preferred Options document

Appendix 2 – Draft Sustainability Appraisal of the Local Plan

Appendix 3 – Equalities Impact Assessment of the Local Plan

Appendix 4 – Site Proformas (site recommendations on 2016 Preferred Options sites and newly recommended Preferred Options sites, summary of consultation feedback, key issues and evidence on these sites)

Appendix 5 – Alternative site suggestions (additional sites suggested in response to 2016 Preferred Option Sites and Boundaries consultation)

Appendix 6 – Summaries of individual consultation responses and petitions submitted to each question included in the 2016 Preferred Options Sites and Boundaries consultation with recommended Council responses

1. **Reason for the Report:** To consider and agree the Local Plan Preferred Options for consultation purposes and the timetable for the preparation and submission of the Local Plan to the Secretary of State
2. **Recommendation**
 - 2.1 That Councillors consider the background evidence and subsequent analysis referred to in this report and accompanying appendices.
 - 2.2 That Councillors agree the Preferred Options Local Plan for public consultation purposes
 - 2.3 That Councillors agree to delegate authority to the Executive Director (Place) to make non-material amendments to the Preferred Options Local Plan document ahead of the public consultation
 - 2.4 That Councillors agree to the proposals for public consultation on the Preferred Options Local Plan
 - 2.5 That Councillors agree to the proposed timetable for taking the Local Plan forward. This will form part of the Local Development Scheme.
3. **Executive Summary**
 - 3.1 The adopted Core Strategy makes a commitment to undertake an early and comprehensive review of the plan for the period 2016 – 2031 to take account of longer term development requirements. The review of the Core Strategy would also roll it forward into a single local plan combined with site allocations.
 - 3.2 To date, two public consultations have been undertaken alongside the gathering of extensive new evidence to inform the emerging Local Plan. On 8th March 2017, the Council agreed the development requirements for housing (average of 320 homes per year) and employment (27ha in total) up to the year 2031 in light of new evidence regarding housing and employment needs.
 - 3.3 This Preferred Options Local Plan seeks to provide an overarching strategy for the development of the District up to the year 2031 which delivers the agreed development requirements and wider objectives in a sustainable manner. The plan provides both strategic and more detailed development management policies and identifies specific sites and boundaries to help determine future planning applications.
 - 3.4 The plan builds on the approach taken for the adopted Core Strategy with modifications to reflect new evidence, feedback and new Government policy and regulations. Key changes include amendments to Preferred Options sites, a new approach to support limited infill in the Rural Areas, an adjustment to the Spatial Strategy to increase the percentage of housing in the Rural Areas

by 3% with a corresponding increase in Cheadle. These changes have enabled a significant reduction in the amount of Green Belt release when compared to the previous sites and boundaries.

- 3.5 It is proposed the Preferred Options Local Plan will be subject public consultation from 31st July to 22nd September. This equates to nearly eight weeks. This goes beyond the standard six week period of consultation in order to account for the summer holiday period. It must be noted that the proposals agreed for consultation at the Preferred Options stage may be subject to change following further consideration prior to publication of the Submission Version Local Plan scheduled for February 2018. The submission of the Local Plan to the Secretary of State is proposed to follow in June 2018.

4. **How this report links to Corporate Priorities**

- 4.1 The Local Plan will have implications for all four aims of the 2015-2019 Corporate Plan, namely:

Aim 1 -To help create a safer and healthier environment for our communities to live and work

Aim 2 - To meet our financial challenges and provide value for money

Aim 3- To help create a strong economy by supporting further regeneration of towns and villages

Aim 4 - To protect and improve the environment

5. **Options and Analysis**

- 5.1 Option 1 – (recommended). The Local Plan Preferred Options is agreed for public consultation along with the timetable for taking the plan forward. This option is considered to accord with relevant national policy, guidance and the Council’s evidence base. The proposed timetable also sets an ambitious timeframe for the submission of the Local Plan to ensure that it can be adopted as soon as possible.

- 5.2 Option 2 – (not recommended). This option relates to a decision being taken by the Council to support alternative proposals for the Local Plan and timetable. This option is not supported as unless the Local Plan is based on credible evidence, relevant policy and legislation, it will increase the risk of the plan being found “unsound” at examination. Alternative timetables for the preparation of the Local Plan either increase the risk that the plan will be delayed or that insufficient consideration is given to issues arising from the consultation ahead of the submission of the Local Plan.

- 5.3 Option 3 – (not recommended). The Council does not support issuing the Preferred Options Local Plan for public consultation. This would

result in delay in submitting the Local Plan and therefore reduce the Council's ability to control development in the District.

6. Implications

6.1 Community Safety - (Crime and Disorder Act 1998)

None direct

6.2 Workforce

Highlighted in the report

6.3 Equality and Diversity/Equality Impact Assessment

This report has been prepared in accordance with the Council's Diversity and Equality Policies. An Equalities Impact Assessment of the Local Plan accompanies this report (Appendix 3).

6.4 Financial Considerations

Highlighted in the report

6.5 Legal

The Planning and Compulsory Purchase Act 2004 (as amended by the Localism Act 2011) and the Town and Country Planning Regulations 2012 set out the requirements for the preparation of the Local Plan. The Self-Build and Custom Housebuilding Act 2015 places a duty on councils to keep a register of individuals and community groups locally who want to acquire land for self-build homes and to have regard to these registers in carrying out its planning function.

6.6 Sustainability

A Sustainability Appraisal of the Local Plan and alternative options has been undertaken (Appendix 2). Its findings have informed the recommendations made in this report.

6.7 Internal and External Consultation

A period of public consultation will commence on the Local Plan Preferred Options and Sustainability Appraisal on 31st July. The recommendations in this report have been informed by external feedback obtained during the Local Plan Options consultation held during the Summer of 2015 and Preferred Options Sites and Boundaries consultation published in April 2016. Internal feedback

from Councillors and officers has also informed the preparation of the plan to date.

6.8 Risk Assessment

If the Council does not agree to consultation on a Local Plan that is informed by evidence and relevant national policy and legislation, it will increase the risk that the Local Plan will be found “unsound” at Examination. Without an up to date Local Plan in place, there is an increased risk of development coming forward under the National Planning Policy Framework rather than local policy. This provides less control over applications than is desired. This risk will be minimised, but not eliminated, if the Council decides to support the option recommended in Section 5. The Preferred Options Local Plan does not include a site allocation to meet the identified need for gypsy and travellers accommodation. This carries a degree of risk as the plan does not fully demonstrate how this need will be met. The risk is in part mitigated through the criteria based policy in the plan which allows for future sites to be approved if they are suitable. It should be noted that at this stage, the Council is not declaring that it considers the Local Plan to be “sound”. The purpose of the proposed consultation is to test and refine the plan if necessary so that the Council can publish a plan which it declares sound at the formal publication stage due in 2018.

7. **Background and Detail**

Background

The Core Strategy

- 7.1 The Staffordshire Moorlands Core Strategy was adopted in March 2014. The Core Strategy identified a housing requirement of 300 homes per year and an employment land requirement of at least 24ha over the period 2011 to 2026. The Core Strategy also established the appropriate distribution of development across the District with the emphasis being on development in the market towns of Leek, Biddulph and Cheadle with a more modest scale of development in the villages that lie within the Rural Area. However, the Planning Inspector who considered the Core Strategy determined that an early and comprehensive review of the Core Strategy for the period 2016 – 2031 would be required to take account of longer term development requirements. The review of the Core Strategy would also roll it forward into a single local plan combined with site allocations. The proposed Preferred Options Local Plan consultation is a key element of this process.

The Local Plan

- 7.2 The Staffordshire Moorlands Local Plan will be a District wide development plan which replaces the Staffordshire Moorlands Core Strategy, Biddulph

Area Action Plan (AAP) and previous 1998 Local Plan to provide a framework for delivering development for the period 2016 to 2031.

- 7.3 The Local Plan sets out the development strategy, strategic and development management policies and land designations for the District. It influences how and where the Staffordshire Moorlands will develop in the future. It sets out what the District Council would like to achieve in each of the main towns and the rural areas outside the Peak District National Park. The Local Plan also provides the framework for future detailed guidance to supplement the policies.
- 7.4 The Local Plan covers only that part of the District for which the Council has responsibility as a local planning authority. It therefore excludes the Peak District National Park which is covered by a separate policy framework prepared by the Peak District National Park Authority.
- 7.5 The proposed consultation seeks views on the above elements of the Preferred Options Local Plan. The Core Strategy provides the basis for many of the proposed policies. Where amended or new policies are proposed in response to new evidence or Government policy, the proposed consultation document identifies the degree to which they are consistent with the Core Strategy. This also applies to other element of the plan such as the Challenges and Vision where some minor amendments from the Core Strategy are proposed.
- 7.6 This consultation builds on two previous public consultation regarding the Local Plan:
- **Site Options** consultation held between July and September 2015. Over 5500 responses were received regarding site and boundary options for housing, employment, mixed-use, open space, town centres, retail frontages, settlement boundaries and infill. Views were also sought on policy matters and potential changes to the Statement of Community Involvement (SCI). An updated SCI was adopted by the Council on 13th April 2016.
 - **Preferred Options Sites and Boundaries** consultation held between April and June 2016. Over 8600 responses were received. Analysis of the consultation responses has informed the content of this consultation and updates to the evidence base. Summaries of responses are provided in Appendix 4, 5 and 6 to this report.
- 7.7 On 8nd March 2017, the District Council agreed new housing and employment land requirements for Staffordshire Moorlands to be taken forward into the Preferred Options Local Plan. The agreed requirements took account of the latest evidence including an updated housing needs assessment and the requirements of the National Planning Policy Framework and National Planning Practice Guidance. The agreed requirements were as follows:

- Housing – annual average requirement of 320 homes per year. This requirement would support a net growth of over 800 jobs in the District by the year 2031 took account of wider issues such as the demand for affordable housing
- Employment – 27ha (gross) in total to support the preferred level of housing and employment growth

Policy context and evidence

7.8 The Preferred Options Local Plan seeks to respond to national policy and legislation and evidence as highlighted in this section of the report. Paragraph 182 of the National Planning Policy Framework (NPPF) states that Local Planning Authorities are required to submit a Local Plan for examination that is considered to be “sound” – namely that it is:

- **“Positively prepared** – the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities which it is reasonable to do so and consistent with achieving sustainable development;
- **Justified** – the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence;
- **Effective** – the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and
- **Consistent with national policy** – the plan should enable the delivery of sustainable development in accordance with the policies in the NPPF.”

7.9 In order for the Local Plan to be recommended for adoption by the Secretary of State, it must also be found to be legally compliant in terms of the relevant statutory requirements for undertaking a Local Plan. These include compliance with the Duty to Co-operate, the preparation and consideration of a Sustainability Appraisal of the plan, and compliance with consultation procedures as set out in the Council’s Statement of Community Involvement and regulations.

7.10 Paragraph 14 of the NPPF is a critical element of national planning policy both in relation to the preparation of Local Plans and in determining planning applications. As such, in order to pass the tests of soundness, it is essential that Local Planning Authorities to comply with its requirements. In relation to plan-making, the paragraph states that:

*“At the heart of the National Planning Policy Framework is a **presumption in favour of sustainable development**, which should be seen as a golden thread running through both plan-making and decision taking.*

For plan-making this means that:

- *local planning authorities should positively seek opportunities to meet the development needs of their area;*
- *Local Plans should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change, unless:*
 - *any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole; or*
 - *specific policies in this Framework indicate development should be restricted¹*

7.11 It is therefore clear that identified development needs for the District should normally be met. This issue was discussed in more detail in the report to Council Assembly on 8th March 2017 regarding the Local Plan development requirements for housing and employment. In terms of how this may be achieved, Paragraph 157 of the NPPF states that “...*Local Plans should:*

- *...indicate broad locations for strategic development on a key diagram and land-use designations on a proposals map*
- *allocate sites to promote development and flexible use of land, bringing forward new land where necessary, and provide detail on form, scale, access and quantum of development where appropriate*
- *identify areas where it may be necessary to limit freedom to change the use of buildings, and support such restrictions with a clear explanation*
- *identify land where development would be inappropriate, for instance because of its environmental or historic significance...*”

7.12 The NPPF specifies that the **Green Belt** is of great importance in order to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. The NPPF is clear that “*once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan*” (Para. 83). However, as outlined in this report, the NPPF is equally clear that “*Local Plans should meet objectively assessed needs...unless specific policies...indicate development should be restricted*” (Paragraph 14).

7.13 With regards to **housing land**, Paragraph 47 of the NPPF requires local planning authorities “to identify a specific deliverable² sites sufficient to provide five years worth of housing against their housing requirements” with a buffer to provide choice and competition. In the medium to long term, the NPPF states that local planning authorities should “identify a supply of

¹ “For example, those policies relating to sites protected under the Birds and Habitats Directives (see paragraph 119) and/or designated as Sites of Special Scientific Interest; land designated as Green Belt, Local Green Space, an Area of Outstanding Natural Beauty, Heritage Coast or within a National Park (or the Broads Authority); designated heritage assets; and locations at risk of flooding or coastal erosion.”

² “To be considered deliverable, sites should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years and in particular that development of the site is viable. Sites with planning permission should be considered deliverable until permission expires, unless there is clear evidence that schemes will not be implemented within five years, for example they will not be viable, there is no longer a demand for the type of units or sites have long term phasing plans.”

specific, developable³ sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15”.

- 7.14 The NPPF allows for a windfall allowance to be included in the local planning authorities housing land supply calculations. This matter is discussed later in this report.
- 7.15 With regards to **employment land**, the NPPF requires local planning authorities to set criteria or identify strategic sites for local and inward investment to match the strategy and to meet anticipated needs over the plan period (Paragraph 21). It goes on to state that when there is not a reasonable prospect of a site being used for employment, alternative uses should be considered (Paragraph 22).
- 7.16 In relation to **retail and town centres**, the NPPF places a strong emphasis on the need to support the vitality and viability of town centres. Paragraph 23 requires Local Plans to; define a network and hierarchy of centres, define the extent of town centres and related primary and secondary frontages. Primary frontages are defined as parts of a town centre with a high proportion of retail units. Secondary frontages include opportunities for a wider range of town centre uses such as restaurants and other businesses.
- 7.17 Paragraph 23 of the NPPF requires local planning authorities to undertake an assessment of the need for additional retail floorspace and for Local Plans to allocate land to accommodate identified needs.
- 7.18 Paragraph 73 of the NPPF requires that Local Plans provides sufficient land for **open space, sports and recreation** as identified by a needs assessment. Detailed policy for **traveller’s accommodation** is not set out in the NPPF. However, Paragraph 159 makes it clear that housing needs of different groups of the community should be assessed. The footnote 34 of the NPPF cross references to a separate Government policy statement, which determines how the needs for traveller sites should be assessed. Paragraph 9 of the Government’s planning policy for traveller sites states that local planning authorities should set pitch targets for gypsies and travellers and plot targets for travelling showpeople which address the likely permanent and transit site accommodation needs of travellers in their area, working collaboratively with neighbouring local planning authorities.
- 7.19 Paragraph 162 of the NPPF set out policy in relation to **infrastructure provision**. It states that local planning authorities should assess the quality and capacity of infrastructure to meet forecast demands.
- 7.20 In order to address strategic matters as required under the Duty to Co-operate as set out in section 110 of the Localism Act, the Council has worked with a number of relevant public bodies to identify and address such matters. This

³ “To be considered developable, sites should be in a suitable location for housing development and there should be a reasonable prospect that the site is available and could be viably developed at the point envisaged.”

process will continue during the preparation and implementation of the Local Plan. To date, the following issues have been identified:

- The provision of suitable supporting infrastructure for planned growth, including transport, education, utilities, green infrastructure and health with Staffordshire County Council, Highways England, Clinical Commissioning Groups and other bodies
- The need to protect the setting of the Peak District National Park
- Meeting development requirements across the entire District, including the Peak District National Park and neighbouring areas with shared housing market and economic relationships
- Engaging in the emerging proposals for economic growth and investment through the Constellation Partnership which seeks to benefit from planned investment in HS2 at Crewe and beyond

7.21 In preparing this Local Plan, consideration has also been given to other new or emerging policies and regulations, including; the Housing and Planning Act 2016, the Self-Build and Custom House Building Act 2015 and associated Regulations (2016), the Town and Country Planning (Brownfield Land Register) Regulations 2017, Town and Country Planning (Permission in Principle) Order 2017, Neighbourhood Planning Act 2017 and the Housing White paper published in February 2017.

7.22 The Housing White Paper published in February 2017 which sets out a number of potential policy changes and information relating to the provision of housing, design and Green Belt amongst others. However, the final outcome of consultation on the White Paper is awaited. The Self-Build and Custom House Building Act 2015 and associated Regulations (2016) introduced a new requirement for District Council to maintain a register of individuals and associations of individuals who are seeking to acquire a plot of land to provide their own home. Councils are then required to have regard to the register in carrying out its planning and regeneration functions. The Regulations require that sufficient land is granted planning consent to meet the demand on the register within three years.

7.23 The Town and Country Planning (Brownfield Land Register) Regulations 2017 makes provisions for Councils to maintain a register of brownfield sites that are suitable for residential development irrespective of their planning status. The first register must be published by the end of 2017. Sites identified in Local Plans may be included on the register alongside others that are considered suitable for development. Permission in Principle (PiP) may then be granted for some sites on the register. Further information is due to be published by Government to set out how PiP will be implemented. This issue will require further consideration in the next iteration of the Local Plan.

7.24 In addition to national policy, the Preferred Options Local Plan seeks to reflect the extensive evidence base which has been commissioned to ensure that the plan is robust. Key studies include:

- Strategic Housing Market Assessment (SHMA) (2014) and Update (2017)

- Employment Land Study (2014) and Update (2017)
- Updated Gypsy and Traveller Needs Assessment (2015)
- Retail Study (2013)
- Level 1 Strategic Flood Risk Assessment Update (SFRA) (2015)
- Ecological Study (2015) and update (2017)
- Cheadle Town Centre Transport Study (2015) and Phase 2 Assessment (2017)
- Green Belt Review (2015) and Updates (2016 and 2017)
- Strategic Housing Land Availability Assessment (SHLAA) (2015)
- Green Infrastructure Strategy (2017)
- Open Space, Sports and Recreation Study Interim Report (2017)
- Development Capacity, Viability and Community Infrastructure Levy Study, including
 - Infrastructure Delivery Plan (2016-2017)
 - Habitats Regulations Assessment (2017)
 - Landscape, Local Green Space and Heritage Impact Assessment (2016):
 - Development Capacity Study (2008/9, and update 2010/11)
 - Landscape & Settlement Character Appraisal (2008)
 - Renewable Energy/Low Carbon Energy Study (2010)
 - Tourism Study (2011)
 - Ecological Surveys (2010/11)
 - Historic Environment Character Assessment: Staffordshire Moorlands (2010)

7.25 Full details of the evidence base are available on the Council's website. Where directly applicable to a site, a summary of relevant evidence is provided in the site pro formas (Appendix 4). Proposed changes to policies in response to the new evidence are identified within the proposed Preferred Options Local Plan document (Appendix 1).

7.26 The Local Plan Preferred Options document is supported by a Sustainability Appraisal (Appendix 2). The appraisal has helped to inform the content of the Local Plan. The Sustainability Appraisal itself is also proposed to be subject to public consultation alongside the Local Plan. The appraisal considers options for development requirements, sites and policy proposals. The Sustainability Appraisal incorporates a draft Habitats Regulations Assessment Report which any impacts of the Local Plan against the conservation objectives of sites of European importance for nature conservation in, and outside the plan area, to ascertain whether it would adversely affect the integrity of any sites concerned. These sites, often just referred to as European sites, include Special Areas of Conservation (SACs) and Special Protection Areas (SPAs).

7.27 An Equalities Impact Assessment (Appendix 3) has also been undertaken to consider how the Local Plan may impact upon different groups within the community. A summary of relevant findings are included in the site pro formas (Appendix 4). Where changes to policy are proposed in response to feedback from the Sustainability Appraisal, this is recorded in the proposed Preferred Options Local Plan document (Appendix 1).

Consultation feedback

7.28 A further key consideration for the Preferred Options Local Plan is consultation feedback. A total of 8603 individual responses were received from 2643 individuals and organisations. A site-by-site summary of feedback regarding specific sites received in response to the Preferred Options Sites and Boundaries consultation is provided in the site pro formas in Appendix 4. Feedback in relation to additional suggested sites is summarised in Appendix 5. A summary of individual responses to each of the 41 questions that were subject to the 2016 Preferred Options Sites and Boundaries is provided at Appendix 6. This includes the nine petitions that were submitted which were as follows:

Petition	Number of signatures
Save the Mount, Leek	1092
Against proposed site, Kingsley	184
Against development of Akesmore Lane, Biddulph	450
Against Travellers Site (Forsbrook Parish Council)	1450
Checkley (non) Travellers site	222
Against housing, Newpool Road, Knypersley, Biddulph	883
Against development adj to Knypersley Hall, Biddulph	114
Support for revised ADD03 (from north Biddulph residents)	361
Cheadle South West Housing and lack of open space	952

7.29 Many of the consultation responses submitted in relation to proposed development sites came from residents or representative groups who were concerned about the impacts of development. Common concerns include:

- Loss of countryside and/or Green Belt
- Infrastructure constraints (highways, schools, health, utilities)
- Highway safety
- Ecological / environmental impacts
- Over-development / harm to character of the area
- Development boundaries which are either too restrictive or not restrictive enough

7.30 As highlighted above, consultation feedback from residents, statutory bodies, developers, landowners and other stakeholders is set out along with recommended Council responses in Appendices 4 to 6. This includes support from landowners with sites in the 2016 Preferred Options Sites and Boundaries consultation and others promoting alternative sites.

Proposed Preferred Options Local Plan

7.31 The Preferred Options Local Plan (Appendix 1) comprises of the following main elements:

- A Portrait of Staffordshire Moorlands - a description of the District
- The Challenges - a summary of the key challenges facing the District
- The Vision – detailing what the Staffordshire Moorlands will be like in 2031
- Aims and Objectives – stating what the Local Plan is proposing to achieve
- A Spatial Strategy and Strategic Policies – setting out the over-arching strategy and policies for the District
- Development Management Policies – setting out specific measures to manage development
- Strategic Development Site Policies - specific policy to guide the development of strategic sites
- Implementation and Monitoring - a framework for how the plan will be implemented and monitored
- Maps - for Leek, Biddulph, Cheadle and the Rural Areas which identify proposed sites and boundaries

7.32 The Local Plan carries forward the above details from the adopted Core Strategy with various exceptions where amendments to the Core Strategy are proposed. Amendments include re-worded policies, new policies and the provision of specific maps to illustrate proposed sites and boundaries in more detail. Where amendments to key elements of the Core Strategy are proposed, the Preferred Options Local Plan document identifies them (Appendix 1). Reasons for changes vary and include:

- New policies to address matters not included in the Core Strategy e.g. site allocations
- Updated vision, challenges, objectives, policies or supporting elements of the Local Plan to reflect:
 - New evidence
 - Factual updates
 - New Government policy or regulations
 - Consultation feedback

7.33 The following list identifies some of key proposals and changes suggested for the Preferred Options Local Plan:

- **Amended spatial distribution of housing** across the District as follows; Leek 30%, Biddulph 20%, Cheadle 25% and Rural Areas 25% This amends the approach of the Core Strategy by reducing the housing requirement for the Rural Areas by 3% and increasing Cheadle's requirement by the same amount (Policy SS3). This change is proposed in response to significant constraints identified in the supply of suitable sites to serve the Rural Areas. In particular, Green Belt limits opportunities for growth across much of the Rural Areas. The plan still seek to focus the majority of development in the towns and larger villages which are more sustainable

- **Reduced Green Belt release** when compared to the 2016 Preferred Options Sites and Boundaries (Maps in Local Plan appendices). Green Belt can only be released in exceptional circumstances. The Core Strategy acknowledged that some Green Belt release would be necessary to enable sufficient housing growth in Biddulph. The Preferred Options Local Plan seeks to deliver Biddulph's housing requirement whilst ensuring that Green Belt release is kept to a minimum and is therefore exceptional. 251 homes are now planned in land currently designated as Green Belt in Biddulph (part of Wharf Road and Tunstall Road sites) compared to 480 in the 2016 consultation. This has been achieved by amendments to the proposed site allocations. Housing in the Green Belt in the Rural Areas has also reduced significantly from 554 to 75 through adjustments to recommended sites and the Spatial Strategy.
- **Residual housing requirement** for the District of land for 3859 new homes to be delivered between April 2017 and March 2031 (Policy SS4). This takes account of the housing backlog since 2012, housing completions between 2012 and 2017 and housing commitments (homes with planning consent) as of 31 March 2017. The housing trajectory identified in Appendix 7 of the Local Plan sets out the anticipated rate of development from 2012 to 2031. This is expected to be below the average annual rate of 320 homes per year until 2020/2021. The average rate of development is then projected to be above 320 per year between 2022/2023 and 2028/2029 before falling again for the final two years of the plan. This is due to the expected lead in times and build out rates for the proposed site allocations.

The residual requirement will be met through site allocations and windfall allowances. The Core Strategy incorporated a "slippage allowance" of 10% of the housing requirement for each area to allow flexibility in the supply. This was based on an assumption that 10% of sites would not come forward as anticipated. This allowance is no longer incorporated into the housing calculations as it is considered that the proposed approach to monitoring and housing supply as set out in Local Plan provide a greater degree of flexibility than the Core Strategy. Furthermore, in Biddulph and the Rural Areas, the slippage allowance placed greater pressure on the need to release land from the Green Belt. It should be noted that the total planned level of housing delivery does not precisely match the residual requirement in Leek and the Rural Areas. In Leek, planned delivery exceeds the requirement over the plan period by 32 homes. In the Rural Areas, the requirement is exceeded by 86 homes. This is due to the fact that the sum total of site capacities and windfall allowances do not always correspond exactly with outstanding number of homes to be provided. This results in the Local Plan exceeding the residual requirement by a total of 118 homes.

Area	%	Gross requirement ⁽⁴⁾	Completions	Commitments	2017 net requirement
Leek	30%	1794	241	538	1015
Biddulph	20%	1196	205	106	885
Cheadle	25%	1495	85	244	1166
Rural	25%	1495	148	554	793

Residual housing requirement (2017 to 2031)

- **Identification of housing requirements for Neighbourhood Plan areas** taking account of factors including Local Plan proposals in the Parish and sustainability (Policy SS4). They are as follows:

Neighbourhood Plan Area	Housing Requirement 2017 - 2031 (dwellings)
Biddulph Parish	900
Brown Edge Parish	25
Checkley Parish	60
Draycott-in-the-Moors Parish	5 - 10
Leekfrith Parish	4 - 8
Rushton Parish	4 - 8

- **Employment land requirements** of 8.1ha for Leek, 5.4ha in Biddulph, 5.4ha in Cheadle and 8.1ha for the Rural Areas (Policy SS4)
- **Development boundaries** are proposed for the towns and larger villages but not in the smaller villages as previously indicated in the Core Strategy and 2016 Preferred Options Sites and Boundaries consultation (Policy SS3 and maps in Local Plan appendices). Amendments are suggested to some of the development boundaries to reflect consultation feedback, development that has occurred since the original boundaries were set in 1998, sites with planning permission and proposed allocations.
- **Area Strategies** for the towns, villages, other rural areas and Churnet Valley to set out the key principle and considerations within each of the respective areas (Policies SS5 to SS11). These strategies are broadly consistent with those previously identified in the Core Strategy.

- **Requirement for developer contributions and potentially the Community Infrastructure Levy** to support improvements to infrastructure and services to accommodate growth (Policy SS12)
- **A new approach to support small infill developments** adjoining larger villages and well related to the existing pattern of development in the smaller villages, subject to landscape, infrastructure and other considerations (Policy SS3, SS4 and H1)
- **Consolidation and clustering of development sites** to support deliverability and support infrastructure improvements. Major development sites and clusters include (see Policy H2, E2 and Strategic Development Site Policies for full lists):
 - Land at the Mount, Leek – residential development of approximately 417 homes and a new school
 - Land at Newton House, Leek – residential development of approximately 179 homes and employment
 - Cornhill East, Leek – mixed-use development of approximately 50 homes and employment
 - Wharf Road Strategic Development Area, Biddulph – mixed-use development of approximately 588 homes, employment and retail
 - Biddulph Mills (Yarn and Minster) – residential development of approximately 57 homes
 - Tunstall Road Strategic Development Area, Biddulph – mixed-use development for approximately 80 homes and employment
 - Cheadle North Strategic Development Site – development of approximately 320 homes and a new school
 - Cecily Brook Strategic Development Area, Cheadle – development of approximately 106 homes
 - Mobberley Strategic Development Area, Cheadle – development of approximately 430 homes
 - Blythe Vale, Blythe Bridge – mixed-use development including residential development of approximately 300 homes and employment
 - Land off Ash Bank Road, Werrington – residential development of 75 homes
- **Policy support for self-build and custom-build housing** developments which will be negotiated on a site-by-site basis having regard to the Self and Custom Build Register (Policy H1)
- **Policy support for housing for particular groups, including elderly people.** This includes provisions to apply the optional nationally described space standards and optional accessibility standards as set out in Part M of the Building Regulations to help ensure that homes offer enough space and accessibility to support adaptability (Policy H1)
- **Affordable housing requirement of 33%** as per the Core Strategy but with new mix of affordable to include 60% social/affordable rented and 40% intermediate/starter homes (Policy H3)

- **A criteria based policy travellers sites** is proposed to determine applications that would support the identified need of 6 travellers pitches to 2018/19 and a further 2 up to 2033/34. No site allocations are included in the Local Plan due to a lack of available sites. The risks associated with this approach are considered in Section 6.8 of this report. (Policy H4)
- **Policies to support the vitality and viability of town centres.** This includes support for a new food store in Biddulph. (Policies TRC1, 2 &3 & SS6)
- **Policies to support the implementation of draft and emerging strategies for Green Infrastructure, Sports, Open Space and Recreation** (Policies C2 & C3)
- **Policies to support tourism and cultural developments** in the District (Policy E4)
- **Design and conservation and landscape and setting policies** to ensure high quality design and the preservation of landscapes (Policies DC1, 2 & 3)
- **Newly proposed Local Green Spaces to protect green areas** which are special to local communities due to their beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife. This designation will replace some of the former Visual Open Space designations as identified in the previous Local Plan (Policy DC4)
- **Applying the Ministerial Statement regarding wind turbines whereby development is restricted without community support** (Policy SD2)
- **A new policy to protect and enhance trees, woodland and hedgerows** (Policy NE2)
- **Transport policies to ensure the provision of suitable transport links.** Changes include the provision of parking guidance to help shape developments (Policies T1 and T2)

Local Plan timetable and consultation

- 7.34 It is proposed the Preferred Options Local Plan and associated Sustainability Appraisal will be subject public consultation from 31st July to 22nd September. This equates to nearly eight weeks. This goes beyond the standard six week period of consultation in order to account for the summer holiday period. Costs for the consultation will be met from the Regeneration Service's budget.
- 7.35 Properties in the District and contacts on the consultee database will be notified directly about the details of the consultation alongside wider publicity in line with the Council's Statement of Community Involvement. This includes wider press releases, site notices and evening public consultation events.

Consultation documents will be available on the Council’s website, Moorlands House, Biddulph Town Hall, Cheadle One Stop Shop and local libraries. Events are currently planned as follows:

- Biddulph - Town Hall, 9th August
- Leek - Moorlands House, 16th August
- Werrington – Methodist Chapel, 24th August
- Blythe Bridge – Village Hall, 30th August
- Cheadle – Guild Hall, 7th September

7.36 It must be noted that the proposals agreed for consultation at the Preferred Options stage may be subject to change following further consideration prior to publication of the Submission Version Local Plan scheduled for February 2018. At this stage formal representations will be invited for a period of six weeks. Consultees at this stage should state whether they believe the Local Plan to be sound of legally compliant. Subject to consideration of the representation by the Council, the submission of the Local Plan and associated representations and supporting evidence to the Secretary of State is proposed to follow in June 2018. The following key milestones are recommended to be incorporated into a future iteration of the Local Development Scheme which establishes the timetable for the Local Plan:

Stage	Dates
Preferred Options Local Plan	
Consultation start	31 July
Consultation end	22 September (7.5 weeks)
Publication of Local Plan	
Publish Local Plan (statutory 6 week period for representations)	February 2018
Closing date for representations	March 2018
Submission of Local Plan to Secretary of State	
Submit Local Plan	June 2018

7.37 Subject to the approval of the Preferred Options Local Plan, officers will continue working to plan and implement the consultation arrangements. This will include updates to the website, preparation of the online consultation system and response forms.

7.38 Approval is also sought for the Executive Direct (Place) to make non-material amendments to the Local Plan and supporting material in the run up to the consultation start date. This will include the inclusion of monitoring indicator tables in Chapter 10, details in Appendix 9 which will summarise which Local Plan policies will supersede those in the Core Strategy, Appendix 12 (Glossary), grammatical, typographical and formatting issues.

Introduction and background

1 Introduction and background

The Local Plan

1.1 The Staffordshire Moorlands Local Plan is a District wide development plan which replaces the Staffordshire Moorlands Core Strategy, Biddulph Area Action Plan (AAP) and previous Local Plan to provide a framework for delivering development for the period 2016 to 2031.

1.2 The Local Plan sets out the development strategy, strategic and development management policies and land designations for the District. It influences how and where the Staffordshire Moorlands will develop in the future. It sets out what the District Council would like to achieve in each of the main towns and the rural areas outside the Peak District National Park. The Local Plan also provides the framework for future detailed guidance to supplement the policies.

1.3 The Local Plan covers only that part of the District for which the Council has responsibility as a local planning authority. It therefore excludes the Peak District National Park which is covered by a separate policy framework prepared by the Peak District National Park Authority.

This Local Plan comprises of the following:

- A Portrait of Staffordshire Moorlands - a description of the District
- The Challenges - a summary of the key challenges facing the District
- The Vision – detailing what the Staffordshire Moorlands will be like in 2031
- Aims and Objectives – stating what the Local Plan is proposing to achieve
- A Spatial Strategy and Strategic Policies – setting out the over-arching strategy and policies for the District
- Development Management Policies – setting out specific measures to manage development
- Strategic Development Site Policies - specific policy to guide the development of strategic sites
- Implementation and Monitoring - a framework for how the plan will be implemented and monitored
- Maps - for Leek, Biddulph, Cheadle and the Rural Areas which identify proposed sites and boundaries

The Core Strategy

1.4 The Staffordshire Moorlands Core Strategy was adopted in March 2014. The Core Strategy identified a housing requirement of 300 homes per year and an employment land requirement of at least 24ha over the period 2011 to 2026. The Core Strategy also established the appropriate distribution of development across the District with the emphasis being on development in the market towns of Leek, Biddulph and Cheadle with a more modest scale of development in the villages that lie within the Rural Area. However, the Planning Inspector who considered the Core Strategy determined that an early and comprehensive review of the Core Strategy for the period 2016 – 2031 would be required to take account of longer term development requirements. The review of the Core Strategy would also roll it forward into a single local plan combined with site allocations.

1.5 This consultation document forms part of the review of the Core Strategy and its policies. Once the new Local Plan is adopted, it will supersede the Core Strategy.

Local Plan Preferred Options consultation

1.6 This consultation seeks views on the Local Plan Preferred Options. This includes proposed policies, sites and boundaries. The Core Strategy provides the basis for many of the proposed policies. Where amended or new policies are proposed in response to new evidence or Government policy, this consultation document identifies the degree to which they are consistent with the Core Strategy.

1.7 This consultation builds on:

- **Site Options** consultation held between July and September 2015. Over 5500 responses were received regarding site and boundary options for housing, employment, mixed-use, open space, town centres, retail frontages, settlement boundaries and infill. Views were also sought on policy matters and potential changes to the Statement of Community Involvement (SCI). An updated SCI was adopted by the Council on 13th April 2016.
- **Preferred Options Sites and Boundaries** consultation held between April and June 2016. Over 8600 responses were received. Analysis of the consultation responses has informed the content of this consultation and updates to the evidence base.

Evidence Base

1.8 The Council needs to ensure that the Local Plan is based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area. The Council has been in the process of updating and commissioning additional evidence to support the Local Plan as follows:

- Strategic Housing Market Assessment (SHMA) (2014) and Update (2017)
- Employment Land Study (2014) and Update (2017)
- Updated Gypsy and Traveller Needs Assessment (2015)
- Retail Study (2013)
- Level 1 Strategic Flood Risk Assessment Update (SFRA) (2015)

- Ecological Study (2015) and update (2017)
- Cheadle Town Centre Transport Study (2015) and Phase 2 Assessment (2017)
- Green Belt Review (2015) and Updates (2016 and 2017)
- Strategic Housing Land Availability Assessment (SHLAA) (2015)
- Green Infrastructure Strategy (2017)
- Open Space, Sports and Recreation Study Interim Report (2017)
- Development Capacity, Viability and Community Infrastructure Levy Study, including Infrastructure Delivery Plan (2016-2017)
- Habitats Regulations Assessment of Preferred Options (2017)
- Landscape, Local Green Space and Heritage Impact Assessment (2016)

1.9 Evidence base studies that informed the Core Strategy and which are still of relevance to the Local Plan include:

- Development Capacity Study (2008/9, and update 2010/11)
- Landscape & Settlement Character Appraisal (2008)
- Renewable Energy/Low Carbon Energy Study (2010)
- Tourism Study (2011)
- Ecological Surveys (2010/11)
- Historic Environment Character Assessment: Staffordshire Moorlands (2010)

1.10 These documents are available to view on the Council's evidence base webpage:

1.11 www.staffsmoorlands.gov.uk/article/1163/Evidence-base

The Development Plan

1.12 Once adopted, the new Local Plan will form part of the statutory Development Plan setting out the local planning authority's policies and proposals for the development and use of land and buildings in the authority's area. Decisions on planning applications are required to be made in accordance with the Development Plan unless material considerations indicate otherwise. The material considerations could include national planning policy or significant local issues that have arisen since the Development Plan was prepared.

1.13 Whilst the Local Plan provides numerous individual policies on a wide range of planning matters, the Development Plan should be read as a whole during the consideration of planning applications.

1.14 Following the adoption of the new Local Plan, the statutory Development Plan for the Staffordshire Moorlands outside of the Peak District National Park will consist of:

- Adopted Staffordshire Moorlands Local Plan
- The saved policies of Staffordshire County Council's Minerals and Waste Local Plans (December 1999 and February 2003 respectively) and successor documents
- Any "made" Neighbourhood Plans

Waste and Minerals

1.15 Staffordshire County Council is responsible for waste and minerals plan preparation in Staffordshire, excluding the Peak District National Park. Waste and minerals planning applications in the District (excluding the Peak District National Park) are also determined by Staffordshire County Council.

1.16 As such, within the plan area the issue of minerals is covered by the saved policies of Staffordshire County Council's Minerals and Waste Local Plans, adopted in December 1999 and February 2003 respectively.

1.17 The 'saved policies' in those two plans also form part of the development plan for Staffordshire Moorlands and should be taken into account during the consideration of development proposals. Any successor documents would also form part of the Development Plan. A new Minerals Plan for Staffordshire is under preparation.

1.18 The NPPF also sets out policy in respect of minerals and waste to ensure that minerals of local and national importance are not needlessly sterilised by non-mineral development and that waste is appropriately managed. It also requires the prior extraction of minerals to be considered in these areas where practicable and feasible, if it is necessary for non-mineral development to take place.

Neighbourhood planning

1.19 Neighbourhood Plans were introduced through the Localism Act in 2011 and the Neighbourhood Planning Regulations (as amended) have been in place since April 2012. Neighbourhood planning enables members of a local community to take forward planning proposals for the area in which they live. Neighbourhood Plans are voluntary local planning policy documents that are written and developed by a community, usually led by a town or parish council.

1.20 In areas without a town or parish council, a Neighbourhood Forum can be established to prepare a plan. Once a neighbourhood plan is adopted, it will form part of the Development Plan for Staffordshire Moorlands. This means that it will become a major consideration during the determination of planning applications.

1.21 Neighbourhood plans prepared in the Staffordshire Moorlands Local Plan area should be in general conformity with the strategic policies of the Local Plan and the National Planning Policy Framework. Strategic policies are those which are essential to delivering the overall planning and development strategy for the District such as those that set out the number

of homes that should be built. Neighbourhood Plans cannot therefore plan for less development than is required by the Local Plan. However, they may be used to plan for additional growth, identify sites for development or protection, or provide guidance on matters such as design.

1.22 There are currently six "Neighbourhood Areas" in which Neighbourhood Plans are being prepared in the District:

- Biddulph
- Brown Edge
- Checkley
- Leekfrith
- Draycott-in-the-Moors
- Rushton

Peak District National Park

1.23 The Peak District National Park Authority is the planning authority with responsibility for plans and proposals within the National Park. The Peak District National Park Core Strategy was adopted in 2011. It provides the spatial strategy and strategic policies for the National Park up to the year 2026. A Development Management Policies Development Plan Document for the Peak District National Park is under preparation.

Policy Context

Integration of policy, plans and strategies

National Planning Policy Framework

1.24 Local Plans must be consistent with Government policy. The National Planning Policy Framework (NPPF) sets out Government policy regarding planning matters. Paragraph 14 of the NPPF is a critical element of national planning policy in relation to Local Plans. It states that:

“At the heart of the National Planning Policy Framework is a presumption in favour of sustainable development, which should be seen as a golden thread running through both plan-making and decision taking.

For plan-making this means that:

- local planning authorities should positively seek opportunities to meet the development needs of their area:
- Local Plans should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change, unless

- any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole; or
- specific policies in this Framework indicate development should be restricted”

1.25 This "presumption in favour of sustainable development" makes it clear that the District Council should seek to meet identified needs for development in Staffordshire Moorlands in the Local Plan unless there are very clear and robust reasons not to do so.

1.26 Another key element of the NPPF are the "tests of soundness". These tests will ultimately be applied by a Planning Inspector when the Local Plan is being examined. The Local Plan must be deemed to have met all of the tests in order for it to be adopted. The tests are that the Local Plan must be:

- **“Positively prepared** – the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities which it is reasonable to do so and consistent with achieving sustainable development;
- **Justified** – the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence;
- **Effective** – the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and
- **Consistent with national policy** – the plan should enable the delivery of sustainable development in accordance with the policies in the NPPF.”

1.27 The Government's detailed planning policy in relation to travellers is set out in separate document - "Planning policy for traveller sites".

1.28 In preparing this Local Plan, consideration has also been given to other new or emerging policies and regulations, including; the Housing and Planning Act 2016, the Self-Build and Custom House Building Act 2015 and associated Regulations (2016), the Town and Country Planning (Brownfield Land Register) Regulations 2017, Town and Country Planning (Permission in Principle) Order 2017, Neighbourhood Planning Act 2017 and the Housing White paper published in February 2017.

1.29 The Housing White Paper published in February 2017 sets out a number of potential policy changes and information relating to the provision of housing, design and Green Belt amongst others. However, the final outcome of consultation on the White Paper is awaited. The Self-Build and Custom House Building Act 2015 and associated Regulations (2016) introduced a new requirement for the District Council to maintain a register of individuals and associations of individuals who are seeking to acquire a plot of land to provide their own

home. Councils are then required to have regard to the register in carrying out their planning and regeneration functions. The Regulations require that sufficient land is granted planning consent to meet the demand on the register within three years.

1.30 The Town and Country Planning (Brownfield Land Register) Regulations 2017 make provisions for Councils to maintain a register of brownfield sites that are suitable for residential development irrespective of their planning status. The first register must be published by the end of 2017. Sites identified in Local Plans may be included on the register alongside others that are considered suitable for development. Permission in Principle (PiP) may then be granted for some sites on the register. Further information is due to be published by Government to set out how PiP will be implemented.

1.31 It is with these policies in mind that the Council has identified the proposals in this document for consultation. Analysis of responses received to this consultation and evidence considered by the Council will help to ensure that the Council is confident that it has met these tests by the time it agrees the Submission Version Local Plan.

1.32 The Local Plan has a key role in providing a spatial dimension for many other strategies and helping in their co-ordination and delivery throughout the Local Planning Authority area. The Local Plan must also accord with national policy and relevant legislation. This section summarises the main strategies and policy influences, which have both directed the approach taken in the Local Plan, and which in turn the Local Plan will help to deliver and potentially shape. These include the Local Transport Plan, Sustainable Community Strategy, Stoke and Staffordshire Local Enterprise Partnership Strategic Economic Plan, the Council's own Corporate Plan and the emerging work of the Constellation Partnership.

Local Transport Plan

1.33 Local transport authorities are required by the Transport Act 2000 to prepare Local Transport Plans (LTPs) for 5 year periods. Staffordshire County Council has prepared its third County-wide LTP for the period from 2011 to 2026. This Staffordshire-wide LTP does not include the Stoke-on-Trent conurbation, which has its own LTP (called the "Stoke-on-Trent LTP 2011/12 - 2025/26"). The Staffordshire LTP sets out the following objectives and priorities for transport:

- supporting growth and regeneration
- maintaining the highway network
- promoting equality of access and opportunity
- maintaining safety and security
- reducing road transport emissions and its effects on the highway network
- improving health and quality of life
- respecting the environment

1.34 The Staffordshire Moorlands Integrated Transport Strategy sets out the transport challenges and projects for the District for the period 2011 – 2026 and will be reviewed annually. It identifies the following challenges

- Maintain current condition of the highway network
- Improve accessibility to services and quality of life in local communities
- Minimise impact of traffic generated by Alton Towers
- Support vitality and viability of Biddulph, Leek and Cheadle town centres
- Accommodate sustainable development on brownfield and greenfield sites in Biddulph, Leek and Cheadle
- Support growth in tourism, particularly within the Churnet Valley
- Improve public transport links to key destinations including the North Staffordshire conurbation
- Raise awareness of environmental issues and encourage people to lead more sustainable lifestyles

Sustainable Community Strategy

1.35 The Sustainable Community Strategy sets a long-term vision and plan for bringing about a sustainable improvement in the social, economic and environmental conditions of Staffordshire Moorlands. It brings together the needs, interests and aspirations of the community of Staffordshire Moorlands. The latest Sustainable Community Strategy (2007–2020) sets out the following key outcomes:

- Children and young people
- Stronger, safer communities
- Older people and adults at risk of exclusion
- Economic regeneration
- Environment and climate change

1.36 The Council developed the Core Strategy in tandem with the development of the Sustainable Community Strategy through the Moorlands Together Local Strategic Partnership. In order to ensure that the Core Strategy was completely aligned with the Sustainable Community Strategy early public consultation on the Core Strategy and Sustainable Community Strategy was undertaken as a single exercise – such that both draw on the same information about community priorities and the same set of local data.

1.37 ‘Shaping the Future of Staffordshire 2005 – 2020’ – The Sustainable Strategy for the County focuses on six key priorities:

- enhancing the voice and profile of Staffordshire;
- developing strong and rural communities;
- integrating and sustaining transport; improving health and social care;

- supporting the growth of the local economy and encouraging prosperity; and
- sharing data and information.

1.38 Corporate Plan

1.39 The Council's Corporate Plan sets out the key aspirations of the Council for improving services for Staffordshire Moorlands. The 2015-2019 Corporate Plan identifies the following aims. Aims 1, 2 and 4 are of particular relevance to the Local Plan:

- Aim 1 - To help create a safer and healthier environment for our communities to live and work
- Aim 2 - To meet our financial challenges and provide value for money
- Aim 3 - To help create a strong economy by supporting further regeneration of towns and villages
- Aim 4: To protect and improve the environment

Stoke and Staffordshire Local Enterprise Partnership Strategic Economic Plan

1.40 The Local Enterprise Partnership is comprised of business and local government representatives that help to determine the economic and investment priorities for Stoke and Staffordshire. Their Strategic Economic Plan sets out five central goals for the period up to 2030 which are:

- A Core City - planned growth of the conurbation with Stoke-on-Trent acting as key driver
- Connected County - to build on our central location and connectivity to deliver the right blend of employment sites and infrastructure to support business growth and meet labour market needs
- Competitive Urban Centres - to significantly enhance growth opportunities from an attractive and thriving city of Stoke-on-Trent city and other towns across Staffordshire where people are eager to live, work and enjoy themselves
- Sector Growth - ensure globally competitive innovation, investment and enterprise-led expansion in large & small businesses across our priority sectors
- Skilled Workforce - to develop a modern and flexible skills to meet the needs of our growth sectors

Constellation Partnership

1.41 The Constellation Partnership is a grouping of local authorities and Local Enterprise Partnerships in Cheshire and north Staffordshire that have come together to maximise the potential benefits to the area arising from the proposed HS2 Hub Station at Crewe and related economic growth opportunities up to the year 2040. Land at Blythe Vale

has been identified by the Partnership as an investment opportunity. Whilst a strategy has yet to be published, the Local Plan will seek to provide support to this initiative insofar as it relates to the timescales for the Local Plan up to the year 2031.

Duty to Co-operate

1.42 Many social, environmental and economic issues can only be effectively addressed at a larger than local scale. This is because people and businesses do not confine their activities to one council area - for example, employees may live in one area and work in another; and a retail development may attract customers from across a wide catchment area. Similarly from an environmental perspective - surface water run-off in one location may present a flooding hazard to communities further 'downstream'; and water and air pollution may have a damaging impact on environmental assets some distance away.

1.43 In order to address such strategic planning issues in the absence of a regional planning function, Section 110 of the Localism Act set out a "duty to co-operate". This duty applies to all local planning authorities in England and to a number of other public bodies. The duty:

- relates to sustainable development or use of land that would have a significant impact on at least two local planning areas or on a planning matter that falls within the remit of a county council
- requires that councils set out planning policies to address such issues;
- requires that councils and public bodies "engage constructively, actively and on an ongoing basis' to develop strategic policies;
- requires councils to consider joint approaches to plan making

1.44 Paragraph 156 of the National Planning Policy Framework (NPPF) sets out the strategic issues where co-operation might be appropriate. Paragraph 179 of the NPPF requires councils to work together to address strategic priorities across boundaries and development requirements which cannot be wholly met within their own areas.

1.45 To date, in order to satisfy the duty to co-operate, Staffordshire Moorlands District Council has engaged authorities including Staffordshire County Council, Stoke-on-Trent City Council, Newcastle-under-Lyme Borough Council, Stafford Borough Council and the Peak District National Park Authority. Strategic issues that have been identified to date include:

- The provision of suitable supporting infrastructure for planned growth, including transport, education, utilities, green infrastructure and health with Staffordshire County Council, Highways England, Clinical Commissioning Groups and other bodies
- The need to protect the setting of the Peak District National Park

- Meeting development requirements across the entire District, including the Peak District National Park and neighbouring areas with shared housing market and economic relationships
- Engaging in the emerging proposals for economic growth and investment through the Constellation Partnership

1.46 The Council will continue to work with partners on strategic issues during the preparation of the Local Plan and beyond.

Sustainability and Equalities

1.47 This Local Plan Preferred Options document is supported by a Sustainability Appraisal. The appraisal has helped to inform the content of the Local Plan. The Sustainability Appraisal itself is also subject to public consultation alongside the Local Plan. If you wish to read and comment on the Sustainability Appraisal, you may find further details at Council offices and online: www.staffsmoorlands.gov.uk/localplan

1.48 An Equalities Impact Assessment has also been undertaken to consider how the Local Plan may impact upon different groups within the community. A Habitats Regulations Assessment is also ongoing to determine the implications of the emerging Local Plan on sites protected for nature conservation of European importance. These documents are also available to view at Council offices and on the Council's website.

How to respond

2 How to respond

2.1 We would like to know your views by **5pm on Friday 22nd September 2017.**

2.2 If you would like to send us your views on this consultation, you can do so by completing a questionnaire using one of the following methods:

- Online on the Local Plan consultation website: www.staffsmoorlands.gov.uk/localplan
- Email to forward.plans@staffsmoorlands.gov.uk
- Post to the address given below

2.3 The submission of comments online or by email is considered to be the most efficient means of responding. Use of the consultation website provides several benefits and enables consultees to:

- Read the Local Plan and supporting information online.
- Submit comments online (registration required).
- Read all comments submitted by other consultees.

2.4 To respond by e-mail, a questionnaire can be downloaded from the web address below, completed electronically and returned to us by e-mail at:

- forward.plans@staffsmoorlands.gov.uk

2.5 Alternatively, paper questionnaires can be collected from Council offices and libraries, (or downloaded from the web address above), completed by hand and returned by post to:

- Regeneration, Staffordshire Moorlands District Council, Moorlands House, Stockwell Street, Leek, Staffordshire, ST13 6HQ.

Please note: details of consultees registered on the consultation website and all respondents to the consultation will be added to our Local Plan contact list and will receive notification of future consultations.

All comments and the name of the individual or organisation responsible for them will be made available to view on the public consultation website. All representations may also be viewed at Council offices.

Consultation responses and associated information will be handled in accordance with the Data Protection Act.

Next steps

2.6 The timescales for key stages in the preparation of the Local Plan from this Local Plan Preferred Options consultation onwards are set out below:

- Local Plan Preferred Options consultation (current stage) - 31st July to 22nd September 2017
- Publication of Local Plan - formal representations invited - February - March 2018
- Submission of Local Plan to Secretary of State - June 2018

A Portrait of Staffordshire Moorlands

3 A Portrait of Staffordshire Moorlands

Location of the Staffordshire Moorlands

 District boundary

3.1 Staffordshire Moorlands is in north east Staffordshire, bordered by Cheshire to the north-west, Derbyshire to the east and Stoke-on-Trent to the south-west. The district covers an area of 57,624 hectares and has a population of 97,106 (2011 Census). Around 54% of the population is based in the three towns of Leek, Biddulph and Cheadle; around 22% of the population lives in the larger settlements of Cheddleton, Endon, Werrington & Cellarhead and Blythe Bridge, located in the west of the district. The remainder are divided among 34 rural parishes.

3.2 A third of the district lies inside the Peak Park - the Peak District National Park Authority represents the special interests of this Park. Of the remainder of the Moorlands, around 30 per cent is designated as Green Belt. The district has close links to parts of Cheshire, as well as to the city of Stoke-on-Trent, which exerts a strong influence on the west of the district in particular, and provides significant employment opportunities and services for many people in the district.

3.3 Between 1991 and 2001 Staffordshire Moorlands recorded a decline in population, although this was primarily driven by natural change as a result of falling birth rates. Since 2001 the District has continued to experience negative natural change, but has made up for this with positive net migration resulting in a steady increase in population.

3.4 The Strategic Housing Market Assessment (2014) concluded that the District does not form a self contained housing market area and that cross boundary relationships are shared with Stoke-on-Trent in particular.

3.5 There are approximately 43,585 houses in the District (2011 Census). According to the 2011 Census approx 80% of households owned their own home. As of October 2012, there was a total of 1,982 vacant dwellings in Staffordshire Moorlands, representing 4.6% of the total stock. Of these dwellings, 842 had been vacant for longer than 6 months.

3.6 The average household size is currently estimated to be 2.38 persons per household. The predominant type of housing in Staffordshire Moorlands is detached (40%) - the level of terraced stock is particularly low at 16.6%, against a regional level of 23.9%. The proportion of social rented households and private-rented households in Staffordshire Moorlands is also low in comparison with the average for Staffordshire or England.

3.7 The Council transferred its Local Authority housing stock to Moorlands Housing in 2001, with a stock base of around 3,700 properties principally located in the Leek, Cheadle and Biddulph areas.

3.8 The District experienced rapid house price growth from 2001 to 2007. After falling and stagnant prices during and after the recession, house prices began to rise again. However, as of 2015, average (median) house prices remain low in the District (£153,750) when compared to Staffordshire (£162,000) and England (£212,000). Houses prices within the District are also variable with the Rural Areas experiencing higher average house prices than in Leek, Biddulph or Cheadle.

3.9 In terms of the local economy, the public administration, education & health sectors are well represented and provide a larger proportion of employment than regional and national rates. Other key sectors of employment are distribution, hotels & restaurants and manufacturing. Manufacturing in particular is over-represented in comparison with regional and national levels and has experienced a much slower rate of decline than the West Midlands average. A third of the District lies in the Peak District National Park. Approximately 11% of Peak District National Park residents live in the Staffordshire Moorlands authority boundary.

3.10 Employment sites are almost at full capacity and there are a number of nationally significant businesses, including JCB and Alton Towers. However, there is a lack of good quality small to medium-sized industrial premises, which is suppressing demand. In particular, the limited level of development in recent years has restricted the availability of sites for local businesses to expand.

3.11 Whilst there is the continued presence of large nationally recognised employers, the business structure of Staffordshire Moorlands is dominated by micro and small businesses of between 1 and 10 employees which collectively accounted for over 92 per cent of all businesses in 2016.

3.12 As with elsewhere across the country, Staffordshire Moorlands has been experiencing rapid economic change, moving away from the traditional industries of agriculture, textiles/manufacturing, and coal mining towards service sector businesses such as finance, retailing, tourism, leisure and the knowledge economy. The District's workforce is seeing a trend towards growth amongst managers and senior officials and increases in the professional class.

3.13 Economic activity rates in the District (84.2%) are higher than national (77.8%) and regional averages (75.4%). ⁽¹⁾ Whilst this is a positive sign, average weekly pay for jobs available in the District is low (£486.2) when compared to the West Midlands (£510.20) or Great Britain (£540.20). ⁽²⁾

3.14 In terms of quality of life, the District is ranked 203 out of 326 Districts in England in the 2015 Index of Multiple Deprivation. Levels of deprivation are higher in certain areas of the District including Biddulph East area, a former coal board housing estate that suffers from a range of socio-economic and environmental deprivation problems and within Leek North and Cheadle North East areas.

3.15 There are strong 'cross-border' workforce links with the Stoke conurbation (about 15.4% of daily work-journeys into the Moorlands are from the conurbation and about 26.8% of the Moorlands resident workforce work in the conurbation). The District also has high car use and low public transport use. There is only one railway station in the District, at Blythe Bridge in the south-west of the District on the Crewe-Stoke-Derby line. The overall rate for all walk-to work journeys is only 0.56% (into/within/out of the Moorlands). However the equivalent figure for those who work in the Moorlands (which includes those who already live in the Moorlands) is significantly higher, at 13.08%.

3.16 The landscape and historic environment of the District is highly valued by both residents and visitors and contains a large and particularly rich stock of protected assets, reflected in the number of formal designations. There are extensive protected environments (SSSIs, Special Conservation Areas) distributed across the District and particularly within the Peak District National Park boundary. The District (outside the Peak District) also includes 967 Listed buildings and structures, 117 Scheduled Monuments and 14 Conservation Areas.

3.17 The landscape is characterised by attractive countryside comprising of farmland, extensive woodland areas, natural grassland and moors interspersed by distinctive settlements. The rural heritage of the District (historic farm buildings, archaeological sites,

parkland, historic landscape character) is also highly significant. There are currently 2 parklands included within the Historic England Register of Parks and Gardens and numerous other notable parklands.

3.18 Community life is a strong and distinctive feature of Staffordshire Moorlands. People identify closely with their towns, neighbourhoods and villages. Pride in local communities is high, leading to a rich pattern of community activities and organisations. Local parish councils, voluntary and community groups play a vital part in maintaining this special characteristic of the district.

Leek (pop. 20,768) is the principal town in the District with a large range of facilities. It stands below the open moorland of the Peak District and serves a wide rural area, yet it lies only 10 miles east of the North Staffordshire conurbation. It is a traditional market town with a large number of listed buildings and a strong sense of identity and has become a recognised national centre for antiques and fine arts. The town has an industrial heritage with a large number of former textile mills and streets of pre-1919 terraced housing.

Biddulph (pop. 19,892 including Biddulph Moor) is a former mining town that lies in the north west corner of the Staffordshire Moorlands District and it is near to the boundary with Cheshire and abuts the North Staffordshire conurbation to the South. It serves a much more constrained area to the west of the District with strong cross-boundary linkages, particularly with the conurbation. The building of a new by-pass has opened up opportunities for new development and regeneration. The area has issues relating to former National Coal Board housing and low demand in the east of the town. Biddulph is home to the celebrated Biddulph Grange Gardens, the best surviving example of an ornamental Victorian garden.

Cheadle (pop. 12,165) is the smallest town, located 10 miles south east of Leek and 10 miles west of the north Staffordshire conurbation and serving a more limited catchment area. Cheadle has suffered from under-investment and a poor infrastructure and its town centre has declined in recent years but a successful Heritage Economic Regeneration Scheme has led to some improvements. Whilst the town has some notable buildings, including the precious asset of St. Giles' RC Church, one of the finest works of the celebrated Victorian architect A W Pugin, the majority of its houses have been built since the First World War. Cheadle is only 4 miles from the A50 [T] Stoke to Derby road that links the M1 and M6 motorways.

The Challenges

4 The Challenges

4.1 Staffordshire Moorlands is an area of great diversity and opportunity which faces a number of significant challenges, both from external influences and pressures at a global, national and regional level and from changes occurring at a more local level. These will drive the changes that are going to be necessary to bring about a sustainable improvement in the social, economic and environmental conditions of the District. The following summary of the challenges and the related issues are those which were identified in the Core Strategy and any subsequent issues arising from the evidence base, the consultations we have undertaken, the various information and monitoring sources and the requirements of various key bodies and organisations.

Accommodating and delivering growth

- Need to meet the development requirements for the District, including housing and employment
- Need to ensure land identified for development needs is deliverable and can help to address historic under delivery
- Importance of working in partnership with other organisations and groups to deliver this growth and the necessary infrastructure improvements.

Strengthening the District's wider role

- Major strengths of Staffordshire Moorlands are the quality of its rural landscape with its proximity to the Peak District National Park and the quality of its market towns and villages which offer a highly regarded quality of life.
- Tourism is identified as one of the key areas where the District can have a major role to help bring more people in and diversify its economy.
- Need to strengthen connections with service providers and ensure better accessibility by road and public transport to and from our towns, villages, visitor destinations and strategic infrastructure
- District's role with the Peak District is particularly important – relieving the pressure of tourism, limiting impact on landscape and protecting sites of value.
- Potential threats from the growth of other centres, undermining the role of local centres and placing pressure on transport links.
- Supporting wider economic initiatives and strategies including the Local Enterprise Partnership's Strategic Economic Plan and the Constellation Partnership.

Creating healthy, sustainable communities

- Need to maintain and improve the quality and diversity of the District's communities by ensuring accessibility to services and determining the best pattern of provision and distribution of development across the District, which is sustainable, reflects the role of the different settlements and is not compromised by inadequate availability of infrastructure.
- Need to support the quality of community life through partnership working – improving community safety, tackling health inequalities, reducing the fear of crime, encouraging community cohesion, and tackling deprivation and inequalities.
- Need to improve provision and accessibility to health and education services and facilities and address under-provision or poor quality provision of recreational facilities and open space.

Adapting to changes in population structure

- Significant rise in older persons requires a better understanding of the aspirations and needs of people aged 60 and over, providing opportunities for people to work beyond the traditional retirement age, meeting changing housing needs, and developing services which maintain people's social contact and independence and provide choice.
- Decline in numbers of younger people and families is a major concern, particularly the rural areas where communities are ageing. Requires more investment in children and young people in terms of raising aspirations and educational attainment, improving access to services and recreational opportunities, providing affordable housing for future generations and providing appropriate local employment opportunities.
- Unless sufficient new housing is delivered to attract people of working age to the District, a projected decline in the working age population will have a detrimental impact on the local economy by restricting the supply of labour leading to a decline in businesses and the number of jobs in the District.

Improving the housing market

- There is a high need for affordable housing (224 to 432 per year) that is unlikely to be fully delivered through developer contributions alone

- There is a need to re-balance the housing stock away from smaller terraced properties towards better quality, aspirational properties to reduce the levels of net out-migration to neighbouring areas. There is also a need for accommodation to support a growing elderly population
- Need to support a diverse range of housing needs, including self and custom build and Starter Homes

Fostering business growth and economic sustainability

- Threats to the economy from a constrained labour force, the loss of existing employment sites due to closures, restructuring and pressure for redevelopment for other uses, especially housing.
- Need to support existing major employers whilst developing policies to diversify the economic base by making sites available for modern employment facilities.
- There is an identified lack of good quality modern premises and smaller sized units available for immediate take up and a significant under-representation of high quality office locations.
- Service sector is seen as the main driver for economic growth with an opportunity to capitalise on the growth of the 'experience economy' – tourism, leisure and retail - in particular developing the District's tourism role.
- To support economic growth there is a continuing need to ensure the provision of relevant employment skills, training and support to retain and develop local workforce.

Creating thriving, distinctive market towns

- Vitality and viability of town centres facing challenges associated with ever changing retail trends such as online shopping
- Biddulph and Cheadle catchment areas are not using the town for their main shopping and instead are choosing to shop outside the District, particularly for comparison shopping. Whilst there is some leakage of expenditure from Leek, the town centre performs relatively well in comparison
- A need for an additional centrally located convenience retail store in Biddulph has been identified to support the town centre

Tackling social exclusion and economic decline in the rural areas

- Economic development needs to recognise the contribution which the rural areas can make to the District's economy with a major role for tourism in terms of providing opportunities for jobs, attracting investment and bringing in wealth.
- The dispersed rural settlement pattern in the District means that accessibility to services and infrastructure is often limited
- There is often limited scope to accommodate significant new development in the rural areas due to the sustainability of sites
- The need for affordable housing is particularly critical to encourage young and/or smaller households to remain in the rural settlements but smaller sites and higher land values can make their delivery difficult
- There is a need to exploit opportunities arising from the closure of major developed areas in the countryside.

Protecting and enhancing the distinctive quality of the environment

- Whilst continuing to protect, manage and enhance the quality of the District's physical, natural and historic environment including its biodiversity is crucial, there is also opportunity to capitalise on the built and natural assets of the District and its heritage to maximise the quality of life for local residents, attract new investment and achieve economic benefits through tourism.
- Need to enhance and protect Green Infrastructure
- There is potential to raise the quality of new development still further, and to ensure that it contributes more significantly to meeting local distinctiveness and sustainability objectives.
- There is also a need to make better use of existing buildings which are of value and add to the character of settlements
- The setting of the District's settlements is important – the landscape provides an important edge to the urban area and defines their character. There are also important areas of open space and Local Green Space within settlements which need to be retained
- The close physical relationship of the District with the Peak District requires special attention to development which may impact on its setting, landscape and areas of value.

Tackling climate change

- Planning has a key role to play in mitigating the causes and effects of climate change through the location and nature of development and by helping to shape places which have lower carbon emissions and are resilient to climate change.
- The District should aim to contribute to the wider Government objective of achieving a low carbon future

- Energy efficiency in the design, construction and use of buildings will be vital to reducing the impact of development on climate change.
- Flooding is also an issue which has become significant in recent years due to increased incidences across the country. The Local Plan should seek to steer development to areas of low flood risk and support the delivery of appropriate mitigation and sustainable drainage where necessary

Making travel more sustainable

- High levels of car ownership and car usage and an over-dependence on use of the car for both work and non-work related journeys, partly as a consequence of poor public transport, particularly in the Rural Areas. This can lead to traffic congestion.
- Addressing these transport issues will require a range of measures aimed at ensuring maximum accessibility to development sites by public transport, walking and cycling as well as focusing development in the most sustainable locations

Consistency with Core Strategy

The Challenges identified in the Core Strategy are carried forwards with the following amendments:

- Removal of references to the term "North Staffordshire Major Urban Area (MUA)" which was a feature of the West Midlands Regional Plan which has now been revoked.
- New references to the need for the District to strengthen its wider role by supporting the Local Enterprise Partnership and Constellation Partnership
- Additional issue identified under the adapting to changes in the population structure heading to highlight the economic consequences of a declining working age population
- Updated housing market issues related to affordable housing, housing stock, self-build, custom-build housing and Starter Homes to reflect new evidence in the Strategic Housing Market Assessment and 2017 Update 2017 and new legislation
- Updated economic and town centre issue to relate to new evidence from the Employment Land Review and Retail Study
- Removal of references to Visual open Space as an environmental issue and inclusion of references to Local Green Space and Green Infrastructure to reflect NPPF, new evidence and current Local Plan.
- Updated climate change issue to reflect national policy
- Consolidated sustainable transport issues

The Vision

5 The Vision

5.1 The Vision is carried forward from the adopted Core Strategy and sets out the direction in which the Council would like to take the District in the long term and sets the context for deriving more detailed objectives and policies within the Local Plan. It is a vision which seeks to drive forward change and address the key challenges the District faces and shares a similar vision to the Sustainable Community Strategy as well as reflecting the Council's Corporate Plan and the community's aspirations. It is also a shared vision which will require the co-ordinated effort of many agencies and partners working together to achieve, including those working outside of the Staffordshire Moorlands.

5.2 The central theme of the vision will be to see Staffordshire Moorlands become an exceptional place to live, work and visit. This means balancing the need to foster sustainable growth where it is needed and beneficial, with the need to protect and enhance the District's heritage and its significant built and natural assets.

5.3 It is recognised that some parts of the proposed vision for the District may be aspirational but it is important that we gain a clear understanding about what sort of District we are aiming for in the future.

Spatial Vision for Staffordshire Moorlands

The vision for Staffordshire Moorlands is that it will be recognised as a vital part of a regenerated North Staffordshire in terms of its functional relationship, its social and economic contribution, its rich historic and natural heritage and its distinctive character.

We will have sustainable and balanced urban and rural communities which have an excellent quality of life with access to appropriate, affordable and desirable housing, suitable local jobs, a range of recreational, cultural and leisure opportunities and high quality public services and facilities. Development clusters and smaller sites in sustainable locations will provide attractive opportunities for investment and communities.

The economy of the Moorlands will have undergone a significant change with more diversified and higher quality employment provision better meeting the skills and needs of its workforce and more opportunities for business start-ups across the whole of the District. There will be a more flexible and proactive approach to employment development, raising the District's economic fortunes by exploiting its assets, raising local skill levels and opportunities and addressing deficiencies and disadvantages. Importantly, we will tackle the potential issues relating to an ageing population by supporting inward investment providing desirable housing for people of working age. The District will support economic growth initiatives for the wider area, including those led by the Local Enterprise Partnership

Tourism will be a key element in the diversification of the District's economy and will also contribute significantly to raising the environmental quality and the regeneration of the District. Its market towns will each have their own unique selling point for attracting visitors. The diversity and quality of the District's natural and historic assets will have improved and greater use will be made of the opportunities they provide for recreation and tourism, particularly around the Churnet Valley which together with Alton Towers

will be a significant tourist attraction. The implementation of a Green Infrastructure Strategy will protect and enhance the environment as well as providing recreational opportunities where appropriate.

The needs of all sectors of the community, in particular younger and older people, will be better met through provision of recreational and community facilities, local employment opportunities and appropriate housing.

Development will be of a high standard of design and sustainability seeking to address and adapt to climate change. Settlements will develop in a way that acknowledges their historic and natural heritage, their unique setting and their green infrastructure.

Our market towns of Leek, Cheadle and Biddulph will remain the focus of the Moorlands. They will be distinctive and unique in terms of their character and the quality and range of shops, services and facilities they provide for both residents and visitors. Their town centres will be welcoming, safe and appealing and will retain their significant historic heritage and distinctiveness which makes them special places, as well as being prosperous and vibrant, catering for the needs of both the town and its hinterland. Access will be improved between market towns and with their surrounding settlements with greater opportunities to travel by means other than the car.

Consistency with Core Strategy

The Spatial Vision is carried forward from the Core Strategy with the following amendments:

- Added reference to desire to tackle issues associated with an ageing population to respond to new evidence in Employment Land Review and Strategic Housing Market Assessment.
- New reference to identification of development clusters that are attractive to investors and communities
- Added reference to support for economic growth initiatives such as the Local Enterprise Partnership's Strategic Economic Plan
- New reference to green infrastructure in response to the new strategy and recommendations of the Equality Impact Assessment

5.4 This vision is further detailed below to cover the specific challenges which need to be addressed in our towns and the rural areas:

Vision for Leek

Leek will be an increasingly important civic and service centre for its population and the District and will further strengthen its role as the principal town in the District. The quality of the retail offer in the town centre will have improved further, and the diversity of employment opportunities, facilities and services it offers increased. It will have enhanced

its role as a tourist attraction, building on its special character, heritage and built environment assets. Major employers in the town will grow, but will be balanced by new businesses on improved existing and new employment sites. Underused and poorer quality areas, such as Cornhill, Newton House and the Churnet Works, will have been regenerated providing new development opportunities and its mill buildings will have been conserved with new uses. The bus station will be served by a reliable public transport system whilst access and car parking in the town centre will be improved.

New housing will help to support the role of the town, including the development cluster off Mount Road, which will be supported by necessary infrastructure improvements including education, transport and open space and recreation. Green infrastructure and open space will protect and enhance the environment whilst providing recreational opportunities.

Consistency with Core Strategy

The Vision for Leek is carried forward from the Core Strategy with the following amendments:

- Removed reference to improving the quantity of the retail offer in line with new evidence in the Retail Study
- Added reference to regeneration at Newton House site
- Added reference to new housing, including development cluster off Mount Road and supporting infrastructure for the town
- Added reference to Green Infrastructure and open space in response to the evidence in the Green Infrastructure Strategy, open space study and Equality Impact Assessment.
- Removed specific reference to provision of multi-storey.

Vision for Biddulph

Biddulph will continue to maintain its role as a significant service centre for its residents and those in outlying rural areas but with a focus on improving its image and prosperity. Significant growth and change will have taken place within the town through the development of the Wharf Road mixed-use allocation which will support additional housing, retail and employment. Further housing and employment will serve the town near to Victoria Business Park and mill buildings will be regenerated. It will benefit from environmental improvements and improved community facilities with more sustainable, thriving and balanced local communities with an expanded local economy. Green infrastructure and open space will protect and enhance the environment whilst providing recreational opportunities. There will be a greater variety of housing types and tenures

which better meets the needs of the community. It will have improved connections with the rest of the District. The local community will help guide the development of Biddulph with a Neighbourhood Plan

Consistency with Core Strategy

The Vision for Biddulph is carried forward from the Core Strategy with the following amendments:

- Added references to site allocations
- Removed reference to housing market renewal areas where action has taken place
- Removed reference to Areas Action Plan which will be superseded by the Local Plan
- Added reference to Neighbourhood Plan
- Added reference to Green Infrastructure and open space in response to the evidence in the Green Infrastructure Strategy, open space study and Equality Impact Assessment.

Vision for Cheadle

Cheadle will become a more sustainable settlement, better able to meet its own needs, enhancing and enlarging its role as a significant service centre for the local population and those in its rural hinterland. This will have been achieved through a focus on growth in housing and employment provision with significant complementary investment in the town's social and physical infrastructure. Its town centre will become more vibrant and attractive supported by investment in the town. JCB and other major employers will grow, but the local economy will have been diversified and expanded with new employment areas. It will benefit from improved transport infrastructure and local public, sustainable transport links focused on the town centre and improved access to other urban areas. Green infrastructure and open space will protect and enhance the environment whilst providing recreational opportunities. With a greater range of housing and employment opportunities Cheadle will have become a more successful and dynamic place where people choose to live and work. Development clusters to the north and south of the town will provide new housing and supporting infrastructure where required.

Consistency with Core Strategy

The Vision for Cheadle is carried forward from the Core Strategy with the following amendments:

- Removed references to new supermarket in the town to reflect the latest Retail Study
- Included reference to development clusters to north and south of town
- Added reference to Green Infrastructure and open space in response to the evidence in the Green Infrastructure Strategy, open space study and Equality Impact Assessment.

Vision for the Rural Areas

The Rural Areas will have viable, attractive villages and smaller settlements which will continue to foster appropriate, sensitive growth and vitality to support rural living and work. The larger villages will be the rural centres for services, facilities and jobs acting to sustain the rural areas. Smaller village communities will also continue to thrive with a range of housing opportunities and improved access to community services. There will be a more vibrant and diverse rural economy which will provide a range of local job opportunities and support a thriving agricultural sector. Mixed-use development at Blythe Bridge will support the Rural Areas and potential wider regeneration initiatives.

Well managed, sustainable tourism will be a major driver in regenerating the rural areas and enhancing their character and quality. Major redundant sites in the countryside will have been redeveloped for new uses, improving the environment and diversifying the rural economy. In the countryside, the richness of the District's landscape, heritage and its biodiversity will continue to be valued, maintained and protected in a way which sensitively accommodates the needs of farmers, rural businesses, visitors and residents. Landscape character and quality will be conserved and enhanced and biodiversity fostered with appropriate new landscaping encouraged. Public access to the countryside will be extended with new walking, cycling and horse riding routes developed. Green infrastructure and open space will protect and enhance the environment whilst providing recreational opportunities. Neighbourhood Plans will be prepared where desired by local communities to guide development.

Consistency with Core Strategy

The Vision for the Rural Areas is carried forward from the Core Strategy with the following amendments:

- Removed reference to local needs to ensure consistency with new policy
- Added reference to Blythe Bridge mixed-use development
- Added reference to Neighbourhood Plans
- Added reference to Green Infrastructure and open space in response to the evidence in the Green Infrastructure Strategy, open space study and Equality Impact Assessment.

Aims and Objectives

6 Aims and Objectives

6.1 Whilst the vision sets out how we would like to see the District develop by 2031, the main challenge will be how we can achieve this in a sustainable manner which delivers the necessary housing, employment, shopping and community facilities whilst ensuring that the District's valuable natural and built heritage assets and its character are not compromised.

6.2 Getting the objectives right is important because they indicate the broad direction that the more detailed strategy and policy measures should take and provide the basis for subsequent targets and indicators. They are closely linked to the key aims/themes of the Sustainable Community Strategy and the key priorities of the Council's Corporate Strategy and have been derived from the challenges and the vision.

Spatial Aims

To see Staffordshire Moorlands become an exceptional place to live, work and visit by:

SA1. Creating distinctive, sustainable, self-supporting settlements

SA2. Meeting the needs of our communities

SA3. Encouraging a strong, prosperous and diverse economy

SA4. Maintaining a quality environment and special places

Spatial Objectives

SO1. To make provision for the overall land-use requirements for the District, consistent with national policy and evidence.

SO2. To create a District where development minimises its impact on the environment, helps to mitigate and adapt to the adverse effects of climate change and makes efficient use of resources.

SO3. To develop and diversify in a sustainable manner the District's economy and meet local employment needs in the towns and villages.

SO4. To provide new housing that is affordable, desirable, well-designed and meets the needs of residents of the Moorlands.

SO5. To ensure the long-term vitality and viability of the three market towns of Leek, Biddulph and Cheadle.

SO6. To maintain and promote sustainable regenerated rural areas and communities with access to employment opportunities, housing and services for all.

SO7. To support and enhance the tourism, cultural, recreation and leisure opportunities for the District's residents and visitors.

SO8. To promote local distinctiveness by means of good design and the conservation, protection and enhancement of historic, environmental and cultural assets throughout the District.

SO9. To conserve and improve the character and distinctiveness of the countryside and its landscape, heritage, biodiversity and geological resources.

SO10. To deliver sustainable, inclusive, healthy and safe communities.

SO11. To reduce the need to travel or make it safer and easier to travel by more sustainable forms of transport.

Consistency with Core Strategy

The Spatial Aims and Objectives have been carried forward from the Core Strategy with the following amendments:

- SO1 - removal of the reference to regional policy to reflect the revocation of the Regional Spatial Strategy and associated reference to North Staffordshire

Spatial Strategy and Strategic Policies

7 Spatial Strategy and Strategic Policies

Spatial Objectives

SO1. To make provision for the overall land-use requirements for the District, consistent with national policy and evidence.

7.1 This section seeks to set out the long term planning framework for Staffordshire Moorlands focusing on particular policy matters that are of strategic importance to the future growth and development of the area and the broad approach to the overall distribution of development across the plan area. More detailed information on the scale and location of new housing, employment and retail development is set out in subsequent sections.

7.2 Any Neighbourhood Plan prepared for areas within the Staffordshire Moorlands will be required to be in general conformity with the strategic policies within this section, as well as other appropriate policies where these are considered to be essential to the overall delivery of the Local Plan.

Development Approach

7.3 The Local Plan seeks to carry forward the development approach from the Core Strategy which focused development on the three market towns of Leek, Cheadle and Biddulph and the larger villages but allowed for limited development of other settlements.

7.4 This development approach facilitates growth of towns and larger villages where it can be accommodated whilst enabling an appropriate scale of development in rural areas to support sustainable communities and help bring forward regeneration opportunities.

7.5 This development approach is also considered to be a sustainable option which would enable development to be focused on regeneration and targeted opportunities in areas of highest accessibility and where it could be supported by existing infrastructure or could best facilitate infrastructure improvements, and where it could achieve high levels of affordable housing. It is a realistic and balanced approach which recognises the needs of both urban and rural areas, increases opportunities to utilise brownfield sites and minimises the need for major green belt/countryside changes.

7.6 As well as supporting the regeneration of towns, this approach also helps rural settlements maintain services and facilities and would ensure that the needs of rural areas are continued to be met.

7.7 In order to ensure that settlements develop in accordance with the proposed development approach and their capacity to support growth, the Core Strategy defined a settlement hierarchy which is also proposed to be carried forward into the Local Plan.

7.8 To inform the Core Strategy process the Development Capacity Study assessed the infrastructure and accessibility of all settlements with a population of 1,000 or more. This helped to determine the scale and distribution of development.

7.9 As part of the review of evidence to inform the new Local Plan, the Infrastructure Delivery Plan (IDP) Baseline Report was prepared in 2016. The report reviewed the latest infrastructure capacity, planned provision and requirements in the context of the development

approach and requirements as agreed in the Core Strategy. Its overall conclusion is that broadly that the distribution of growth in the Core Strategy can be supported by current and planned infrastructure. Schemes are identified which align with the spatial distribution of growth proposals in the Core Strategy and there are no significant constraints to the level of growth proposed. Given that the development requirements of the Local Plan are broadly consistent with those in the Core Strategy, it is proposed to carry forward the development approach.

Development Principles

7.10 This policy underpins the whole Local Plan and provides a fundamental set of criteria that will be applied to all development proposals to ensure that all development provides integrated solutions which meet social, economic and environmental objectives at the same time.

7.11 It is considered that the broad thrust of the policy is in line with the Council's Sustainable Community Strategy and the aims and objectives of the Local Plan. Detailed requirements concerning the management of development and specific designations are set out later in the Local Plan.

Policy SS 1

Development Principles

The Council will expect the development and use of land to contribute positively to the social, economic and environmental improvement of the Staffordshire Moorlands in terms of delivering, in partnership with other agencies and services:

- a mix of types and tenures of quality, affordable homes, including starter homes, to meet the needs and aspirations of the existing and future communities
- quality local services, including provision for education, healthcare, leisure, community, cultural and tourist facilities in response to anticipated population change and visitor numbers;
- easy access to jobs, shops and transport services by all sections of the community;
- increased economic prosperity and opportunities for employment and greater local capacity with an educated, skilled and flexible workforce;
- a healthy, safe, attractive and well-maintained environment;
- development which maintains the locally distinctive character of the Staffordshire Moorlands, its individual towns and villages and their settings;
- development that is undertaken in a way that protects and enhances the natural and historic environment of the District and its surrounding areas both now and for future generations.
- support development which secures high quality, sustainable environments, efficient and effective use of resources and contributes effectively to tackling climate change and reduced carbon emissions.

All proposals for development will be considered in the context of the District-wide Spatial Strategy and with regard to both its direct and indirect cumulative impact over the longer term. New development will make effective use of land and the best use of previously developed land and buildings.

Consistency with Core Strategy

- First bullet point includes reference to starter homes to reflect the Housing and Planning Act 2016
- Added reference to "locally" distinctive character in the interests of clarity
- Removed requirement for a sequential approach to development from the last paragraph to accord with the NPPF and facilitate appropriate development.
- Added reference to making effective use of land in last paragraph to more closely reflect the NPPF

Presumption in Favour of Sustainable Development

7.12 At the heart of the NPPF is a presumption in favour of sustainable development seen as "...a golden thread running through both plan-making and decision-taking." This policy sets out how the Council will work with applicants to facilitate development that improves the economic, social and environmental conditions of Staffordshire Moorlands. It also provides for the grant of planning permission in circumstances where there are no relevant policies or where relevant policies are out-of-date.

7.13 To achieve sustainable development, new development should be located in sustainable locations and contribute positively to the social, economic and environmental improvement of the area, in accordance with policy SS1.

Policy SS 1a

Presumption in Favour of Sustainable Development

When considering development proposals the Council will take a positive approach that reflects the presumption in favour of sustainable development contained in the National Planning Policy Framework. It will always work pro-actively with applicants jointly to find solutions which mean that proposals can be approved wherever possible, and to secure development that improves the economic, social and environmental conditions in the area.

Planning applications that accord with the policies in this Local Plan (and, where relevant, with policies in neighbourhood plans) will be approved without delay, unless material considerations indicate otherwise. Where there are no policies relevant to the application or relevant policies are out of date at the time of making the decision then the Council will grant permission unless material considerations indicate otherwise – taking into account whether:

- Any adverse impacts of granting permission would significantly and demonstrably outweigh the benefits, when assessed against the policies in the National Planning Policy Framework taken as a whole; or
- Specific policies in that Framework indicate that development should be restricted.

Consistency with Core Strategy

- Factual update second paragraph reference to Core Strategy changed to Local Plan

Settlement Hierarchy

7.14 The three towns of Leek, Biddulph and Cheadle are the largest settlements in the District accommodating 50% of the District's population and the majority of the District's services and facilities. The spatial strategy seeks to focus future growth in these settlements and to strengthen their role as significant service centres.

7.15 The rural areas outside of the Peak District make up over two-thirds of the plan area in terms of land coverage and contain nearly half of the plan area's population. The majority of this area is undeveloped countryside which is of high landscape quality and has poor accessibility. However, the rural areas also includes a diverse mixture of large and small villages, hamlets and scattered development as well as some major developed areas.

7.16 In order to properly deliver the spatial strategy at a local level it is proposed to establish a hierarchy of settlements reflecting the roles, function and capacity of individual settlements. This hierarchy will ensure that the aims and objectives of the Local Plan and the proposed development approach are properly met through an appropriate balance of development. It will also provide a spatial context for the co-ordination of the plans, strategies and initiatives of the various service providers and agencies with an interest in the Staffordshire Moorlands. This hierarchy is in line with the adopted Core Strategy. It should be noted that the designation of a settlement within the hierarchy reflects its planning status only and does not confer any other status as a town or village.

7.17 The status of each category of settlement, a list of those settlements included within them and the development principles and levels of development which apply to each category are set out in policies SS5 to SS10. In considering sites for development regard should be had to the hierarchy to ensure that the appropriate scale and type of development is provided in each settlement and other rural areas.

7.18 All development will need to be of a scale and nature appropriate to the character and role of each area within its hierarchy. For each town and the rural area categories there is an Area Strategy which sets out the various measures and actions which will be taken to address the needs of those areas. The Area Strategies are key policies which drive forward the Local Plan and help implement the strategies and plans of other organisations and service providers as well as establishing how settlements are to develop over the plan period.

7.19 Neighbourhood Plans must be in general conformity with the strategic policies of the Local Plan. This includes the settlement hierarchy as set out below. Neighbourhood Plans may wish to amend proposed settlement boundaries or create new boundaries where none are proposed. Such proposals could be supported subject to the settlement hierarchy, wider strategic Local Plan policies and national planning policy, including on Green Belt.

Policy SS 2

Settlement Hierarchy

Towns – these are the largest settlements comprising of Leek, Biddulph and Cheadle which accommodate half of the District's population and the majority of the District's services and facilities. The spatial strategy seeks to focus future growth in these settlements and to strengthen their role as service centres. These settlements will be defined by a Development Boundary.

Rural Area Larger Villages – these are the most sustainable settlements in the rural areas which generally have a good local social infrastructure, some local employment opportunities and good accessibility to the towns and larger centres. These villages also have an important role in terms of serving and supporting their immediate surrounding rural areas and smaller villages. The spatial strategy focuses the bulk of the rural development in these settlements and seeks to ensure that they are sustained and promoted as service centres. These settlements will be defined by a Development Boundary. It is recognised that there is a significant range amongst these villages in terms of their size and facilities and it is proposed therefore that the scale of development in each area should be relative to their current size and infrastructure capacity.

Rural Area Smaller Villages – these villages generally have a poor range of services and facilities and it is often necessary for local residents to travel outside the village for most of their daily needs. Development on a large scale would be unsustainable in these villages, as it will generate a disproportionate number of additional journeys outside the village and may undermine the spatial strategy. However, it is recognised that these settlements have a limited role in meeting the development requirements for the District which may assist in maintaining the vitality of the smaller villages. These settlements are not defined by a Development Boundary and only limited development of an appropriate nature will be allowed.

Other Rural Areas – this comprises of the open countryside and green belt where further development is generally inappropriate. Within these areas there are some groups of houses and hamlets which are not identified as 'smaller villages' because their predominantly open character and loose-knit nature. They also contain major developed areas which may be suitable for appropriate development or redevelopment.

Consistency with Core Strategy

- New policy that adopts the same hierarchy as set out in the Core Strategy. The hierarchy is now proposed to be included in policy to emphasise its importance to sustainable development in the District.

- The policy removes reference in the Core Strategy to infill boundaries being proposed in Smaller Villages as they are no longer proposed. A criteria based policy is proposed to apply instead (see Policy H1) to enable a case-by-case assessment of whether proposals constitute infill.
- Removed reference to development being limited to essential local needs to enable greater flexibility.

Future Provision and Distribution of Development

7.20 The NPPF requires that authorities meet the full, objectively assessed needs for market and affordable housing. The 2014 Strategic Housing Market Assessment (SHMA) assessed the extent of the local housing market and its characteristics and provided an assessment of the need for market and affordable housing. It was updated in 2017 take account of the 2014 based Sub-National Household Projections and new employment projections. The 2017 SHMA update concluded that the housing needs of the District lie within the range of 235 to 330 additional homes per year up to 2031. The top of the range relates to the level of housing growth required to support potential employment growth, whilst the bottom reflects household projections. The latter would lead to a decline in the number of jobs in the District due to a decline in the working age population.

7.21 This range also reflects an uplift to support additional affordable housing of which there is a relatively high need in the District (224 to 432 homes per year). The 2017 SHMA Update reviewed the Housing Register as of October 2016 and current supply of affordable housing to identify a net backlog of 408. An assessment of likely newly arising affordable housing needs over the plan period was then undertaken to identify a net annual need for affordable housing of 224 to 432 homes per year. The lower figure of 224 would apply if allowances are made for a deposit and/or a greater proportion (35%) of income is spent on renting a property.

7.22 In order to address the objectively assessed needs for housing in the District the Local Plan proposes 6,080 dwellings for the period 2012 – 2031 (320 per year) which is expected to meet the projected household increase for the District over this period. Although the Local Plan period is 2016 to 2031, the calculation of housing requirements backdates to 2012 in order to take account of the shortfall of housing provision that has occurred in recent years. The proposed level of provision will enable the Council to:

- fully meet demographic housing needs
- help support an increase of over 800 full time equivalent (FTE) jobs across the plan period
- help address the affordable housing need.

7.23 This requirement is seen to be "aspirational but realistic " as required by the NPPF when considered in the context of an historic average delivery rate of 195 homes per year. It is deliverable in the terms of suitable housing land and is not considered to give rise to significant landscape impacts including on the setting of the Peak District National Park. It provides a more balanced range of social, economic and environmental effects as set out in the Sustainability Appraisals.

7.24 The requirement for 6,080 dwellings is a target and should not be seen as an absolute ceiling as there needs to be flexibility to ensure there is a continuous 5 year supply of deliverable land at all times in accordance with the NPPF. The Council will monitor the amount of development over the plan period to ensure there is a five year housing land supply.

7.25 The requirement will be met from all sources of permanent housing provision including new build market dwellings and flats, conversions or changes of use of existing properties, affordable and local needs housing, rural exceptions housing and sheltered and extra care/flexicare housing which is self-contained. Losses of housing through demolitions or conversions or changes of use to non-residential uses will be deducted from the provision.

7.26 The provision of employment land is based on the 2014 Employment Land Study and Update report published in 2017. The SHMA and Employment Land Studies have been co-ordinated and based on common the data and scenarios in order to better understand the relationship between housing and employment and to support an appropriate balance of development. The 2017 report identified a need for 13 to 27 hectares of employment land across the District to 2031. In order to provide a balanced level of employment and housing, an employment land requirement of 27 hectares is proposed. As with the housing requirement, this level of development is towards the top of the range of identified needs and will help to support the growth of around 800 FTE jobs (435 in B-use class jobs).

7.27 The distribution of development reflects the development approach and will guide the provision of housing and employment for the whole of the plan period. The use of proportional distributions will enable the Council to monitor overall development in each of the towns and the rural areas to ensure that it is realising the spatial strategy and to make adjustments to net requirements in the event of evidence of changes in the housing market or as a result of any changes to the overall requirements for the District arising from any future review of housing requirements or development rates.

7.28 The distribution of housing development largely adheres to the approach of the Core Strategy with minor adjustments to Cheadle and the Rural Areas. The Rural Areas share of the District's housing requirement is reduced from 28% to 25% in order to reflect the constrained supply of suitable sites. Green Belt is a significant constraint for many of the Rural Areas villages as it can only be released in exceptional circumstances. The distribution of development now proposed in the Local Plan enables the housing requirement to be met without significant Green Belt release. Cheadle's share of the District's housing requirement has risen from the 22% previously put forward in the Core Strategy to reflect the availability of suitable development sites outside of the Green Belt.

Policy SS 3

Future Provision and Distribution of Development

Provision will be made for 6080 additional dwellings (net of demolitions) to be completed in Staffordshire Moorlands during the period 2012 to 2031 - an annual average of 320 homes per year. Sufficient deliverable land will be identified to provide at least 5 years of development at all times.

The Council will review the annual development rate to ensure that future provision will continue to adequately meet identified needs and reflect development potential.

Provision will be made for 27 hectares of additional employment land in Staffordshire Moorlands (excluding the Peak District National Park) up to the year 2031.

Provision will be made for new retail, transport, recreational, community and tourism facilities and services to meet the identified needs of settlements within Staffordshire Moorlands (excluding the Peak District National Park) up to 2031 as set out in the Area Strategies.

Development will be located in accordance with the Spatial Strategy and will be distributed between the towns and rural areas as set out below. In identifying land for new development or in considering planning applications, development shall also be compatible with the settlement hierarchy in terms of the development approaches set out in the Area Strategies.

	Housing	Employment
Leek	30%	30%
Biddulph	20%	20%
Cheadle	25%	20%
Rural Areas	25%	30%

Table 7.1 Distribution of Development

Neighbourhood Plans

In order to assist in meeting the identified development requirements for the Local Plan, Neighbourhood Plans should maximise the opportunities for housing and employment growth in sustainable locations, and where appropriate, make allocations in their plan for at least the same amount of housing and employment land identified in the Local Plan for the relevant parish or Neighbourhood Area.

Consistency with Core Strategy

This policy replaces Core Strategy policy SS2 and SS3 but with the following changes:

- First paragraph housing figures have been updated to reflect the new evidence and reference to Peak Park and phasing removed.
- Second paragraph, removed reference to "local" housing needs as the housing requirement assumes in-migration from neighbouring areas to support the local economy
- Table and second and third paragraph with reference to phasing removed to reflect the need to boost the supply of housing
- Table - % of District's housing requirement to be met in Cheadle increased to 25% and reduced to 25% in the Rural Areas to reflect the supply of suitable sites and Green Belt constraints

- Fourth paragraph employment figures updated in line with evidence and last line deleted.
- Fifth paragraph date and policy numbers have been updated.
- Last paragraph which refers to review of Core Strategy has been deleted as it is now superfluous

Core Strategy Policy SS3 has been incorporated into this policy with references to policy numbers updated.

Strategic Housing and Employment Land Supply

7.29 The housing and employment requirements are based on the distributions set out in Policy SS3 which reflect the spatial strategy and development requirements. The housing requirements will be met from completions since 2012, current commitments and the site allocations. The employment requirements are capable of being met from existing commitments and the proposed employment allocations detailed in Policy E2. The figures for housing and employment are targets for the whole plan period and will be monitored through the Annual Monitoring Report and monitoring schedules to assess performance and the need for management measures.

7.30 The objectively assessed need for housing as identified in the Strategic Housing Market Assessment relates to the District as whole. As such, this includes the parts of the District that lie within the Peak District National Park. The Peak District National Park Authority have their own adopted Core Strategy which governs development across the National Park. Due to the constraints and purposes of the National Park, the Core Strategy does not include housing requirements. However, in recognition of the fact that the identified housing requirements for Staffordshire Moorlands includes parts of the National Park, the National Park Authority has agreed to an allowance of 100 dwellings being identified in the housing land supply for the Staffordshire Moorlands Local Plan.⁽³⁾ This allowance reflects long terms annual average housing completions in the parts of the District that lie within the National Park. Whilst the Peak District National Park Core Strategy does not allocate land for housing, the allowance will be factored in to the windfall allowance for the District and housing completions and commitments within the National Park will be monitored accordingly. The table below identifies the net housing requirement for the District once completions, commitments and the Peak District National Park allowance are taken into account.⁽⁴⁾

Gross housing requirement (2012 - 2031)	6080 dwellings
Total district-wide completions (2012 - 2017)	679
Total district-wide commitments	1442
Peak District National Park allowance	100

3 The allowance of 100 homes in the Peak District National Park does not infer a development requirement for the National Park Authority

4 As of 31 March 2017

Net housing requirement (2017 - 2031)	3859
---------------------------------------	------

Table 7.2 District net housing requirement

Area	%	Gross requirement ⁽⁵⁾	Completions	Commitments	2017 net requirement
Leek	30%	1794	241	538	1015
Biddulph	20%	1196	205	106	885
Cheadle	25%	1495	85	244	1166
Rural	25%	1495	148	554	793
Total	100%	5980	679	1442	3859

Table 7.3 Net housing requirement by area

7.31 This policy sets out how the net housing requirement of 3859 will be met across the District up to the year 2031. Sources of future supply include allocations as set out in Policy H2 and windfall allowances for each area based on past trends. Windfall sites will be considered in the context of the Spatial Strategy and Policy H1. From the end of 2017, the Council will be required to publish and update a Brownfield Register of sites that are suitable for housing development. If appropriate, the Council also use the Brownfield Register to grant some of the sites on it with "Permission in Principle". This potential additional source of housing land supply will be considered in the next iteration of the Local Plan.

7.32 The Housing Trajectory (Appendix 7) indicates how the Council expects future provision to come forward. The purpose of the Housing Trajectory is to highlight the robustness and soundness of the overall housing strategy in the Local Plan and how it is likely to perform in relation to the housing requirements. However, many of the factors influencing the delivery of housing are beyond the control of the local planning authority or the development industry. The role of monitoring through the Annual Monitoring Report will be important in assessing the actual performance in terms of delivery of this and other parts of the development strategy and highlighting 'trigger points' for measures to adjust the delivery of housing.

7.33 The Core Strategy incorporated a "slippage allowance" of 10% of the housing requirement for each area to allow flexibility in the supply. This was based on an assumption that 10% of sites would not come forward as anticipated. This allowance is no longer incorporated into the housing calculations as it is considered that the proposed approach to monitoring and housing supply as set out in the Local Plan provide a greater degree of flexibility than the Core Strategy. Furthermore, in Biddulph and the Rural Areas, the slippage allowance placed greater pressure on the need to release land from the Green Belt.

7.34 The 2017 Employment Land Requirement Study Update identified the need for up to 27ha of employment land by the year 2031. The report also considered the type of employment land that would be required in terms of B1, B2 or B8 use class related development. The review recommended that 50% of the requirement should be for B1a/B1b (office, R&D) use with the other 50% recommended for B1c/B2/B8 (light industry, general

industry, storage and distribution). This recommendation took into account past trends of development and demand, forecast jobs, office vacancies and the need to replace existing poor quality industrial stock.

7.35 In Neighbourhood Plan areas that plan for housing and employment, provision must be made for at least as much development as identified in the Local Plan. This policy sets out Neighbourhood Area housing requirements as of 31 March 2017. A methodology for calculating future requirements is provided at Appendix 11.

Policy SS 4

Strategic Housing and Employment Land Supply

Housing Land Supply.

In order to meet the housing requirements identified in Policy SS3, sufficient land will be identified to accommodate 3859 additional dwellings.

Area	% of District Total	Net housing requirement
Leek	30%	1015
Biddulph	20%	885
Cheadle	25%	1166
Rural	25%	793
Total	100%	3859

Table 7.4

This will be met from from sites allocated in Policy H2 and a windfall allowance for small sites that accord with the Spatial Strategy and Policy H1.

Leek	Number of Dwellings on new sites
New allocations	697
Large windfall site allowance (15 per year)	210
Small sites allowance (10 per year)	140
TOTAL POTENTIAL PROVISION	1047
Biddulph	

New allocations	725
Large windfall site allowance	20
Small sites allowance (10 per year)	140
TOTAL POTENTIAL PROVISION	885
Cheadle	
New allocations - Within the urban area	1026
Small sites allowance (10 per year)	140
TOTAL POTENTIAL PROVISION	1166
Rural	
New allocations - Larger Villages	459
Small sites allowance - (infill provision 30 per year)	420
TOTAL POTENTIAL PROVISION	879

Table 7.5 Anticipated Housing Provision

Employment Land Supply

Land will be made available for 27ha of employment land which comprises of 50% B1a/B1b (office, R&D) and 50% B1c/B2/B8 (light industry, general industry, storage and distribution) through the allocation of sites under Policy E2 and through windfall sites.

Area	%	Land requirement (hectares)
Leek	30%	8.1
Biddulph	20%	5.4
Cheadle	20%	5.4
Rural	30%	8.1
Total	100%	27

Table 7.6

The release of land for housing and employment across the District will be managed in order to deliver the level and distribution of development set out above. The adequacy of supply (in terms of five year supply of housing and in meeting planned housing delivery targets over the full plan period) will be assessed and monitored through reviews of the

Strategic Housing and Economic Land Availability Assessment (SHELAA) and progress will be reported in the Annual Monitoring Report. If necessary the Council will review the Local Plan to bring forward additional sites for development.

Neighbourhood Plans

In order to assist in meeting the development requirements for the Local Plan, Neighbourhood Plans should maximise opportunities for housing growth in sustainable locations. The following table sets out the housing requirements for parishes preparing a Neighbourhood Plan. These requirements are a minimum and may be subject to review as part of the District's overall review of plan delivery against its housing requirement. The methodology used to calculate the housing requirement is set out in Appendix 11 and will be used to calculate requirements for new Neighbourhood Plans.

Neighbourhood Plan Area	Housing Requirement 2017 - 2031 (dwellings)
Biddulph Parish	900
Brown Edge Parish	25
Checkley Parish	60
Draycott-in-the-Moors Parish	5 -10
Leekfrith Parish	4 - 8
Rushton Parish	4 - 8

Table 7.7 Neighbourhood Plan Housing Requirement

Consistency with Core Strategy

- This policy replaces SS4 Managing the Release of Housing Land, SS5 Towns and SS6 Rural Areas in setting out updated development requirements for the respective towns and rural areas and details of the planned approach for land supply through the identification of sites and windfall allowances.

Area Strategies

7.36 The following policies set out the specific area strategies for each town and for the larger villages, smaller villages and other rural areas. They set out what we would like to achieve in each of them. The area strategies do not provide a definitive list of the proposals and projects for each area, rather they set out the actions needed to achieve the vision, deliver the spatial strategy and achieve the objective of creating sustainable, self-supporting communities in each distinct area of the District. The delivery of these proposals will not necessarily be the responsibility of the Council. Other groups and organisations may be responsible for their delivery. Many will also depend on securing sufficient resources and the support of landowners.

Leek Area Strategy

7.37 Leek is the largest settlement in the District with an already well established range of facilities and services serving the whole of the District. Despite this the town has lacked opportunities for retail and economic growth and has not fully developed its tourism and cultural potential. The proposed strategy for Leek seeks to strengthen the role of Leek as the principal town in the District by addressing a number of specific challenges which have been identified through consultation, the evidence base and the strategies and plans of other agencies and organisations.

7.38 The town Development Boundary is shown on the Policies Map. Within the Development Boundary new development should be of an appropriate scale and nature for the town and be in accord with the Spatial Strategy and Leek Area Strategy.

7.39 In order to deliver the housing requirements for Leek set out in Policy SS4 it is estimated that there will need to be a minimum of 1015 additional dwellings to be provided in the town. This requirement will be met through the allocated sites, windfalls or the small sites. The Council recognises that it needs to provide a range of opportunities to enable the market to respond to the targets set for the town and to address key infrastructure and regeneration needs. In practical terms, this means providing for different types of housing development in a variety of locations including greenfield development on the edge of the urban areas. A cluster of housing sites located off Mount Road has been identified as an opportunity to make a significant contribution towards the housing needs of the town. This development will be supported with additional infrastructure, including additional school capacity and transport improvements.

7.40 Policy SS4 details an employment land requirement of 8.1ha for the Leek area. Employment provision will be met through the expansion of existing employment areas to the south of the town which have good access to the road network. This is considered to be the most sustainable location for employment development and will minimise the impact of development on the countryside and residential areas.

7.41 The policy also identifies the Cornhill and Newton House area of Leek as a major mixed-use regeneration opportunity which is strategically important and has been recognised as a Council objective for a number of years. Cornhill is part owned by the District Council and is well related to existing employment uses as well as potential tourism facilities to the south. Both sites provide opportunities to support the town's need for housing and economic growth. A significant related requirement is the provision of an east-west link road between the A520 Cheddleton Road and the Barnfield Industrial estate, to allow easier access across the southern side of the town, and to relieve pressure on Junction Road.

Policy SS 5

Leek Area Strategy

The Council and its partners will seek to consolidate the role of Leek as the principal service centre and a market town and support its regeneration. This will be achieved through the following actions:

1. Continue to meet the housing and community needs of Leek and its rural hinterland by:

- Increasing the range of available and affordable house types, including for first time buyers and older people
 - Allocating a range of suitable , deliverable housing sites sufficient to meet the requirements of the area
 - Supporting the development of new housing on sustainable sites within the Development Boundary
 - Protecting, increasing and improving the provision and accessibility of open space, sport and recreational facilities in line with the emerging Open Space, Sports and Recreation Strategy
 - Increasing and improving the provision of educational, health and community facilities and enabling further shared use of facilities. Specific facilities and needs will be identified through the Plans and Strategies of relevant service providers. Supporting the provision of the identified education, in particular the following sites identified on the Policies Map:
 - New first school
 - Expansion of existing middle
 - Promoting measures to encourage walking and cycling.
2. Create employment growth and increase the diversity of employment opportunities to meet existing and future needs by:
- Supporting the retention and growth of existing businesses within the town
 - Seeking the comprehensive redevelopment of the Cornhill East area for a mix of uses as set out in the Cornhill Masterplan and the Newton House site
 - Supporting the development of the employment site allocations (as identified on the Policies Map)
 - Providing facilities and sites for new start-up businesses and expanding the service sector, in particular small B1(a) and B1(b) uses, knowledge-based and creative industries;
 - Improving the provision of prime office space and commercial premises in and around the town centre;
 - Encouraging mixed use development on larger redevelopment sites, particularly within or near to the more accessible town centre locations, on former employment premises, and in mill buildings within the town centre where consistent with wider Policies including E1;

- Improving and intensifying the use of existing employment areas at Barnfields and Leekbrook;
- Improving accessibility to employment areas, particularly from areas of local deprivation and need.

3. Strengthen the role of Leek as a principal service and retailing centre for the District by:

- Supporting sensitive improvements to the town centre to increase the quality of the retail offer and supporting town centre uses, improve linkages between areas and establish new development opportunities in accordance with the adopted Town Centre Masterplan.
- Consolidating the main retail core and the market area and protecting and enhancing its distinctiveness, vitality and viability
- Supporting improvements to the range and diversity of educational, health, cultural and community services and facilities in the town
- Improving accessibility to the town's major retail, service and employment areas, particularly by public transport, from the rest of the District
- Managing car parking to support the role of Leek as a destination for shopping, employment, entertainment and tourism without leading to congestion of the town centre.

4. Promote Leek's special character and heritage and strengthen its role as a visitor destination by:

- Conserving and enhancing buildings, sites and areas of heritage and cultural importance, complemented by new distinctive, sensitively designed, high quality, sustainable buildings;
- Promoting environmental enhancements in and on the edges of the town centre, establishing the Market as a central feature, creating strong, high quality 'gateways' into the centre and improving signposting;
- Increasing tourist opportunities for visitors through additional high quality accommodation, promoting links with the Peak District and the development of new tourist attractions linked to the Churnet Valley (see policy SS11);
- Improving and creating pedestrian and cycle links in the town and in particular between the town centre and Brough Park, Westwood College, Leek High School and Churnet View Middle School;
- Protecting and improving the setting and historic character of the town and increasing access into the countryside by foot, cycling and horse riding
- Implementing measures identified for Leek in the Green Infrastructure Strategy.

5. Create major mixed use development opportunities and related infrastructure improvements for the following strategic sites:

- Cornhill East – uses which may be suitable include employment and housing. Development should enable provision for a link between the A520 and A53 to the south of the town and links to the canal and Churnet Valley railway and should have regard to the Churnet Valley Masterplan. Further policy for this site is set out in Policy DSL4
- Land at Newton House - a mix of uses including housing and employment will be supported in line with policy DSL3
- Land at the Mount - the provision of housing and supporting infrastructure, including additional school capacity and transport improvements will be supported in line with policy DSL2.

Consistency with Core Strategy

This policy carries forward Core Strategy policy SS5a but with the following changes:

- Point 1 Second bullet point updated to include reference to site allocations
- Point 1 additional bullet point inserted after second bullet point referring to supporting housing within the development boundary
- Point 1 fourth bullet point amended to refer to proposed school sites
- Point 2 second bullet point updated - refers to Cornhill Masterplan and Newtown House re-development
- Point 2 additional bullet point inserted referring to employment site allocations
- Point 2 fifth bullet point includes reference to other Plan policies and policy E1
- Point 3 first bullet point updated to reflect the adoption of the Town Centre Masterplan and removal of reference to increase the retail offer in to reflect the latest Retail Study
- Point 4 now includes support for the Green Infrastructure Strategy in response to the creation of the strategy and feedback in the Sustainability Appraisal
- Point 5 first bullet point refers to the Cornhill Masterplan, Newton House and the Mount with cross references to relevant strategic development site policies.
- Last paragraph reference to Site Allocations DPD removed along with cross references to wider Local Plan policies.

Biddulph Area Strategy

7.42 Biddulph is the second largest settlement in the District. It has suffered from economic decline and includes the Biddulph East Ward, an area of high deprivation. The town centre has seen recent improvements due to proposals within the Biddulph Town Centre Area Action Plan coming to fruition. The proposed strategy for Biddulph seeks to further enhance its role as a significant service centre and a market town.

7.43 The Local Plan defines the extent of the town development boundary (shown on the Policies Map). Due to the extent of green belt around the town, opportunities for peripheral expansion are constrained. A District wide Green Belt Review has been undertaken by the Council and this recommends areas around Biddulph which could be considered for release in exceptional circumstances. The Core Strategy recognised that a review of the Green Belt was necessary in order for Biddulph to accommodate the identified development requirements for the town.

7.44 The Retail Study (2013) recommends the allocation of a site in Biddulph to accommodate a discount foodstore of around 1000m² (net sales) to claw back some of the 45% of residents who shop out of town for their main food shopping. The study identifies outflow to mainstream and discount foodstores. It is considered that a discount store would provide the local population with more choice as due to closures of other stores, Sainsbury's is now the only mainstream foodstore in the town. The study identifies land west of the bypass (in an edge of centre location) as the only area with capacity and with appropriate linkages to the town centre.

7.45 In order to meet the requirements for Biddulph, two key mixed-use development areas are identified. The Wharf Road Strategic development site will help to support a significant degree of the future housing land supply for the town as well as accommodating additional retail and employment development and supporting infrastructure. Much of this area was previously identified as a Broad Area in the Core Strategy for mixed-use development, however, this has now been extended to include additional land alongside the bypass and to the west of the Biddulph Valley Way on land included within the Green Belt. A further mixed-use site for employment and housing opposite Victoria Business Park has also been identified for housing and employment. This site will also require the release of Green Belt land. Elsewhere, the regeneration of mills in the town will further support the sustainability of the town.

7.46 The identification of sites and proposals for improved or new recreational and sports facilities and for additional or improved educational and health facilities and services will emerge from current studies being undertaken and through discussions with service providers.

7.47 In order to manage surface water discharge rates into the waste water network in the Biddulph area, the use of Sustainable Urban Drainage Systems should be applied along with DEFRA's non-statutory technical standards.

Policy SS 6

Biddulph Area Strategy

The Council and its partners will seek to enhance the role of Biddulph as a significant service centre and a market town and support its regeneration. This will be achieved through the following actions:

1. Improve the local housing market and range of community facilities by:
 - Increasing the range of available and affordable house types, (including starter homes) especially for first time buyers, families and older people, including extra care housing
 - Identifying suitable land for housing housing sites both within the urban area and, on land adjacent to the urban area. Sites within the urban area shall be in locations across the town which have good accessibility to services and facilities with encouragement being given to previously developed (brownfield) sites. Protecting, increasing and improving the provision and accessibility of open space, sport and recreational facilities in line with the emerging Open, Space, Sports and Recreation Strategy
 - Increasing the provision of educational, health and community facilities. Specific facilities and needs will be identified through the Plans and Strategies of relevant service providers.
2. Create employment growth and increase the diversity of employment opportunities to meet existing and future needs by:
 - Supporting the retention and growth of existing businesses within the town;
 - Providing opportunities for new enterprises and businesses by promoting further development
 - Providing facilities and sites for new start-up businesses;
 - Supporting improvements to accessibility to employment areas, particularly from areas of local deprivation and need.
3. Strengthen the role of Biddulph as a significant service and retailing centre for the District by:
 - Allocation of land for a new foodstore of 1000m² (net sales)
 - Supporting improvements public transport connections to the town centre.
4. Improve the image and identity of Biddulph and strengthen its role as a visitor destination by:
 - Regenerating and improving the streetscape of the town centre;

- Upgrading the general environment of the town through landscaping and the improvement and creation of green spaces;
 - Strengthening and promoting links between the town and countryside in particular with the Biddulph Valley Way, Biddulph Grange Garden and the Country Parks. This will include the implementation of the Green Infrastructure Strategy
 - Improving the main approaches to the town from the south;
 - Protecting and enhancing the setting and historic character of the town.
5. Create major mixed use development opportunities and related infrastructure improvements for the following strategic sites:
- Wharf Road Strategic Development site - mixed-use development including housing, employment, retail and supporting infrastructure will be supported in line with policy DSB1.
 - Tunstall Road Strategic Development site - housing and employment will be supported in line with policy DSB3.

Developments should secure Sustainable Urban Drainage Systems in line with national planning policy and manage surface water discharge rates in accordance with the Sustainable Drainage Systems Non-statutory Technical Standards (DEFRA, 2015).

Consistency with Core Strategy

- Part 1 - included a reference to starter homes to reflect Government policy
- Part 1 - last bullet point - removed reference to Primary Care Centre as this is open
- Part 1 - removed reference to addressing Schindler properties in Biddulph East as this is no longer an active project
- Part 3 - new bullet point to reflect allocation of a new food store (as recommended in the Council's Retail Study published in 2013).
- Parts 3 and 4 - removal of 'implementation of the Biddulph Town Centre Area Action Plan' as this document will be superseded by the Local Plan.
- Part 4 - added reference to the Green Infrastructure Strategy to reflect new evidence and feedback from the Sustainability Appraisal and Equalities impact Assessment

- New Part 5 added to refer to key role that two mixed-use development sites will play in supporting the growth of the town
- Last paragraph added to address surface water management issues in the Biddulph area.

Cheadle Area Strategy

7.48 Cheadle is the smallest of the District's market towns and has suffered from under-investment in its infrastructure and town centre and a lack of housing opportunities. The Spatial Strategy identifies the town as an area for significant growth in order to expand its role as a service centre and market town. The proposed strategy for Cheadle therefore seeks to achieve this through a range of actions and measures as well as addressing a number of specific challenges which have been identified through consultation, the evidence base and the strategies and plans of other agencies and organisations.

7.49 One of the most significant challenges is identifying the need and viability of a link road to relieve through traffic in the town and provide improved access to existing and planned housing and employment areas. Whilst some junction improvements have been implemented, there remains scope for further improvements to address transport issues in the town. Assessments undertaken have identified potential improvements such as junction improvements, road widening, improved signage and highways management. The Council will work with partners, including Staffordshire County Council and developers to develop and implement the required improvements.

7.50 A further significant challenge is the need for more community facilities to serve a growing population. The County Council has identified the need for a new primary school to serve the north of the town. An updated Open Space Sports and Recreation Study will identify potential needs for new facilities across the town.

7.51 Housing requirements will be met through the identification of key clusters of development to the north and south of the town. The former formed part of the Broad Area as identified in the Core Strategy. Elsewhere, smaller housing allocations within the town will support the sustainable development of Cheadle.

7.52 Employment provision will be met through the expansion of existing employment areas to the south of the town. This is considered to be the most sustainable location for employment development and will minimise the impact of development on the countryside and existing residential areas.

Policy SS 7

Cheadle Area Strategy

The Council and its partners will seek to expand the role of Cheadle as a significant service centre and a market town. This will be achieved through the following actions:

1. Expand the housing market area and community provision by:

- Increasing the range of available and affordable house types and higher market housing, including for first time buyers and families;
 - The development of specific housing sites through new site allocations in the Local Plan. This will include two strategic housing clusters to the north and south of the town, namely:
 - Land off Donkey Lane - housing and school development will be supported in line with policy SDC1
 - Mobberley Farm - housing development will be supported in line with policy SDC2
 - Protecting, increasing and improving the provision and accessibility of open space, sport and recreational facilities in line with the emerging Open, Space, Sports and Recreation Strategy
 - Providing additional educational, health and community facilities, including a new primary school to serve north Cheadle at the Donkey Lane site
2. Create employment growth and increase the diversity of employment opportunities to meet existing and future needs by:
- Supporting the retention and growth of JCB and other existing businesses within the town;
 - Supporting improved access to JCB and existing employment sites;
 - The development of employment land through new site allocations in the Local Plan;
 - Providing facilities and land for new start-up businesses;
 - Improving and intensifying the use of existing employment areas at New Haden/Brookhouses.
3. Expand the role of Cheadle as a significant service and retailing centre for the District by:
- Supporting improvements to the quality and range of the retail offer and supporting town centre uses
 - Regenerating and improving the streetscape of the town centre and creating more public realm
 - Expanding the range and diversity of educational, health, sport, cultural and community services and facilities in the town;
4. Improve environmental quality and accessibility by:

- Addressing traffic related issue in the town centre and along the A521 and A522 by working with partners to develop and implement transport improvements
- Improving pedestrian and cycle links across the town and into the countryside, including the implementation of the Green Infrastructure Strategy
- Improving public transport links between the town and other main settlements;
- Promoting the role and historic character of the town and its links with the Churnet Valley as a visitor destination.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy SS5c but with the following changes:

- Removing the reference to the need to allocate sites in the Site Allocations DPD.
- Adding reference to new sites for housing, employment and a new school being allocated in the Local Plan
- Added reference to the Green Infrastructure Strategy to reflect new evidence and feedback from the Sustainability Appraisal and Equalities Impact Assessment
- Removing the references to increase retail provision in line with the Retail Study
- Added reference to the need to continue to work with partners to address traffic related issue in the town

Larger Villages Area Strategy

7.53 The larger villages have an important role in terms of serving and supporting their immediate surrounding rural areas and smaller villages. It is important therefore that they are sustained and promoted as service centres. A major issue in such settlements is balancing the need to retain local facilities and accommodate housing and other needs with maintaining their character and avoiding over-development. The proposed strategy for the larger villages seeks to sensitively retain and enhance their role as service centres by addressing a number of specific social, economic and environmental challenges which have been identified through consultation, the evidence base and the strategies and plans of other agencies and organisations.

7.54 The policy allows for development or redevelopment of land to come forward which is appropriate to the Spatial Strategy and character of each settlement. The amount and nature of development will be dependent on the development capacity of individual settlements and the availability of suitable sites. In some settlements the scale of development may therefore be limited. Development boundaries are identified on the Policies Map, within the Development Boundary development of an appropriate scale and nature will be allowed. Outside of the boundaries, limited infilling may be supported, subject to key criteria being met as set out in Policy H1.

Policy SS 8

Larger Villages Areas Strategy

The following are identified as larger villages:

- Alton
- Biddulph Moor
- Blythe Bridge & Forsbrook
- Brown Edge
- Cheddleton
- Endon
- Ipstones
- Kingsley
- Upper Tean
- Waterhouses
- Werrington & Cellarhead
- Wetley Rocks

These settlements shall retain and enhance their role as rural service centres, providing for the bulk of the housing requirement of the rural areas and also for employment needs of a scale and type appropriate to each settlement having infrastructure capacity and character. The Council and its partners will achieve this through the following actions:

1. Retain and enhance their role as rural service centres by:
 - Enabling appropriate development which supports and increases the range and quality of community facilities available to the rural areas;
 - Protecting community facilities where loss would be deemed to reduce the community's ability to meet its day to day needs
 - Improving connections by public transport to surrounding smaller villages and market towns.
2. Meet housing requirements by:
 - Increasing the range of available and affordable house types, including for first time buyers and families;

- Allocating a range of deliverable housing sites with good accessibility to services and facilities
 - Supporting the development of housing windfall sites within the village boundaries, subject to wider Local Plan polices
 - Allowing for rural exceptions housing in appropriate locations on the edge of settlements (in accordance with Policy H1). This will be additional to the housing provision for the rural areas
 - Giving consideration to limited infilling on the edge of settlement boundaries, subject to the criteria set out in Policy H1.
3. Meet limited employment needs by:
- Enabling small-scale new employment development;
 - Improving and intensifying the use of existing employment areas and, where appropriate, expanding them.
4. Ensure that new development reflects and enhances each village's special character and heritage by:
- Giving priority to the reuse and regeneration of existing redundant, underused or surplus sites and premises for new development;
 - Ensuring that development is of a suitable scale in relation to the role and function of the villages as set out in the Spatial Strategy
 - Supporting the use of Neighbourhood Plans and Village Design Statements to guide future development
 - Protecting and enhancing the setting of individual settlements
 - Supporting the implementation of the Green Infrastructure Strategy and Local Green Spaces.
5. Supporting the mixed-use development of the Blythe Vale site at Blythe Bridge in line with policy DSR1.

Any development proposal that might have the potential to affect a European or Ramsar Site must itself be subject to appropriate assessment.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy SS6a but with the following changes:

- Removal of references to meeting local housing and employment needs

- Point 1 - first two bullet points services and facilities changed to community facilities
- Point 1 second bullet point change to wording
- Point 2 - new reference for scope for limited infilling on the edge of the settlement boundaries, subject to Policy H1
- Point 4 second bullet point - reworded reference to "restricting" scale to "suitable" scale in line with the Spatial Strategy to provide a more positively worded policy in line with the NPPF
- Point 4 third bullet point Parish Plans replaced with Neighbourhood Plans
- Point 4 last bullet point - new reference to implementation of Green Infrastructure Strategy and Local Green Spaces in response to new evidence and feedback from the Sustainability Appraisal
- Added new point 5 to refer to the mixed-use site at Blythe Vale
- Added final sentence to respond to recommendations from the Habitats Regulations Assessment.

Smaller Villages Area Strategy

7.55 The smaller villages have a more limited role as service centres, but they are vital to the rural areas particularly in terms of providing for local housing and rural employment needs. A major issue for smaller villages is the loss of local population through lack of housing opportunities. The proposed strategy for the smaller villages therefore seeks to allow an appropriate level of sensitive development which enhances community vitality.

7.56 Development on a large scale would be unsustainable in these villages, as it will generate a disproportionate number of additional journeys outside the village and may undermine the spatial strategy. Development will be strictly controlled in order to ensure that the character and life of the settlement is not undermined. Boundaries are not defined for smaller villages, except where they have been excluded from the Green Belt. Limited development, including infill will be supported subject to this policy and Green Belt policy set out in the National Planning Policy Framework.

Policy SS 9

Smaller Villages Area Strategy

The following are identified as smaller villages:

- Bagnall
- Blackshaw Moor
- Boundary

- Bradnop
- Caverswall
- Checkley
- Consall
- Cookshill
- Cotton
- Dilhorne
- Draycott
- Foxt
- Froghall
- Heaton
- Hollington
- Hulme
- Kingsley Holt
- Leekbrook
- Longsdon
- Lower Tean
- Meerbrook
- Oakamoor
- Rudyard
- Rushton Spencer
- Stanley
- Stockton Brook
- Swinscoe
- Whiston
- Winkhill

These settlements shall provide only for appropriate development which enhances community vitality or meets a social or economic need of the settlement and its hinterland. The Council and its partners will achieve this through the following actions:

1. Enhance community vitality by:

- Protecting and enabling services and facilities which are essential to sustain rural living;
- Improving connections by public transport and other transport measures to neighbouring larger villages and market towns;
- Supporting the provision of local, mobile and electronic services which increases the range and quality of services
- Supporting the implementation of the Green Infrastructure Strategy and Local Green Spaces

2. Meet community, social or economic need by:

- Enabling limited new housing development, including small infill schemes in accordance with Policy H1
- Allowing for rural exceptions housing in appropriate locations (in accordance with Policy H1). This will be additional to the housing provision for the rural areas.
- Enabling small-scale new employment development including 'live-work' developments which are for a rural enterprise or an existing authorised business use;
- Supporting the diversification of existing farm enterprises
- Supporting the development of appropriate ICT and new means of communications to enable homeworking and small businesses reliant on e-technology.

Any development proposal that might have the potential to affect a European or Ramsar Site must itself be subject to appropriate assessment.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy SS6b but with the following changes:

- Point 2 first bullet point amended to refer to scope for limited infilling, subject to Policy H1
- Added final sentence to respond to recommendations of Habitats Regulations Assessment

- Added references to new Policy H1 to reflect Local Plan
- Added reference to Local Green Space and Green Infrastructure to reflect new evidence and Local Plan.

Other Rural Areas Strategy

7.57 The concept of sustainability argues in favour of concentrating most development in or adjoining existing built-up areas. However, there can be cases where some development and diversification of use in the countryside can be beneficial and sustainable. For instance, some farm businesses may benefit from diversification and an increased number of visits to the countryside can help the rural economy. However this needs to be appropriate to the character of the countryside which also needs to be sustained.

7.58 Where development in the open countryside is justified, the preference will be for the re-use or redevelopment of existing buildings. All development in these areas will be strictly controlled, both in terms of its scale and type in order to ensure that the character and role of the countryside and the green belt is not undermined.

7.59 Within these areas there are some smaller settlements and hamlets which are not identified in Policy SS10 as 'Small Villages' because their predominantly open character, loose-knit nature and lack of services and facilities.

7.60 The development of renewable energy sources will also often be in rural areas but such development will almost always have an environmental cost as well as benefits. Such proposals must be weighed against the continuing commitment to protect the environment. The scale and design of such schemes will therefore be of paramount importance and should accord with Policy SD2.

7.61 Historically development of a large scale has taken place in a number of areas in the countryside of Staffordshire Moorlands, often associated with past industrial activity or specific needs. These are brownfield sites and where these are no longer needed it is necessary to consider whether an alternative use would be appropriate. The complete or partial redevelopment of such major developed areas may offer the opportunity for environmental improvement without adding to their impact as well as helping to meet the needs of the rural areas and improve the rural economy. Two such areas were identified in the Core Strategy and included in the plan at:

- **Bolton Copperworks, Froghall** - The historic copper factory of Thomas Bolton and Sons most of which is now closed and derelict apart from a small section that services copper wires. It lies within an area of high landscape and tourism value adjoining the village of Froghall. The whole site occupies an area of approximately 17 hectares comprising of a range of industrial buildings. There are significant potential contamination issues which may be at some depth within the site which must be addressed. Its strategic location at the centre of the Churnet Valley is considered crucial to the area's success.
- **Anzio Camp, Blackshaw Moor** – Former army training base located 3 miles to the north of Leek on the southern edge of the Peak District National Park. The site extends to some 15.4 hectares and includes 17 existing buildings. The site now has planning consent.

7.62 The policy also places considerable emphasis on tourism. This is identified in the spatial strategy and the Sustainable Community Strategy as a major opportunity to sustain the rural economy and strengthen the role of the District within the region and North Staffordshire.

7.63 The District has a close link with the Peak District National Park in terms of tourism and the policy seeks to encourage and promote tourism opportunities that could ease pressures on the Park itself, provided this would not increase pressure on areas of biodiversity interest.

7.64 The Green Belt serves a number of purposes which are derived from Government policy in the NPPF and the former Staffordshire Structure Plan. The Green Belt keeps land open and free from development over a long period, which extends beyond the plan period, in order to give assurance that its boundaries will endure. National policy on Green Belts is set out in the NPPF and will apply to the whole of the Green Belt. The Green Belt Review assessed the Green Belt in the District against the five purposes of the Green Belt. The Green Belt boundary (as revised) is identified on the Polices Map.

Policy SS 10

Other Rural Areas Strategy

The other rural areas comprise the countryside and the green belt outside of the development boundaries of the towns and larger villages and the open countryside surrounding the smaller villages.

These areas will provide only for development which has an essential need to be located in the countryside, supports the rural diversification and sustainability of the rural areas, promotes sustainable tourism or enhances the countryside. The Council and its partners will achieve this through the following actions:

1. Meet housing requirements and specific needs by:
 - Restricting new build housing development in the countryside to that which has an essential need to be located in the countryside in accordance with Policy H1
 - Allowing the conversion, extension or replacement of an existing rural building in accordance with Policy H1
 - Allowing suitable development which would secure the future conservation of a heritage asset in accordance with Policy DC2;
 - Allowing rural exceptions housing (in accordance with Policy H1)
 - Allowing community facilities which meet a local need, where that need cannot be met in a settlement within the hierarchy. In such cases the development should be in a sustainable location close to an existing serviced settlement.
2. Sustain the rural economy by:

- Enabling the limited expansion or development of business for employment uses where a rural location can be justified
 - Supporting the diversification of existing farm enterprises
 - Supporting the development of appropriate ICT and new means of communications to enable homeworking and small businesses reliant on e-technology;
3. Enhance and conserve the quality of the countryside by:
- Giving priority to the need to protect the quality and character of the area and requiring all development proposals to respect and respond sensitively to the distinctive qualities of the surrounding landscape;
 - Limiting uses which generate a substantial number of regular trips in areas that are not well served by public transport;
 - Ensuring renewable energy schemes are of an appropriate scale, type and location;
 - Recognising and conserving the special quality of the landscape in the Peak District National Park (in accordance with Policy DC3);
 - Encouraging measures which protect and enhance the biodiversity, geological resources and heritage of the District.
4. Regenerate underused major developed areas in the countryside including:
- Bolton Copperworks, Froghall – uses which may be suitable are employment, residential, tourist-related retail and accommodation, leisure, subject to the satisfaction of flooding and contamination constraints. Development shall make provision for appropriate off-site highway improvements. Further guidance is provided in the Churnet Valley Masterplan SPD and Bolton's Copperworks Masterplan.
 - Anzio Camp, Blackshaw Moor – uses which may be suitable are employment, extra care housing, tourist accommodation. Further guidance is provided in the Churnet Valley Masterplan SPD.
- Development of these areas shall be complementary to and not undermine the role of the towns and larger villages nor shall it undermine wider strategic objectives. It shall also avoid or minimise environmental impacts and congestion and safeguard and enhance natural and cultural assets.
- Facilitating the appropriate redevelopment of other major developed areas where the proposed development brings positive benefits to the area and any resultant environmental or highways concerns could be adequately addressed and minimised. Such proposals will be expected to provide supporting information that demonstrates clearly that the redevelopment will complement the overall development strategy for the District.

5. Enhance tourist opportunities by:

- Supporting sustainable tourism developments and measures in the Churnet Valley in accordance with Policy SS12 and the Churnet Valley Masterplan SPD;
- Allowing for small-scale tourism developments in other areas (in accordance with policy E4);
- Establishing strong linkages between recreational and tourist resources;
- Recognising and developing the close linkages to the Peak District National Park.

6. Maintain the Green Belt within Staffordshire Moorlands. Strict control will continue to be exercised over inappropriate development within the Green Belt allowing only for exceptions as defined by Government policy.

Any development proposal that might have the potential to affect a European or Ramsar Site must itself be subject to appropriate assessment.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy SS6c but with the following changes:

- Second paragraph meets essential to local needs replaced with has an essential need to be located in the countryside
- Point 1 reference to essential local needs replaced with needs
- Point 1 bullet point 1 essential local need replace with has an essential need to be located in the countryside. Affordable deleted, H1 included in the policies.
- Point 2 first bullet point removed reference to existing business and added where a rural location can be justified and development
- Point 4 Cross references policies for Bolton Copperworks and Anzio Camp
- Point 5 first bullet point includes Churnet Valley Masterplan
- Point 6 reference to Green Belt review deleted.

Churnet Valley Strategy

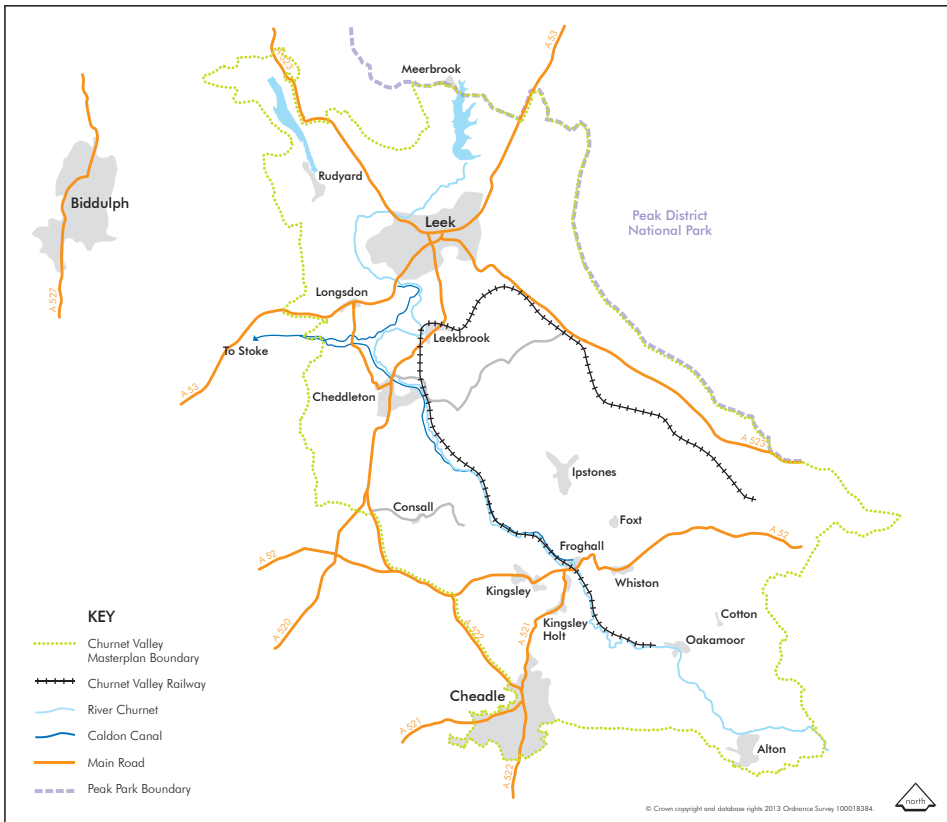

7.65 The Churnet Valley, running from Rudyard Lake and Tittesworth Water through Leek, Cheddleton, Froghall and Oakamoor to Alton, is an area of significant landscape, wildlife and heritage value with a number of existing well-established tourist and visitor attractions. The Churnet Valley can provide a strong focus for sustainable rural regeneration across the District and a significant sub-regional asset as well as complementing and easing pressures on the neighbouring Peak District National Park. The Churnet Valley Masterplan was adopted

as a Supplementary Planning Document (SPD) in 2014. It provides a comprehensive framework for future development in the Churnet Valley. The extent of the area covered is defined in the Masterplan. It identifies opportunities and measures to help regenerate and manage this important rural area based around sustainable tourism in a manner which is sensitive to and enhances its important heritage, landscape and ecology.

7.66 To reflect the aims of the strategy for the Churnet Valley and the Churnet Valley Masterplan the policy seeks to manage opportunities for further appropriate visitor accommodation and tourist facilities with an emphasis on increasing overnight stays with visitors staying for longer and throughout the year and on further developing the visitor experience of the Churnet Valley through the development of its heritage, nature based and outdoor recreation products, improving and developing links between existing facilities and activities so that they are benefiting from each other, and maintaining and establishing links with regional tourism facilities. This will be supported by measures to improve access by public transport, walking and cycling into the countryside.

7.67 Sustainable tourism is tourism which takes account of its current and future economic, social and environmental impacts, balancing the needs of visitors, the economy, the environment and host communities. Tourism development must not be at the expense of the special qualities of the Churnet Valley which draw so many people to the area. A very sensitive approach to the provision and expansion of facilities and accommodation will therefore be required to ensure that it is of an appropriate scale and design and compatible with the nature of the local area and enhances the heritage, landscape and ecology of the Churnet Valley.

7.68 The principal purpose and role of the existing green belt should also not be undermined by development which can still take place provided it is of an appropriate use, scale and form in accordance with national green belt policy.

Churnet Valley Masterplan Area

Policy SS 11

Churnet Valley Strategy

The Churnet Valley is identified as an area for sustainable tourism and rural regeneration. The Churnet Valley Masterplan provides a comprehensive framework for development in the Churnet Valley and development should be in accordance with the Masterplan. Within this area particular support will be given to the following forms of development and measures:

- short stay and long stay visitor accommodation;
- the expansion of existing tourist attractions and facilities and the provision of compatible new tourist attractions and facilities;
- measures to enhance, protect and interpret the landscape character and heritage assets of the Churnet Valley;
- measures to remediate and restore derelict land, buildings and features including the appropriate redevelopment of sites;
- actions to protect and enhance the biodiversity of the valley, including the maintenance, buffering and connection of designated sites and actions to mitigate climate change.

- measures that support and integrate the heritage transport infrastructure of the valley, sympathetically with enhancing and developing links to strategic footpaths, cycle and horse riding routes.
- measures to improve connectivity and accessibility to and within the Churnet Valley by sustainable transport means having regard to the Green Infrastructure Strategy.

Any development should be of a scale and nature and of a high standard of design which conserves and enhances the heritage, landscape and biodiversity of the area and demonstrate strong sustainable development and environmental management principles. The consideration of landscape character will be paramount in all development proposals in order to protect and conserve locally distinctive qualities and sense of place and to maximise opportunities for restoring, strengthening and enhancing distinctive landscape features.

Complementary and sensitive highway improvements to access routes and/or measures to support other alternative means of access will be required to serve any developments which generate significant additional demand for travel.

Development shall be in accordance with the Churnet Valley Masterplan.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy SS7 but with the following changes:

- First paragraph refers to Policies Map and includes reference to the Churnet Valley Masterplan
- Last bullet includes reference to the Green Infrastructure Strategy
- Last two paragraphs deleted as they refer to the the preparation of the Churnet Valley Masterplan which has now been completed.

Planning Obligations and Community Infrastructure Levy

7.69 Developer contributions will have a significant role to play in infrastructure delivery, including contributions towards affordable housing (on-site or off-site) and other measures required to make developments acceptable in planning terms. Standard formulae used to secure infrastructure provision used by the Local Planning Authorities and its partners may also be applied where appropriate. A Developer Contributions SPD will provide detail of how contributions will be calculated. This will be subjected to a viability appraisal to ensure that any requirements do not undermine development viability.

7.70 The Community Infrastructure Levy could also provide an important funding source for infrastructure required to support the cumulative impacts of growth. An assessment of the viability of development in Staffordshire Moorlands and the scope for potential rates to be charged on developments is ongoing. Subject to the findings of this study and further

consideration by the Council, a levy could be pursued in the District. Any levy would be subject to public consultation and an examination prior to adoption. The levy cannot be adopted prior to the new Local Plan.

7.71 The Infrastructure Delivery Plan that supports the Local Plan identifies the types of infrastructure or specific projects that are expected to be funded either by planning obligations or a levy along with phasing requirements when necessary. However, in many cases it should be recognised that wider funding sources of funding will be required to provide new infrastructure.

7.72 Other such sources may include the New Homes Bonus or other public and private capital programmes. The Infrastructure Delivery Plan will be updated in consultation with partners to reflect changing circumstances and funding opportunities during the plan period.

Policy SS 12

Planning Obligations and Community Infrastructure Levy

Development proposals will be required to provide, or meet the reasonable costs of providing, the on-site and off-site infrastructure, facilities and/or mitigation necessary to make a development acceptable in planning terms through the appropriate use of planning obligations and/or conditions. Standard formulate will be applied when applicable. The Developer Contributions SPD will provide further guidance on how contributions will be calculated.

Provision will be required for subsequent maintenance where contributions are secured for facilities which are predominantly for the benefit of users of the development concerned.

Subject to an assessment of development viability and further consideration by the Council, infrastructure requirements related to the cumulative impact of development in Staffordshire Moorlands will generally be supported by the Community Infrastructure Levy. The Infrastructure Delivery Plan that supports the Local Plan provides further clarification on infrastructure needs and sources of funding.

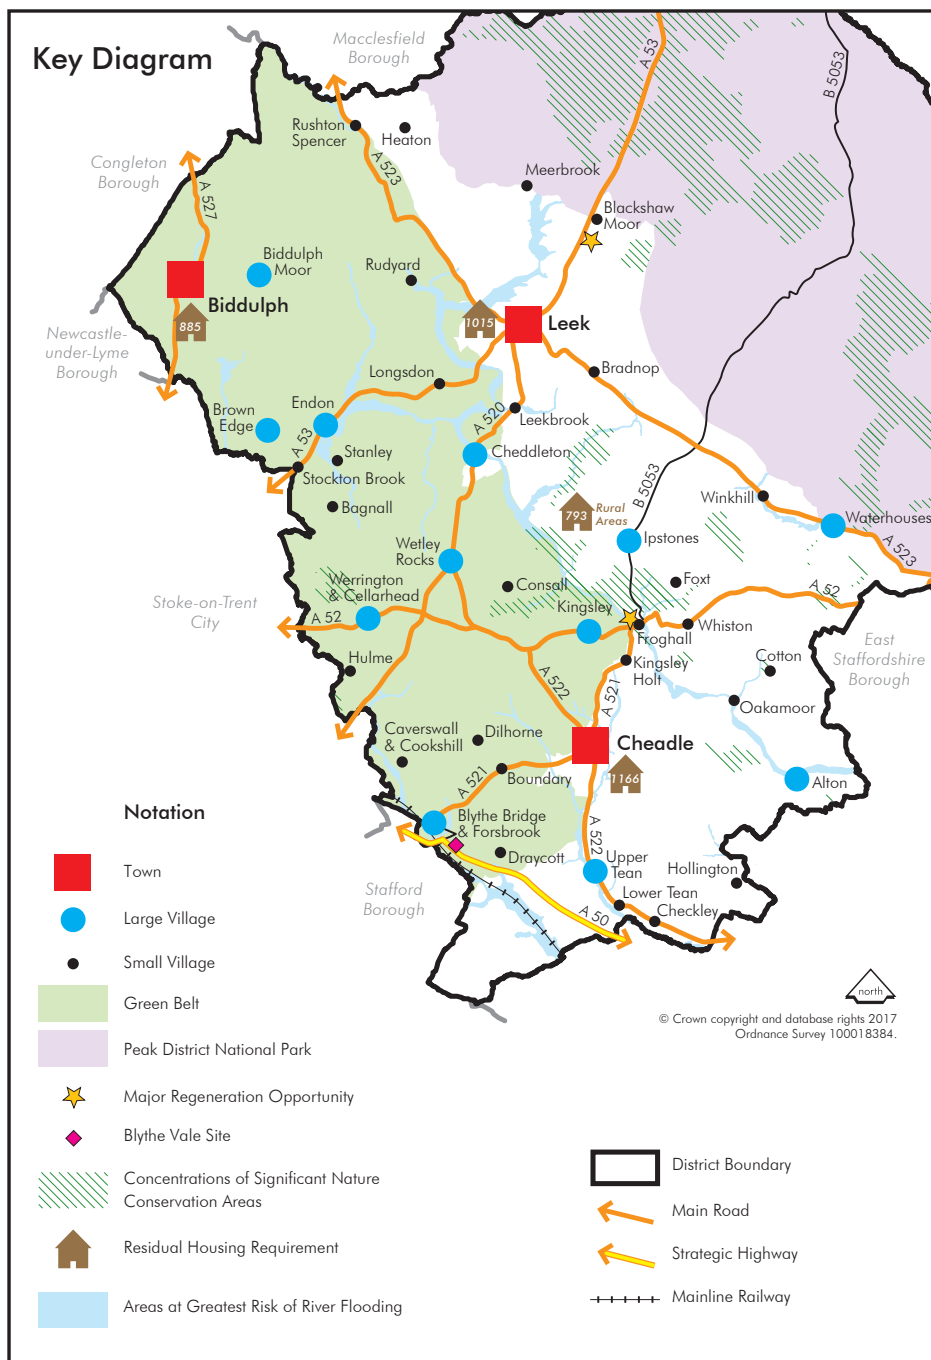

The Infrastructure Delivery Plan will be reviewed regularly to ensure that it remains up-to-date. In implementing this policy regard will be had to economic viability considerations, consistent with meeting the Local Plan objectives.

Consistency with Core Strategy

This is a new policy proposed to provide clarity regarding the Council's approach to Planning Obligations and the Community Infrastructure Levy.

Key Diagram

7.73 The following Key Diagram illustrates key constraints, opportunities and proposals across the District. It is intended to provide a visual representation of the Spatial Strategy and issues that have helped to shape it. More detailed maps of proposals are provided in the Appendices to this Local Plan.

Development Management Policies

8 Development Management Policies

8.1 This chapter provides more detailed development management policies for specific planning related matters, namely:

- Sustainable development
- Economy and employment
- Housing
- Town centres and retail
- Design and conservation
- Sustainable communities
- Natural environment
- Transport

8.2 These policies should be read in the context of the Spatial Strategy and Strategic Policies in the preceding chapter of this Local Plan. In addition, further site specific policies are provided in Chapter 9.

8.1 Sustainable Development

Spatial Objectives

SO2. To create a District where development minimises its impact on the environment, helps to mitigate and adapt to the adverse effects of climate change and makes efficient use of resources.

Sustainable Development Policies

Sustainable Use of Resources

8.3 The need to respond pro-actively to the issue of climate change has been identified as a major challenge for the District and planning has a key role to play in ensuring that development minimises its impact on the environment, helps to mitigate and adapt to the adverse effects of climate change and makes efficient use of resources.

8.4 The Government has made it clear that sustainable development is the core principle underpinning land use planning, in the NPPF and other guidance. In particular the Stern Review (October 2006) identified that human activity is changing the world's climate, with profound and rising costs to the natural environment, concluding that action is needed now to avoid the worst of these costs. This was addressed in the 2008 Planning Act, which requires that Local Plans contain policies (when taken as a whole) designed to "...contribute to the mitigation of, and adaptation to, climate change." The NPPF also addresses climate

change mitigation with its support for transition to a low carbon future, support for more renewables; and its direction that Planning should play a key role in helping to secure radical reductions in greenhouse gas emissions.

8.5 National policy guidance and Policy SD1 support the use of previously developed land for development and the efficient use of land subject to wider considerations. Whilst the Council's Strategic Housing Land Availability Assessment indicates that much new housing could be built on previously developed land, the Council's overall development requirements will mean that it will still need to allocate some greenfield land; further there may be other circumstances where the re-use of a brownfield site over greenfield may not be appropriate, for example on sustainability grounds.

8.6 The submission of environmental information listed in Part(4) SD1 for major developments (broadly as defined in the Development Management Procedure Order) will enable the Council and applicant to explore how they can further contribute towards improving a scheme in relation to climate change/carbon-saving in the context of the viability expectations of the NPPF. Such information may be submitted as part of a Design and Access Statement or separately. Where the Council considers insufficient information has been submitted given the complexity of the proposal, it may request further information to cover the expectations regarding this part of the Policy.

8.7 The District contains a number of older settlements, many of which contain buildings and sites which could be re-used. Some of these have a history of contamination due to industrial legacy, and remediation measures will be necessary where redevelopment is proposed. Where a site is affected by contamination or land stability issues, responsibility for securing a safe development rests with the developer and/or landowner. In some cases a developer may be required to submit pre-application evidence as to the presence of contamination across the site, under the 2011 Environmental Impact Regulations (as amended), before a planning application can be determined. Any proposal to develop land which has been subject to a previous use which may have caused contamination of the underlying soils and groundwater will need to be supported by a Preliminary Risk Assessment to identify the presence of receptors as identified under Part IIA of the Environmental Protection Act 1990. The NPPF requires that any contaminated site proposed for redevelopment should not be capable of being described as contaminated land under this legislation, following remediation measures.

8.8 Further, the District has a history of mineworkings; the presence of which can adversely affect the stability of future built developments. The presence of minerals underground may also be identified as a resource for future extraction under County Minerals Plans. For these reasons, all future applications and allocations will be assessed against the best available information, such as Coal Authority records. However the presence of coalmining legacy across a site does not of itself mean it is not suited to re-use, indeed redevelopment schemes with appropriate coalmining mitigation measures often provide a good opportunity to re-use derelict land. The County Minerals Planning Authority have clarified that their adopted policies seek to protect established minerals safeguarding areas and safeguarded mineral infrastructure sites. Consequently they require consultation for any major development schemes within Mineral Safeguarding Areas (MSAs) identified in the Staffordshire Minerals Local Plan or on or near to mineral infrastructure sites. The Council will also expect that developers recognise mining legacy problems and demonstrate how they can be positively addressed by new development.

Policy SD 1

Sustainable Use of Resources

The Council will require all development to make sustainable use of resources, and adapt to climate change. This will be achieved by:

1. Supporting or promoting proposals that remediate brownfield sites affected by contamination.
2. Re-use of sites affected by mining legacy will be supported where this accords with the adopted County Minerals Local Plan, and provided that any mining legacy is appropriately addressed so that no future liability for future maintenance or public safety arises. The Council will also expect that developers recognise mining legacy problems generally and demonstrate how they can be positively addressed by new development.
3. Supporting development that is located and designed to minimise energy needs and to take advantage of maximised orientation (subject to design and landscape policies) to achieve energy savings in line with Policy SD3.
4. The Council will require applicants for all major-scale planning applications (10 or more residential units or 1,000+ square metres floor area) to demonstrate that they have considered the energy efficiency, water conservation, sourcing of construction materials, and site orientation aspects of the scheme, and where possible the feasibility of integrating micro-renewables. The degree of detail expected will depend on the scale/complexity of the proposal.
5. The Council will encourage developers to investigate the potential for re-using construction or construction waste materials, especially those sourced locally (which can include those minerals available on site, as appropriate) and integrates where possible on-site waste management facilities.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy SD1 but with the following changes:

- Part (2) clarifies the Council's support for the re-use of sites affected by a mining legacy, provided this accords with the County Minerals Authority position with respect to protecting minerals safeguarding areas and minerals infrastructure sites. It also expects developers to recognise and address mining legacy problems generally.
- Part (4) has been amended to refer to submission of environmental information generally, without tying this to submission of sustainability statements. The supporting text at 8.4 clarifies Council expectations.
- Amends "expect" under Part (5) to "encourage", so it is more in line with NPPF
- Part (6) has been removed and Policy SD(3) has been amended, to clarify that it also supports water conservation measures (not just thermal efficiency measures).

Renewable/Low-Carbon Energy

8.9 In recent years the UK has committed itself to legal obligations stemming from EU Directives, relating to both the reduction of future greenhouse gas (GHG) emissions (including carbon); and the meeting of a greater proportion of the UK's future demand for energy through renewables - which have been reflected in more recent legislation. The Climate Change Act 2008 requires the UK to reduce GHG emissions by 80% between 1990 and 2050; with a requirement that UK CO₂ emissions reduce by 26% between 1990 and 2020. EU Directive 2009/28/EC requires the UK to source 15% of its energy from renewables sources by 2020 (the target for 2015-16 was 7.5% – actual uptake in 2015 was 8.3%). The NPPF reflects this with support for transition to a low carbon economy; and its support for greater uptake of renewables. LPAs can also continue to develop an evidence-based understanding of renewables opportunities in their areas. As a response to the above legislation and Policy, in 2009 the Council, along with other Staffordshire planning authorities, commissioned consultants CAMCO to produce a Staffordshire-wide study examining in detail the opportunities for stand-alone renewables in general. The study included energy opportunity mapping, and was published in 2011.

8.10 In line with National Policy, Policy SD2 gives support to new renewable energy development generally without differentiating between forms, as the District has natural characteristics (e.g. river flows) which could make this viable – either now, or due to future technology. In the case of wind energy proposals, the Policy clarifies that recent Government NPPG Policy (in particular Ministerial Statement HCWS42) will be applied, as the Local Plan does not currently designate any "areas identified as suitable for wind energy development". Policy SD2 also recognises that the siting and design of all stand-alone renewables installations requires careful consideration, to protect the natural and built environment, and other amenities, without precluding the supply of any type of renewable energy. The viability of different forms of renewable energies, within different areas of the District, is examined in the CAMCO work (which may in future be informed by further local evidence). Note that schemes for non-renewable energy schemes not covered by this policy (such as fossil fuel generators), will be assessed against all relevant policy, including the National Policy Statements.

Policy SD 2

Renewable/Low-Carbon Energy

The Council will strive to meet part of the District's future energy demand through renewable or low-carbon energy sources (which could be through a variety of technologies, for example solar energy, biomass etc), in line with current evidence which identifies the feasibility of these forms of energy across the District. The Council will assess wind turbine schemes in line with the Government's specific policy on wind turbines. For all other forms of renewable energy the Council will support small- and large- scale stand alone renewable or low-carbon energy schemes subject to the following considerations:

- the degree to which the scale and nature of a proposal impacts on the landscape, particularly having regard to relevant Landscape Character evidence and impact on the Peak District National Park (taking into account both individual and cumulative effects of similar proposals);

- the degree to which the developer has demonstrated any environmental/economic/social benefits of a scheme, as well as how any environmental or social impacts have been minimised (e.g. visual, noise or smell);
- the impact on designated sites of European (or successor), national and local biodiversity and geological importance in accordance with policy NE1;
- the impact on the amenity of residents and other interests of acknowledged importance, including the historic environment;
- the degree to which individual proposals reflect current local evidence regarding the feasibility of different types of renewable or low-carbon energy at different locations across the District;
- in the case of solar energy proposals that are not affixed to buildings or structures, applicants will be expected to demonstrate that they have examined whether previously developed land is available before greenfield land. Where agricultural land is proposed, poorer quality land should be utilised before higher quality agricultural land.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy SD2 but with the following changes:

- Policy (and supporting text) clarifies that the Council does not have designated areas for wind turbines and therefore wind turbine proposals will be considered separately against Government Policy (in particular Ministerial Statement HCWS42)
- Clarifies expectation that brownfield sites should be prioritised in the case of freestanding solar energy proposals (Ministerial statement HCWS488)
- Other textual updates to reflect new landscape evidence etc.

Sustainability Measures in Development

8.11 A consequence of recent Governments' commitment to mitigating climate change has been a tightening of the building regulations with respect to environmental performance of new dwellings (including thermal efficiency/ water consumption efficiency/ minimisation of surface water run-off etc), according to a trajectory aimed at attaining "zero carbon" status for new dwellings, by 2016. Previously under the Planning and Energy Act 2008, Councils could set policy requirements that exceeded building regulations; however the Deregulation Act 2015 has since removed this power, as part of the Government's intention to streamline housebuilding standards and remove financial viabilities upon developers. The NPPF is clear in its support for reducing the carbon- and water- consumption impacts of new buildings, but, because this generally involves greater build-costs, this is subject to developer viability considerations. The Government has recently introduced a number of optional 'national technical standards' pertaining to access space, and water efficiency in new dwellings

(Councils can only apply a requirement for these in policy if justified by 'clear evidence'). There are also a number of other voluntary schemes such as BREEAM 'Home Quality Mark', and the UK New Construction Standard (for non-domestic buildings) which builders can refer to.

8.12 The Infrastructure Act 2015 also clarifies that developers can achieve 'zero carbon' homes standard by using "allowable solutions" such as near- or off-site carbon mitigation measures in addition to on-site environmental performance measures (the exception to this is for 'smaller'-scale housing schemes which are exempted from off-site requirements).

8.13 For these reasons, Policy SD3 supports a number of measures which can improve the sustainability of new or existing development in advance of the Building Regulations; however it does not set (either on- or off- site) carbon reduction requirements in new development beyond that expected in the building regulations.

Policy SD 3

Sustainability Measures in Development

The Council will support further carbon-saving or water-saving measures in both new and existing developments, in the following ways:

1. Supporting developers who propose exceeding the thermal efficiency or water conservation standards required by law for new buildings or extensions, at the time of the application. In the case of larger developments such as housing estates the Council will support measures such as 'communal' micro-renewables, or District Heating installations.
2. The Council will support measures by landowners/developers designed to contribute to existing or emerging District Heating networks (for example by connecting 'exporters', with receptors, of heat).
3. The Council will support measures designed to improve the sustainability of existing buildings (such as improved thermal insulation, water conservation, or the installation of micro-renewables).

Consistency with Core Strategy

Policy SD3 is unchanged apart from minor text changes ("promote" changed to "support" in line with NPPF). Also "Carbon-Saving" in the title is amended to "Sustainability" to reflect the fact that it also supports water conservation measures (in both existing and new development).

Pollution

8.14 Pollution not only can negatively impact on the quality of life of people, but can also contribute to climate change (impact on ozone etc) and adversely impact on biodiversity assets (which can also affect 'wealth creation'). The NPPF directs Councils to proactively provide needed economic development - however decisions should ensure that new development is "appropriate for its location" in pollution and contamination terms; and more

generally development should contribute to securing good standards of amenity and reducing pollution. On the other hand the NPPF recognises that industrial expansions resulting in 'some' additional noise should not be unfairly restricted. In accordance with the Government's noise policies including the Noise Policy Statement for England (NPSE) the Council will apply the principles in the following Policy to any development where pollution or contamination considerations may arise.

Policy SD 4

Pollution

The Council will protect people and the environment from unsafe, unhealthy and polluted environments by ensuring proposals avoid potential adverse effects; and only permitting proposals that are deemed (individually or cumulatively) to result in pollution (including air/ water/ noise/ vibration/ light/ ground contamination) if after mitigation, potential adverse effects are deemed acceptable. This may be achieved by the imposition of planning conditions or through a planning obligation.

Consistency with the Core Strategy

Original Policy SD4 separated into two Policies - the first dealing with pollution control and the second dealing with flood risk. The original element of SD4 dealing with pollution control has been amended for clarity in line with the NPPF and the NPSE.

Flood Risk

8.15 The Moorlands has a wet climate and within it there are significant corridors along rivers identified as being within flood risk zones, in addition to other areas affected by surface water run off. Previous consultations have indicated acute public concerns to flooding generally. Development patterns can have distorting effects on the water cycle and drainage systems (for example, artificial features such as hardstanding, new roads and pavements can create channels of surface run-off).

8.16 The District Council will continue to keep abreast of relevant evidence affecting flood risk in its District, such as the requirements of the 2003 Water Framework Directive and any relevant Catchment Flood Management Plans (such as the Humber River Basin Management Plan). A level 1 Strategic Flood Risk Assessment has been undertaken for the District. In accordance with the NPPF, areas of 'low', 'medium' and 'high' risk have been mapped using data collected from the Environment Agency, Staffordshire Moorlands District Council, Severn Trent Water, United Utilities, the Highways Agency and British Waterways. This has included information on flooding from rivers, surface water (land drainage), groundwater, artificial water bodies and sewers. This provides the basis for the Sequential Test to be applied. The Council will expect the Sequential Test to be applied to all sites within the 'high' and 'medium' risk flood zones to demonstrate that there are no reasonably available sites in areas with less risk of flooding that would be appropriate to the type of development or land use proposed. If there is an area of overlap between the site boundary and area at risk of flooding, this should be utilised as an opportunity to reduce flood risk within the site, by using waterside

areas for recreation, amenity and environmental purposes. Where sites are affected by the presence of any type of watercourse, the Council will expect developers to undertake early discussions with the Environment Agency and the Lead Local Flood Authority.

8.17 Notwithstanding any requirements for site-specific flood risk assessments, new legislation (2010 Flood and Water Management Act) may require separate Sustainable Drainage approval from the SuDS-approving authority (in all locations) for most new structures. Applicants will also be expected to review any guidance issued by the County Council Lead Local Flood Risk Officer or Environment Agency, with regards to SuDS design, as appropriate.

Policy SD 5

Flood Risk

Development proposals will be guided to first make use of areas at no or low risk of flooding before areas at higher risk, where this is viable or possible and compatible with other policies aimed at achieving a sustainable pattern of development. Development deemed acceptable within areas at risk of flooding due to national or other policies or other material considerations, must be subject to a site-specific flood risk assessment. Additionally, approved schemes must be designed and controlled to mitigate the effects of flooding on the site and the potential impact of the development on flooding elsewhere in the floodplain. In all cases, schemes will be determined after having considered both individual and cumulative impacts.

Where sites are affected by the presence of watercourses, the Council expects developers to undertake early discussions with the Environment Agency and the Lead Local Flood Authority.

Wherever possible SuDS will be expected to contribute to on-site flood alleviation, as well as taking opportunities to contribute to wider Council objectives such as its emerging Green infrastructure Network; to enhancing biodiversity and recreation opportunities; landscape character etc.

When considering planning applications, the Council will also have regard to all relevant Catchment Flood Management Plans affecting the District.

Consistency with Core Strategy

- Text clarification that the sequential approach applies in all cases (not just sites in the floodplain)
- Text clarification regarding when site-specific Flood Risk Assessments are required.
- New paragraph making explicit reference to expectations concerning SuDS (and additional information in supporting text).

8.2 Economy and Employment

Spatial Objectives

SO3. To develop and diversify in a sustainable manner the District's economy and meet local employment needs in the towns and villages.

SO7. To support and enhance the tourism, cultural, recreation and leisure opportunities for the District's residents and visitors.

New Employment Development

8.18 The provision of employment land of the right type and in the right place is a key issue for the Local Plan. The Employment Land Study has highlighted the need for the local economy to rely less on the manufacturing industry and to stimulate the private sector by making more sites available. The Study particularly indicated the need for starter units and the potential for offices. Tourism and cultural development is also seen in the Employment Land Study as being potentially significant for the District's economy in terms of generating income and providing employment. This section therefore contains 5 policies to help develop the District's economy and maintain existing valuable employment land and premises.

8.19 Policy E1 will ensure that there is a choice of sustainably located employment sites, attractive to developers and operators and appropriate to market needs; including 'B' uses but also wider employment uses (refer to Glossary). The Employment Land Study identified a need to follow successful examples such as the Victoria Business Park, and opportunities to encourage more start-up businesses and embrace new technologies in order to diversify the District's economic base away from industrial to office markets.

8.20 This policy also supports local businesses many of which are located outside main settlements or designated industrial estates, are within rural locations or are tightly hemmed in by housing or other development. For those businesses wishing to expand and remain on their current sites, there needs to be a careful balance between protecting the countryside or surrounding land uses, maintaining the openness of the green belt and allowing these firms to provide the additional floorspace that they require.

8.21 Expansion and consolidation land and premises also need to be provided for larger occupiers. This will be particularly important for established businesses in the area that are planning to expand locally or respond to changing market circumstances. In meeting these needs, it will be necessary for this policy to be complemented by on-going dialogue and consultation, in particular with major employers in the area to identify not only land-use requirements but transportation and economic development strategies that may be required.

8.22 Large-scale office developments (200m² gross or more), not otherwise allocated, will need to provide an impact assessment regarding the impact of the proposal on town centre vitality and viability (threshold derives from District's 2013 retail study). Schemes having significant adverse effects will be refused.

8.23 In order to ensure that the local workforce and businesses benefit from new development, the policy also proposes local labour or business agreements in appropriate cases to provide job opportunities and training for local people and businesses in the construction and running of the schemes. More detail on agreements with developers to

contribute towards training programmes and employment support and employment access schemes and on off-site contributions for employment training and support will be provided in an SPD on Developer Contributions or any subsequently adopted Community Infrastructure Levy. This will contain additional information on when agreements may be needed, what they will seek to cover, levels of contribution and how they will operate.

Policy E 1

New Employment Development

New employment development will be assessed according to the extent to which it supports and improves the local economy in terms of providing for the needs and skills of the existing and future local resident workforce and meeting identified business needs, having regard to the Spatial Strategy Policies in SS2, SS3, and SS10, and general employment land requirements set out in Policy SS4. In general the Council will endeavour to support the expansion of existing businesses and new businesses in the District, subject to the provisions below.

In addition:

- All proposals should help maintain or enhance an appropriate range of employment premises and sites across the District in terms of their scale, location and type.
- Within or on the edge of the town centres and on existing employment sites where redevelopment for other uses is proposed, mixed use schemes will be promoted. Mixed use schemes should accommodate employment generating uses of a scale and nature appropriate to their location.
- New business developments (use class B1a) should be located in existing or proposed employment areas or in or on the edge of town centres. Preference will be given to town centre locations for office developments, unless ancillary to another use or specifically allocated. In other locations the Council will expect a sequential demonstration that there were no centre or edge of centre sites available first. Office (Class B1a) developments of 200m² gross or more must provide an impact assessment regarding the impact of the proposal on town centre vitality and viability. This will not apply to appropriate expansions of existing authorised B1 sites or for small scale developments.
- Other types of B use class developments (B1b, B1c, B2 and B8) should be located in existing or proposed employment areas. Such development outside of existing or proposed employment areas but within the settlement boundary may also be acceptable when it would not create undue harm to the character, appearance or amenity of the area. In exceptional circumstances, such developments not on existing or proposed employment sites and outside of the settlement boundary may be supported where a rural location can be justified.
- Business development falling within other use classes (such as sui generis) will generally be viewed favourably.

- The sustainable redevelopment, intensification or improvement of existing employment sites for new business and industrial developments will be supported provided it would not have an unacceptable impact on the amenities, character or appearance of the area.
- Priority will be given to the re-use of rural buildings for commercial enterprise, including tourism uses, where the location is sustainable and the proposed use does not harm the building's character and/or the character of its surroundings.

To support the growth of the economy, the Council will:

- Support proposals that help to deliver priorities of the Local Enterprise Partnership;
- Encourage flexible working practices via home-working where there is no adverse impact on residential amenities, and allowing the development of live-work units on residential and mixed use sites
- Encourage provision for small-scale and start-up businesses

To ensure that the District's workforce is suitably skilled, the Council will, where appropriate, seek to enter into agreements with developers and employers to contribute towards training programmes and employment support and employment access schemes.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy E1 but with the following changes:

- Emphasises Council support for expansion of existing businesses and added reference to support new businesses to support the economy
- Updates Policy relating to B1(a) uses such that it fully reflects NPPF (removal of reference to needs testing; clarification of when impact statements are required (such that Policy is consistent with Pol TCR1) ; clearer reference to sequential test expectation
- Added reference to conditions under which development in a rural location may be supported in exceptional circumstances in order to provide a clear policy basis for determining any such applications
- Clarifies the locations and circumstances B1b/B1c/B2/B8 developments are appropriate.
- Widens scope of Policy such that it applies to more than 'B' uses (such as sui generis businesses)

- Clarifies the Council's approach to proposals for commercial conversion of rural buildings.
- Added section to demonstrate support for projects that support the Local Enterprise Partnership, suitable home-working and small/start-up businesses to provide additional support to suitable economic growth.

Employment Allocations

8.24 The Employment Land Requirement Study was completed in July 2014 and updated in February 2017. The study reviewed a range of economic factors, projections relating to the performance of different sectors of the local economy and the working age population. The 2017 update concluded that 13 to 27ha of additional employment land was required for Staffordshire Moorlands for the period 2016 to 2031. An employment land requirement of 27ha is recommended being at the top end of this range, to dovetail with a housing requirement of 320 homes per year (relating to the level required to support projected increase in jobs).

8.25 This 27ha is then broken down into the three towns and rural areas, according to the proportions set out in Strategic Policies SS3 and SS4. The Council therefore makes the following allocations for B Class employment use. Note that whilst the ELRS update 2017 tentatively recommends a 'split' of this figure (50% for B1a/B1b office, 50% for B1c/B2 industrial/B8 storage and distribution); the Policy does not specify sub-uses so as to maximise the freedom of subsequent occupants. However Policy SS4 carries forward the ELRS update expectations about splits between B-uses. The Council will need to monitor the uptake of the respective sub-uses to assess how effectively employment land is being delivered across the District. Land requirements are expressed as a minimum.

8.26 Note that no rural employment allocations are proposed given that in May 2016 the Council granted outline approval for a major residential and industrial scheme in the countryside at Cresswell covering approx 8.58ha employment land. This satisfies the District's residual employment land requirement 2016-2031. Note that the 48.5ha allocation of land at Blythe Vale (Policy DSR1) for mixed uses responds to a special regional requirement for high quality, employment development independent of the general employment land requirements for the District set out in Policy E2.

Policy E 2

Employment Allocations

The following sites as identified on the Policies Map will be allocated for employment development (B1b, B1c, B2, B8 uses), and in some cases mixed uses. The Council will work with developers and the local community to bring forward sustainable developments in accordance with the other policies in the Local Plan. Proposals for town centres uses, including B1a (office) will be required to comply with the sequential site and impact tests specified in Policy E1.

Consistency with Core Strategy

New Policy listing sites considered suitable for development.

Existing Employment Areas, Premises and Allocations

8.27 Government policy guidance for development to take place on previously-developed land has meant that many of the existing employment sites have become under considerable pressure from the threat of residential development. Applicants often argue that there is no demand for an existing employment site or that its retention or its redevelopment for new employment uses is not a viable option. It is accepted that in some cases this is true. However, it needs to be recognised that employment land is a finite resource and once it is lost, it is effectively lost for good. Although the retention or redevelopment of a site for employment use may not be viable at a particular time, the economics of development may change over time and its redevelopment for employment uses may become a viable proposition in the future.

8.28 The Council will continue to resist proposals involving the loss of employment land (as defined in the Glossary) by proposing a sequential approach towards planning applications. Existing premises that employ people may fall into a number of different use classes, not just industrial (such as sui generis), or in some case it may not be clear what use classes are represented. The Council will reach a view as to what constitutes an existing employment site on a case by case basis. For clarification Policy E3 covers employment sites currently in use; disused/vacant sites where employment use has not been abandoned; and employment allocations (Policy E2) whether or not they contain development. This would initially involve retaining appropriate and viable employment sites. Where a lack of demand can be demonstrated by an appropriate marketing exercise and where the retention of a site in employment use can clearly be shown to be unviable through the submission of appropriate evidence, the potential for mixed-use development should be explored incorporating an element of employment use within the development. To this end the Council would expect that an applicant demonstrate that as much employment floorspace is retained (or re-provided) as possible on site. In the case of 'enabler' redevelopment schemes involving a proportion of non-employment uses needed to fund improvements to existing employment premises or supporting infrastructure, the Council will consider these on their individual merits (including consideration of evidence submitted), but will seek to retain as much of the redeveloped site in employment use.

8.29 Mixed-use development is considered to be beneficial in contributing to sustainable development and provides the opportunity to build business units which might otherwise not be viable. Permitting some residential development on employment sites for example can help to raise land value and generate additional revenue to bring forward sites with known problems that are costly to resolve. Locating housing and employment developments close to each other also has added benefits of potentially helping to reduce the amount of traffic, congestion and pollution from work to home travel. This is particularly so with 'live-work' units – purpose built units where the occupier of a studio, office or workshop lives in a flat attached to the place of work.

8.30 Where mixed use development is not viable then the Council will seek a financial contribution in appropriate cases towards securing employment development elsewhere in the area. Further details will be set out in the Developer Contributions SPD, which will first be tested by viability evidence to ensure that expected financial contributions are NPPF compliant.

8.31 This policy will only apply insofar as it is consistent with any permanent or temporary provisions for changes of use permissible under the Town and Country Planning (General Permitted Development) Order (as amended). This policy does not apply to any business or industrial land or buildings which are allocated for an alternative use as these will have already been assessed through the plan making process.

Policy E 3

Existing Employment Areas, Premises and Allocations

Employment areas, premises and allocations that:

- are well located to the main road and public transport network; and

- provide, or are physically and viably capable of providing through redevelopment, good quality modern accommodation attractive to the market without harm to the amenity of nearby residents; and
- are capable of meeting a range of employment uses to support the local economy;

will be safeguarded for such purposes.

Redevelopment of such areas that will lead to a loss of employment will not be permitted unless:

A) the site is identified in the Local Plan for redevelopment; or,

B) it can be demonstrated that the site would not be suitable or viable for any continued employment use having regard to the above criteria and evidence can be provided that no suitable and viable alternative employment use can be found, or is likely to be found in the foreseeable future; or

C) substantial planning benefits would be achieved through redevelopment which would outweigh the loss of the site for employment use; or

D) Where redevelopment is proposed preference will be given to a mixed use redevelopment scheme which retains as much employment floorspace on the site as possible (to be demonstrated by evidence). The Council will consider "enabling" redevelopment proposals (required to support improvements to existing employment premises or supporting infrastructure) on their individual merits. In such cases, a viability appraisal should be submitted to demonstrate that a change of use or redevelopment of the site is required to fund the improvements; and in all cases the Council will seek to retain as much employment floorspace on the site as possible. Where this would not be viable the Council will negotiate for funding to support off-site employment provision.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy E2 but with the following changes:

- Widens the scope of the Policy such that its protection applies to wider "employment" uses (as defined in the Glossary), not just 'B' uses
- Clarification in text (and supporting text) what counts as "employment"
- Clarifies the circumstances in which losses to non-employment uses will be considered
- Clarifies the Council's expectations concerning justification for mixed use proposals involving a net loss of employment Class floorspace.
- New text to explain how 'enabler' mixed use schemes will be assessed upon existing employment sites.

Tourism and Cultural Development

8.32 This policy positively supports the important role that tourism and culture plays in the economy of the Staffordshire Moorlands and the contribution it makes to increasing physical activity and improving health and well-being. It is essential however that all new tourism, visitor and cultural proposals that are located outside settlement boundaries should be in sustainable locations and carefully assessed so that they do not have a detrimental impact on the local area unless it can be demonstrated that a particular tourism proposal requires such a location. The policy also accords with the Strategic Policies and tourism policy for the Churnet Valley (Policy SS11) which seeks to promote the Churnet Valley as a sustainable tourism and recreational resource.

8.33 Existing tourist accommodation in the Staffordshire Moorlands is generally small scale family-run businesses, usually rurally located, often in converted buildings. The area has a relatively high proportion of self-catering types of accommodation and very few hotels and serviced accommodation. At present a very low proportion of visitors to the Moorlands stay overnight and supply is particularly low in the three towns. Within the Churnet Valley the provision of further short and long stay visitor accommodation is particularly supported, the Churnet Valley Masterplan provides further guidance on suitable sites and scale. Particular attention should be paid to the quality of new tourist accommodation. A Staffordshire Moorlands Tourism Study undertaken in 2011 has identified a number of projects that would enhance the tourism offer of the District. These include developing and improving attractions and attractors, and enhancing the accommodation stock, notably further small serviced and self catering accommodation, particularly in the Churnet Valley, and providing budget hotel accommodation in the market towns. Tourism also plays an important role in diversifying the rural economy. The Tourism Study identifies where there is scope for further provision and the nature of that provision which will help inform decisions on applications for tourism uses in order to ensure supply matches demand. Policy E4 sets out the considerations for tourism proposals.

8.34 Within town centres new tourism and cultural facilities and accommodation should accord with Policy TCR1. Outside settlement boundaries new tourist accommodation will be limited to the conversion of existing buildings and in exceptional circumstances new buildings, with a preference for non-permanent new buildings meaning that the landscape can be returned to its previous state. Sites for touring caravans and camping sites will be granted providing they meet the criteria set out in the policy. Stronger controls will however apply across the Green Belt, including those parts of the Churnet Valley which are within it, in order to preserve their openness.

Policy E 4

Tourism and Cultural Development

New tourism and cultural development will be assessed according to the extent to which it supports the local economy and promotes the distinctive character and quality of the District and enhances the role of Staffordshire Moorlands as a tourism and leisure destination having regard to the Area Strategies in Policies SS5 to SS11.

In addition:

1. New tourist and visitor accommodation, attractions and facilities should be developed in locations that offer, or are capable of offering either:

A) good connectivity with other tourist destinations and amenities, particularly by public transport, walking and cycling; or

B) in locations in or close to settlements where local services, facilities and public transport are available; or

C) in areas specifically identified for tourism development in the Churnet Valley Masterplan or other relevant documents.

In exceptional circumstances, developments in other locations may be supported where a rural location can be justified.

2. New accommodation, attractions and facilities should:

A) be of a scale and design which can be easily assimilated into the local area in a sustainable manner;

B) normally be limited to the conversion of existing buildings; or

C) exceptionally, may be new build where it is required to support or complement existing accommodation, facilities or attractions and there is an identified need which cannot be met in other ways. Preference will be given to buildings which are non-permanent in nature.

D) all development shall be of an appropriate quality, scale and character compatible with the local area, protect the residential amenity of the area, enhance the heritage, landscape and biodiversity of the area and shall not harm interests of acknowledged importance.

3. Support will be given to the provision of new cultural facilities in town centres and villages to meet the needs of local communities and visitors.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy E3 but with the following changes:

- Clarifies the various locations and circumstances where new tourism proposals may be deemed appropriate, and introduces new text that allows for 'exceptional' circumstances beyond these in order to provide a clear policy basis for determining any such applications

8.3 Housing

Housing Policies

Spatial Objectives

SO4. To provide new housing that is affordable, desirable, well-designed and meets the needs of residents of the Moorlands.

8.35 The provision of sustainable, decent and affordable housing for all sectors of the community remains one of the priorities of the Council, the Sustainable Community Strategy and of the Local Plan.

New Housing Development

8.36 This policy seeks to ensure that an appropriate range and type of housing is provided which meets identified needs arising from changes in population structure, including special needs for the elderly, and promotes higher quality, more sustainable housing design and layout. It is proposed to address this through a range of measures and requirements. In tackling these issues the proposed policy approach will be contributing towards the delivery of not only local priorities but also national housing agendas.

8.37 This policy is primarily to ensure that an appropriate range and mix of housing – including affordable housing – is provided to meet the needs of the existing and future population. It reflects government guidance to create sustainable, inclusive and mixed communities and to make efficient use of land. Collaborative working between Local Planning Authorities, local communities, stakeholders, developers and house builders is also a key principle underlying the NPPF.

8.38 The range, type and mix of affordable accommodation required on development sites will be determined by a combination of the results of housing needs studies, housing market assessment, information from the waiting lists, consideration of existing housing stock, local housing market information as well as any other available information including the constraints of sites.

8.39 Housing for special groups will also be needed to meet the future increase in elderly persons across the District and the needs of those with a learning or physical disability – this may be in the form of sheltered housing, extra care homes or flexicare or supported housing.

8.40 In order to address the changes in population structure, new homes should where possible be designed to provide flexible, accessible accommodation that is capable of future adaptation to meet the differing and changing needs of households as they experience life events. Accordingly, new developments should aim to meet the needs of an ageing population by adhering to the optional technical housing standard for access and the new nationally described space standard.

8.41 The Self-build and Custom Housebuilding Act 2015 (as amended by the Housing and Planning Act 2016) places a duty on District Planning Authorities to maintain a register of those wishing to acquire a serviced plot of land for self-build projects and have regard to

the register when carrying out their planning functions. There has been a low level of interest to date however the Council will keep this under review and where a demand exists, qualifying sites will be required to make a contribution.

8.42 Details of the Council's requirements for sustainable design and construction are set out in Policy SD1 and the accompanying supporting text.

8.43 It is essential that all applications for planning permission for new dwellings in the countryside are scrutinised thoroughly to avoid new isolated homes in the countryside unless there are special circumstances in accordance with Government guidance. In the case of occupational dwellings the proposal will be required to meet functional and financial tests to demonstrate the essential need for a rural worker to live permanently at or near their place of work in the countryside. It also allows for the re-use of redundant or disused buildings where it is worthy of conversion and lead to enhancement of the immediate setting.

Policy H 1

New Housing Development

1) New housing development should provide for a mix of housing sizes, types and tenure including a proportion of affordable housing as set out in Policy H3, and where appropriate housing for special groups, to meet the needs and aspirations of the current and future population having regard to the Area Strategies.

2) In line with Government legislation the Council will maintain and update a register of those interested in acquiring self-build / custom-build housing plots across the District. Where a demand exists, residential developments of 15 dwellings (0.5 hectares) or more will make an appropriate contribution towards this need in agreement with the Council. This will be negotiated on a case by case basis.

3) All development will be assessed according to the extent to which it provides for high quality, sustainable housing and to which it meets identified housing needs, having regard to the location of the development, the characteristics of the site and the economics of provision.

In addition:

a) Housing for special groups, particularly for older people, should meet a genuine and proven housing need and demand and be of a scale and in a location which is appropriate to its needs.

b) Housing proposals of 10 dwellings or more will be required to provide a mix of housing in terms of size, type and tenure on the site. The final mix will be negotiated with the developer based on housing needs as informed by the Strategic Housing Market Assessment and other relevant factors such as available supply and market demand.

c) All housing development should be at the most appropriate density compatible with the site and its location, and with the character of the surrounding area. It is assumed that higher densities will be appropriate in locations which are accessible by public transport.

d) All new dwellings should aim to provide flexible accommodation which is capable of future adaptation by seeking to achieve adequate internal space for the intended number of occupants in accordance with the Nationally Described Space standard and delivered to meet accessibility standards set out in the Optional Requirement M4(2) of Part M of the Building Regulations.

e) All new dwellings must be of sufficient size to provide satisfactory levels of amenity for future occupiers of the dwellings whilst respecting the privacy and amenity of occupiers of existing dwellings.

4) Housing development on sites not allocated for such purposes in Policy H2 will be supported as follows:

a) Within the development boundaries of the towns and larger villages, residential development and development on unidentified (windfall) sites will be permitted, subject to compliance with the Spatial Strategy and wider Local Plan policies

b) Outside of the development boundaries, limited infill residential development of an appropriate scale for the Spatial Strategy will be supported, provided that:

- The development will adjoin the boundary of a larger village and be well related to the existing pattern of development and surrounding land uses, or;
- The development is well related to the existing pattern of development of a smaller village and will not create or add ribbon development or lead to sporadic pattern of development; and

c) In all cases:

- The development will not lead to a prominent intrusion into the countryside or have an adverse impact of significance to the character of the countryside; and;
- it would have reasonable access by foot, cycle or public transport to existing services and community facilities; and
- the local and strategic infrastructure can meet the additional requirements arising from the development.
- Where applicable, national Green Belt policy will apply in determining the suitability of proposals for limited infilling and the re-development of previously developed sites

5) In the other rural areas in the open countryside, only the following forms of housing development will be permitted;

a) Affordable housing which cannot be met elsewhere, in accordance with Policy H3.

b) A new dwelling that meets an essential local need, such as accommodation for an agricultural, forestry or other rural enterprise worker, where the need for such accommodation has been satisfactorily demonstrated and that need cannot be met elsewhere.

c) Proposals for replacement dwellings, provided they do not have a significantly greater detrimental impact on the existing character of the rural area than the original dwelling or result in the loss of a building which is intrinsic to the character of the area.

d) Extensions or additional domestic outbuildings to existing dwellings provided they are appropriate in scale and design and do not have a detrimental impact on the existing dwelling and the character of the rural area. The Council will assess schemes having regard to the original dwelling, in cases where cumulative change has occurred.

e) The conversion of non-residential rural buildings for residential use where the building is suitable and worthy in physical, architectural and character terms for conversion; and where such development would represent the optimal viable use of a heritage asset or would be appropriate enabling development to secure the future of heritage assets.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy H1 and Policy R2 - Rural Housing with the following changes:

H1:

- Amendment in part 1) to reflect the Housing and Planning Act 2016 and the requirement for all District Planning Authorities to promote the supply of starter homes.
- To reflect the recent self-build / custom-build Act.
- Density examples deleted from third bullet to enable greater discretion and capacity to consider local character
- Fourth bullet amended to delete windfall thresholds - NPPF consistency.
- Fifth bullet amended to reflect Nationally Described Space Standard / accessibility standards - Reflect new standards.
- Sixth bullet amended to improve clarity for future occupiers and occupiers of existing dwellings - clarification.

- Bullet deleted requiring that all new dwellings meet the sustainable design and construction requirements set out in Core Strategy Policy SD1 - this requirement is considered to be too onerous
- New criteria based approach to housing development outside of larger village development boundaries and infill related to smaller villages in order to support sustainable, flexible infill development.

R2:

- Change reference from Site Allocations DPD to Local Plan.
- Clarification of part d) addition of 'additional domestic outbuildings' and clarification regarding 'original dwelling'
- Rewording of 5. part e) added clarification regarding heritage assets to removed reference to marketing requirements to reflect NPPF.

Housing Allocations

8.44 In order to meet the housing requirement outlined in Policy SS3 and Policy SS4, the above sites have been identified as suitable for development. In some cases this will be housing but in others the site may be more suitable for a mix of uses.

Policy H 2

Housing Allocations

The following sites will be allocated for housing or mixed use development. The Council will work with developers and the local community to bring forward sustainable developments in accordance with the other policies in the Local Plan.

Leek

Location	No of dwellings
Land east of Horsecroft Farm, Leek (ADD01) Policy DSL 1	15
Land at the Mount, Leek (LE066, LE127, LE128a&b, LE140, LE142a, LE142b) Policy DSL 2	417
Land adjacent to Newton House, Cheddleton Rd, Leek (LE150) Policy DSL 3	179
Land at Cornhill, Leek (LE235) Policy DSL 4	50

Location	No of dwellings
Land west of Ashbourne Road, Leek (LE022)	16
Land north of Macclesfield Road, Leek (LE102)	20

Biddulph

Location	No of dwellings
Land west of the Biddulph Bypass and East of the Biddulph Valley Way - Wharf Road Strategic Development Area (BD055, BD071, BD071a, BD106, BD156, BD076, BD076a, BD108, BD016, BD104). Policy DSB 1	588
The Mills - Yarn and Minster Mills, Stringer Street, Biddulph (BD101 & BD102) Policy DSB 2	57
Tunstall Road Strategic Development Area (opposite Victoria Business Park), Biddulph (BD117) Policy DSB 3	80

Cheadle

Location	No of dwellings
Cheadle North Strategic Development Area (CH001 & CH132) Policy DSC 1	320
Cecilly Brook Strategic Development Area (CH002a, CH002b, CH024) Policy DSC 2	106
Land to the rear of Froghall Road, Cheadle (CH004)	45
Land to the rear of the Birches (CH013)	51
Stoddards Depot, Leek Road (CH015)	32
Land north of the Green, Cheadle (CH020)	42
Mobberley Strategic Development Area (CH085A, CH085B, CH085C, CH085D, CH128) Policy DSC 3	430

Rural

Location	No of dwellings
Land at Capri, Gallows Green, Alton (AL012)	13
Blythe Vale, Blythe Bridge <u>Policy DSR 1</u>	300
Land at corner of Brookfield Avenue / Stoney Lane, Endon (EN128)	20
Haulage Depot, St Thomas's Road, Upper Tean (UT019)	15
Land adj to Waterhouses Enterprise Centre, Leek Road (WA004)	36
Land off Ash Bank Road, Werrington (WE003 & WE052) <u>Policy DSR 2</u>	75

Consistency with Core Strategy?

New Policy listing sites considered suitable for development.

Affordable Housing

8.45 The limited supply of, and high demand for, housing in Staffordshire Moorlands has led to high prices and rents. It is now extremely difficult for local people on low incomes and increasingly those on middle incomes to afford a home of their own. This is particularly so in the rural areas. Unless more affordable housing is provided, there is a danger that those on lower and middle incomes, particularly the young, will be forced to leave the district in increasing numbers. As a result, our communities will be damaged and the district's age and social structure will become even more biased towards the elderly and the wealthy.

8.46 The Strategic Housing Market Assessment (SHMA) demonstrates a significant need for affordable housing in the District which exceeds the District's average annual development rate requirements. This policy therefore seeks to support the provision of affordable housing across the District through a range of measures. The SHMA findings would suggest a 100% affordable housing target, however this is considered unrealistic as it would not allow a sustainable housing market to be maintained. The NPPF requires that the sites and scale of development should not be subject to such a scale of obligations and policy burdens, including affordable housing, that their ability to be developed is threatened.

8.47 The threshold and minimum target for affordable housing provision are intended to ensure that adequate provision is made both in urban and smaller rural settlements to help address this need and ensure that a sustainable and deliverable housing market is maintained which will deliver the range of housing needed to help meet market demand as well affordable housing needs. All development involving the provision of housing which meet the thresholds will be required to make provision for affordable housing.

8.48 The majority of any affordable housing that is likely to be provided will mostly be on allocated sites in or on the edges of the main market towns. Affordable housing provision will also be contributed to by windfall schemes, net gains from conversions, new provision of non self contained household spaces, and long term vacant properties brought back into use.

8.49 In the rural areas it is anticipated that the bulk of the provision of affordable houses will be in the larger villages, either on allocated sites or on windfall sites. Because of the smaller scale of development in the rural areas a lower threshold is considered justifiable unless there are exceptional circumstances why this would not be possible, such as enabling development.

8.50 The policy sets out the expected affordable housing split between starter homes, intermediate housing and social / affordable rent.

Policy H 3

Affordable Housing

1) The provision of affordable housing will be delivered through the following measures:

a) In the towns, residential developments of 15 dwellings (0.5 hectares) or more shall provide a target of 33% affordable housing on-site from all sources. The actual level of provision will be determined through negotiation taking into account development viability and other contributions

b) Elsewhere, residential developments of 5 dwellings (0.16 hectares) or more shall provide a target of 33% affordable housing on-site from all sources, unless there are exceptional circumstances which dictate otherwise. Exceptionally this may be provided through a commuted sum payment in lieu. The actual level of provision will be determined through negotiation taking into account development viability and other contributions.

2) Unless circumstances dictate otherwise and in agreement with the Council, 60% of all affordable dwellings provided on each site will be social / affordable rented housing with the remaining 40% being intermediate / starter homes.

a) In or on the edge of villages, small schemes for 100% affordable housing will be permitted on suitable rural exceptions sites which are well related to services and facilities and where a demonstrable need exists within the local area which cannot otherwise be met by means of provision in the plan.

b) In areas of low demand or where the stock does not meet and is not capable of meeting local housing market needs consideration will be given, in consultation with local communities, to options for renovation/improvement or redevelopment schemes to create more sustainable and balanced housing.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy H2 with the following changes:

- Clarification that all schemes including 33% on-site affordable housing will include 60% social/affordable rent and 40% intermediate / starter homes (SHMA).
- Bullet deleted referring to allocating sites in the Site Allocations DPD.

Gypsy and Traveller Sites and Sites for Travelling Showpeople

8.51 Recent legislation and guidance from the government has indicated a commitment to taking steps to resolve some of the longstanding accommodation issues for members of the gypsy and traveller communities. This legislation and guidance has an overarching aim of ensuring that members of the gypsy and traveller communities have equal access to decent and appropriate accommodation options, health, education and employment opportunities in sustainable locations akin to each and every other member of society.

8.52 This policy is based on the 2015 'Planning Policy for Traveller Sites' Guidance and wider NPPG, which seek to address this through criteria aimed at ensuring such provision is made in appropriate locations which will apply to the determination of planning applications. This policy also relates to travelling showpeople. Although their work is of a mobile nature, showpeople nevertheless require secure, permanent bases for the storage of their equipment and more particularly for residential purposes.

8.53 The need for sites for gypsies and travellers within Staffordshire Moorlands has been identified through a recent 2015 joint-Authority Gypsy and Traveller Accommodation Needs Assessment (GTAA). This Assessment identifies a requirement for 6x residential and zero transit pitches for the District over the period 2014 – 2019 (with an additional 2 residential pitches up to 2034, taking account of household formation). This Assessment also covers the separate provision for travelling showpeople (although this GTAA did not identify any additional plot requirements for travelling showpeople across the Staffordshire Moorlands). Proposals for the development of sites required to meet this need will be assessed against the parameters in this policy, taking into account other relevant criteria set out in the Local Plan. The Council will monitor the availability of gypsy and traveller and travelling showperson's accommodation and manage the provision of additional pitches/plots within Staffordshire Moorlands against the need identified for the District and, as set out in the guidance in paragraphs 24 and 27 of the 'Planning Policy for Traveller Sites', will take into account the existing level of local provision and need for sites when considering planning applications for gypsy and traveller sites. Section 124 of the Housing and Planning Act 2016 has clarified that Local Authorities must periodically assess the need for people residing on "sites on which caravans can be stationed"; however the requirement to produce formal "GTAA's" has been removed. The Government also clarified changes to the definition of traveller and travelling showperson, such that those who have ceased to travel permanently, may now be excluded from assessment.

Policy H 4

Gypsy and Traveller Sites and Sites for Travelling Showpeople

The following considerations will be taken into account in the determination of applications for gypsy and traveller sites or sites for travelling showpeople, in order to meet the identified needs of the District:

- Safe and convenient vehicular and pedestrian access to the site should be provided;
- The site must be large enough to provide for adequate on site facilities for parking, storage, play and residential amenity;
- The site is reasonably accessible to shops, schools, health facilities and other community facilities on foot, by cycle or public transport;
- The site should not be detrimental to amenities of adjacent occupiers;
- Adequate levels of privacy and residential amenity for occupiers should be provided;
- Sites or features of natural, historic or archaeological value should not be harmed by the proposal.

There will be a presumption against the development of gypsy and traveller or travelling showperson's accommodation in the Green Belt unless there are very special circumstances.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy H3 with the following changes:

- Clarifies that Policy also applies to travelling showpeople
- Emphasises the importance of proximity of sites to health facilities, as per national policy.

8.4 Town Centres and Retailing

Town Centre and Retailing Policies

Spatial Objectives

SO5. To ensure the long term vitality and viability of the three market towns of Leek, Biddulph and Cheadle.

8.54 The market towns of Leek, Biddulph and Cheadle are the main centres in the Staffordshire Moorlands, serving residents of the towns themselves and their large rural hinterlands. It is recognised both locally and nationally that our town centres are very important to the social, economic and environmental well being of the District. It is considered crucial to maintain and improve their long term vitality and viability so that they are attractive places to shop, work, visit and invest in. In line with national guidance set out in the NPPF, this

policy states how the Council will plan pro-actively for the town centres by focusing growth and development within them to meet the needs of all members of the community in terms of retailing and other facilities, whilst at the same time preserving their unique local identity.

8.55 This policy approach ties in with the vision of the Staffordshire Moorlands Sustainable Community Strategy 2007 - 2020, which states that 'by 2020....Our vibrant market towns will be home to a range of successful retail, visitor and knowledge based businesses'.

8.56 The policy contains a whole range of measures to maintain the vitality and viability of our town centres. Retailing and other key town centre uses like offices, leisure uses such as hotels and cinemas and cultural facilities like those connected with performance and the arts should ideally be focused in town centres. However, as the District has a thriving tourist industry it is recognised that when special circumstances dictate, hotels in particular may need to be located outside town centres, subject to the impact test (required by Policy TCR3) not concluding that this would have an adverse impact on the vitality and viability of the town centre.

8.57 Examples of measures to enhance the town centres which could be considered are improvements to the public realm such as greening the town centres. It is also extremely important to ensure that our town centres, which are our key service centres for a large rural hinterland, are accessible by a choice of means of transport as well as to pedestrians. It is recognised that a proportion of town centre users travel by private transport and need convenient parking places to encourage them to use the town centres rather than go to other centres outside the District.

8.58 Retaining and enhancing local distinctiveness has strong local support with residents and businesses alike not wanting our historic market towns to become 'clone towns'. Supporting independent traders and niche markets (such as antiques in Leek) is a positive way of doing this. Good design is also particularly important in our town centres in order to retain distinctiveness, attract visitors and also ensure that key areas and buildings are user friendly for the whole community. The Design Guide SPD and Policy DC1 cover this in more detail.

8.59 Upper floors in our town centres are not used to their full capacity. There is a local need for housing in accessible locations as well as the other benefits residential use could bring, such as security outside normal working hours and assisting with the development of the evening economy.

8.60 The 2013 Retail Study did not identify a need to allocate land for additional convenience or comparison goods floorspace in Leek or Cheadle. A need for a discount foodstore was identified in Biddulph and an allocation is proposed on the west side of Biddulph bypass to meet this need. A further review of capacity for convenience and comparison goods floorspace will be undertaken during the plan period to confirm development requirements for the latter phase of the plan.

Policy TCR 1

Development in the Town Centres

The vitality and viability of the town centres of Leek, Biddulph and Cheadle (defined on the Policies Maps) will be protected and enhanced by positive management as follows:

1. Focusing and promoting retailing as well as other key town centre uses such as offices, leisure and cultural facilities within the town centres where they contribute to vitality and viability.
2. Supporting positive measures and proposals which enhance and regenerate the shopping and town centre environment and promote their tourism potential.
3. Enhancing local distinctiveness by supporting proposals which help retain, attract or expand the provision of independent retailers in the town centres including niche markets.
4. Ensuring new development is well related to pedestrian shopping routes.
5. Ensuring there are adequate parking facilities in suitable locations in and around the town centres and good access to the town centres is strengthened for those using public transport, cycling or walking.
6. Setting out design principles to improve and enhance the distinctive heritage of the town centres including high quality public spaces as well as minimising the risk of crime and considering the needs of disabled people.
7. Promoting housing on upper floors within the primary shopping areas and elsewhere in the town centres where this does not jeopardise their vitality and viability.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy TCR1 but with the following changes:

- Removal of references to 'Site Allocations DPD'.
- Removal of references to the 'Biddulph Town Centre Area Action Plan (AAP)' as this document will be superseded by the Local Plan.
- Inclusion of Biddulph in the first paragraph of the policy alongside Cheadle and Leek to reflect the AAP being superseded.
- Amended the reference 'Proposals Map' to 'Policies Map'.
- Amended part 5 of the policy to add in a reference to strengthening links by sustainable forms of transport in order to help sustain a vibrant rural economy in line with the Sustainability Appraisal recommendation.
- Amended part 6 of the policy to add in a reference to 'considering the needs of disabled people' in line with Equality Impact Assessment recommendation. Also substituted the word 'including' for 'as well as' to accommodate this new reference.
- Added "including high quality public spaces" to part 6 of the policy to reflect the Sustainability Appraisal recommendation.
- Removal of part 8 of the policy as this repeats the content of Policy TCR3.

- Removal of part 9 of the policy as this repeats the content of Policy TCR2.
- For clarity, the primary shopping frontages policy has been separated from this policy.

Primary Shopping Frontages

8.61 The safeguarding of the retail function at the heart of the town centres is considered to be a crucial factor in maintaining their vitality and viability, so primary shopping frontages for Leek, Biddulph and Cheadle have been defined on the policies maps.

8.62 It is considered that in the designated primary shopping frontages if a proposed change of use to a non-A1 use would result in three or more adjacent units in non-A1 use then this would create a concentration. In some locations within a primary shopping frontage, where two non-A1 use units are created opposite a single non-A1 unit or where there is a significant A1 frontage (i.e. larger units in prominent positions) the change of use may be unacceptable. Where the units are near a street junction, the presence of non-retail units around the corner may also be a material factor. If significant numbers of non-A1 uses are clustered in a part of the Primary Shopping Frontage, even if they are not adjacent, this may also constitute a concentration. It is recognised that sometimes non-A1 uses in Primary Shopping Frontages can help to contribute towards the vitality and viability of town centres. A judgment will be made on a case-by-case basis. Additionally it is recognised that the retail character of an area can be adversely affected by concentrations of particular types of non-A1 uses. In line with a recommendation in the Council's Retail Study, frontage policies relating to a potential creation of a concentration of evening economy uses (A3, A4 & A5) that would give rise to social and environmental issues are not supported.

Policy TCR 2

Primary Shopping Frontages

In primary shopping frontages (defined on the policies maps), proposals for changes of use to A1 retail will be supported. Development falling within other use classes will only be permitted where it will not create a concentration of non-shopping uses and result in an unacceptable change in the retail character of the immediate area or have an adverse effect on the vitality or viability of the town centre.

Proposals for residential use at ground floor level in primary shopping frontages will not be supported.

Any non-A1 use must be complementary to adjacent shopping uses in terms of its operational characteristics.

Other Frontages within the Town Centre Boundary

In other frontages, development falling within other use classes will be permitted where it will contribute to the vitality and viability of the town centre.

Proposals within the town centre boundary that would create a concentration of evening economy uses (A3, A4 & A5) that would give rise to social and environmental issues will not be supported.

This policy will only apply insofar as it is consistent with any permanent or temporary provisions for changes of use permissible under the Town and Country Planning (General Permitted Development) Order (as amended).

Consistency with Core Strategy

- This policy has been separated from Policy TCR1 for clarity.
- Amendment to the third paragraph to remove the words "and retain a display frontage appropriate to a shopping area" as they are considered to be unnecessary.
- Reference to 'secondary frontages' removed from policy in line with the Council's new evidence within its updated retail study which makes this recommendation. The policy now just defines a 'Primary Shopping Frontage' in each of the towns which is in line with the NPPF and calls frontages not designated as 'primary shopping frontages' 'other frontages within the town centre boundary.'
- Inclusion of a sentence about concentration of evening economy uses which was recommended for inclusion in the Retail Study (2013).
- Addition of last paragraph to reflect amendments to the Use Classes Order.

TCR3 Retailing and other Town Centre Uses outside Town Centres

8.63 As well as requiring the applicant to apply a sequential test to proposals for main town centre uses outside existing town centres which are not in accordance with an up to date Local Plan, the NPPF also requires an impact assessment and allows Councils to define a locally set floorspace threshold to which this should apply. The Council's latest retail study (2013) recommends that the Council should adopt a minimum local floorspace threshold of 200 m² (net) for impact assessment. The reasoning behind this is that existing retail units within the historic areas of the main town centres are relatively small and there are identified vacancies in prominent locations within the respective centres. The Retail Study considers that a larger locally set floorspace threshold would potentially undermine the re-occupation of existing units. It is considered appropriate to apply the same threshold to the sequential test requirement.

Policy TCR 3

Retailing and other Town Centre uses outside Town Centres

In determining proposals for retail and other town centre uses of 200m² or more (net sales for A1) on sites not allocated in the Local Plan a Sequential Assessment will be required. Preference will be given to town centre and then edge of centre sites. Where

there are no sequentially preferable sites available, sites outside Leek, Biddulph and Cheadle in highly accessible locations that are well connected to the town centre will be considered.

An Impact Assessment will be required on proposals for town centre uses of 200m² or more (net sales for A1) located outside of the town centres and not in accordance with the Local Plan. Developer contributions may be sought to mitigate identified impacts on defined centres where appropriate. Proposals with a significant adverse impact will be refused.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy TCR3 but with the following changes:

- Amended policy and policy title to include other town centre uses in line with NPPF.
- Removal of references to 'Site Allocations DPD'.
- Removal of text in the first paragraph which refers to identifying sites for significant retail provision in Leek and Cheadle. The relevant evidence set out in the 2013 Retail Study does not recommend allocating sites for food or non-food retailing in either Leek or Cheadle (mainly due to changing market conditions).
- A local impact threshold has been added to the policy to reflect the recommendation in the updated Retail Study and the NPPF.
- A threshold has been set for a Sequential Assessment in line with the threshold for impact assessments
- Removal of the paragraph stating: 'Other major retail proposals (of 500m² gross or more) will not be permitted outside town centres in order to protect the vitality and viability of the town centres, unless the proposal can be demonstrated to be acceptable under national policy'. This wording is not now needed as the Impact Assessment performs this function.
- Removal of paragraph stating 'Within the towns, but outside town centres, and in the larger villages identified in Policy SS6a, new or extended convenience retail units of up to 500m² gross floor space to serve everyday local shopping needs and improve access to retail facilities at a local level will be promoted and supported, provided that they complement but do not adversely impact upon the vitality and viability of the three town centres and are in sustainable locations.' This is not now needed as the Impact Assessment performs this function.

8.5 Design and Conservation

Design Considerations

Spatial Objectives

SO8. To promote local distinctiveness by means of good design and the conservation, protection and enhancement of historic, environmental and cultural assets throughout the District.

SO9. To protect and improve the character and distinctiveness of the countryside and its landscape, biodiversity and geological resources.

8.64 Good design is a key element of sustainable development, so the Council will promote a high standard of design which is locally distinctive and reinforces the unique character of its individual settlements. A high quality, well designed, development can enhance the sense of place and identity of an area and can bring significant benefits to the local environment and economy. In this way, new development can have a positive impact on the lives of local people and visitors to the District. To this end, the Council operates a 'Design Review Panel' where larger planning applications and other development proposals are considered by a design team and recommendations made to inform the decision on the application or masterplan etc. The 'Building for Life' toolkit is also a useful resource.

8.65 Guidance on those features and characteristics which make the Moorlands so unique and how design can complement and reflect this will be provided through the Design Guide SPD. All developers and applicants will be required to provide a Design and Access Statement to accompany suitable planning applications which addresses, as appropriate, the issues set out in Policy DC1 and the Design Guide SPD. A Design and Access Statement will be required to accompany proposals for development with accurate illustration of the proposal and its relationship with its surroundings including crime prevention considerations.

8.66 Assessment of potential impacts from new developments at the earliest possible stage of the design process will assist in identifying problems to be overcome. Detailed guidance on issues of security and public safety in the public realm can be found in 'Secured by Design' (www.securedbydesign.com) produced by the police. A further useful reference point is the 'Streets for All Manual: West Midlands' produced by the Department of Transport and Historic England. This contains guidance on the retention and conservation of historic street furniture, rationalisation of existing signage, minimisation of street markings, use of appropriate surfacing and associated highway improvements. The principles of active design set out by Sport England promote opportunities for sport and physical activity in the design and layout of development.

8.67 In line with the Council's Sustainability Appraisal, the policy includes a requirement for developments to be well integrated for car, pedestrian and cycle use as well as other sustainable transport links. It also includes a requirement for the creation of healthy environments (to address potential impacts of air pollution).

8.68 The 'green infrastructure' can be defined as a network of multi-functional open spaces, including formal parks, gardens, woodlands, green corridors, waterways, street trees and open countryside. It performs a valuable role in the District's towns and villages. A Green Infrastructure Strategy is currently being produced to consider how the green spaces relate to one another in the District and where there may be opportunities to extend them.

Policy DC 1

Design Considerations

All development shall be well designed and reinforce local distinctiveness by positively contributing to and complementing the special character and heritage of the area in line with the Council's Design Guide SPD. In particular, new development should:

1. be of a high quality and add value to the local area, incorporating creativity, detailing and materials appropriate to the character of the area;
2. be designed to respect the site and its surroundings and promote a positive sense of place and identity through its scale, density, layout, siting, landscaping, character and appearance;
3. create, where appropriate, attractive, functional, accessible and safe public and private environments which incorporate public spaces, green infrastructure including making provision for networks of multi-functional new and existing green space (both public and private), landscaping, public art, 'designing out crime' initiatives and the principles of active design;
4. incorporate sustainable construction techniques and design concepts for buildings and their layouts to reduce the impact of the development;
5. protect the amenity of the area, including creation of healthy environments and residential amenity, in terms of satisfactory daylight, overbearing development, sunlight, outlook, privacy, soft landscaping as well as noise, odour and light pollution;
6. promote the maintenance, enhancement, restoration and re-creation of biodiversity and geological heritage, where appropriate;
7. provide for safe and satisfactory access and make a contribution to meeting the parking requirement arising from necessary car use;
8. require new developments to be well integrated for car, pedestrian and cycle use as well as other sustainable transport links;
9. ensure that existing drainage, waste water and sewerage infrastructure capacity is available, and where necessary enhanced, to enable the development to proceed;
10. ensure, where appropriate, equality of access and use for all sections of the community.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy DC1 but with the following changes:

- Removal of the words 'local and global' from Part 4 of the policy as these are considered to be unnecessary.
- Remove reference to adapting to climate change from part 4 of the policy as this is covered elsewhere in Policy SD1
- Additional wording in part 5 of the policy "creation of healthy environments and" in order to address potential impacts of air pollution (as raised in the Sustainability Appraisal).
- New wording (part 8 of the policy) stating "require new developments to be well integrated for car, pedestrian and cycle use as well as other sustainable transport links" (as raised in the Sustainability Appraisal).
- Amended the name of the SPD from 'Design SPD' to 'Design Guide SPD'.
- References to 'overbearing development' and cross reference to Pollution Policy added to part 5 of the policy to provide greater scope to manage development appropriately
- Removal of cross references to other policies - these are unnecessary as the plan should be read as a whole.

The Historic Environment

8.69 The historic environment of Staffordshire Moorlands is a resource for which the District is renowned. It includes a range of buildings, gardens and structures many of which are statutorily protected. The historic environment also extends beyond individual assets to the historic character of the wider landscape. This policy seeks to ensure that sites and areas of particular heritage value are both safeguarded for the future and, where possible, enhanced both for their own heritage merits and as part of wider heritage regeneration proposals. There are just under 1,000 Listed Buildings and structures, 16 Conservation Areas (as at September 2016) and a number of Scheduled Monuments within the District outside the Peak District National Park. Conservation Areas and Listed Buildings are protected by national legislation and guidance. Additionally the Council has adopted an SPD 'Staffordshire Moorlands Local Heritage Register' which outlines procedures for identifying local buildings not statutorily protected but considered worthy of recognition (local listing). In addition, Government Guidance (NPPF) requires the Council to consider any impacts arising from a development proposal on non-designated heritage assets.

8.70 The Authority has adopted Conservation Area Appraisals to assess the particular qualities and needs of each one. These appraisals will act as tools in defining the character of the areas and as an aid in considering development proposals.

8.71 A Register of Parks and Gardens of Special Historic Interest is maintained by Historic England. Although there are no specific additional statutory controls resulting from inclusion on the Register, Government guidance (NPPF) indicates that local authorities must have regard to the protection of these sites in preparing plans and determining planning applications. Staffordshire County Council has undertaken a countywide Historic Landscape Characterisation Project which was taken into account when producing the District Council's Landscape & Settlement Setting Study (refer to Policy DC3).

8.72 The Landscape, Local Green Space and Heritage Impact Study (2016) assesses the heritage impacts of sites that have been identified for development in the Local Plan in line with NPPF methodology, identifying sites where appropriate masterplanning would be necessary. This has been incorporated into the relevant development site policy.

8.73 This policy does not repeat NPPF wording which clearly sets out how to assess a development proposal which would lead to 'substantial harm' or 'less than substantial harm' to a heritage asset. It is intended that developers refer to NPPF wording to assess proposals affecting the historic environment. It is not considered necessary to repeat the NPPF wording in the Local Plan.

8.74 In addition, proposals for sites and areas of heritage importance, including sites identified under local listing and non-designated heritage assets, should adhere to the design guidance to be set out through the Design Guide SPD and any relevant Conservation Area Appraisals and management plans.

Policy DC 2

The Historic Environment

The Council will safeguard and, where possible, enhance the historic environment, areas of historic landscape character and interests of acknowledged importance, including Scheduled Monuments, significant buildings (both statutory Listed and non-designated heritage assets), Conservation Areas, Registered Historic Parks and Gardens, Registered Battlefields, archaeological remains, and their settings.

Development proposals affecting the heritage assets listed above will be assessed against NPPF policy.

The Council will promote development which sustains, respects or enhances buildings and features which contribute to the character or heritage of an area and those interests of acknowledged importance through the use of Conservation Area Appraisals, Design Guidance and Statements, Archaeological Assessments, Characterisation Studies and Masterplanning.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy DC2 but with the following changes:

- Removal of parts 1 and 3 of the policy to reflect an Inspector's view in a recent appeal decision in the District, where the policy wording in the Core Strategy was not considered to be NPPF compliant. These have been replaced by a reference

to clarify that development proposals affecting heritage assets will be assessed against NPPF policy, rather than repeating NPPF policy which is not an approach generally supported by the Planning Inspectorate.

Landscape and Settlement Setting

8.75 The Staffordshire Moorland's natural environment is one of the District's greatest assets. National guidance set out in the NPPF identifies the need for Council's to produce policies that maintain and enhance the value of the countryside.

8.76 The Council has developed robust landscape character evidence by undertaking a Landscape Character Assessment in order to identify character features in the District which should be used to inform planning decisions taking into account Staffordshire County Council's Historic Landscape Characterisation Study and earlier Planning for Landscape Change: Supplementary Planning Guidance to the Staffordshire and Stoke on Trent Structure Plan, 1996 – 2011 (2000). This identifies a range of 10 different landscape character types across the District.

8.77 This Policy provides protection for local landscape character which includes features, qualities and views that can make a valuable contribution to the landscape quality. This will be achieved through resisting development that would have a detrimental impact on landscape features, qualities and views.

8.78 The setting of settlements is also considered important to the character of the Moorlands and the special qualities of its towns and villages. This policy seeks to ensure that new development respects and reinforces these qualities. The Landscape and Settlement Character Study is seen as a positive way of identifying and highlighting the importance of an area and its setting which will form a significant piece of evidence to support both the allocation of sites and the day-to-day control of development.

8.79 The Landscape, Local Green Space and Heritage Impact Study (2016) assesses the landscape impacts of sites that have been identified for development in the Local Plan. The Assessment also identifies appropriate landscape mitigation measures for development on these sites which should be incorporated into development schemes where appropriate.

Policy DC 3

Landscape and Settlement Setting

The Council will protect and, where possible, enhance local landscape and the setting of settlements in the Staffordshire Moorlands by:

1. Resisting development which would lead to prominent intrusion into the countryside or have an adverse impact of significance to the character of the countryside or the setting of a settlement or important views into and out of the settlement as identified in the Landscape and Settlement Character evidence;
2. Supporting development which respects and enhances local landscape character and which reinforces and enhances the setting of the settlement as identified in the Landscape and Settlement Character evidence;

3. Supporting development which maintains the biodiversity qualities of any natural or man-made features within the landscape, such as trees, woodlands, hedgerows, walls, watercourses or ponds;
4. Supporting opportunities to positively manage the landscape and use sustainable building techniques and materials which are sympathetic to the landscape;
5. Recognising and conserving the special quality of the landscape in the Peak District National Park, and ensuring that development does not adversely affect the wider setting of the National Park.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy DC3 but with the following changes:

- Amended wording in part 1 to clarify that development to be resisted should lead to prominent intrusion / significant adverse impact rather than just being 'harmful' or 'detrimental' as it could be argued that most development would fall into this category. The policy wording is now consistent with Policy H1.
- Change of 'and' to 'or' in part 1 of the policy in respect of adverse impact of significance to the setting of a settlement *or* important views to enable these to be considered independently of each other.
- Removal of part 4 of the policy relating to 'visual open space'. This designation has now changed to 'Local Green Space' in order to be NPPF compliant (as recommended in Landscape, Local Green Space and Heritage Impact Study (2016)). It was considered appropriate for a separate policy to be introduced to reflect this designation.
- Inclusion of a new bullet point reading "Supporting development which maintains the biodiversity qualities of any natural or man-made features within the landscape, such as trees, woodlands, hedgerows, walls, watercourses or ponds" in line with the Sustainability Appraisal recommendation.
- Removal of reference to Site Allocations DPD.
- Substitute the word 'assessment' for 'evidence' in parts 1 and 2 of the policy.

Local Green Space

8.80 The Landscape, Local Green Space and Heritage Impact Study (2016) reviews the 'Visual Open Space' designation used in the old Local Plan and recommends that in order to be NPPF compliant, a new 'Local Green Space' (LGS) designation would be appropriate. The Local Green Space designation allows local communities to protect spaces that are important to them in Local Plans or Neighbourhood Plans provided that they meet the criteria set out in national guidance. The LGS Study specifically notes Brough Park as worthy of

mention due to its special character and importance to the town of Leek. Each of the 'Visual Open Space' sites have been re-assessed using the criteria for Local Green Space set out in the NPPF. Those assessed as being suitable for a 'Local Green Space' designation are included as an allocation in the Local Plan. Their location can be viewed on the policies maps and a full list can be found in Appendix 10.

Policy DC 4

Local Green Space

The Council has identified and will protect from inappropriate development Local Green Space shown on the policies maps and listed in Appendix 10.

Development that would harm the openness or special character of a Local Green Space or its significance and value to the local community will not be permitted unless there are very special circumstances which outweigh the harm to the Local Green Space.

Consistency with Core Strategy

- Updated wording (formerly part 4 of Policy DC3) to reflect LGS section in the NPPF - made reference to 'very special circumstances' in the context of any new development being allowed in line with NPPF paragraph 76 and removed reference to limited development on LGS possibly being acceptable where this would bring about overriding improvements to the open space itself as the use of 'very special circumstances' covers this.
- Cross reference added to Appendix which will list all the Local Green Spaces (45 no).
- Removal of the text "Where appropriate the Council may seek public access agreements with the land owners and seek proposals for the enhancement or improvement of these areas as part of the green infrastructure network in accordance with policy C3." from the policy as public access is not required in the NPPF.

8.6 Sustainable Communities

Sustainable Communities Policies

Spatial Objectives

SO6. To maintain and promote sustainable regenerated rural areas and communities with access to employment opportunities, housing and services for all.

SO7. To support and enhance the tourism, cultural, recreation and leisure opportunities for the District's residents and visitors.

SO10. To deliver sustainable, inclusive, healthy and safe communities.

8.81 Creating sustainable communities by ensuring that new development contributes to the creation of safe, livable and mixed communities with good access to jobs and key services and to sports, recreation and leisure facilities for all the population is a key principle of Government planning policy and is widely supported by local residents. It is particularly important in rural areas like the Staffordshire Moorlands where accessibility to facilities and services by transport modes other than the private car can be limited. The proposed Sustainable Communities policies therefore seek to establish measures which will support, protect and promote community facilities and services and the provision of infrastructure improvements to serve new development.

Sustainable Communities

8.82 Community facilities such as village halls, village shops and post offices, schools, colleges, nurseries, places of worship, health services, convenience stores, libraries, public houses and cultural facilities such as theatres and arts centres play an important role in community life in the Staffordshire Moorlands. The loss of such facilities can have a widespread negative impact on the community, particularly the old and the young who live in rural areas and may have limited access to alternative facilities. The NPPF promotes the retention and development of local services and community facilities in rural areas. In line with this Government guidance, the policy seeks to support the retention of community facilities. Where an alternative facility of the same type already exists or the lost facility is replaced in the same locality so that it is accessible to all members of the community, this could mitigate the loss. Each proposal will be judged on its own merits. It is recognised that there are occasions where particular uses may become financially unviable. In such cases, a thorough marketing exercise must take place and all options for continued use as a community facility (such as a multi use scheme) must be thoroughly explored.

8.83 An important part of creating sustainable communities is the provision of the necessary infrastructure to serve new development (such as roads, accessibility by public transport, schools and public open space), where this is lacking. Otherwise, new development can put a strain on existing facilities and disadvantage both existing and new residents in an area. This is recognised by the Government as a development cost to be met by the landowner or developer. Full details of the Council's requirements will be produced in an SPD. The Council will also consider the use of Community Infrastructure Levy to fund investment in vital infrastructure either across the District or in specific areas.

8.84 In accordance with sustainability principles, major new development must be accessible by a choice of means of transport so that all members of the community are able to access it.

Policy C 1

Creating Sustainable Communities

In order to create sustainable communities at a local level the Council will:

1. Support proposals which protect, retain or enhance existing community facilities (including multi use and shared schemes) or provide new facilities. New facilities should preferably be located within defined built up areas where they are most accessible. In exceptional cases facilities may be located adjacent to these areas where it can be demonstrated that this is the only practical option and where a site is well related to the existing settlement.
2. Safeguard land required for the provision of facilities to meet existing and future community needs, as identified by service providers.
3. Resist proposals involving the loss of community facilities unless:
 - a) an alternative facility of the same type is available in the locality or can be provided in an accessible location in the same locality; or
 - b) a viability appraisal including a marketing exercise by a qualified professional demonstrates that there are no options for continued use as any type of community facility which are financially viable and it can be demonstrated that loss of the facility would not disadvantage local residents.
 - c) In the case of proposals to change use from one type of community facility to another, the Council will consider the respective benefits of both the existing and proposed uses in terms of their contribution to the community's ability to meet its day to day needs.
4. Only permit new development where the utility, transport and community infrastructure necessary to serve it is either available, or will be made available by the time it is needed. All development proposals must therefore either incorporate the infrastructure required as a result of the scheme, or make provision for financial contributions and/or land to secure such infrastructure or service provision at the time it is needed, by means of conditions or a planning obligation in line with the Developer Contributions SPD, or any subsequently adopted Community Infrastructure Levy.
5. Support the relocation of uses which are no longer compatible with their surroundings due to negative amenity issues such as noise or accessibility where an alternative suitable site can be secured, subject to the requirements set out in Policy E2 in order to facilitate regeneration.
6. Require development proposals to incorporate high quality locally distinctive design features and layouts that will reduce crime and the fear of crime and support inclusive communities, particularly in terms of accessibility and functionality in line with the Council's Design SPD.
7. Require major new development to be accessible by a choice of means of transport, in accordance with policy T1.

This policy will only apply insofar as it is consistent with any permanent or temporary provisions for changes of use permissible under the Town and Country Planning (General Permitted Development) Order (as amended).”

Consistency with Core Strategy

This policy carries forward Core Strategy Policy C1 but with the following changes:

- Amendment to bullet 3 a) to clarify that alternative facilities should be available 'in the locality' for the avoidance of doubt.
- Amendment to bullet 3 b) to clarify that options for continued use should consider 'any type of community facility' of the avoidance of doubt.
- Added additional bullet 3 c) to cover changes of use from one type of community facility to another.
- Addition of last paragraph to reflect amendments to the Use Classes Order.

Sport, Recreation and Open Space

8.85 Open space in the Staffordshire Moorlands forming a network of green infrastructure, is important to both residents and visitors and this policy promotes and safeguards many types of open space. The Council's Sport and Physical Activity Strategy recognises the importance of good quality open space, sports and recreation facilities and improving the quality of life and health of communities. An updated Open Space Sports and Recreation Study will identify the future needs and requirement for new sites. Work to date on this update has informed this Preferred Options Local Plan. The final study will inform the Submission Version of the Local Plan.

8.86 The Council will establish local standards for all types of provision within an updated Open Space, Sport and Recreation SPD. This will also be used to set the open space, sports and recreation facilities requirement for planning applications or alternatively, the amount of contribution payable in lieu of that provision into the Council's Open Space Sports and Recreation Facilities Fund.

8.87 New sport, recreation and open space facilities should be in an accessible and sustainable location and carefully assessed so that they do not have a detrimental impact on the local area, especially if they are proposed on the edge of a settlement in the open countryside. Opportunities to promote access to facilities by public transport and by alternatives to the car such as recreational routes, cycleways and bridleways etc should be maximised. The Council also supports the improvement of existing facilities in order to increase their use and availability such as changing facilities and floodlighting. Again these need to be carefully assessed so that the scale is directly related to the needs of the facility, they do not have a detrimental impact on the residential amenity of the area and do not impact on the 'openness' of the Green Belt.

8.88 Sport England have produced new 'Active Design' (2015) guidelines to promote the role of sport and physical activity in creating healthy and sustainable communities. This document sets out the ten principles of active design and how these can be incorporated into new development.

8.89 The protection of existing areas of open space and recreational facilities is also considered necessary to ensure that there is no net loss of open space in terms of quantity and quality. However, the policy recognises that there may be instances where alternative provision elsewhere or improvements to neighbouring facilities may be a more appropriate option. Areas of open space will be identified on the Policies Maps.

Policy C 2

Sport, Recreation and Open Space

The Council will promote the provision of high quality recreational open space by implementing and supporting schemes that will protect and improve the quantity, quality and accessibility of open space and outdoor sports, leisure and children's play facilities throughout the district, in accordance with the adopted minimum standards set out in the Open Space, Sport and Recreation SPD.

Where there is a proven deficiency, qualifying new residential development will be expected to make provision, or a contribution towards provision of open space, sports and recreation facilities which are necessary and reasonably related in form and scale in accordance with the adopted minimum standards set out in the Open Space, Sport and Recreation SPD.

In addition:

1) Existing areas of open space, recreational land and buildings including school playing fields and amenity open space will be protected from development, unless:

a) suitable alternative provision is made which is at least as accessible and at least equivalent in terms of size, usefulness, attractiveness and quality and is capable of being maintained adequately through management and maintenance agreements; or

b) an assessment has been undertaken to demonstrate the facility is surplus to requirements.

2) New sport, recreation and open space facilities should:

a) be located in accessible locations and supported by the local transport infrastructure;

b) protect the residential amenity of the area;

c) be of an appropriate quality, scale and form compatible with the local area, especially if the site is located outside the settlement boundary in the open countryside;

d) not harm interests of acknowledged importance; and

e) be designed so that they are fit for purpose.

3) Applications to improve the use and availability of existing outdoor sports and recreation provision such as the introduction of ancillary facilities such as changing rooms, artificial surfaces or floodlighting will be permitted provided that they :

- a) are directly related to the needs of the facility and are proportionate in scale;
- b) can be satisfactorily and economically serviced;
- c) meet the above criteria for new sport, recreation and open space facilities; and
- d) are acceptable in other respects e.g. design, landscape impact, appropriate in green belt etc

Any of the above development should be consistent with the Council's Sports and Physical Activity Strategy and the guidance in the Open Space, Sport and Recreation SPD.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy C2 but with the following changes:

- Delete reference that 'sites over 0.2ha will be included on the proposals map'. Cover in supporting text.
- Added section d) to part 3) regarding applications to improve existing sports and recreation provision, to improve clarity over scale and need to be acceptable in other respects.

Green Infrastructure

8.90 Green Infrastructure is the network of green spaces and natural elements that intersperse and connect our towns, villages and countryside. It is the open spaces, waterways, gardens, woodlands, green corridors, wildlife habitats, street trees, natural heritage and open countryside.

8.91 Green Infrastructure provides multiple benefits for the economy, the environment and people. A high quality environment has a key role in delivering the spatial strategy. It is important for the quality of life of local residents and improves the perception and attractiveness of the area for visitors and investment. Green infrastructure also has a role in our adaption to climate change and contributing to carbon neutral development.

8.92 Staffordshire Moorlands contains a wide range of existing and potential green infrastructure assets, which can benefit from a strategic approach to ensure adequate protection is given to key features, to identify areas where new linkages and assets need to be created and to guide and manage development which may impact on such areas. The

Local Plan recognises the cross cutting function that green infrastructure has, and the benefits of integrating green infrastructure with social and economic priorities, which will help contribute to the development of sustainable communities.

8.93 This policy is supported by a 'Green Infrastructure Strategy' which will seek to create functional and physical connectivity between green spaces, identify opportunities to provide additional green routes, consider how land can help to alleviate flooding through providing storage areas at times of flooding, consider opportunities to adapt to climate change and importantly make recommendations for how new development should be designed and how it can contribute to the wider green infrastructure network.

8.94 The provision of green infrastructure is also recognised as benefiting biological and geological resources. Defra has produced 'Guidance for Local Authorities on Implementing Biodiversity Duty' which states 'The creation and improvement of Green Infrastructure in urban and rural areas and the countryside in and around towns can help to deliver multiple benefits for biodiversity, landscape, and health and recreation.' The Town and Country Planning Association (TCPA) have also produced guidance 'Planning for a Healthy Environment – Good Practice Guidance for Green Infrastructure and Biodiversity'. Policy C3 therefore sets out the Council's policy for developing an integrated network of green infrastructure which is informed and supported by a Green Infrastructure Strategy.

Policy C 3

Green Infrastructure

The Council will, through partnership working with local communities, organisations, landowners and developers, develop an integrated network of high quality and multi-functional green infrastructure that will:

- a) Support and improve the provision of open space, sport and recreational facilities for local communities and enhance the settings of neighbourhoods;
- b) Link existing and potential sites of nature conservation value and historic landscape features, create new wildlife habitats, increase biodiversity, and increase tree cover where it is appropriate to the landscape;
- c) Enhance the natural, man-made and cultural features that are crucial to the local landscape and create opportunities for the restoration of degraded landscapes and the enhancement of the urban fringe;
- d) Mitigate the negative effects of climate change and maximise potential climate change benefits including effective flood risk and waterways management;
- e) Create appropriate access for a wide range of users to enjoy the countryside, including improved linkages to and provision of formal and informal recreation opportunities and accessible woodland areas, encouraging walking, cycling and horse riding;
- f) Contribute to the diversification of the local economy and tourist development through the enhancement of existing, and provision of new facilities.

The Council will identify, protect and enhance Green Infrastructure assets through the Green Infrastructure Strategy.

Consistency with Core Strategy

This policy carries forward Core Strategy Policy C3 but with the following changes:

- Delete reference to Site Allocations DPD.
- Changes in text to reflect the outcomes/recommendations of the Green Infrastructure Strategy.

8.7 Natural Environment

Natural Environment Policies

Spatial Objectives

SO9. To protect and improve the character and distinctiveness of the countryside and its landscape, biodiversity and geological resources.

Biodiversity and Geological Resources

8.95 The District has a wealth of biological and geological resources many of which are statutorily protected. Government guidance states that the planning system should contribute to and enhance the natural and local environment and local planning authorities should 'set out a strategic approach in their Local Plans, planning positively for the creation, protection, enhancement and management of networks of biodiversity and green infrastructure.' The NPPF requires that distinctions are made between the hierarchy of international, national and locally designated sites. These sites are protected under separate legislation with ODPM Circular 06/2005 outlining how statutory obligations impact within the planning system and policy NE1 will seek to reinforce their protection through the planning process. In addition the 2006 Natural Environment and Rural Communities Act states that planning authorities must in their Planmaking, have regard to the purpose of conserving biodiversity; and the Council will seek to produce net gains and enhance biodiversity having regard to the objectives and priorities for the various ecosystems identified within the Staffordshire Moorlands in the Staffordshire Biodiversity Action Plan.

8.96 The Council published a number of Phase 1 Ecological Studies for potential development sites across the District since 2015, which have been used as part of the site allocations process. This evidence assessed not only the ecological / nature conservation characteristics presently on-site, but also those immediately adjacent and within 2km of the site, including ancient woodland; and includes an assessment of 'local wildlife site' (LWS) criteria for each site, for the purposes of the NPPF.

8.97 The Staffordshire Moorlands Biodiversity Opportunity Map has been produced by Staffordshire Wildlife Trust in conjunction with other nature conservation bodies which highlights areas of biodiversity importance. This and other evidence has contributed to the preparation of a Strategic Green Infrastructure Network for the Plan Area which identifies a series of strategic corridors designed to link existing (and proposed) green spaces with green corridors running through towns, villages and rural areas.

8.98 The policies map shows the concentration of significant nature conservation sites within and around the District, which includes Special Protection Areas, Special Areas of Conservation and Sites of Special Scientific Interest. The policies map also identifies the location of designated sites of international, national, regional and local biological and geological importance and ancient woodlands.

Policy NE 1

Biodiversity and Geological Resources

The biodiversity and geological resources of the District and neighbouring areas will be conserved and enhanced by positive management and strict control of development (and having regard to Council evidence) by:

1. Resisting any proposed development that could have an adverse effect on the integrity of a European site (or successor designation) alone or in combination with other plans or projects unless it can be demonstrated that the legislative provisions to protect such sites can be fully met. Any development with a potential to adversely affect a European site/s through construction activities should ensure that Ciria construction guidelines are followed including environmental good practice on control of dust and water pollution.
2. The Council will not normally permit any development proposal which would directly or indirectly (either individually or in combination with other developments) have an adverse effect on a Site of Special Scientific Interest. Where an adverse effect on the site's notified special interest features is likely, an exception should only be made where the benefits of the development, at this site, clearly outweigh both the impacts that it is likely to have on the features of the site that make it of special scientific interest and any broader impacts on the national network of Sites of Special Scientific Interest.
3. Conserving, and enhancing regional and locally designated sites. The Council will not permit any development proposal which would directly or indirectly result in significant harm to geological and biodiversity conservation interests, unless it can be demonstrated that:
 - a) there is no appropriate alternative site available; and
 - b) all statutory and regulatory requirements relating to any such proposal have been satisfied; and

- c) appropriate conservation and mitigation measures are provided; or if it is demonstrated that this is not possible
- d) the need for, and benefit of, the development is demonstrated to clearly outweigh the need to safeguard the intrinsic nature conservation value of the site and compensatory measures are implemented.
4. Supporting opportunities to improve site management and increase public access to wildlife sites including supporting the objectives of the Staffordshire County Council Rights of Way Improvement Plan.
 5. Ensuring development where appropriate produces a net gain in biodiversity, and ensuring that any unavoidable impacts are appropriately mitigated for.
 6. Ensuring development promotes the appropriate maintenance, enhancement, restoration and/or re-creation of biodiversity through its proposed nature, scale, location and design. The Staffordshire Moorlands Biodiversity Opportunity Map, in conjunction with the Staffordshire Biodiversity Action Plan, will be used to guide biodiversity enhancement measures to be included in development proposals as appropriate to the nature and scale of development proposed and other environmental interest, in particular supporting opportunities to increase grassland and heathland habitats including supporting targets in the UK and Staffordshire Biodiversity Action Plan.
 7. Protecting and enhancing habitats and species of principal importance for the conservation of biodiversity as identified in legislation, and recognising and implementing appropriate measures, including landscape-scale conservation management, to take account of the fact that the distribution of habitats and species will be affected by climate change.
 8. Recognising the value of the natural environment for sport and leisure activities and the need to manage such activities to ensure there is no conflict.
 9. Ensuring the provision and protection of green infrastructure networks in line with Policy C3.

Consistency with Core Strategy

This Policy carries forward Core Strategy Policy NE1 but with the following changes:

- Amendment in first paragraph to include reference to 'Council evidence' (District-wide Phase 1 Ecology Studies.)
- Amendment in part 1) to read 'European site (or successor designation)'
- Amendment in part 2) to reflect NPPF wording.

Trees Woodland and Hedgerows

8.99 Woodlands, trees and hedgerows are important to both the quality of life and environment, and are essential to life. They stabilise the soil, generate oxygen, store carbon, trap air pollution, play host to a wide variety of wildlife, as well as providing us with raw materials such as timber and biofuel. Trees can play a role in mitigating the effects of climate change through carbon storage and shading. They are also an important feature in creating a high quality local environment.

8.100 In January 2013 DEFRA published its *Government Forestry and Woodlands Policy Statement*. This explains the Government's policy of seeking to protect, improve and expand existing public and private woodland assets, to improve and restore native and ancient woodlands, and to improve the biodiversity of woodlands. It states that increasing woodland cover by 12% across England by 2060 is deliverable.

8.101 The Council adopted its own Tree Strategy in 2016. This sets out the Council's aims to create a sustainable, robust tree population in the District to protect existing trees, and to promote additional tree planting. This will also be taken into account in the consideration of individual development proposals; and with regards to the Council's Green Infrastructure Strategy.

8.102 Ancient and semi-natural woodlands are not re-creatable within any practical time frame as the ecological and physical features of a site will have developed over hundreds of years. The Staffordshire Moorlands has an above average ancient woodland resource compared to the UK as a whole. Mature and ancient woodland are an essential part of the District's natural capital and a significant source of biodiversity. Development can impact on ancient woodlands in a number of ways including through pollution, disturbance, introduction of new species etc. Native woodland is a priority habitat within the Staffordshire Moorlands in the Staffordshire Biodiversity Action Plan. Veteran trees are trees of special interest because of their history and longevity and may lie outside of ancient woodlands - these are also protected by the policy.

8.103 In order to protect trees in the interest of amenity, particularly when they are considered to be at risk, the Council can make a Tree Preservation Order (TPO) meaning the tree has special protection under the Planning Acts. The District Council has made over 200 Tree Preservation Orders (TPOs) covering thousands of individual trees, and hundreds of 'areas', 'groups' of trees, and 'woodlands'. This covers over 14% of the District's area (including that in the Peak Park). Hedgerows also share some of the benefits of trees and woodlands in terms of climate change mitigation, biodiversity, and health and wellbeing. Changes to farming practices in the 20th Century saw a decline in particular in the extent of rural hedgerows. In 1997 regulation were enacted that protect all rural hedgerows over 20m in length from removal without permission. This policy goes further by seeking to protect all hedgerows in the District affected by development.

8.104 New developments will be required to ensure that any trees removed will be replaced by replanting twice the number removed. This will help to deliver net biodiversity gains, since many newly planted trees do not survive. In order to help maximise the chances of survival for replacement trees, developments should also ensure that a tree management plan is put in place.

Policy NE 2

Trees, Woodland and Hedgerows

The Council will protect existing trees, woodlands and hedgerows, in particular, ancient woodland, veteran trees and ancient or species-rich hedgerows from loss or deterioration.

This will be achieved by:

- Requiring that existing woodlands, healthy, mature trees and hedgerows are retained and integrated within a proposed development unless the need for, and benefits of, the development clearly outweigh their loss
- Requiring new developments where appropriate to provide tree planting and soft landscaping, including where possible the replacement of any trees that are removed at a ratio of 2:1
- Resisting development that would directly or indirectly damage existing ancient woodland, veteran trees and ancient or species-rich hedgerows.

The Council will refer to its adopted Tree Strategy in the consideration of proposals; and will in generally seek to retain as many trees and as much hedgerow on site as possible.

Consistency with Core Strategy

This is a new policy intended to provide clarity regarding Council policy specifically towards trees, woodland and hedgerows. The policy provides protection to all types of trees - including non-designated trees; trees covered by TPO (whether individual-, group-, area-, or woodland-TPO); ancient woodlands; and veteran trees outside ancient woodland. Also protected are all types of hedgerows affected by development.

8.8 Transport

Spatial Objectives

SO11. To reduce the need to travel or make it safer and easier to travel by more sustainable forms of transport

Development and Sustainable Transport

8.105 Reducing the need to travel, and reducing the reliance on the car is a well established planning principle stemming from concerns at combating climate change (reducing vehicular emissions) and of addressing social equity (ensuring physical accessibility to all sections of

society). The Staffordshire Local Transport Plan is the principal means of addressing transport issues in the District, and the proposed policy approach seeks to ensure that proposals in the Local Plan are helping deliver the objectives of this Local Transport Plan.

8.106 It is considered that there is potential in influencing modal shift away from the car in Staffordshire Moorlands in two respects - by targeting public transport improvements along the main 'work corridors' connecting the Moorlands with the conurbation; and by promoting public transport schemes within rural areas and between rural areas and towns. The Council's Development Capacity Studies have examined the accessibility of the main settlements in the District using the existing transport network including public transport and this has informed the development approach and identification of development areas. However, it is important that strategic planning decisions are not purely based on the location of existing public transport infrastructure. For this reason the proposed policies are proactive in seeking improvements to the existing network.

8.107 Policy T1 reflects national transport planning policy in the NPPF which seeks to deliver a system that supports sustainable transport through the integration with land use planning at all levels, so that transport and planning work together to support more sustainable travel choices and reduce the need to travel. However the NPPF also drives for the expeditious delivery of necessary development, and is therefore clear that proposals should only be refused on transport grounds alone, where residual cumulative impacts of development are 'severe'. Reducing the need to travel, and reliance on the car, is linked to social equality, through making developments equally 'accessible' to all sections of society. The Policy aims to benefit not only work-related travel but also that for shopping, leisure and recreation etc.

8.108 The approach embodied in this policy will seek to manage travel demand in an effective and sustainable way, while improving the range of choice and responding to the needs of residents, workers and visitors.

8.109 The Council will continue to work closely with the Highway Authority to ensure the coordination of proposals within the Local Plan and the Local Transport Plan: the 'Staffordshire Moorlands District Integrated Transport Strategy 2013-2031' explains how the LTP is expected to be delivered in the Staffordshire Moorlands and where the County Council's transport investment, and other funding resources, are expected to be targeted. The location of development and the way that development is carried out are important factors in helping achieve the priorities of the Local Transport Plan; and in the case of proposals affecting the Strategic Road Network closely involve Highways England (formerly the Highways Agency) such that it can undertake its duties as set out in DfT Circular 2/13 Strategic Road Network and Delivery of Sustainable Development. Choices about where new housing and employment uses are located for example, and patterns of travel that result, will be important factors in helping to reduce reliance on the private car. Encouraging alternative forms of travel and securing access to the most sustainable modes of travel such as public transport, walking or cycling, represent approaches which aim to help achieve a new balance between non-motorised transport, public transport and private car use.

8.110 This approach also reflects the aims of the Council's Sustainable Community Strategy and the Corporate Plan priorities to promote improved health and protect the environment. The Council will aim to ensure as far as possible, development minimises traffic problems and maximises the potential benefits of accessibility and new infrastructure to the wider community.

8.111 The Government issued a ministerial statement in 2015 which stated arbitrary parking standards that restrict off-street parking (such as maximum standards), should not be applied when assessing planning proposals, without compelling justification. Therefore, the Council will consider the appropriateness of proposed off-street parking in schemes, on a case by case basis, after (where appropriate) having consulted with SCC Highways Officer (and Manual for Streets (2007)/Manual for Streets 2(2010)), rather than referring to formally laid out standards. However the Council has, after consultation with SCC Highways Officer, published recent guidance to accompany this Local Plan which suggests 'minimum' provision of spaces, depending on use class; these are set out in Appendix 8 of the Local Plan.

8.112 The Council has a statutory responsibility to consult various organisations before determining planning applications (depending on the scale and impact of the proposals) as laid out in the Development Management Procedure Order. For example the Council must consult the Secretary of State for Transport, Staffordshire Highways Authority, or Network Rail for proposals which would increase traffic volumes upon trunk roads, classified roads, or railway level crossings (respectively). It is also important that major new developments help to mitigate any adverse impacts they may otherwise have on transport and travel. Transport Assessments are required to be prepared where any application would have significant transport implications (in line with DfT's former Guidance on Transport Assessment (March 2007), in consultation with the Highways Authority, so as to determine necessary mitigation measures. Where appropriate, S106 planning obligations, or any adopted Community Infrastructure Levy, will be used to ensure that such developments provide for related transport improvements and fund other appropriate mitigation measures. This may also require developers to fund any qualitative improvements required in relation to existing facilities and infrastructure as a direct result of increased patronage resulting from new development. Further details regarding potential access and sustainable transport requirements for individual site allocations are set out in this Plan.

Policy T 1

Development and Sustainable Transport

The Council will promote and support development which reduces reliance on the private car for travel journeys, reduces the need to travel generally and helps deliver the priorities of the Staffordshire Local Transport Plan. This will be achieved by:

1. Ensuring that all new development is located where the highway network can satisfactorily accommodate traffic generated by the development or can be improved as part of the development.
2. Ensuring that major development is located in areas that are accessible by sustainable travel modes or can be made accessible as part of the proposal.
3. Considering appropriate parking provision on a case by case basis with recourse to the parking guidance set out in Appendix 8.
4. Where appropriate all new development shall facilitate walking and cycling within neighbourhoods and town centres, and link with or extend identified walking or cycling routes.

Development which generates significant demand for travel or is likely to have significant transport implications (as identified within a Transport Assessment) will, where appropriate:

- Contribute to improved public transport provision
- Provide proactive facilities and measures to support sustainable transport modes including on-site features to encourage sustainable travel methods e.g. cycle path links, cycle storage facilities, bus stops etc
- Provide and actively promote travel plans.

Consistency with Core Strategy

Updates previous references to 'parking standards' given Government's recent ministerial statement that these should not be applied in most cases; and introduces the Council's own parking guidance (Appendix 8).

Other Sustainable Transport Measures

8.113 Whereas the Local Transport Plan funding streams are allocated County-wide in accordance with the shared objectives, the Local Plan must decide broadly where future population is distributed and ensure that the transport network is able to sustain it. It is important therefore that strategic planning decisions are not purely based on the location of existing public transport infrastructure, or predicted locations of funding. For this reason Policy T2 is proactive in seeking improvements to the existing road/bus/rail networks generally. The Council will work with the highway authority to exploit opportunities for new road schemes. If they are feasible and subject to available finances, they will be included in both the Infrastructure Plan and District Integrated Transport Strategy.

8.114 A major issue for the District has been the inadequacy of the alternative modes of travel and in particular the public transport system. Whilst there is an extensive network of bus routes, with many settlements having daily bus links and a call-on-demand Moorlands Connect service, the Development Capacity Study found that the frequency and accessibility to these services can be limited, particularly in the rural areas.

8.115 The high level of out-commuting in the District would also suggest there is potential in affecting modal shift away from the car in a number of ways - by targeting public transport improvements along the main 'work corridors' connecting the Moorlands with the conurbation; by promoting public transport schemes within rural areas / between rural areas and towns; and by facilitating walking and cycling within settlements. This will also help to support healthy, inclusive and sustainable communities as well as reducing the impacts of travel.

8.116 The District also benefits from a network of legally recognised (and other) public rights of way, including footpaths, bridleways and cycle routes which links the towns and villages to the wider countryside. For example a number of National Cycle Network routes run throughout the District. The Council will ensure that all legally recognised public rights of way affected by development are protected (or diverted where necessary) and, where possible, enhanced.

Policy T 2

Other Sustainable Transport Measures

In line with priorities set out in the NPPF and the Staffordshire Local Transport Plan, and through working with partner organisations, the Council will encourage and support measures which promote better accessibility, create safer roads, reduce the impact of traffic, or facilitate highway improvements. In particular, the Council will:

1. Support, subject to feasibility assessment, new road schemes within the District (where not already identified as priorities in the Local Transport Plan) where:
 - a. there would be evidence to suggest positive impact and need for the scheme; and
 - b. it would be in accord with the general objectives and policies of the NPPF and the Local Transport Plan.
2. Support, subject to feasibility assessment, strategic infrastructure improvements and links to major urban areas for example to road, rail, bus facilities in the District and the development of new rail or bus termini within the District.
3. Continue to safeguard all existing disused railway lines within the District and support the reuse of these for public or commercial/tourism use. To this end the Council will refuse any development which would impede or truncate these routes. However proposals for recreational routes, cycleways, bridleways etc will generally be acceptable.
4. Work with its partners to promote the improvement/expansion of existing bus services and the provision of innovative sustainable transport services in the District, particularly those serving rural areas.
5. Support and promote the development of a network of safe walking, horse riding and cycling routes (including the National Cycle Network), connecting to transport interchanges, linking communities and recreational/tourist areas. The Council will also ensure that all legally recognised public rights of way affected by development are protected (or diverted where necessary) and, where possible, enhanced.
6. Seek to minimise the environmental impact of freight road transport and to work with Staffordshire County Council and other partner organisations to agree designated lorry routes, freight handling facilities and greater rail use.

Consistency with Core Strategy

Clarification added under Part(5) that the Council will protect and where possible, enhance, existing public rights of way.

Strategic Development Site Policies

9 Strategic Development Site Policies

9.1 This Chapter provides additional policies for specific sites or clusters of allocated developments sites that are of strategic importance to the Local Plan and/or require bespoke policy to shape the development in an appropriate manner.

9.1 Leek

Land at Horsecroft Farm

9.2 This is a small greenfield site lying immediately adjacent to the Leek development boundary to the northeast of the town.

9.3 The School Organisation Team at Staffordshire County Council have indicated that additional school places are required at the Middle School Level to meet the needs of new housing development proposed in Leek. Churnet View Middle school located adjacent to the Horsecroft Farm site, is the only middle school in Leek and options to expand school buildings within the school site are limited. It is therefore proposed to provide some additional land for the school within this site; however the site is large enough to provide an element of housing in addition to this.

9.4 A track separates the Churnet View School from the Horsecroft Farm site. SCC Highways have indicated that access is acceptable through the Nightingale Estate (Tittesworth Avenue), subject to access design.

9.5 The Council's Environmental Health Team have advised that there may be constraints on development due to possible ground gas (methane and carbon dioxide) from nearby landfill(s). Investigation would be required.

9.6 The Council's Landscape, Local Green Space and Heritage Impact Study considers the site to be high landscape sensitivity. Development of this site will have to incorporate a comprehensive landscaping plan to ensure that any adverse landscape impacts are minimised as far as possible.

9.7 The SCC Lead Local Flood Risk Officer has indicated that there may be a watercourse flow route to north of site; therefore recommends that a site-specific flood risk assessment should be submitted with any proposal.

9.8 The Extended Phase 1 Habitat Surveys and Local Wildlife Assessments also recommend a number of ecological surveys are undertaken (including survey of the peripheral hedgerow habitat to establish potential SBI/BAS status) and that any vegetation is removed at the appropriate time of year.

9.9 Developer contributions for affordable housing and infrastructure will be required as appropriate.

Policy DSL 1

Land at Horsecroft Farm, Leek

Land amounting to 0.89ha is allocated for a mix of uses including housing (approximately 15 dwellings) and D1 education.

Development must:

- provide mitigation measures identified in the Council's Landscape, Local Green Space and Heritage Impact Study;
- Provide a site specific flood risk assessment;
- Make appropriate contributions towards infrastructure;
- include surveys and actions recommended by the Extended Phase 1 Habitat Survey and Local Wildlife Assessment;
- Provide affordable housing in accordance with Policy H3.

Consistency with Core Strategy

This is a new policy intended to clarify the expectations for the allocation.

Land at the Mount

9.10 This is a series of separate fields lying immediately adjacent to the development boundary or built up area of Leek on its eastern side, along Mount Road. Access to Mount Road is possible via Buxton Road, Kniveden Lane or Ashbourne Road.

9.11 Staffordshire Council Highways advise that development in this area should contribute to the improvement of Mount Road including provision of footways and pedestrian links. Also Kniveden Lane should be brought up to adoptable standard with the implementation of footways. Further junction improvements at Mount Road/Ashbourne Road may also be appropriate. Given the interconnection of these sites it is considered appropriate to consider highway improvement works holistically in a single policy.

9.12 The School Organisation Team at Staffordshire County Council have indicated that an equivalent of at least 1 new first school should be provided within Leek during the Local Plan period to take into account the number of dwellings required; and request that land to the east of the town be safeguarded for this purpose. Policy DSL2 provides for this.

9.13 The Council's landscape evidence indicates that the various sites around the Mount vary between low, to medium, to high landscape sensitivity. Development of sites should include appropriate landscape mitigation measures such as advanced planting and landscaping along eastern boundaries, and limited building heights.

9.14 The Extended Phase 1 Habitat Surveys and Local Wildlife Assessments also recommend a number of ecological surveys are undertaken (including polecat surveys, bat surveys, further bat survey of trees, to establish potential SBI/BAS status on parts of the site) and that any vegetation is removed at the appropriate time of year.

9.15 Developer contributions for affordable housing and infrastructure will be required as appropriate.

Policy DSL 2

Land at The Mount, Leek

Land amounting to approximately 14.25ha as shown on the proposals map is allocated for housing (approximately 417 dwellings); and 1.2 ha for D1 education.

Development must:

- provide mitigation measures identified in the Council's Landscape, Local Green Space and Heritage Impact Study;
- make appropriate contributions towards infrastructure;
- include surveys and actions recommended by the Extended Phase 1 Habitat Survey and Local Wildlife Assessment;
- Provide affordable housing in accordance with Policy H3.

Land for a new first school shall be safeguarded as identified on the proposals map, or similar location, if forming part of a mixed education and residential development.

Development proposals on the allocations listed above, shall be expected to contribute to highway or junction improvements in this area, as deemed necessary to enable that development according to the County Highways Authority, in order to coordinate contributions from wider developments along Mount Road.

Consistency with Core Strategy

This is a new Policy following the allocation of development sites around the Mount. The Policy clarifies the Council's expectations regarding development of these sites, including in relation to new first school provision; and regarding coordinated contributions around the Mount to enable local highways improvements.

Land at Newton House

9.16 This site is the former Britannia/Coop headquarters located off a purpose built roundabout to the east of the A520 at Cornhill, on the edge of the Leek town boundary. The Council needs to allocate additional employment land in the Leek area (about 8ha), in addition to new housing, to 2031.

9.17 This 9.27ha brownfield site provides an opportunity to comprehensively redevelop for mixed residential and commercial purposes; the Council considers that this could yield at least 5.25ha for residential use (about 179 dwellings), and at least 1.5ha employment land. The nature and location of employment uses across the site would need to take account of the amenity of adjacent housing. The site is closely related to the adjacent 'Cornhill East' site, which is itself the subject of a detailed Masterplan for mixed use redevelopment [see

Policy DSL4 below]. The Council considers it appropriate to identify additional employment land for Leek across a range of locations, with good access to main roads such as the A520, to provide choice in locations around the town, to at least meet its residual employment land requirement.

9.18 Staffordshire County Council Highways advise that proposals would need to assess impact on the existing access roundabout onto the A520 and local traffic impacts, and schemes must demonstrate access onto this roundabout. Also footway links connecting onto the A520 should be provided and cycle facilities should be considered.

9.19 The School Organisation Team at Staffordshire County Council have indicated that development of this and other sites would add to the existing pressure for first school places in this area (therefore recommend the safeguarding of a site for a new first school in the east of the town).

9.20 The Council's landscape evidence indicates that whilst the site overall is of low landscape sensitivity the southeast corner is more visually prominent and should ideally remain undeveloped. Development should be concentrated in the north of the site where visual prominence is lowest; and existing trees and landscaping should be retained where possible.

9.21 The Council's ecological evidence also indicates the proximity to Ballington Wood to the immediate east which is both an ancient woodland and (County-level) Site of Biological Importance at this location. It therefore has the potential for certain species such as badger and newt to forage on the site. In addition to taking account of this ecological evidence (requirements for pre-development surveys), the policy also expects incorporation of a wildlife buffer in design schemes between the allocation and the woodland to the east.

9.22 Developer contributions for affordable housing and infrastructure will be required as appropriate.

Policy DSL 3

Land at Newton House, Leek

This site amounting to around 9.27ha is allocated for mixed residential and employment use. Development proposals should support approximately 179 dwellings and 1.5ha of the site area for B-Class employment purposes; mixed use proposals must demonstrate how the amenity of housing will be maintained around employment uses.

Development must:

- make appropriate contributions towards infrastructure;
- provide affordable housing in accordance with Policy H3;
- demonstrate the incorporation of a wildlife 'buffer' along the eastern edge of the site, to the satisfaction of the Council.

Consistency with Core Strategy

This is a new Policy following the allocation of Newton House for mixed employment and residential uses. The Policy clarifies the Council's expectations regarding development of this site, including the expectation that schemes incorporate an eastern wildlife buffer to protect the ancient woodland and ecological interests.

Land at Cornhill East

9.23 Policy SS3 of the 2014 Core Strategy identified a residual employment land requirement for Leek (to 2026) and identified the Cornhill East area as 'Broad Area EM1' as a "Major Regeneration Opportunity" for future employment allocation (dependent on the need for further employment land provision across the town). Further to the NLP study findings, the Council considers it appropriate to identify additional employment land for Leek across a range of locations, with good access to main roads such as the A520, to provide choice in locations around the town, to at least meet its residual employment land requirement. The SS3 Policy stance is retained under Local Plan Policies SS3 and SS5 (but up to 2031).

9.24 In 2014 the Council adopted the Churnet Valley Masterplan to guide development proposals within this Valley, which is considered to extend from Rushton Spencer/Blackshaw Moor in the north, to Alton in the southeast, and including Leek town. The terminus of the disused Churnet Valley railway line from Leekbrook at Cornhill in the south of the town (where it meets Caldon Canal) is identified as a tourism 'gateway' into the town, and the wider Cornhill area encompassing Barnfields industrial estate to the A52 to the west, as far as the land east of the railway line but west of Britannia House premises is identified as an 'opportunity site' for commercial/residential/tourism redevelopment, with concept plan. As per Leek Strategic Spatial Policy SS5, it also supports a potential link road route in between A53 and A520 to allow easier access across the southern side of the town, and to relieve pressure on Junction Road.

9.25 In 2015 the Council approved a major redevelopment scheme on the Cornhill area west of the railway line, to accommodate residential, commercial and tourism-related uses (including boating marina, railway station and pub/restaurant); crucially this scheme reserved land for a link road to enable continuation east across the railway line to the Britannia House junction with A520.

9.26 The site includes Birchall Meadow 'Biodiversity Alert Site' (ie contender- SBI site) to the south west corner covering around 1.12ha, which the Masterplan proposes be redeveloped. Given the sensitivity of this area the Council commissioned further detailed ecological work for the whole Cornhill East site in late 2016, to make any recommendations regarding the status of the BAS, appropriate ecological compensatory measures in the event of its loss, and general recommendations for the whole Cornhill East site. This study is available on the Council's website. The Council's existing natural environment policies and the NPPF expect that loss of such sites would require appropriate mitigation/compensation; therefore this is a requirement of the policy. The nature and location of employment uses across the site would also need to take account of the amenity of adjacent housing.

9.27 Staffordshire Council Highways advise that access to the site should (whether or not via link road) be onto the existing roundabout junction onto A520, not via Sandon Street. Connectivity measures for pedestrians and cyclists into the town centre may also be appropriate.

9.28 The School Organisation Team at Staffordshire County Council have indicated that development of this and other sites would add to the existing pressure for first school places in this area (therefore recommend the safeguarding of a site for a new first school in the east of the town).

9.29 The Council's landscape evidence indicates that the site is of low landscape sensitivity and that development of the site, with planting on its southern boundary, could strengthen Leek's southern boundary and reduce visual prominence. Redevelopment schemes should however have regard to the changing aspects north to south across the site.

9.30 Developer contributions for affordable housing and infrastructure will be required as appropriate.

Policy DSL 4

Cornhill East, Leek

This 3.13ha site is allocated for comprehensive redevelopment for mixed employment and residential purposes. Schemes should have regard to the adopted Churnet Valley Masterplan, development proposals should support approximately 50 dwellings as part of a mixed use scheme also incorporating B-Class employment; and mixed use proposals must demonstrate how the amenity of housing will be maintained around employment uses.

Development must:

- provide for any transport infrastructure improvements having regard to the Churnet Valley Masterplan
- make appropriate contributions towards infrastructure;
- provide affordable housing in accordance with Policy H3;
- take account of ecological constraints, including any requirements for further pre-development ecological surveys. In the event of proposals affecting Birchall Meadow BAS, appropriate mitigation/compensation measures will be required.

Consistency with Core Strategy

This is a new Policy following the allocation of Cornhill East for mixed employment and residential uses. The Policy dovetails with the aspirations contained within the adopted Churnet Valley Masterplan, whilst making it clear that other proposals may also be appropriate subject to the criteria listed in the policy, including the need to compensate for any loss of the Birchall Meadow BAS.

9.2 Biddulph

Wharf Road Strategic Development Area

9.31 This is a key mixed use development site in the Local Plan. It is in a sustainable location close to the town centre and most of the land (with the exception of that to the west of the Biddulph Valley Way) lies outside the Green Belt. It presents an opportunity to comprehensively plan for a range of uses to make a significant contribution to Biddulph's development needs over the plan period. There are opportunities to provide improved pedestrian and cycle linkages with the town centre and with the adjacent Biddulph Valley Way for access to the wider countryside.

9.32 The Employment Land Requirement Study was completed in July 2014 and updated in February 2017. The study reviewed a range of economic factors, projections relating to the performance of different sectors of the local economy and the working age population. The 2017 update concluded that 13 to 27ha of additional employment land was required for Staffordshire Moorlands for the period 2016 to 2031. An employment land requirement of 27ha is recommended being at the top end of this range, to dovetail with a housing requirement of 320 homes per year (relating to the level required to support projected increase in jobs). The residual requirement in Biddulph (over and above the land still available at Victoria Business Park) has been split over 2 sites - Wharf Road and Tunstall Road (opposite Victoria Business Park). The Council considers this approach appropriate to cater for businesses who need a location close to the town centre as well as businesses who wish to locate on a larger business park. The type of employment use to be located at Wharf Road is dependent upon how this integrates with other land uses and will be determined as part of the masterplan.

9.33 The Council's Retail Study (2013) recommends the allocation of a site to accommodate a discount foodstore (a standard sized store of around 1,000m² (net sales) is recommended) to claw back some of the 45% of residents who still shop out of town for their main food shopping. Note that this is a qualitative rather than quantitative need. The study identifies outflow to mainstream and discount foodstores and explains that a discount store would provide the local population with more choice as there is a lack of such a facility in the town at present. The study advises that any new store would have to be sustainably located so that linked trips to the town centre can still be achieved.

9.34 The school playing field included in the allocation is in use and is proposed for retention in situ.

9.35 Housing density calculations vary across the site with 40 dwellings per hectare assumed for the area between the bypass and Tunstall Road to reflect adjacent development and its position close to the town centre, 35 dwellings per hectare assumed for land west of the Biddulph Valley Way and a lower density of less than 30 dwellings per hectare assumed for the central part of the site to reflect known constraints including mine shafts, land levels and the watercourse. Actual density levels will be determined through the masterplan process once all the constraints can be assessed in full detail.

9.36 The Council's Landscape, Local Green Space & Heritage Impact Study (2016) makes recommendations to mitigate landscape and heritage impact which the developer should adhere to. Landscape sensitivity across the site area varies with low impact to the east of the bypass, in and around the former Meadows School and on land around the telephone exchange. Most of the site has medium landscape sensitivity including the area immediately to the east of the Biddulph Valley Way (BVW). The landscaping plan should reflect this by

including additional advanced planting on the ridge and along the boundary with the BVW and screening in the south-eastern part of the site. The large mature tree adjacent to the telephone exchange access point needs to be retained. Landscaping should be used as a buffer between the residential and employment / retail development. Development of land between Tunstall Road and the bypass provides an opportunity for urban greening along the Tunstall Road frontage and buffer planting for visual and noise purposes along the bypass boundary. The Green Belt Review recommends creation of a new settlement edge along the south-western boundary of the part of the site located to the west of the BVW.

9.37 In terms of heritage, the study states that the heritage assets are around the southern part of the area. There are 2 Grade 2 Listed Buildings in the site and 5 additional Grade 2 Listed Buildings within the 400m buffer used in the study. As a consequence, mitigation must take place to include setting development back on the former Jackson's Nursery site and land to the west from the nearby Listed Buildings by keeping development to the west and north of the site as well as employing screening along the south-eastern edges of the former meadows school site and land to the west up to the BVW. Without the appropriate mitigation measures set out in the study, development would highly likely cause substantial adverse effects to the settings of the Listed Buildings.

9.38 The Council's contamination department has advised that air quality issues of future occupants of the housing can be avoided by careful site design to avoid placing housing too close to the bypass.

9.39 This area, along with many others around Biddulph, has a mining legacy. The Coal Authority has advised that new development should recognise the problems and how they can be positively addressed. They consider that mining legacy is not always a complete constraint and new development can address issues making it safe, sustainable and stable. The mining legacy of this site will not prevent development but detailed site investigation work must take place to inform site design. A developer will therefore need to undertake intrusive site investigations to locate these mine entries and determine their current condition followed by undertaking consequential treatment. Any layout would then need to try and locate the mine entries within landscaping belts, open space, roads etc. The developer must ensure that no development takes place over mine entries even when treated. Mine entries are positioned parallel to the BVW so this land could potentially be integrated into open space providing a buffer between the BVW and new development.

9.40 A watercourse runs through the middle of the site, which the Lead Local Flood Authority would like to see preserved to contribute towards Water Framework Directive objectives. This may take up space within the site, however it may be possible to divert the channel round the edge to create more developable space. The Environment Agency should be contacted by the developer at an early stage to discuss this issue. The Environment Agency also requires a Preliminary Risk Assessment of controlled waters to identify any contamination issues and advises that the developer has regard to the relevant River Basin Management Plan. The Lead Local Flood Authority would like to see a Flood Risk Assessment of the whole site undertaken by the developer prior to any development taking place.

9.41 County Highways has stated that development of this site is acceptable in principle subject to suitable access design and a Transport Assessment. They require site access to the sites on the east side of the bypass to be gained from Tunstall Road and not the bypass.

9.42 The Council's contamination department has advised that there is possible landfill in the North West of the site which the developer would need to investigate. Also investigation will be required to determine whether any minor contamination from previous uses has occurred on the brownfield parts of the site e.g. the possibility of minor contamination on the land which was formerly Jacksons Nursery due to possible pesticide use.

9.43 There is ecological interest on the site and comprehensive survey work will need to be carried out at an early stage. Recommendations for survey work are set out in the Council's 2014 Phase 1 Habitat Survey and its 2016 Local Wildlife Assessment work. All of this survey work must be undertaken. This includes a bat survey for all buildings and trees with potential to support roosting bats, a reptile survey, a hedgerow survey following modified HEGS methodology, vegetation removal at the appropriate time of the year, assessment of the trees for location, quantity, age and size and a detailed vegetation survey to determine the status of the habitat mosaic, particularly in the central part of the site. All the surveys listed are not required on every part of the site. The developer should refer to the Ecology Studies to identify which parts of the site require which type of survey. This work will also establish the SBI / BAS status of parts of the site.

9.44 The County ecologists point out that the north of the site is adjacent to, or overlaps with a Biodiversity Alert Site. With this in mind they state that design and layout should avoid impacts on this site, it should be enhanced where possible and linear habitat connectivity should be maintained.

9.45 Natural England have pointed out that a number of sites are located close to and/or adjoining existing areas of open space and green infrastructure and will need to include suitable multi-functional green infrastructure. The Council has prepared a Draft Green Infrastructure Strategy (GIS) for consultation. This site borders the Biddulph Strategic Corridor, comprising the Biddulph Valley Way. The GIS aims to protect and improve the Biddulph Valley Way as an established greenway through the settlement, to increase its use and enjoyment by people for health and recreation and to enhance its function as a wildlife corridor. Development of this area should positively contribute to this aim including the provision of pedestrian and cycling linkages from the site to the BVW and investigation of opportunities to reduce habitat fragmentation and increase connectivity by helping to create and improve wildlife corridors extending into the surrounding countryside.

9.46 Any public rights of way crossing the sites should be protected and, where possible, enhanced in conjunction with any development. It is accepted that diversions may be required. The only right of way which exists at the time of writing (apart from the Biddulph Valley Way) is along the old Wharf Road, the northern boundary of the area.

Policy DSB 1

Wharf Road Strategic Development Area

Land amounting to 23.4ha is allocated for a mix of uses comprising:

- Housing 20.4ha (approximately 588 dwellings);
- Employment 1ha;

- Retail space) 0.5ha (food store of around 1000m² net sales floor space)
- Retention of School Playing Field 1.5ha.

Development will be subject to comprehensive master planning to include:

- Provision of a landscaping plan and mitigation of heritage impact to address recommendations set out in the Council's Landscape, Local Green Space and Heritage Impact Study;
- Positioning of housing away from the immediate edge of the bypass to prevent noise and air quality issues;
- Detailed investigation work in relation to the mining legacy of the site before development can commence;
- A site specific flood risk assessment and early discussions with the Lead Local Flood Authority;
- De-culverting of the watercourse flowing beneath the site which should be renaturalised through redevelopment and undertaking a Preliminary Risk Assessment in relation to the contamination of controlled waters;
- A Transport Assessment along with suitable access design. The access point to the area on the east side of the bypass must be from Tunstall Road. An access point to land on the west side of the BVW should be created at an appropriate point. The developer is required to ensure that creation of the access point does not adversely affect any existing utilities infrastructure. The access should also facilitate the development of the wider site;
- Investigation of possible historic landfill in the north-western part of the site as well as any contamination from previous employment uses;
- Surveys and actions recommended by the Extended Phase 1 Habitat Survey and Local Wildlife Assessment and avoiding negative impacts on the nearby Biodiversity Alert site;
- Priorities and actions identified in the Council's Green Infrastructure Strategy;
- Contributions towards infrastructure, public open space, education, services, improved pedestrian and cycle linkages with the town centre and other community needs as required;

- Affordable housing in accordance with H3;
- The employment use will be determined as part of the masterplan taking into account amenity impact in relation to neighbouring land uses. The retail element of the site is intended for a food store. Any main town centre uses proposed must be subject to sequential testing.

Consistency with Core Strategy

The majority of the site (the central area) is identified in the Core Strategy as a broad location for housing in Policy SS5b.

Biddulph Mills

9.47 The redevelopment of Yarn Mill and Minster Mill provides an opportunity to create high density residential development on these underused sites in the town centre.

9.48 Both buildings have no historic interest and have had various extensions which is likely to make residential conversion difficult. It is considered that a new build scheme on both sites would be appropriate.

9.49 The Environment Agency has stated that the sites are within groundwater source protection zones so the developer should check for any restrictions associated with this prior to redevelopment of the sites.

9.50 The Highway Authority requires provision of adequate parking and a Transport Assessment / Transport Statement to compare trip generation to the potential maximum of the current planning use.

Policy DSB 2

Biddulph Mills

Land at Yarn Mill and Minster Mill amounting to about 0.38ha in total is allocated for residential development of approximately 57 dwellings. Proposals for further intensification of these sites will be considered if residential amenity for future occupants is not adversely affected.

Development will be subject to:

- A site specific flood risk assessment and early discussions with the Lead Local Flood Authority;
- Provision of adequate parking and a Transport Assessment in line with requirements of the Highway Authority;

- Contributions towards infrastructure, public open space, education, services, improved pedestrian and cycle linkages with the Biddulph Valley Way and other community needs as required;
- Affordable housing in accordance with H3.

Consistency with Core Strategy

This is a new policy following the allocation of Yarn Mill and Minster Mill for residential development. This policy clarifies the Council's expectations regarding development of the site.

Tunstall Road Strategic Development Area (opposite Victoria Business Park)

9.51 This land is on the edge of Biddulph and is proposed for removal from the Green Belt in line with the conclusion of the Council's District wide Green Belt Review and subject to demonstration of very special circumstances. These are that in order to address demand for employment and housing in Biddulph, it is considered that this site is ideally located with good road links opposite Victoria Business Park and bringing it forward will have a positive impact on the local economy.

9.52 The Council considers that this site would provide for the bulk of the town's residual employment land requirement (up to 2031), catering more for 'general' or heavy industrial uses [pursuant to Local Plan Policy E2], given its position along the A527 that links Stoke with Cheshire, and its proximity to the existing industrial areas at Victoria Business Park, Forge Way etc. However given the site is also allocated for mixed residential use (and its adjacent residential areas) it is important that development of the site achieves sufficient levels of amenity for new and existing dwellings. The Council therefore expects that this will be reflected in the masterplan.

9.53 The number of houses has been calculated based on a density of 40 dwellings per hectare to reflect residential development nearby. Actual density levels will be determined through the masterplan process once the constraints can be assessed in full detail.

9.54 The site has limited ecological value according to the Council's Ecology Studies. However, the following surveys/actions are recommended in order to establish SBI/ BAS status - hedgerow survey following modified HEGS methodology and relevant trees to be identified and further assessed for their potential to support roosting bats. Following this a bat survey may possibly be required.

9.55 The Council's Landscape, Local Green Space & Heritage Impact Study (2016) identifies that all but the south-west corner of the site has a high landscape sensitivity and therefore the developer's landscape plan must adhere to the mitigation measures set out in the policy. In order to limit potential landscape impacts the existing vegetation in the south-west of the site should be retained, and additional planting could be undertaken on the edges of, and within the development, to create a strong vegetated edge and soften the appearance of the development in long distance views. Limits on the size and scale of buildings would also soften the appearance of the development.

9.56 There are no designated heritage assets within the 400m buffer, according to the study and development would be highly unlikely to adversely affect the HLC zone BBHECZ 5 (Historic Environment Character Assessment 2010).

9.57 The Highway Authority advise that it would be preferable for the access to be achieved as part of the traffic signal controlled junction to Victoria Business Park. A Transport Assessment would also be required.

9.58 Natural England have pointed out that a number of sites are located close to and/or adjoining existing areas of open space and green infrastructure and will need to include suitable multi-functional green infrastructure. The Council has prepared a Draft Green Infrastructure Strategy (GIS) for consultation and development of this area should positively contribute to the aims set out within this document.

9.59 This area, along with many others around Biddulph, has a mining legacy. The Coal Authority has advised that new development should recognise the problems and how they can be positively addressed. They consider that mining legacy is not always a complete constraint and new development can address issues making it safe, sustainable and stable. The mining legacy of this site will not prevent development but detailed site investigation work must take place to inform site design. Land in the central part of the site and land immediately adjacent to Tunstall Road is defined as a high risk mining area. The rest of the site is low risk. According to the latest Coal Authority data, there are no mine entries on or adjacent to the site.

9.60 The Council's contamination department has advised that there is possible landfills nearby which the developer would need to investigate.

9.61 The Environment Agency advises that the developer needs to have regard to the relevant River Basin Management Plan.

9.62 Any public rights of way crossing the sites should be protected and, where possible, enhanced in conjunction with any development. It is accepted that diversions may be required. The only right of way which exists at the time of writing runs from Victoria Row along the northern boundary of the area.

Policy DSB 3

Tunstall Road Strategic Development Area (opposite Victoria Business Park)

Land amounting to around 6.74ha is allocated for mixed-use development as follows:

- Approximately 4.74ha is allocated for general employment development; and
- Land is allocated for residential development of approximately 80 dwellings.

Development will be subject to comprehensive masterplanning to include:

- Surveys and actions recommended by the Extended Phase 1 Habitat Survey and Local Wildlife Assessment being undertaken;

- Provision of a landscaping plan to address the high landscape sensitivity of most of the site, namely planting within and on the edges of the development, and limiting the sizes and scale of buildings. Landscaping should be used as a buffer between the residential and employment elements;
- A Transport Assessment;
- Inclusion of suitable multi-functional green infrastructure in line with Green Infrastructure Strategy;
- Detailed investigation work in relation to the mining legacy of the site before development can commence;
- Contributions towards infrastructure, public open space, education, services, improved pedestrian and cycle linkages with the town centre and other community needs as required;
- Affordable housing in accordance with H3;
- Details in relation to the employment and residential uses will be determined as part of the masterplan taking into account amenity impact in relation to neighbouring land uses. Any main town centre uses proposed must be subject to sequential testing.

Consistency with Core Strategy

This is a new policy following the allocation of land at Tunstall Road for employment and residential development. This policy clarifies the Council's expectations regarding development of the site.

9.3 Cheadle

Cheadle North Strategic Development Area

9.63 This is a key strategic mixed use development site in the Local Plan. It presents an opportunity to provide new housing and a new primary school to serve the northern part of the town. The southern section of the site is already located within the town development boundary and identified in the Core Strategy as a broad location for housing.

9.64 The school organisation team (SCC) has identified the need for new school places in Cheadle, in particular a new county Primary School and have confirmed that it supports the proposed location for a new school. All the current schools in Cheadle are located in the south west area of the town and the provision of a new school in the north area could help to reduce the number of car-based trips travelling through the town centre at certain times of the day and increase the number of pupils walking to school.

9.65 This area, along with others around Cheadle has a mining legacy. The Coal Authority has advised that new development should recognise the problems and how they can be positively addressed. There are former mineral workings on the site (two mine shafts present). The Coal Authority have confirmed that this would not prevent development taking place, however no development should take place directly over the mine shafts. Investigative work will take place in these areas prior to the commencement of any development.

9.66 The Council's Landscape, Local Green Space and Heritage Impact Study has recommended site-specific landscape mitigation measures which include limiting building heights in certain areas, advanced planting on some boundaries and setting development back in some other areas. There is one Grade II Listed Building within 400m however the site is not within the immediate setting of the asset. It is considered that any adverse effects could be mitigated through screening of the north-eastern boundary.

9.67 Cecilly Brook Local Nature Reserve (LNR) holds a strong isolated population of water voles. As a protected species their habitat must be maintained with no development creating direct or indirect impacts to impinge movement and expansion of the population along the riparian corridor.

9.68 The Council's Green Infrastructure Plan also recognises the importance of the natural environment of Cecilly Brook for sense of place, nature experience, health and recreation, biodiversity and flood risk management and it's key role to strengthen the population of water voles in this location. It sets out priorities and actions for the strategic corridor.

9.69 The Extended Phase 1 Habitat Survey and Local Wildlife Assessment recommend that a bat survey and a tree and hedgerow survey are undertaken and that any vegetation is removed at the appropriate time of year.

9.70 The site is located in Flood Zone 1 - low probability and therefore the sequential test required by national policy has been met. A Flood Risk Assessment will be required and early discussions with the Lead Local Flood Authority in order to mitigate any surface water flooding within the site. Land to the east, outside the site in Flood Zones 2 and 3 could be used as open space / surface water mitigation.

9.71 The Highways Authority have confirmed that two separate accesses will be needed to accommodate the number of houses proposed plus a new school. A transport assessment will be required.

Policy DSC 1

Cheadle North Strategic Development Area

Land amounting to 11.2 ha is allocated for residential development of approximately 320 dwellings, including a new County Primary School (approximately 2ha) and associated public open space.

Development will be subject to comprehensive master planning to include:

- A Transport Assessment along with suitable access design;
- Detailed investigation work in relation to the mining legacy of the site;

- Mitigation measures identified in the Council's Landscape, Local Green Space and Heritage Impact Study;
- Consideration of the growth that may impact on the Cecilly Brook Local Nature Reserve (LNR) in order to manage the impact on the Green Infrastructure Network and the LNR to ensure that Local Plan policy requirements can be met for minimising impacts on biodiversity (and providing net gains in biodiversity where possible); and establishing coherent ecological networks that are more resilient to current and future pressures; as well as enabling water quality improvements in line with the Water Framework Directive objectives;
- Surveys and actions recommended by the Extended Phase 1 Habitat Survey and Local Wildlife Assessment;
- Priorities and actions identified in the Council's Green Infrastructure Plan;
- Retention of trees protected by Tree Preservation Orders;
- A site specific flood risk assessment and early discussions with the Lead Local Flood Authority;
- Contributions towards infrastructure, public open space, education, services and other community needs as required;
- Affordable housing in accordance with H3; and
- Pedestrian connections should be made to the residential areas surrounding the site.

Consistency with Core Strategy

The southern section of the site is identified in the Core Strategy as a broad location for housing in Policy SS5c.

Cecilly Brook Strategic Development Area

9.72 This strategic area comprises two greenfield sites proposed for residential development that lie within the town development boundary and adjacent to the Cecilly Brook Local Nature Reserve.

9.73 Cecilly Brook Local Nature Reserve (LNR) holds a strong isolated population of water voles. As a protected species their habitat must be maintained with no development creating direct or indirect impacts to impinge movement and expansion of the population along the riparian corridor.

9.74 The Council's Green Infrastructure Plan also recognises the importance of the natural environment of Cecilly Brook for sense of place, nature experience, health and recreation, biodiversity and flood risk management and it's key role to strengthen the population of water voles in this location. It sets out priorities and actions for the strategic corridor.

9.75 The Extended Phase 1 Habitat Survey recommended that a buffer zone should be created between the site at Moor Lane Farm (CH002a) and the LNR. The Extended Phase 1 Habitat Surveys and Local Wildlife Assessments also recommend a number of ecological surveys are undertaken and that any vegetation is removed at the appropriate time of year.

9.76 The site is located in Flood Zone 1 - low probability and therefore the sequential test required by national policy has been met. A Flood Risk Assessment will be required and early discussions with the Lead Local Flood Authority in order to mitigate any surface water flooding within the site. Land lying outside the sites in Flood Zones 2 and 3 could be used as open space / surface water mitigation.

9.77 The Council's Landscape, Local Green Space and Heritage Impact Study considers that the sites have low landscape sensitivity due to adjacent vegetation and surrounding development but recommends some site-specific landscape mitigation measures which include planting to create a vegetated edge.

Policy DSC 2

Cecilly Brook Strategic Development Area

Land amounting to 3.1 ha is allocated for residential development of approximately 106 dwellings comprising:

- Land at Moor Lane Farm (1.7 ha) of approximately 61 dwellings; and
- Land off Churchill Road (1.4 ha) of approximately 45 dwellings

Development will be subject to compliance with other relevant Local Plan policies; and

- A master-plan that considers the growth that may impact on the Cecilly Brook Local Nature Reserve (LNR) in order to manage the impact on the Green Infrastructure Network and the LNR to ensure that Local Plan policy requirements can be met for minimising impacts on biodiversity (and providing net gains in biodiversity where possible); and establishing coherent ecological networks that are more resilient to current and future pressures; as well as enabling water quality improvements in line with the Water Framework Directive objectives;
- Surveys and actions recommended by the Extended Phase 1 Habitat Survey and Local Wildlife Assessment;
- Priorities and actions identified in the Council's Green Infrastructure Plan;
- A site specific flood risk assessment and early discussions with the Lead Local Flood Authority;
- Mitigation measures identified in the Council's Landscape, Local Green Space and Heritage Impact Study;
- Contributions towards infrastructure, public open space, education, services and other community needs as required;

- Affordable housing in accordance with H3; and
- Public rights of way need to be protected.

Consistency with Core Strategy

This is a new policy following the allocation of land for residential development. This policy clarifies the Council's expectations regarding development of the site.

Mobberley Strategic Development Area

9.78 This is a key strategic housing site in the Local Plan. It presents an opportunity to provide new housing and associated public open space in the south west of Cheadle. The majority of the land lies within the town development boundary and a small proportion of the area to the south lies within the Green Belt.

9.79 The Green Belt Review (2015) recommends that the area could be considered for release under 'exceptional circumstances'. Currently there is no direct access to the undeveloped area within the town development boundary via the existing road network. Access to the area can be achieved via land north of the veterinary practice which is currently in the Green Belt. There are considered to be exceptional circumstances to release this small section of Green Belt to be able to gain access to this area.

9.80 The Cheadle Town Centre Phase 2 Study (2017) considered the provision of a link road between the A522 Tean Road and Brookhouse Way / A521 as part of this residential scheme. The route is severed by a disused railway line which is in third party ownership and a bridge would be required to connect a link road through. The Cheadle Phase 2 Study does not consider that a link road in this location would be a solution to traffic congestion in Cheadle and as a result there is not a requirement for the developer to provide a link road and bridge as part of the development. It remains however a long-term aspiration to safeguard the route for a future link road and there will be a need to provide access to the new housing within the site. Subject to discussions with the Highways Authority, the internal road layout could potentially be designed to the so that in the long term the joining of the two access roads will not be precluded. A Transport Assessment will be required.

9.81 The site is located in Flood Zone 1 - low probability and therefore the sequential test required by national policy has been met. There is a main river floodplain located to the west of the site and evidence of some surface water flooding on the southern part of the site. The developer will need to consult with the Environment Agency and the Lead Local Flood Authority as early as possible to discuss SuDs. Land lying outside the sites in Flood Zones 2 and 3 could be used as open space / surface water mitigation.

9.82 The Council's Landscape, Local Green Space and Heritage Impact Study has recommended site-specific landscape mitigation measures which include limiting building heights in certain areas, and planting along the western edge of the site. There are two Grade II Listed Buildings within 400m of the southern section of the site, as a farm the agricultural setting is considered to contribute to the overall significance of the asset. It is considered that mitigation through screening of the southern edge of the site would reduce those effects.

9.83 The Council's Green Infrastructure Plan also recognises the importance of the natural environment of Cecilly Brook for sense of place, nature experience, health and recreation, biodiversity and flood risk management. It sets out priorities and actions for the strategic corridor.

9.84 The Extended Phase 1 Habitat Surveys and Local Wildlife Assessments also recommend a number of ecological surveys are undertaken and that any vegetation is removed at the appropriate time of year.

9.85 Land north of the veterinary practice, west of Tean Road providing the main access into the site, is in a different land ownership to the rest of the wider site. A comprehensive approach to development will require landowners to co-operate to bring the site forward.

Policy DSC 3

Mobberley Farm, Cheadle

Land amounting to 16.64 is allocated for residential development (approximately 430 dwellings) including associated public open space. The Council will resist development which would undermine a comprehensive approach to the development of the site.

Development will be subject to comprehensive master planning to include:

- A Transport Assessment along with suitable access design;
- Safeguarding of the route within the site for a potential future link road;
- Surveys and actions recommended by the Extended Phase 1 Habitat Survey and Local Wildlife Assessment;
- Priorities and actions identified in the Council's Green Infrastructure Strategic Network;
- Mitigation measures identified in the Council's Landscape, Local Green Space and Heritage Impact Study;
- Public footpaths crossing the site will need to be retained;
- Ground conditions survey;
- A site specific flood risk assessment and early discussions with the Lead Local Flood Authority;
- Contributions towards infrastructure, public open space, education, services and other community needs as required; and
- Affordable housing in accordance with H3.

Consistency with Core Strategy

This is a new policy following the allocation of land for residential development. This policy clarifies the Council's expectations regarding development of the site.

Land North of New Haden Road

9.86 Policy SS3 of the 2014 Core Strategy identified a residual employment land requirement for Cheadle (to 2026) so identified 'Broad location EM1' at New Haden/Brookhouses Industrial Estate Road, for future employment allocation (dependent on the need for further employment land provision across the town). The SS3 Policy stance is retained under Local Plan Policies SS2, SS3, SS4 and SS5 (but up to 2031). Further to the NLP study findings, the Council considers it appropriate to identify a single site for allocation for general employment purposes within Cheadle to at least meet its residual employment land requirement. The 4.27ha site was formerly allocated in the 1998 Local Plan, is adjacent to existing general industrial areas, and in proximity to main roads including the A521 and A522.

9.87 The Council's Landscape, Local Green Space and Heritage Impact Study identifies the site as medium landscape sensitivity. It recommends that development schemes incorporate site-specific landscape mitigation measures including additional advanced planting on the site boundaries and limiting building heights.

9.88 The northeast boundary of the site is bounded by the River Tean, which falls within Floodzone 2/Floodzone 3. Therefore the SCC Lead Local Flood Risk Officer advises on the need for submission of Flood Risk Assessment and need for early engagement with developers.

9.89 The Extended Phase 1 Habitat Surveys and Local Wildlife Assessments also recommend a number of ecological surveys are undertaken (including bat survey of two oak trees to establish potential SBI/BAS status) and that any vegetation is removed at the appropriate time of year.

9.90 Coal Authority advise that Staffordshire Moorlands is an area where there have been significant coal mining activities which have left a legacy. They recommend that sites are assessed to determine if there coal related hazards which require remediation and the likely impact on mineral resources. As most of the site falls within a 'Coal Authority High Risk Area' this is a requirement of the Policy.

9.91 SCC Highways/Transportation advise that vehicular access may be achieved via either New Haden Road or Brookhouse Way, subject to any necessary highways improvements; and a Transport Assessment will be required including assessment of impact on The Green/Brookhouse Way junction. Also new cycle links into the existing advisory network and footway links to existing footways should be considered.

Policy DSC 4

Land North of New Haden Road, Cheadle

Land amounting to 4.27ha is allocated for general employment purposes.

Development must:

- include mitigation measures identified in the Council's Landscape, Local Green Space and Heritage Impact Study;
- provide a site specific flood risk assessment to demonstrate how the impacts of flooding on site have been mitigated and early discussions with the Lead Local Flood Authority;
- include surveys and actions recommended by the Extended Phase 1 Habitat Survey and Local Wildlife Assessment;
- include detailed investigation work in relation to the mining legacy of the site; and
- submit a Transport Assessment and demonstrate a satisfactory vehicular access arrangement, incorporating any necessary highways improvements or financial contributions.

Consistency with Core Strategy

This is a new policy following the allocation of land for general employment development. This policy clarifies the Council's expectations regarding development of the site.

9.4 Rural Areas

Blythe Bridge

9.92 The Core Strategy (Policy SS8) supported the development of a Regional Investment Site for high quality, regional scale employment development at this location. Given that this site was intended to serve a regional need, it was considered independently of the employment land requirement for the District. The previous Core Strategy policy supported the development of the site for B1 development and B2 where appropriate.

9.93 The Local Plan proposes to take this site forward for a mixed use development with a more flexible approach to employment with the restriction to B1/B2 no longer applying. It is still recognised that the site is regionally important and may have a role to play in supporting the future Constellation Partnership regeneration initiative. As in the Core Strategy, due to the regional scale of the site, employment development will be considered separately from the employment land requirement for the District.

9.94 The is allocated for mixed which includes residential development of approximately 300 houses. This residential development should be located to the north of the site which is more close related to the village of Blythe Bridge. The site has the capacity to deliver housing outside the Green Belt in a sustainable and accessible location. Housing development on the site may also help support the delivery of the employment uses by stimulating new investment. The National Planning Policy Framework (NPPF) is clear that Green Belt boundaries should only be altered in exceptional circumstances where plans are being prepared or revised. The Housing White Paper (February 2017) reaffirms the governments

commitment to protecting and maintaining the Green Belt and states that Green Belt boundaries can only be amended when it can be demonstrated that all other reasonable options have been fully examined. The allocation of this site to include residential development is therefore considered important as it will enable the Council to meet its objectively assessed need for housing in line with the principles in the Spatial Strategy and to reduce the amount of land that will be required to be removed from the Green Belt.

9.95 A masterplan will be prepared for the site which will look at the details of the development and sustainable transport and rail and road links to and from the site to Blythe Bridge and the surrounding area.

9.96 The site is located either side of the A50 and is south of Blythe Bridge. It is enclosed by a railway line to the south west. It comprises large areas of agricultural land, and some development including residential properties. To the north of the A50 the site is semi enclosed by hedgerows and tree belts adjacent to the roads. To the south of the A50 the site is more open as screening reduces. The Landscape Local Green Space and Heritage Impact Study (2016) found the site was of medium-high landscape sensitivity to the north of the A50 and high landscape sensitivity to the south of the A50. It recommended landscape mitigation measures to include planting within and on the edges of the development and limits on buildings sizes and scale. A comprehensive landscaping plan will be required to enable the visual impact of development on the landscape to be assessed.

9.97 The south east of the site is within groundwater source protection zones 1 and 2 defined by the Environment Agency. The zones show the risk of contamination from any activities that might cause pollution in the area. Zone 1 is the area most at risk. Pollution prevention measures will therefore be required and early discussions with the Environment Agency to consider the potential effects of the development with regard to pollutants entering the groundwater. Early discussions with Staffordshire County Council as Lead Flood Authority will also be necessary as there is also a culvert on site and known flooding hotspots nearby. A Flood Risk Assessment will be required.

9.98 The site is largely improved grassland and contains a number of trees and hedgerows and a total of seven ponds. It has the potential to support wildlife and any development will need to ensure it seeks to minimise impacts on biodiversity and if possible provide improvements. The Local Wildlife Assessment (2017) found the site had biodiversity value, in particular with the single length of species rich hedgerow to the north of the site, two of the ponds and the possibility of bats/badgers using the site. An ecological survey should be submitted to provide an assessment of the wildlife on the site together with any mitigation and enhancement measures.

9.99 Consideration also needs to be given to improving connectivity with surrounding areas both in terms of wildlife corridors and sustainable transport routes to Blythe Bridge and the wider transport network. It is important that there are sustainable transport links to the employment development on the site. A cycle path crosses the southern path of the site and this should be retained to provide access to the surrounding area.

9.100 The site is close to the Blythe Bridge Opportunity Corridor identified in The Green Infrastructure Strategy. This is a corridor linking the Bromley Wood and Hose Wood SBIs in the south with Cresswell and the proposed development site through to Forsbrook, and running north along the Foxfield Steam Railway linking Little Eaves Farm SBI with important

habitats at Dilhorne Park and Godley Brook. The potential corridor has scope to create and contribute to significant GI networks for people and wildlife as part of any development at Blythe Vale. The Strategy recommends:

- extending the network of off-road paths around the site for walkers, cyclists and horse riders with links to the surrounding settlements and countryside.
- investigating opportunities for delivery connectivity to new centres of employment brought forward at the site via a network of footpaths and cycle ways.
- investigating opportunities for habitat creation within new developments including looking at establishing wildlife corridors extending into the countryside

9.101 Development will need to deliver the requirements identified in the Green Infrastructure Strategy.

Policy DSR 1

Blythe Vale

Land of approximately 48.5ha is allocated for mixed-use including employment, residential development of approximately 300 houses and supporting infrastructure. This residential development should be located to the north of the site.

Development will be subject to compliance with other relevant Local Plan policies and

- A comprehensive masterplan;
- Affordable housing in accordance with policy H3;
- A Transport Assessment;
- A Travel Plan;
- A landscaping scheme and mitigation measures identified in the Council's Landscape, Local Green Space and Heritage Impact Study;
- Details of surface water discharge;
- A site specific Flood Risk Assessment and early engagement with the the Local Lead Flood Authority;
- Ecological survey and management plan having regard to the findings of the Council's Local Wildlife Assessment 2017;
- Measures to improve sustainable transport routes and connectivity with Blythe Bridge and surrounding area having regard to the Green Infrastructure Strategy;

- Cycle path crossing the site needs to be protected and
- Contributions toward infrastructure, public open space, education services and other community needs as required.

Consistency with Core Strategy

The policy replaces policy SS8 and carries forward the designation from the Core Strategy it includes the following changes

- Restriction relating to B1 and B2 uses class employment removed
- Additional reference to the need for proposals to support the implementation of the Northern Gateway initiative
- Additional reference to support a wider mix of uses including housing
- Clarification of the Council's expectations regarding development of this site.

Leekbrook

Land east of Brooklands Way, Leekbrook

9.102 Leekbrook is identified as a 'smaller village' in the Local Plan, which given its scale and previous residential commitments it is not considered necessary to make an allocation for residential purposes. The village is closely related to the town of Leek however (falling within the same Ward), and it is considered that locations across the village can contribute towards the future employment land requirements for Leek.

9.103 Policy SS3 of the 2014 Core Strategy identified a residual employment land requirement for Leek (to 2026) so identified 'Broad location EM2' east of Brooklands Way Leekbrook, for future employment allocation (dependent on the need for further employment land provision across the town). The SS3 Policy stance is retained under Local Plan Policies SS2, SS3, SS4 and SS5 (but up to 2031). Further to the NLP study findings, the Council considers it appropriate to identify additional employment land for Leek across a range of locations, with good access to main roads such as the A520, to provide choice in locations around the town, to at least meet its residual employment land requirement.

9.104 The Council's Landscape, Local Green Space and Heritage Impact Study identifies a Listed building a short distance to the south and advises that despite intervening screening, development of the site would adversely affect its setting. It therefore recommends the site is only suitable for development in heritage terms, subject to suitable masterplanning and appropriate mitigation.

9.105 The north of the site is bounded by the Leek brook, which falls within Floodzone 2/Floodzone 3. Therefore the Environment Agency and SCC Lead Local Flood Risk Officer advise on the need for submission of Flood Risk Assessment and need for early engagement with developers.

9.106 SCC Highways/Transportation advise that junction assessments at A520/Basford Lane/Brooklands Way will be required, and possible improvements to sustainable transport links.

9.107 The wider site extends to over 8ha including wooded elements to the south, and sloping pasture to the north as far as the Leek brook; however virtually all the site (aside from SW access areas) lies within a designated Site of Biological Importance (SBI) "Twinney Wood and grassland". A 2016 outline application for major B2 and B8 development across the site covered only 5.42ha of this, excluding southern wooded areas (but still lying within the SBI, and containing TPOs). This has been the subject of a resolution to approve by the Council, on the basis of its contribution to meeting the residual (NLP) employment land requirements for the Leek area; given its previous identification as a 'broad location' for employment; and given that the scheme demonstrated ecological compensation and management measures; and other landscape, flood risk, and heritage impact mitigation measures. Therefore the Policy below sets out the allocation of this site; and general expectations concerning mitigatory measures.

Policy DSR 2

Land east of Brooklands Way, Leekbrook

Land amounting to 5.42ha is allocated for employment uses.

Development must:

- Provide a site specific flood risk assessment to demonstrate how the impacts of flooding on site have been mitigated and early discussions with the Lead Local Flood Authority;
- Take account of the Council's ecological evidence regarding the Twinney Wood and Grassland SBI and demonstrate appropriate ecological impact mitigatory/compensatory measures
- Demonstrate how heritage impacts have been mitigated, for example through submission of a masterplan of the site
- make appropriate contributions towards infrastructure including highways improvements.

Consistency with Core Strategy

This is a new Policy following the allocation of land east of Brooklands Way for general employment uses. The Policy clarifies the Council's expectations regarding development of this site, including expected ecological mitigation measures for impacts on the existing SBI.

Land west of Basford Lane, Leekbrook

9.108 It is considered that a further site in Leekbrook could contribute to Leek's remaining employment land requirement up to 2031. Land is available for employment purposes rear of the Docksey haulage company, west of Basford Lane, Leekbrook. Whilst the gross area extends to around 1.67ha, approximately 0.8ha of this is considered deliverable given topography issues. Given access difficulties from this lane, It is anticipated that access must be served through this business via the A520 main road, however. Staffordshire Council Highways have indicated they are satisfied with this arrangement.

9.109 The Council's Landscape, Local Green Space and Heritage Impact Study indicates as the site slopes up to the south it becomes increasingly visually prominent to the west despite existing woodland screening. Overall the evidence concludes that the site is of medium landscape sensitivity therefore recommends that future development be limited to the lower ground only and building heights limited in the west.

9.110 Areas of wooded and open land to the immediate west and south are designated as both a County-level Site of Biological Importance (SBI) and a woodland TPO. The Council commissioned a Phase I Study of the site incorporating 'Local Wildlife Site' assessment in 2016. This concluded that the hedgerow habitat on site was considered of nature conservation value at the local level however it may qualify as an SBI or a BAS (biodiversity alert site) dependent on further survey against Staffordshire SBI guidelines. The improved grassland habitat was considered of nature conservation value at the site level only. However, badgers and bats may use the site and further surveys for these should be undertaken prior to any future development (including tree surveys for roosts). Riparian mammals and white-clawed crayfish should also be surveyed for if Leek brook, close to the north-eastern corner of the site, is likely to be disturbed.

9.111 The SCC Lead Local Flood Risk Officer advises that the site is steep, adjacent to a flow path, and may need 3rd party land to discharge surface water. Therefore submission of a Flood Risk Assessment will be required.

9.112 SCC Highways/Transportation advise that junction assessments at A520/Basford Lane/Brooklands Way will be required, and possible improvements to sustainable transport links.

Policy DSR 3

Land west of Basford Lane, Leekbrook

Land amounting to approximately 0.8ha is allocated for general employment uses.

Development must:

- demonstrate a suitable vehicular access arrangement that allows for adequate access by industrial traffic, direct onto the A520 (through Dockseys existing access);

- provide appropriate contributions towards infrastructure including highways improvements;
- be limited to the lower parts of the site where possible and building heights limited to the west. The Council expects provision of a design layout that demonstrates how landscape/visual impacts have been minimised;
- take account of the Council's ecological evidence for the site and where harm to ecological interests would arise, demonstrate appropriate ecological impact mitigatory/compensatory measures.

Consistency with Core Strategy

This is a new Policy following the allocation of land west of Basford Lane for general employment uses. The Policy clarifies the Council's expectations regarding development of this site, including how design layout should respond to the topography of the site and demonstrate a A520 access point through Dockseys premises; and expected ecological mitigation measures.

Werrington

9.113 Werrington is defined as a larger village in the settlement hierarchy, it has a range of facilities and services. It is located to the south of the District in a sustainable location. Two sites are allocated for residential development both are located to the southern edge of the settlement off Ash Bank Road and are separated by the HM Young Offenders Institute.

WE003 Land adjacent to Stonehouse Farm Ash Bank Road

9.114 The larger site (WE003) of some 2.9ha comprises three fields . It is enclosed on all sides by existing development (including HM Young Offenders Institute to the east) apart from the southern edge which is open. The site slopes down from the road with some vegetation on the southern boundary. It is open to long distance views from Ash Bank Road. It forms a gap in the existing development along the A52.

9.115 The Landscape Local Green Space and Heritage Impact Study (2016) recognised the site would have some landscape impact and found it was of medium landscape sensitivity. It considered that the development would be viewed in the context of the surrounding development but landscape mitigation measures to include planting on the southern and south eastern boundaries would reduce the site's visual prominence. The Green Belt Review (2015) considered that the site was suitable for release from the Green Belt as the overall impact of development on the purposes of the Green Belt would be moderate but recommended development should ensure that the top third of the site should maintain the gap in existing development on the A52 and open space should be retained in this location. The proposed housing density for the site is relatively low due to these issues.

9.116 Access to the site should be from the eastern length of the frontage with Ash Bank Road. The Highway Authority advise access from the west frontage would not be supported and any access would need to be provided adequate visibility splays and ensure it did not form a crossroads with Oakmount Road. A traffic assessment will be required to look at the effect of traffic from the development on Ash Bank Road.

9.117 A site specific flood risk assessment has been requested by Staffordshire County Council Lead Local Flood Authority.

WE0052 land to the north of HM Young Offenders Institute Ash Bank Road

9.118 The smaller site is 0.9ha in size and is allocated for approximately 25 houses. The site is a single field enclosed with a hedgerow on the eastern boundary and existing development on the other sides including the HM Young Offenders Institute to the south. It forms a gap in the development along the A52. The Landscape Local Green Space and Heritage Impact Study (2016) found the site had low landscape sensitivity and the Green Belt review (2015) found the impact of development on the site to the purposes of the Green Belt were limited.

9.119 Access to the site will need to consider the impact on the bus stop on Ash Bank Road and ensure adequate visibility splays are provided.

9.120 Both sites are grassland with some trees. There are hedgerows on the smaller site. The Phase 1 Habitat Study (2015) and the Local Wildlife Assessment (2017) considered the trees on the site had potential to support bats and recommended a bat survey to establish if bats roost in the trees. A bat survey will therefore be necessary to show whether bats are present and how they use the site. If bats are found a mitigation plan will need to demonstrate how any negative impacts of the development on the bats will be avoided, reduced or managed.

9.121 The sites are adjacent to the HM Young Offenders Institute and there is potential for noise disturbance. A noise impact assessment will therefore be required to determine the impact of noise and identify appropriate mitigation measures.

Policy DSR 4

Land off Ash Bank Road Werrington

Land comprising two sites is allocated for residential development. WE003 amounts to 2.9ha and is allocated for approximately 50 dwellings and WE0052 amounts to 0.9ha and is allocated for approximately 25 dwellings.

Development will be subject to compliance with other relevant Local Plan policies and

- A landscaping scheme and mitigation measures identified in the Council's Landscape, Local Green Space and Heritage Impact Study;
- The development shall maintain the gap on the top part of the site WE003 fronting Ash Bank Road by retaining open space on this part of the site;

- A Noise impact assessment to consider the impact of the HM Young Offenders Institute. Where appropriate the assessment shall provide details of measures to mitigate the impact of noise on residential development;
- Adequate visibility splays and access shall be provided in line with the requirements of the Highway Authority;
- A traffic assessment to consider the effect of traffic from the development on Ash Bank Road;
- Ecological survey and management plan having regard to the findings of the Extended Phase 1 Habitat Survey and the Local Wildlife Assessment 2017;
- A site specific Flood Risk Assessment;
- Affordable housing in accordance with policy H3; and
- Contributions toward infrastructure, public open space, education services and other community needs as required.

Consistency with the Core Strategy

This is a new Policy following the allocation of land at Ashbank Road for residential development. The Policy clarifies the Council's expectations regarding development of this site.

Implementation and Monitoring

10 Implementation and Monitoring

Delivering and Monitoring the Local Plan

10.1 The Local Plan is required to set out how much development is intended to happen, where and when and by what means it will be delivered. To enable this to happen, the plan should be:

- Capable of being delivered
- Based on a partnership approach that helps to implement the aims and objectives of partner organisations that benefit Staffordshire Moorlands
- Flexible to reflect to changing circumstances, and have appropriate contingency measures in place
- Easy to monitor to determine how well the strategy is performing against indicators and targets

10.2 The following sections outline how each of the policies of the Local Plan will be implemented, how they will be monitored and how the necessary infrastructure needed to support planned development will be delivered.

Implementation and Delivery of Policies

10.3 It is important that the policies in the Local Plan are necessary and capable of being implemented, with clear mechanisms for doing so. The table below outlines how each of the policies will be implemented, what their outcomes will be, how the policy will be implemented and which organisations will be responsible or involved in doing so.

Policy	Principal outcomes	Implementation mechanism	Delivery body
Policy SS 1 Development Principles	Ensuring that all local communities are sustainable and that appropriate development is supported	Determination of planning applications Working with partners to implement relevant plans and strategies	SMDC Developers Partner organisations
Policy1a Presumption in Favour of Development	Ensuring that all local communities are sustainable and that appropriate development is supported	Determination of planning applications Working with partners to implement relevant plans and strategies	SMDC Developers Partner organisations
Policy SS 2 Settlement Hierarchy	Guides the distribution of of development to the most appropriate location	Allocation of sites in the Local Plan Determination of planning applications	SMDC Developers

Policy	Principal outcomes	Implementation mechanism	Delivery body
Policy SS 3 Future Provision and Distribution of Development	<p>To meet the development needs of the District as far as possible within the limits of local landscape, infrastructure and environmental constraints</p> <p>Guides the distribution of development to the most appropriate location</p> <p>To support the preparation Neighbourhood Plans</p>	<p>Allocation of sites in the Local Plan</p> <p>Determination of planning applications</p> <p>Working with Parish/Town Councils</p> <p>Monitoring the delivery of development through the Annual Monitoring Report</p>	<p>SMDC</p> <p>Developers</p> <p>Parish/Town Councils</p>
Policy SS 4 Strategic Housing and Employment Land Supply	<p>Guides the distribution of development to the most appropriate location</p>	<p>Allocation of sites in the Local Plan</p> <p>Determination of planning applications</p>	<p>SMDC</p> <p>Developers</p> <p>Parish/Town Councils</p>
Policy SS 5 Leek Area Strategy	<p>Enable the sustainable development of Leek and consolidate its role as a principal service centre and market town</p> <p>Protect and enhance the special character and heritage of Leek</p> <p>Support the delivery of complementary regeneration and infrastructure projects</p>	<p>Allocation of sites in the Local Plan</p> <p>Determination of planning applications</p> <p>Working with partners to delivery regeneration projects</p> <p>S106 and conditions</p>	<p>SMDC</p> <p>Developers</p> <p>Partner organisations</p>
Policy SS 6 Biddulph Area Strategy	<p>Enable the sustainable development of Biddulph and enhance its role as a principal service centre and market town</p> <p>Protect and enhance the special character and heritage of Biddulph</p>	<p>Allocation of sites in the Local Plan</p> <p>Determination of planning applications</p> <p>Working with partners to delivery regeneration projects</p> <p>S106 and conditions</p>	<p>SMDC</p> <p>Developers</p> <p>Partner organisations</p>

Policy	Principal outcomes	Implementation mechanism	Delivery body
	Support the delivery of complementary regeneration and infrastructure projects		
Policy SS 7 Cheadle Area Strategy	<p>Enable the sustainable development of Cheadle and expand it's role as a principal service centre and market town</p> <p>Protect and enhance the special character and heritage of Cheadle</p> <p>Support the delivery of complementary regeneration and infrastructure projects</p>	<p>Allocation of sites in the Local Plan</p> <p>Determination of planning applications</p> <p>Working with partners to delivery regeneration projects</p> <p>S106 and conditions</p>	<p>SMDC</p> <p>Developers</p> <p>Partner organisations</p>
Policy SS 8 Larger Villages Area Strategy	<p>Enable the sustainable development of the larger villages and maintain their role as rural service centres</p> <p>Protect the larger villages heritage and special character</p>	<p>Allocation of sites in the Local Plan</p> <p>Determination of planning applications</p> <p>S106 and conditions</p>	<p>SMDC</p> <p>Developers</p> <p>Partner organisations</p>
Policy SS 9 Smaller Villages Area Strategy	<p>Enable the sustainable development of the smaller villages</p> <p>Protect the smaller villages heritage and special character</p>	<p>Determination of planning applications</p> <p>S106 and conditions</p>	<p>SMDC</p> <p>Developers</p>
Policy SS 10 Other Rural Areas Strategy	Maintain the openness of the countryside and Green Belt	<p>Determination of planning applications</p> <p>S106 and conditions</p>	<p>SMDC</p> <p>Developers</p>
Policy SS 11 Churnet Valley Strategy	Enhance and promote the Churnet Valley for sustainable tourism and rural regeneration	Implementation of the Churnet Valley	<p>SMDC</p> <p>Developers</p>

Policy	Principal outcomes	Implementation mechanism	Delivery body
Policy SS 12 Planning Obligations and Community Infrastructure Levy	Provision of infrastructure or funding by developers to support individual sites and the cumulative impacts of development	Determination of planning applications S106 and conditions Community Infrastructure Levy (subject to further consideration)	SMDC Developers
Policy SD 1 Sustainable Use of Resources	To reduce the impact of development on the environment through sustainable design and construction Efficient use of resources	Determination of planning applications S106 and conditions	SMDC Developers
Policy SD 2 Renewable/Low Carbon Energy	Increased energy from renewable resources Protect landscape character	Determination of planning applications S106 and conditions	SMDC Developers
Policy SD 3 Sustainability Measures in Development	To reduce the impact of development on the environment through sustainable design and construction Efficient use of resources	Determination of planning applications S106 and conditions	SMDC Developers
Policy SD 4 Pollution	Development located away from sensitive areas as far as possible Pollution mitigation measures to reduce potential adverse effects	Determination of planning applications S106 and conditions	SMDC Developers
Policy SD 5 Flood Risk	Mitigate the impact of flood risk	Determination of planning applications S106 and conditions	SMDC Developers

Policy	Principal outcomes	Implementation mechanism	Delivery body
	Development located outside areas of flood risk as far as possible		Environment Agency
Policy E 1 New Employment Development	New employment development in sustainable locations	Determination of planning applications	SMDC Developers
Policy E 2 Employment Allocations	Deliver additional land for employment development Mitigation of impact of development	Determination of planning applications S106 and conditions	SMDC Developers
Policy E 3 Existing Employment Areas	Protection of land for employment use to maintain sufficient supply	Designation of sites in Local Plan Determination of planning applications S106 and conditions Public sector investment where appropriate	SMDC Developers Partners
Policy E 4 Tourism and Cultural Development	New tourist development in sustainable locations Increased visitor numbers and spend Protection of landscape	Determination of planning applications S106 and conditions Implementation of Churnet Valley Masterplan Implementation of the Green Infrastructure Strategy	SMDC Developers Partners
Policy H 1 New Housing Development	Sufficient supply of land to meet housing needs New housing in sustainable locations	Allocation of sites in the Local Plan Determination of planning applications	SMDC Developers

Policy	Principal outcomes	Implementation mechanism	Delivery body
	<p>Provide a range of market and affordable housing</p> <p>Provide a range of house types including self build</p>	S106 and conditions	
Policy H 2 Housing Allocations	<p>Sufficient supply of land to meet housing needs</p> <p>New housing in sustainable locations</p>	<p>Allocation of sites in the Local Plan</p> <p>Determination of planning applications</p>	<p>SMDC</p> <p>Developers</p>
Policy H 3 Affordable Housing	<p>Supply of affordable housing that considers both need and viability</p> <p>Provision of affordable housing tenures that relates to needs</p>	<p>Allocation of sites in the Local Plan</p> <p>Determination of planning applications</p> <p>Appraisals of individual developments where viability may require adjustment to the level of affordable</p>	<p>SMDC</p> <p>Developers</p> <p>Registered Social Landlords</p>
Policy H 4 Gypsy and Traveller Sites Development in the Travelling Shires	<p>Meet the need identified gypsy and traveller sites</p> <p>Protect and enhance the viability of town centres</p> <p>Accessible retail and town centre development that accords with local design guidance</p> <p>Protect the character of town centres</p>	<p>Determination of planning applications</p> <p>Designation of land in the Local Plan</p> <p>Determination of planning applications</p> <p>S106 agreements and conditions</p>	<p>SMDC</p> <p>Developers</p> <p>SMDC</p> <p>Developers</p>
Policy TCR 2 Primary Shopping Frontages	Retention of A1 frontages within areas designated in the town centres	Designation of land in the Local Plan	<p>SMDC</p> <p>Developers</p>

Policy	Principal outcomes	Implementation mechanism	Delivery body
	Other town centre uses outside defined Primary Shopping Frontages which	Determination of planning applications	
Policy TCR 3 Retailing and other Town Centre uses outside Town Centres	Protect and enhance vitality and viability of town centres	Determination of planning applications S106 and conditions Sequential Assessment of development	SMDC Developers
Policy DC 1 Design Considerations	Enhances and protects the special and the character and distinctiveness of local areas Increased use of sustainable design and construction methods Provides inclusive design Developments accessible and integrated with a range of transport methods	Determination of planning applications S106 and conditions Implementation of the Green Infrastructure Strategy	SMDC Developers
Policy DC 2 The Historic Environment	Enhances and protects heritage assets and the historic character of the area	Determination of planning applications S106 and conditions	SMDC Developers
Policy DC 3 Landscape and Settlement Setting	Enhance and protect the distinctive character of the local landscape and settlements	Designation of land in Local Plan Determination of planning applications S106 and conditions	SMDC Developers

Policy	Principal outcomes	Implementation mechanism	Delivery body
Policy DC 4 Local Green Space	Protection of Local Green Spaces	Designation of land in Local Plan Determination of planning applications S106 and conditions	SMDC Developers
Policy C 1 Creating Sustainable Communities	Protect and enhance community facilities	Designation of land in Local Plan Determination of planning Applications S106 and conditions Community Infrastructure Levy (subject to further consideration)	SMDC Developers Infrastructure providers
Policy C 2 Sport, recreation and Open Space	Protect and enhance the quality, quantity and accessibility of open space and recreation provision	Designation of land in the Local Plan Determination of planning Applications S106 and conditions Community Infrastructure Levy (subject to further consideration) Implementation of the Green Infrastructure Strategy Working with partners	SMDC Developers Partners
Policy C 3 Green Infrastructure	Improve and enhance the Green Infrastructure of the District.	Designation of land in the Local Plan	SMDC Developers

Policy	Principal outcomes	Implementation mechanism	Delivery body
	Develop a multi functional integrated green infrastructure that has both biodiversity and recreational benefits	Determination of planning Applications S106 and conditions Community Infrastructure Levy (subject to further consideration) Implementation of the Green Infrastructure Strategy Working with partners	Partners
Policy NE 1 Biodiversity and Geological Resources	Enhance and protect designated and non designated sites of biodiversity importance	Designation of land in the Local Plan Determination of planning Applications S106 and conditions Implementation of the Green Infrastructure Strategy Working with partners	SMDC Developers Partners
Policy NE2 Trees, Woodlands and Hedgerows	Increased incorporation of existing mature trees within new development Protection of trees, hedgerows and woodland Improved tree planting and mitigation as part of new development	Determination of planning Applications S106 and conditions	SMDC Developers
Policy T 1 Development	New development in sustainable locations	Determination of Planning	SMDC

Policy	Principal outcomes	Implementation mechanism	Delivery body
and Sustainable Transport	<p>Provision of new sustainable transport measures to increase accessibility</p> <p>Measures to promote safer road conditions</p> <p>Identification of impacts of development on highways and transport and necessary mitigation measures</p>	<p>Applications</p> <p>S106 and conditions</p> <p>Travel Plans</p> <p>Community Infrastructure Levy (subject to further consideration)</p>	<p>Developers</p> <p>Partners</p>

Table 10.1 Implementation of Local Plan policies

Monitoring the Local Plan

10.4 It is important that the Local Plan is monitored to identify the need for any reviews to policies or the strategy overall. By identifying appropriate indicators and targets, the effectiveness of policies and implementation measures can be monitored. The results of such monitoring will then identify which policies and implementation measures are succeeding, and which need revising or replacing because they are not achieving the intended effect.

10.5 In accordance with the Localism Act 2011 and the Town and Country Planning (Local Planning) (England) Regulations 2012, the Council is required to prepare and publish a monitoring report with up-to-date information annually. Information should be made available on a number of matters, including;

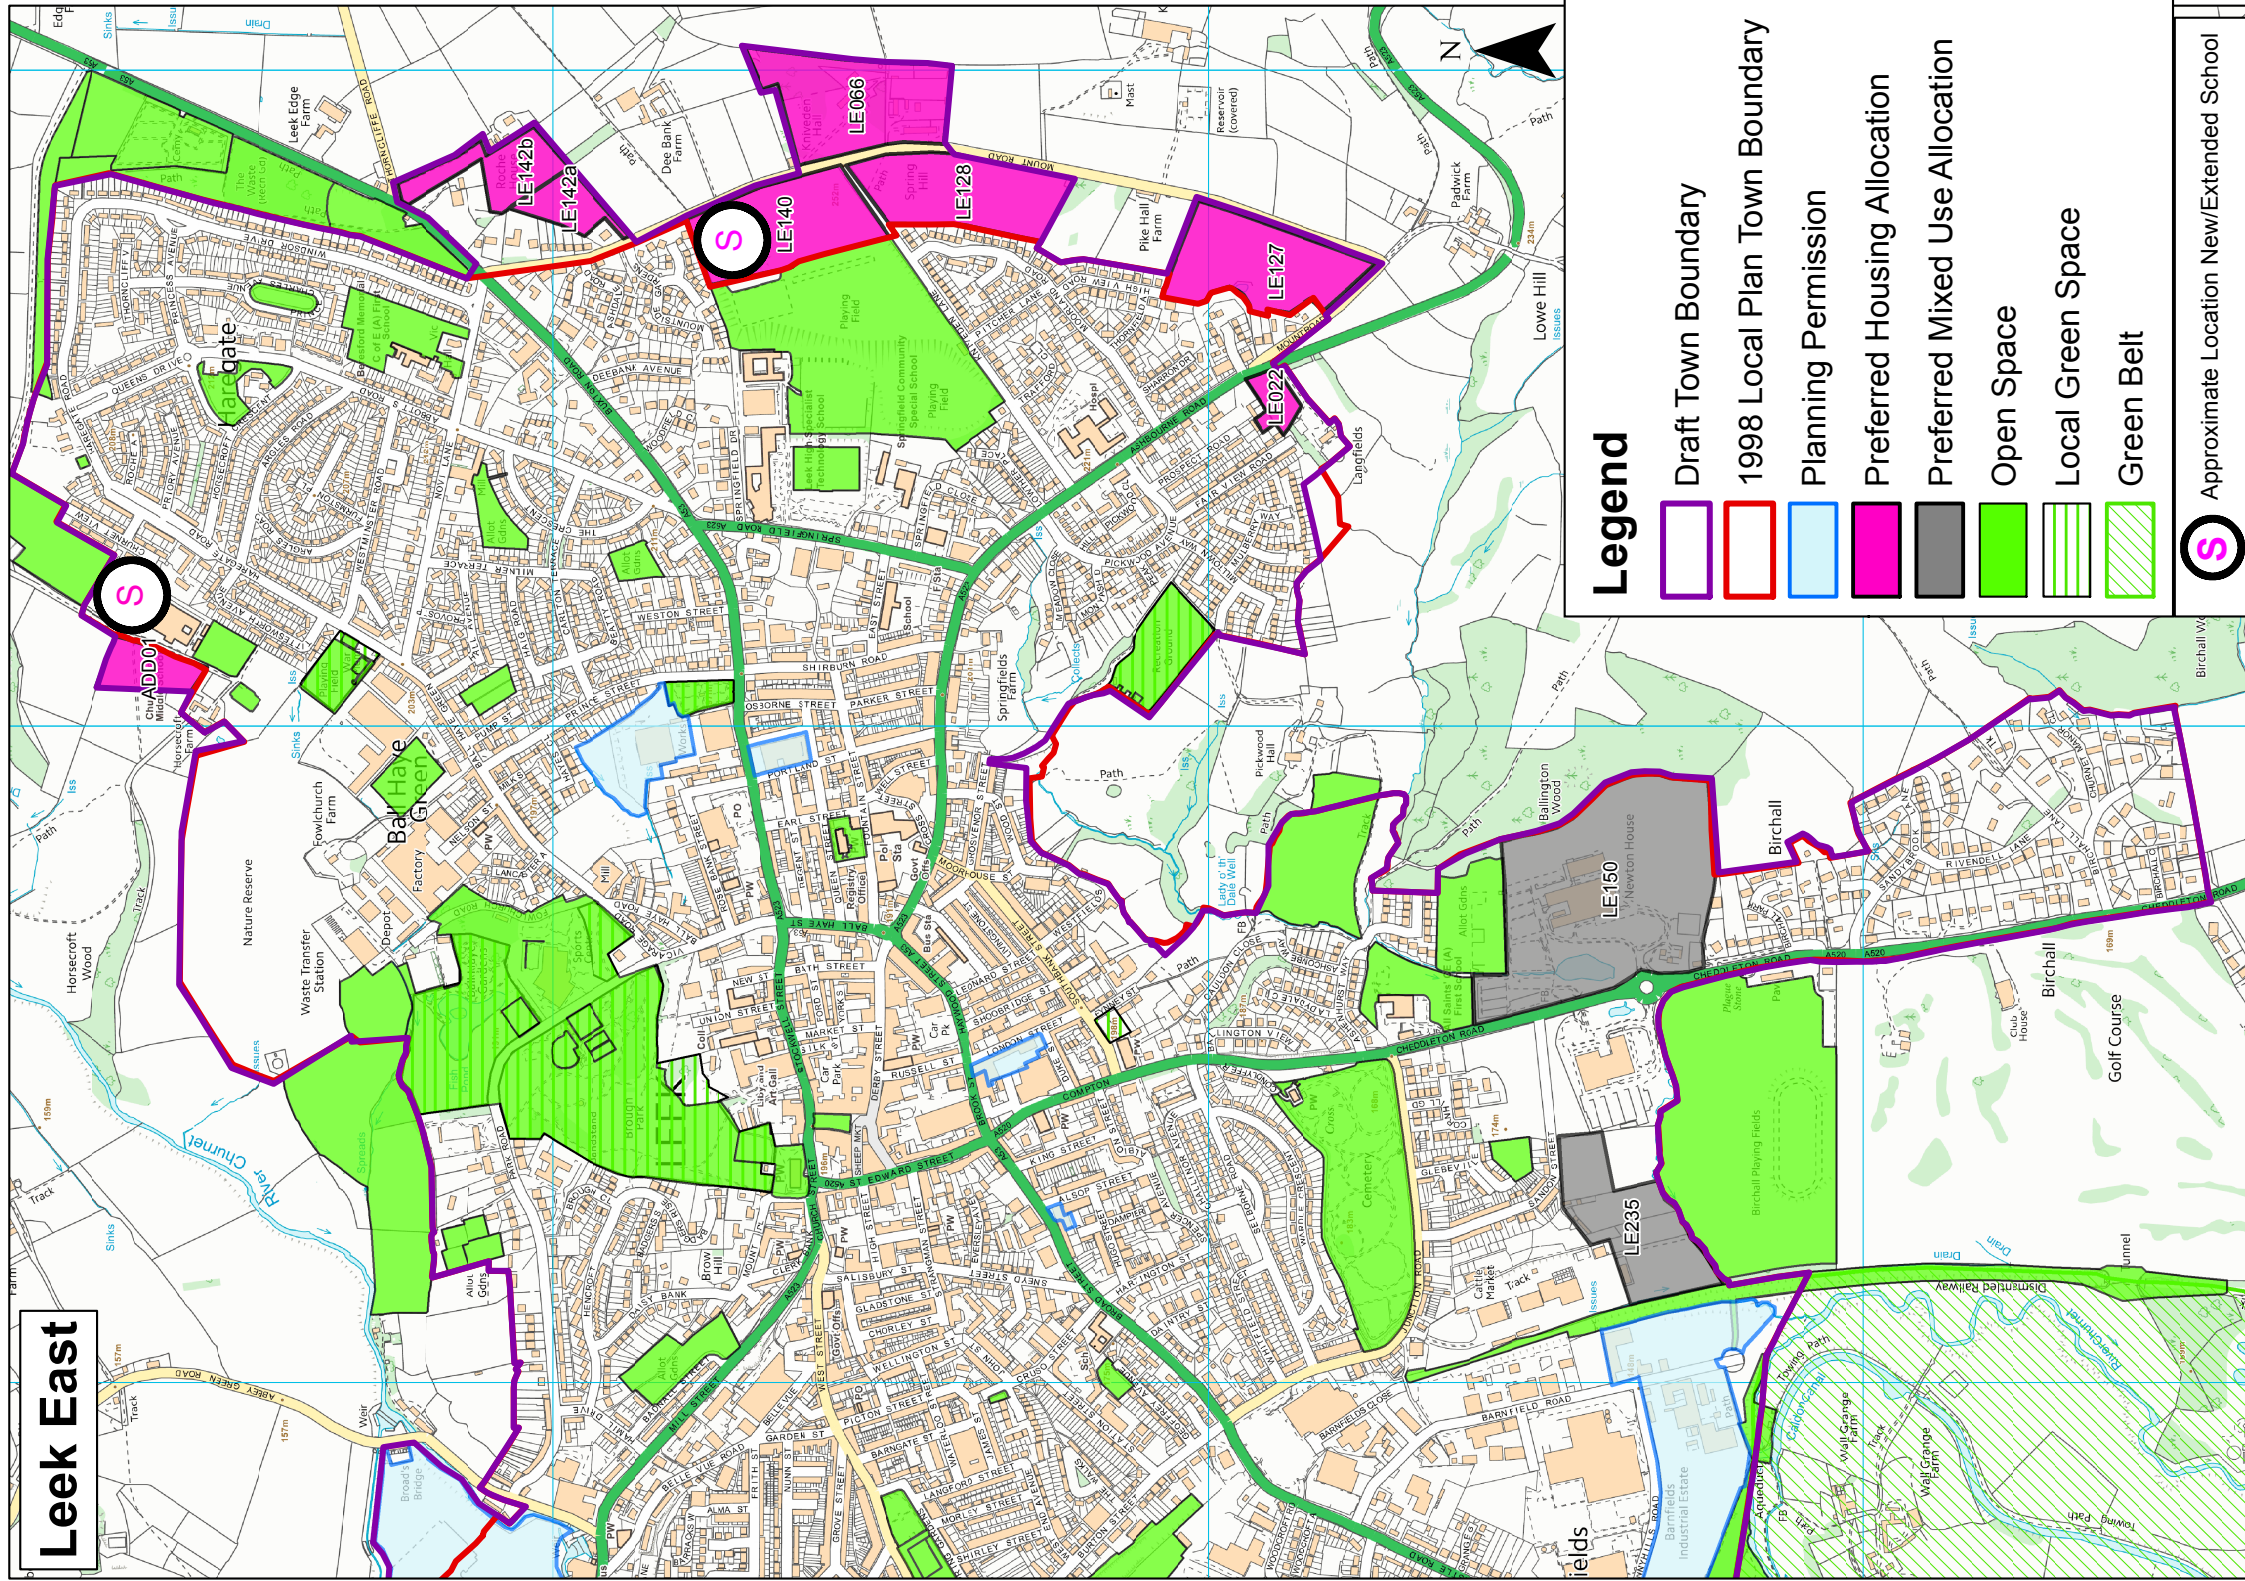

- Local Development Scheme - timetable and progress report on the Local Plan and any
- Supplementary Planning Documents
- Implementation of Local Plan policies
- Neighbourhood Plans and Neighbourhood Development Orders
- Community Infrastructure Levy (if adopted) - details of receipts and expenditure during the
- Monitoring period
- Duty to Cooperate - details of cooperation with neighbouring authorities, Staffordshire County Council and other key public bodies during the monitoring period
- Housing - completions and commitments, including for affordable housing
- The Self Build Register

10.6 In addition, issues such as the economy, town centres and the environment should also be monitored in order to determine the effectiveness of relevant policies. The following table sets out the indicators that will be used to monitor all of the policies contained within the Local Plan in the Council's monitoring report. The table identifies relevant indicators and targets for each policy of the Local Plan and their related Local Plan objectives. Sources of data for each indicator are also identified.

Appendix 8 - Parking Guidance

Appendix 8 - Parking Guidance

Staffordshire Moorlands District Council Parking Guidance

.1 The Government issued a ministerial statement in 2015 that stated arbitrary parking standards that restrict off-street parking (such as maximum standards), should not be applied when assessing planning proposals, without compelling justification. However Councils can continue to issue guidance to assist in decision-making. Therefore the Council has, after consultation with SCC Highways, adopted the following guidance to accompany this Local Plan which suggests 'minimum' provision of spaces, depending on use class. These will be applied to development proposals, in addition to consultation with SCC Highways officer, on a case by case basis:

Use Class	Parking Guidance
Class A1 - Shops	<ul style="list-style-type: none"> i. In town centres where public car parking is normally available and is sufficient to meet current and expected demand from the proposed development, there will be no requirement for additional provision subject to no loss of existing facilities. On edge of centres or elsewhere, 1 space per 20 m² gross floor area up to 1000m² and 1 space per 14m² thereafter. ii. Food Retail Units - 1 space per 14m² of gross floor area. iii. Retail Warehousing - 1 space per 20m² of gross floor area, plus 1 per 100m² for staff parking. Where retail warehouses include garden centres / DIY, a higher guidance of 1 space per 15m² of gross floor area will be required for customer parking.
Car/ Other Vehicle Showrooms and Related Services	<ul style="list-style-type: none"> i. Car Sales: The staff parking requirement will be as for Class B1 (offices). Customer parking should be provided at a rate of 1 space per 40 square metres of gross sales floor area, plus 1 space per 10 outside display places. Ancillary Workshop/Storage Areas and Parts Departments - 3 car / lorry spaces as appropriate per service bay, plus 1 space per 50 square metres for staff and other customer parking. ii. General Vehicle Repair and Servicing Garages - 3 car / lorry spaces as appropriate per service bay plus 1 space per 50 square metres for staff. iii. Car washing facilities - 5 queuing spaces. iv. Specialist Vehicle Repair Centres (i.e. tyres, exhausts etc) - 3 car / lorry spaces as appropriate per service bay, plus 1 space per 40 square metres for staff parking. <p>Where retail sales are also present at a facility, the appropriate Class A1 guidance will normally be required. Spaces will also be required for articulated vehicles and deliveries.</p>

Use Class	Parking Guidance
Class A2 - Financial and professional services	(i) Banks, building societies, estate agents and other agencies, betting shops - 1 car space per 30 sqm
Class A3 - Restaurants and Cafes	In town centres where public car parking is normally available and is sufficient to meet current and expected demand from the proposed development there will be no requirement for additional provision subject to no loss of existing facilities. 1 garage or parking space will be required for each resident staff in any location. Otherwise the following guidance will apply; 1 space for 2 staff employed at peak operating times, plus 1 space per 5m ² or 4 seats in dining/bar areas.
Hot Food Takeaway	2 spaces, plus 1 space per 5m ² of public floor space for customers. This guidance may be relaxed or waived where public parking is readily available nearby.
Transport Cafes	1 space per 3 staff employed at peak working times, plus 1 lorry space per 3m ² of public floor space.
Class B1 – 1. Offices 2. Research and Development and Light Industry	1. 1 space per 25m ² gross floor area up to 250m ² , then 1 space per 30 square metres thereafter 2. 1 space per 35m ² up to 235m ² gross floor space; 1 space per 60m ² thereafter.
Class B2 - Industry	1 space per 25 m ² gross floor space up to 250m ² then 1 space per 50 m ² thereafter. In cases where ancillary office space does not exceed 100m ² , no additional provision is necessary, thereafter 1 space per 25m ² will be required.
Class B8 - Storage and Distribution	1 space per 80m ² of gross floor area in the case of large scale storage and distribution facilities.
Class C1 - Hotels and Hostels	1 garage or parking space per resident staff, plus 1 space per 3 non-resident staff at peak working times plus 1 space per bedroom. If other facilities such as bars, restaurants, shops, health clubs are open to non-residents the relevant guidance for those uses will also be relevant. Where a developer considers it is not necessary to achieve 100% for the other uses, this must be supported by a clear justification.

Use Class	Parking Guidance
<p>Class C2 - Residential Institutions</p> <ol style="list-style-type: none"> 1. Residential Care Establishments 2. Hospitals 3. Nursing Homes 4. Residential Schools (Pupils up to 18 years) 5. University, Residential Colleges and Training Centres (Students 16 years plus). 	<ol style="list-style-type: none"> 1. 1 garage or parking space per resident staff, plus 1 space per non-resident staff present at peak working times, plus 1 space per 3 bed spaces for visitors. An ambulance space should also be provided in a position which would not impede site access but located as close as possible to the main entrance of the establishment 2. 1 garage or parking space per resident staff, plus 1 space per Doctor, Surgeon or Consultant, plus 1 space per 3 other staff, plus 1 space per 3 beds for visitors. Additional spaces may be required if an out patients or casualty department exists at the hospital 3. 1 space per resident staff, plus 1 space per non-resident staff present at peak working times, plus 1 space per 3 bed spaces for visitors. An ambulance space should also be provided in a position which would not impede site access but located as close as possible to the main entrance of the establishment 4. 1 garage or parking space per resident member of staff, plus 1 per 2 non-resident, plus 1 per 20 pupils for parents/visitors 5. 1 garage or parking space per resident staff, plus 1 space per non-resident staff, plus 1 space per 4 students, plus 1 space per 100 students for visitors.
<p>Class C3 Residential Dwellings</p> <ol style="list-style-type: none"> 1. Detached or semi-detached 2. Forms other than Detached / Semi-Detached 3. Sheltered Housing / Elderly Persons Housing 4. Residential Conversions, including Flats 5. Houses in Multiple Occupation 	<p>The number of car parking spaces required for each residential type is set out below. It is also important to locate spaces as near as possible to dwellings, and to avoid large and unattractive areas of open parking to screen car parking with landscape or structures as far as possible.</p> <p>(a) up to 3 bedrooms - 2 spaces (2.4 x 4.8m) for residents and visitors within curtilage of dwelling;</p> <p>(b) 4 or more bedrooms - 3 spaces (2.4 x 4.8m) for residents and visitors within the curtilage of the dwelling. An extension of a smaller dwelling to 4 or more bedrooms would normally be expected to meet this guidance.</p> <p>(a) up to 2 bedrooms - 1 space per dwelling plus 1 space per 4 dwellings for visitors. Spaces should be provided within curtilage of dwelling if possible, otherwise communally within curtilage of the development, and wherever possible within sight of dwelling and / or within 45 metres thereof;</p> <p>(b) 3 or more bedrooms - 2 spaces per dwelling plus 1 per 4 for visitors. Spaces should be provided within the curtilage of the dwelling if possible, otherwise communally within the curtilage of the development, and wherever possible within sight of the dwelling and/or within 45 metres thereof.</p>

Use Class	Parking Guidance
	<p>1 space per 4 dwellings, plus 2 spaces per resident staff plus 1 space per non-resident staff present at peak working times. If development comprises owner-occupied dwellings, 1 space per dwelling should be provided communally, preferably adjacent to, but no more than 45 metres from, the dwelling, to allow for resident and visitor parking.</p> <p>1 space per dwelling, plus 1 per 4 dwellings for visitors, where possible within the curtilage of the original dwelling. Where conversions provide for more than 2 bedrooms per unit, parking requirements will be based on merits of the proposed development. This guidance may be relaxed if the dwellings are provided by a Housing Association or on a shared equity basis.</p> <p>1 space per 2 bedsits or bedrooms, wherever possible within curtilage of original dwelling.</p>
<p>Class D1 - Non-residential Institutions</p> <p>1. Health Centres</p> <p>2. Dentists, Doctors or Veterinary Surgeries</p> <p>3. Creches, Nurseries and Day Centres</p> <p>4. Schools for Pupils up to 18 years</p> <p>5. Colleges for Students over 16 years</p> <p>6. Art Galleries, Museums, Libraries, Public Reading Rooms and Exhibition Halls</p> <p>7. Places of Worship</p> <p>Theatres</p>	<p>1 space per medical practitioner, plus 1 space per staff member present at peak working times, plus 3 spaces per consulting room / cubicle.</p> <p>3 spaces per consulting room/cubicle.</p> <p>1 space per 2 staff normally present at peak working times, plus 1 space per 5 child placements and / or adequate pick up/set down points within the curtilage of the facility. Where possible, emergency vehicle access should also be provided which cannot be obstructed by any of the above parking provision.</p> <p>1 space per full-time staff member, plus 1 space per 30 pupils for parents/visitors.</p> <p>1 space per full-time staff member, plus 2 spaces per 5 students plus 1 space per 4 academic/administrative staff for visitors.</p> <p>1 space per full-time staff member, plus 1 space per 30 square metres public floor area for visitors. In town centres where public parking is available, the need for visitor parking may be relaxed.</p> <p>1 space per resident member of clergy or staff, plus 1 per 2 other clergy / staff, plus 1 per 10 seats. If the facility comprises another community use, an assessment will have to be made with reference to the guidance for community centres and halls.</p> <p>(i) 1 parking space per 5 fixed seats, and adequate turning and loading facilities, incorporating space for one coach or a 16.5m lorry.</p>

Use Class	Parking Guidance
<p>Class D2 - Assembly and Leisure</p> <p>1. Cinemas, Bingo and Concert Halls</p> <p>2. Halls, Community Centres, Clubs, Dance Halls, Discotheque</p> <p>3. Sports and Leisure Centres</p> <p>4. Tennis, Golf, Bowling Facility</p> <p>Cricket, Football, Rugby</p>	<p>1 space per senior member of staff plus 1 space per 10 seats in town centres or 1 space per 4 seats for out of centre developments.</p> <p>1 per senior/resident staff, plus 1 per 3 other staff normally present at peak working times, plus 1 per 5 square metres of public floor area for customers.</p> <p>1 space per 2 members of staff present at peak work times; 1 space per 20 square meters indoor playing area for participating customers; 3 spaces per squash court; 1 space per 2 players / officials capable of using outdoor playing space at any one time; 1 space per 10 square metres of swimming pool surface area, plus 1 space per 4 seats for spectators; 3 spaces per bowling alley lane; 1 space per snooker or pool table.</p> <p>1 space per 3 square metres of indoor public floor area; 2 spaces per green/court; 1 space per lane of any driving range.</p> <p>1 space per 3 square metres of public floor area of buildings; 3 spaces for each team capable of using the facility at any one time.</p> <p>If areas within the facility are convertible to another use having a higher parking guidance requirement, the higher guidance will be applied. If bars, restaurants, shops and other ancillary facilities are provided, additional provision should be made at half the appropriate guidance for those uses.</p> <p>In town centres where public car parking is normally available there will be no requirement for additional non-operational parking provision, subject to no loss of existing parking facilities and consideration by the Council of potential additional vehicle attraction to the town centre as result of the development.</p>

Appendix 11 - Neighbourhood Plan housing requirement methodology

Appendix 11 - Neighbourhood Plan housing requirement methodology

.1 This document sets out the draft methodology used to calculate the housing requirement for parishes preparing a Neighbourhood Plan within the Staffordshire Moorlands. The same methodology will be used for any future neighbourhood plan areas which decide to prepare a neighbourhood plan.

.2 The housing figures included in the following tables are based on 31 March 2017 data. The overall housing requirements for the District have been agreed by the Council and the housing calculations for each area have been updated to reflect this and the latest housing monitoring information.

.3 The neighbourhood plan housing requirements have been based on the housing evidence included in the tables below. The figures are based on new allocations, plus estimated windfall, with a final judgement based on the specific factors affecting that parish such as local services and facilities, potential capacity of sites in the SHLAA and past housing completion rates to give a total figure for each parish.

Housing Background

Area	Amount	Required provision	Completions ¹	Commitments ²	Net residual requirement ³
Leek	30%	1794	241	538	1015
Biddulph	20%	1196	205	106	885
Cheadle	25%	1495	85	244	1166
Rural	25%	1495	148	554	793
Total	100%	5980	679	1442	3859

Table .1 District net housing requirement Preferred Options Local Plan

Explanatory notes for columns.

- Completions¹ - The net number of new homes completed between 1st April 2012 and 31st March 2017. This includes new build dwellings and conversions to residential use.
- Commitments² - The number of new homes that have planning permission at 31 March 2017. This also includes sites and plots that are under construction. It should be noted that planning permission will lapse if work on site has not commenced. Commitments are also deducted from the overall housing requirement.
- Net residual requirement³ - The remaining amount of housing that needs to be identified during the plan period after deducting completions and commitments.

Biddulph Housing Provision

.4 New allocations and windfall allowances are taken from the Preferred Options Local Plan (July 2017). The rest of the figures have been updated to reflect the latest position regarding completions and commitments at 31 March 2017 – see Table 21.1 above.

Biddulph Housing provision	Dwellings
Total requirement (31 March 2017)	885
New allocations	725
Large site windfall allowance	20
Small site windfall allowance ⁴	140
Total potential provision	885

Table .2 Biddulph Housing Provision

Rural Housing Provision

.5 New allocations and the small sites windfall allowance are taken from the Preferred Options Local Plan (July 2017). The rest of the figures have been updated to reflect the latest position regarding completions and commitments at 31 March 2017 – see Table 21.1 above.

Rural Housing Provision	Dwellings
Total requirement (31 March 2017)	793
New allocations (larger villages) ⁵	441
Small site windfall allowance (14 years) (30 per annum) ⁶	420
Total potential provision	861

Table .3 Rural Housing Provision

.6 Explanatory notes for columns.

- Small site windfall allowance⁴ - Windfall development on small sites (sites that can accommodate up to ten dwellings in the towns) arise from planning applications on non-allocated sites and are 'unexpected'. It is estimated that approximately 140 dwellings could be achieved in Biddulph over the plan period on small windfall sites.
- New Allocations (Larger Villages)⁵ - Preferred option Local Plan housing sites (July 2017) approximately 441 dwellings.
- Small site windfall allowance⁶ - Windfall development on small sites (sites that can accommodate up to five dwellings in the rural areas) arise from planning applications on non-allocated sites and are 'unexpected'. It is estimated that approximately 30 dwellings per annum could be achieved on small windfall sites across the rural area which equates to 420 dwellings between 2017 and 2031. This rural windfall allowance needs to be divided between the rural settlements and parishes.

Neighbourhood Plan Area - Housing Evidence

7. Evidence relating to those parishes preparing Neighbourhood Plans, and intending to make provision for new housing, are set out in the following table.

Neighbourhood Area	1. Completions (net) 2012 - 2017	2. Commitments (net) @ 31 March 2017	3. New allocations - (Preferred Options Local Plan July 17)	4. Parish Population (2011 Census) / % of Rural Area (42,754)	5. Rural windfall allowance based on population (420) Town windfall (large and small sites)	6. SHLAA 2015 Potential dwellings on small sites (no of which in GE)	7. Small windfall site completions (net) 1/4/2006 - 31/3/2017	8. Facilities & Service
Biddulph Parish	205	106	725 Biddulph (Town) 0 - Biddulph Moor	19,892 1,640 / 4% (Biddulph Moor Ward)	17 (Biddulph Moor only) 160 Biddulph	100 (20) (Biddulph) 20 (5) (Biddulph Moor)	90 (of which 4 Biddulph Moor)	XXXXX (Biddulph) XXX (Biddulph Moor)
Brown Edge Parish	10	16	0 0	2,486 / 6%	25	23 (2)	19	XXX (Brown Edge)
Checkley Parish	20	135	15	4,700 / 11%	46	46 (0)	20	XXXX (Upper Tean) XXX (Checkley) XX (Lower Tean) XX (Hollington)
Draycott in the Moors Parish	0	169	0	1,029 / 2%	8	8 (8)	0	XX (Draycott)
Leekfrith Parish	0	1	0	363 / 1%	4	13 (0)	1	XX (Meerbrook) XXX (Blackshaw Moor)
Rushton Parish	1	13	0	485 / 1%	4	21 (12)	12	XXX (Rushton)

Table .4 Housing Evidence

.8 Explanatory notes for columns.

1. Completions - The number of new housing completions between 1 April 2012 and 31 March 2017 (including conversions) with any losses deducted, for example conversions of two dwellings into one, to give a net figure.
2. Commitments - The number of new homes that have outline or full planning permission in each parish. The table shows the level of commitments at 31 March 2017 which includes sites / plots that are under construction. Losses are deducted to give a net figure.
3. New allocations - These sites are identified in the Preferred Options Local Plan (July 2017).
4. Parish population 2011 - The total population for the parishes within the rural area in the Staffordshire Moorlands in 2011 was 41,114. Biddulph Moor is identified as a larger village in the adopted Core Strategy but is included within Biddulph Parish along with the town of Biddulph. Biddulph Moor shares a proportion of the rural windfall allowance and therefore the population for Biddulph Moor ward 1,640 has been added to the rural area population figure to give a total of 42,754. The population of each rural parish and the ward of Biddulph Moor is expressed as a percentage of this overall figure.
5. Windfall allowance - The rural windfall allowance (420) is divided between each parish based on 2011 percentage to provide a baseline. A windfall allowance of 160 dwellings is included in the Preferred Options Local Plan for the town of Biddulph which includes 20 dwellings for large sites and 140 dwellings for small sites.
6. Site Availability - Figures are taken from the latest published Strategic Housing Land Availability Assessment (SHLAA) (July 2015). They indicate the potential number of dwellings on small sites that could accommodate 1 to 10 dwellings in the towns and 1 and 5 dwellings in the rural areas and are classified as a 'B' which are considered to be developable. The table also indicates the number of these potential homes in the Green Belt (GB).
7. Past Trends / Small Windfall Site Completions - This is the net number of completions on small sites (1 to 10 dwellings in the towns and 1 to 5 dwellings in the rural areas) over the last 11 years in each parish.
8. Facilities and services - In order to promote sustainable development, an assessment has been made of services and facilities for each of the settlements located within each parish. The Core Strategy defines large and small villages.

XXXXX – primary and secondary school, GP/dentist, village hall, store/PO, PH

XXXX – primary school, GP/dentist, village hall, store/PO, PH

XXX – primary school, village hall/store/PO/PH

XX – no school, village hall/store/PO/PH

X – no school, no village hall/store/PO/PH

Draft Neighbourhood Plan Housing Requirement

.9 The neighbourhood plan housing requirements have been based on the housing evidence included in the Table 4. The figures are based on new allocations (a) plus estimated windfall (b) with a final judgement based on the specific factors affecting that parish such as local services and facilities, potential capacity of sites in the SHLAA and past housing completions to give a total figure for each parish (c). **It should be noted that the required provision is on top of what already has planning permission at 31 March 2017.**

Neighbourhood Plan Area	(a) New Allocations	(b) Estimated Windfall	(a) + (b)	(c) Housing Requirement 2017 - 2031 (dwellings)	Specific Factors
Biddulph Parish	725 (Biddulph) + 0 (Biddulph Moor)	160 (Biddulph) + 17 (Biddulph Moor)	902	900	Biddulph parish includes Biddulph town and Biddulph Moor which is a large village. Both Biddulph town and Biddulph Moor are surrounded by Green Belt. The Local Plan sets out separate housing requirements for Biddulph town. The housing requirement for Biddulph Moor which falls in the rural area has been added to the Biddulph town figure. There are good facilities and services in Biddulph and a number of small sites identified in the SHLAA. Biddulph Moor has good links with Biddulph town and has had few housing completions over the last 10 years.
Brown Edge Parish	0	25	25	25	Brown Edge is the only village within the Parish. It is surrounded by Green Belt and the area outside the settlement within the Parish is limited. The SHLAA identifies a number of small sites not within the Green Belt which have development potential.
Checkley Parish	15	46	61	60	Checkley Parish includes a large village and three smaller villages. The Parish area is relatively large compared to others. Checkley Parish has a high level of commitments due to Fole Dairy which has outline permission for 60 dwellings. Outline permission has also been granted for up to 67 dwellings at Cheadle Road, Upper Tean. The SHLAA identifies a number of small sites which have development potential.
Draycott-in-the-Moors Parish	0	8	8	5 - 10	Draycott in the Moors Parish covers a large area however only incorporates one small village. Outline planning permission has been granted for up to 168 dwellings at Cresswell within the Parish. There have been no completions in the parish over the last 10 years.
Leekfrith Parish	0	4	4	4 - 8	Leekfrith Parish is rural parish, approximately half the Parish is located within the Peak District National Park and half within the Staffordshire Moorlands Local Plan area. It covers a relatively large area with a small population. There are two small villages located within the Staffordshire Moorlands area, Blackshaw Moor having the benefit of a primary school. There has only been one completion over the last 10 years.
Rushton Parish	0	4	4	4 - 8	Rushton Parish includes the village of Rushton Spencer (although a small part of the village is located in Heaton Parish) and stretches west of the A523. Rushton Spencer has a limited number of services but has the benefit of a primary school and more than one public house. There have been a number of new houses completed over the last 11 years and planning approval for 13 new dwellings in the parish.

Table .5 Neighbourhood Plan Housing Requirement

Staffordshire Moorlands Local Plan

Sustainability Appraisal Report of Preferred Options Local Plan

July 2017

1 Consultation questions	5
2 Introduction	8
3 Appraisal methodology	14
4 SA Scoping stage	37
4.1 Sustainability Appraisal Framework	52
5 Summary of findings	61
5.1 Appraisal of housing requirement options	62
5.2 Appraisal of alternative employment land requirements	82
5.3 Appraisal of site options	91
5.3.1 Gypsy and Traveller site options	218
5.4 Appraisal of alternative development approaches for Cheadle	227
5.5 Appraisal of preferred option policies	238
6 Cumulative Effects	253
7 HRA and EqIA	261
7.1 Introduction	261
7.2 Habitats Regulations Assessment - methodology	261
7.3 Habitats Regulations Assessment - Summary of findings	261
7.4 Equality Impact Assessment - methodology	264
7.5 Equality Impact Assessment - Summary of findings	265
8 Monitoring Proposals	270
9 Quality Assurance Checklist	275
10 Next steps	282
11 Consultation responses	284

12 Appraisal of site options	292
12.1 Leek	293
12.1.1 Other uses	362
12.1.2 Sites outside current development boundary	403
12.2 Biddulph	467
12.2.1 Urban extension	499
12.2.2 Other uses	504
12.2.3 Sites within Green Belt	518
12.3 Cheadle	607
12.3.1 Urban extension	653
12.3.2 Other uses	658
12.3.3 Sites outside the development boundary	672
12.4 Larger villages	826
12.4.1 Larger Villages: Brown Edge to Cheddleton	958
12.4.2 Larger villages: Endon to Kingsley	1056
12.4.3 Larger villages: Upper Tean to Werrington & Cellarhead	1177
12.5 Smaller villages: Bagnall to Checkley	1316
12.5.1 Smaller villages: Dilhorne to Foxt	1371
12.5.2 Smaller villages: Hollington to Longsdon	1398
12.5.3 Smaller villages: Lower Tean to Rushton Spencer	1453
12.5.4 Smaller villages: Stockton Brook to Whiston and other areas	1508
12.6 Gypsy and Traveller sites TR001-TR016	1554
12.7 Gypsy and Traveller sites TR017-TR033	1624
12.8 Additional site appraisals July 2017	1701
12.8.1 Leek	1702
12.8.2 Biddulph	1716
12.8.3 Villages	1738
13 Appraisal of alternative housing requirement options	1757
14 Appraisal of alternative options for an employment land requirement	1839
15 Appraisal of alternative development approaches for Cheadle	1876

16 Appraisal of preferred option policies	1916
16.1 Strategic policies	1917
16.2 Development Management Policies	2013
16.2.1 Sustainable Development	2014
16.2.2 Economy and Employment	2044
16.2.3 Housing	2074
16.2.4 Town Centres and Retailing	2104
16.2.5 Design and Conservation	2122
16.2.6 Sustainable Communities	2147
16.2.7 Natural Environment	2166
16.2.8 Transport	2172
16.3 Development Site Policies	2184
17 Site Appraisals - Constraints maps	2186
17.1 Location of Gypsy and Traveller site options	2202

Consultation questions

1 Consultation questions

1.1 The purpose of this consultation is to seek your views on this SA Report prepared to accompany the Preferred Options Local Plan July 2017. We would particularly welcome your comments on the following:

Question 1

Do you support the overall approach taken to the appraisal of options?

Question 2

Have we correctly identified the main significant effects and potential mitigation measures?

Question 3

Do you wish to make a comment on the appraisal of one or more Local Plan policy option(s)?

Question 4

Do you wish to make a comment on the appraisal of one or more housing or employment requirement option(s)?

Question 5

Do you wish to make a comment on the appraisal of one or more proposed development site option(s)?

Question 6

Do you wish to make a comment on the appraisal of alternative development approaches for Cheadle?

Question 7

Do you wish to make a comment on the monitoring proposals, in particular the sustainability effects to be monitored and the information to be collected, including by whom and when?

Question 8

Do you wish to make any other comments about this SA Report?

Question 9

Does this July 2017 draft SA Report, together with the SA Scoping Report, provide sufficient information at this stage to ensure that an appropriate SA is carried out of the emerging Staffordshire Moorlands Local Plan?

Question 10

Do you wish to make a comment on either or both of the supporting documents: the Habitats Regulations Assessment report of the Staffordshire Moorlands preferred option Local Plan July 2017, or the Equality Impact Assessment report of the emerging Local Plan at this stage? Both these reports are available alongside this draft SA Report.

1.2 Details of how to respond are provided from paragraph 2.22 of this report.

Introduction

2 Introduction

2.1 Staffordshire Moorlands District Council is in the process of preparing a Local Plan which, when adopted, will guide future development across the plan area, up to the year 2031.

2.2 This draft Sustainability Appraisal Report has been published to accompany the Preferred Options Staffordshire Moorlands Local Plan July 2017. Sustainability Appraisal (SA) is an ongoing process. This SA Report follows on from the Initial Sustainability Appraisal Report that accompanied the Local Plan Preferred Options Sites and Boundaries consulted on between 28th April 2016 and 13th June 2016; and the Sustainability Appraisal Scoping Report, consulted on between 13th August 2014 and 26th September 2014.

2.3 National Planning Practice Guidance describes how sustainability appraisal is a systematic process that must be carried out during the preparation of a Local Plan. Its role is to promote sustainable development by assessing the extent to which the emerging plan, when judged against reasonable alternatives, will help to achieve relevant environmental, economic and social objectives.

2.4 This process is an opportunity to consider ways by which the Plan can contribute to improvements in environmental, social and economic conditions, as well as a means of identifying and mitigating any potential adverse effects that the Plan might otherwise have. By doing so, it can help make sure that the proposals in the Plan are the most appropriate given the reasonable alternatives. It can be used to test the evidence underpinning the Plan and help to demonstrate how the tests of soundness have been met. Sustainability appraisal should be applied as an iterative process informing the development of the Local Plan.

2.5 The sustainability appraisal process is governed by European and national legislation, supported by government policy, which includes:

- The Planning and Compulsory Purchase Act 2004 which requires sustainability appraisal of emerging Development Plan Documents and Supplementary Planning Documents.
- The requirements of European Directive 2001/42/EC (often known as the Strategic Environmental Assessment (SEA) Directive) which requires the preparation of an environmental report that considers the significant environmental effects of a plan or programme. This Directive is transposed into UK law by The Environmental Assessment of Plans and Programmes Regulations 2004: Statutory Instrument 2004 No. 1633 (SEA Regulations).
- Planning practice guidance issued by the Department for Communities and Local Government on Strategic environmental assessment and sustainability appraisal; published 9 February 2015⁽¹⁾.

2.6 This sustainability appraisal incorporates the requirements of the SEA Directive, by combining the more environmentally-focused considerations of SEA with wider social and economic effects.

Staffordshire Moorlands Local Plan

2.7 The Staffordshire Moorlands Core Strategy was adopted in March 2014. The plan identified a housing requirement of 300 homes per year and an employment land requirement of at least 24ha over the period 2011 to 2026. The Core Strategy also established the

appropriate distribution of development across the District with the emphasis being on development in the market towns of Leek, Biddulph and Cheadle with a more modest scale of development in the villages that lie within the Rural Area. However, the Inspector determined that an early and comprehensive review of the Core Strategy for the period 2016 to 2031 would be required to take account of longer term development requirements. The review of the Core Strategy has been rolled forward into a single Local Plan combined with site allocations.

2.8 Local Plans are seen by Government as key to delivering sustainable development. They should, as far as possible, reflect the aspirations of local communities and should strive to contribute towards their wider social, economic and environmental objectives. The Staffordshire Moorlands Local Plan also needs to be consistent with the Government's planning principles and policies as set out in the National Planning Policy Framework⁽²⁾.

2.9 To meet these objectives, the Staffordshire Moorlands Local Plan - Preferred Options July 2017 comprises:

- A Portrait of Staffordshire Moorlands - a description of the District.
- The Challenges - a summary of the key challenges facing the District.
- The Vision – detailing what the Staffordshire Moorlands will be like in 2031.
- Aims and Objectives – stating what the Local Plan is proposing to achieve.
- A Spatial Strategy and Strategic Policies – setting out the over-arching strategy and policies for the District.
- Development Management Policies – setting out specific measures to manage development.
- Strategic Development Site Policies - specific policy to guide the development of strategic sites.
- Implementation and Monitoring - a framework for how the plan will be implemented and monitored.
- Maps - for Leek, Biddulph, Cheadle and the Rural Areas which identify proposed sites and boundaries.

Habitats Regulations Assessment

2.10 European Directive 92/43/EEC on the Conservation of Natural Habitats and of Wild Fauna and Flora (the Habitats Directive) requires a Habitats Regulations Assessment (HRA) to be undertaken on the Local Plan. In the UK, the Habitats Directive is implemented through the Conservation of Habitats and Species Regulations 2010 (the “Habitats Regulations”).

2.11 The HRA assesses any impacts of the Local Plan against the conservation objectives of sites of European importance for nature conservation in, and outside the plan area, to ascertain whether it would adversely affect the integrity of any sites concerned. These sites, often just referred to as European sites, include Special Areas of Conservation (SACs) and Special Protection Areas (SPAs).

2.12 Staffordshire Moorlands District Council has appointed consultants Clearlead Consulting Limited to undertake the HRA requirements for the Local Plan. It is important that the sustainability appraisal takes account of HRA findings in order that consideration

can be given to mitigating any adverse effects. An initial HRA Report (July 2017) is available for consultation alongside the Preferred Options Local Plan and this SA Report. The initial findings of the HRA Report July 2017 are considered in section 7 of this report.

2.13 The HRA of the Local Plan is building on work undertaken to prepare the HRA of the adopted Core Strategy. The HRA reports for the Core Strategy can be viewed at:

www.staffsmoorlands.gov.uk/sm/council-services/core-strategy/sustainability-appraisal-and-appropriate-assessment

2.14 The HRA process is an iterative one and it will be reviewed and amended as the Local Plan develops.

Equalities Impact Assessment

2.15 In order to comply with the Public Sector Equality Duty (set out in the Equality Act 2010)⁽³⁾ the Council is carrying out an equalities impact assessment of Staffordshire Moorlands emerging Local Plan. The broad purpose of the Equalities Duty is to integrate consideration of equality and good relations into the day-to-day business of public authorities.

2.16 The Equalities Impact Assessment (EqIA) is considering the impact, or likely impact, of the development strategy, policies and their functions outlined in the Local Plan on different equality groups, including women, people from ethnic minorities and those with disabilities. The findings of the assessment will be summarised to provide an overall assessment of the submission version of the Staffordshire Moorlands Local Plan.

2.17 An EqIA is a tool to assist public authorities with assessing the impact, or likely impact, of their policies and functions on people who share a relevant protected characteristic. It assists authorities with identifying adverse outcomes and steps that can be taken to mitigate adverse effects. EqIAs help public authorities meet the requirements of their equality duties and to identify active steps to promote equality.

2.18 One of the 12 core planning principles set out in paragraph 17 of the National Planning Policy Framework (NPPF) is that local planning authorities should take account of and support local strategies to improve health, social and cultural wellbeing for all, and deliver sufficient community and cultural facilities to meet local needs. It is considered that the EqIA can help inform this process by understanding the needs of different community groups and how planning policies and decisions can affect them.

Structure of this report

2.19 This July 2017 Sustainability Appraisal Report has been designed to be as succinct as possible to improve accessibility of information and to allow key findings to be presented more concisely. Detailed appraisal work is presented in separate appendices. Consultation questions are provided in Section 1.

2.20 This section has provided an introduction to sustainability appraisal, the Staffordshire Moorlands Local Plan Habitats Regulations Assessment (HRA) and Equalities Impact Assessment (EqIA). The rest of the report is structured as follows:

- Section 3 – the methodology of how this appraisal was carried out, limitations and definitions of significance.
- Section 4 – an overview of the scoping stage, consultation responses received and the sustainability appraisal framework.
- Section 5 – a summary of findings with an overview of significant effects.
- Section 6 – a discussion of broad conclusions about the nature of cumulative effects of the plan.
- Section 7 - discussion of the findings of the Habitats Regulations Assessment and the Equalities Impact Assessment of the Plan and how these findings have been used to help shape the Local Plan policies and proposals.
- Section 8 - recommendations for the approach to monitoring the sustainability effects of implementing the Staffordshire Moorlands Local Plan.
- Section 9 - The Quality Assurance checklist used to ensure that the requirements of the SEA Directive have been met and fully integrated into the sustainability appraisal process.
- Section 10 - the next steps in the sustainability appraisal process.
- Section 11 - consultation responses received to the Initial SA Report prepared alongside the Staffordshire Moorlands Local Plan Preferred Options Sites and Boundaries April 2016
- **Appendices** - providing full detail of the assessments undertaken:
- Section 12 - appraisal of site options.
- Section 13 - appraisal of alternative housing requirement options.
- Section 14 - appraisal of alternative alternative employment land requirement options.
- Section 15 - appraisal of alternative development approaches for Cheadle.
- Section 16 - appraisal of preferred option policies.
- Section 17 - constraints maps for site appraisals.

2.21 This July 2017 Sustainability Appraisal Report includes the required elements of an environmental report as required by the SEA Regulations.

How to respond

2.22 We would like to know your views by **5pm on Friday 22nd September 2017**.

2.23 If you would like to send us your views on this consultation, you can do so using one of the following methods:

- Online on the Local Plan consultation website: http://staffsmoorlands.objective.co.uk/portal/local_plan/
- Email to forward.plans@staffsmoorlands.gov.uk.
- Post to the address given below.

2.24 The submission of comments online or by email is considered to be the most efficient means of responding. Use of the consultation website provides several benefits and enables consultees to:

- Read the SA Report, Local Plan and other supporting information online.
- Submit comments online (registration required).
- Read all comments submitted by other consultees.

2.25 Documents can be consulted at Council offices and libraries (or downloaded from the web address above) and comments returned by post to:

- Regeneration, Staffordshire Moorlands District Council, Moorlands House, Stockwell Street, Leek, Staffordshire, ST13 6HQ.

Please note: details of consultees registered on the consultation website and all respondents to the consultation will be added to our Local Plan contact list and will receive notification of future consultations.

All comments and the name of the individual or organisation responsible for them will be made available to view on the public consultation website. All representations may also be viewed at Council offices.

Consultation responses and associated information will be handled in accordance with the Data Protection Act.

Appraisal methodology

3 Appraisal methodology

3.1 The methodology for this appraisal was developed in accordance with the following guidance:

- Sustainability Appraisal of Regional Spatial Strategies and Local Development Documents (ODPM, 2005).
- A Practical Guide to the Strategic Environmental Assessment (SEA) Directive (ODPM, 2005).
- Planning Advisory Service (PAS) Sustainability Appraisal guidance contained in the Communities and Local Government (CLG) Plan Making Manual.⁽⁴⁾
- National Planning Practice Guidance⁽⁵⁾

3.2 Staffordshire Moorlands District Council undertakes the sustainability appraisal process principally in-house, with Officers based in the Regeneration Service teams. The work has been supported by site appraisals carried out by consultants Amec Foster Wheeler.

3.3 The sustainability appraisal is carried out in a series of stages, which include setting the context and objectives for the sustainability appraisal, developing and assessing the effects of alternatives and carrying out consultation on a Sustainability Appraisal Report. The stages of methodology are shown in Table 3.1 below.

Methodology stage	Description
A – Setting the context and objectives for the sustainability appraisal	This stage sets the scope for the ongoing appraisal by establishing an evidence base. A separate Scoping Report has been completed and published for consultation.
B – Developing options and assessing effects	The sustainability appraisal is involved in developing options from the outset. Development and appraisal of options is an iterative process, with effects being predicted and evaluated for their significance. Potential mitigation measures for any predicted significant effects are considered at this stage.
C – Preparing a Sustainability Appraisal Report	This July 2017 report is the second step in this key output of the appraisal process, following publication of the Initial SA Report in April 2016, and presenting information on the effects of the plan in a format suitable for public consultation.
D – Consulting on the plan and Sustainability Appraisal Report	The final Sustainability Appraisal Report is published for consultation alongside the plan concerned. Consultation must include the statutory environmental consultation bodies.

4 <http://www.pas.gov.uk/pas/core/page.do?pageId=24230>
 5 <http://planningguidance.communities.gov.uk/>

Methodology stage	Description
E – Monitoring significant effects	The predicted significant effects are monitored after implementation of the plan to identify any unforeseen effects and undertake appropriate remedial action.

Table 3.1 Stages of sustainability appraisal methodology

3.4 The timetable for the key stages undertaken in the SA of the emerging Staffordshire Moorlands Local Plan are shown in Table 3.2 below.

Stage	Linkages to Plan Preparation	Aim
SA Scoping Report - August 2014	Prepared alongside preparation and review of the evidence base. Published for consultation between 13 th August 2014 and 26 th September 2014.	Identify relevant plans and programmes. Establish the baseline. Identify sustainability issues. Set the Sustainability Framework: including deciding on the scope of the appraisal, defining objectives and indicators.
Interim Sustainability Appraisal report - April 2016	Prepared alongside the Local Plan: Preferred Options Sites and Boundaries. Published for consultation between 28 th April 2016 and 13 th June 2016.	Provide background and context for the consultation. Assist selection of preferred options. Recommend how options could be improved, including through mitigation measures.
Draft Sustainability Appraisal report - July 2017	This document. Prepared alongside the Preferred Options Local Plan July 2017. Consultation on both is taking place at the same time: 24 th July 2017 to 15 th September 2017.	Appraise the effects (economic, social and environmental) of the alternative development requirements, policies and site allocations - against the Sustainability Framework. Appraise any significant changes to the plan arising out of consultation undertaken at Preferred Options Sites and Boundaries Stage. Recommend how the options could be improved, including through mitigation measures. Develop proposals for monitoring the plan.

Stage	Linkages to Plan Preparation	Aim
Final Sustainability Appraisal report - (date to be confirmed)	Submitted alongside Staffordshire Moorlands Local Plan for Examination.	<p>Test the draft objectives and options against the SA framework.</p> <p>Identify key sustainability issues and problems and recommend how the options could be improved, including through mitigation measures.</p> <p>The sustainability appraisal will be used as part of determining the robustness of the plan and whether it should be approved.</p>

Table 3.2 Key Stages in the Sustainability Appraisal

Developing and refining ‘reasonable alternatives’

3.5 The SEA Directive requires assessment of the likely significant effects of implementing the plan, and “reasonable alternatives”. Developing options and alternatives is an important part of both the plan-making and sustainability appraisal process. For the Local Plan, the reasonable alternatives are the different options put forward during the preparation of the plan.

3.6 This consultation and the sustainability appraisal work documented in appendices to this report have had a significant part to play in identifying and refining options considered to be “reasonable alternatives”. The sustainability appraisal has been involved from an early stage in this development of options to help ensure that any adverse effects of proposals were identified as early as possible.

Development Site Options

3.7 The Council maintains a Strategic Housing Land Availability Assessment (SHLAA) which identifies and assesses the availability, suitability and deliverability of land as a potential housing site to meet the identified need for housing over the plan period. This evidence helps the Council understand what sites are theoretically available for housing development and was the basis for identifying a wide range of alternative site options consulted on between July and September 2015. A detailed appraisal of 278 alternative housing site options, alongside options for employment sites and gypsy and traveller sites, is documented in section 12 of this report, with findings summarised in section 5.

3.8 Over 5,500 consultation responses were received to the 2015 consultation and the representations made, along with the findings of the SA, were used with other evidence to help determine preferred sites to be taken forward into the Local Plan preferred option sites and boundaries consultation held in April 2016.

3.9 Over 8,600 responses were received to the 2016 consultation. Analysis of these consultation responses along with updates to the evidence base, including the developing SA evidence recorded in this report, has helped to refine the preferred options and inform the selection of sites proposed in the Local Plan preferred options July 2017.

Housing requirement options

3.10 An update to the SHMA⁽⁶⁾ was published in February 2017 when a number of scenarios were modelled to take account of the latest evidence, including the 2014-based SNPP published in May 2016. The scenarios demonstrated the extent to which the population of the District is likely to change over the plan period, and how this growth would be translated into households, dwellings, numbers of economically active residents and the number of jobs that might be supported. Reasonable alternatives for a housing requirement, derived from the February 2017 report, were appraised in February 2017. These were:

- Option 1: 235 new homes each year (2014 - 2031)
- Option 2: 260 new homes each year (2014 - 2031)
- Option 3: 330 new homes each year (2014 - 2031)
- Option 4: 450 new homes each year (2014 - 2031)

3.11 Previously, the Staffordshire Moorlands Strategic Housing Market Assessment⁽⁷⁾ January 2016 revision had identified a number of scenarios to reflect the alternatives for future growth within the District based on the evidence available at that time. Consideration of these scenarios led to the Council considering four potential housing requirement options in January 2016:

- Option 1: 250 new homes each year (2016 - 2031)
- Option 2: 320 new homes each year (2016 - 2031)
- Option 3: 440 new homes each year (2016 - 2031)
- Option 4: 520 new homes each year (2016 - 2031)

Employment requirement options

3.12 Nathaniel Lichfield & Partners (NLP) prepared an Employment Land Review for the district in July 2014. This study was updated in February 2017 to incorporate more recent data releases, to align with the updated Strategic Housing Market Assessment (SHMA) and also to reflect the changing economic context post British exit from the European Union. The report⁽⁸⁾ considered a number of potential future scenarios in order to help identify requirements for B-class employment space in the district over the seventeen year period 2014-2031. From these scenarios, four reasonable alternative employment land requirements were selected for appraisal in February 2017:

- Option 1: 13ha (2014 - 2031)
- Option 2: 16ha (2014 - 2031)
- Option 3: 25ha (2014 - 2031)
- Option 4: 27ha (2014 - 2031)

Alternative Development Approaches for Cheadle

6 Staffordshire Moorlands SHMA Update; Nathaniel Lichfield & Partners; 2017

7 Staffordshire Moorlands 2012-based SNHP Update - Implications of the 2012-based SNHP - January 2016 Revision; January 2016; Nathaniel Lichfield & Partners

8 Staffordshire Moorlands ELR Update; February 2017; Nathaniel Lichfield & Partners

3.13 The strategy for Cheadle set out in the adopted Core Strategy is based on taking a comprehensive view of the expansion of the town and programming ahead for the phased release of land and related infrastructure improvements. The Core Strategy notes that this will take the form of urban extensions involving housing and employment development with related leisure and community facilities as part of an overall regeneration and growth strategy.

3.14 In identifying sites for inclusion in the Local Plan preferred option sites and boundaries April 2016, a number of reasonable alternative development approaches were considered for Cheadle, in line with the strategy set out above. These were:

- Option 1: Northern Focus
- Option 2: South western focus
- Option 3: Scattered approach

3.15 Following the appraisal, all three options were dismissed and a fourth option was appraised for the Local Plan preferred options July 2017:

- Option 4: North-South clusters with small sites scattered through the town

Local Plan policy options

3.16 The Staffordshire Moorlands Core Strategy was adopted in March 2014. The Core Strategy contains a suite of existing policies consistent with the NPPF. However since adoption a number of new or emerging planning policies and regulations of relevance have been introduced. These include:

- The Housing and Planning Act 2016
- Self-Build and Custom House Building Act 2015 and associated Regulations (2016)
- The Town and Country Planning (Brownfield Land Register) Regulations 2017
- Town and Country Planning (Permission in Principle) Order 2017
- Neighbourhood Planning Act 2017
- Housing White paper published February 2017

3.17 Existing core strategy policies have thus been reviewed as part of the Local Plan preparation process and updated where the evidence base or national planning policy context requires it. For this reason, alternative approaches to delivering policy objectives have not been appraised, the Core Strategy policy has been taken as the most appropriate policy option in the first instance. However the policies, updated as required, have been considered the preferred approach and appraised to identify likely significant effects.

Assessing the significance of effects

The SEA Directive requires

... "an assessment of likely significant effects ... taking into account the objectives and geographical scope of the plan or programme".

3.18 It is only necessary to assess those effects that are likely to be significant, not all possible effects. In this report, the social, environmental and economic effects of all Local Plan options have been predicted and evaluated for their significance. The sustainability appraisal framework, presented in Section 4, forms the basis for the assessment throughout the report.

3.19 Prediction of effects involves identifying what changes might occur to the sustainability baseline over time – these changes are then evaluated for their likely significance, in terms of their probability, duration, frequency, and the geographical area likely to be affected.

3.20 Assessment matrices (contained in Sections 12 - 16) present the detailed findings. Each matrix is relatively simple and allows for a discussion of potential effects, evidence and possible mitigation measures. The simplicity of the matrix is designed to reflect the fact that strategic options should (and in many cases can only be) assessed in broad terms where there is a lack of spatial expression. A combination of expert judgement and analysis of baseline data has been used to judge the effects.

3.21 Within each matrix, a significance "score", ranging from: ++ (very positive impact) to: -- (very negative impact) is given against each objective. Ultimately, the significance of an effect is a matter of judgement, making best use of available evidence, and requires no more than a clear and reasonable justification. Definition of significance is considered later in this section. Where uncertainties exist or where it is considered that insufficient information exists to enable an accurate assessment to be made, this has been noted.

Assessing cumulative effects

3.22 The assessment of effects of Local Plan policies and proposals includes potential secondary, cumulative and synergistic effects, as required by the SEA Directive. Many sustainability problems result from the accumulation of multiple, small and often indirect effects, rather than a few large obvious ones, and consideration of such cumulative effects is set out in section 6 of this report.

Consideration of potential mitigation measures

The SEA Directive requires

... consideration of "measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan or programme".

3.23 These measures are referred to as mitigation measures, and can include recommendations for improving beneficial effects.

3.24 In the assessment matrices, potential mitigation measures are considered for likely adverse and positive effects. For any effects judged likely to be significant, these are discussed further in this report.

Appraisal limitations, difficulties encountered and assumptions made

3.25 A key issue in undertaking the appraisal of the emerging Local Plan is the partly strategic nature of the document, the uncertainty surrounding precisely how its ambitions will be implemented on the ground and the degree to which they will be achieved in practice (particularly since many different partners are involved in its delivery).

3.26 Inevitably, a high degree of judgement has been required in undertaking the appraisals to determine the "significance" of effects. Sustainability appraisal relies on expert judgement, which is guided by knowledge of the likely impacts of the plan, the baseline data available and responses and information provided by consultees and other stakeholders. The assessment has been carried out and reported using an expert, judgement-led, qualitative assessment.

3.27 Definitions of significance have been identified and used in the appraisals in order to address the qualitative nature of the work, and to help ensure consistency and transparency. This is discussed further below.

3.28 Some gaps in the baseline data regarding detailed trends across the plan area have been identified. Although every effort has been made to present an accurate baseline situation in the scoping report, there have been inevitable data constraints and the scoping report is subject to regular review. Information contained within the scoping report is always likely to become outdated quickly and there are time and resource issues regarding how often this data can be updated.

Definitions of significance

3.29 In order to support the appraisals, definitions of significance were used to ensure assessments were consistent and transparent. These definitions are set out in Table 3.5 below, and show the rationale under-pinning judgements made on significance of identified effects. The key to the symbols depicting the description of significance used in Table 3.5 is given in Table 3.4.

3.30 In considering definitions of significance, suggested acceptable walking distances have been taken from Building for Life 12 as set out in table 3.3 below.

(1)	Town centres (m)	Commuting / School / Sight-seeing (m)	Elsewhere (m)
Desirable	200	500	400
Acceptable	400	1000	800
Preferred maximum	800	2000	1200

Table 3.3 Suggested acceptable walking distances

1. Source: The Institution of Highways and Transportation (2000) Guidelines for Providing for Journeys on Foot, London

Key to description of the nature of effects

Effect	
++	The policy / proposal will have a very positive impact on the sustainability objective. See definition of significance in Table 3.4.
+	The policy / proposal will have a slightly positive impact on the sustainability objective. See definition of significance in Table 3.4.
0	The policy / proposal will have a negligible or neutral impact on the sustainability objective. A recorded neutral effect does not necessarily mean that there will be no effect at the project level, but shows that at this strategic level there are no identifiable effects.
-	The policy / proposal will have a slightly negative impact on the sustainability objective. See definition of significance in Table 3.4.
--	The policy / proposal will have a very negative impact on the sustainability objective. See definition of significance in Table 3.4.
i	The outcome could be dependent on implementation, or more detail is required to make an assessment.
?	The impact of an issue cannot be predicted at this stage.

Table 3.4 Description of the nature of effects

Objective	Decision making criteria	Effect	Illustrative Guidance for determining significance
<p>1. To improve community cohesion and the quality of where people work and live.</p>	<ul style="list-style-type: none"> ● Will it make a positive contribution towards community cohesion? ● Will it improve neighbourhood quality? ● Will it ensure that there is adequate open space and support Green Infrastructure (GI)? ● Will it minimise light and noise pollution? ● Will it ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	<p>++</p> <p>+</p> <p>-</p> <p>--</p>	<p>The proposal could enable the delivery of new, or the significant enhancement of existing, community facilities and services.</p> <p>The proposal could enable significant improvements to the social and environmental quality of the neighbourhood.</p> <p>The proposal could enable significant enhancement of the District's GI network. The proposal is within the existing settlement boundary.</p> <p>The proposal could enable the enhancement of existing, community facilities and services.</p> <p>The proposal could enable improvement of the social and environmental quality of the neighbourhood.</p> <p>The proposal could enable enhancement of the District's GI network. The proposal is within or adjoins the existing settlement boundary.</p> <p>The proposal could reduce the availability and quality of existing community facilities and services.</p> <p>The proposal could have an adverse effect on the social and environmental quality of the neighbourhood.</p> <p>The proposal could have an adverse effect on the District's GI network. The proposal is separate from an existing settlement.</p> <p>The proposal could result in the loss of existing community facilities and services without suitable replacement</p> <p>The proposal could have a significantly adverse effect on the social and environmental quality of the neighbourhood.</p> <p>The proposal could have a significantly adverse effect on the District's GI network.</p> <p>The proposal is remote from an existing settlement.</p>
<p>2. To advance equality of opportunity</p>	<ul style="list-style-type: none"> ● Will it remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / 	<p>++</p>	<p>The proposal could ensure that new development is located in close proximity to a wide range of services and facilities (e.g. within 800m of a wide range of services and/or 400m of a settlement centre.) The needs of all members of the community can be addressed.</p>

Objective	Decision making criteria	Effect	Illustrative Guidance for determining significance
		--	<p>The proposal could result in loss of healthcare facilities and open space without suitable replacement.</p> <p>The proposal could have significant effects which could result in a deterioration of health within the community e.g. through loss of leisure and physical recreational facilities.</p>
<p>4. To minimise opportunities for crime and reduce the fear of crime.</p>	<ul style="list-style-type: none"> ● Will it reduce actual levels of crime? ● Will it reduce fear of crime? 	<p>++</p> <p>+</p> <p>-</p> <p>--</p>	<p>The proposal could significantly reduce the level of crime and fear of crime through design and/or other safety measures.</p> <p>The proposal could reduce the level of crime and fear of crime through design and/or other safety measures.</p> <p>The proposal risks leading to an increase in reported crime and the fear of crime in the District.</p> <p>The proposal risks leading to a significant increase in reported crime and the fear of crime in the District.</p>
<p>5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.</p>	<ul style="list-style-type: none"> ● Will it provide an appropriate mix of housing to enable all needs to be met? ● Will it enable people to meet their needs within their existing communities? ● Will it ensure that people can afford their housing? 	<p>++</p> <p>+</p>	<p>The proposal could provide a significant contribution to help boost the supply of housing in the District (for sites: over 20 dwellings in towns and over 10 dwellings elsewhere).</p> <p>The proposal could enable the delivery of a range of types and tenures making a significant contribution to meeting the needs of the whole community.</p> <p>The proposal could make a significant contribution to the delivery of affordable homes.</p> <p>The proposal could provide a contribution to help boost the supply of housing in the District (for sites: between 15 - 19 dwellings in towns and between 5 - 9 elsewhere).</p> <p>The proposal could enable the delivery of a range of types and tenures making a contribution to meeting community needs</p> <p>The proposal could make a contribution to the delivery of affordable homes.</p>

Objective	Decision making criteria	Effect	Illustrative Guidance for determining significance
		-	<p>The proposal could fail to provide a contribution to help boost significantly the supply of housing in the District (for sites: between 1 - 14 dwellings in towns and 1 - 4 dwellings elsewhere).</p> <p>The proposal could not enable the delivery of a range of types and tenures and could fail to make a contribution to meeting community needs.</p> <p>The proposal could not make a contribution to the delivery of affordable homes.</p>
<p>6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.</p>	<ul style="list-style-type: none"> ● Will it minimise impacts on existing traffic congestion? ● Will it support the use of public transport? ● Will it support safe walking and cycling? ● Will it protect and improve access to the natural environment and support Green Infrastructure? 	++	<p>The proposal could fail to provide a contribution to help boost the supply of housing in the District (for sites: 0 dwellings).</p> <p>The proposal could fail to provide an appropriate mix of housing and significant need of some parts of the community could be unmet.</p> <p>The proposal could not make a contribution to the delivery of affordable homes and significant affordable housing need could be unmet.</p> <p>The proposal could have a significantly positive effect on minimising the impact of new development on existing traffic congestion e.g. a site in an area without existing traffic congestion.</p> <p>The proposal could offer significant support for the use of public transport e.g. a site that could deliver development within 500m of a bus stop or 1,000m of a train station.</p> <p>The proposal could provide significant support for safe walking and cycling e.g. development that could deliver a new, or improvement to an existing, greenway and /or deliver development within 400m of a settlement centre or 800m of a range of services and facilities.</p>

Objective	Decision making criteria	Effect	Illustrative Guidance for determining significance
		+	<p>The proposal could have a positive effect on minimising the impact of new development on existing traffic congestion e.g. a site in an area without high levels of existing traffic congestion.</p> <p>The proposal could offer support for the use of public transport e.g. a site that could deliver development within 1,000m of a bus stop or 2,000m of a train station.</p> <p>The proposal could provide support for safe walking and cycling e.g. development that could deliver a new, or improvement to an existing, greenway and /or deliver development within 800m of a settlement centre or 1,200m of a range of services and facilities.</p>
		-	<p>The proposal could increase the need to travel by less sustainable forms of transport, increasing road traffic and congestion eg a site remote from a settlement centre (eg in excess of 2,000m from a wide range of services) and/or in an area of existing traffic congestion.</p> <p>The proposal could not offer support for the use of public transport eg a site that could deliver development in excess of 2,000m from public transport services.</p>
		--	<p>The proposal could significantly increase the need to travel by less sustainable forms of transport, increasing road traffic and congestion.</p>
<p>7. To minimise contributions to climate change and consider climate change adaptation.</p>	<ul style="list-style-type: none"> ● Will it reduce emissions of greenhouse gases particularly CO₂? ● Will it increase energy efficiency? ● Will it increase the use of renewable energy? ● Will it ensure new development is in accessible locations in order to reduce the need for car use and / or encourage sustainable forms of transport? 	<p>++</p>	<p>The proposal could significantly reduce greenhouse gas emissions from the District.</p> <p>The proposal could significantly reduce energy consumption or increase the amount of renewable energy used / generated.</p> <p>The proposal could deliver development within 400m of a settlement centre or 800m of a range of services and facilities.</p>
		+	<p>The proposal could reduce greenhouse gas emissions from the District.</p> <p>The proposal could reduce energy consumption or increase the amount of renewable energy used / generated.</p> <p>The proposal could deliver development within 800m of a settlement centre or 1,200m of a range of services and facilities.</p>

Objective	Decision making criteria	Effect	Illustrative Guidance for determining significance
		-	<p>The proposal could lead to an increase in greenhouse gas emissions from the District</p> <p>The proposal could lead to an increase in energy consumption.</p> <p>The proposal could fail to support increase in the use of renewable energy.</p> <p>The proposal could deliver development in excess of 1,200m from a wide range of services and facilities.</p>
		--	<p>The proposal could lead to a significant increase in greenhouse gas emissions from the District.</p> <p>The proposal could lead to a significant increase in energy consumption.</p> <p>The proposal could lead to a decline in the contribution made by renewable forms of energy.</p> <p>The proposal could deliver development in excess of 2,000m from public transport and other services and facilities.</p>
8. To improve air quality.	<ul style="list-style-type: none"> ● Will it minimise emissions of airborne pollutants? ● Will it maximise the removal of air pollutants (e.g. by trees)? 	++	<p>The proposal could significantly improve air quality; result in air quality targets being met and/or the number of identified areas of poor air quality being reduced.</p>
		+	<p>The proposal could improve air quality.</p> <p>The proposal could contribute to improvements in air quality e.g. through delivery of significant soft landscape features.</p>
		-	<p>The proposal could lead to a decrease in air quality.</p> <p>The proposal could result in new development being located within 500m of an identified area of poor air quality.</p>
		--	<p>The proposal could lead to a decrease in air quality and could result in the extension to an identified area of poor air quality.</p> <p>The proposal could result in new development being located within an identified area of poor air quality.</p>

Objective	Decision making criteria	Effect	Illustrative Guidance for determining significance
<p>9. To reduce flood risk, protect and enhance water sources.</p>	<ul style="list-style-type: none"> ● Is new development directed towards areas of least flood risk? ● Will it reduce risk of flooding eg by encouraging the integration of mitigation measures such as SuDs into new development? ● Will it protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? ● Will it encourage water efficiency and demand management? 	<p>++</p>	<p>The proposal could significantly reduce flood risk to new or existing infrastructure or communities currently located in the 1 in 100 year floodplain (flood zone 3). The proposal could lead to a significant reduction of wastewater, surface water runoff and/or pollutant discharge so that the quality of groundwater and/or surface water could be significantly improved and all water targets could be met.</p> <p>The proposal could lead to a significant reduction in the demand for water from the District.</p>
		<p>+</p>	<p>The proposal could reduce flood risk to new or existing infrastructure or communities currently located in the 1 in 1,000 year floodplain (flood zone 2). The proposal could lead to a reduction of wastewater, surface water runoff and/or pollutant discharge so that the quality of groundwater and/or surface water could be improved so that some water targets could be met.</p> <p>The proposal could lead to a reduction in the demand for water from the District.</p>
		<p>-</p>	<p>The proposal could result in an increased flood risk within the 1 in 1,000 year floodplain (flood zone 2).</p> <p>The proposal could result in development being located in flood zone 2.</p> <p>The proposal could reduce flood risk to new or existing infrastructure or communities currently located in the 1 in 1,000 year floodplain (flood zone 2).</p> <p>The proposal could lead to an increase in the amount of wastewater, surface water runoff and/or pollutant discharge so that the quality of groundwater and/or surface water could be reduced. (This will apply in most cases if the site is greenfield).</p> <p>The proposal could lead to an increase in the demand for water from the District.</p>

Objective	Decision making criteria	Effect	Illustrative Guidance for determining significance
		--	<p>The proposal could result in an increased flood risk within the 1 in 100 year floodplain (flood zone 3).</p> <p>The proposal could result in development being located in flood zone 3.</p> <p>The proposal could lead to a significant increase in the amount of wastewater, surface water runoff and/or pollutant discharge so that the quality of groundwater and/or surface water could be decreased and water targets could not be met.</p> <p>The proposal could lead to a significant increase in the demand for water from the District.</p>
<p>10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European sites and SSSIs</p>	<ul style="list-style-type: none"> ● Will it protect and promote effective management of the district's sites of ecological and nature conservation importance? ● Will it help contribute to Staffordshire Biodiversity Action Plan objectives? ● Will it help deliver networks of biodiversity and green infrastructure? 	++	<p>The proposal could have a positive effect on European or national designated sites, habitats or species e.g. enhancing habitats, creating additional habitat or increasing protected species population.</p> <p>The proposal could create new habitat and link it with existing habitats or significantly improve existing habitats to support local biodiversity.</p>
		+	<p>The proposal could have a positive effect on regional or locally designated sites, habitats or species.</p> <p>The proposal could improve existing habitats to support local biodiversity.</p> <p>The policy could enhance the District's ecological and GI networks.</p>
		-	<p>The proposal could have negative effects on regional or locally designated sites, habitats or species e.g. short term loss of habitats, temporary loss of species, proposal within 100m of a designated site.</p> <p>The proposal could lead to short-term disturbance of existing habitat (including woodland) but could not have long-term effects on local biodiversity.</p> <p>The proposal could adversely affect the District's ecological and GI networks.</p>
		--	<p>The proposal could have a negative effect on European or national designated sites, habitats and/or protected species and these effects could not be reasonably mitigated.</p> <p>The proposal could have a significantly adverse effect on the District's ecological and GI networks.</p>

Objective	Decision making criteria	Effect	Illustrative Guidance for determining significance
<p>11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> ● Will it safeguard the best and most versatile agricultural land? ● Will it minimise the loss of greenfield land? ● Will it reduce land contamination / instability? ● Will it reduce the amount of derelict land? ● Will it protect notable geological and geomorphological features? 	<p>++</p> <p>+</p> <p>-</p> <p>--</p>	<p>The proposal could avoid the loss of agricultural land including the best and most versatile land.</p> <p>The proposal could result in significant development on brownfield land.</p> <p>The proposal could result in soil contamination being removed.</p> <p>The proposal could have major positive effects on protected geologically important sites.</p> <p>The proposal could result in development on brownfield or non agricultural land.</p> <p>The proposal could have positive effects on protected geologically important sites.</p> <p>The proposal could result in development on agricultural land in the countryside or ALC 4 or 5.</p> <p>The proposal could have minor negative effects on protected geologically important sites.</p> <p>The proposal could result in the loss of the best and most versatile agricultural land. ALC 1-3.</p> <p>The proposal could result in land contamination.</p> <p>The proposal could have major negative effects on protected geologically important sites.</p>
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> ● Will it reduce waste generation? ● Will it maximise the re-use of existing buildings? ● Will it increase the use of building materials from sustainable sources? 	<p>++</p> <p>+</p> <p>-</p>	<p>The proposal could reduce the amount of waste generated through prevention, minimisation and re-use.</p> <p>The proposal could enable the significant re-use of existing buildings.</p> <p>The proposal could enable the significant use of sustainable materials.</p> <p>The proposal could enable some re-use of existing buildings.</p> <p>The proposal could enable some use of sustainable materials.</p> <p>The proposal could involve the loss of existing buildings.</p> <p>The proposal could increase the demand for local resources.</p>

Objective	Decision making criteria	Effect	Illustrative Guidance for determining significance
		--	<p>The proposal could result in a significantly increased amount of waste going to landfill.</p> <p>The proposal could involve the significant loss of existing buildings.</p> <p>The proposal could significantly increase the demand for local resources.</p> <p>The proposal could result in inappropriate development within a Minerals Safeguarding Area.</p>
<p>13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.</p>	<ul style="list-style-type: none"> Will it ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Will it protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>++</p> <p>+</p> <p>-</p>	<p>The proposal could provide opportunities to enhance cultural and historic heritage assets (designated and non-designated assets) along with their settings.</p> <p>The proposal could offer potential to significantly enhance townscape character.</p> <p>The proposal could protect cultural and historic heritage assets (designated and non-designated assets) along with their settings.</p> <p>The proposal could offer potential to enhance townscape character.</p> <p>The proposal could lead to deterioration of cultural and historic heritage assets (designated and non-designated assets) or their settings.</p> <p>Proposal will effect designated heritage asset or it's setting (is within 100m) although it's effect maybe uncertain.</p>
<p>14. To protect and enhance the character and appearance of</p>	<ul style="list-style-type: none"> Will it protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? 	--	<p>The proposal could lead to a loss or significant deterioration of cultural and historic heritage assets (designated and non-designated assets) or their settings that could not be reasonably mitigated.</p> <p>The proposal could lead to new development that risked making a negative contribution to local character and distinctiveness.</p> <p>The proposal could offer potential to significantly protect and enhance landscape character in accordance with NCA profiles</p> <p>The proposal could avoid development within 1,000m of protected sites (e.g. Natura sites and SSSIs) and thus recreational and urbanisation pressures on such sites.</p>

Objective	Decision making criteria	Effect	Illustrative Guidance for determining significance
<p>the landscape including historic landscape and other natural assets and resources.</p>	<ul style="list-style-type: none"> Will it promote development on brownfield land? Will it safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>+</p>	<p>The proposal could offer potential to protect and enhance landscape character in accordance with NCA profiles. The proposal could avoid development within 400m of protected sites (e.g. Natura sites and SSSIs).</p> <p>The proposal could have an adverse effect on landscape character or an area of historic landscape value that could not be reasonably mitigated. The proposal has potential for an adverse effect on a site of local importance such as ancient woodland that could not be reasonably mitigated.</p> <p>The proposal is on a greenfield site in the countryside.</p>
<p>15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.</p>	<ul style="list-style-type: none"> Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	<p>++</p> <p>+</p> <p>-</p> <p>--</p>	<p>The proposal could have a significant adverse effect on landscape character or area of historic landscape value that could not be reasonably mitigated. The proposal could result in development within proximity of protected sites (e.g. Natura sites and SSSIs) and could result in recreational and urbanisation pressures on such sites that could not be reasonably mitigated.</p> <p>The proposal could support opportunities for investment in culture and tourism that could result in significant positive effects on the local economy.</p> <p>The proposal could support opportunities for investment in culture and tourism that could result in positive effects on the local economy.</p> <p>The proposal could have negative effects on potential investment in culture and tourism that could result in negative impacts on the local economy.</p> <p>The proposal could have significantly negative effects on investment in culture and tourism that could result in significant negative impacts on the local economy.</p>

Objective	Decision making criteria	Effect	Illustrative Guidance for determining significance
<p>16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy</p>	<ul style="list-style-type: none"> ● Will it safeguard shops and services in existing centres? ● Will it safeguard and improve the retail, leisure and service provision? 	<p>++</p> <p>+</p> <p>-</p> <p>--</p>	<p>The proposal could significantly enhance the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services.</p> <p>The proposal could enhance the vitality and viability of the District's towns and villages contributing to the safeguarding and improvement of shops and services.</p> <p>The proposal could have an adverse effect on the vitality and viability of the District's towns and villages, leading to the decline of shops and services.</p> <p>The proposal could have a significantly adverse effect on the vitality and viability of the District's towns and villages, leading to significant decline in shops and services.</p>
<p>17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth</p>	<ul style="list-style-type: none"> ● Will it provide a balanced portfolio of employment land in sustainable locations? ● Will it provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	<p>++</p> <p>+</p> <p>-</p> <p>--</p>	<p>The proposal could significantly encourage investment in businesses, people and infrastructure which could lead to a strengthened and more diversified economy, e.g. it could deliver over 1ha of employment land within 20 minutes travel time of a main population centre.</p> <p>The proposal could encourage investment in businesses, people and infrastructure which could lead to a strengthened and more diversified economy. The proposal could provide accessible employment opportunities.</p> <p>The proposal could have a negative effect on business, the local economy and local employment, e.g. it could lead to the closure or relocation of existing business, or the loss of employment land.</p> <p>The proposal could have a significant negative effect on business, the local economy and local employment, e.g. it could lead to the closure or relocation of significant businesses, the loss of over 1ha of employment land or negative impact on key sectors of the economy (e.g. knowledge-based; advanced manufacturing).</p>

Objective	Decision making criteria	Effect	Illustrative Guidance for determining significance
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> ● Will it meet the employment needs of local people? ● Will it increase economic activity levels? ● Will it improve physical accessibility to jobs? ● Will it support higher income levels for local residents? 	<p>++</p> <p>+</p> <p>-</p> <p>--</p>	<p>The proposal could facilitate the delivery of new employment opportunities, or residential development in close proximity to existing local employment provision e.g. within 500m or 10 minutes travel time by walk/cycle/bus/rail.</p> <p>The proposal could facilitate the delivery of new employment opportunities, or residential development e.g. within 1,000m or 30 minutes travel time of existing local employment provision by walk/cycle/bus/rail.</p> <p>The proposal is unlikely to contribute to the employment needs of local people e.g. by delivering development beyond 1,000m and 30 minutes travel time by walk/cycle/bus/rail.</p> <p>The proposal could fail to meet the employment needs of local people e.g. by delivering development beyond 1,500m and 30 minutes travel time by walk/cycle/bus/rail.</p>

Table 3.5 Definitions of significance

Consultation requirements for the sustainability appraisal

The SEA Directive requires that

... “ authorities with relevant environmental responsibilities and the public ... shall be given an early and effective opportunity within appropriate time frames to express their opinion on the draft plan ... and accompanying environmental report...”

3.31 This draft SA report is being consulted on alongside the Staffordshire Moorlands Local Plan - Preferred Options document July 2017. The consultation includes the statutory environmental organisations Natural England, Historic England and the Environment Agency, as required by the SEA Directive, alongside a wide range of other stakeholders and community organisations.

3.32 An Initial Sustainability Appraisal Report was published for formal public consultation alongside the Staffordshire Moorlands Preferred Option Sites and Boundaries document between 28th April and 13th June 2016. Comments received during this consultation, and the Council's response, are set out in section 11 of this report.

3.33 Consultation has also previously been undertaken on the scope and level of detail of the sustainability appraisal through consultation on the SA Scoping Report held between 13th August 2014 and 26th September 2014. Seeking the views of the statutory environmental organisations on the scope and level of detail to be included in the Environmental Report is also a requirement of the SEA Directive.

SA Scoping stage

4 SA Scoping stage

The SEA Directive requires

an environmental report to include ... “An outline of the plan’s relationship with other relevant plans and programmes”.

“The relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan or programme”.

“The environmental characteristics of those areas likely to be significantly affected”.

“Any existing problems which are relevant to the plan or programme including, in particular, those relating to any areas of a particular environmental importance such as areas designated pursuant to Council Directive 79/409/EEC on the conservation of wild birds and Habitats Directive”.

“The environmental protection objectives, established at international, Community or Member State level, which are relevant to the plan or programme and the way those objectives and any environmental considerations have been taken into account during its preparation”.

4.1 This stage of the sustainability appraisal (shown as stage A in Table 3.1) involves compiling background information needed before a sustainability appraisal can be undertaken. It established an evidence base for ongoing appraisal work and culminated in a framework of sustainability objectives.

4.2 Key tasks in this evidence compilation included:

- identifying relevant policies, plans and programmes;
- collecting baseline information;
- identifying key sustainability issues in the plan area;
- establishing sustainability objectives.

4.3 This evidence base work was subject to a period of public consultation held on the SA Scoping Report between 13th August 2014 and 26th September 2014 as part of a continuing baseline review taking place alongside preparation of the emerging Staffordshire Moorlands Local Plan. An SA Scoping Report was originally produced in 2006 and updated in 2007 to form the basis for assessing the Council's Local Development Framework.

4.4 The SA Scoping Report forms part of the environmental report required by the SEA Directive. The scoping work is subject to continual review as evidence becomes outdated and new information made available. This helps to ensure that effects prediction and evaluation remains accurate and consistent.

4.5 The key elements of the Scoping Report are described below, and the full version can be viewed online at:

<https://www.staffsmoorlands.gov.uk/article/2861/Sustainability-Appraisal>

Relationship with other plans and programmes (policy context) and baseline evidence

4.6 A thorough review was undertaken of other relevant plans, policies and programmes and this was presented in the Scoping Report. The purpose of this was to meet the requirement of the SEA Directive to take account of environmental protection objectives and to gather other information that would influence options to be considered in plan preparation.

4.7 This review studied a range of international, national, regional and local documents that should be taken into account during the preparation of the Local Plan.

4.8 This was followed by a thorough review of the sustainability "baseline" in the Staffordshire Moorlands plan area. The baseline identifies what is currently happening in Staffordshire Moorlands and the likely future state of the area if current trends were to continue. It provides the basis for predicting and monitoring effects and helps to identify sustainability problems and alternative ways of dealing with them.

Key sustainability issues

4.9 The review of plans, policies and programmes, and baseline research as described above, has enabled the identification of key sustainability issues in Staffordshire Moorlands (including environmental problems as required by the SEA Directive).

4.10 Sustainability issues can be any problems or uncertainties which need to be understood and addressed before the Local Plan can be considered sustainable. On the basis of the issues identified, sustainability appraisal objectives have been defined which are used to test how likely the proposals in the Local Plan and alternative options are to lead to sustainable outcomes.

Sustainability appraisal framework

4.11 The Sustainability Appraisal Framework consists of sustainability objectives which provide a way in which the effects of the Local Plan can be described, analysed and compared. These objectives were developed as a result of the review of other plans and programmes and baseline, consultation responses and from the identified sustainability issues, in particular.

4.12 Sustainability appraisal objectives are different in concept and purpose from the objectives of the Local Plan, though there is a degree of overlap. The objectives are listed in table 4.2 at section 4.1, paragraph 4.16 and form the basis of the appraisal. The full framework includes detailed "decision aiding criteria"; these criteria help to ensure that all the key issues are included in the framework.

Comments received on the SA Scoping Report

4.13 The SA Scoping Report was consulted on for six weeks between 13th August 2014 and 26th September 2014. Seven organisations made comments and these are summarised in the table below.

4.14 Where possible comments have been taken on board during the preparation of this SA Report July 2017. Other comments, including the identification of additional plans and programmes, will be addressed when a revised Scoping Report is published.

4.15 Details of the responses received and the Council's actions in the light of responses is set out in the table below.

Organisation	Summary of Response	Action
Staffordshire Police	Welcomes that ' crime ' has been identified as a sustainability issue and that there is a recognition within the local authority that 'New developments need to create safe public and private environments and include 'designing out crime' initiatives' and that objective (No.4) 'To minimise opportunities for crime and reduce the fear of crime' is proposed to reflect this. Seeking to fulfil this objective helps satisfy the obligation within Section 17 of the Crime and Disorder Act 1998 placed on all local authorities 'to exercise their functions with due regard to their likely effects on crime and disorder, and to do all they reasonably can to prevent crime and disorder' .	Support noted.
Staffordshire Police	With regard to the local authority's recognition for the need to include ' designing-out crime initiatives', the local authority could do no better than embrace Secured by Design and require all new developments to be built and accredited to Secured by Design.	Core Strategy Policy DC1 – Design Considerations states that new development should incorporate 'designing-out crime initiatives'. Add reference to Plans, Policies and Programmes list in Appendix 1.
English Heritage	Mitigation measures are mentioned throughout the document, how will any mitigation measures be included within the Local Plan? Consider inserting a statement to set out how this will be dealt with. We would encourage mitigation measures to be incorporated within the Local Plan itself, in policy wording and justification text.	Agree. Include reference in the scoping report to clarify that mitigation measures will be incorporated within the Local Plan, in policy wording and justification text.
Environment Agency	Flood Risk: The ability of the WFD waterbodies to meet their required status by 2027 could be affected by growth. The ability of the existing sewerage infrastructure and water environment to accommodate	Agree. Include this within the sustainability issues.

Organisation	Summary of Response	Action
	the proposed levels of growth should be reflected within this section.	
Environment Agency	Objective 9: summarises the SA objectives identified for the plan. Although we welcome Point 9 (to reduce flood risk and protect water resources) we recommend that Point 7 (to minimise contributions to climate change) is expanded to also include climate change adaptation, as there are other climate change impacts that should be considered within the plan.	Accepted. Amend Objective 7 to reflect to include reference to climate change adaptation.
Environment Agency	<p>We have reviewed Appendix 1 and welcome the inclusion of the EU Water Framework Directive (WFD) and corresponding Humber River Basin Management Plan (RBMP).</p> <p>Suggest including the following.</p> <ul style="list-style-type: none"> • River Trent Catchment Flood Management Plan (CFMP) 2010 produced by the Environment Agency - these give an overview of the flood risks across different catchments and ensure that works/development affecting flooding are coordinated between all parties. • Staffordshire Preliminary Flood Risk Assessment (PFRA) (2011) - The Preliminary Flood Risk Assessments (PFRAs) provide a high level summary of significant flood risk from surface water, ordinary watercourses and groundwater through collection of information on past (historic) and future (potential) floods. They are a requirement of the Flood Risk Regulation 2009 and must be produced every 6 years. • Shropshire and Staffordshire Local Flood Risk Management Strategy (2014) - currently out for consultation - This Local Flood Risk Management Strategy (LFRMS) offers an opportunity for Staffordshire County Council (as Lead Local Flood Authority) to formalise their longer term vision and shape individual priorities that deliver the greatest benefit to the people, property and environment of Staffordshire. 	Comments noted. Agreed that the other documents can be referenced in Appendix 1.
Environment Agency	We have reviewed Appendix 2 and note that there is no reference to baseline data relating to the WFD waterbodies that flow through your district. The ability of these waterbodies to meet their required status by 2027 could be hindered by growth, and it should be	Noted. SA to be updated accordingly.

Organisation	Summary of Response	Action
	<p>ensured that the plan is able to mitigate for this risk and ensure that watercourses are retained at or returned to their most natural possible condition. Please see the attached spreadsheet and map which shows the waterbodies affecting your district, their current status and their required future status.</p>	
Environment Agency	<p>Under the housing and employment sections we note section 5 (flood risk) and the criteria of classifying developments 1-4 according to their location in relation to the floodplain. We note that Floodzone 3b is not specified here. In line with Table 2 of the NPPG residential and employment development is not considered appropriate within this zone, therefore sites at this level of risk should be thinned out as part of the SHLAA process and not be further considered as allocations. In light of this, we find exclusion of a reference to FZ3b acceptable.</p>	Noted. Site assessment methodology reviewed.
Environment Agency	<p>We also welcome the inclusion of criteria 9 (physical infrastructure including sewerage and water provision). We note this alludes to findings of the Development Capacity Study, which summarises a number of infrastructure requirements under the red amber green system. We recommend that sewerage infrastructure is singled out under its own criteria, in order to highlight the site's potential impact on the pollution of the water environment. Development in locations where there is the availability of public main foul sewer should be considered in preference to those where connection is not feasible, as it is these sites that will pose the greatest risk of pollution of the water environment as any treated effluent will discharge directly into the water environment (either groundwater or rivers). Data for this would be provided by a WCS if the Development Capacity Study does not provide this level of detail.</p>	Noted. Site assessment methodology reviewed.
Environment Agency	<p>Criteria 11 assesses contamination. We welcome the high scoring of contaminated sites, as these provide unique opportunities for the remediation of any underlying contamination and therefore protection and improvement of the water environment (as required under WFD).</p>	Noted. Site assessment methodology reviewed.
Environment Agency	<p>With regards to the criteria for gypsy and traveller sites, we draw your attention to Table 2 of the NPPG that states that such a land use is not suitable for sites within Flood Zone 3, and only suitable in Flood Zone 2 in exceptional circumstances. Sites affected by Flood Zone 3 (3a or 3b) should be thinned out prior</p>	Noted. Site assessment methodology reviewed.

Organisation	Summary of Response	Action
	to consideration by sustainability appraisal as being contrary to national policy. The scoring criteria should therefore be reconsidered in light of the high vulnerability of this land use.	
Natural England	Soil and Agricultural Land: No mention if an assessment has been undertaken to determine the quality of soil and agricultural land. Digital ALC data is available from Natural England and sufficient site specific data should be available to inform decision making.	Add section referring to Soil and Agricultural Land.
Natural England	Landscape: Pleased the landscape section has highlighted that District adjoins the PDNP. Suggest the baseline incorporates the South West Peak, White Peak and Potteries and Churnet Valley National Character Areas (NCAs) which fall within the Staffordshire Moorlands. NCA profiles provide an invaluable resource for understanding wider landscape context, and highlighting opportunities for enhancement of the natural environment.	Agree. Add reference to these in the baseline information and Plans, Policies and Programmes list in Appendix 1.
Natural England	Access and Recreation: Access to the countryside is not included as a topic. NE encourages any proposal to incorporate measures to help encourage people to access the countryside for quiet enjoyment. Relevant aspects of local authority green infrastructure strategies should be incorporated where appropriate. The SA should also consider Green Infrastructure.	Agree that Access to the Countryside could be included as a topic. Green Infrastructure is considered within Objective 10 but could also be considered within Objectives 1 and 6.
Natural England	Insert a reference to the historic environment within the ' cumulative impacts ' section on page 15/16 and assess what impacts could arise for the historic environment.	Accepted. Add reference to historic environment within this section.
Natural England	Objective 6: NE are pleased that there is an objective to encourage sustainable links between rural areas and towns. However strongly recommends that that an objective is included which seeks to protect and improve access to the natural environment.	Consider that this can be considered within Objective 6 by adding a question under decision making criteria within Appendix 3.

Organisation	Summary of Response	Action
Natural England	Objective 10: The Moorlands has a number of internationally designated nature conservation sites and locally protected sites. There should therefore be an objective to test the plan's policies and proposals on European sites and SSSIs.	Agreed. Amend Objective 10 to reflect this.
Natural England	Objective 11: This could be improved to be more specific to protecting the best and most versatile agricultural land.	Agreed. Amend Objective 11 to reflect this.
Natural England	Objective 14: This could be strengthened by making reference to protected sites and could incorporate links to the NCA objectives.	Agreed. Add a question under decision making criteria within Appendix 3 making reference to protected sites and natural environment.
Natural England	Suggest that Biodiversity 2010 and neighbouring local plans could be considered in the SA context.	Add references to Plans, Policies and Programmes list in Appendix 1.
Natural England	The baseline data should consider the presence of Protected species and Priority species (including Annex1 birds and regularly occurring migratory birds). Site allocations within the local plan could affect habitats that support either domestic or European Protected Species. Areas that are known to be wildlife habitats or corridors should be highlighted and scoped into the SEA to be considered.	Noted.
Natural England	We have highlighted above data that could further inform the baseline in relation to protected species, soils, landscape and access to nature.	Comments noted.
Natural England	Objective 10: 'Will it help to deliver the findings of the Appropriate Assessment?' It is not clear what this indicator is setting out to achieve. An Appropriate Assessment is a stage within the Habitat Regulation process to assess whether a plan or project is likely to have adverse impacts on a European site. Complying with the Appropriate Assessment is therefore a requirements under the Habitat Directive. Natural England recommends an indicator that would encourage benefits to the natural environment for example;	Agreed that this is a requirement under the Habitat Directive. Amend Appendix 3 to reflect comments and add suggested indicator.

Organisation	Summary of Response	Action
	<p>“% of new developments incorporating ecological enhancement measures per year”.</p>	
<p>Natural England</p>	<p>Natural England is concerned that the site appraisal process does not give sufficient weight to the natural environment, in particular designated sites. The SA states that European designated sites (also commonly referred to as Natura 2000 sites), fall within your Authority boundary. European sites are afforded protection under the Conservation of Habitats and Species Regulations 2010, as amended (the ‘Habitats Regulations’). In considering European sites of interest, Natural England advises that you, as a competent authority under the provisions of the Habitats Regulations, should have regard for any potential impacts that a plan or project may have. The Conservation objectives for each European site explain how the site should be restored and/or maintained and may be helpful in assessing what, if any, potential impacts a plan or project may have.</p> <p>European sites are also notified at national level as Sites of Special Scientific Interest (SSSI). Natural England notes that criteria 4 ‘protected land’ is split into two themes ‘green belt’ and ‘nature conservation sites’ Natural England is concerned that Green Belt is given greater weighting in terms of scoring than Nature Conservation sites. This could lead to pressure being created to allocate sites for housing within or adjacent to international / national designated sites and therefore have the potential to affect their interest features. It is also important to be aware that housing development can have indirect impacts on protected sites for e.g. a housing site adjacent to a designated could have impacts on its interest features via recreational disturbance and ‘urban edge’ effects etc. In line with the NPPF paragraph 113 , distinctions should be made between the hierarchy of international , national and local sites. This therefore need to be reflected in the assessment criteria when scoring potential development sites again designated sites.</p>	<p>Site appraisal methodology reviewed.</p>
<p>Historic England</p>	<p>Landscape: Information from the historic character assessment could be included here.</p>	<p>Agree. Add separate paragraph into landscape section regarding this.</p>

Organisation	Summary of Response	Action
Historic England	Historic Assets: Request amending 'historic assets' to read 'heritage assets'. We would encourage including some additional information in this section, such as referencing the HER, numbers of assets (designated and non-designated assets), the availability of conservation area appraisals and management plans as examples.	Agree. Amend title and add additional information as suggested.
Historic England	Objectives 13 & 14. We support the inclusion of specific objectives within the SEA for the historic environment considering both buildings and landscape. Include reference to the need to protect, conserve and enhance the significance of heritage assets, which includes their setting. Ensure that the objective relates to both designated and non-designated assets.	Objective 13 refers to the setting of heritage assets. An amendment can be made to the question under decision making criteria within Appendix 3 to refer to non-designated assets.
Historic England	Objective 15: Consider using the term heritage. The section title references 'local distinctiveness', we would encourage including this term within the objective.	Agreed. Add references to heritage and local distinctiveness.
Historic England	Include monitoring indicators that reflect the historic environment. The English Heritage SEA guidance, link included below, includes monitoring examples that may be useful.	Accepted.
Historic England	Support the reference to conservation area appraisals, historic environment characterisation, landscape and settlement character appraisals. Also encourage the inclusion of the Historic Environment Record, Heritage Legislation and National Planning Policy Guidance.	Support noted.
Historic England	Appendix 2 amend 'historic assets' to read 'heritage assets' and 'historic Parks and Gardens' to read 'Registered Parks and Gardens'. Include information from the Historic Environment Record on a wider range of issues including archaeology and non-designated assets. Reference other historic environment evidence base such as conservation area appraisals and management plans within this section. Consider including a reference to locally important listings, if applicable.	Noted. SA will be updated accordingly.

Organisation	Summary of Response	Action
Historic England	Page 29 on site assessments consider how an assessment of the impacts/harm to the historic environment, as a result of development/site allocations, could be included within this process. Any potential sites for allocation would have to undergo a heritage impact assessment.	SA methodology reviewed and assessment commissioned.
Historic England	Appendix 4 regarding site assessment criteria scores highly where development is not within or adjacent to heritage assets such as conservation areas. However, if development is appropriate and takes account of the historic environment then it is possible for development to protect, conserve and/or enhance heritage assets. The NPPF states that sustainable development within a conservation area could better reveal its significance.	SA methodology reviewed.
Historic England	Within Appendix 4 and between the different uses – housing/employment/travellers sites there are different criteria that are applied; this should be a consistent approach. Consider this approach during the site assessment process. The important issue is to consider what impacts/harm to the historic environment could result from development and how they can be avoided/ mitigated. A heritage impact assessment would be a beneficial tool.	SA methodology reviewed and assessment commissioned.
Historic England	Sources at the end of the assessment criteria should reference historic environment sources such as the HER and other documents of relevance.	Noted.
Staffordshire County Council	The three Extensive Urban Survey (EUS) for Alton, Cheadle and Leek should be included within Chapter 2 paragraph 2.4 under the heading “Historic Assets” alongside the reference to the Historic Environment Character Assessment (HECA). The EUS also considers the impacts of change on the historic environment of the District’s three medieval towns in greater detail than that provided within the HECA. The emerging English Heritage and SCC guidance on the sustainable reuse of historic farm buildings and sympathetic new build on historic farmstead complexes is a county-wide guidance document which has particular resonance in the Staffordshire Moorlands. This guidance lays a methodology for the preliminary assessment of historic farm buildings/complexes by applicants and for discussion with local planning officers. The aim of this approach is to enable early discussion and the development of appropriate and sustainable proposals which promote the conservation of historic farm complexes through their sustainable	Noted.

Organisation	Summary of Response	Action
	<p>reuse and the deployment of appropriate new build to reflect the area and the site's inherent historic character.</p> <p>The section on 'Historic Assets' considers (in sentence 2) the range of heritage assets, many of which are statutorily protected including '...buildings, gardens and structures'; this sentence must also include reference to archaeological remains (such as the Scheduled Bury Bank hillfort). This section should also recognise that the unique character of heritage assets may comprise a range of individual elements, for example Alton Castle is a Grade I Listed Building, but is also a Scheduled Monument which also incorporates medieval earthworks, structural remains and below ground archaeological remains within its bounds. The castle also represents an important landscape feature.</p> <p>The majority of heritage assets are not however statutorily protected and instead receive consideration as part of the planning process. The nature of below ground archaeological remains means that their presence and significance is often not fully understood before they are encountered. As such there is the potential for non-scheduled nationally important remains to be present. Sustainability in this context requires early discussions (and in some circumstances investigations) where development may impact upon such sensitive remains to develop appropriate strategies to ensure the conservation and enhancement of such remains.</p>	
Staffordshire County Council	<p>There are errors in the Biodiversity, Flora and Fauna section in 2.4. Geodiversity should be added. Nationally designated sites are not referenced. It should be made clear that the data from Defra for area of designated sites in favourable condition relates only to SSSIs. Staffordshire Wildlife Trust may be able to supply data on local sites. This will show a much lower proportion of local sites in favourable condition than SSSIs. Condition of designated habitats is therefore an issue, associated with agricultural practices and economy. This section is limited to designated sites. Reference to ecological connectivity, in line with Natural Environment White Paper and the NPPF is required. An issue in Moorlands, as elsewhere, is addressing fragmentation of habitats and facilitating and encouraging improvements in habitat connectivity. Reference to biodiversity opportunity mapping would be relevant here and to the Churnet Valley Living</p>	Noted. SA will be updated accordingly.

Organisation	Summary of Response	Action
	Landscapes Project which includes objectives for enhancing ecological connectivity. Moorlands includes a significant survival of species-rich grassland – one of the most threatened and declining habitats nationally – while the Churnet Valley supports a significant area of ancient woodland and the district supports important moorland habitats - this could be recognised including the role these surviving habitats play in attracting visitors.	
Staffordshire County Council	Should be an objective to deliver more extra care units in line with the Flexicare Strategy. SCC keep a database which could be used for monitoring purposes.	Agree. Add extracare into Objective 5 and include a monitoring indicator.
Staffordshire County Council	Support monitoring of SA 13 but what is the indicator measuring, total number, condition, number of designated heritage assets considered 'at risk'?	Noted.
Staffordshire County Council	Biodiversity, Flora and Fauna: Reference to Appropriate Assessment may not be required – if this is not fully met a proposal/site should be refused. Legal requirements mean that this cannot be balanced against other objectives/criteria. If it is included the objective should be that impacts on Europa 2000 sites are fully avoided. Reference to meeting/contributing to objectives of the Water Framework Directive should be made. Reference to contributing to Staffordshire Biodiversity Action Plan objectives would be welcomed. Thought could be given to an indicator of contribution to ecological connectivity. Connectivity mapping can be carried out for some habitats.	Noted and SA will be updated accordingly.
Staffordshire County Council	SA 3. Access to natural green space could be added as an indicator. There is much evidence that this is an indicator for physical and mental health.	Noted and SA will be updated accordingly.
Staffordshire County Council	There is no mention of Veteran or Ancient trees within the documentation. These are highlighted in the NPPF and therefore should be reflected in local documentation. This is a difficult asset, in that they are often not recorded, however due to their cultural and ecological importance, once lost cannot be replaced. An indicator would be through data collection and safeguarding through the Planning Process. Soil and Material Assets. A better indicator for geological sites would be condition rather than area.	Noted and SA will be updated accordingly.

Organisation	Summary of Response	Action
Staffordshire County Council	<p>Objective 2 covers access to education and minimising distance to travel. However, we feel that this does not take into account the capacity of nearby schools or the potential for new sites to provide additional facilities. Therefore, the indicators should be updated to include the number of school places created and the distance of new housing to school sites. The School Organisation Team at the County can provide data annually on new school places created for monitoring purposes.</p>	Noted and SA will be updated accordingly.
Staffordshire County Council	<p>Appendix 1 should also include the following policies and documents relating to Cultural Heritage. Under International/European Context the relevancy of the European Landscape Convention (2000), Florence and the Convention for the Protection of the Archaeological Heritage of Europe (1992), Valletta should be considered. Under Local/Sub-Regional Context the three Extensive Urban Surveys (EUS), for Alton, Cheadle and Leek, should be included. This appendix should also identify the emerging EH/SCC guidance concerning the sustainable reuse of historic farmsteads. While a county-wide document, this does have particular relevant to the Staffordshire Moorlands where many important early farm buildings and complexes survive.</p>	Noted and SA will be updated accordingly.
Staffordshire County Council	<p>International: The EU Green Infrastructure Strategy should be referred to: EU-wide strategy on Green Infrastructure: Enhancing Europe's Natural Capital. The EU Water Framework Directive should be listed.</p> <p>National: The UK Biodiversity Strategy: Biodiversity 2020: A strategy for England's wildlife and ecosystem services should be cited. The White Paper on the Natural Environment: The Natural Choice- Securing the Value of Nature should be cited. The Conservation of Habitats and Species Regulations 2010 and the Natural Environment and Rural Communities Act 2006 should be referenced. Reference to the Wildlife and Countryside Act is incorrect. This should read The Wildlife and Countryside Act 1981 (as amended).</p>	Noted and SA will be updated accordingly.
Staffordshire County Council	<p>European context: The European Landscape Convention (Florence 2002): Landscape is an important part of the quality of life for people everywhere: in urban areas and in the countryside. It sets, as part of its principle aims, the promotion of landscape protection, management and planning, to be implemented through; recognising landscapes in</p>	Noted and SA will be updated accordingly.

Organisation	Summary of Response	Action
	<p>law as an essential component of peoples surroundings, to establish and implement landscape policies aimed at landscape protection, management and planning, and to integrate landscape into regional and town planning policies as well as any other policies with possible direct or indirect impact on landscape. It advocates a landscape character approach to informing planning decisions.</p> <p>Local / Sub Regional: Planning For Landscape Change: Supplementary Planning Guidance to the Staffordshire and Stoke on Trent Structure Plan 1996-2011 or its successor document. Incorporates landscape character assessment for Staffordshire and provides guidance on protection, management and planning of Staffordshire's Landscapes. This document is currently being reviewed and updated.</p>	
Staffordshire County Council	Consider that further emphasis needs to be placed on extracare (flexicare) housing for elderly in the baseline information . Raft of data available from the Flexicare Strategy.	Noted and SA will be updated accordingly.
Staffordshire County Council	<p>In Appendix 2 the three Extensive Urban Surveys (EUS) for Alton, Cheadle and Leek should be included within Column 2 under the heading "Historic Assets". The Staffordshire Historic Environment Character Assessment (2010), which is included in the list, deliberately excluded an assessment on the historic character and heritage assets of the built areas of these three settlements because they would be considered in greater detail by the EUS project. The EUS project is now complete and the reports for Alton (February 2013), Cheadle (June 2012) and Leek (December 2011) can be found on the Staffordshire County Council website. Column 2 "Historic Assets" should also include reference to non-designated heritage assets (monuments, buildings (which includes the non-designated traditional farmsteads which are the subject of the guidance mentioned above) and landscapes). Under column 1 "Historic Assets" reference should also be made to the Staffordshire Historic Environment Record (HER), which is held by Staffordshire County Council.</p>	Noted and SA will be updated accordingly.
Staffordshire County Council	The data for biodiversity is limited to designated sites, Data is held by Staffordshire Ecological Record on habitats and species of principal importance for biodiversity. Quantified habitat areas could be cited as could the number of species recorded in the	Noted and SA will be updated accordingly.

Organisation	Summary of Response	Action
	<p>District. The Biodiversity Opportunity Mapping should be cited. It should be made clear that the data from Defra for area of designated sites in favourable condition relates only to SSSIs. Staffordshire Wildlife Trust may be able to supply data on local sites. It is not clear whether all ancient woodland is captured through SSSI datasets, this is available through the Inventory of Ancient semi Natural Woodland and this is not referenced in Appendix 2, which may result in some fragmented areas of woodland not being captured in this piece of work. It is common place to set parameters that will prevent the loss of ASNW, therefore without the baseline; there is a missed opportunity to use this commonly used target. Planning For Landscape Change: Supplementary Planning Guidance to the Staffordshire and Stoke on Trent Structure Plan 1996-2011 or its successor document. This provides landscape character assessment and guidance on protecting and managing landscapes.</p>	
Staffordshire County Council	Appendix 4 does not appear to take into account the results of either the Staffordshire Historic Environment Character Assessment or the Extensive Urban Survey.	SA methodology reviewed.
Staffordshire County Council	Protected land: B) Nature Conservation Site/ TPO should refer to SAC, SPA, SSSI and habitats of principal importance. Could, for residential allocations , accessible natural green space within 300 metres be included as a positive in line with Natural England targets?	SA methodology reviewed.
Staffordshire County Council	The site appraisal criteria set out the capacity of social infrastructure as a theme, which includes education stating sites should not have an adverse impact. However, it is not clear how the appraisal scores sites that can have a positive impact, for example by providing land for new school provision if required. We therefore suggest that this should be factored into appraisal criteria as it likely that new school sites will be needed in the District to cater for new housing growth.	SA methodology reviewed.
United Utilities	Objective 7: support objective regarding climate change.	Comment noted.
United Utilities	Objective 9: support objective regarding water.	Comment noted.

Table 4.1 Summary of consultation responses and action taken

4.1 Sustainability Appraisal Framework

4.16 The Table below sets out the SA Framework used in the appraisals. The objectives and indicators have been revised in the light of consultation responses received during the period of public consultation held on the SA Scoping Report between 13th August 2014 and 26th September 2014.

Objective	SEA Topic	Decision making criteria	Indicator
SOCIAL			
Population, Human Health and Social Inclusiveness			
<p>1. To improve community cohesion and the quality of where people work and live.</p>	<p>Population and Human Health</p>	<ul style="list-style-type: none"> • Will it make a positive contribution towards community cohesion? • Will it improve neighbourhood quality? • Will it ensure that there is adequate open space and support Green Infrastructure? • Will it minimise light and noise pollution? • Will it ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	<ul style="list-style-type: none"> • Area of open space. (SMDC, Annual Monitoring Report)
<p>2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.</p>	<p>Population and Human Health</p>	<ul style="list-style-type: none"> • Will it remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? • Will it help to minimise the distance people need to travel to access education, 	<ul style="list-style-type: none"> • Job Seekers Allowance Claimant Count Aged 18 – 24 (nomisweb) • Incidents of crime per 1,000 Population • Fear of Crime (Office for National Statistics) • Number of affordable houses competed

Objective	SEA Topic	Decision making criteria	Indicator
		employment, shopping and other key services and facilities.	<ul style="list-style-type: none"> • % of new residential development completed within Towns / Large Villages/ Small Villages/ Other Rural Areas (SMDC) • Number of school places created (School Organisation Team, SCC)
3. To improve health and reduce health inequalities.	Population and Human Health	<ul style="list-style-type: none"> • Will it improve health or access to health facilities? • Will it promote healthy lifestyles? • Will it reduce health inequalities? • Will it provide opportunities to participate in leisure and recreational activities including access to the countryside? 	<ul style="list-style-type: none"> • Life expectancy (Public Health England) • Adult Obesity (Public Health England) • Adult participation in sport (Sport England Active People Data)
4. To minimise opportunities for crime and reduce the fear of crime.	Population and Human Health	<ul style="list-style-type: none"> • Will it reduce actual levels of crime? • Will it reduce fear of crime? 	<ul style="list-style-type: none"> • Incidents of crime per 1,000 Population • Fear of Crime (Office for National Statistics)
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	Population and Human Health	<ul style="list-style-type: none"> • Will it provide an appropriate mix of housing to enable all needs to be met? • Will it enable people to meet their needs within their existing communities? • Will it ensure that people can afford their housing? 	<ul style="list-style-type: none"> • Number of affordable houses competed • No of years supply of deliverable housing sites (SMDC, Annual Monitoring Report) • No of extra care units delivered (SCC)

Objective	SEA Topic	Decision making criteria	Indicator
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	Population and Human Health	<ul style="list-style-type: none"> Will it minimise impacts on existing traffic congestion? Will it support the use of public transport? Will it support safe walking and cycling? Will it protect and improve access to the natural environment and support Green Infrastructure? 	<ul style="list-style-type: none"> Frequency of bus service (by settlement) (Staffordshire County Council) % of new residential development completed within Towns / Large Villages/ Small Villages/ Other Rural Areas (SMDC)
ENVIRONMENTAL			
Climate Change, Air and Water			
7. To minimise contributions to climate change and consider climate change adaptation.	Air and Climatic Factors	<ul style="list-style-type: none"> Will it reduce emissions of greenhouse gases particularly CO₂? Will it increase energy efficiency? Will it increase the use of renewable energy? Will it ensure new development is in accessible locations in order to reduce the need for car use and / or encourage sustainable forms of transport? 	<ul style="list-style-type: none"> % of new residential development completed within Towns / Large Villages/ Small Villages/ Other Rural Areas (SMDC) CO₂ total emissions (National Atmospheric Emissions Inventory) Amount of renewable energy generation by installed capacity and type (SMDC, Annual Monitoring Report)
8. To improve air quality.	Air	<ul style="list-style-type: none"> Will it minimise emissions of airborne pollutants? Will it maximise the removal of air pollutants (e.g. by trees)? 	<ul style="list-style-type: none"> CO₂ total emissions (National Atmospheric Emissions Inventory)

Objective	SEA Topic	Decision making criteria	Indicator
<p>9. To reduce flood risk, protect and enhance water sources.</p>	<p>Water</p>	<ul style="list-style-type: none"> Is new development directed towards areas of least flood risk? Will it reduce risk of flooding eg by encouraging the integration of mitigation measures such as SuDs into new development? Will it protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Will it encourage water efficiency and demand management? 	<ul style="list-style-type: none"> Number of planning applications granted contrary to the advice of the EA in respect of flood risk. Number of planning applications granted contrary to the advice of the EA in respect of water quality. (Environment Agency)
<p>Page 30</p>			
<p>Biodiversity, Flora and Fauna</p>			
<p>10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs</p>	<p>Biodiversity, Flora and Fauna</p>	<ul style="list-style-type: none"> Will it protect and promote effective management of the district's sites of ecological and nature conservation importance? Will it help contribute to Staffordshire Biodiversity Action Plan objectives? Will it help deliver networks of biodiversity and green infrastructure? 	<ul style="list-style-type: none"> Area (ha) of UK priority habitats by type. (Staffordshire Ecological Record) % of designated sites brought into favourable condition (DEFRA) % of new developments incorporating ecological enhancement measures per year
<p>Soil and Material Assets</p>			

Objective	SEA Topic	Decision making criteria	Indicator
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	Soil	<ul style="list-style-type: none"> Will it safeguard the best and most versatile agricultural land? Will it minimise the loss of greenfield land? Will it reduce land contamination / instability? Will it reduce the amount of derelict land? Will it protect notable geological and geomorphological features? 	<ul style="list-style-type: none"> % of development built on brownfield sites (SMDC, Annual Monitoring Report) Area of Regionally Important Geological Sites (RIGS) (Staffordshire Ecological Record)
12. To minimise the use of non-renewable resources.	Material Assets	<ul style="list-style-type: none"> Will it reduce waste generation? Will it maximise the re-use of existing buildings? Will it increase the use of building materials from sustainable sources? 	<ul style="list-style-type: none"> Residual household Waste (kg/hh) % of household waste reused, recycled or composted (recycle for Staffordshire.org)
Built and Cultural Heritage, Landscape and Local Distinctiveness			
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	Cultural Heritage	<ul style="list-style-type: none"> Will it ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Will it protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<ul style="list-style-type: none"> Number of major development projects that affect the significance of heritage assets or historic landscape character whether in an adverse or beneficial way (SMDC, Annual Monitoring Report)

Objective	SEA Topic	Decision making criteria	Indicator
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	Cultural Heritage and Landscape	<ul style="list-style-type: none"> Will it protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Will it promote development on brownfield land? Will it safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<ul style="list-style-type: none"> % of new dwellings on previously developed land (SMDC, Annual Monitoring Report) % of new employment on previously developed land (SMDC, Annual Monitoring Report)
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	Cultural Heritage	<ul style="list-style-type: none"> Will it support the development of a vibrant cultural economy and local distinctiveness? Does it help support tourism and the visitor economy? 	<ul style="list-style-type: none"> Percentage of visitors staying overnight (STEAM report)

Table 4.2 Objectives and indicators

Summary of findings

5 Summary of findings

5.1 This section provides a summary of the main findings of the SA. The summary findings are set out in five sections:

- Housing requirement options appraisal.
- Employment land requirement options appraisal.
- Development Site options appraisal, including options for a Gypsy and Traveller site.
- Alternative development approaches for Cheadle.
- Preferred Option Local Plan Policies appraisal.

Do Nothing approach

5.2 The Sustainability Appraisal also has to consider a "do nothing option". However Local planning authorities are required to have an up to date Local Plan. The Planning and Compulsory Purchase Act 2004 and the Town and Country Planning (Local Planning) (England) Regulations 2012 set out matters that should be considered when preparing a Local Plan and prescribe their form and content. The National Planning Policy Framework describes the evidence that should be gathered in the preparation of local plans and the approach that they should adopt. In some matters therefore, the Council considers that a "do nothing" approach is not a reasonable option.

5.3 In his report on the Examination of the Staffordshire Moorlands Core Strategy⁽⁹⁾, the Inspector required an early and comprehensive review of the Core Strategy for the period 2016 – 2031 and recommended rolling it forward into a single local plan combined with the proposed Site Allocations DPD. His report also identified the need for a Site Allocations DPD to include a review of the Green Belt boundaries in the vicinity of Biddulph, leading to the identification of further development opportunities. Thus not preparing a Local Plan - and not basing this on up to date assessments of housing and employment needs - were not considered to be reasonable alternatives for appraisal.

5.4 Although the policies contained within the Core Strategy accord with the NPPF, and can still be given weight in decision making, the "do nothing" option of relying on saved Core Strategy policies could result in development which would not help address the District's existing problems and lead to the continuation of the issues identified in the Baseline Data review such as decline in working age population which could stifle economic growth in the District as policies would not be updated to reflect the latest evidence. Thus failure to update Core Strategy policies was not considered to be a reasonable alternative for appraisal.

5.5 There is pressure to release additional land for development. With no Local Plan in place, there is less certainty about where future development will take place and this is likely to lead to less sustainable developments and more planning appeals. A failure to select appropriate sites for development from alternatives is likely to lead to an insufficient supply of housing and employment land and could lead to sites being determined by Appeal. This would give no control over the location of development which in turn may have a negative influence on the delivery of services and facilities within the District as piecemeal development may result from having no certainty over where additional housing development would go and the associated lack of certainty over the delivery of infrastructure. Thus a "do nothing" approach to the identification of appropriate development sites from reasonable alternatives was not considered to be a reasonable option for appraisal.

5.1 Appraisal of housing requirement options

Background

5.6 The adopted Core Strategy covers the period 2006 - 2026. Policy SS2 (Future Provision of Development) indicates that the Council will make provision for an additional 6,000 dwellings over the plan period at an average annual development rate of 300 dwellings. The policy also states that "the Council will undertake and complete an early and comprehensive review of the Core Strategy by 2016 to cover the period 2016 - 2031 to ensure that future provision will continue to adequately meet objectively assessed needs and reflect development potential".

5.7 Nathaniel Lichfield & Partners (NLP) produced a Strategic Housing Market Assessment (SHMA) on behalf of the Council in April 2014. The identification of Objectively Assessed Need (OAN) for housing was at the heart of the study, based on a range of housing, economic and demographic factors, trends and forecasts. The demographic data underpinning NLP's modelling work was subsequently updated by the Office for National Statistics (ONS). This new data, the 2012-based Sub National Population Projections, (SNPP) was published on 29th May 2014. NLP analysed this updated data and issued an updated report in August 2014.

5.8 The August 2014 Housing Needs Update⁽¹⁰⁾ recommended a range of housing OAN between 210 and 430 dwellings per annum. This range encompassed the Oxford Economics Job Growth projections and would allow the District to meet its demographically-driven housing needs in full.

5.9 The 2012-based Sub-National Household Projections (SNHP) were released on 27th February 2015 and superseded the 2011-based (interim) SNHP. The 2012-based SNHP incorporate the ONS 2012-based SNPP published on 28th May 2014 and further information from the Census 2011 where available.

5.10 Since these SNHP were released following the adoption of the Core Strategy in March 2014, NLP has undertaken further work to consider the implications of the 2012-based SNHP on the Council's OAN and a further update Report was published in July 2015.

5.11 A revision to the July 2015 was subsequently prepared to take account of information released since Summer 2015 as well as relevant Planning inspector's Reports and High Court Judgements on approaches to defining housing OAN. The January 2016 revision also took on board new Annual Population Survey (APS) data, the 2014 Mid-Year Population Estimates (MYE) and the latest unemployment data in the PopGroup modelling.

5.12 In order to inform plan preparation, a number of reasonable alternatives were appraised derived from this January 2016 report. A description of this is set out from paragraph 5.51.

5.13 A further update to the SHMA⁽¹¹⁾ was published in February 2017 when a number of scenarios were remodelled to take account of a series of changes to the evidence, including the 2014-based SNPP published in May 2016. These population projections provided the most up to date estimate of population growth over the period 2014 - 2039 at 1st February 2017. The 2017 SHMA has used the latest 2014-based SNHP to derive the baseline

10 Housing Needs Study 2012-based SNPP Update; High Peak Borough Council and Staffordshire Moorlands District Council; Nathaniel Lichfield and Partners; 10 August 2014

11 Staffordshire Moorlands SHMA Update; Nathaniel Lichfield & Partners; 2017

demographic need, which acts as the 'starting point' when determining the housing OAN. Thereafter, various assumptions, adjustments and sensitivities were applied to take account of local factors and economic aspirations.

5.14 In order to further inform plan preparation, additional reasonable alternatives were appraised derived from the February 2017 report. A description of the further assessments is set out below.

Selection of alternatives for appraisal - February 2017

5.15 The Staffordshire Moorlands 2014-based SNPP and 2014-based household projections Update⁽¹²⁾ considered that a housing OAN range of between 235 dpa and 300 dpa represented the appropriate range for the plan area. This range was considered to provide a realistic level of housing provision which will address economic growth requirements, affordable housing need, worsening market signals and the demographic challenges that are present.

5.16 A number of (previously agreed) scenarios, based upon demographic, economic and housing trends, were updated to reflect the 2014- based data and the latest mid-year population estimates. The modelling work excluded any "policy-on" scenarios and included the addition of a scenario which seeks to meet identified affordable housing needs.

5.17 3.2 These scenarios represented the alternatives for potential future growth within the District. They demonstrate the extent to which the population of the Staffordshire Moorlands District could change over the Plan period and how this change would be translated into households, dwellings, labour force and the number of jobs that might be supported by the local population.

5.18 The scenarios were:

- **Scenario A: Baseline 2014 SNPP** - A scenario utilising the latest ONS 2014-based SNPP and the headship rates from the CLG 2014-based household projections. [170 dpa (with no uplifts)]
- **Scenario Aa: Sensitivity Test** – Applying the same assumptions as for Scenario A; however, starting post-2017, headship rates amongst 15-34 year olds will return half-way to the 2008-based projections by 2031. This is termed 'partial catch-up' [PCU]. [192 dpa (with no uplifts)]
- **Scenario Ab: Sensitivity Test** – As Aa, but incorporating the latest 2015 mid-year population estimate. [196 dpa (with no uplifts)]
- **Scenario B: Natural Change** – This scenario sets all migration to 0, assuming that there is no movement into or out of the District over the Plan period. This provides an indication of the level of housing required if only current local residents' needs were catered for. [16 dpa (with no uplifts)]
- **Scenario C: Zero Net Migration** – A theoretical scenario whereby in and out migration (both internal and international) is balanced, meaning there is only population churn in the District and no growth from net in-migration, i.e. migrants continue to move into and out of the District, but on a one in, one out basis. [-22 dpa (with no uplifts)]

- **Scenario D: Long Term Migration Trends** – A scenario based on migration trends observed for Staffordshire Moorlands over the previous 10 years (the period 2005/06 to 2014/15). [139 dpa (with no uplifts)]
- **Scenario Da: Sensitivity Test** - applying the same assumptions as for Scenario D; incorporating PCU Headship rates. [160 dpa (with no uplifts)]
- **Scenario E: Oxford Economics Job Growth** – based on (post-Brexit) policy off job growth as forecast by Oxford Economics (October 2016), based on the net additional workforce jobs over the period 2014-2031. [279 dpa (with no uplifts)]
- **Scenario Ea: Sensitivity Test** – based on Oxford Economics job growth forecast but reduced to account for -5% out commuting. [180 dpa (with no uplifts)]
- **Scenario Eb: Sensitivity Test** – based on Oxford Economics job growth forecast but incorporating PCU headship rates. [302 dpa (with no uplifts)]
- **Scenario F: Job Stabilisation** – Constraining the number of net additional jobs over the 17-year plan period to zero, to assess the level of housing needed to maintain the current number of jobs. [259 dpa (with no uplifts)]
- **Scenario Fa: Sensitivity Test** – based on zero net job growth but incorporating PCU headship rates. [282 dpa (with no uplifts)]
- **Scenario G: Past Trends Job Growth** – Taking into account the past trends job growth for the 15-year period to 2015 derived from the Oxford Economics data (0.47% annually) this scenario assumes that this will continue over the plan period. [420 dpa (with no uplifts)]
- **Scenario Ga: Sensitivity Test** – based on Past Trends job growth but incorporating PCU headship rates. [446 dpa (with no uplifts)]
- **Scenario H: Experian Job Growth** - based on policy off job growth as forecast by Experian (December 2016), using net additional workforce jobs over the period 2014-2031. [333 dpa (with no uplifts)]
- **Scenario Ha: Sensitivity Test** – based on Experian job growth but incorporating PCU headship rates. [357 dpa (with no uplifts)]
- **Scenario I: Combined Job Growth** - based on a combination of the Oxford Economics and Experian job growth projections over the period 2014-2031. [306 dpa (with no uplifts)]
- **Scenario Ia: Sensitivity Test** – based on the previous combined job growth scenario but incorporating PCU headship rates. [329 dpa (with no uplifts)]
- **SHMA Affordable Housing Need** - based on the affordable housing needs identified in the SHMA Update February 2017. [679 / 1,309 dpa (with no uplifts)]

5.19 The Government's Practice Guidance states that 'household projections published by the Department for Communities and Local Government should provide the starting point estimate of overall housing need'. It also states that the household projections of housing need may require adjustment to reflect factors affecting local demography and household formation rates which are not captured in past trends.

5.20 Housing requirements must set a level of housing delivery which meets the needs associated with population and household growth, addresses the need for all types of housing including affordable and caters for housing demand⁽¹³⁾. Furthermore, a planned level of housing to meet OAN must respond positively to wider opportunities for growth and should take account of market signals, including affordability⁽¹⁴⁾.

5.21 Scenarios B, C and D have produced targets that are lower than the baseline demographic projections considered the starting point for identifying objectively assessed need and on this basis have not been pursued by the Council.

5.22 Scenarios E, Ea and Eb, Oxford Economics Job Growth and the associated sensitivity tests (allowing for a reduction in the level of net out commuting by 5% and applying PCU headship rates), have also not been considered reasonable alternatives for sustainability appraisal. Nor have scenarios H and Ha, Experian job growth and its sensitivity test. This is because whilst both forecasting houses are considered to provide credible and robust estimates of job growth, their recent estimates for the District have proved to be different. Experian has projected that the Staffordshire Moorland's economy will grow by 1,400 workforce jobs 2014-2031 - significantly higher than the Oxford Economics projections (339 over the same period) - primarily due to much stronger growth predicted by Experian in certain manufacturing sectors. It was thus considered reasonable to attach greater weight to the combined job growth scenario.

5.23 The Baseline Scenarios (A) and Baseline plus Partial Catch Up Scenario (Aa) have contributed to NLP's recommended lower end of the OAN range based on Scenario Ab: 2014-based SNHP with mid year estimates and sensitivity for partial catch-up headship rates (235 dpa including uplifts). This scenario (Ab) is considered to represent the appropriate demographic led need for housing and would be the minimum necessary to meet the District's future housing needs to 2031 and is thus considered a reasonable alternative to assess. **(Option 1.)**

5.24 The Job Stabilisation scenario (F) 259 dpa was the scenario previously considered to be the most appropriate for the Council to pursue (January 2016 appraisal - see below) and so the scenario has been considered as a reasonable alternative on this basis. **(Option 2.)**

5.25 As discussed, jobs growth forecasts have been obtained from both Oxford Economics and Experian. Because of the methodological differences between the two models, the job projections derived are quite different: (Oxford Economics: job growth 2014-2031: 20pa; Experian: job growth 2014-2031: 82pa. As the detailed assumptions are not disclosed with regards to the local and regional economy, along with the adjustments made to the raw data to calculate the forecasts, it is difficult to make a robust decision concerning the comparative weight to attach to each forecast. On this basis it was considered reasonable to appraise the scenario which takes an average level of job growth across the two econometric projections. Scenario Ia, Combined job growth plus partial catch up (329 dpa) was used to

inform the employment-led upper end of the recommended housing OAN range; it represents the level of housing growth necessary to provide a sufficiently large labour force to support a combination of the Oxford Economics and Experian job growth forecasts for the District and is thus considered a reasonable alternative to appraise. **(Option 3.)**

5.26 Finally, Scenario G is a past trends scenario indicating the level of housing needed should historic job growth trends continue over the plan period. For Scenario Ga, the same employment and demographic inputs were applied as for Scenario G, but with the application of the partial catch up accelerated headship rates. This test generated a housing need of 446dpa to 2031 - the highest requirement of the scenarios tested by NLP and above the recommended OAN range of 235 - 330dpa. It was included as a reasonable scenario for appraisal to help identify the likely economic, social and environmental effects of increasing the housing supply to aid the delivery of affordable homes.

5.27 The SHMA (2014) identified a critical affordable housing OAN of 707 dpa (net) affordable housing over the next five years across the District. The December 2016 Update (February 2017) concluded that there was a net annual need of between 224 and 432 affordable dwellings, which attributing an estimated delivery rate of 33% equates to a total need of at least 679dpa and potentially as high as 1,309dpa.

5.28 The NPPF makes clear that having identified the OAN for affordable housing, the Local Plan should meet this need subject to the constraints referred to in paragraphs 14 and 47. However paragraph 154 of the Framework also requires that Local Plans should be aspirational but realistic. NLP considered that an affordable housing OAN of at least 679dpa and potentially as high as 1,309dpa is very unlikely to be consistently achieved in the District. However the Council considered it appropriate to consider the economic, social and environmental impacts of delivering a housing requirement of 450 dpa, representing an employment led scenario giving rise to a requirement beyond the upper end of the recommended OAN range and making a very significant contribution to meeting affordable housing need.

5.29 On this basis the SA has considered a fourth reasonable alternative housing requirement: the option of 450 dpa. **(Option 4.)**

5.30 In summary, consideration of the scenarios set out above led to the Council considering four potential housing requirement alternatives for appraisal:

- Option 1: 235 new homes each year (2014 - 2031)
- Option 2: 260 new homes each year (2014 - 2031)
- Option 3: 330 new homes each year (2014 - 2031)
- Option 4: 450 new homes each year (2014 - 2031)

Summary of appraisal findings February 2017

5.31 The full SA appraisal matrices recording the detail of the appraisal of each of these options are provided in section 8. The summary of findings is set out below.

Option 1 - Summary of significant effects

5.32 This option proposes the delivery of 235 new dwellings per year (2014-2031). It will have a direct, long-term positive effect on the SA objective to ensure provision of homes to meet local needs since it represents the lower end of the recommended objectively assessed

housing need range. However being the lower end of the range, the option makes the least contribution of all options considered to addressing affordable housing need and the needs of an ageing population.

5.33 Predicted population growth of around 2,500 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages including helping to safeguard local shops and services. However since this option provides for the lowest level of growth, these benefits would be lowest of all options considered. This option is likely to lead to a decline in the labour force of 2,141 and the loss of 1,579 jobs (2014 - 2031). This is likely to undermine economic stability in the long term and lead to a significant negative effect on business, the local economy and local employment through a lack of encouragement for investment in business and infrastructure.

5.34 As the lowest growth option, requiring the lowest number of site allocations, by comparison with other options considered, this alternative is likely to result in minor positive effects on SA objectives relating to the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets. The lower level of growth is also likely to minimise the negative effects on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new dwellings and associated car journeys.

5.35 The lower level of growth is also likely to help enable a focus of new development on small urban extensions and small sites within existing settlement boundaries resulting in minor positive effects on minimising the distance people need to travel to access key services and facilities and increasing the opportunities for use of sustainable forms of transport. However since this option proposes the lowest level of growth, it is also likely to result in the lowest level of investment in community facilities, including Green Infrastructure and other measures that help to reduce health inequalities, leading to minor negative effects on the SA objective relating to supporting health improvements.

Option 2 - Summary of significant effects

5.36 This option proposes the delivery of 260 new dwellings per year. Since it is within the recommended, full objectively assessed housing need range, the housing requirement would have a direct, long-term positive effect on the SA objective to ensure provision of homes to meet local needs. This positive effect is likely to be more significant than under option 1. However being closer to the lower end of the range than options 3 and 4, the option makes less of a contribution than options 3 and 4 to addressing affordable housing need and the needs of an ageing population.

5.37 Predicted population growth of around 6,300 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages, including help to safeguard local shops and services. Under this option, these benefits are likely to be more significant than under option 1 and less significant than under options 3 and 4. This option is expected to maintain the 2014 level of jobs in the district over the plan period. This is likely to result in a long term minor positive impact on business, the local economy and local employment. This compares favourably with the impacts on this objective likely under option 1, where significant negative impacts on SA objectives for supporting employment and economic growth are likely since housing delivery below 260dpa would potentially result in a reduction in jobs. However the positive impacts on economic growth under this option are less significant than those likely to result under options 3 and 4.

5.38 Option 2 requires the second lowest number of site allocations of the four options considered, and consequently this alternative is likely to result in comparatively more positive effects on SA objectives relating to the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets than options 3 and 4. Positive effects on these objectives are slightly less under this option than under option 1. The lower level of growth under option 2 compared with options 3 and 4 is also likely to minimise the negative effects on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new dwellings and associated car journeys.

5.39 The lower level of growth is also likely more likely under option 2 than options 3 and 4 to enable a focus of new development on small urban extensions and small sites within existing settlement boundaries resulting in minor positive effects on minimising the distance people need to travel to access key services and facilities and increasing the opportunities for use of sustainable forms of transport. Benefits under option 2 in this regard are not likely to be as great as under option 1. However since option 2 proposes the second lowest level of growth of the four options considered, it is likely to result in a lower level of investment than under options 3 and 4 in community facilities, including Green Infrastructure and other measures that help to reduce health inequalities, leading to possible minor negative effects on the SA objective relating to supporting health improvements. These negative effects are not likely to be as significant as under option 1.

Option 3 - Summary of significant effects

5.40 This option proposes the delivery of 330 new dwellings per year. Since it is the upper end of the recommended objectively assessed housing need range, the housing requirement would have a direct, long-term positive effect on the SA objective to ensure provision of homes to meet local needs. This positive effect is likely to be more significant than under options 1 and 2. As the upper end of the range, the option is likely to make a significant contribution to addressing affordable housing need and the needs of an ageing population.

5.41 Predicted population growth of around 8,500 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages, including help to safeguard local shops and services. Under this option, these benefits are likely to be more significant than under options 1 and 2, but less significant than under option 4. This option is based on expected job growth of 870 and a labour force increase of 981 in the district 2014-2031. This is likely to allow for the economic potential of the district to be realised and lead to medium and long term positive impacts on the local economy and local employment.

5.42 Option 3 requires the second highest number of site allocations of the four options considered, and consequently this alternative is likely to result in comparatively more negative effects on SA objectives relating to the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets than options 1 and 2. Negative effects on these objectives are slightly less under this option than under option 4. The higher level of growth under option 3 compared with options 1 and 2 is also likely to result in negative effects on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new dwellings and associated car journeys.

5.43 Due to the extent of sites that are likely to be allocated under this option, it is less likely than under options 1 and 2 that a high proportion of new development can be delivered close to town and village centres, resulting in negative effects on minimising the distance

people need to travel to access key services and facilities and reducing the opportunities for use of sustainable forms of transport. Negative effects under option 3 in this regard are not likely to be as great as under option 4. However since option 3 proposes the second highest level of growth of the four options considered, it is likely to result in a higher level of investment than under options 1 and 2 in community facilities, including Green Infrastructure and other measures that help to reduce health inequalities, leading to possible minor positive effects on the SA objective relating to supporting health improvements. These positive effects are not likely to be as significant as under option 4.

Option 4 - Summary of significant effects

5.44 This option proposes the delivery of 450 new dwellings per year. It will have a direct and significant positive effect on the SA objective to ensure provision of homes to meet local needs since it exceeds the upper end of the recommended objectively assessed housing need range. This option should make the greatest contribution of all options considered to addressing affordable housing need and the needs of an ageing population.

5.45 Predicted population growth of around 13,700 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages, including helping to safeguard local shops and services. The past trends scenario provides employment growth in the district of 3,038 jobs 2014-31 (179pa) and an increase in the labour force of 3,746 2014-31 (220pa). As a result, the option is likely to have a significant positive effect on the local economy and local employment. However these predicted positive effects should be treated with caution, since the SHMA December 2016 update notes that the population growth required to underpin this job growth would primarily be achieved by inward migration as opposed to natural change. To achieve the 450dpa that would be required based on a continuation of past job growth rates would require a 6-fold increase in net population growth compared to the 2014-based SNPP and would require more than 10,000 additional migrants from elsewhere across the UK/abroad to move into the district. This is considered to be at odds with what may be reasonably expected to occur in the district.

5.46 As the highest growth option, requiring the highest number of site allocations, by comparison with other options considered, this alternative is likely to result in significant negative effects on SA objectives relating to the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets. The high level of housing growth is also likely to result in negative effects on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new dwellings and associated car journeys.

5.47 This level of new housing development is not likely to enable growth to be focused on small urban extensions and small sites within the existing settlement boundaries, which may result in increasing the distance people need to travel to access key services and facilities and makes the use of sustainable forms of transport less likely. However since this option proposes the highest level of growth, it is likely to result in the highest level of investment in community facilities, including Green Infrastructure and other measures that may help to reduce health inequalities, leading to positive effects on the SA objective relating to supporting health improvements.

Mitigation measures proposed

5.48 It is possible that some likely significant effects identified via the SA can be mitigated. To assist this, potential mitigation measures have been identified during the appraisal of alternative housing requirements. These recommendations will be included in the review of policies undertaken as part of Local Plan preparation.

Recommended preferred option and options dismissed

5.49 The table below sets out the rationale for recommending an option to take forward into the preferred options plan.

Option recommended to take forward	Rationale
Option 3: 330 dpa	<p>This option could be expected to:</p> <ul style="list-style-type: none"> • Have a direct and long term positive effect on providing homes to meet local needs (more significant than under options 1 and 2). • Address affordable housing need and the needs of an ageing population. • Result in increased spending in the local economy, helping to safeguard local shops and services. • Support job growth and a labour force increase over the plan period, resulting in significant positive effects on the local economy. • Enable investment in community facilities associated with growth. • Offer comparatively more protection for landscape character and natural assets, biodiversity, the character of towns, villages and heritage assets and their settings when compared with option 4. • Minimise negative effects on climate change and air quality when compared with option 4. <p>However the option makes less of a contribution than option 4 to address affordable housing need.</p> <p>Also, it is less likely than under options 1 and 2 that a high proportion of new development can be delivered close to town and village centres, increasing the distance people may need to travel to access key services and facilities (less significant than under option 4).</p>

Table 5.1 Housing requirement option recommended for taking forward

5.50 The table below sets out the rationale behind those options recommended for dismissal following the appraisal.

Options proposed for dismissal	Rationale
Option 1: 235 dpa	<p>This option could be expected to:</p> <ul style="list-style-type: none"> • Have a direct and long term positive effect on providing homes to meet local needs. • Result in increased spending in the local economy, helping to safeguard local shops and services. • Offer comparatively more protection for landscape character and natural assets, biodiversity, the character of towns, villages and heritage assets and their settings when compared with all other options. • Minimise negative effects on climate change and air quality when compared with all other options. • Enable a focus of new development on small urban extensions and small sites within existing settlement boundaries, helping to minimise the distance people need to travel to access key services and facilities. <p>However the option makes less of a contribution than all other options to:</p> <ul style="list-style-type: none"> • Addressing affordable housing need and the needs of an ageing population. • Increased spending in the local economy; and • Enabling investment in community facilities associated with growth. <p>The option is likely to lead to the loss of 1,579 jobs over the plan period, resulting in significant negative effects on the local economy.</p>
Option 2: 260 dpa	<p>This option could be expected to:</p> <ul style="list-style-type: none"> • Have a direct and long term positive effect on providing homes to meet local needs. • Result in increased spending in the local economy, helping to safeguard local shops and services (less significant than under options 3 and 4). • Offer comparatively more protection for landscape character and natural assets, biodiversity, the character of towns, villages and heritage assets and their settings when compared with options 3 and 4. • Minimise negative effects on climate change and air quality when compared with options 3 and 4. • Enable a focus of new development on small urban extensions and small sites within existing settlement boundaries, helping to minimise the distance people need to travel to access key services and facilities (less significant than under option 1).

Options proposed for dismissal	Rationale
	<p>This option is likely to help maintain the 2014 level of jobs in the district over the plan period, resulting in a long term minor positive impact on business, the local economy and local employment.</p> <p>However the option makes less of a contribution than options 3 and 4 to:</p> <ul style="list-style-type: none"> ● Addressing affordable housing need and the needs of an ageing population. ● Increased spending in the local economy; and ● Enabling investment in community facilities associated with growth.
<p>Option 4: 450 dpa</p>	<p>This option could be expected to:</p> <ul style="list-style-type: none"> ● Have a direct and long term positive effect on providing homes to meet local needs, including addressing affordable housing need and the needs of an ageing population. ● Result in increased spending in the local economy, helping to safeguard local shops and services (more significant than under all other options). ● Enable growth related investment in community facilities (more significant than under all other options). <p>The option is based on employment growth in the district of 3,038 jobs over the plan period, resulting in significant positive effects on the local economy. However the population growth required to underpin this job growth would primarily be achieved by a level of inward migration that is not considered a reasonable expectation for the district.</p> <p>The option has more negative effects than all other options (that may not be reasonably mitigated) in relation to likely impact on:</p> <ul style="list-style-type: none"> ● Landscape character and natural assets. ● Biodiversity. ● Character of towns, villages and heritage assets and their settings; and ● Climate change and air quality. <p>It is less likely than under all other options that a high proportion of new development can be delivered close to town and village centres, increasing the distance people may need to travel to access key services and facilities.</p>

Table 5.2 Housing requirement options dismissed following appraisal

Selection of alternatives for appraisal - January 2016

5.51 The Staffordshire Moorlands 2012-based SNHP Update⁽¹⁵⁾ tested the on-going validity of the housing OAN of 210 to 430dpa identified in the 2012-based SNPP Update (August 2014) and found that a revised range of between 250 dpa and 440 dpa represented the appropriate range for the plan area, taking into account worsening market signals, an additional allowance for affordable housing need and planning for a level of economic growth to match earlier assumptions.

5.52 Based on past trends and the housing, economic and demographic context of Staffordshire Moorlands, the SHMA has identified a number of scenarios chosen to reflect the alternatives for future growth within the District. The scenarios demonstrate the extent to which the population of the District is likely to change over the plan period, and how this growth would be translated into households, dwellings, numbers of economically active residents and the number of jobs that might be supported.

5.53 The scenarios were:

- **Scenario A: Updated PopGroup 2012-based SNHP** - A projection of the demographic shift based on current factors and recent trends in Staffordshire Moorlands District, aligning household growth to the 2012-based SNHP. The scenario takes account of dwelling vacancy rates in order to derive a housing need figure from the projections in household growth. [219 dpa (with uplifts)]
- **Scenario Aa: Partial Catch-Up Headship Rates** – Using the 2012-based headship rates as a starting point, it is projected that by 2033 (starting after 2017 to allow for full economic recovery) headship rates for the younger adult age groups will have caught up half of the difference between the 2012 and 2008-based SNHP headship rates. The underlying population upon which this scenario is based is the same as Scenario A, i.e. the 2012-based SNHP. [240 dpa (with uplifts)]
- **Scenario Ab: 2013 and 2014 MYE** - Using the 2013 and 2014 MYE and applying the fertility, mortality, migration and headship rates from the 2012-based household projections thereafter. [227 dpa (with uplifts)]
- **Scenario Ac: 2013 and 2014 MYEs + Partial Catch-Up Headship Rates** - As Ab, but incorporation of partial catch up headship rates on the same basis as Scenario Aa. [248 dpa (with uplifts)]
- **Scenario B: Natural Change** – In and out-migration is reduced to zero, hence growth is driven purely by natural change, or the interaction between births and deaths. [49 dpa (with uplifts)]
- **Scenario C: Zero Net Migration** – Whereby the annual international and domestic migration flows under the baseline scenario are equalised to result in a net migration of zero (i.e. an identical number of people move into the area as leave the District). [8 dpa (with uplifts)]

- **Scenario D: Short Term Migration Trends** - Based on average gross flows of internal and international migration in Staffordshire Moorlands over the five year period 2008/09 to 2012/13 as taken from the ONS MYE Series, assuming Staffordshire Moorlands will continue to see migration at a level in line with recent trends. [111 dpa (with uplifts)]
- **Scenario E: Long Term Migration Trends** – As above, but using a ten year migration average, from 2002/03 to 2012/13, assuming Staffordshire Moorlands will continue to see migration in line with levels on average over the last decade. [165 dpa (with uplifts)]
- **Scenario F Oxford Economics Job Growth** – A ‘policy-off’ trend scenario based upon Oxford Economics local area-based econometric model. This provides potential unconstrained employment growth in Staffordshire Moorlands (+2,250 jobs 2012-2031) over the Plan period. [438 dpa (with uplift)]
- **Scenario Fa: Oxford Economics Job Growth + 5% Reduction in Out-Commuting** - This scenario applies the above assumption whilst factoring in a 5% reduction in out-commuting over the period 2012-2031. [361 dpa (with uplift)]
- **Scenario G: Policy On Job Growth Target** – A ‘Policy-on’ trend scenario based upon the Council’s realistic economic objectives whilst factoring in increased economic growth in key sectors in line with regional averages. This provides employment growth in Staffordshire Moorlands of 3,879 jobs over the course of the plan period. [520 dpa (with uplift)]
- **Scenario Ga: Policy On Job Growth Target + 5% Reduction in Out-Commuting** - This scenario applies the above assumption whilst factoring in a 5% reduction in out-commuting over the period 2012-2031. [441 dpa (with uplift)]
- **Scenario H Job Stabilisation / Past Trends Job Growth** – Assumes that there are no additional jobs created over the projection period, i.e. the number of jobs remains at the level achieved in 2012. The past trends job growth for the period 2000-2013, derived from the ONS Job density data, indicates that the long term past trends are neutral and align with the Job Stabilisation scenario, so the two have been combined. [319 dpa (with uplift)]
- **Scenario: Average Past Delivery** – Using past delivery trends (2005/06 - 2014/15) to illustrate what the market has previously delivered and project these forward over the Plan period. [195 dpa]
- **Scenario: SHMA Need** - The SHMA 2014 identified a critical need for 707 (net) affordable housing dwellings annually over the next five years in the District. [2,142 dpa]
- **Scenario: Core Strategy target** - Testing the population and economic implications of delivering the target set out in the adopted Core Strategy. [300 dpa]

5.54 The Government’s Practice Guidance states that ‘household projections published by the Department for Communities and Local Government should provide the starting point estimate of overall housing need’. It also states that the household projections of housing need may require adjustment to reflect factors affecting local demography and household formation rates which are not captured in past trends.

5.55 Housing requirements must set a level of housing delivery which meets the needs associated with population and household growth, addresses the need for all types of housing including affordable and caters for housing demand⁽¹⁶⁾. Furthermore, a planned level of housing to meet OAN must respond positively to wider opportunities for growth and should take account of market signals, including affordability⁽¹⁷⁾.

5.56 Scenarios B, C, D, E and "Average past delivery" have produced targets that are lower than the baseline demographic projections considered the starting point for identifying objectively assessed need and on this basis have not been pursued by the Council.

5.57 Scenario Fa Oxford Economics and reduced commuting has also not been considered a reasonable alternative for sustainability appraisal. This is because the scenario is based on job growth remaining the same as in Scenario F, but assumes a policy approach to attempt to reduce out-commuting and thereby reduce the number of in-migrants required to take up those job opportunities. In the absence of known policy measures, it was considered more appropriate to consider Scenario F as an option for appraisal, (see paragraph 5.17).

5.58 The Baseline Scenario (A); the Baseline plus Partial Catch Up Scenario (Aa); including the 2013 and 2014 MYE Scenario (Ab); and including the 2013 and 2014 MYE with Partial Catch Up Scenario (Ac) are (before uplifts) closely aligned to the average past delivery figure (Scenario: Average Past Delivery). These scenarios have contributed to NLP's recommended lower end of the OAN range (250 dpa including uplifts) and this requirement is thus considered a reasonable option to assess. (Option 1.)

5.59 The Job Stabilisation scenario (H) is broadly aligned with the Council's adopted housing requirement figure (Scenario Core Strategy target) and has been considered further on this basis. (Option 2.)

5.60 The Council is actively seeking to promote economic growth and therefore a third reasonable alternative requirement is one that allows for an additional element of housing growth to support the creation of new jobs. The top end of the range proposed by NLP (440 dpa) enables the delivery of sufficient labour force levels to support the Oxford Economics Job Growth projections (Scenario F). Since this is intended to allow for the economic potential of Staffordshire Moorlands to be realised, it is considered a reasonable alternative to appraise. This Scenario also closely aligns with Scenario Ga. (Option 3.)

5.61 Finally, Scenario G is a Policy On Job Growth scenario, using the job creation figures set out in the Council's Employment Land Review (ELR). It presents an objective forecast of how the District could perform in economic terms based on the nature of its economy and current expectations of future national and regional economic performance. To underpin this level of growth there would be need to be an increase in dwellings equating to a housing requirement of 473 dpa; with the 10% uplift for affordable housing this yields a requirement of 520dpa. This is the highest requirement of the scenarios tested by NLP.

5.62 The SHMA (2014) identified a critical affordable housing OAN of 707 dpa (net) affordable housing over the next five years across the District. The NPPF makes clear that having identified the OAN for affordable housing, the Local Plan should meet this need subject to the constraints referred to in paragraphs 14 and 47. However paragraph 154 of the Framework also requires that Local Plans should be aspirational but realistic. NLP considered that delivering 707 affordable dpa at a rate of 33% overall would indicate a

housing requirement of 2,142 dpa. This is clearly not realistic for the District to deliver. However the Council considered it appropriate to consider the economic, social and environmental impacts of delivering a housing requirement of 520 dpa, representing an employment led scenario giving rise to a requirement beyond the upper end of the recommended OAN range and making a very significant contribution to meeting affordable housing need.

5.63 On this basis the SA has considered a fourth reasonable alternative housing requirement: the option of 520 dpa. (Option 4.)

5.64 In summary, consideration of the scenarios set out above led to the Council considering four potential housing requirement alternatives for appraisal:

- Option 1: 250 new homes each year (2016 - 2031)
- Option 2: 320 new homes each year (2016 - 2031)
- Option 3: 440 new homes each year (2016 - 2031)
- Option 4: 520 new homes each year (2016 - 2031)

Summary of appraisal findings - January 2016

5.65 The full SA appraisal matrices recording the detail of the appraisal of each of these options are provided in section 8. The summary of findings is set out below.

Option 1 - Summary of significant effects

5.66 This option proposes the delivery of 250 new dwellings per year. It will have a direct, long-term positive effect on the SA objective to ensure provision of homes to meet local needs since it represents the lower end of the recommended objectively assessed housing need range. However being the lower end of the range, the option makes the least contribution of all options considered to addressing affordable housing need and the needs of an ageing population.

5.67 Predicted population growth of around 2,800 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages including helping to safeguard local shops and services. However since this option provides for the lowest level of growth, these benefits would be lowest of all options considered.

5.68 This option is likely to lead to the loss of 2,075 jobs over the plan period. This is likely to result in a significant negative effect on business, the local economy and local employment through a lack of encouragement for investment in business and infrastructure.

5.69 As the lowest growth option, requiring the lowest number of site allocations, by comparison with other options considered, this alternative is likely to result in minor positive effects on SA objectives relating to the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets. The low level of growth is also likely to minimise the negative effects on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new dwellings and associated car journeys.

5.70 The low level of growth is also likely to help enable a focus of new development on small urban extensions and small sites within existing settlement boundaries resulting in minor positive effects on minimising the distance people need to travel to access key services

and facilities and increasing the opportunities for use of sustainable forms of transport. However since this option proposes the lowest level of growth, it is also likely to result in the lowest level of investment in community facilities, including Green Infrastructure and other measures that help to reduce health inequalities, leading to minor negative effects on the SA objective relating to reducing health improvements.

Option 2 - Summary of significant effects

5.71 This option proposes the delivery of 320 new dwellings per year. Since it is within the recommended objectively assessed housing need range, the housing requirement would have a direct, long-term positive effect on the SA objective to ensure provision of homes to meet local needs. This positive effect is likely to be more significant than under option 1. However being closer to the lower end of the range than options 3 and 4, the option makes less of a contribution than options 3 and 4 to addressing affordable housing need and the needs of an ageing population.

5.72 Predicted population growth of around 7,900 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages, including help to safeguard local shops and services. Under this option, these benefits are likely to be more significant than under option 1 and less significant than under options 3 and 4.

5.73 This option is expected to maintain the current number of jobs in the district over the plan period. This is likely to result in a long term minor positive impact on business, the local economy and local employment. This compares favourably with the impacts on this objective likely under option 1, where significant negative impacts on SA objectives for supporting employment and economic growth are likely. However the positive impacts on economic growth under this option are less significant than those likely to result under options 3 and 4.

5.74 Option 2 requires the second lowest number of site allocations of the four options considered, and consequently this alternative is likely to result in comparatively more positive effects on SA objectives relating to the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets than options 3 and 4. Positive effects on these objectives are slightly less under this option than under option 1.

5.75 The lower level of growth under option 2 compared with options 3 and 4 is also likely to minimise the negative effects on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new dwellings and associated car journeys.

5.76 The lower level of growth is also likely more likely under option 2 than options 3 and 4 to enable a focus of new development on small urban extensions and small sites within existing settlement boundaries resulting in minor positive effects on minimising the distance people need to travel to access key services and facilities and increasing the opportunities for use of sustainable forms of transport. Benefits under option 2 in this regard are not likely to be as great as under option 1. However since option 2 proposes the second lowest level of growth of the four options considered, it is likely to result in a lower level of investment than under options 3 and 4 in community facilities, including Green Infrastructure and other measures that help to reduce health inequalities, leading to possible minor negative effects on the SA objective relating to reducing health improvements. These negative effects are not likely to be as significant as under option 1.

Option 3 - Summary of significant effects

5.77 This option proposes the delivery of 440 new dwellings per year. Since it is the upper end of the recommended objectively assessed housing need range, the housing requirement would have a direct, long-term positive effect on the SA objective to ensure provision of homes to meet local needs. This positive effect is likely to be more significant than under options 1 and 2. As the upper end of the range, the option is likely to make a significant contribution to addressing affordable housing need and the needs of an ageing population.

5.78 Predicted population growth of around 13,400 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages, including help to safeguard local shops and services. Under this option, these benefits are likely to be more significant than under options 1 and 2, but less significant than under option 4.

5.79 This option is based on expected job growth of 2,250 in the district over the plan period. This is likely to allow for the economic potential of the district to be realised and result in medium and long term positive impacts on the local economy and local employment.

5.80 Option 3 requires the second highest number of site allocations of the four options considered, and consequently this alternative is likely to result in comparatively more negative effects on SA objectives relating to the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets than options 1 and 2. Negative effects on these objectives are slightly less under this option than under option 4.

5.81 The higher level of growth under option 3 compared with options 1 and 2 is also likely to result in negative effects on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new dwellings and associated car journeys.

5.82 Due to the extent of sites that are likely to be allocated under this option, it is less likely than under options 1 and 2 that a high proportion of new development can be delivered close to town and village centres, resulting in negative effects on minimising the distance people need to travel to access key services and facilities and reducing the opportunities for use of sustainable forms of transport. Negative effects under option 3 in this regard are not likely to be as great as under option 4. However since option 3 proposes the second highest level of growth of the four options considered, it is likely to result in a higher level of investment than under options 1 and 2 in community facilities, including Green Infrastructure and other measures that help to reduce health inequalities, leading to possible minor positive effects on the SA objective relating to reducing health improvements. These positive effects are not likely to be as significant as under option 4.

Option 4 - Summary of significant effects

5.83 This option proposes the delivery of 520 new dwellings per year. It will have a direct and significant positive effect on the SA objective to ensure provision of homes to meet local needs since it exceeds the upper end of the recommended objectively assessed housing need range. This option should make the greatest contribution of all options considered to addressing affordable housing need and the needs of an ageing population.

5.84 Predicted population growth of around 17,000 is likely to increase spending in the local economy resulting in positive benefits for the District's towns and villages, including helping to safeguard local shops and services. This option is based on an objective forecast

of how the district could perform in economic terms based on the nature of its economy and current expectations of future national and regional economic performance and provides unconstrained employment growth in the district of 3,878 jobs over the plan period. As a result, the option is likely to have a significant positive effect on the local economy and local employment. However these predicted positive effects should be treated with caution, since the 2012-based SNHP update notes that the population growth required to underpin this job growth would primarily be achieved by inward migration as opposed to natural change. Net migration would need to increase from +7,373 to +20,645 - over 13,000 net additional in migrants to achieve the required population level (all other assumptions remaining constant). This is considered to be at odds with what may be reasonably expected to occur in the district.

5.85 As the highest growth option, requiring the highest number of site allocations, by comparison with other options considered, this alternative is likely to result in significant negative effects on SA objectives relating to the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets. The high level of housing growth is also likely to result in negative effects on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new dwellings and associated car journeys.

5.86 This level of new housing development is not likely to enable growth to be focused on small urban extensions and small sites within the existing settlement boundaries, which may result in increasing the distance people need to travel to access key services and facilities and makes the use of sustainable forms of transport less likely. However since this option proposes the highest level of growth, it is likely to result in the highest level of investment in community facilities, including Green Infrastructure and other measures that may help to reduce health inequalities, leading to positive effects on the SA objective relating to reducing health improvements.

Mitigation measures proposed

5.87 It is possible that some likely significant effects identified via the SA can be mitigated. To assist this, potential mitigation measures have been identified during the appraisal of alternative housing requirements. These recommendations will be included in the review of policies undertaken as part of Local Plan preparation.

Recommended preferred option and options dismissed

5.88 The table below sets out the rationale for recommending an option to take forward into the preferred options plan.

Option recommended to take forward	Rationale
Option 2: 320 dpa	This option could be expected to: <ul style="list-style-type: none"> ● Have a direct and long term positive effect on providing homes to meet local needs (more significant than under option 1); ● Result in increased spending in the local economy, helping to safeguard local shops and services;

Option recommended to take forward	Rationale
	<ul style="list-style-type: none"> • Maintain the current number of jobs in the District; • Offer comparatively more protection for landscape character and natural assets, biodiversity, the character of towns, villages and heritage assets and their settings when compared with options 3 and 4; • Minimise negative effects on climate change and air quality when compared with options 3 and 4; • Enable a focus of new development on small urban extensions and small sites within existing settlement boundaries, helping to minimise the distance people need to travel to access key services and facilities (less significant than under option 1). <p>However the option makes less of a contribution than options 3 and 4 to:</p> <ul style="list-style-type: none"> • Addressing affordable housing need and the needs of an ageing population; • Increased spending in the local economy; • Supporting employment and economic growth; and • Enabling investment in community facilities associated with growth.

Table 5.3 Housing requirement option recommended for taking forward

5.89 The table below sets out the rationale behind those options recommended for dismissal following the appraisal.

Options proposed for dismissal	Rationale
Option 1: 250 dpa	<p>This option could be expected to:</p> <ul style="list-style-type: none"> • Have a direct and long term positive effect on providing homes to meet local needs; • Result in increased spending in the local economy, helping to safeguard local shops and services; • Offer comparatively more protection for landscape character and natural assets, biodiversity, the character of towns, villages and heritage assets and their settings when compared with all other options; • Minimise negative effects on climate change and air quality when compared with all other options; • Enable a focus of new development on small urban extensions and small sites within existing settlement boundaries, helping to minimise the distance people need to travel to access key services and facilities.

Options proposed for dismissal	Rationale
	<p>However the option makes less of a contribution than all other options to:</p> <ul style="list-style-type: none"> • Addressing affordable housing need and the needs of an ageing population; • Increased spending in the local economy; and • Enabling investment in community facilities associated with growth. <p>The option is likely to lead to the loss of 2,075 jobs over the plan period, resulting in significant negative effects on the local economy.</p>
Option 3: 440 dpa	<p>This option could be expected to:</p> <ul style="list-style-type: none"> • Have a direct and long term positive effect on providing homes to meet local needs, including addressing affordable housing need and the needs of an ageing population; • Result in increased spending in the local economy, helping to safeguard local shops and services (more significant than under options 1 and 2); • Enable growth related investment in community facilities (less significant than under option 4). <p>The option is based on expected job growth of 2,250 over the plan period, resulting in significant positive effects on the local economy.</p> <p>However the option has more negative effects than options 1 and 2 (that may not be reasonably mitigated) in relation to likely impact on:</p> <ul style="list-style-type: none"> • Landscape character and natural assets; • Biodiversity; • Character of towns, villages and heritage assets and their settings; and • Climate change and air quality. <p>It is less likely than under options 1 and 2 that a high proportion of new development can be delivered close to town and village centres, increasing the distance people may need to travel to access key services and facilities (less significant than under option 4).</p>
Option 4: 520 dpa	<p>This option could be expected to:</p> <ul style="list-style-type: none"> • Have a direct and long term positive effect on providing homes to meet local needs, including addressing affordable housing need and the needs of an ageing population;

Options proposed for dismissal	Rationale
	<ul style="list-style-type: none"> • Result in increased spending in the local economy, helping to safeguard local shops and services (more significant than under all other options); • Enable growth related investment in community facilities (more significant than under all other options). <p>The option is based on unconstrained job growth of 3,878 over the plan period, resulting in significant positive effects on the local economy.</p> <p>However the population growth required to underpin this job growth would primarily be achieved by inward migration and this is not considered a reasonable expectation for the district.</p> <p>The option has more negative effects than all other options (that may not be reasonably mitigated) in relation to likely impact on:</p> <ul style="list-style-type: none"> • Landscape character and natural assets; • Biodiversity; • Character of towns, villages and heritage assets and their settings; and • Climate change and air quality. <p>It is less likely than under all other options that a high proportion of new development can be delivered close to town and village centres, increasing the distance people may need to travel to access key services and facilities.</p>

Table 5.4 Housing requirement options dismissed following appraisal

5.2 Appraisal of alternative employment land requirements

Background

5.90 Nathaniel Lichfield & Partners (NLP) prepared an Employment Land Review for the district in July 2014. This study was updated in February 2017 to incorporate more recent data releases, to align with the updated Strategic Housing Market Assessment (SHMA) and also to reflect the changing economic context post British exit from the European Union.

5.91 The report⁽¹⁸⁾ considered a number of potential future scenarios in order to help identify requirements for B-class employment space in the district over the seventeen year period 2014-2031. The scenarios are set out in the section below.

Selection of alternatives for appraisal

5.92 A variety of forecasting techniques were used to identify options for employment land requirements, as follows.

- Baseline employment forecasts (labour demand) using Oxford Economics Local Market Quarterly Forecasts for October 2016; Experian's local area-based projections and a combined jobs growth scenario.
- Estimated growth in the local labour supply - and the jobs and employment space that this could be expected to support - having regard to analysis presented as part of the District's SHMA.
- Consideration of past take-up of employment space based on the Council's monitoring data and projecting forward to forecast how this might change in the future.

5.93 The scenarios were:

- **Scenario 1: Oxford Economics** Staffordshire Moorlands Economic Forecasts (October 2016): gross employment land requirement in hectares (2014-2031): **16.89**
- **Scenario 2: Experian** job growth projections: gross employment land requirement in hectares (2014-2031): **38.06**
- **Scenario 3: Combination of job growth forecasts:** gross employment land requirement in hectares (2014-2031): **27.47**
- **Scenario 4: Past trends:** gross employment land requirement in hectares (2014-2031): **24.79**
- **Scenario 5: Job stabilisation:** gross employment land requirement in hectares (2014-2031): **16.26**
- **Scenario 6: Past take up rates:** gross employment land requirement in hectares (2014-2031): **23.98**
- **Scenario 7: Labour supply to match forecast growth of resident workforce modelled under SHMA Update 2017 Scenario A (170dpa):** gross employment land requirement in hectares (2014-2031): **12.61**
- **Scenario 8: Labour supply to match forecast growth of resident workforce modelled under SHMA Update 2017 Scenario Ab (196dpa):** gross employment land requirement in hectares (2014-2031): **12.73**

5.94 The Housing and Economic Development Needs Assessment section of the National Planning Practice Guidance⁽¹⁹⁾ advises that local authorities should develop an idea of future needs based on a range of data which is current and robust. In particular it recommends that plan-makers consider a variety of forecasting techniques.

5.95 Two demographically derived assessments of future employment land needs have been identified (labour supply). It was considered appropriate to consider one of these further. Since Scenario Ab: (Baseline 2014 sub national population projections with sensitivity tests) was used to inform option 1 of the housing requirement alternatives - the Council dismissed Scenario 7 and took Scenario 8 forward for assessment as **Option 1** of the possible employment land requirements.

5.96 A number of sectoral employment forecasts and projections (labour demand) have been used. Scenario 1 was underpinned by Oxford Economics forecasts (October 2016) and Scenario 2 took Experian job growth forecasts. Both forecasting houses produce credible and robust estimates of job growth at a local level. However there are methodological differences between them regarding how the various job projections are derived and this can lead to differences in the outcomes. For example the OE forecasts project a FTE job growth in the district of 288 (net) for the period 2014-2031 compared with the Experian forecast that project a FTE job growth of 1,300 (net) for the same period. The most obvious

discrepancy between the two projections relates to the manufacturing sector. On balance, the Council considers that there is merit in dismissing scenarios 1 and 2 and taking forward for appraisal a combination of the two scenarios: scenario 3 (as **Option 4**).

5.97 Scenario 5 (job stabilisation) assumes that the district's overall job growth will stabilise over the coming years (ie zero job growth post 2014) based on the trends outlined in scenario 1. Since job stabilisation is a scenario considered in the housing requirement options appraisal, it was considered appropriate to take forward this scenario for further appraisal as an employment land requirement option also (**Option 2**).

5.98 Scenarios 4 and 6 (past trends and past take up rates) suggested requirements that were broadly aligned. An option based on these scenarios was taken forward for appraisal as **Option 3**.

5.99 In summary, consideration of the scenarios set out above led to the Council considering four potential employment land requirement alternatives for appraisal:

- Option 1: 13ha (2014 - 2031)
- Option 2: 16ha (2014 - 2031)
- Option 3: 25ha (2014 - 2031)
- Option 4: 27ha (2014 - 2031)

Summary of appraisal findings

Option 1 - Summary of significant effects

5.100 This option is based on labour supply projections and proposes the delivery of 13ha of employment land to 2031 (gross). This option represents the lower end of the range and as such may provide less opportunities than under all other options to ensure that there is sufficient local supply of employment land in the district for its businesses to expand and grow. However it is still likely to lead to a positive effect on the local economy and local employment through helping to meet previously identified needs to revitalise current poor quality stock; help address the imbalance of the portfolio in terms of the size of properties available and meet continued demand for B2 floorspace (particularly from indigenous companies). However as it proposes the lowest allocation of new employment land of all options considered, this option is likely to lead to least overall, long-term support for strengthening, modernising and diversifying the district economy.

5.101 The labour supply scenario forecasts workforce jobs to be 35,485 in 2031 (a decline of 1,637 since 2014), of all options considered, this option is likely to lead to least overall, long-term support for encouraging a high and stable level of employment. Ensuring a sufficient supply of employment land is likely to enable local businesses to expand and make a positive contribution to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. However this option makes the least positive contribution to this of all options considered.

5.102 The option is considered likely to lead to negative effects on meeting housing need since the scenario projects the amount of new jobs needed to match the future working-age population and how much employment space would be needed to accommodate these jobs. The demographic scenarios identified in the emerging SHMA result in a need for 170dpa and 196dpa and housing supply at this level is not considered sufficient to meet objectively assessed need. Further negative effects are likely to result on objectives relating to climate

change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new employment space and associated car journeys.

5.103 Since the option represents the lowest allocation of new employment land there is less opportunity to deliver employment close to where people live, potentially increasing the distance people need to travel to access key services and facilities and making the use of sustainable forms of transport less likely. In addition, this option offers least opportunity to address the high levels of out commuting from the district, leading to negative effects predicted for the objective to reduce the number of journeys made by car. Uncertain effects are recorded on a number of SA objectives including those relating to community cohesion, the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets as the effect will be dependent on the location of employment land allocations and the implementation of Local Plan policies.

Option 2 - Summary of significant effects

5.104 This option is based on a demand-led projection and proposes the delivery of 16ha of employment land 2014 to 2031 (gross). This job stabilisation scenario provides a lower-mid range employment land requirement option and as such may provide more opportunity than option 1, but less opportunity than under options 3 and 4 to ensure that there is sufficient local supply of employment land in the district for its businesses to expand and grow. However the option is likely to lead to a positive effect on the local economy and local employment through helping to meet previously identified needs to revitalise current poor quality stock; help address the imbalance of the portfolio in terms of the size of properties available and meet continued demand for B2 floorspace (particularly from indigenous companies). As lower-mid-range, this option is likely to lead to more opportunity than under option 1, but less opportunity than under options 3 and 4, to offer long-term support for strengthening, modernising and diversifying the district economy.

5.105 The scenario assumes that the district's overall job growth will stabilise over the coming years, ie zero job growth post 2014 and the option is likely to lead to more opportunity than option 1, but less opportunity than under options 3 and 4, to offer long-term support for encouraging a high and stable level of employment. Ensuring a sufficient supply of employment land is likely to enable local businesses to expand and make a positive contribution to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. The option makes a more positive contribution to this than option 1, but less of a positive contribution than is likely under options 3 and 4.

5.106 The option is considered likely to lead to positive effects on meeting housing need since to ensure labour supply meets the job stabilisation forecast, higher levels of housing delivery will be required and this is likely to lead to meeting objectively assessed need. Negative effects are likely to result for objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new employment space and associated car journeys. Since the option is lower-mid range, there is more opportunity to deliver employment close to where people live than under option 1 but less opportunity than under options 3 and 4, influencing the distance people need to travel to access key services and facilities and impacting on the likelihood of people being enabled to use sustainable forms of transport. In addition, the option offers some opportunity to address the high levels of out commuting from the district,

leading to less significant negative effects than under option 1, but more negative impacts than under options 3 and 4 predicted for the objective to reduce the number of journeys made by car.

5.107 Uncertain effects are recorded on a number of SA objectives including those relating to community cohesion, the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets as the effect will be dependent on the location of employment land allocations and the implementation of Local Plan policies.

Option 3 - Summary of significant effects

5.108 This option is based on demand-led projections informed by past take up rates and past trends, proposing the delivery of 25ha of employment land to 2031 (gross). This option is upper-mid range and as such may provide more opportunities than under options 1 and 2, but less opportunity than option 4 to ensure that there is sufficient local supply of employment land in the district for its businesses to expand and grow. This option is likely to lead to a significantly positive effect on the local economy and local employment through helping to meet previously identified needs to revitalise current poor quality stock; help address the imbalance of the portfolio in terms of the size of properties available and meet continued demand for B2 floorspace (particularly from indigenous companies). As this option is upper-mid range it may provide more opportunities than under options 1 and 2, but less opportunity than option 4 to lead to overall, long-term support for strengthening, modernising and diversifying the district economy.

5.109 The past trends job growth scenario suggests growth in office FTE jobs (B1a) but declining FTE jobs in industrial (B1c/B2) and warehousing (B8) land use. Consideration of past take up rates suggests limited prospects for growth in the B-class employment sectors. The practical physical constraints and relative inaccessibility of certain areas and the current lack of viability of employment development schemes suggests that realistically an upsurge in large developments in the district is unlikely for the foreseeable future. However as this option is upper-mid range it may provide more opportunities than under options 1 and 2, but less opportunity than option 4 to lead to long-term support for encouraging a high and stable level of employment. Ensuring a sufficient supply of employment land is likely to enable local businesses to expand and make a positive contribution to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. This option makes a more positive contribution to this than options 1 and 2, but less of a contribution than option 4.

5.110 The option is also considered likely to lead to positive effects on meeting housing need. Past trends in FTE job growth over the period 2014-2031 were considered (2,609) in addition to past take up rates of employment sites in the district, reflecting market demand. To ensure labour supply is sufficient to support the net land requirement produced by this approach (around 3ha - 3.9ha to 2031) high levels of housing delivery will be required, likely to be considered sufficient to meet objectively assessed need.

5.111 Since the option is upper-mid range, there is most opportunity to deliver employment close to where people live than under options 1 and 2, potentially reducing the distance people need to travel to access key services and facilities and making the use of sustainable forms of transport more likely, however the option offers less of a positive contribution to this than option 4. In addition, this option offers more opportunity than options 1 and 2 to address the high levels of out-commuting from the district, leading to positive effects predicted for

the objective to reduce the number of journeys made by car; although the significance is less than under option 4. However negative effects are likely to result on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new employment space and associated car journeys, these effects are likely to be greater than under options 1 and 2, but less significant than under option 4.

5.112 Uncertain effects are recorded on a number of SA objectives including those relating to community cohesion, the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets as the effect will be dependent on the location of employment land allocations and the implementation of Local Plan policies.

Option 4 - Summary of significant effects

5.113 This option is based on demand-led projections informed by Oxford Economics and Experian job growth forecasts, proposing the delivery of 27ha of employment land to 2031 (gross). This option represents the upper end of the range and as such may provide more opportunities than under all other options to ensure that there is sufficient local supply of employment land in the district for its businesses to expand and grow. This option is likely to lead to a significantly positive effect on the local economy and local employment through helping to meet previously identified needs to revitalise current poor quality stock; help address the imbalance of the portfolio in terms of the size of properties available and meet continued demand for B2 floorspace (particularly from indigenous companies).

5.114 The scenario represents a combination of Oxford Economics (OE) and Experian job growth forecasts. Whilst both projections indicate growth over the plan period, the magnitude of this varies considerably. OE suggest a net growth of +228 jobs 2014 - 2031 whilst Experian projections forecast +1,300 over the same period. A key difference between them relates to the projections for manufacture of machinery and equipment and of transport equipment with OE projections suggesting a decline of -427 FTE jobs for these two sectors and Experian projections suggesting a growth of 1,676 FTE jobs net. Given the presence of successful companies in the district specialising in these advanced manufacturing sectors, the NLP report considers there is merit in taking forward a combination of the two job growth scenarios providing a net increase of 435 B-Class FTE jobs 2014-2031 (794 FTEs in total). The report notes that allocation of this level of employment land would require policy intervention via the emerging Local Plan and close monitoring to ensure that the associated scale of job growth is realistic.

5.115 However as it proposes the greatest allocation of new employment land of all options considered, this option has the greatest potential to lead to overall, long-term support for strengthening, modernising and diversifying the district economy and encouraging a high and stable level of employment. Ensuring a sufficient supply of employment land is likely to enable local businesses to expand and make a positive contribution to the vitality and viability of the District's towns and villages, contributing to the safeguarding and improvement of shops and services. This option makes the most positive contribution to this of all options considered.

5.116 The option is also considered likely to lead to positive effects on meeting housing need. To ensure labour supply is sufficient to support the net land requirement produced by this approach (around 6.5ha 2014 to 2031) significant levels of housing delivery will be required, likely to be considered sufficient to meet objectively assessed need.

5.117 Since the option represents the greatest allocation of new employment land there is most opportunity to deliver employment close to where people live, potentially reducing the distance people need to travel to access key services and facilities and making the use of sustainable forms of transport more likely. In addition, this option offers most opportunity to address the high levels of out-commuting from the district, leading to positive effects predicted for the objective to reduce the number of journeys made by car. However negative effects are likely to result on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new employment space and associated car journeys.

5.118 Uncertain effects are recorded on a number of SA objectives including those relating to community cohesion, the protection of biodiversity; the character of towns, villages and heritage assets and their settings; and landscape character and natural assets as the effect will be dependent on the location of employment land allocations and the implementation of Local Plan policies.

Mitigation measures proposed

5.119 It is possible that some likely significant effects identified via the SA can be mitigated. To assist this, potential mitigation measures have been identified during the appraisal of alternative employment land requirements. These recommendations are recorded in the appraisal tables set out in section 9 and have been included in the review of policies undertaken as part of Local Plan preparation.

Recommended preferred option and options dismissed

5.120 The table below sets out the rationale for recommending an option to take forward into the preferred options plan.

Option recommended to take forward	Rationale
Option 4: 27 Ha	<p>This option could be expected to:</p> <ul style="list-style-type: none"> ● Provide opportunities to ensure that there is sufficient supply of employment land in the district to allow local businesses to grow (more significant than under all other options). ● Lead to long term support for strengthening, modernising and diversifying the district economy. ● Provide a net increase of 435 B-class FTE jobs, encouraging a high and stable level of employment. ● Help meet previously identified needs to revitalise current poor quality stock. ● Help address the imbalance of the portfolio in terms of the size of properties available. ● Meet continued demand for B2 floorspace (particularly from indigenous companies).

Option recommended to take forward	Rationale
	<ul style="list-style-type: none"> ● Provide opportunities to deliver employment close to where people live (more significant than under all other options). ● Address the high levels of out commuting from the district (more significant than under all other options). <p>Significant levels of housing delivery will be required to ensure labour supply is sufficient to support the net land requirement produced by this approach.</p> <p>Negative effects are likely to result on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new employment space and associated car journeys.</p>

Table 5.5 Employment land requirement option recommended for taking forward

5.121 The table below sets out the rationale behind those options recommended for dismissal following the appraisal.

Options proposed for dismissal	Rationale
Option 1: 13 Ha	<p>This option could be expected to:</p> <ul style="list-style-type: none"> ● Provide some opportunities to ensure that there is sufficient supply of employment land in the district to allow local businesses to grow (less significant than under all other options). ● Lead to limited long term support for strengthening, modernising and diversifying the district economy (less significant than under all other options). ● Minor positive effect on the local economy through help to meet demand for B2 floorspace and revitalise current poor quality stock (less significant than under all other options). ● Least opportunity to address the high levels of out commuting from the district than under all other options. ● Least opportunity to deliver employment close to where people live than under all other options. <p>Under this option, workforce jobs are forecast to be 35,485 in 2031 (a decline of 1,637 since 2014).</p> <p>Using labour supply projections as the forecast basis is unlikely to contribute towards meeting objectively assessed housing need.</p>

Options proposed for dismissal	Rationale
	<p>However whilst minor negative effects are likely to result on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new employment space and associated car journeys - these are less significant than under all other options.</p>
<p>Option 2: 16 Ha</p>	<p>This option could be expected to:</p> <ul style="list-style-type: none"> • Provide some opportunities to ensure that there is sufficient supply of employment land in the district to allow local businesses to grow (less significant than under options 3 and 4). • Lead to limited long term support for strengthening, modernising and diversifying the district economy (less significant than under options 3 and 4). • Minor positive effect on the local economy through help to meet demand for B2 floorspace and revitalise current poor quality stock (less significant than under options 3 and 4). • Less opportunity to address the high levels of out commuting from the district than under options 3 and 4. • Less opportunity to deliver employment close to where people live than under options 3 and 4. <p>Under this option job growth is forecast to stabilise (zero job growth post-2014).</p> <p>Minor negative effects are likely to result on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new employment space and associated car journeys - these are more significant than under option 1, but less significant than under options 3 and 4.</p>
<p>Option 3: 25 Ha</p>	<p>This option could be expected to:</p> <ul style="list-style-type: none"> • Provide opportunities to ensure that there is sufficient supply of employment land in the district to allow local businesses to grow (more significant than under options 1 and 2, but less significant than under option 4). • Lead to long term support for strengthening, modernising and diversifying the district economy (more significant than under options 1 and 2, but less significant than under option 4). • Minor positive effect on the local economy through help to meet demand for B2 floorspace and revitalise current poor quality stock (more significant than under options 1 and 2, but less significant than under option 4).

Options proposed for dismissal	Rationale
	<ul style="list-style-type: none"> • More opportunity to address the high levels of out commuting from the district than under options 1 and 2, but less than under option 4. • More opportunity to deliver employment close to where people live than under options 1 and 2, but less than under option 4. <p>The past trends job growth scenario suggests growth in office FTE jobs (B1a) but declining FTE jobs in industrial (B1c/B2) and warehousing (B8) land use. Consideration of past take up rates suggests limited prospects for growth in the B-class employment sectors.</p> <p>Negative effects are likely to result on objectives relating to climate change contributions and air quality that are associated with energy consumption and emissions arising from construction and use of new employment space and associated car journeys - these are more significant than under options 1 and 2, but less significant than under option 4.</p>

Table 5.6 Employment land requirement options dismissed following appraisal

5.3 Appraisal of site options

Selection of alternatives for appraisal

5.122 In March 2014, the Council adopted its Core Strategy as the strategy for the future development of the district to 2026 (excluding those parts of the district within the Peak District National Park). The Core Strategy does not identify specific sites to meet future development requirements but identifies the settlements where development may take place and the scale and nature of the development appropriate to those areas.

5.123 The Council maintains a Strategic Housing Land Availability Assessment (SHLAA) which identifies and assesses the availability, suitability and deliverability of land as a potential housing site to meet the identified need for housing over the plan period. This evidence helps the Council understand what sites are theoretically available for housing development and was used, alongside other pieces of evidence, to identify potential alternative locations for housing to be allocated in the emerging Staffordshire Moorlands Local Plans.

5.124 To inform the Council's future choice of site allocations through the emerging Local Plan, a range of alternative site options which could potentially be developed for housing, employment and other uses such as open space were identified and consulted on between July and September 2015. A detailed appraisal of these options is documented in section 7 of this report.

5.125 Over 5,500 consultation responses were received to the 2015 consultation and these and the findings of the SA were used, alongside other evidence, to help determine preferred sites to be taken forward into a draft Local Plan. A first preferred site options consultation was held in April 2016.

5.126 An Initial SA report was consulted on alongside this preferred option sites and boundaries document between 28th April and 13th June 2016. The report included details of the SA of site options and the summaries are reproduced below. In some cases the Initial SA report recommended that further information was sought concerning the sustainability effects of site allocation and the summaries below include detail of this additional evidence where appropriate. In some cases the additional evidence has contributed to the justification for the selection or rejection of sites as a preferred option. In each case rationale for site selection or dismissal as a preferred option is provided.

5.127 Following the additional evidence and consideration of responses received to the April 2016 consultation, a second preferred options draft plan was prepared for further consultation in July 2017. The SA site summaries below include updates to the site summaries included in the Initial SA report with results of the appraisal of additional sites put forward; it should be considered alongside the July 2017 preferred option plan.

5.128 Further information will be provided in the next version of the SA report, alongside updated appraisals where necessary, as the Council continues to build its evidence base.

5.129 SA site summaries for 33 alternative options for the preferred location of a Gypsy and Traveller site are set out in the next section.

Glossary of terms used

5.130 Agricultural Land Classification (**ALC**) is a basis for assessing how development proposals affect agricultural land within the planning system. The system classifies land into five grades, with Grade 3 subdivided into Subgrades 3a and 3b. The best and most versatile land (**BMV**) is defined as Grades 1, 2 and 3a by policy guidance.

5.131 **Flood Zones** refer to the probability of river and sea flooding, ignoring the presence of defences. Zone 1: Low Probability; Zone 2: Medium Probability; Zone 3a: High Probability; Zone 3b: The Functional Floodplain.

5.132 Sites of Biological Importance (**SBI**) are sites of local importance and contain most of the best remaining areas of semi-natural habitat in the county. The sites are selected as the result of a series of county biological and habitat surveys.

5.133 Biodiversity Alert Sites (**BAS**) are of lesser significance on a County basis, because of lower intrinsic quality, smaller size or damage or disturbance. Nevertheless they collectively form a significant part of the County's nature conservation resource, and in some cases a valuable 'reserve series' for some of the Sites of Biological Importance.

5.134 Habitats Regulations Assessment (**HRA**) is an assessment in accordance with the Habitats Regulations (the Conservation (Natural Habitats, &c.) Regulations 1994 as amended) to ascertain the significance of potential impacts of a plan on relevant European sites. The assessment determines whether the plan would adversely affect the integrity of such a site in terms of its nature conservation objectives. Where negative effects are identified, other options should be examined to avoid any potential for damaging effects. The sites are: Special Areas of Conservation (**SACs**) - designated under the Habitats Directive and Special Protection Areas (**SPAs**) - designated under the Wild Birds Directive.

Summary of appraisal findings - all options - with rationale for any options dismissed

Leek

Leek - sites within current settlement boundary

LE022

5.135 The proposed delivery of circa 16 dwellings is considered to have a positive effect. The site is also accessible to existing services and facilities which is likely to have a positive effect, as could the site's low ecological importance. However, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as within an area where 20 - 60% of the land is likely to be BMV is assessed as having a negative effect, as could the site's proximity to historic assets and the inaccessibility of existing areas of employment.

5.136 This site was taken forward as a preferred option for consultation in April 2016.

5.137 The site comprises a small field on the south-eastern edge of Leek, west of the A523 (Ashbourne Road). The site has full planning permission for 12 dwellings, currently awaiting a Decision Notice (SMD/2016/0510).

5.138 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has low ecological value in its potential to support protected species and the site habitats are considered to be of nature conservation value at site level only.

5.139 The Landscape, Local Green Space & Heritage Impact Study (August 2016) considered that the site is of low landscape sensitivity. There are four Grade II Listed Buildings within the 400m buffer. The study considered that their settings do not contribute greatly to the significance of the assets and that development would be highly unlikely to adversely affect their settings.

5.140 Initial Habitats Regulations Assessment Screening noted that new housing development in Leek could increase recreational pressure and air pollution effects (from increased road traffic) potentially resulting in impact on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC. This requires further investigation.

5.141 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

LE037A

5.142 The proposed delivery of circa 28 dwellings is considered to have a significant positive effect, as could the site's proximity to existing areas of employment. The site is also accessible to existing services and facilities which is likely to have a positive effect. However, the development of greenfield land is assessed as having a negative effect, as could the site's proximity to historic assets and the ecological importance of the site.

5.143 Given the current SBI status of most of the site and owing to its ecological importance any future development of the site should be considered in accordance with relevant policies of the NPPF and the Core Strategy.

5.144 This site was not taken forward as a preferred option for consultation in April 2016.

LE045

5.145 The proposed delivery of circa 50 dwellings is considered to have a significant positive effect, as could the site's proximity to existing areas of employment and services and facilities within the town. However, the site's proximity to a designated asset is likely to have a significant negative effect. The development of greenfield land, grade 4 ALC is assessed as having a negative effect, as could the site's proximity to historic assets.

5.146 The site is part of Ball Haye Green Disused Tip SBI. There is potential for visual impact on Abbey Farm (listed Grade II) and the site of Dieu-la-Cres Abbey (Scheduled Monument). County Highways has raised access difficulties.

5.147 This site was not taken forward as a preferred option for consultation in April 2016.

LE057

5.148 The proposed delivery of circa 105 dwellings is considered to have a significant positive effect, as could the site's proximity to existing areas of employment and services and facilities within the town. However, the development of greenfield land, grade 4 ALC is assessed as having a negative effect, as could the site's proximity to historic assets and the ecological importance of the site given its relation to Ladydale Site of Biological Importance.

5.149 The site overlays a part of the Ladydale SBI and is situated within the original parkland setting of Pickwood Hall (listed Grade II). County Highways has raised access difficulties.

5.150 This site was not taken forward as a preferred option for consultation in April 2016.

LE061

5.151 The site's proximity to existing areas of employment and services and facilities within the town is assessed as having a significant positive effect, as could the development of brownfield, urban ALC land. The proposed delivery of circa 16 houses is considered to have a positive effect. However, the site's proximity to historic assets is assessed as being a negative effect.

5.152 Since the site is within the current Leek Town Development Boundary a development proposal could come forward at any time and consequently the site was not taken forward as a preferred option for consultation in April 2016.

LE063

5.153 The proposed delivery of circa 30 dwellings is considered to have a significant positive effect, as could the site's proximity to services, facilities and existing areas of employment. However, the site's proximity to historic assets and ecological importance of the site is likely to have a negative effect.

5.154 Since the site is within the current Leek Town Development Boundary a development proposal could come forward at any time and consequently the site was not taken forward as a preferred option for consultation in April 2016.

LE064

5.155 The site's proximity to existing areas of employment is considered to be a significant positive effect. Similarly, the site has good accessibility to services and facilities which is likely to have a positive effect. However, the site is located within flood zone 2 which is assessed as being a negative effect. The development of greenfield land is likely to have a negative effect, as could the site's proximity to historic assets and a Local Nature Reserve.

5.156 The site is located on the north-western edge of Leek, and comprises a field of rough grassland which slopes up from commercial development on Ashbourne Road to a property on Kiln Lane. There is relevant planning history on the site with an outline application for 11 dwellings awaiting a section 106 agreement. Since the site is likely to be affected to some degree by flood risk, allocation of the site will require support of the Sequential Test and a level 2 SFRA.

5.157 The site was taken forward as a preferred option for consultation in April 2016.

5.158 An outline application for eleven dwellings was approved on 14th December 2016 (SMD/2013/1201). The site was not included in the July 2017 version preferred option Local Plan.

LE070

5.159 The proposed delivery of circa 22 dwellings is considered to have a significant positive effect, as could the development of urban ALC brownfield land, the site's proximity to services, facilities and existing areas of employment. However, the site's proximity to historic assets and the ecological importance of the site is assessed as a negative effect.

5.160 Since the site is within the current Leek Town Development Boundary a development proposal could come forward at any time and consequently the site was not taken forward as a preferred option for consultation in April 2016.

LE076

5.161 The proposed delivery of circa 50 dwellings is considered to have a significant positive effect, as could the site's proximity to services, facilities and existing areas of employment. However, the site's proximity to a designated asset is likely to have a significant negative effect. The development of greenfield land, grade 4 ALC is assessed as being a negative effect, as could the site's proximity to a Local Nature Reserve and the ecological importance of the site.

5.162 The site is part of Ball Haye Green Disused Tip SBI. There is potential for impact on the setting of Fowlchurch, a former grange of Dieu-la-Cres Abbey (listed Grade II). County Highways has raised access difficulties.

5.163 This site was not taken forward as a preferred option for consultation in April 2016.

LE091

5.164 The proposed delivery of circa 150 dwellings is considered to have a significant positive effect, as could the site's proximity to services, facilities and existing areas of employment. However, the site's proximity to designated and historic assets is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is assessed as being a negative effect.

5.165 The site overlays most of Ball Haye Green Disused Tip SBI and is in close proximity to Brough Park Fields Local Nature Reserve. There is potential for impact on the setting of Fowlchurch, a former grange of Dieu-la-Cres Abbey (listed Grade II). There is potential for visual impact on Abbey Farm (listed Grade II) and the site of Dieu-la-Cres Abbey (Scheduled Monument). County Highways has raised access difficulties.

5.166 This site was not taken forward as a preferred option for consultation in April 2016.

LE106

5.167 The site's proximity to services, facilities and existing areas of employment is assessed as a significant positive effect. However, the development of greenfield land, grade 4 ALC is assessed as being a negative effect. As could the site's proximity to historic assets and a Local Nature Reserve.

5.168 Since the site is within the current Leek Town Development Boundary a development proposal could come forward at any time and consequently the site was not taken forward as a preferred option for consultation in April 2016.

LE147

5.169 The proposed delivery of circa 25 dwellings is considered to have a significant positive effect, as could the site's proximity existing areas of employment. Similarly, the site is accessible to services and facilities which is likely to have a positive effect. However, the site's proximity to designated and historic assets is likely to have a significant negative effect. Similarly, the development of greenfield land, grade 4 ALC is assessed as being a negative effect.

5.170 There is a listed well (Ladywell) to the south of the site and a 19th century stone structure survives (listed grade II). The site forms part of established parkland to Pickwood Hall and is part of the Ladydale SBI habitat mosaic.

5.171 This site was not taken forward as a preferred option for consultation in April 2016.

LE243

5.172 The proposed delivery of circa 70 dwellings is considered to have a significant positive effect, as could the site's proximity to existing areas of employment. Similarly, the site has good accessibility to services and facilities which is likely to have a positive effect, as could the development of urban ALC brownfield land. However, the site's proximity to historic assets could have a negative effect. The site's proximity to a Local Nature Reserve is also assessed as being a negative effect.

5.173 The site is part of Ball Haye Green Disused Tip SBI and is adjacent to Fowlchurch Farmhouse (listed Grade II). The site is currently in employment use.

5.174 This site was not taken forward as a preferred option for consultation in April 2016.

LE249

5.175 The proposed delivery of circa 35 dwellings is considered to have a significant positive effect, as could the site's proximity to existing areas of employment. However, the site is partially within flood zone 3 which is likely to have a significant negative effect, as could its proximity to historic assets. Similarly, the proximity to a Local Nature Reserve is

assessed as having negative effects, as could the inaccessibility to other services and facilities. The site is indicated on the predictive map of Best and Most Versatile agricultural land as an urban / industrial area. There is potential for contamination to be present, resulting from the site's former use as a depot.

5.176 The site is surrounded by Ladderedge Country Park to the west and south, a golf course and stream to the north with connective scrub and scattered trees, intersected by the A53 to the east. The site has a culverted watercourse flowing beneath it and is partially within flood zone 3. Allocation of the site will require support of the Sequential Test and a level 2 SFRA. Consideration should be given to planting and landscaping on the eastern boundaries in order to limit effects on views from Ladderedge Country Park. There are opportunities to contribute to the Council's Green Infrastructure strategy.

5.177 The site was taken forward as a preferred option for consultation in April 2016, with a revised boundary to exclude areas within the flood zone.

5.178 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has low ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at local level only. However, more information is required requiring the presence/absence of reptiles.

5.179 There is one Grade II Listed Building within the 400m buffer. The Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) considered that setting does not extensively contribute to the significance of the asset and that development would be highly unlikely to adversely affect the setting of the asset. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity.

5.180 Initial Habitats Regulations Assessment Screening noted that new housing development in Leek could increase recreational pressure and air pollution effects (from increased road traffic) potentially resulting in impact on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC. This requires further investigation.

5.181 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

LE259

5.182 The proposed delivery of circa 50 dwellings is considered to have a significant positive effect, as could the site's proximity to services, facilities and existing areas of employment. However, the proximity to historic assets and a LNR are assessed as being significant negative effects. The development of greenfield land, grade 4 ALC land is assessed as being a negative effect.

5.183 The site is part of Ball Haye Green Disused Tip SBI and is adjacent to Fowlchurch Farmhouse (listed Grade II). The site is currently used as a sports pitch.

5.184 This site was not taken forward as a preferred option for consultation in April 2016.

Leek - Other Uses

LE014 and LE015

5.185 The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the accessibility of other services and facilities is likely to have a significant positive effect, as could the proposed delivery of circa 30 dwellings.

5.186 It is understood that contamination may affect the site.

5.187 Since the site is within the current Leek Town Development Boundary a development proposal could come forward at any time and consequently the site was not taken forward as a preferred option for consultation in April 2016.

LE067

5.188 The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the accessibility of other health care services and facilities is likely to have a significant positive effect, as could the proposed delivery of circa 30 dwellings. However, the site is in proximity to historic assets and a Local Nature Reserve which is likely to have a negative effect.

5.189 Since the site is within the current Leek Town Development Boundary a development proposal could come forward at any time and consequently the site was not taken forward as a preferred option for consultation in April 2016.

LE073

5.190 The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the accessibility of other services and facilities is likely to have a significant positive effect, as could the development of brownfield, urban ALC land. However, the proximity to historic assets and a Local Nature Reserve are assessed as being negative effects.

5.191 Has recent planning approval for 35 dwellings (SMD/2015/0523).

LE080, LE085, LE086 & LE252

5.192 The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the accessibility of other services and facilities is likely to have a significant positive effect, as could the proposed delivery of circa 25 dwellings. However, the site includes two listed buildings which is likely to have a significant negative effect. The proximity of the site to a Local Nature Reserve is also likely to have a negative effect.

5.193 Since the site is within the current Leek Town Development Boundary a development proposal could come forward at any time and consequently the site was not taken forward as a preferred option for consultation in April 2016.

LE116

5.194 The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the accessibility of other services and facilities is likely to have a significant positive effect, as could the proposed delivery of circa 21 dwellings and development of brownfield, urban ALC land. However, the site is in proximity to historic assets and a Local Nature Reserve which is likely to have a negative effect, as could the ecological value of the site.

5.195 Since the site is within the current Leek Town Development Boundary a development proposal could come forward at any time and consequently the site was not taken forward as a preferred option for consultation in April 2016.

LE150 (Newton House)

5.196 The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the proposed delivery of circa 120 is likely to have a significant positive effect. However, the site is indicated on the predictive map of Best and Most Versatile agricultural land as partly within an area where 20 - 60% of the land is likely to be BMV and this is likely to have a significant negative effect. The site's proximity to historic assets and its ecological value is likely to have a significant negative effect.

5.197 The site comprises existing offices, parking and surrounding land on the southern edge of Leek, east of Cheddleton Road. It is adjacent to Ladydale SBI and Ballington Wood ancient woodland. Further work is required to address potential impacts on these sites and if necessary a buffer should be required between the site and Ballington Wood / Ladydale SBI. A contribution to Green Infrastructure may be required.

5.198 The site was taken forward as a preferred option for consultation in April 2016.

5.199 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has medium ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at district level only. However, more information is required regarding the scattered trees on site in order to establish their ecological importance, and the potential to support a population of reptiles and badgers.

5.200 There are nine Grade II Listed Buildings within the 400m buffer. The Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) considered that there was no inter-visibility with the assets to the north of the site due to intervening vegetation and buildings. Therefore, development would be highly unlikely to adversely affect the settings of those assets. The settings of the three assets to the south of the site are not considered to contribute greatly to their significance. However, adverse effects could be reduced by stepping development back and using vegetation screening along the south-western edge of the site.

5.201 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. Initial Habitats Regulations Assessment Screening noted that new development in Leek could increase

recreational pressure and air pollution effects (from increased road traffic) potentially resulting in impact on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC. This requires further investigation.

5.202 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

LE219

5.203 The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the development of brownfield, urban ALC land is likely to have a significant positive effect. However, the site's proximity to historic assets and some ecological value is likely to have a negative effect.

5.204 The site is currently in employment use.

5.205 This site was not taken forward as a preferred option for consultation in April 2016.

LE220

5.206 The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the site has good accessibility to services and facilities and the development of brownfield, urban ALC land is likely to have a significant positive effect. However, the site's proximity to historic assets is likely to have a significant negative effect. The site's proximity to ecological importance is likely to have a negative effect.

5.207 The site is adjacent to Big Mill (Grade II listed) and in Leek Conservation Area. It is currently in employment use.

5.208 This site was not taken forward as a preferred option for consultation in April 2016.

LE235 (Cornhill)

5.209 The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the proposed delivery of circa 244 dwellings is considered to have a significant positive effect. The site's accessibility to services, facilities and open space is likely to have a positive effect. However, the site's partial location within a flood zone is likely to have a significant negative effect, as could its proximity to designated and historic assets. The site is indicated on the predictive map of Best and Most Versatile agricultural land as partly in an area where less than 20% of the land is likely to be BMV.

5.210 Site comprises land to the west of existing offices south of Leek on Cheddleton Road, which includes paddocks, some tree planting and a small farmstead adjacent to the northern boundary. The site is bound by a dismantled railway to the west, beyond which Barnfields Industrial Estate is located. The site is partially within flood zone 3; allocation of the site will require support of the Sequential Test and a level 2 SFRA.

5.211 The site was taken forward as a preferred option for consultation in April 2016, with a revised boundary to exclude areas within the flood zone.

5.212 The ecological appraisal of the Cornhill Economic Regeneration Scheme (October 2016) considered that the main areas of ecological interest are Birchall meadow and the immediately adjoining scrub / rank grassland, the railway corridor and the watercourse running along the southern boundary of the site. These areas are considered to provide the best habitat for bats, birds, badgers and, potentially, reptiles, as well as other flora and fauna. As much site habitat will be lost under the current development proposals, it is suggested that connecting habitat should be maintained as much as possible along the southern and western boundaries of the site (the watercourse and old railway line, respectively).

5.213 There are six Grade II Listed Buildings and one Conservation Area within the 400m buffer. The Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) considered that development would be highly unlikely to adversely affect the settings of the heritage assets due to intervening buildings and vegetation.

5.214 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. Initial Habitats Regulations Assessment Screening noted that new housing development in Leek could increase recreational pressure and air pollution effects (from increased road traffic) potentially resulting in impact on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC. This requires further investigation.

5.215 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

Leek - sites outside current settlement boundary

LE066

5.216 The proposed delivery of circa 50 dwellings is considered to have a significant positive effect. Similarly, the site is located away from designated heritage assets and has good accessibility to services and facilities which is likely to have a positive effect. However, the ecological value of the site is likely to have a negative effect as well as the inaccessibility of existing areas of employment.

5.217 The site forms part of the setting of Knivedon Hall (not listed) and the significance of the Hall and its estate requires further assessment. The site lies partially within an area identified as being important to the landscape setting of the settlement and the potential landscape impact of development also requires further assessment.

5.218 The site was not taken forward as a preferred option for consultation in April 2016.

5.219 However the site was put forward in representations made following the April 2016 public consultation. The site is located on the eastern edge of Leek, east of Mount Road. The site is previously developed, with the northern section comprising Knivedon Hall amongst woodland, and the southern half comprising a property and polytunnels / horticulture. There are no designated heritage assets within the 400m buffer.

5.220 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of high landscape sensitivity. The study found that the site is located beyond the ridge of Mount Road, which currently screens views of Leek from the PDNP. Existing development within the site is generally screened by the trees and other vegetation both within and surrounding the site. The woodland within the site also

provides screening of existing development within Leek. It was considered that development within the site would be visually prominent and could potentially affect the setting of the PDNP.

5.221 Initial Habitats Regulations Assessment Screening noted that new housing development in Leek could increase recreational pressure and air pollution effects (from increased road traffic) potentially resulting in impact on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC. This requires further investigation. There is an opportunity for contribution to the District's Green Infrastructure Network.

5.222 The site was proposed for inclusion in the July 2017 preferred option Local Plan, with an estimated yield of 74.

LE069

5.223 The proposed delivery of circa 42 dwellings is considered to have a significant positive effect. Similarly, the site has low ecological value and has good accessibility to services and facilities which is likely to have a positive effect. However, the proximity of the site to historic assets is likely to have a negative effect as well as the inaccessibility of existing areas of employment.

5.224 The potential landscape impact of development requires further assessment.

5.225 The site was not taken forward as a preferred option for consultation in April 2016.

LE102

5.226 The proposed delivery of circa 20 dwellings is considered to have a significant positive effect. However, the development of greenfield land where the site is indicated on the predictive map of Best and Most Versatile agricultural land as an area where 20 - 60% of the land is likely to be BMV could have a significant negative effect, as could the site's proximity to historic assets. Similarly, the site is relatively inaccessible to services, facilities and areas of existing employment, and has some ecological value which is likely to have a negative effect.

5.227 The site lies on raised ground marking the edge of the settlement. The potential landscape impact of development requires further assessment. There is an opportunity for contribution to the District's Green Infrastructure Network.

5.228 The site was not taken forward as a preferred option for consultation in April 2016.

5.229 However the site was suggested in representations made during the April 2016 public consultation. The site is bounded by mature trees and is in an area not identified as being important landscape setting to settlement. Initial Habitats Regulations Assessment Screening noted that new housing development in Leek could increase recreational pressure and air pollution effects (from increased road traffic) potentially resulting in impact on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC. This requires further investigation.

5.230 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

LE103

5.231 The proposed delivery of circa 20 dwellings is considered to have a significant positive effect. However, the development of greenfield, grade 3 ALC land would have a significant negative effect. Similarly, the site is relatively inaccessible to services, facilities and areas of existing employment and is adjacent to a listed building all of which is likely to have a negative effect. The site's location within flood zones 2 and 3 is also a significant negative effect.

5.232 Due to its location within flood zones 2 and 3 the site is likely to be severely impacted by flood risk, allocation of the site will require support of the Sequential Test and a level 2 SFRA.

5.233 The site was not taken forward as a preferred option for consultation in April 2016.

LE127

5.234 The proposed delivery of circa 100 dwellings is considered to have a significant positive effect. Similarly, the site has low ecological value and has good accessibility to services and facilities which is likely to have a positive effect. However, the development of a mixed greenfield and brownfield site, where the site is indicated on the predictive map of Best and Most Versatile agricultural land as an area where less than 20% of the land is likely to be BMV, and the proximity of the site to historic assets is likely to have a negative effect as well as the inaccessibility of existing areas of employment.

5.235 Mount Road is located to the east of Leek, on a ridge that currently screens the majority of views of the settlement from the Peak District National Park (PDNP). The site comprises a large field on the south-eastern edge of Leek, enclosed by Mount Road to the south and east. The potential landscape impact of development requires further assessment. There is an opportunity for contribution to the District's Green Infrastructure Network.

5.236 The site was taken forward as a preferred option for consultation in April 2016.

5.237 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has low ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However, more information is required regarding the scattered trees on site in order to establish their ecological importance.

5.238 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that there are five Grade II Listed Buildings within the 400m buffer. However due to the topography of the surrounding landscape as well as intervening buildings and vegetation, the report considered there would be no inter-visibility between the assets and the site and that development would be highly unlikely to adversely affect the setting of the assets.

5.239 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of high landscape sensitivity. The study found that the site is visually prominent, and development within it may affect the setting of the PDNP. Development of LE127 was also considered to have the potential to adversely affect the existing settlement edge and landscape character, including the rural approach to Leek.

5.240 Initial Habitats Regulations Assessment Screening noted that new housing development in Leek could increase recreational pressure and air pollution effects (from increased road traffic) potentially resulting in impact on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC. This requires further investigation.

5.241 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

LE128a and LE128b

5.242 The proposed delivery of circa 95 dwellings is considered to have a significant positive effect. Similarly, the site has low ecological value and good accessibility to services and facilities which is likely to have a positive effect. However, the development of greenfield land, where the site is partly indicated on the predictive map of Best and Most Versatile agricultural land as an area where less than 20% of the land is likely to be BMV and the proximity of the site to historic assets is likely to have a negative effect as well as the inaccessibility of existing areas of employment.

5.243 The sites comprise the northern (LE128a) and southern (LE128b) half of a field which slopes up from the eastern edge of Leek to Mount Road. The potential landscape impact of development requires further assessment. There is an opportunity for contribution to the District's Green Infrastructure Network.

5.244 The northern section of the site only (LE128a) was taken forward as a preferred option for consultation in April 2016, with an estimated yield of 54. This area is indicated on the predictive map of Best and Most Versatile land as an urban / industrial area. LE128b is indicated on the predictive map of Best and Most Versatile agricultural land as within an area where less than 20% of the land is likely to be BMV.

5.245 The Council's 2015 Phase 1 ecological survey of LE128 considered the site to have mostly low biodiversity value overall as it consists solely of species poor improved grassland with one species poor hedgerow. The subsequent extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) of LE128a considered that this area has low ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However, more information is required regarding the scattered trees on site in order to establish their ecological importance. A further survey of LE128b is required.

5.246 There is one Grade II Listed Building within the 400m buffer of LE128a and two Grade II Listed Buildings within the 400m buffer of LE128b. The sites were considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that due to the topography of the surrounding landscape as well as intervening buildings and vegetation, there would be no inter-visibility between the assets and the sites. The study considered that setting does not extensively contribute to the significance of the assets and therefore that development would be highly unlikely to adversely affect the setting of the assets.

5.247 LE128a and b were considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that the existing settlement edge is well-defined but urban, and only at a slightly lower elevation than the site, and so is visible across it. The study considered that the sites are currently screened from the National Park by the ridge of Mount Road, the existing tree

planting on Mount Road and the woodland surrounding Knivedon Hall. Site-specific landscape mitigation measures proposed included advanced planting and landscaping on the eastern boundary, and limited building heights in the eastern half of the sites.

5.248 Initial Habitats Regulations Assessment Screening noted that new housing development in Leek could increase recreational pressure and air pollution effects (from increased road traffic) potentially resulting in impact on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC. This requires further investigation.

5.249 Both LE128a and b were proposed for inclusion in the July 2017 preferred option Local Plan, with an estimated yield of 95.

LE140

5.250 The proposed delivery of circa 95 dwellings is considered to have a significant positive effect. Similarly, the site has low ecological value and good accessibility to services, facilities and areas of employment which is likely to have a positive effect. However, the development of greenfield land, where the site is indicated on the predictive map of Best and Most Versatile agricultural land as an urban / industrial area and the proximity of the site to historic assets is likely to have a negative effect.

5.251 Site comprises land sloping down from Mount Road to the settlement edge, and is enclosed by tree belts on the northern and western boundaries. There are also trees on the eastern boundary, however these are more sparse. The site lies within an area identified as being important to the landscape setting of the settlement and the potential landscape impact of development requires further assessment. There is an opportunity for contribution to the District's Green Infrastructure Network.

5.252 The site was taken forward as a preferred option for consultation in April 2016.

5.253 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has low ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at local level only.

5.254 There are three Grade II Listed Buildings within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that due to the topography of the surrounding landscape as well as intervening buildings and vegetation, there would be no inter-visibility between the assets and the site and the study considered that development would be highly unlikely to adversely affect the settings of the assets.

5.255 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that the site slopes down from Mount Road and so views from the National Park are screened by the ridge and intervening vegetation on the site boundary and on the land on the opposite side of Mount Road (including the woodland surrounding Knivedon Hall). The study suggests that site-specific landscape mitigation measures could include advanced planting and landscaping on the eastern boundary, and limited building heights in the eastern half of the site.

5.256 Initial Habitats Regulations Assessment Screening noted that new housing development in Leek could increase recreational pressure and air pollution effects (from increased road traffic) potentially resulting in impact on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC. This requires further investigation.

5.257 The site was proposed for inclusion in the July 2017 preferred option Local Plan with an estimated yield of 70.

LE142A

5.258 The proposed delivery of circa 140 dwellings is considered to have a significant positive effect. Similarly, the site good accessibility to services, facilities and areas of employment which is likely to have a positive effect. However, the development of greenfield land, where the site is indicated on the predictive map of Best and Most Versatile agricultural land as an urban / industrial area, the ecological value of the site and the proximity to historic assets is likely to have a negative effect.

5.259 Site comprises land to the east of Mount Road, on the north-eastern edge of Leek. The site is visually prominent and visible from the National Park, as it is located atop of the ridge that screens views of Leek. The site lies within an area identified as being important to the landscape setting of the settlement and the potential landscape impact of development requires further assessment. There is an opportunity for contribution to the District's Green Infrastructure Network.

5.260 The site was taken forward as a preferred option for consultation in April 2016.

5.261 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has low ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However, more information is required regarding the potential for bats roosts on the site.

5.262 There are two Grade II Listed Buildings within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that due to the topography of the surrounding landscape as well as intervening buildings and vegetation, there would be no inter-visibility between the assets and the site and considers that development would be highly unlikely to adversely affect the setting of the assets.

5.263 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of high landscape sensitivity. The study found that the site is visually prominent, and development within it may affect the setting of the National Park. The study considered that development of LE142a had the potential to adversely affect the existing settlement edge and landscape character, including the rural approach to Leek.

5.264 Initial Habitats Regulations Assessment Screening noted that new housing development in Leek could increase recreational pressure and air pollution effects (from increased road traffic) potentially resulting in impact on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC. This requires further investigation.

5.265 The site was proposed for inclusion in the July 2017 preferred option Local Plan with an amended site boundary to exclude land in the ownership of Leek Land Trust, estimated yield 29.

LE142B

5.266 The proposed delivery of circa 40 dwellings is considered to have a significant positive effect. Similarly, the site good accessibility to services, facilities and areas of employment which is likely to have a positive effect. However, the development of greenfield land, where the site is indicated on the predictive map of Best and Most Versatile agricultural land as an urban / industrial area, the ecological value of the site and the proximity to historic assets is likely to have a negative effect.

5.267 The site comprises an existing farmstead and paddocks, and the access track which extends north to Thorncliffe Road. The site lies within an area identified as being important to the landscape setting of the settlement and the potential landscape impact of development requires further assessment. There is an opportunity for contribution to the District's Green Infrastructure Network.

5.268 The site was taken forward as a preferred option for consultation in April 2016.

5.269 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has low ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However, more information is required regarding the scattered trees on site in order to establish their ecological importance.

5.270 There is one Grade II Listed Building within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that due to the topography of the surrounding landscape as well as intervening buildings and vegetation, there would be no inter-visibility between the asset and the site and development would be highly unlikely to adversely affect the setting of the asset.

5.271 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of high landscape sensitivity. The study found that while existing development within the site does not contribute to a well-defined settlement edge, the existing development is located within the areas of the site with the lowest visual prominence and development across the entire site would likely be visible from the National Park and could affect its setting. The study found that the site is visually prominent and development may adversely affect landscape character, including the rural approach to Leek.

5.272 Initial Habitats Regulations Assessment Screening noted that new housing development in Leek could increase recreational pressure and air pollution effects (from increased road traffic) potentially resulting in impact on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC. This requires further investigation.

5.273 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

LE143

5.274 The proposed delivery of circa 190 dwellings is considered to have a significant positive effect. However, the development of greenfield, grade 4 ALC land, the proximity to historic assets is likely to have a negative effect as could the relative inaccessibility to services, facilities and areas of existing employment.

5.275 The site is in open countryside and forms part of the setting of the 16th century Edge End Farm (listed Grade II); the significance of the designated heritage asset and potential landscape impact of development, including on the Peak District National Park, require further assessment.

5.276 The site was not taken forward as a preferred option for consultation in April 2016.

LE143A

5.277 The proposed delivery of circa 135 dwellings is considered to have a significant positive effect. However, the site's proximity to historic assets is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land, the proximity to historic assets is likely to have a negative effect as could the relative inaccessibility to services, facilities and areas of existing employment.

5.278 The potential landscape impact of development, including on the Peak District National Park, requires further assessment.

5.279 The site was not taken forward as a preferred option for consultation in April 2016.

LE253

5.280 The proposed delivery of circa 15 dwellings is considered to have a positive effect, as could the site's proximity to areas of existing employment. However, the site's proximity to historic assets is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land and the proximity to historic assets are likely to have a negative effect, as could the relative inaccessibility to services and facilities and the ecological value of the site.

5.281 The site was not taken forward as a preferred option for consultation in April 2016.

Broad Area EM2 Leekbrook

5.282 The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. The site's accessibility to open space is likely to have a positive effect. However, the site is relatively inaccessible to services and facilities and the site is located within a flood zone which is likely to have a significant negative effect. The development of greenfield land where the site is indicated on the predictive map of Best and Most Versatile agricultural land as an area where 20 - 60% of the land is likely to be BMV is assessed as being a negative effect, as could the site's proximity to historic assets and a partial SBI designation.

5.283 The site is likely to be affected to some degree by flood risk; allocation of the site will require the support of the Sequential Test and a level 2 SFRA. The site lies in a valley with an existing industrial estate adjacent to the west. It comprises grassland, adjacent to a stream on the northern boundary, which gradually slopes up to woodland on the southern

boundary. The majority of the site is designated as part of Twinney Wood and Grassland Site of Biological Importance and is within 400m of Grade II * listed Fynneylane Farm. Further heritage and ecological impact assessment work is required.

5.284 The site was taken forward as a preferred option for consultation in April 2016, with a revised boundary to exclude areas within the flood zone.

5.285 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that whilst a large proportion of the site has already been designated as part of the Twinney Wood and Grassland SBI, the remaining part of the site has low ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However, more information is required regarding the scattered trees on site in order to establish their ecological importance.

5.286 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that due to the topography of the surrounding landscape and the dense screening of vegetation, there was no inter-visibility between the site and the heritage asset. Despite this, the site is part of the setting of the asset. The study found that the setting contributes to the significance of the heritage asset and it would be likely that development of the site would adversely affect its setting. Affects may be reduced if development was kept in the western half of the site so as to not infringe on the setting of the asset; an appropriate mitigation strategy should be required.

5.287 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that while the site is large and open, as it is enclosed by woodland and located at the bottom of a valley, it is considered to have low visual prominence. Further, the character of the site is affected by the adjacent industrial development, which is visually prominent from within the site.

5.288 Initial Habitats Regulations Assessment Screening noted that new development in Leek could increase recreational pressure and air pollution effects (from increased road traffic) potentially resulting in impact on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC. This requires further investigation.

5.289 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

Leek - Additional Sites

ADD01 (East of Horsecroft Farm)

5.290 The proposed delivery of circa 15 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. The site's accessibility to areas of open space is considered to have a positive effect. However, the site's proximity to designated and historic assets is likely to have a negative effect, as could the development of greenfield land where the site is indicated on the predictive map of Best and Most Versatile agricultural land as partly within an area where 20 - 60% of the land is likely to be BMV, and the inaccessibility of services and facilities.

5.291 The site comprises a fenced section of a field sloping down from the northeastern edge of Leek, to the north-west of Churnet View Middle School. The site was taken forward as a preferred option for consultation in April 2016.

5.292 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that species recorded on site are common and widespread both at a county and national level and it is considered unlikely that the site is important in maintaining any populations of notable or protected species. The majority of the site consists of improved grassland, this habitat is common and widespread both locally and throughout the UK and, as such, is considered to be of importance to nature conservation at site level only.

5.293 There are two Grade II Listed Buildings within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that due to the topography and intervening buildings, development would be highly unlikely to adversely affect the assets. Outside of the 400m buffer, there is a Scheduled Monument to the north-west of the site. Due to the open topography, development could adversely affect its setting. Mitigation including the use of vegetation screening may reduce effects.

5.294 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of high landscape sensitivity. The study found that the site is semi-enclosed by vegetation on the settlement edge, however is open to the north-west. This allows long distance views and inter-visibility between the site and higher ground across the valley to the north-west. Currently the settlement edge is well-defined and vegetated, with views of existing development generally screened. In addition the settlement edge is currently located on a ridge, with development not extending beyond this ridge, however the site is located below this ridge. The study considered that development of the site would be visually prominent, and would encroach on the countryside by extending beyond this ridge. In addition the study noted that there would be no clear limit to development if the site were developed, potentially compromising the surrounding sensitive countryside.

5.295 Initial Habitats Regulations Assessment Screening noted that new housing development in Leek could increase recreational pressure and air pollution effects (from increased road traffic) potentially resulting in impact on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC. This requires further investigation.

5.296 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

ADD09 (Leekbrook) (employment land allocation)

5.297 The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. The site's accessibility to open space is likely to have a positive effect. However, the site is relatively inaccessible to services and facilities which is likely to have a significant negative effect. The development of greenfield land where the site is indicated on the predictive map of Best and Most Versatile agricultural land as an area where 20 - 60% of the land is likely to be BMV is assessed as being a negative effect, as could the site's proximity to historic assets.

5.298 The site comprises a field that slopes steeply up from Basford Lane to woodland, which encloses the site to the west and south. The site is bound by commercial development on the A520 to the north. Consideration should be given to the adjacent woodland, which is designated as an SBI and carries Tree Preservation Orders.

5.299 The site was taken forward as a preferred option for consultation in April 2016.

5.300 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that most of the site was comprised of improved grassland for pasture; this habitat is common and widespread both locally and throughout the UK and, as such, is considered to be of importance to nature conservation at site level only. However the hedgerow habitat on site was considered of nature conservation value at the local level. Species recorded on site were common and widespread both at a county and national level and it is considered unlikely that the site significantly supported any notable protected species.

5.301 There is one Grade II Listed Building within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that due to the intervening industrial estate, development would not adversely affect the setting of the asset.

5.302 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that the surrounding vegetation and development which encloses the site reduces visual prominence and development of the site would fit in well with the existing pattern of surrounding industrial / commercial development. Site-specific landscape mitigation measures could include restricted development and building heights on the higher ground.

5.303 Initial Habitats Regulations Assessment Screening noted that new development in Leek could increase recreational pressure and air pollution effects (from increased road traffic) potentially resulting in impact on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC. This requires further investigation.

5.304 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

Additional sites appraised following April 2016 consultation

LE154 Adams Foods

5.305 The proposed delivery of circa 60 dwellings is considered to have a significant positive effect, as is avoidance of the loss of best and most versatile agricultural land and the edge of town centre location. However, the site's proximity to historic assets and mature woodland is likely to have a negative effect, as is the loss of potential employment use.

5.306 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

LE138 Land at Macclesfield Road

5.307 The proposed delivery of circa 25 dwellings is considered to have a significant positive effect, the site's location outside flood zones 2 or 3 is also likely to lead to positive effects. However, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as within an area where over 60% of the land is likely to be BMV, could have a significant negative effect. Similarly, the site is relatively inaccessible to services, facilities and areas of existing employment. New housing development in Leek could increase recreational pressure and air pollution effects (from increased road traffic) potentially resulting in impact on European sites. Further assessment is required to identify potential for ecological or landscape impacts.

5.308 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

Biddulph

Biddulph - Sites within current development boundary

BD004

5.309 The development of urban ALC land on a brownfield site is likely to have a significant positive effect, as could the site's proximity to existing areas of employment. The site should deliver a quantum of housing, circa 15 dwellings which is likely to have a positive effect. The site is located within the settlement boundary and has good accessibility to the services and facilities. However, its proximity to heritage assets would have a negative effect, as would the ecological value of the site.

5.310 Concerns expressed by the Highway Authority raise issues about the viability of developing this site independently.

5.311 This site was not taken forward as a preferred option for consultation in April 2016.

BD016

5.312 The site should deliver a quantum of housing, circa 20 dwellings which is likely to have a significant positive effect, as could the location of the site with regard to its proximity to services and facilities and areas of existing employment as well as the positive effect on the landscape. The site is located within the settlement boundary and has good accessibility to health care services and facilities. However, its proximity to heritage assets would have a negative effect. The site is indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial.

5.313 The site comprises Beehive Farm and adjacent land, enclosed by Colliers Way to the west and Tunstall Road to the east. The site was taken forward as a preferred option for consultation in April 2016.

5.314 The site is located close to and / or adjoining existing areas of open space and green infrastructure. Suitable enhancements of existing open spaces and / or the provision of links may be required together with appropriate management via contribution to the Council's Green Infrastructure Network.

5.315 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has low ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However, more information is required regarding the scattered trees on site in order to establish their ecological importance.

5.316 There are seven Grade II Listed Buildings within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that the church tower was visible from the site however due to the topography of the landscape, development would be unlikely to adversely affect its setting. Due to the large road junction and intervening buildings, development would be unlikely to cause high adverse effects to the settings of the remaining designated assets.

5.317 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the existing development within the site does not contribute to a well-defined settlement edge, and therefore development of the site could strengthen the settlement edge.

5.318 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

BD055

5.319 The site should deliver a quantum of housing, circa 20 dwellings which is likely to have a significant positive effect, as could the development of brownfield land indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial and proximity to services and facilities. However, the site's proximity to heritage assets is assessed as a significant negative. The site is located within the settlement boundary and has good accessibility to services and facilities and areas of existing employment. However, the site's ecological value would have a negative effect.

5.320 The site has a planning history. Application reference SMD/2015/0684 was withdrawn. Site comprises previously developed land (formerly a school) immediately west of the junction of St John's Road and Tunstall Road and within the southern part of the land enclosed by the dismantled railway and the A527. The site was taken forward as a preferred option for consultation in April 2016 as part of the Wharf Road site (Core Strategy Broad Area 4).

5.321 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site habitats are considered to be of nature conservation value at site level only and are not eligible for possible SBI / BAS status. However, the building on site has the potential to support bats and as such, requires further assessment. The site was also noted as potentially supporting reptiles.

5.322 There are seven Grade II Listed Buildings within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that development would be unlikely to cause high adverse effects to the settings of the assets, however, mitigation should include screening along the southern edge of the site to reduce effects.

5.323 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that re-development of the site could improve local landscape character.

5.324 The site was proposed for inclusion in the July 2017 preferred option Local Plan as part of the Wharf Road site (Broad Area 4).

BD059

5.325 The development of urban ALC brownfield land should have a significant positive effect, as should the preservation of the landscape and the site's proximity to existing areas of employment and services and facilities. The site is located within the settlement boundary, and away from historical assets. However, the site's ecological value would have a negative effect.

5.326 Since the site is within the current settlement boundary a development proposal could come forward at any time and consequently the site was not taken forward as a preferred option for consultation in April 2016.

BD101 (Yarn Mill)

5.327 The development of brownfield land indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial should have a significant positive effect, as should the preservation of the landscape and the site's proximity to existing areas of employment and services and facilities and the delivery of circa 24 dwellings. The site is located within the settlement boundary, and away from historical assets. However, the site's ecological value could have a negative effect.

5.328 This site was not taken forward as a preferred option for consultation in April 2016.

5.329 The site was suggested in representations made to the public consultation held in April 2016 and proposed for inclusion in the July 2017 preferred option Local Plan. Ecological assessment is required.

BD102 (Minster Mill)

5.330 The development of brownfield land indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial should have a significant positive effect, as should the preservation of the landscape and the site's proximity to existing areas of employment and services and facilities and the delivery of circa 42 dwellings. The site is located within the settlement boundary, and away from historical assets. However, the site's ecological value could have a negative effect.

5.331 This site was not taken forward as a preferred option for consultation in April 2016.

5.332 The site was suggested in representations made to the public consultation held in April 2016 and proposed for inclusion in the July 2017 preferred option Local Plan. Ecological assessment is required.

BD108

5.333 The development of brownfield land indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial should have a significant positive effect, as should the preservation of the landscape and the site's proximity to services and facilities. However there is scope that development of this site could have significant negative effects on historical assets. Similarly, the site's ecological value would have a negative effect.

5.334 The site comprises previously developed land within the settlement, west of Tunstall Road and north of Roaches School and is the southern-most of the sites enclosed by the dismantled railway and the A527. The site was taken forward as a preferred option for consultation in April 2016.

5.335 The site is located close to and / or adjoining existing areas of open space and green infrastructure. Suitable enhancements of existing open spaces and / or the provision of links may be required together with appropriate management via contribution to the Council's Green Infrastructure Network.

5.336 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has low ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However, more information is required regarding the scattered trees on site in order to establish their ecological importance.

5.337 There are two Grade II Listed Buildings in the site and five additional Grade II Listed Buildings within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that the site is small and development would highly likely cause substantial adverse effects to the settings of the assets in the site. To reduce effects, mitigation should include setting development back from the assets coupled with landscape master-planning to provide screening.

5.338 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the site is set back from the road, with screening provided by the existing trees and vegetation on the road. Development within the site would not be visually prominent, and (in combination with development of the adjacent sites) could create a stronger settlement edge.

5.339 The site was proposed for inclusion in the July 2017 preferred option Local Plan as part of the Wharf Road site (Broad Area 4).

Biddulph - Urban Extension

BD071, BD071A, BD106 & BD156 (Core Strategy Broad Area 4)

5.340 The site's proximity to services, facilities and existing areas of employment and proposed delivery of circa 265 dwellings should have a significant positive effect. However there is scope that development of this site could have negative effects due to the site's ecological value and the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as an area where less than 20% of the land is likely to be BMV.

5.341 The area has been identified as an appropriate area for housing in the adopted Core Strategy (Area 4). The potential landscape impact of development requires further assessment.

5.342 The sites making up the Broad Area were taken forward as a preferred option for consultation in April 2016.

5.343 Sites BD071 and BD071a are the largest of the sites enclosed by the dismantled railway and the A527. The sites comprise Knypersley View Farm and the fields surrounding it, enclosed by the dismantled railway to the west and Colliers Way to the east. The site extends south, adjacent to the railway line, to Newpool Road where the access for the farm is located. Sites BD106 and BD156 are within the south of the land enclosed by the dismantled railway and the A527 and comprise an existing property (Levens), gardens and adjacent fields within the south-west of the settlement. The sites also include the existing access track, extending east from the property to Tunstall Road. Coal outcrops are probable within the Area.

5.344 The Council's Extended Phase 1 Habitat Survey (2014) highlights the presence of species rich hedgerows, dense willow scrub and tall ruderal vegetation which are connected to a series of other hedgerows and habitats and form an important potentially biodiverse habitat mosaic with good connectivity and making a valuable contribution to the Biddulph Corridor as set out in the District's Strategic Green Infrastructure Network.

5.345 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the broadleaf woodland of sites BD071 & BD071A may be of ecological value and may allow for the site to gain SBI / BAS status once the vegetation has been fully recorded and that the sites offer potential to support bats, reptiles and amphibians. The study considered the habitats of sites BD106 and BD156 to be of nature conservation value at site level only and not eligible for possible SBI / BAS status. However, the building and some trees on site have the potential to support bats and as such, requires further assessment. The sites were also noted as potentially supporting reptiles.

5.346 There are seven Grade II Listed Buildings within the 400m buffer of sites BD071 and BD071a. The sites were considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that due to topography and surrounding vegetation, development would be unlikely to cause high adverse effects to the settings of the assets. Mitigation may include screening in the south-eastern part of the sites.

5.347 There are seven Grade II Listed Buildings within the 400m buffer of sites BD106 and BD156. The sites were considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that development would be unlikely to cause high adverse effects to the settings of the assets. To reduce effects, mitigation should include setting development back from the assets by keeping development to the west and north of the sites as well as employing screening along the eastern edges.

5.348 The sites BD071 and BD071a were considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that the topography within the site is undulating, and so visual prominence of the site varies. The southern extent of the site is generally screened by surrounding vegetation. Visual prominence is higher in the north of the site, where the land rises up to a ridge. Site-specific landscape mitigation measures could include additional advanced planting on the ridge and western boundary.

5.349 The sites BD106 and BD156 were considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the sites were set back from the road and well screened by intervening vegetation and existing development. It was considered that development within the sites would not be visually prominent, and (in combination with development of the adjacent sites) could create a stronger settlement edge.

5.350 A comprehensive masterplan should be prepared for the Broad Area to take account of its ecological value, the need to maintain linear habitat connectivity along the stream, demonstrating how development is contributing to the priorities and actions proposed for the Biddulph corridor (as set out in the Green Infrastructure Strategy) including providing access to the Biddulph Valley Way; the masterplan should also address landscape and heritage impact mitigation measures and respond to the presence of any shallow mine workings.

5.351 The overall Core Strategy Broad Area 4 was proposed for inclusion in the July 2017 preferred option Local Plan - to be known as Wharf Road.

Biddulph - Other uses**BD117**

5.352 The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. However, the greenfield nature of this site (largely indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial, but partly as an area where less than 20% of the land is likely to be BMV) and its location outside of the settlement boundary, coupled with its ecological value could have a negative effect.

5.353 This is a large site comprising fields on the southern edge of Biddulph, east of the A527 (Tunstall Road); south of Victoria Row; and north and west of Mill Hayes Road. Residential properties and a smallholding are located on the A527 and are enclosed by the site.

5.354 The Council's Green Belt review has recommended considering this site for release from the Green Belt if exceptional circumstances are demonstrated. The potential landscape impact of development requires further assessment. There are no designated heritage assets within the 400m buffer.

5.355 This site was taken forward as a preferred option (housing / employment mixed-use) for consultation in April 2016.

5.356 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has some ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However, more information is required regarding the scattered trees on site in order to establish their ecological importance.

5.357 The Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) considered the landscape sensitivity of the site to be low in the south-west, increasing to the north-east corner of the site where sensitivity was considered to be highest. The study found that the site is large and open with high visual prominence, particularly in the north and east of the site, with long distance views available from the footpath on the northern boundary. Visual prominence is lower in the south-west of the site, south of the existing properties on the A527, where the land is enclosed by trees and hedgerows. Site-specific landscape mitigation measures could include planting within and on the edges of the development, and limits on building sizes and scale.

5.358 The site was proposed for inclusion in the July 2017 preferred option Local Plan for residential use.

BD076

5.359 The proposed delivery of a town centre employment site is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect. There are no designated heritage assets within the 400m buffer. The site is indicated on the predictive map of Best and Most Versatile agricultural land as within an area where less than 20% of the land is likely to be BMV.

5.360 BD076 is within the north of the land enclosed by the dismantled railway and the A527. The site comprises the northern sections of two fields, the remainder of which are located in site BD071 and BD071a to the south. The site is enclosed by the dismantled railway (Biddulph Valley Way) to the west and previously developed land (BD076a) to the north. The site is allocated for retail / employment use in the Biddulph Town Centre Area Action Plan.

5.361 This site was taken forward with BD076A as a preferred option (employment / retail) for consultation in April 2016.

5.362 The site has a culverted watercourse flowing beneath it which should be re-naturalised through redevelopment. It may be possible to divert the channel round the edge of the site to maximise developable space. The site is included within an area constituting potentially biodiverse habitat mosaic with good connectivity and making a valuable contribution to the Biddulph Corridor as set out in the District's Strategic Green Infrastructure Network. Coal outcrops are probable.

5.363 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has medium ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at local and site level. However, more information is required regarding the species rich hedgerow and the presence/absence of reptiles on the site.

5.364 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that land within the site slopes up to a ridge with an approximate north - south orientation in the centre of the site. Development on the ridge within the site could be visually prominent, particularly from the countryside to the west of Biddulph. Site-specific landscape mitigation measures could include additional advanced planting on the ridge and western boundary.

5.365 A comprehensive masterplan should be prepared for the wider area of potential allocation that the site contributes to, to take account of its ecological value, the need to maintain linear habitat connectivity, including to re-naturalise the water course, demonstrating how development is contributing to the priorities and actions proposed for the Biddulph corridor (as set out in the Green Infrastructure Strategy) including providing access to the Biddulph Valley Way; the masterplan should also address landscape impact mitigation measures and include a response to the presence of any shallow mine workings.

5.366 The site was proposed for inclusion with BD076A as an employment / retail allocation in the July 2017 preferred option Local Plan.

BD076A

5.367 The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the site is located within settlement boundary and should have good access to services and facilities which is likely to also have a significant positive effect. However the site has been assessed as having ecological value which is likely to have a negative effect. The site is indicated on the predictive map of Best and Most Versatile agricultural land as within an area where less than 20% of the land is likely to be BMV.

5.368 BD076a is the northern-most of the sites enclosed by the dismantled railway and the A527. The site comprises previously developed land, including an existing depot, on the western edge of Biddulph. The site was taken forward with BD076 as a preferred option (employment / retail) for consultation in April 2016.

5.369 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has some ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at local level only. However, further investigation of the presence or absence of reptiles on the site is needed.

5.370 There are no designated heritage assets within the 400m buffer. The site is included within an area constituting potentially biodiverse habitat mosaic with good connectivity and making a valuable contribution to the Biddulph Corridor as set out in the District's Strategic Green Infrastructure Network. Coal outcrops are probable. Contamination issues are possible as this site is believed to be located above an historic landfill site.

5.371 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that existing development within the north of the site is generally screened by the vegetation that encloses it. However, views from Colliers Way are available. In addition, limited views are available through gaps in vegetation on Wharf Road and the Biddulph Valley Way. The study considered that re-development of the site could improve local landscape character.

5.372 A comprehensive masterplan should be prepared for the wider area of potential allocation that the site contributes to, to take account of its ecological value, the need to maintain linear habitat connectivity, demonstrating how development is contributing to the priorities and actions proposed for the Biddulph corridor (as set out in the Green Infrastructure Strategy) including providing access to the Biddulph Valley Way; the masterplan should also include landscape impact mitigation measures and a response to the presence of any shallow mine workings.

5.373 The site was proposed for inclusion with BD076 as an employment / retail allocation in the July 2017 preferred option Local Plan.

Biddulph - Sites within existing Green Belt

BD062

5.374 The proposed delivery of circa 40 dwellings should have a significant positive effect. The site is also accessible to existing services, facilities and areas of employment which is likely to have a positive effect. However, the site's ecological importance due to the potential for protected species to be present and its connection to the wider countryside are considered to have a significant negative effect. Similarly, the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial) and the site's proximity to historic assets are also assessed as having a negative effect.

5.375 Site is located within the north of Biddulph, east of the dismantled railway line (Biddulph Valley Way), and comprises an area of rough grassland and scrub. The site is enclosed by residential development to the south and west, and a sewage treatment works to the north-east, resulting in low visual prominence.

5.376 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the species poor semi improved grassland, scattered scrub, dense scrub, tall ruderal vegetation are common and widespread habitats both locally and nationally and are not listed as important habitats in the Staffordshire SBI guidelines. Assessment of the two trees for their potential to support roosting bats and a reptile survey are required.

5.377 The Council's Green Belt review has recommended considering this site for release from the Green Belt if exceptional circumstances can be demonstrated. The potential landscape and ecological impacts of development require further assessment.

5.378 This site was taken forward as a preferred option for consultation in April 2016.

5.379 There are three Grade II Listed Buildings within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that it is enclosed by surrounding vegetation and that there is no inter-visibility between the site and the assets; development was considered highly unlikely to adversely affect the settings of the assets.

5.380 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. Although the adjacent settlement edge is well-defined, it is urban in character to the south of the site. The study found that existing vegetation on the north-eastern site boundaries would form a vegetated settlement edge, and considered that this vegetation should be retained and strengthened where necessary.

5.381 The site is adjacent to United Utilities water treatment works - master-planning may be required in order to mitigate the risk of odour and noise nuisance. The Council's 2015 Phase 1 habitat survey noted that the site has potential for protected species to be present due to the mosaic of habitats and habitat structure present, especially as the site is well connected to the wider countryside. Any masterplan should also demonstrate how a development scheme will address the site's potential ecological value and contribute to the priorities and actions proposed for the Biddulph strategic GI corridor (as set out in the Green Infrastructure Strategy), including by supporting public access on to the Biddulph Valley Way.

5.382 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

BD063A

5.383 The proposed delivery of circa 120 dwellings should have a significant positive effect. The site is also accessible to existing services, facilities and areas of employment which is likely to have a positive effect. However, the site's ecological value is considered to have a negative effect. Similarly, the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial) and the site's proximity to historic assets are also assessed as having a negative effect.

5.384 The potential landscape and heritage impacts of development require further assessment.

5.385 The Council's Green Belt review has recommended considering a smaller variant of this site for release from the Green Belt if exceptional circumstances can be demonstrated. The capacity of the site was reduced from 120 to 40 to reflect the results of the Green Belt review and this revised site was taken forward as a preferred option for consultation in April 2016.

5.386 The site is located north of Newpool road, and comprises a single field that slopes down from the farm track on the western boundary, to the residential development which encloses the site. The site has low visual prominence due to its topography, and screening provided by the adjacent development and a hedgerow on the western boundary.

5.387 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered the site habitats to be of nature conservation value at site level only and not eligible for possible SBI / BAS status. However two trees on site have the potential to support bats and as such, require further assessment.

5.388 There are seven Grade II Listed Buildings within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that the site is set behind existing development and development on the site would be highly unlikely to adversely affect the settings of the heritage assets.

5.389 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the linear development on Meadowside does not contribute to a well-defined settlement edge, and development of the site could strengthen the settlement edge, it was recommended that the hedgerow on the western boundary should be retained in order to maintain low visual prominence, and a vegetated edge.

5.390 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

BD064

5.391 The site is accessible to existing services, facilities and areas of employment which is likely to have a positive effect. However, the site's ecological value is considered to have a negative effect. Similarly, the development of greenfield land, grade 4 ALC and the site's proximity to historic assets and the ecological status of the site are also assessed as having a negative effect.

5.392 The Council's Green Belt review has not recommended that this site is suitable to consider for release from the Green Belt.

5.393 This site was not taken forward as a preferred option for consultation in April 2016.

BD067A

5.394 The proposed delivery of circa 120 dwellings is considered to have a significant positive effect. The site is accessible to existing services, facilities and areas of employment and located away from historic assets is likely to have a positive effect. However, the site's ecological value is considered to have a negative effect. Similarly, the development of greenfield land, grade 4 ALC is also assessed as having a negative effect.

5.395 The site has a culverted watercourse flowing beneath it which should be re-naturalised through re-development. The Council's Green Belt review has recommended that this site is not released from the Green Belt.

5.396 This site was not taken forward as a preferred option for consultation in April 2016.

BD067B

5.397 The proposed delivery of circa 150 dwellings is considered to have a significant positive effect. The site is accessible to existing services, facilities and areas of employment is likely to have a positive effect. However, the site's ecological value is considered to have a negative effect. Similarly, the development of greenfield land, grade 4 ALC and the site's proximity to heritage assets is also assessed as having a negative effect.

5.398 The site has a culverted watercourse flowing beneath it which should be re-naturalised through re-development. The Council's Green Belt review has recommended that this site is not released from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

BD067C

5.399 The proposed delivery of circa 120 dwellings is considered to have a significant positive effect. The site is accessible to existing services, facilities and areas of employment is likely to have a positive effect. However, the site's ecological value is considered to have a negative effect. Similarly, the development of greenfield land, grade 4 ALC and the site's proximity to heritage assets is also assessed as having a negative effect.

5.400 The Council's Green Belt review has recommended that this site is not released from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

BD068

5.401 The proposed delivery of circa 70 dwellings is considered to have a significant positive effect, as could the site's proximity to existing areas of employment. The site is also accessible to existing services and facilities which is likely to have a positive effect. However, the site is partly located within a flood zone which is likely to have a significant negative effect. Similarly, the ecological value is considered to have a negative effect, as could the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial) and the site's proximity to heritage assets is also assessed as having a negative effect.

5.402 Site is located within the north of Biddulph, south of Marshgreen Road. The site comprises fields enclosed by residential development to the north, east and south; and sewage treatment works to the west. The site is likely to be affected to some degree by flood risk; allocation will require the support of the Sequential Test and a level 2 SFRA.

5.403 The Council's Green Belt review has recommended considering this site for release from the Green Belt if exceptional circumstances can be demonstrated. The potential landscape, heritage and ecological impacts of development require further assessment.

5.404 The site was taken forward as a preferred option for consultation in April 2016.

5.405 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered the site habitats to be of nature conservation value at site level only and not eligible for possible SBI / BAS status. However the tree on site has the potential to support bats and as such requires further assessment. The site was also noted as potentially supporting reptiles.

5.406 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the site is elevated above Marshgreen Road, however it is at a similar level to the adjacent residential development on Portland Drive, and has low visual prominence due to screening provided by the surrounding development and vegetation, particularly trees surrounding the sewage works. The site was considered to form a gap in development, and therefore to fit well within the existing settlement form.

5.407 There is one Grade II* and eight Grade II Listed Buildings, and a Registered Park and Garden which is also a Conservation Area within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that there was no public access on to the site which is elevated above Marshgreen Road, and it is at a similar level to the adjacent residential development on Portland Drive. Development would be unlikely to cause high adverse effects to the settings of the heritage assets as development would be seen in context of the existing housing estate.

5.408 The site is adjacent to United Utilities water treatment works - master-planning may be required in order to mitigate the risk of odour and noise nuisance. Any masterplan should also demonstrate how a development scheme will address potential ecological value, contribute to the priorities and actions proposed for the Biddulph strategic GI corridor (as set out in the Green Infrastructure Strategy), including by supporting public access on to the Biddulph Valley Way and use of natural drainage to help manage surface water.

5.409 The site boundary requires amendment to exclude land within Flood Zone 2. The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

BD069

5.410 The proposed delivery of circa 30 dwellings is considered to have a significant positive effect. The site is also accessible to existing employment areas which is likely to have a positive effect. However, the site's proximity to historic assets is assessed as having a significant negative effect. The development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as within an area where 20 - 60% of the land is likely to be BMV is also assessed as having a negative effect.

5.411 The site formerly served as the kitchen gardens to Knypersley Hall (Listed Grade II*). The site is currently overgrown, however important features including protected trees and remnants of the original garden wall are present. Heritage impact assessment is required.

5.412 This site was taken forward as a preferred option for consultation in April 2016.

5.413 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the broadleaf woodland may be of ecological value and may allow for the site to gain SBI / BAS status once the vegetation has been fully recorded. Furthermore the site offers potential to support bats, reptiles and amphibians.

5.414 There is one Grade II* and one Grade II Listed Building within close proximity to the site. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that the site contributes greatly to the setting of the Grade II* as a walled garden to the hall, which in turn, contributes to the overall significance of the asset. Development on the site was considered highly likely to cause considerable adverse effects to the setting of the Grade II* Listed Building which would impact upon its overall significance. Further assessment may be required to demonstrate that a development can be brought forward in line with planning policy.

5.415 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that development of the site could improve local landscape character through the removal of derelict buildings, the existing metal fencing and scrub. Site-specific landscape mitigation measures could include ensuring development is sympathetic to its original use and in keeping with the character of the adjacent cottages.

5.416 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

BD083

5.417 The proposed delivery of circa 40 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. The site is also accessible to existing services and facilities which is likely to have a positive effect. However, the site is partly located within a flood zone which is likely to have a significant negative effect. The development of greenfield land, grade 4 ALC and the site's proximity to heritage assets and an LNR are assessed as having a negative effect.

5.418 The site is likely to be affected to some degree by flood risk; allocation will require the support of the Sequential Test and a level 2 SFRA. The Council's Green Belt review has recommended that this site is not released from the Green Belt.

5.419 This site was not taken forward as a preferred option for consultation in April 2016.

BD087

5.420 The proposed delivery of circa 25 dwellings is considered to have a significant positive effect, as could the site's proximity to existing areas of employment. The site is also accessible to existing services and facilities which is likely to have a positive effect. However, the site is partly located within a flood zone which is likely to have a significant negative effect. The development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial) and the site's proximity to heritage assets and an LNR is likely to have a negative effect, as could the site's ecological value.

5.421 The site comprises land to rear of linear development on the A527, to the north of the settlement. It is likely to be affected to some degree by flood risk; allocation will require the support of the Sequential Test and a level 2 SFRA. The Council's Green Belt review has recommended that the site is considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.422 This site was taken forward as a preferred option for consultation in April 2016.

5.423 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has low ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However more information is required regarding the presence or absence of reptiles on site.

5.424 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the site slopes down from linear development on the A527 towards Biddulph Brook (located to the west of the site), and is visible from the opposite side of the valley. However, it was considered that development within the site would be partially screened by trees along Biddulph Brook and would be viewed against the context of the existing development.

5.425 There are three Grade II* and 21 Grade II Listed Buildings, one Scheduled Monument, and a Registered Park and Garden which is also a Conservation Area within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that whilst the tower of the Grade II* listed church was visible from the site - development would be highly unlikely to adversely affect the setting of the asset. Also, due to the intervening buildings and vegetation, development would be unlikely to cause high adverse effects to the understanding of the Registered Park and Garden and Conservation Area.

5.426 The site boundary requires amendment to exclude land within the floodplain, this is likely to reduce site yield.

5.427 The site is close to United Utilities water treatment works - master-planning may be required in order to mitigate the risk of odour and noise nuisance. Any masterplan should also demonstrate how a development scheme will contribute to the priorities and actions proposed for the Biddulph strategic GI corridor (as set out in the Green Infrastructure Strategy), including by supporting public access on to the Biddulph Valley Way and should take account of potential ecological value.

5.428 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

BD109 and BD118

5.429 The proposed delivery of circa 26 dwellings is considered to have a significant positive effect. The site is also accessible to existing services, facilities and areas of existing employment as well as being located away from historic assets and a SSSI and LNR, as well as the site's low ecological value is likely to have a positive effect. However, the development of greenfield is assessed as having a negative effect.

5.430 The Council's Green Belt review has recommended that these sites are not released from the Green Belt. These sites were not taken forward as preferred options for consultation in April 2016.

BD110

5.431 The proposed delivery of circa 50 dwellings is considered to have a significant positive effect. The site is also accessible to existing services, facilities and areas of existing employment as well as being located away from historic assets and a SSSI and LNR, as well as the site's low ecological value is likely to have a positive effect. However, the development of greenfield land is assessed as having a negative effect.

5.432 The Council's Green Belt review has recommended that this site is not released from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

BD131B

5.433 The proposed delivery of circa 80 dwellings is considered to have a significant positive effect, as could the site's proximity to existing areas of employment. The site is also accessible to existing services and facilities which is likely to have a positive effect. The development of greenfield land is assessed as having a negative effect, as could the site's proximity to historic assets.

5.434 The Council's Green Belt review has recommended considering this site for release from the Green Belt if exceptional circumstances can be demonstrated. It is understood that this site is not currently available.

5.435 This site was not taken forward as a preferred option for consultation in April 2016.

BD134

5.436 The proposed delivery of circa 40 dwellings is considered to have a significant positive effect. The site is also accessible to existing services, facilities and existing areas of employment is likely to have a positive effect, as could its distance away from historic assets. However, the development of greenfield land, grade 4 ALC is assessed as having a negative effect, as could the ecological value of the site.

5.437 The Council's Green Belt review has recommended that this site is not released from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

BD138A

5.438 The proposed delivery of circa 90 dwellings is considered to have a significant positive effect, as could the site's proximity to existing areas of employment. The site is also accessible to existing services and facilities is likely to have a positive effect, as could its low biodiversity value of the site. However, the development of greenfield land, grade 4 ALC is assessed as having a negative effect, as could the site's location near to historic assets.

5.439 The site lies within the area considered as important landscape setting to settlement. The Council's Green Belt review has recommended that this site is not released from the Green Belt.

5.440 This site was not taken forward as a preferred option for consultation in April 2016.

BD138B

5.441 The proposed delivery of circa 76 dwellings is considered to have a significant positive effect, as could the site's proximity to existing areas of employment. The site is also accessible to existing services and facilities is likely to have a positive effect. However, the development of greenfield land, grade 4 ALC is assessed as having a negative effect, as could the site's location near to historic assets and the ecological value of the site.

5.442 The site lies within the area considered as important landscape setting to settlement. The Council's Green Belt review has recommended that this site is not released from the Green Belt.

5.443 This site was not taken forward as a preferred option for consultation in April 2016.

BD144

5.444 The proposed delivery of circa 80 dwellings is considered to have a significant positive effect. The site is also accessible to existing services, facilities and existing areas of employment is likely to have a positive effect, as could the site's distance away from historic assets. However, the development of greenfield land is assessed as having a negative effect, as could the site's ecological value.

5.445 The Council's Green Belt review has not recommended releasing this site from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

Biddulph - Additional sites

ADD02

5.446 The proposed delivery of circa 159 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. The site's location away from designated and historic assets is likely to have a positive effect. However, the site's inaccessibility to services and facilities is likely to have a negative effect, as could the development of greenfield, grade 4 ALC land.

5.447 The Council's Green Belt review has not recommended releasing this site from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

ADD03

5.448 The proposed delivery of circa 372 dwellings is considered to have a significant positive effect. The site's location away from designated assets is likely to have a positive effect, as could the site's accessibility to services, facilities and areas of existing employment. However, the site's proximity to historic assets is likely to have a significant negative effect. The development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as largely within an area where 20 - 60% of the land is likely to be BMV is considered to have a negative effect.

5.449 This is a large site on the western edge of Biddulph, comprising agricultural land and two farmsteads (Moodystreet Farm and Hollylane) and sheds, enclosed by Akemoor Lane to the west. According to information held by the Environment Agency, this site is located above historic landfill sites.

5.450 The Council's Green Belt review has recommended considering this site for release from the Green Belt if exceptional circumstances can be demonstrated. The potential landscape impacts of development require further assessment.

5.451 This site was taken forward as a preferred option for consultation in April 2016.

5.452 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the habitats on site were considered to be of nature conservation value at the site level only and are not listed as an important habitat in the Staffordshire SBI guidelines. However further surveys are recommended of the semi-natural broadleaved woodland present along the brook as this could qualify as an SBI under the Staffordshire guidelines. Species recorded on site were common and widespread both at a county and national level and it is considered unlikely that the site significantly supported any notable protected species.

5.453 There is one Grade II Listed Building within the site. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that the setting of the asset contributes to the overall significance of it and would need special regard for its preservation. It was considered that development would be highly likely to cause adverse effects to its setting and that any development should be restricted to the southern part of the site only with mitigation measures including the use of vegetation screening.

5.454 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of high landscape sensitivity. The study found that the site is located beyond the dismantled railway (Biddulph Valley Way) which currently forms a strong, vegetated settlement edge and limit to development and that the site is inter-visible with the Green Belt to the west. It was considered that development within the site could encroach on the surrounding countryside, and adversely affect the existing settlement edge. Development of the site could potentially compromise the surrounding sensitive countryside, as there would be no clear limit to development beyond the site.

5.455 Masterplanning should be used to demonstrate how a development scheme could be accommodated in the light of heritage and landscape impacts identified and to contribute to the priorities and actions proposed for the Biddulph strategic GI corridor (as set out in the Green Infrastructure Strategy), including by supporting public access on to the Biddulph Valley Way. A masterplan should also take account of the potential ecological value of the site.

5.456 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

ADD04

5.457 The proposed delivery of circa 1,070 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. However, the site's proximity to historic assets is likely to have a significant negative effect. The development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as partly within an area where 20 - 60% of the land is likely to be BMV is assessed as having a negative effect.

5.458 The site is adjacent to Knypersley Hall (Grade II* Listed). The site comprises land to the west and south of Knypersley Hall, including a large, open field which slopes down from the hall in the north of the site, and more undulating land in the south of the site containing a pond and scattered trees. The southern part of the site is adjacent to a Local Geological / Geomorphological Site (LoGS). The presence of school playing fields and other recreational features would need to be addressed. Heritage and landscape impact assessments are required.

5.459 The Council's Green Belt review has recommended considering this site for release from the Green Belt if exceptional circumstances can be demonstrated.

5.460 This site was taken forward as a preferred option for consultation in April 2016.

5.461 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the improved grassland and species-poor hedgerow habitats on site were of nature conservation value at the site level only. Species recorded on site were common and widespread both at a county and national level. However scattered mature trees in the northern area of the site, as well as pond 1, may qualify for SBI or BAS status dependent on further survey. The trees should be further assessed to determine whether they may be considered 'veteran'. Assessment is required to determine the presence or absence of bats roosts and the pond should be surveyed for newts.

5.462 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of high landscape sensitivity. The study found that the site is separated from the settlement edge by Knypersley Hall and agricultural land to the north. It was considered that development of the site could adversely affect the existing settlement form, particularly in the southern extent of the site; and that the northern section of the site has high visual prominence, particularly when viewed from Tunstall Road.

5.463 There is one Grade II* and one Grade II Listed Building within close proximity to the site. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which considered that the site could not be developed without substantial heritage impacts that could not be reasonably mitigated. The study found that the site contributes greatly to the setting of the Grade II* as a remnant of the parkland, which in turn, contributes to the overall significance of the asset. It was considered that development on the site would highly likely cause substantial adverse effects to the setting of the Grade II* Listed Building which would impact upon its overall significance.

5.464 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

Additional sites appraised following April 2016 consultation

BD143 ("Victoria Colliery"; west of Victoria Business Park)

5.465 The proposed delivery of circa 100 dwellings should have a significant positive effect. The site is also accessible to areas of employment which is likely to have a positive effect. However, the greenfield nature of this site and its location outside of the settlement boundary, coupled with its potential ecological value and relationship to the Biddulph Valley Way could have a negative effect. The development of land indicated on the predictive map of Best and Most Versatile agricultural land as within an area where 20 - 60% of the land is likely to be BMV is also assessed as having a negative effect.

5.466 The Council's Green Belt review has recommended considering this site for release from the Green Belt if exceptional circumstances can be demonstrated. Landscape and heritage assessments are required.

5.467 The site was not proposed for inclusion in the July 2017 version preferred option Local Plan.

Land at BD116 and a small part of BD140 (Land west of BVW and east of Woodside Farm)

5.468 The site's proximity to services, facilities and existing areas of employment and proposed delivery of circa 170 dwellings should have a significant positive effect. However there is scope that development of this site could have negative effects due to the site's potential ecological value, its contribution to the Biddulph Valley Way and impacts on landscape character. The development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as within an area where less than 20% of the land is likely to be BMV is assessed as having a negative effect.

5.469 The Council's Green Belt review has recommended considering this site for release from the Green Belt if exceptional circumstances can be demonstrated. Landscape and heritage assessments are required.

5.470 There are potential mining legacy issues as the land has previously been used for open cast mining. Masterplanning should be used to demonstrate how a development scheme could contribute to the priorities and actions proposed for the Biddulph strategic GI corridor (as set out in the Green Infrastructure Strategy), including by supporting public access on to the Biddulph Valley Way.

5.471 The site was proposed for inclusion in the July 2017 preferred option Local Plan as part of the Wharf Road site (Broad Area 4).

BD011 (Land at rear Meadowstile Caravan Park)

5.472 The proposed delivery of circa 80 dwellings should have a significant positive effect. The site is also accessible to areas of employment which is likely to have a positive effect. However, the greenfield nature of this site indicated on the predictive map of Best and Most Versatile agricultural land as within an area where 20 - 60% of the land is likely to be BMV and its location outside of the settlement boundary, coupled with its potential ecological value could have a negative effect.

5.473 Landscape and heritage assessments are required.

5.474 The site was not proposed for inclusion in the July 2017 version preferred option Local Plan.

BD138c (Marsh Green Nursery)

5.475 The proposed delivery of circa 85 dwellings should have a significant positive effect. The site is also accessible to existing services, facilities and areas of employment which is likely to have a positive effect. However, the site's location in the wider countryside and important landscape setting to the settlement are considered to have a significant negative effect. The site is within land indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial.

5.476 The Council's Green Belt review recommended the site could be considered for release under Exceptional Circumstances. Landscape and heritage assessments are required.

5.477 The site was not proposed for inclusion in the July 2017 version preferred option Local Plan.

BD104 (Land between Meadows Way and Tunstall Road)

5.478 The site should deliver a quantum of housing, circa 10 dwellings which is likely to have a significant positive effect, as could the location of the site with regard to its proximity to services and facilities and areas of existing employment as well as the positive effect on the landscape. The site is located within the settlement boundary and has good accessibility to health care services and facilities. However, its proximity to heritage assets would have a negative effect.

5.479 This is an elevated site in a prominent location immediately adjacent to a roundabout and between the bypass and Tunstall Road. Mainly grass with some trees. The site is within 400m of seven grade II listed assets. Ecological and heritage impact assessments are required.

5.480 The site was proposed for inclusion in the July 2017 preferred option Local Plan as part of the Wharf Road site (Broad Area 4).

Cheadle

Cheadle - sites within the current development boundary

CH002A

5.481 The proposed delivery of circa 26 dwellings is considered to have a significant positive effect, as could the site's proximity to health care services and facilities and areas of existing employment. Similarly, the site's distance away from historic assets is likely to have a positive effect. However, the site is partly within flood zone 2 and 3 which is likely to have a significant negative effect, as could the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial and the site's proximity to designated assets.

5.482 The site comprises a small field on the eastern edge of the settlement that (in combination with CH002b to the east) forms a gap in development. The site is likely to be affected to some degree by flood risk; allocation will require the support of the Sequential Test and a level 2 SFRA. Cecilly Brook holds a strong isolated population of water voles, as a protected species their habitat must be maintained. There are no designated heritage assets within the 400m buffer.

5.483 The site was taken forward as a preferred option for consultation in April 2016.

5.484 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has some potential to support protected species and further surveys are also recommended for the scattered trees. The site habitats are considered to be of nature conservation value at district level. Further surveys are recommended to confirm the presence or absence of reptiles in the in the south-west area of the site due to the presence of scattered scrub and good connectivity with Cecilly Brook.

5.485 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The site boundary requires amendment to exclude land within the floodplain. The creation of a buffer zone between the site and Cecily Brook Local Nature Reserve should be considered. There is opportunity to contribute to the Green Infrastructure Network.

5.486 Master-planning will be required in order to manage impact on the Local Nature Reserve and to ensure impacts on biodiversity are minimised (and net gains in biodiversity provided where possible). A masterplan should also demonstrate how a development scheme could contribute to the priorities and actions proposed for the Cecilly Brook strategic GI corridor (as set out in the Green Infrastructure Strategy), including by establishing coherent ecological networks that are more resilient to current and future pressures, as well as enabling water quality improvements in line with the Water Framework Directive objectives. The potential to accommodate SuDS should be considered to both manage any residual flood risk and help deliver the water quality improvements.

5.487 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

CH002B

5.488 The proposed delivery of circa 42 dwellings is considered to have a significant positive effect, as could the site's proximity to services and facilities and areas of existing employment. Similarly, the site's distance away from historic assets is likely to have a positive effect. However, the site's proximity to a designated asset and the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial is likely to have a significant negative effect.

5.489 The site comprises a small field containing Moor Lane Farm on the eastern edge of the settlement that (in combination with CH002a to the west) forms a gap in development. There are no designated heritage assets within the 400m buffer. This site was taken forward as a preferred option for consultation in April 2016.

5.490 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site generally has low biodiversity but its good connectivity to a stream and surrounding habitats deem the site to be of district importance for its potential to support protected species. The site habitats are considered to be of district importance. Further surveys are recommended to confirm the presence of reptiles and assess the importance of the species-rich hedgerows.

5.491 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. There is opportunity to contribute to the Green Infrastructure Network.

5.492 Master-planning will be required in order to manage impact on the Local Nature Reserves and to ensure impacts on biodiversity are minimised (and net gains in biodiversity provided where possible). A masterplan should also demonstrate how a development scheme could contribute to the priorities and actions proposed for the Cecilly Brook strategic GI corridor (as set out in the Green Infrastructure Strategy), including by establishing coherent ecological networks that are more resilient to current and future pressures, as well as enabling water quality improvements in line with the Water Framework Directive objectives. The potential to accommodate SuDS should be considered to help deliver the water quality improvements.

5.493 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

CH003

5.494 The proposed delivery of circa 55 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. Similarly, the site's distance away from historic assets is likely to have a positive effect. However, the site is partly within a flood zone which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is assessed as having a negative effect, as could the site's ecological value.

5.495 The site has been granted outline planning permission for up to 43 dwellings SMD/2014/0655.

CH004

5.496 The proposed delivery of circa 45 dwellings is considered to have a significant positive effect. Similarly, the site's distance away from historic assets is likely to have a positive effect as could the accessibility to services, facilities and areas of existing employment. However, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial is assessed as having a significant negative effect. The ecological value of the site is likely to have a negative effect.

5.497 A single field within the north of the settlement enclosed by residential development, north of the play area on Thorpe Rise. There are no designated heritage assets within the 400m buffer. This site was taken forward as a preferred option for consultation in April 2016.

5.498 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site generally has low ecological value in its potential to support protected species. Most of the site habitats are considered to be of nature conservation value at local level only. However the species-rich hedgerow was assessed as being potentially meeting BAS / SBI status.

5.499 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity.

5.500 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

CH006

5.501 The proposed delivery of circa 45 dwellings is considered to have a significant positive effect, as could the site's accessibility to areas of existing employment. Similarly, the site's distance away from historic assets is likely to have a positive effect as could the accessibility to services and facilities. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect, as could the site's partial location within a flood zone and proximity to a designated asset.

5.502 The site is likely to be affected to some degree by flood risk. Cecilly Brook holds a strong, isolated population of water voles, as a protected species their habitat must be maintained. The site includes a farmhouse that is a possible non-designated heritage asset.

5.503 Full planning permission has been granted for 36 dwellings SMD/2015/0050.

CH009

5.504 The site's accessibility to services, facilities and areas of existing employment is considered to have a significant positive effect. Similarly, the proposed delivery of circa 16 dwellings is likely to have a positive effect. However, the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial) is assessed as having a significant negative effect, as could the site's proximity to designated assets. The site's proximity to historic assets is also likely to have a negative effect.

5.505 The site is located to the east of Churchill Road within the north of the settlement, and comprises Orchard Farm and adjacent land. The public footpath crossing the site (Public Right of Way Cheadle 38) will need to be retained. There is opportunity to contribute to the Green Infrastructure Network. This site was taken forward as a preferred option for consultation in April 2016.

5.506 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has potential to support protected species. Further surveys are recommended to assess the importance of the species-rich hedgerows and the potential for bat roosts.

5.507 There are three Grade II Listed Buildings and one Conservation Area within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which considered that due to the intervening buildings as well as vegetation between the assets and the site, development would be highly unlikely to adversely affect the settings of the heritage assets.

5.508 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity.

5.509 Master-planning will be required in order to manage impact on the Local Nature Reserve and to ensure impacts on biodiversity are minimised (and net gains in biodiversity provided where possible). A masterplan should also demonstrate how a development scheme could contribute to the priorities and actions proposed for the Cecilly Brook strategic GI corridor (as set out in the Green Infrastructure Strategy), including by establishing coherent ecological networks that are more resilient to current and future pressures, as well as enabling water quality improvements in line with the Water Framework Directive objectives. The potential to accommodate SuDS should be considered to help deliver the water quality improvements.

5.510 The site was not proposed for inclusion in the July 2017 version preferred option Local Plan.

CH013

5.511 The proposed delivery of circa 50 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect. However, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as within an area where 20 - 60% of the land is likely to be BMV is assessed as having a negative effect, as could the ecological value of the site and its proximity to historic assets.

5.512 An outline planning application has a resolution for approval, subject to S106 agreement (SMD/2015/0438). This site was taken forward as a preferred option for consultation in April 2016.

5.513 The site was proposed to be carried forward into the July 2017 preferred option Local Plan with outline planning permission pending.

CH015

5.514 The proposed delivery of circa 32 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect, as could the development of brownfield land indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial. However, the ecological value of the site and its proximity to a LNR, candidate AQMA and historic assets is likely to have a negative effect.

5.515 Previously developed land within the centre of the settlement, east of Leek Road. This site was taken forward as a preferred option for consultation in April 2016.

5.516 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has potential for protected species. Further surveys are recommended to confirm the presence of roosting bats in the buildings and trees; a tree survey is also required.

5.517 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity.

5.518 There are 22 Grade II Listed Buildings and one Conservation Area within the 400m buffer. The site consists of previously developed land including a depot, and is adjacent to the Conservation Area and opposite two Grade II Listed Buildings. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that the present site does not contribute to the setting of the heritage assets and appropriate development could enhance the frontage with sensitive design.

5.519 The site is located within Ground Water Source Protection Zone 2 and partially within Ground Water Source Protection Zone 1. Due to the nature of the previous use of the site there is a risk of contamination that will need to be addressed.

5.520 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

CH020

5.521 The proposed delivery of circa 42 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. Similarly, the site's accessibility to services and facilities is likely to have a positive effect, as could its location away from historic assets. However, the site is partly within a flood zone which is likely to have a significant negative effect. The ecological value of the site is also likely to have a negative effect. The site is indicated on the predictive map of Best and Most Versatile agricultural land as within an area where 20 - 60% of the land is likely to be BMV.

5.522 Previously developed land (including a residential property) and rough grassland within the west of Cheadle, north of the A521 and the Brookhouses industrial estate. There are no designated heritage assets within the 100m buffer

5.523 The site is likely to be affected to some degree by flood risk; allocation will require the support of the Sequential Test and a level 2 SFRA. This site was taken forward as a preferred option for consultation in April 2016 with a revised site boundary to exclude land within the floodplain.

5.524 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that most of the site habitats are common throughout the region and not considered eligible for BAS / SBI status. However the ruderal vegetation could be eligible for BAS status subject to further work. Surveys are recommended to confirm the presence of roosting bats, reptiles and to assess the scattered trees.

5.525 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. Due to the nature of the previous use of the site there is a risk of contamination that will need to be addressed.

5.526 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

CH024

5.527 The proposed delivery of circa 45 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as urban / industrial) and its partial location within a flood zone are assessed as having a significant negative effect. The ecological value of the site, its location near to a LNR, and its proximity to heritage assets are also assessed as negative effects.

5.528 Site comprises a field within the north of the settlement, east of Orchard Farm, south-east of the recreation ground and west of Cecily Brook. The public footpath crossing the site (Public Right of Way Cheadle 38) will need to be retained. The site is likely to be affected to some degree by flood risk; allocation will require the support of the Sequential Test and a level 2 SFRA. Cecilly Brook holds a strong, isolated population of water voles, as a protected species their habitat must be maintained.

5.529 This site was taken forward as a preferred option for consultation in April 2016 with a revised site boundary to exclude land within the floodplain.

5.530 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that most of the site habitats are common throughout the region and not considered eligible for BAS / SBI status. However the ruderal vegetation is considered eligible for BAS status and further surveys are recommended to confirm the presence of reptiles. The site has potential for protected species to be present mainly due to the close proximity of the mosaic of stream habitats and good connectivity to Cecily Brook Local Nature Reserve and the wider countryside. Contribution to the emerging strategic Green Infrastructure network should be considered.

5.531 There are three Grade II Listed Buildings and one Conservation Area within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that due to the buildings as well as vegetation between the assets and the site, it is considered that development would be highly unlikely to adversely affect the settings of the heritage assets.

5.532 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity.

5.533 Master-planning will be required in order to manage impact on the Local Nature Reserves and to ensure impacts on biodiversity are minimised (and net gains in biodiversity provided where possible). A masterplan should also demonstrate how a development scheme could contribute to the priorities and actions proposed for the Cecilly Brook strategic GI corridor (as set out in the Green Infrastructure Strategy), including by establishing coherent ecological networks that are more resilient to current and future pressures, as well as enabling water quality improvements in line with the Water Framework Directive objectives. The potential to accommodate SuDS should be considered to help manage any residual flood risk and to deliver water quality improvements.

5.534 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

Urban Extension: Core Strategy Broad Area 1 - CH001

5.535 The proposed delivery of circa 240 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect. Similarly, the site's location away from historic assets is likely to have a positive effect. However, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as partly within an area where 20 - 60% of the land is likely to be BMV is assessed as having a significant negative effect.

5.536 This is a large site located to the north of the settlement, east of Froghall Road. The site is enclosed by existing development to the north, west and south, and is open to the east. Therefore the site forms a large gap in existing development within Cheadle. The area has been identified as an appropriate area for housing in the adopted Core Strategy (Area 1). A small section to the east of the site is located in Flood Zone 3 and the site is likely to be affected to some degree by flood risk. Cecilly Brook holds a strong, isolated population of water voles, as a protected species their habitat must be maintained. The road frontage to the site affects the setting of Woodhead Yard, which is a non-designated heritage asset. A former mid-19th century historic tramline crosses the site. Landscape and heritage impact assessments are required.

5.537 This site was taken forward as a preferred option for consultation in April 2016 with a revised site boundary to exclude land within the floodplain.

5.538 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site generally has some ecological value in its potential to support protected species. The scattered trees are considered to be of nature conservation value at district level.

5.539 There are no designated heritage assets within the 400m buffer. However the site has a mining legacy and the presence of disused mine shafts need to be addressed.

5.540 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that the western extent of the site is enclosed with low visual prominence and that visual prominence increases to the east as the site becomes more open and slopes down

to Cecily Brook. Site-specific landscape mitigation measures could include setting development back from the lower ground in the eastern corner of the site and advanced planting on the eastern boundary.

5.541 The tramway route should be used to help inform a master-planning process which should also include landscape mitigation measures and respond to the presence of disused mine shafts. A master-plan should also demonstrate how the site's relationship with the Local Nature Reserves have been addressed to ensure impacts on biodiversity are minimised (and net gains in biodiversity provided where possible). A masterplan should also demonstrate how a development scheme could contribute to the priorities and actions proposed for the Cecilly Brook strategic GI corridor (as set out in the Green Infrastructure Strategy), including by establishing coherent ecological networks that are more resilient to current and future pressures, as well as enabling water quality improvements in line with the Water Framework Directive objectives. The potential to accommodate SuDS should be considered to help manage any residual flood risk and to deliver water quality improvements.

5.542 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

Other uses

Core Strategy Broad Area EM1 (CH127)

5.543 The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the accessibility of other services and facilities and its location away from historic assets is likely to have a positive effect. However, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as within an area where over 60% of the land is likely to be BMV and its partial location within a flood zone are likely to have a negative effect as could the ecological value of the site.

5.544 The site comprises a large field south of existing industrial development, which slopes down from New Haden Road to a stream on the northern site boundary. The area has been identified as an appropriate area for employment in the adopted Core Strategy (Area EM1). A small area to the east of the site adjacent to the Brook is located in Flood Zone 2, the site is likely to be affected to some degree by flood risk. There are no designated heritage assets within the 400m buffer.

5.545 This site was taken forward as a preferred option for consultation in April 2016 with a revised boundary to exclude areas of floodplain.

5.546 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that most of the site habitats are common throughout the region and not considered eligible for BAS / SBI status. However the two scattered trees present could support roosting bats and be eligible for BAS status subject to further survey.

5.547 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that the site is open, however the land continues to rise to the south, screening longer distance views from this direction. Tree planting and vegetation on the site boundaries and within adjacent land reduces visual prominence. Views of the site from the north would be

seen in the context of the adjacent industrial development. Site-specific landscape mitigation measures could include additional advanced planting on the site boundaries and limiting building heights.

5.548 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

Core Strategy Broad Area EM2 - CH019

5.549 The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the low ecological value of the site, the development of brownfield land (although indicated on the predictive map of Best and Most Versatile agricultural land as partly within an area where less than 20%, and partly within an area where greater than 60% of the land is likely to be BMV) and its location away from historic assets is likely to have a positive effect.

5.550 Previously developed site (comprising a recycling yard on disused opencast workings) on the western edge of Cheadle, behind Hillside Industrial Park off Draycott Cross Road. The area has been identified as an appropriate area for employment in the adopted Core Strategy (Area EM2). There are no designated heritage assets within the 400m buffer.

5.551 This site was taken forward as a preferred option for consultation in April 2016.

5.552 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site generally has low ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. Further surveys are recommended to confirm the presence or absence of Great Crested Newts in the pond present within 250m of the site.

5.553 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the site is located at the bottom of a valley, with land rising to the south and north, and is enclosed by thick tree belts and hedgerows. The site was considered to have low visual prominence.

5.554 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

CH143

5.555 The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, its location away from historic assets is likely to have a positive effect as could its accessibility to services and facilities. However, the development of greenfield, grade 4 ALC land is likely to have a negative effect as could the ecological value of the site.

5.556 Outline planning permission has been granted for this site, SMD/2014/0655.

Cheadle - Sites outside the current development boundary

CH073A

5.557 The proposed delivery of circa 90 dwellings is considered to have a significant positive effect, as could the accessibility to areas of existing employment. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect. The ecological value of the site and its location near to a LNR and historic assets is likely to have a negative effect.

5.558 The site forms part of the setting of Hales Hall (Grade II* listed) and its medieval fish pond. Landscape and heritage impact assessments are required; along with an assessment of potential impacts on Hales Hall Pool Local Nature Reserve and the District's Green Infrastructure network.

5.559 This site was not taken forward as a preferred option for consultation in April 2016.

CH073B

5.560 The proposed delivery of circa 114 dwellings is considered to have a significant positive effect, as could the accessibility to areas of existing employment. Similarly, the site's accessibility to services and facilities is likely to have a positive effect as could its location away from historic assets. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect, as could the site's proximity to designated assets.

5.561 Landscape impact assessment is required; along with an assessment of potential impacts on Cecilly Brook LNR and the District's Green Infrastructure network.

5.562 This site was not taken forward as a preferred option for consultation in April 2016.

CH073C

5.563 The proposed delivery of circa 90 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect as could its location away from historic assets. However, the development of greenfield, grade 3 ALC land and proximity to designated assets is assessed as having a significant negative effect. The site's inaccessibility to areas of existing employment is likely to have a negative effect.

5.564 Landscape impact assessment is required; along with an assessment of potential impacts on Hales Hall Pool LNR and the District's Green Infrastructure network.

5.565 This site was not taken forward as a preferred option for consultation in April 2016.

CH073D

5.566 The proposed delivery of circa 77 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect as could its location away from historic assets. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect. The site's location near to a LNR is likely to have a negative effect.

5.567 The site is adjacent to ancient woodland. Landscape impact assessment is required; along with an assessment of potential impacts on Cecilly Brook LNR and the District's Green Infrastructure network.

5.568 This site was not taken forward as a preferred option for consultation in April 2016.

CH073E

5.569 The proposed delivery of circa 140 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect as could its location away from historic assets. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect as could the remote nature of this site within the open countryside. The site's inaccessibility to areas of existing employment and proximity to designated assets is likely to have a negative effect.

5.570 The site is adjacent to ancient woodland. Landscape impact assessment is required; along with an assessment of potential impacts on Hales Hall Pool and Cecilly Brook LNRs, as well as the District's Green Infrastructure network.

5.571 This site was not taken forward as a preferred option for consultation in April 2016.

CH075A

5.572 The proposed delivery of circa 50 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect as could its location away from historic assets. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect, as could the site's location near to a Local Nature Reserve.

5.573 The site lies within the area considered to form an important landscape setting to the settlement. Landscape impact assessment is required; along with an assessment of potential impacts on Cecilly Brook LNR.

5.574 This site was not taken forward as a preferred option for consultation in April 2016.

CH075B

5.575 The proposed delivery of circa 60 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect as could its location away from historic assets. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect, as could the site's proximity to designated assets. The site's inaccessibility to areas of existing employment is likely to have a negative effect.

5.576 The site lies within the area considered to form an important landscape setting to the settlement. Landscape impact assessment is required; along with an assessment of potential impacts on Cecilly Brook LNR.

5.577 This site was not taken forward as a preferred option for consultation in April 2016.

CH075C

5.578 The proposed delivery of circa 125 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land and the site's proximity to designated assets is assessed as having a significant negative effect. The site's inaccessibility to areas of existing employment is likely to have a negative effect.

5.579 The site lies within the area considered to form an important landscape setting to the settlement. Landscape impact assessment is required; along with an assessment of potential impacts on Cecilly Brook LNR as well as the District's Green Infrastructure network.

5.580 This site was not taken forward as a preferred option for consultation in April 2016.

CH075D

5.581 The proposed delivery of circa 45 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land and proximity to designated assets is assessed as having significant negative effects.

5.582 The site lies within the area considered to form an important landscape setting to the settlement. Landscape impact assessment is required; along with an assessment of potential impacts on Cecilly Brook LNR as well as the District's Green Infrastructure network.

5.583 This site was not taken forward as a preferred option for consultation in April 2016.

CH076A

5.584 The proposed delivery of circa 100 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect as could the site's partial location within flood zone 2 and 3. The site's location near to designated and historic assets and the inaccessibility of areas of existing employment is likely to have a negative effect.

5.585 Part of the site is located within a flood zone 3 area and may be subject to risk from flooding. The site lies within the area considered to form an important landscape setting to the settlement and is within 75m of Mill House (grade II* listed). Landscape and heritage impact assessments are required; along with an assessment of potential impacts on Cecilly Brook LNR as well as the District's Green Infrastructure network.

5.586 This site was not taken forward as a preferred option for consultation in April 2016.

CH076B

5.587 The proposed delivery of circa 110 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect as could the site's partial location within flood zone 2 and 3. The site's location near to a Local Nature Reserve and historic assets is likely to have a negative effect, as could the inaccessibility of areas of existing employment.

5.588 Part of the site is located within a flood zone 3 area and may be subject to risk from flooding. The site lies within the area considered to form an important landscape setting to the settlement and is within 400m of Mill House (grade II* listed). Landscape and heritage impact assessments are required; along with an assessment of potential impacts on Cecilly Brook LNR as well as the District's Green Infrastructure network.

5.589 This site was not taken forward as a preferred option for consultation in April 2016.

CH077A

5.590 The proposed delivery of circa 100 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect as could the site's partial location within flood zone 2 and 3 and proximity to historic assets. Additionally, the site has ecological value and may have potential for classification as a Site of Biological Importance which has a significant negative effect. The inaccessibility of areas of existing employment is likely to have a negative effect.

5.591 Part of the site is located within a flood zone 3 area and may be subject to risk from flooding. The site lies within the area considered to form an important landscape setting to the settlement and is adjacent to Mill House (grade II* listed). Landscape, ecology and heritage impact assessments are required; along with an assessment of potential impacts on Cecilly Brook LNR as well as the District's Green Infrastructure network.

5.592 This site was not taken forward as a preferred option for consultation in April 2016.

CH077B

5.593 The proposed delivery of circa 105 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to health care services and facilities is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect as could the site's partial location within flood zone 2 and 3. Additionally, the site has ecological value and may have potential for classification as a Site of Biological Importance which has a significant negative effect. The site's location near to historic assets is likely to have a negative effect, as could the inaccessibility of areas of existing employment.

5.594 Part of the site is located within a flood zone 3 area and may be subject to risk from flooding. The site lies within the area considered to form an important landscape setting to the settlement and forms part of the rural setting of Mill House (grade II* listed). Landscape, ecology and heritage impact assessments are required; along with an assessment of potential impacts on Cecilly Brook LNR as well as the District's Green Infrastructure network.

5.595 This site was not taken forward as a preferred option for consultation in April 2016.

CH080

5.596 The proposed delivery of circa 80 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to health care services and facilities and areas of existing employment is likely to have a positive effect. However, the development

of greenfield, grade 3 ALC land is assessed as having a significant negative effect as could the site's partial location within flood zone 2 and 3. The site's location near to a Local Nature Reserve and historic assets is likely to have a negative effect.

5.597 Part of the site is located within a flood zone 3 area and may be subject to risk from flooding. The site is within 400m of Hales Hall (grade II listed). Landscape and heritage impact assessments are required; along with an assessment of potential impacts on Hales Hall Pool LNR as well as the District's Green Infrastructure network.

5.598 This site was not taken forward as a preferred option for consultation in April 2016.

CH081

5.599 The proposed delivery of circa 110 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. Similarly, the site's accessibility to health care services and facilities is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect as could the site's partial location within flood zone 2 and 3. The site's location near to a Local Nature Reserve and historic assets and its ecological value is likely to have a negative effect.

5.600 Part of the site is located within a flood zone 3 area and may be subject to risk from flooding. Cecilly Brook holds a strong, isolated population of water voles, their habitat must be maintained. The site is also within 200m of Hales Hall Pool LNR and 400m of Hales Hall (grade II listed). Landscape and heritage impact assessments are required; along with an assessment of potential impacts on the Nature Reserves as well as the District's Green Infrastructure network.

5.601 This site was not taken forward as a preferred option for consultation in April 2016.

CH085A

5.602 The proposed delivery of circa 150 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect, as could the site's location away from historic assets. However, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as predominantly within an area where 20 - 60% of the land is likely to be BMV is assessed as having a significant negative effect as could part of the site's location within flood zone 2. The site's ecological value is likely to have a negative effect.

5.603 Site comprises fields on the south-western edge of the settlement, sloping down from the settlement edge. There are no designated heritage assets within the 400m buffer. The western edge of the site is within an area of flood zone and the site is likely to be affected to some degree by flood risk. Support of the sequential test and a Level 2 SFRA are needed. A landscape impact assessment is also required.

5.604 This site was taken forward as a preferred option for consultation in April 2016 with an amended site boundary to exclude areas of flood risk.

5.605 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that most of the site habitats are common throughout the region and not considered eligible for BAS / SBI status. However the two scattered trees present could support roosting bats and be eligible for BAS status subject to further survey.

5.606 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that while the site is open, long distance views are screened by the railway embankment located to the north and west of the site. Site-specific landscape mitigation measures could include limiting building heights and planting in the south west of the site.

5.607 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

CH085B

5.608 The proposed delivery of circa 80 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to health care services and facilities and areas of existing employment is likely to have a positive effect, as could the site's location away from historic assets. However, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as predominantly within an area where 20 - 60% of the land is likely to be BMV is assessed as having a significant negative effect as could part of the site's location within flood zone 2 and 3.

5.609 Site comprises a field on the south-western edge of the settlement, sloping down from the settlement edge. There are no designated heritage assets within the 400m buffer. The western edge of the site is within an area of flood zone and the site is likely to be affected to some degree by flood risk. Support of the sequential test and a Level 2 SFRA are needed. A landscape impact assessment is also required.

5.610 This site was taken forward as a preferred option for consultation in April 2016 with an amended site boundary to exclude areas of flood risk.

5.611 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that most of the site habitats are common throughout the region and not considered eligible for BAS / SBI status. However the species-rich hedgerow has potential for BAS / SBI status subject to further survey.

5.612 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that while the site is open, long distance views are screened by the railway embankment located to the north and west of the site. Site-specific landscape mitigation measures could include limiting building heights and planting in the west of the site.

5.613 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

CH085C

5.614 The proposed delivery of circa 150 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility areas of existing employment is likely to have a positive effect, as could the site's location away from historic assets. However, the development of greenfield land indicated on the predictive map of Best and Most Versatile

agricultural land as predominantly within an area where 20 - 60% of the land is likely to be BMV (but partly within an area where over 60% of the land is likely to be BMV) is assessed as having a significant negative effect.

5.615 Site comprises fields to the south-west of the settlement, sloping down from the settlement edge. A landscape impact assessment is required.

5.616 This site was taken forward as a preferred option for consultation in April 2016.

5.617 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that most of the site habitats are common throughout the region and not considered eligible for BAS / SBI status. However the species-rich hedgerow has potential for BAS / SBI status subject to further survey.

5.618 There is one Grade II Listed Building within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) considered that as a farm, the wider agricultural setting is considered to contribute to the overall significance of the asset. The study found that the site is part of the wider setting of the asset and therefore development would be likely to cause adverse effects. Potential mitigation measures include screening of the southern edge of the site.

5.619 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that while the site is open, long distance views are screened by the railway embankment located to the north and west of the site. Only the north-eastern corner of the site is adjacent to the settlement edge and is otherwise separated by adjacent sites (CH085d). Site-specific landscape mitigation measures could include phased development (ensuring the site is developed following the development of adjoining sites), limiting building heights and planting in the west of the site.

5.620 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

CH085D

5.621 The proposed delivery of circa 115 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to health care services and facilities and areas of existing employment is likely to have a positive effect. However, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as predominantly within an area where 20 - 60% of the land is likely to be BMV is assessed as having a significant negative effect. The site's ecological value and proximity to historic assets are also likely to have a negative effect.

5.622 Site comprises generally flat fields on the south-western edge of the settlement, enclosed by residential development to the east and north. Landscape and heritage impact assessments are required.

5.623 A small part of CH093 was incorporated within CH085d at the Preferred Options stage. The whole of CH093 was considered as part of the Council's Green Belt Review. The study recommended considering the site for release from the Green Belt if exceptional circumstances can be demonstrated. The site was taken forward as a preferred option for consultation in April 2016.

5.624 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that most of the site habitats are common throughout the region and not considered eligible for BAS / SBI status. However the species-rich hedgerow has potential for BAS / SBI status, one oak tree has bat roost potential and the scattered trees also need to be assessed. Further surveys are required.

5.625 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that while the site is open to the west, long distance views are screened by the railway embankment located further to the west of the site and considered that the site fits well within the existing settlement pattern.

5.626 There are two Grade II Listed Buildings within the 400m buffer; of which the site is part of the wider agricultural setting of a farm to the south. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that as a farm, the agricultural setting is considered to contribute to the overall significance of the asset. As such, development was considered likely to cause adverse effects to its setting by altering some of that agricultural landscape. Mitigation measures may include master-planning and screening of the southern edge of the site.

5.627 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

CH093

5.628 The proposed delivery of circa 165 dwellings is considered to have a significant positive effect. However, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as predominantly within an area where 20 - 60% of the land is likely to be BMV is assessed as having a significant negative effect as could the site's partial location within flood zone 2. The site's proximity to historic assets is likely to have a negative effect, as could the inaccessibility of areas of existing employment.

5.629 The site is likely to be affected to some degree by flood risk; support of the sequential test and a level 2 SFRA is required. Landscape and heritage impacts assessments should also be undertaken. The Council's Green Belt review has concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.630 The north east section of the site has been incorporated within site CH085d and this part of the site only has been taken forward as a preferred option for consultation in April 2016 and is proposed to be carried forward into the July 2017 preferred option Local Plan.

CH121

5.631 The proposed delivery of circa 38 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect, as could the site's location away from historic assets. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect. The site's ecological value and proximity to a Local Nature Reserve is likely to have a negative effect.

5.632 Public Right of Way (Cheadle 4) runs along the access to the Cottage and should be retained. The site lies within the area considered to form an important landscape setting to the settlement. Landscape impact assessment is required; along with an assessment of potential impacts on Cecilly Brook LNR as well as the District's Green Infrastructure network.

5.633 This site was not taken forward as a preferred option for consultation in April 2016.

CH122

5.634 The proposed delivery of circa 22 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect, as could the site's location away from historic assets. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect. The site's ecological value and proximity to a Local Nature Reserve is likely to have a negative effect.

5.635 Landscape impact assessment is required; along with an assessment of potential impacts on Cecilly Brook LNR as well as the District's Green Infrastructure network.

5.636 This site was not taken forward as a preferred option for consultation in April 2016.

CH128

5.637 The proposed delivery of circa 28 dwellings and accessibility to areas of existing employment is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as within an area where 20 - 60% of the land is likely to be BMV is assessed as having a significant negative effect. The site's proximity to historic assets is likely to have a negative effect.

5.638 The site is overgrown land with no public access on the southern edge of Cheadle, west of the A522. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. Landscape and heritage impact assessments are required.

5.639 This site was taken forward as a preferred option for consultation in April 2016.

5.640 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that most of the site habitats are common throughout the region and not considered eligible for BAS / SBI status. No protected species were identified on site and the site is considered to have low ecological value.

5.641 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the site is enclosed by development to the north and south which provides screening, reducing visual prominence.

5.642 There are two Grade II Listed Buildings within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that the assets are well screened by vegetation and considered that due to the topography and existing vegetation, development would be unlikely to cause high adverse effects to their settings. Mitigation measures could include screening of the eastern and southern edges.

5.643 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

CH129

5.644 The proposed delivery of circa 120 dwellings is considered to have a significant positive effect, as could the accessibility to areas of existing employment. Similarly, the site's accessibility to services and facilities and distance away from historic assets is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect. The site's proximity to Local Nature Reserves and ecological value is likely to have a negative effect.

5.645 Landscape impact assessment is required. In addition, the site is within 100m of Hales Hall Pool LNR and within 300m of Cecilly Brook LNR. Assessments are required of potential impacts on these Nature Reserves and the District's Green Infrastructure network.

5.646 This site was not taken forward as a preferred option for consultation in April 2016.

CH132

5.647 The proposed delivery of circa 130 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of existing employment and distance away from historic assets is likely to have a positive effect. However, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as predominantly within an area where 20 - 60% of the land is likely to be BMV is assessed as having a significant negative effect, as could the site's partial location within flood zone 2 and 3. The site's proximity to two Local Nature Reserves and ecological value is also likely to have a negative effect.

5.648 Site comprises a large field on the northern edge of Cheadle, which slopes down from the settlement edge to Cecilly Brook. Broad Hayes Park (mobile home park) is adjacent to the north-west site boundary. Part of the site is located within a flood zone 3 area and thus is likely to be subject to risk from flooding. Cecilly Brook holds a strong, isolated population of water voles whose habitat must be maintained. The site is within 500m of Cecilly Brook and Hales Hall Pool LNRs. Assessments are required of potential impacts on these Nature Reserves and the District's Green Infrastructure network.

5.649 This site was taken forward as a preferred option for consultation in April 2016 with a revised boundary to exclude areas of flood risk.

5.650 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that while the site is open and visually prominent (particularly when viewed from the opposite side of the valley) the existing settlement edge is urbanised. Site-specific landscape mitigation measures could include limiting building heights, limiting development to the higher ground, and advanced planting on the southern boundary.

5.651 There is one Grade II Listed Building within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that as a farm, the wider agricultural setting is considered to contribute to the overall significance of the asset. The site is not within the immediate setting of the asset and the study considered that development would likely be viewed as part of the existing residential to the west although development may cause adverse effects to its wider setting. Mitigation measures may include screening of the north eastern boundary.

5.652 The findings of the Landscape, Local Green Space and Heritage Impact Study should be used to help inform a master-planning process which should also demonstrate how the site's relationship with the Local Nature Reserves has been managed to ensure impacts on biodiversity are minimised (and net gains in biodiversity provided where possible). A masterplan should also demonstrate how a development scheme could contribute to the priorities and actions proposed for the Cecilly Brook strategic GI corridor (as set out in the Green Infrastructure Strategy), including by establishing coherent ecological networks that are more resilient to current and future pressures, as well as enabling water quality improvements in line with the Water Framework Directive objectives. The potential to accommodate SuDS should be considered to help manage any residual flood risk and to deliver water quality improvements.

5.653 The site was proposed for inclusion in the July 2017 preferred option Local Plan in conjunction with CH001 and includes land for a new Primary School.

CH134A

5.654 The proposed delivery of circa 150 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect, as could its location away from historic assets. However, the development of greenfield, grade 3 ALC land and the remote nature of the site is assessed as having a significant negative effect, as could the site's partial location within flood zone 2 and 3.

5.655 The site may be subject to risk from flooding. The Council's Green Belt review concluded that the site makes a significant contribution to the purposes of the Green Belt and should not be considered for release. A landscape impact assessment is required.

5.656 This site was not taken forward as a preferred option for consultation in April 2016.

CH134B

5.657 The proposed delivery of circa 150 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect, as could its location away from historic assets. However, the development of greenfield, grade 3 ALC land and the remote nature of the site is assessed as having a significant negative effect, as could the site's partial location within flood zone 2 and 3.

5.658 The site may be subject to risk from flooding. The Council's Green Belt review concluded that the site makes a significant contribution to the purposes of the Green Belt and should not be considered for release. A landscape impact assessment is required.

5.659 This site was not taken forward as a preferred option for consultation in April 2016.

CH135A

5.660 The proposed delivery of circa 160 dwellings is considered to have a significant positive effect, as its proximity to areas of existing employment. Similarly, the site's accessibility to services and facilities is likely to have a positive effect, as could its location away from historic assets. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect, as could the site's partial location within flood zone 2 and 3.

5.661 The site may be subject to risk from flooding. The Council's Green Belt review concluded that the site makes a significant contribution to the purposes of the Green Belt and should not be considered for release. A landscape impact assessment is required.

5.662 This site was not taken forward as a preferred option for consultation in April 2016.

CH135B

5.663 The proposed delivery of circa 110 dwellings is considered to have a significant positive effect, as its proximity to areas of existing employment. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect. The site's proximity to historic assets is likely to have a negative effect.

5.664 The Council's Green Belt review concluded that the site makes a significant contribution to the purposes of the Green Belt and should not be considered for release. A landscape impact assessment is required.

5.665 This site was not taken forward as a preferred option for consultation in April 2016.

CH135C

5.666 The proposed delivery of circa 130 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect, as could its location away from historic assets. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect, as could the site's partial location within flood zone 2 and 3.

5.667 The site may be subject to risk from flooding. The Council's Green Belt review concluded that the site makes a significant contribution to the purposes of the Green Belt and should not be considered for release. A landscape impact assessment is required.

5.668 This site was not taken forward as a preferred option for consultation in April 2016.

CH165

5.669 The proposed delivery of circa 26 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is assessed as having a significant negative effect. The site's proximity to historic assets is likely to have a negative effect.

5.670 The Council's Green Belt review concluded that the site makes a significant contribution to the purposes of the Green Belt and should not be considered for release. The site lies within the area considered to form an important landscape setting to the settlement. A landscape impact assessment is required.

5.671 This site was not taken forward as a preferred option for consultation in April 2016.

Employment sites

CH094

5.672 The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, site's location away from historic assets is likely to have a positive effect. However, the development of greenfield, grade 4 ALC land and the site's ecological value is likely to have a negative effect.

5.673 The Council's Green Belt review concluded that the site makes a contribution to the purposes of the Green Belt and should not be considered for release.

5.674 This site was not taken forward as a preferred option for consultation in April 2016.

CH136

5.675 The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, site's location away from historic assets is likely to have a positive effect. However, the development of greenfield, grade 4 ALC land and the site's ecological value is likely to have a negative effect.

5.676 The Council's Green Belt review concluded that the site could be considered for release from the Green Belt whilst retaining a Green Belt designation washed over the land.

5.677 This site was not taken forward as a preferred option for consultation in April 2016.

Additional sites

ADD05 (CH084)

5.678 The proposed delivery of circa 50 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. However, the site's proximity to historic assets is likely to have a significant negative effect, as could the site's partial location within a flood zone. The site's proximity to designated assets and the development of greenfield, grade 4 ALC land are assessed as having negative effects.

5.679 The site is at risk from flooding although It is understood that development is proposed on the north western section of the site to avoid areas outside flood zone 1. The site is adjacent to The Eaves and Mobberley Farm (both Grade II listed). Landscape and heritage impact assessments are required.

5.680 This site was not taken forward as a preferred option for consultation in April 2016.

Sites (5+ dwellings) within the current development boundary

AL024 (only small part within development boundary)

5.681 The proposed delivery of circa 12 dwellings is considered to have a significant positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect. The site's proximity to historic assets and ecological value is likely to have a negative effect.

5.682 Landscape and heritage impact assessments are required.

5.683 This site was not taken forward as a preferred option for consultation in April 2016.

Sites (5+ dwellings) outside the current development boundary

AL012

5.684 The proposed delivery of circa 18 dwellings is considered to have a significant positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect. The site's proximity to historic assets and ecological value is likely to have a negative effect. The site is indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban / industrial.

5.685 The site is located on the southern edge of the village, comprising an individual property (and surrounding gardens) located on the B5032, and the adjacent field to the south. Outline planning permission for 13 dwellings is pending: SMD/2014/0824.

5.686 This site was taken forward as a preferred option for consultation in April 2016.

5.687 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that an existing strong, vegetated settlement edge is defined by a thick hedgerow on the southern boundary of the field to the south of the site. The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has medium ecological value in its potential to support protected species. The site habitats are considered to be of nature conservation value at local and site level. However, more information is required regarding the species rich hedgerow and the potential for bat roosts in the building and trees.

5.688 There are five Grade II Listed Buildings and one Conservation Area within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that the site was well screened with vegetation on the east, west and southern sides. The study considered that to the north, there was no inter-visibility between the site and the Conservation Area due to the intervening buildings and that development would be unlikely to cause adverse effects to their settings.

5.689 The site was proposed to be carried forward into the July 2017 preferred option Local Plan with planning permission pending.

AL019

5.690 The proposed delivery of circa 43 dwellings is considered to have a significant positive effect. Similarly, the site's proximity to services and facilities, albeit limited, is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets and a SSSI.

5.691 The site is within 600m of Saltersford Lane Meadows SSSI (which encompasses two species rich hay meadows) and within 400m of one scheduled monument, one grade II* listed asset and twenty nine grade II listed assets. Landscape, ecology and heritage impact assessments are required.

5.692 This site was not taken forward as a preferred option for consultation in April 2016.

AL022

5.693 The proposed delivery of circa 20 dwellings is considered to have a significant positive effect. Similarly, the site's proximity to services and facilities, albeit limited, is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect, as could the proximity of the site to a SSSI. The site's proximity to historic assets is likely to have a negative effect.

5.694 The site is within 500m of Saltersford Lane Meadows SSSI (which encompasses two species rich hay meadows) and within 400m of one scheduled monument and twenty four grade II listed assets. Landscape, ecology and heritage impact assessments are required.

5.695 This site was not taken forward as a preferred option for consultation in April 2016.

AL025

5.696 The proposed delivery of circa 60 dwellings is considered to have a significant positive effect. Similarly, the site's proximity to health care services and facilities is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets and ecological value.

5.697 The site is within 1000m of Saltersford Lane Meadows SSSI (which encompasses two species rich hay meadows) and within 400m of one scheduled monument, one grade II* listed asset and twenty five grade II listed assets. One of the grade II listed assets - Turnditch Farmhouse is within 50m of the site. Landscape, ecology and heritage impact assessments are required.

5.698 This site was not taken forward as a preferred option for consultation in April 2016.

AL026

5.699 The proposed delivery of circa 43 dwellings is considered to have a significant positive effect. Similarly, the site's proximity to health care services and facilities is likely to have a positive effect. However, the site is inaccessible to areas of existing employment

which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets and a SSSI.

5.700 The site is within 1000m of Saltersford Lane Meadows SSSI (which encompasses two species rich hay meadows) and within 400m of eight grade II listed assets. Landscape, ecology and heritage impact assessments are required.

5.701 This site was not taken forward as a preferred option for consultation in April 2016.

AL027

5.702 The proposed delivery of circa 45 dwellings is considered to have a significant positive effect. Similarly, the site's proximity to services and facilities is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets and a SSSI.

5.703 The site is within 500m of Saltersford Lane Meadows SSSI (which encompasses two species rich hay meadows) and within 400m of two scheduled monuments, one grade I listed asset, five grade II* listed assets and forty one grade II listed assets. Landscape, ecology and heritage impact assessments are required.

5.704 This site was not taken forward as a preferred option for consultation in April 2016.

Biddulph Moor

Sites (5+ dwellings) - within the current Green Belt

BM008

5.705 The proposed delivery of circa 18 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of existing employment and low ecological value is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of mixed brownfield and greenfield, grade 4 ALC land and the site's proximity to historic assets is assessed as having a negative effect.

5.706 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. The site lies within the area considered to form an important landscape setting to the settlement and is within 400m of one grade II listed asset. Landscape and heritage impact assessments are required.

5.707 This site was not taken forward as a preferred option for consultation in April 2016.

BM013

5.708 The proposed delivery of circa 65 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of existing employment is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban / industrial) is assessed as having a negative effect, as is the site's proximity to historic assets and the ecological value of the site.

5.709 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. The site lies within the area considered to form an important landscape setting to the settlement and is within 400m of one grade II listed asset. Landscape and heritage impact assessments are required.

5.710 Part of the site adjacent to Parklands / Hot Lane (18 dwellings) was taken forward as a preferred option for consultation in April 2016.

5.711 The site is located on the north-eastern edge of Biddulph Moor, between Hot Lane and Rudyard Road. The site is L-shaped and comprises sections of fields. The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has some potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However more information is required regarding the potential for great crested newts and reptiles.

5.712 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of partly low and partly medium landscape sensitivity. The study found that visual prominence of the site increases to the east, as the distance from the settlement edge increases; the site is open to the north, and long distance views are available from this direction. Site-specific landscape mitigation measures could include phased development and additional advanced planting adjacent to Hot Lane.

5.713 There is one Grade II building within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that there was no inter-visibility between the site and asset due to the topography and intervening buildings.

5.714 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

BM014A

5.715 The proposed delivery of circa 15 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of existing employment is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban / industrial) is assessed as having a negative effect, as is the site's proximity to historic assets and the ecological value of the site.

5.716 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. The site lies within the area considered to form an important landscape setting to the settlement. Landscape and heritage impact assessments are required.

5.717 Part of the site along New Street (6 dwellings) was taken forward as a preferred option for consultation in April 2016. The site comprises part of the private garden of a residential property (315 New Street) on the south-western edge of the settlement. The site is generally enclosed by development.

5.718 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the habitats on site are of nature conservation value at the site level only. These habitats are not listed as priority habitats in the Staffordshire SBI guidelines

and therefore the site does not currently qualify for consideration as an SBI or as a BAS. Species recorded on site were common and widespread both at a county and national level and it is considered highly unlikely that the site supports notable protected species, although further survey for badger should be undertaken.

5.719 There are no designated heritage assets within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that the site in isolation does not relate to the settlement pattern. Site-specific landscape mitigation measures could include phased development (ensuring the site is developed in combination with BM014b) and that proposals are accompanied by an overall landscape mitigation plan to cover all sites.

5.720 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

BM014B

5.721 The proposed delivery of circa 25 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of existing employment is likely to have a positive effect, as could its location away from historic assets and designated assets. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban / industrial) is assessed as having a negative effect.

5.722 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. The site lies within the area considered to form an important landscape setting to the settlement. Landscape and heritage impact assessments are required.

5.723 Part of the site along Chapel Lane (9 dwellings) was taken forward as a preferred option for consultation in April 2016. The site comprises two small fields divided by Bankhouse Farm on Chapel Street, on the south-western edge of the settlement. There are no designated heritage assets within the 400m buffer.

5.724 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has low potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However more information is required regarding the potential for bat roosts on the site.

5.725 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the site is generally enclosed by development, and is within the settlement form.

5.726 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

BM021

5.727 The proposed delivery of circa 7 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of existing employment is likely to have a positive effect, as could its location away from designated assets. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development

of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban / industrial) is assessed as having a negative effect, as is its location near to historic assets.

5.728 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. The site lies within the area considered to form an important landscape setting to the settlement and is within 400m of one grade II listed asset. Landscape and heritage impact assessments are required.

5.729 This site was not taken forward as a preferred option for consultation in April 2016.

BM029

5.730 The proposed delivery of circa 12 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of existing employment is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban / industrial) is assessed as having a negative effect, as is its location near to historic assets and the ecological value of the site.

5.731 The site comprises a small field on the north-eastern edge of the settlement, north of Rudyard Road. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if very special circumstances can be demonstrated. The site lies within the area considered to form an important landscape setting to the settlement and is within 400m of one grade II listed building. Landscape and heritage impact assessments are required.

5.732 The site was taken forward as a preferred option for consultation in April 2016.

5.733 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has low potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However more information is required regarding the scattered trees on site.

5.734 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) which notes that there was no inter-visibility between the site and listed asset due to the topography and intervening buildings.

5.735 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that the site is not visually prominent due to screening provided by vegetation on the field boundaries, and existing properties located to the east and west of the site however it the site is separated from the settlement edge to the west by 51 Rudyard Road and BM013. Site-specific landscape mitigation measures could include phased development (ensuring site is developed in combination with BM013) and a proposal is accompanied by an overall landscape mitigation plan to cover the sites.

5.736 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

BM030

5.737 The proposed delivery of circa 60 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of existing employment is likely to have a positive effect, as could its location away from designated assets. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is its location near to historic assets.

5.738 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. The site lies within the area considered to form an important landscape setting to the settlement and is within 400m of one grade II listed asset. Landscape and heritage impact assessments are required.

5.739 This site was not taken forward as a preferred option for consultation in April 2016.

BM031

5.740 The proposed delivery of circa 60 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of existing employment is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is its location near to historic assets and the ecological value of the site.

5.741 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. The site lies within the area considered to form an important landscape setting to the settlement and is within 400m of one grade II listed asset. Landscape and heritage impact assessments are required.

5.742 This site was not taken forward as a preferred option for consultation in April 2016.

BM032

5.743 The proposed delivery of circa 30 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of existing employment is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is its location near to historic assets.

5.744 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. The site lies within the area considered to form an important landscape setting to the settlement and is within 400m of one grade II listed asset. Landscape and heritage impact assessments are required.

5.745 This site was not taken forward as a preferred option for consultation in April 2016.

BM035

5.746 The proposed delivery of circa 35 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of existing employment is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is its location near to historic assets.

5.747 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. The site lies within the area considered to form an important landscape setting to the settlement and is within 400m of one grade II listed asset. Landscape and heritage impact assessments are required.

5.748 This site was not taken forward as a preferred option for consultation in April 2016.

Blythe Bridge & Forsbrook

Sites (5+ dwellings) - within the current development boundary

BB021 - residential

5.749 The proposed delivery of circa 30 dwellings is considered to have a significant positive effect, as is the accessibility of the site to services and facilities and public transport. Similarly, the site's accessibility to areas of existing employment is likely to have a positive effect, as could the site's location away from historic assets. However, there is scope that the site could be designated SBI land which would have a significant negative effect, as would the partial flood zone 2 and 3 designation of the site. Similarly, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban / industrial is assessed as having a negative effect.

5.750 This site has also been appraised for potential employment use - see para **XXX**.

5.751 The site is likely to be affected to some degree by flood risk and if taken forward will require the support of the Sequential Test and a Level 2 SFRA. The Council's 2014 Ecology Study considers that the site could qualify as an SBI for its floral diversity.

5.752 This site was not taken forward as a preferred option for consultation in April 2016.

Sites (5+ dwellings) - outside the current development boundary

BB027/28

5.753 The proposed delivery of circa 27 dwellings is considered to have a significant positive effect, as is the accessibility of the site to services and facilities and public transport. Similarly, the site's accessibility to areas of existing employment is likely to have a positive effect, as could the site's location away from historic assets. However, the site is partially within flood zone 2 and 3 which is likely to have a significant negative effect. Similarly, the site is adjacent to Blythe Bridge Woods BAS which would have a negative effect, as would the development of greenfield, urban ALC land.

5.754 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. The site is likely to be affected to some degree by flood risk and if taken forward will require the support of the Sequential Test and a Level 2 SFRA.

5.755 This site was not taken forward as a preferred option for consultation in April 2016.

BB040

5.756 The proposed delivery of circa 12 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect, as could the site's location away from historic assets. However, the development of greenfield, urban ALC land is assessed as having a negative effect, as is the ecological value of the site and the inaccessibility of areas of existing employment.

5.757 Previous land use may have caused contamination; remediation and mitigation measures may be required to protect the water environment and human health. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt. The site lies within the area considered to form an important landscape setting to the settlement.

5.758 This site was not taken forward as a preferred option for consultation in April 2016.

BB041 (ADD011)

5.759 The proposed delivery of circa 50 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect, as could the site's location away from historic assets. However, the development of greenfield land forming part of the landscape setting to the settlement (indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban / industrial) is assessed as having a negative effect, as is the ecological value of the site and the inaccessibility of areas of existing employment.

5.760 Site comprises fields to the north of the settlement, sloping down from Caverswell Old Road towards the settlement edge (rear of properties on Caverswell Road). The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.761 This site was taken forward as a preferred option for consultation in April 2016.

5.762 Staffordshire Wildlife Trust has noted that two north-western fields within this site are considered to be good quality semi-improved grassland. The hedgerows are potentially diverse, with good structure and mature trees. There are two ponds on the site which could potentially support great crested newts and other amphibians such as Common Toad, further ecological surveys are required.

5.763 There are no designated heritage assets within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the site is generally screened by existing development; vegetation (particularly the hedgerow on Caverswell Old Road); and topography, as the land continues to rise to a ridge to the north of the site, thus screening long distance views from this direction. The study considered that development of the site would fit in well within the existing settlement form, and would create a well defined, vegetated settlement edge.

5.764 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

BB044

5.765 The proposed delivery of circa 30 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to public transport is likely to have a positive effect. However, the site is partially within flood zone 2 and 3 which is likely to have a significant negative effect. Similarly, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban / industrial is assessed as having a negative effect, as is the ecological value of the site and the inaccessibility of areas of existing employment.

5.766 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. The site lies within the area considered to form an important landscape setting to the settlement. The site is likely to be affected to some degree by flood risk and if taken forward will require the support of the Sequential Test and a Level 2 SFRA. The Council's Ecological Study suggested that the site's wet woodland area may be regarded as a UKBAP priority habitat.

5.767 This site was not taken forward as a preferred option for consultation in April 2016.

BB045

5.768 The proposed delivery of circa 15 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to public transport is likely to have a positive effect. The site's location away from historic assets is likely to have a positive effect. However, the development of greenfield, urban ALC land is assessed as having a negative effect, as is the ecological value of the site.

5.769 The site lies within the area considered to form an important landscape setting to the settlement. The Council's Green Belt review did not recommend considering the site for release from the Green Belt.

5.770 This site was not taken forward as a preferred option for consultation in April 2016.

BB054

5.771 The proposed delivery of circa 70 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect. However, the site's partial location within a flood zone is assessed as having a significant negative effect. The development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban / industrial is assessed as having a negative effect, as is the ecological value of the site and the proximity of historic assets.

5.772 The site comprises agricultural land surrounding Wood Grove Farm on the south eastern edge of the settlement, south-west of Draycott Old Road. The site is likely to be affected to some degree by flood risk and if taken forward will require the support of the Sequential Test and a Level 2 SFRA. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated and in the context of wider land in this location.

5.773 This site was taken forward as a preferred option for consultation in April 2016.

5.774 The Extended Phase 1 Habitat Survey (2015) considered that the site mainly consists of species poor improved grassland used as grazing. The remaining habitats are species poor and very common within the local area and the UK as a whole. However there are two trees are present on or adjacent to the site that could support roosting bats, further survey is required.

5.775 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of high landscape sensitivity. The study found that the site is adjacent to the end of linear development on Draycott Old Road, but is otherwise separated from the edge of the settlement by agricultural land. The study considered that site does not relate to the existing settlement form such that development would adversely affect the settlement pattern, adversely affecting the existing vegetated settlement edge and encroaching on the countryside.

5.776 There is one Grade II Listed Building within the 400m buffer. Mitigation including screening along the northern boundary could reduce adverse effects to the setting of the asset.

5.777 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

BB062

5.778 The proposed delivery of circa 20 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect, as could the site's location away from historic assets. However, the development of greenfield, urban ALC land is assessed as having a negative effect, as is the ecological value of the site.

5.779 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

BB086

5.780 The proposed delivery of circa 15 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect, as could the site's location away from historic assets. However, the development of greenfield, urban ALC land is assessed as having a negative effect, as is the ecological value of the site.

5.781 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

BB087 - residential

5.782 The proposed delivery of circa 46 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the site's proximity to historic assets is likely to have a negative effect. The development of greenfield, urban ALC land is assessed as having a negative effect, as is the ecological value of the site.

5.783 (This site has also been assessed for employment use, see para XXX below.)

5.784 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. The site lies within the area considered to form an important landscape setting to the settlement. The site is likely to be affected to some degree by flood risk and if taken forward will require the support of the Sequential Test and a Level 2 SFRA.

5.785 This site was not taken forward as a preferred option for consultation in April 2016.

Other uses

BB021 - employment

5.786 The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District, as is the accessibility of the site to services and facilities and public transport. Similarly, the site's location away from historic assets is likely to have a positive effect. However, there is scope that the site could be designated SBI land which would have a significant negative effect, as would the partial flood zone 2 and 3 designation of the site. Similarly, the development of greenfield, urban ALC land is assessed as having a negative effect.

5.787 The site is likely to be affected to some degree by flood risk and if taken forward will require the support of the Sequential Test and a Level 2 SFRA. The Council's Ecology Study considers that the site could qualify as an SBI for its floral diversity.

5.788 This site was not taken forward as a preferred option for consultation in April 2016.

BB087 - employment

5.789 The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the site's proximity to historic assets is likely to have a significant negative effect. The development of greenfield, urban ALC land is assessed as having a negative effect, as is the ecological value of the site.

5.790 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. The site lies within the area considered to form an important landscape setting to the settlement. The site is likely to be affected to some degree by flood risk and if taken forward will require the support of the Sequential Test and a Level 2 SFRA.

5.791 This site was not taken forward as a preferred option for consultation in April 2016.

Additional sites appraised following April 2016 consultation

Blythe Vale Strategic Site (Identified in Core Strategy as Policy SS8 Blythe Bridge Regional Investment Site) - potential mixed use including residential

5.792 The proposed delivery of circa 300 dwellings is considered to have a significant positive effect. Similarly, the site's good strategic location (with regional significance) has scope to have a positive effect on the vitality and viability of the wider District and could encourage investment in people, jobs and infrastructure. However, the development of

greenfield land, partly within the important landscape setting to the settlement, and indicated on the predictive map of Best and Most Versatile land as an area where more than 60% of the land is likely to be BMV, is assessed as having a significant negative effect, similarly the potential ecological value of the site and the effects on climate change resulting from the likelihood of the location supporting journeys made by car, are assessed as negative.

5.793 This site is a long standing allocation, having been allocated in the Staffordshire Moorlands Local Plan which was adopted in 1998 and subsequently included as an allocation in the Staffordshire Moorlands Core Strategy, which was adopted in 2014.

5.794 The site comprises large areas of agricultural land extending south-east from Blythe Bridge (at the junction of the A50 and A521) and located either side of the A50. The site contains some previous development, comprising residential properties and Stone House Farm on Woodlands Lane, and Woodlands farm to the south of the A50. The site is enclosed by a railway line to the south-west.

5.795 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the improved grassland, arable, hard-standing, tall ruderal vegetation, buildings, species-poor hedgerow and scattered trees were of importance to nature conservation at the site level only. However the single length of species-rich hedgerow in the northern area of the site was considered to be of importance at the local level. There is reasonable potential that it may qualify as an SBI or a BAS dependent on further survey. The ponds are of at least local importance to nature conservation and appear to qualify as both an SBI or a BAS. Further survey is required. Species recorded on site were common and widespread both at a county and national level and, subject to further survey, it is considered unlikely that the site significantly supports any notable protected species.

5.796 There is one Grade II Listed Building within the 400m buffer. The Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) considered that due to the topography of the landscape, there was no inter-visibility between the site and the asset and that development would be highly unlikely to adversely affect the setting of the heritage asset.

5.797 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium or high landscape sensitivity. The study found that the existing settlement edge to Blythe Bridge is well-defined and vegetated, with the A50 and A521 providing a strong limit to development. It was considered that development of the site could lead to coalescence between Blythe Bridge and Draycott, with physical and visual coalescence potentially arising in the northern section of the site, and visual coalescence between these two settlements arising in the southern section of the site (especially when viewed from higher ground to the south-west). Site-specific landscape mitigation measures recommended included planting within and on the edges of the development, and limits on building sizes and scale.

5.798 The site was proposed for inclusion in the preferred options Local Plan July 2017.

Brown Edge

Sites (5+ dwellings) - within the current development boundary

BE003A

5.799 The site's proximity to the village centre could reduce the need to travel and as such have a positive effect on climate change which is likely to have a significant positive effect. The proposed delivery of circa 6 dwellings is considered to have a positive effect, as is its distance away from historic assets and low ecological value. However, the site is relatively inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect.

5.800 The site is within the Brown Edge village development boundary and could come forward at any time. This site was not taken forward as a preferred option for consultation in April 2016.

Sites (5+ dwellings) - within the current Green Belt

BE032

5.801 The proposed delivery of circa 35 dwellings is considered to have a significant positive effect. Similarly, the site's low ecological value is likely to have a positive effect. However, the site is relatively inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets.

5.802 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt. The site has a culverted watercourse flowing beneath it which should be re-naturalised through re-development to contribute to Water Framework Directive objectives.

5.803 This site was not taken forward as a preferred option for consultation in April 2016.

BE041

5.804 The proposed delivery of circa 50 dwellings is considered to have a significant positive effect. Similarly, the site's distance away from historic assets is likely to have a positive effect. However, the site is relatively inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect. Similarly, the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban / industrial) is assessed as having a negative effect, as is the ecological value of the site.

5.805 Site comprises a field on the southern edge of Brown Edge, enclosed by a combination of existing residential development, or trees and hedgerows. The site lies within the area considered to form an important landscape setting to the settlement. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. Development could be part of the enhancement of recreational opportunities in this location, the site bordering scrubland and well-used footpaths running southwards towards Stockton Brook.

5.806 This site was taken forward as a preferred option for consultation in April 2016.

5.807 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has some potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However more information is required regarding the species-rich hedgerow and the potential for roosting bats on site.

5.808 There are no designated heritage assets within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the site slopes down from a track on the north-east boundary to Willfield Lane on the south-west boundary and considered the higher land to the north-east of the site to have higher visual prominence, with long distance views available to the south-west. The study considered that development would be viewed behind and adjacent to existing development.

5.809 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

BE044

5.810 The proposed delivery of circa 20 dwellings is considered to have a significant positive effect. Similarly, the site's distance away from historic assets is likely to have a positive effect. However, the site is relatively inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the ecological value of the site.

5.811 The site lies within the area considered to form an important landscape setting to the settlement. The Council's Green Belt review did not recommend considering the site for release from the Green Belt.

5.812 This site was not taken forward as a preferred option for consultation in April 2016.

BE045

5.813 The proposed delivery of circa 35 dwellings is considered to have a significant positive effect. Similarly, the site's distance away from historic assets is likely to have a positive effect. However, the site is relatively inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the ecological value of the site.

5.814 The site lies within the area considered to form an important landscape setting to the settlement. The Council's Green Belt review did not recommend considering the site for release from the Green Belt.

5.815 This site was not taken forward as a preferred option for consultation in April 2016.

BE056

5.816 The proposed delivery of circa 15 dwellings is considered to have a significant positive effect. However, the site is relatively inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the ecological value of the site.

5.817 The site is adjacent to farm buildings considered non-designated heritage assets. The site lies within the area considered to form an important landscape setting to the settlement. The Council's Green Belt review did not recommend considering the site for release from the Green Belt.

5.818 This site was not taken forward as a preferred option for consultation in April 2016.

BE060

5.819 The proposed delivery of circa 60 dwellings is considered to have a significant positive effect. Similarly, the site's distance away from designated assets is likely to have a positive effect. However, the site is relatively inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets.

5.820 The site lies within the area considered to form an important landscape setting to the settlement. The Council's Green Belt review did not recommend considering the site for release from the Green Belt.

5.821 This site was not taken forward as a preferred option for consultation in April 2016.

ADD06

5.822 The proposed delivery of circa 15 dwellings is considered to have a significant positive effect. Similarly, the location away from designated assets is considered to have a positive effect. However, the site is relatively inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets.

5.823 Site adjoins BE032. The Council's Green Belt Review concluded that site BE032 could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.824 This site was not taken forward as a preferred option for consultation in April 2016.

Cheddleton

Sites (5+ dwellings) - within the current development boundary

CD004

5.825 The proposed delivery of circa 18 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. Similarly, the site's accessibility to areas of countryside and open space is likely to have a positive effect.

However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets and the ecological value of the site.

5.826 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

CD017

5.827 The proposed delivery of circa 29 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. Similarly, the site's accessibility to areas of countryside and open space is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the site's proximity to historic assets and the ecological value of the site is likely to have a negative effect. The site is indicated on the predictive map of Best and Most Versatile agricultural land as within an area where less than 20% of the land is likely to be BMV.

5.828 Site comprises a residential property on Cheadle Road and the land to the rear of it, north of Bones Lane. It includes a potentially species rich hedgerow. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.829 This site was taken forward as a preferred option for consultation in April 2016.

5.830 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has some potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However more information is required regarding the species-rich hedgerow and the potential for bats on site.

5.831 There are three Grade II Listed Buildings within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that due to the topography as well as intervening buildings and vegetation, there was no inter-visibility between the site and the assets. The study considered that development would be highly unlikely to adversely affect the settings of the heritage assets. Outside of the 400m buffer, there are a group of Listed Buildings to the north-east of the site. The study found that development may adversely affect their settings. Mitigation including screening along the north-eastern and eastern boundaries of the site was considered likely to reduce any potential effects on the settings of these Listed Buildings.

5.832 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the existing linear development on Cheadle Road and the development to the south of the site do not currently contribute to a well-defined settlement edge and considered that the site has low visual prominence as it is generally enclosed by development and vegetation.

5.833 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

CD029

5.834 The site's proximity to areas of existing employment is considered to have a significant positive effect. Similarly, the proposed delivery of circa 8 dwellings is likely to have a positive effect, as could the site's accessibility to areas of open countryside and location away from historic assets. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's inaccessibility to services and facilities.

5.835 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

CD060/CD118 (mainly outside development boundary)

5.836 The proposed delivery of circa 113 dwellings is considered to have a significant positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield, grade 3 and 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets and the inaccessibility of areas of existing employment.

5.837 Site forms part of the setting of Ashcombe Park (Grade II*). The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

CD069A

5.838 The proposed delivery of circa 6 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open countryside and low ecological value is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the site's inaccessibility to areas of existing employment is likely to have a significant negative effect. The development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area where the land is likely to be urban) is assessed as having a negative effect, as is the site's proximity to historic assets.

5.839 Allocation of the site was considered to be unnecessary as it may be regarded as potential infill. The site was not taken forward as a preferred option for consultation in April 2016.

CD088

5.840 The proposed delivery of circa 7 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open countryside is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the site's inaccessibility to areas of existing employment is likely to have a negative effect. The site's proximity to historic assets and the ecological value of the site is likely to have a negative effect.

5.841 Allocation of the site was considered to be unnecessary as it may be regarded as potential infill. The site was not taken forward as a preferred option for consultation in April 2016.

Sites (5+ dwellings) - within the current Green Belt**CD002**

5.842 The proposed delivery of circa 26 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of existing employment and open countryside, as well as the site's location away from historic assets is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as within an area where less than 20% of the land is likely to be BMV is assessed as having a negative effect, as is the site's ecological value.

5.843 Site comprises a small triangular field on the southern edge of the settlement. The site is enclosed by linear development on Folly Lane to the east; and a strong tree belt/hedgerow to the south-west. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.844 This site was taken forward as a preferred option for consultation in April 2016.

5.845 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has some potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However more information is required regarding the species-rich hedgerow and bat potential on site.

5.846 There are no designated heritage assets within the 400m buffer. The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that development within the site would have low visual prominence, and the existing vegetation on the south-western boundary would create a well defined, vegetated edge to the settlement. Site-specific landscape mitigation measures could include phased development (ensuring the site is developed in combination with the adjacent CD003).

5.847 The site is adjacent to a watercourse with no mapped floodplain. An assessment of flood risk, including a model of the watercourse, should be undertaken at the planning application stage.

5.848 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

CD003

5.849 The proposed delivery of circa 70 dwellings is considered to have a significant positive effect, as is the site's accessibility to areas of existing employment. Similarly, the site's accessibility to the open countryside is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as within an area where less than 20% of the land is likely to be BMV is assessed as having a negative effect, as is the site's ecological value and location near to historic assets.

5.850 Site comprises fields on the southern edge of the settlement. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.851 This site was taken forward as a preferred option for consultation in April 2016.

5.852 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has some potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However more information is required regarding the bat potential on site.

5.853 There is one Grade II Listed Building within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that due to the intervening buildings between the site and the asset, there was no inter-visibility and considered that development would be highly unlikely to adversely affect the setting of the asset.

5.854 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the site is enclosed by residential development on Rock End Drive and Millstone Edge to the north; linear development on Folly Lane to the east; and a strong tree belt/hedgerow to the south-west. The study considered that development within the site would have relatively low visual prominence, and the existing vegetation on the southwestern boundary would create a well-defined, vegetated edge to the settlement.

5.855 The site is adjacent to a watercourse with no mapped floodplain. An assessment of flood risk, including a model of the watercourse, should be undertaken at the planning application stage.

5.856 The site was not proposed for inclusion in the July 2017 preferred option Local Plan.

CD007

5.857 The proposed delivery of circa 14 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to the open countryside and areas of existing employment is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect and location near to historic assets.

5.858 The site lies within the area considered to form an important landscape setting to the settlement. The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

CD008

5.859 The proposed delivery of circa 23 dwellings is considered to have a significant positive effect, as is the site's accessibility to areas of existing employment. Similarly, the site's accessibility to the open countryside is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect and location near to historic assets.

5.860 The site lies within the area considered to form an important landscape setting to the settlement. The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

CD015

5.861 The proposed delivery of circa 30 dwellings is considered to have a significant positive effect, as is the site's accessibility to areas of existing employment. Similarly, the site's accessibility to the open countryside is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect and location near to historic assets.

5.862 The site lies within the area considered to form an important landscape setting to the settlement. The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

CD019

5.863 The proposed delivery of circa 39 dwellings is considered to have a significant positive effect, as is the site's accessibility to areas of existing employment. Similarly, the site's accessibility to the open countryside is likely to have a positive effect. However, the inaccessibility of services and facilities is likely to have a significant negative effect. Similarly, the development of greenfield, grade 4 ALC land is assessed as having a negative effect and its location near to historic assets.

5.864 The Council's Green Belt review recommends considering the site for release from the Green Belt if exceptional circumstances can be demonstrated. The site forms part of the setting of an historic farmstead considered a local heritage asset. This site was not taken forward as a preferred option for consultation in April 2016.

CD115: residential

5.865 The proposed delivery of circa 104 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and areas of existing employment is likely to have a positive effect. However, the inaccessibility of services and facilities and development of greenfield, grade 3 ALC land is likely to have a significant negative effect. Similarly, the sites proximity to historic assets is likely to have a negative effect.

5.866 The site forms part of the setting of Heath House (Grade II listed). The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

Other uses

CD115: alternative uses

5.867 The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the provision of housing provided

is likely to have a significant positive effect. However, the inaccessibility of services and facilities and development of greenfield, grade 3 ALC land is likely to have a significant negative effect. Similarly, the site's proximity to historic assets is likely to have a negative effect.

5.868 The site forms part of the setting of Heath House (Grade II listed). The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

Endon

Sites (5+ dwellings) - within the current development boundary

EN128

5.869 The proposed delivery of circa 27 dwellings is considered to have a significant positive effect, as is the site's proximity to services and facilities. Similarly, the site's accessibility to health care and open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect. The site's proximity to historic assets and ecological value is likely to have a negative effect. The site is indicated on the predictive map of Best and Most Versatile agricultural land as within an area where land is likely to be urban / industrial.

5.870 Site comprises a small field of rough grassland within the settlement, which slopes down from Stoney Lane to the playing field of St Luke's primary school. It is currently identified as Visual Open Space, but was not identified for retention as such in the Council's 2008 Landscape and Settlement Character Assessment.

5.871 This site was taken forward as a preferred option for consultation in April 2016.

5.872 The Extended Phase 1 Habitat Survey (2015) considered that the site has fairly low biodiversity value overall, it is set within a mainly urban environment with poor connectivity to the wider countryside. However the site includes a tree with bat roosting potential and a species-rich hedgerow.

5.873 There are three Grade II Listed Buildings and one Conservation Area within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that the site was well screened and there was no inter-visibility between the site and heritage assets. The study considered that development would be highly unlikely to adversely affect the settings of the heritage assets.

5.874 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the site comprises a gap in development within the settlement and is enclosed by vegetation, the study considered that development would fit well within the existing settlement pattern and would have low visual prominence.

5.875 The presence of a watercourse along the site's southern boundary suggests that flood risk assessment / modelling and early engagement with the County Council and Environment Agency should be required. The potential to accommodate SuDS should be explored along with other measures to help improve water quality in line with the Water Framework Directive objectives.

5.876 The site was proposed for inclusion in the July 2017 preferred option Local Plan.

Sites (5+ dwellings) - within the current Green Belt

EN007

5.877 The proposed delivery of circa 45 dwellings is considered to have a significant positive effect, as is the site's proximity to services and facilities. Similarly, the site's accessibility to health care and open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect, as could its partial location within a flood zone. The development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets and ecological value.

5.878 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. This site was not taken forward as a preferred option for consultation in April 2016.

EN012

5.879 The proposed delivery of circa 24 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities and open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect. The development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area where land is likely to be urban / industrial) is assessed as having a negative effect, as is the site's proximity to historic assets and ecological value.

5.880 The site comprises an L-shaped field on the northern edge of Endon, which encloses the recreation ground at the end of Hillswood Drive. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.881 This site was taken forward as a preferred option for consultation in April 2016.

5.882 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the habitats have limited ecological value however the site has potential to support protected species. Further surveys are required to establish the potential for bat roosts and the presence of reptiles and amphibians.

5.883 There is one Grade II Listed Building and one Conservation Area within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that there was no inter-visibility between the site and the assets due to the topography and intervening buildings and considered that development would be highly unlikely to adversely affect their settings.

5.884 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be partly of medium and partly high landscape sensitivity. The study found that development within the eastern section of the site would be only partially screened by surrounding vegetation but that development within the western section of the site, north of the recreation ground, would have higher visual prominence

when viewed from the surrounding countryside and risked adversely affecting the existing settlement edge. Site-specific landscape mitigation measures could include additional advanced planting on the northern boundary.

5.885 There are potential flood risk issues that will require flood risk assessment / modelling and early engagement with the County Council and Environment Agency.

5.886 The site was not proposed for inclusion in the preferred option Local Plan July 2017.

EN019

5.887 The proposed delivery of circa 8 dwellings is considered to have a positive effect. Similarly, the site's accessibility to services, facilities and open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets and ecological value.

5.888 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. This site was not taken forward as a preferred option for consultation in April 2016.

EN024 (residential)

5.889 The proposed delivery of circa 7 dwellings is considered to have a positive effect. Similarly, the site's accessibility to services, facilities and open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect, as could its partial location within a flood zone. The development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets and ecological value.

5.890 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. The site lies within the area considered to form an important landscape setting to the settlement and is likely to be severely impacted by flood risk; if taken forward it will require the support of the Sequential Test and a Level 2 SFRA.

5.891 This site was not taken forward as a preferred option for consultation in April 2016.

EN030

5.892 The proposed delivery of circa 10 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services, facilities is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land partially within flood zone 2 is assessed as having a negative effect, as is the site's proximity to historic assets.

5.893 The site lies at the historic core of the village and is adjacent to the Conservation Area. The site is likely to be affected to some degree by flood risk and if taken forward will require the support of the Sequential Test and a Level 2 SFRA. The Council's Green Belt review did not recommend considering the site for release from the Green Belt.

5.894 This site was not taken forward as a preferred option for consultation in April 2016.

EN033

5.895 The proposed delivery of circa 12 dwellings is considered to have a significant positive effect, as is the accessibility of services and facilities. Similarly, the site's accessibility to health care and open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect. The development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area where land is likely to be urban / industrial) is assessed as having a negative effect, as is the site's proximity to historic assets and ecological value.

5.896 Site comprises a small field on the southern edge of the settlement, to the rear of properties on Post Street. The site is bound to the south by an access track to a garage / mechanics business, which encloses the site to the east. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.897 This site was taken forward as a preferred option for consultation in April 2016.

5.898 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has some potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However more information is required regarding the potential for reptiles and amphibians.

5.899 There is one Grade II Listed Building and one Conservation Area within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that the nature of the Conservation Area (Caldon Canal) and associated Listed Building means that setting contributes little to their overall significance. The study considered that the site was well screened along its southern boundary which limits inter-visibility between the site and the Conservation Area and found that with vegetation screening along the southern edge of the site, development would be unlikely to cause adverse effects to the setting of the Conservation Area.

5.900 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the site is generally screened by adjacent development. It considered that views towards the site from the south are available, however found that these are partially screened by intervening vegetation and that the site sits well within the existing development form, as it does not extend beyond existing linear development on Post Lane.

5.901 There are existing local flood risk issues that suggest flood risk assessment / modelling and early engagement with the County Council and Environment Agency should be required.

5.902 The site was not proposed for inclusion in the preferred option Local Plan July 2017.

EN079

5.903 The proposed delivery of circa 18 dwellings is considered to have a significant positive effect, as is the accessibility of services and facilities. Similarly, the site's accessibility to health care and open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative

effect, as could its partial location within a flood zone. The development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets and ecological value.

5.904 The site forms part of the setting of the Scheduled Monument: Audley's Moat and is likely to be severely impacted by flood risk; if the site is taken forward it will require the support of the Sequential Test and a Level 2 SFRA. The Council's Green Belt review did not recommend considering the site for release from the Green Belt.

5.905 This site was not taken forward as a preferred option for consultation in April 2016.

EN101

5.906 The proposed delivery of circa 54 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities and open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets and ecological value.

5.907 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. This site was not taken forward as a preferred option for consultation in April 2016.

EN125

5.908 The proposed delivery of circa 14 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to health care and open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets.

5.909 Most of the site is owned by Endon Well Dressing Trustees and is not available for development. The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

EN126

5.910 The proposed delivery of circa 12 dwellings is considered to have a significant positive effect, as could its accessibility to services and facilities. Similarly, the site's accessibility to health care and open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which is likely to have a significant negative effect, as could its partial location within a flood zone. The development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area where land is likely to be urban / industrial) is assessed as having a negative effect, as is the site's proximity to historic assets and ecological value.

5.911 The site comprises a field on the southern edge of the settlement, north of the canal and adjoining the Caldon Canal Conservation Area. The site is adjacent to linear development on Post Lane but otherwise separated from the settlement edge by EN033. The site is likely to be affected to some degree by flood risk and if taken forward will require the support of

the Sequential Test and a Level 2 SFRA. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.912 This site was taken forward as a preferred option for consultation in April 2016.

5.913 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has some potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However more information is required regarding the potential for bats, reptiles and amphibians.

5.914 There is one Grade II Listed Building and one Conservation Area within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that the nature of the Conservation Area (Caldon Canal) and associated Listed Building means that setting contributes little to their overall significance. However the study considered that due to the location of the site along the edge of the Conservation Area, mitigation should include stepping development back from the southern boundary, as well as employing vegetation screening along the southern boundary.

5.915 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of high landscape sensitivity. The study found that the site is currently open, and an important contribution to the existing rural approach to the settlement from the south. The study considered that development within the site would be visually prominent and risked adversely affecting local landscape character and the rural approach to Endon.

5.916 A small area to the west of the site is within flood zones 2 and 3. The site boundary should be revised to exclude this area and flood risk assessment / modelling and early engagement with the County Council and Environment Agency should be required.

5.917 The site was not proposed for inclusion in the preferred option Local Plan July 2017.

Other uses

EN024 (employment)

5.918 The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the site's accessibility to areas of open countryside, services and facilities and low ecological value is likely to have a positive effect. However, the site is partially located within a flood zone which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets.

5.919 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. The site lies within the area considered to form an important landscape setting to the settlement and is likely to be severely impacted by flood risk; if taken forward it will require the support of the Sequential Test and a Level 2 SFRA.

5.920 This site was not taken forward as a preferred option for consultation in April 2016.

Ipstones

Sites (5+ dwellings) - within the current development boundary

IP019 (partly within development boundary)

5.921 The proposed delivery of circa 35 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities and areas of existing employment is likely to have a positive effect. However, the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area where land is likely to be urban / industrial) is assessed as having a negative effect, as is the site's proximity to designated and historic assets and ecological value.

5.922 Site comprises a field on the north-western settlement edge, bound by a recreation ground to the south and a cemetery to the north. This site was taken forward as a preferred option for consultation in April 2016.

5.923 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has some potential to support protected species. The site habitats are considered to be of nature conservation value at site and local level. However more information is required regarding the potential bat roosts.

5.924 There is one Grade II* and 27 Grade II Listed Buildings, and one Conservation Area within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that setting is considered to contribute to the overall significance of the heritage assets, in particular the Grade II* listed church and the Conservation Area. The study considered that development would be likely to adversely affect the setting of the church to the north of the site. These effects could be reduced by restricting development to the eastern half of the site, in line with the existing development to the north, and the use of vegetation screening along the northern boundary.

5.925 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that the site is enclosed by a tree belt to the south, and generally screened from Church Lane by intervening development and vegetation. The study considered that the site is visually prominent when viewed from the cemetery, and from land to the west. Site-specific landscape mitigation measures could include advance tree planting on the northern and western boundaries, or limiting development to the eastern half of the site.

5.926) Further investigation by the Habitats Regulations Assessment is required due to the site's proximity to a component of the Peak District Dales SAC and the potential for effects of development to result in an in-combination effect in relation to recreational pressure.

5.927 The site was not proposed for inclusion in the preferred option Local Plan July 2017.

Sites (5+ dwellings) - outside the current development boundary

IP011

5.928 The proposed delivery of circa 15 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities and areas of existing employment is likely to have a positive effect. However, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets and ecological value.

5.929 The site lies at the historic core of the village. It was not taken forward as a preferred option for consultation in April 2016.

IP012A

5.930 The proposed delivery of circa 20 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities and areas of existing employment is likely to have a positive effect. However, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to historic assets and ecological value.

5.931 The site lies at the historic core of the village. It was not taken forward as a preferred option for consultation in April 2016.

IP014A

5.932 The proposed delivery of circa 35 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities and areas of existing employment is likely to have a positive effect. However, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the site's proximity to designated and historic assets.

5.933 Previous land use may have caused ground contamination that through redevelopment would present a risk to the water environment and human health. The site was not taken forward as a preferred option for consultation in April 2016.

IP015

5.934 The proposed delivery of circa 22 dwellings is considered to have a significant positive effect, as is the site's proximity to areas of existing employment. Similarly, the site's accessibility to health care and open space is likely to have a positive effect. However, the site is in proximity to a designated asset, Churnet Valley SSSI which is likely to have a significant negative effect, as could the site's proximity to listed assets. The development of greenfield, grade 4 ALC land is assessed as having a negative effect.

5.935 The site forms part of the setting for New House Farm (Grade II listed). The site was not taken forward as a preferred option for consultation in April 2016.

Kingsley

Sites (5+ dwellings) - within the current development boundary

KG024

5.936 The proposed delivery of circa 12 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space and the partial brownfield nature of the site is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect. The site's proximity to designated and historic assets is likely to have a negative effect, as could the site's ecological value.

5.937 The site consists of Glebe House (Grade II listed) and its historic curtilage including a medieval moated site. The site was not taken forward as a preferred option for consultation in April 2016.

KG059

5.938 The proposed delivery of circa 6 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect. Similarly, the site's proximity to historic assets and the development of greenfield, grade 3 ALC land is likely to also have a significant negative effect. The site's proximity to designated assets is likely to have a negative effect.

5.939 The site forms part of the setting for Church Farm (Grade II listed). The site was not taken forward as a preferred option for consultation in April 2016.

Sites (5+ dwellings) - within the current Green Belt

KG005

5.940 The proposed delivery of circa 7 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect. Similarly, development of greenfield, grade 3 ALC land is likely to also have a significant negative effect and the site's proximity to historic assets.

5.941 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

KG019

5.942 The proposed delivery of circa 30 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect. Similarly, development of greenfield, grade 3 ALC land is likely to also have a significant negative effect. The site's proximity to designated and historic assets is likely to have a negative effect.

5.943 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. This site was not taken forward as a preferred option for consultation in April 2016.

KG026A

5.944 The proposed delivery of circa 30 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect. Similarly, development of greenfield, grade 3 ALC land is likely to also have a significant negative effect. The site's proximity to designated and historic assets is likely to have a negative effect.

5.945 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

KG026B

5.946 The proposed delivery of circa 50 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect. Similarly, development of greenfield, grade 3 ALC land is likely to also have a significant negative effect.

5.947 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

KG030A

5.948 The proposed delivery of circa 25 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect. Similarly, development of greenfield, grade 3 ALC land is likely to also have a significant negative effect. The site's proximity to historic assets is likely to have a negative effect.

5.949 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

KG031

5.950 The proposed delivery of circa 20 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect. Similarly, development of greenfield, grade 3 ALC land is likely to also have a significant negative effect. The site's proximity to historic assets is likely to have a negative effect.

5.951 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

KG042

5.952 The proposed delivery of circa 30 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect. Similarly, development of greenfield, grade 3 ALC land is likely to also have a significant negative effect. The site's proximity to designated and historic assets is likely to have a negative effect.

5.953 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

KG049A

5.954 The proposed delivery of circa 35 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect. Similarly, development of greenfield land indicated on the predictive map of Best and Most Versatile agricultural land as within an area where 20 - 60% of the land is likely to be BMV is also likely to have a significant negative effect. The site's proximity to designated and historic assets is likely to have a negative effect.

5.955 Site comprises the north-western half of a field at on the south-western edge of the village, bound by Cheadle Road (track) to the north-east and residential development to the north-west. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.956 This site was taken forward as a preferred option for consultation in April 2016.

5.957 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the habitats on site were of nature conservation value at the site level only. Species recorded on site were common and widespread both at a county and national level and it is considered unlikely that the site supports notable protected species, however surveys should be undertaken to determine the presence or absence of great crested newt in ponds within 250 m of the site, for signs of badger activity and to determine the use of the site by bats.

5.958 There are six Grade II Listed Buildings within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that the Listed Buildings are situated along the main road through the village. The study considered that although there may be some inter-visibility, development would be unlikely to cause high adverse effects to their settings.

5.959 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of high landscape sensitivity. The study found that the site is visually prominent and extends beyond the existing settlement edge. The study considered that development of the site would encroach into the surrounding countryside and could adversely affect the existing settlement pattern and edge.

5.960 The site was not proposed for inclusion in the preferred option Local Plan July 2017.

Upper Tean

Sites (5+ dwellings) - within the current development boundary

UT011/014

5.961 The proposed delivery of circa 20 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to health care and areas of existing employment is likely to have a positive effect. However, the site is partially located within a flood zone which is likely to have a significant negative effect. The site's proximity to historic assets and ecological value is likely to have a negative effect.

5.962 This area covers the site of the former dye works to Tean Hall Mill. Archaeological and heritage assessment will be required. The sites are likely to be severely impacted by flood risk; if taken forward they will require the support of the Sequential Test and a Level 2 SFRA.

5.963 The sites were not taken forward as a preferred option for consultation in April 2016.

UT019

5.964 The proposed delivery of circa 15 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect as could the development of brownfield land indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban. However the site is located in proximity to historic assets which is likely to have a significant negative effect. The site's inaccessibility to areas of existing employment is likely to have a negative effect.

5.965 The site is an existing depot within the centre of the settlement, south of St Thomas's Road. It is within the Upper Tean Conservation Area and adjoins several properties on the High Street that are Grade II listed; a Heritage Impact Assessment will be required.

5.966 This site was taken forward as a preferred option for consultation in April 2016.

5.967 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has low potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However more information is required regarding the scattered trees on site in order to establish their ecological importance.

5.968 There are two Grade II* and ten Grade II Listed Buildings within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that the site is currently used as a work yard which adversely affects the character of the Conservation Area and the Listed Buildings. The study considered that sensitive development

could enhance the Conservation Area. Master-planning should be required to identify mitigation measures that could include vegetation screening along the southern boundary to reduce effects to the settings of the Listed Buildings.

5.969 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the site is enclosed by development on all sides, and considered that it is not visually prominent and fits within the settlement pattern. As a previously developed site, the risk of contamination should be addressed.

5.970 The site was proposed for inclusion in the preferred option Local Plan July 2017.

Sites (5+ dwellings) - within the current Green Belt

UT012

5.971 The proposed delivery of circa 50 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to health care and areas of existing employment is likely to have a positive effect. However, the site is partially located within a flood zone which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is likely to have a negative effect as could the site's proximity to historic assets.

5.972 The site is likely to be impacted by flood risk to some degree and if taken forward will require the support of the Sequential Test and a Level 2 SFRA. The site has outline planning permission for up to 67 dwellings (SMD/2015/0424).

UT018

5.973 The proposed delivery of circa 25 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to health care and areas of existing employment is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is likely to have a significant negative effect. The ecological value of the site is likely to have a negative effect.

5.974 This site was not taken forward as a preferred option for consultation in April 2016.

UT021

5.975 The proposed delivery of circa 20 dwellings is considered to have a significant positive effect, as could the site's accessibility to areas of existing employment. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is likely to have a significant negative effect. The ecological value of the site and its proximity to historic assets is likely to have a negative effect.

5.976 This site was not taken forward as a preferred option for consultation in April 2016.

UT022

5.977 The proposed delivery of circa 15 dwellings is considered to have a significant positive effect, as could the site's accessibility to areas of existing employment. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However,

the development of greenfield, grade 3 ALC land is likely to have a significant negative effect, as could the site's partial location within a flood zone. The site's proximity to historic assets is likely to have a negative effect.

5.978 The site is likely to be affected to some degree by flood risk; if taken forward it will require the support of the Sequential Test and a Level 2 SFRA. The site was not taken forward as a preferred option for consultation in April 2016.

UT023

5.979 The proposed delivery of circa 50 dwellings is considered to have a significant positive effect, as could the site's accessibility to areas of existing employment. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is likely to have a significant negative effect, as could the site's partial location within a flood zone. The site's proximity to historic assets and ecological value is likely to have a negative effect.

5.980 This site was not taken forward as a preferred option for consultation in April 2016.

UT024

5.981 The proposed delivery of circa 40 dwellings is considered to have a significant positive effect, as could the site's accessibility to areas of existing employment. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the development of greenfield, grade 3 ALC land is likely to have a significant negative effect. The site's proximity to historic assets is likely to have a negative effect.

5.982 This site was not taken forward as a preferred option for consultation in April 2016.

UT041

5.983 The proposed delivery of circa 50 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of existing employment and open space is likely to have a positive effect. However, the development of greenfield, grade 4 ALC land is likely to have a negative effect, as could the site's proximity to historic assets.

5.984 This site was not taken forward as a preferred option for consultation in April 2016.

Waterhouses

Sites (5+ dwellings) - within the current development boundary

WA004 (mixed use)

5.985 The proposed delivery of circa 36 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the site's proximity to a designated asset is likely to have a negative effect. The development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban) is likely to also have a negative effect, as could the site's proximity to historic assets and the inaccessibility of areas of existing employment.

5.986 The site comprises Waterhouses Enterprise Centre and the adjacent fields on the western edge of the village, north of the A523. The Council's ecological study has indicated that the northern section of the site has some semi-improved grassland which is of importance. Appropriate conservation and mitigation measures will need to be considered.

5.987 This site was taken forward as a preferred option for consultation in April 2016.

5.988 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has some potential to support protected species. The semi-improved, species-rich neutral grassland was considered to be of district importance as it is fairly uncommon within the locality. The other site habitats are considered to be of nature conservation value at site level only. However a detailed grassland vegetation survey is required.

5.989 There are four Grade II Listed Buildings within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that sensitive development would be highly unlikely to cause adverse effects to the settings of the assets due to the intervening buildings and vegetation. Master-planning should be required.

5.990 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that the site is open and located beyond the existing settlement edge, however due to the topography and vegetation within the surrounding landscape, and the existing development within Waterhouses, views of the site are limited. The study considered that development within the site would be partially visible from the National Park, however it would be viewed behind existing development in Waterhouses. Site-specific landscape mitigation measures could include additional advanced planting on the western and northern boundaries, and limited building heights and sizes. The presence of the semi-improved grassland on site will also need to be addressed.

5.991 Further investigation by the Habitats Regulations Assessment is required due to the site's proximity to a component of the Peak District Dales SAC and the potential for effects of development to result in an in-combination effect in relation to recreational pressure.

5.992 The site was proposed for inclusion in the preferred option Local Plan July 2017.

Sites (5+ dwellings) - outside the current development boundary

WA005

5.993 The proposed delivery of circa 40 dwellings is considered to have a significant positive effect, as is the site accessibility to areas of existing employment. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the site's proximity to a designated asset is likely to have a negative effect. The development of greenfield, grade 4 ALC land is likely to also have a negative effect, as could the site's proximity to historic assets.

5.994 This site was not taken forward as a preferred option for consultation in April 2016.

WA006

5.995 The proposed delivery of circa 30 dwellings is considered to have a significant positive effect, as is the site accessibility to areas of existing employment. Similarly, the site's accessibility to services and facilities is likely to have a positive effect. However, the site's proximity to a designated asset is likely to have a negative effect. The development of greenfield, grade 4 ALC land is likely to also have a negative effect, as could the site's proximity to historic assets.

5.996 This site was not taken forward as a preferred option for consultation in April 2016.

Werrington & Cellarhead**Sites (5+ dwellings) - within the current development boundary****WE018**

5.997 The proposed delivery of circa 24 dwellings is considered to have a significant positive effect, as is the accessibility of services and facilities. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which would have a significant negative effect, as would the site's proximity to designated assets. Similarly, the site's proximity to historic assets is assessed as having a negative effect.

5.998 Site has planning consent for 31 dwellings (SMD/2014/0764).

Sites (5+ dwellings) - within the current Green Belt**WE003**

5.999 The proposed delivery of circa 85 dwellings is considered to have a significant positive effect, as is the accessibility of services and facilities. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which would have a significant negative effect, as would the site's proximity to designated assets. Similarly, the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban) and the site's proximity to historic assets is assessed as having a negative effect.

5.1000 A relatively large site on the southern edge of Werrington, comprising three fields generally enclosed by development. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated and with the northern part of the site being open space to preserve its openness. The capacity of this site has been lowered from 85 to 50 dwellings to take this into account.

5.1001 This site was taken forward as a preferred option for consultation in April 2016.

5.1002 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered that the site has some potential to support protected species. The site habitats are considered to be of nature conservation value at site level only. However more information is required regarding the potential for bat roosts on site.

5.1003 There is one Grade II Listed Building within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that due to the intervening buildings, there was no inter-visibility between the site and the asset. The study considered that development would be highly unlikely to adversely affect the setting of the asset.

5.1004 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that vegetation is located on the southern boundary, however due to the sloping nature of the site, it provides limited screening. The study considered that the site forms a gap in existing development and fits well within the existing settlement pattern. Site-specific landscape mitigation measures could include planting on the south-eastern and southern boundaries. Presence of species rich hedgerows need to be addressed.

5.1005 The site was proposed for inclusion in the preferred option Local Plan July 2017.

WE013

5.1006 The proposed delivery of circa 10 dwellings is considered to have a significant positive effect, as is the accessibility of services and facilities. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which would have a significant negative effect, as would the site's proximity to designated assets. Similarly, the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban) and the site's proximity to historic assets is assessed as having a negative effect.

5.1007 Site comprises Little Ash Farm, a single residential property, and the surrounding grounds. The site lies within the area considered to form an important landscape setting to the settlement. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1008 This site was taken forward as a preferred option for consultation in April 2016.

5.1009 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered WE013 and WE027 together and found that the habitats on site were of nature conservation value at the site level only. Species recorded on site were common and widespread both at a county and national level and it is considered unlikely that the site supports notable protected species.

5.1010 There are two Grade II Listed Building within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that due to the intervening buildings, there was no inter-visibility between the site and the assets. The study considered that development would be highly unlikely to adversely affect the settings of the assets.

5.1011 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that the site is located to the rear of linear development on the A52 and is enclosed by trees and hedgerows to the south, resulting in low visual prominence. Site-specific landscape mitigation measures could include planting on the south-eastern boundary.

5.1012 The site is adjacent to a watercourse with no mapped floodplain; the flood risk to the site should be quantified. The site was not proposed for inclusion in the preferred option Local Plan July 2017.

WE019

5.1013 The proposed delivery of circa 50 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities and areas of open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which would have a significant negative effect, as would the site's proximity to designated assets. Similarly, the development of greenfield, grade 4 ALC land and the site's proximity to historic assets is assessed as having a negative effect.

5.1014 This allocation would extend the settlement closer to Wetley Moor SSSI such that new housing would be within 150m of the SSSI at the nearest point. The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

WE027

5.1015 The proposed delivery of circa 20 dwellings is considered to have a significant positive effect, as could the site's accessibility to services and facilities. Similarly, the site's to areas of open space is likely to have a positive effect. However, the site's accessibility to areas of existing employment which would have a significant negative effect, as would the site's proximity to designated assets. Similarly, the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban) and the site's proximity to historic assets is assessed as having a negative effect.

5.1016 Land to the rear of linear development on the A52, to the east of Ash Farm; the site lies within the area considered to form an important landscape setting to the settlement. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1017 This site was taken forward as a preferred option for consultation in April 2016.

5.1018 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered WE013 and WE027 together and found that the habitats on site were of nature conservation value at the site level only. Species recorded on site were common and widespread both at a county and national level and it is considered unlikely that the site supports notable protected species.

5.1019 There are two Grade II Listed Building within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that due to the intervening buildings, there was no inter-visibility between the site and the assets. The study considered that development would be highly unlikely to adversely affect the settings of the assets.

5.1020 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found the site has low visual prominence and is generally enclosed by development and vegetation, although the vegetation on the southern boundary is more sparse.

5.1021 The site is adjacent to a watercourse with no mapped floodplain; the flood risk to the site should be quantified. The site was not proposed for inclusion in the preferred option Local Plan July 2017.

WE033

5.1022 The proposed delivery of circa 60 dwellings is considered to have a significant positive effect. However, the site is inaccessible to areas of existing employment which would have a significant negative effect. Similarly, the site's inaccessibility to services and facilities and areas of open space is likely to have a negative effect. Also, the site's ecological value is likely to have a negative effect, as could the development of greenfield, grade 4 ALC land and the site's proximity to historic assets is assessed as having a negative effect.

5.1023 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

WE040

5.1024 The proposed delivery of circa 7 dwellings is considered to have a positive effect, as is the accessibility to services and facilities and areas of open space. However, the site is inaccessible to areas of existing employment which would have a significant negative effect, as would the site's proximity to designated and historic assets. Similarly, the development of greenfield, grade 4 ALC land is likely to have a negative effect.

5.1025 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. The site lies within the area considered to form an important landscape setting to the settlement and the allocation would extend the settlement closer to Wetley Moor SSSI such that new housing would be within 150m of the SSSI at the nearest point.

5.1026 This site was not taken forward as a preferred option for consultation in April 2016.

WE041

5.1027 The proposed delivery of circa 22 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities and areas of open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which would have a significant negative effect, as would the site's proximity to designated and historic assets. Similarly, the development of greenfield, grade 4 ALC land is likely to have a negative effect.

5.1028 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. The site lies within the area considered to form an important landscape setting to the settlement and the allocation would extend the settlement closer to Wetley Moor SSSI such that new housing would be within 150m of the SSSI at the nearest point.

5.1029 This site was not taken forward as a preferred option for consultation in April 2016.

WE052

5.1030 The proposed delivery of circa 25 dwellings is considered to have a significant positive effect, as is the site's accessibility to services and facilities. Similarly, the site's accessibility to open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which would have a significant negative effect. The site's

proximity to designated and historic assets is likely to have a negative effect, as could the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban).

5.1031 A relatively large site on the southern edge of Werrington, comprising three fields generally enclosed by development except for the southern edge which is open. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1032 This site was taken forward as a preferred option for consultation in April 2016.

5.1033 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered the site habitats to be of nature conservation value at site level only and not eligible for possible SBI / BAS status. However the five trees on site have the potential to support bats and as such require further assessment.

5.1034 There is one Grade II Listed Building within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that due to the intervening buildings, there was no inter-visibility between the site and the asset. The study considered that development would be highly unlikely to adversely affect the setting of the asset.

5.1035 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found vegetation is located on the southern boundary, however due to the sloping nature of the site it provides limited screening. The study considered that the site forms a gap in existing development and fits well within the existing settlement pattern. Site-specific landscape mitigation measures could include planting on the south-eastern and southern boundaries.

5.1036 The site was proposed for inclusion in the preferred option Local Plan July 2017.

WE053

5.1037 The proposed delivery of circa 15 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities and areas of open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which would have a significant negative effect, as would the site's proximity to historic assets. The site's proximity to designated assets is likely to have a negative effect, as could the development of greenfield, grade 4 ALC land.

5.1038 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

WE069

5.1039 The proposed delivery of circa 6 dwellings is considered to have a positive effect. Similarly, the site's accessibility to services and facilities and areas of open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which would have a significant negative effect, as would the site's proximity to historic assets. The site's proximity to designated assets is likely to have a negative effect, as could the development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban).

5.1040 The site is a small field on the southern edge of Werrington, north-east of Square Meadow Farm and enclosed by linear development on the A52 to the east and west. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1041 This site was taken forward as a preferred option for consultation in April 2016.

5.1042 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered the site habitats to be of nature conservation value at site level only and not eligible for possible SBI / BAS status. The site has limited ecological value and is unlikely to support any protected species other than foraging bats, birds and badgers. However the 5 trees on site require further assessment.

5.1043 There is one Grade II Listed Building within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that due to the intervening buildings, there was no inter-visibility between the site and the asset. The study considered that development would be highly unlikely to adversely affect the setting of the asset.

5.1044 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found the site is bound to the north by the A52, with a thick hedgerow on the northern boundary generally screening views from the road. The study considered the site to have low visual prominence, including when viewed from the south as screening is provided by intervening vegetation and development.

5.1045 The site was not proposed for inclusion in the preferred option Local Plan July 2017.

WE070

5.1046 The proposed delivery of circa 12 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities and areas of open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which would have a significant negative effect. The site's proximity to designated and historic assets is likely to have a negative effect, as could the development of greenfield, grade 4 ALC land.

5.1047 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. The site lies within the area considered to form an important landscape setting to the settlement. It is noted that the land owner has stated that the site is not available for development.

5.1048 This site was not taken forward as a preferred option for consultation in April 2016.

Other uses

WE001

5.1049 The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the site's low ecological value is

likely to have a positive effect. However, the development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the proximity to historic assets and distance away from services and facilities and areas of open space.

5.1050 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. This site was not taken forward as a preferred option for consultation in April 2016.

WE002

5.1051 The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. However, the remote nature of the site is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is assessed as having a negative effect, as is the proximity to historic assets, ecological value and distance away from services and facilities and areas of open space.

5.1052 It was not considered that the site was required to meet the District's rural employment land needs. This site was not taken forward as a preferred option for consultation in April 2016.

Additional sites appraised June 2017

WE042 / WE043 (Land off Tregaron Court/Langton Court)

5.1053 The proposed delivery of circa 105 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities and areas of open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment which would have a significant negative effect, as would the site's proximity to designated assets. Similarly, the development of greenfield land with the potential for loss of best and most versatile agricultural land and the site's proximity to historic assets is assessed as having a negative effect.

5.1054 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated. This site was not taken forward as a preferred option for consultation in July 2017.

Wetley Rocks

Suitable sites (5+ dwellings) - within the current development boundary

WR002

5.1055 The proposed delivery of circa 29 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space and low ecological importance of the site is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect, as could the site's proximity to designated and historic assets. The development of greenfield, grade 4 ALC land is likely to have a negative effect.

5.1056 The site lies within the area considered to form an important landscape setting to the settlement. It was not considered necessary to include the site as an allocation in the Plan since it lies within the existing development boundary. Part of the site has existing permission for residential development.

5.1057 This site was not taken forward as a preferred option for consultation in April 2016.

WR015 (small part of site only is within development boundary)

5.1058 The proposed delivery of circa 20 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space and low ecological value of the site is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect. The development of greenfield land (indicated on the predictive map of Best and Most Versatile agricultural land as within an area likely to be urban) is likely to have a negative effect, as could the site's proximity to historic assets.

5.1059 Site comprises a field within the north-east of the settlement, located to the rear of linear development on the A520 and south of Mill Lane. The site lies within the area considered to form an important landscape setting to the settlement. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1060 This site was taken forward as a preferred option for consultation in April 2016.

5.1061 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered the site habitats to be of nature conservation value at local level only, although they have some potential to support protected species such as Badger, Brown hare, Hedgehog and foraging bats.

5.1062 There are three Grade II Listed Buildings within the 400m buffer. The Landscape, Local Green Space and Heritage Impact Study (August 2016) found that development would have the potential to adversely affect the setting of the church to the north-west of the site. The study considered that a mitigation strategy including the use of vegetation screening along the north-west and southern boundaries of the site would reduce effects to the heritage assets.

5.1063 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of low landscape sensitivity. The study found that the site is enclosed by Mill Lane to the north, linear development on the A520 to the south as well as development to the west, resulting in relatively low visual prominence. The study considered that the site fits well within the existing settlement form as it forms a gap in development on Mill Lane.

5.1064 There are local issues with surface water flooding, including a poor quality culvert downstream under Leek Road, early engagement with the Environment Agency and County Council flood team should be required.

5.1065 The site was not proposed for inclusion in the preferred option Local Plan July 2017.

Sites (5+ dwellings) - within the current Green Belt

WR005

5.1066 The proposed delivery of circa 13 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing

employment, both of which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is likely to have a negative effect, as could the site's proximity to historic assets and ecological value.

5.1067 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

WR014A

5.1068 The proposed delivery of circa 12 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to areas of existing employment and services and facilities which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is likely to have a negative effect, as could the site's proximity to historic assets and ecological value.

5.1069 The site lies within the area considered to form an important landscape setting to the settlement. The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

Smaller Villages

Bagnall

Sites (5+ dwellings) - within the current Green Belt

BG008

5.1070 The proposed delivery of circa 10 dwellings is considered to have a significant positive effect, as could the site's accessibility to areas of existing employment. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect, as could the site's proximity to historic assets. The development of greenfield, grade 4 ALC land and the ecological value of the site is likely to also have a negative effect.

5.1071 This site is in Bagnall Conservation Area and the impact of development on the historic settlement form requires further consideration. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1072 Bagnall is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed in to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

BG014

5.1073 The proposed delivery of circa 10 dwellings is considered to have a significant positive effect, as could the site's accessibility to areas of existing employment. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect, as could the site's proximity to historic assets. The development of greenfield, grade 4 ALC land and the ecological value of the site is likely to also have a negative effect.

5.1074 The Council's Green Belt review did not recommend considering the site for release from the Green Belt.

5.1075 Bagnall is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

BG015

5.1076 The proposed delivery of circa 10 dwellings is considered to have a significant positive effect, as could the site's accessibility to areas of existing employment. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect, as could the site's proximity to historic assets. The development of greenfield, grade 4 ALC land and the ecological value of the site is likely to also have a negative effect.

5.1077 The Council's Green Belt review did not recommend considering the site for release from the Green Belt.

5.1078 Bagnall is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Blackshaw Moor

Sites (5+ dwellings) - within the draft infill boundary

BL006

5.1079 The proposed delivery of circa 12 dwellings is considered to have a significant positive effect, as could the site's accessibility to areas of existing employment. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land and the ecological value of the site is likely to have a negative effect.

5.1080 Blackshaw Moor is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

BL007

5.1081 The site's accessibility to areas of existing employment is considered to have a significant positive effect. The proposed delivery of 7 dwellings is likely to have a positive effect, as could the site's accessibility to areas of open space. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is likely to have a negative effect.

5.1082 Blackshaw Moor is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

OC050 Former Anzio Camp

5.1083 The potential delivery of some housing and extra care units is considered to have a positive effect, as could the site's accessibility to areas of open space and possible contribution to investment in tourism. However the site is inaccessible to services and facilities which is likely to have a significant negative effect, as is the potential impact on landscape character and the setting of the Peak District National Park. Similarly the proximity to an SBI is likely to lead to negative effects.

Caverswall

Sites (5+ dwellings) - within the infill boundary

CV005

5.1084 The proposed delivery of circa 10 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect, as could the development of greenfield, grade 3 ALC land and the site's proximity to historic assets. The ecological value of the site is likely to have a negative effect.

5.1085 This site is in the Conservation Area and the impact of development on the historic settlement form requires further consideration.

5.1086 Caverswall is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Sites (5+ dwellings) - within the current Green Belt

CV004

5.1087 The proposed delivery of circa 8 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space and low ecological value of the site is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect, as could the development of greenfield, grade 3 ALC land and the site's proximity to historic assets.

5.1088 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1089 Caverswall is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

CV006

5.1090 The proposed delivery of circa 8 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect, as could the development of greenfield, grade 3 ALC land and the site's proximity to historic assets. The ecological value of the site is likely to have a negative effect.

5.1091 This site is in the Conservation Area and the impact of development on the historic settlement form requires further consideration. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1092 Caverswall is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Cookshill

Sites (5+ dwellings) - within the current Green Belt

CL004

5.1093 The proposed delivery of circa 20 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space and location away from historic assets is likely to have a positive effect. However, the site is inaccessible to

services and facilities and areas of existing employment which is likely to have a significant negative effect, as could the development of greenfield, grade 3 ALC land. The ecological value of the site is likely to have a negative effect.

5.1094 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1095 Cookshill is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

CL007

5.1096 The proposed delivery of circa 30 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect, as could the development of greenfield, grade 3 ALC land. The ecological value of the site and its proximity to historic assets is likely to have a negative effect.

5.1097 The Council's Green Belt review did not recommend considering the site for release from the Green Belt.

5.1098 Cookshill is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Checkley

Sites (5+ dwellings) - outside the infill boundary

CK007

5.1099 The proposed delivery of circa 6 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space and low ecological value is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect, as could the development of greenfield, grade 3 ALC land. The site's proximity to historic assets is likely to have a negative effect.

5.1100 Checkley is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

CK008

5.1101 The proposed delivery of circa 6 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space and low ecological value is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect, as could the development of greenfield, grade 3 ALC land. The site's proximity to historic assets is likely to have a negative effect.

5.1102 Checkley is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Dilhorne

Sites (5+ dwellings) - within the Green Belt

DH004

5.1103 The proposed delivery of circa 20 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space and distance from designated assets is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect, as could the site's proximity to historic assets. The development of greenfield, grade 4 ALC land is likely to have a negative effect.

5.1104 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1105 Dilhorne is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

DH013

5.1106 The proposed delivery of circa 6 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space and distance from designated assets is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect, as could the site's proximity to historic assets. The development of greenfield, grade 4 ALC land is likely to have a negative effect.

5.1107 The Council's Green Belt review did not recommend considering the site for release from the Green Belt.

5.1108 Dilhorne is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

DH018

5.1109 The proposed delivery of circa 7 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect, as could the site's proximity to historic assets. The development of greenfield, grade 4 ALC land is likely to have a negative effect, as could the site's ecological value.

5.1110 The Council's Green Belt review did not recommend considering the site for release from the Green Belt.

5.1111 Dilhorne is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

DH026

5.1112 The proposed delivery of circa 15 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is likely to have a negative effect, as could the site's ecological value and proximity to historic assets.

5.1113 The Council's Green Belt review did not recommend considering the site for release from the Green Belt.

5.1114 Dilhorne is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Draycott

Sites (5+ dwellings) - within the current Green Belt

DC003

5.1115 The proposed delivery of circa 10 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect, as could the site's proximity to historic assets and development of greenfield, grade 3 ALC land. The site's ecological value is likely to have a negative effect.

5.1116 The site is adjacent to the Old Rectory (Grade II listed), a heritage impact assessment will be required. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1117 Draycott is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Foxt

Sites (5+ dwellings) - outside the draft infill boundary

FO008

5.1118 The site has good accessibility to areas of existing employment which is likely to have a significant positive effect. Similarly, the proposed delivery of circa 8 dwellings is considered to have a positive effect, as could the site's accessibility to areas of open space. However, the site is inaccessible to services and facilities and is in proximity to designated assets, both of which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is likely to have a negative effect, as could the site's proximity to historic assets.

5.1119 Foxt is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Hollington

Potentially suitable sites (5+ dwellings) - outside the draft Infill Boundary

HO002

5.1120 The proposed delivery of circa 7 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space and location away from designated assets is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect, as could the site's proximity to historic assets. The development of greenfield, grade 4 ALC land is likely to have a negative effect.

5.1121 The site is located in a sensitive area close to Hollington House (Grade II listed), a heritage impact assessment will be required.

5.1122 Hollington is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

HO003

5.1123 The proposed delivery of circa 6 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space and location away from designated assets is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment, both of which is likely to have a significant negative effect, as could the site's proximity to historic assets. The development of greenfield, grade 4 ALC land is likely to have a negative effect.

5.1124 The site is located in a sensitive area close to Hollington House (Grade II listed), a heritage impact assessment will be required.

5.1125 Hollington is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Hulme

Sites (5+ dwellings) - within the current Green Belt

HU002

5.1126 The proposed delivery of circa 5 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space, areas of existing employment and location away from historic assets is likely to have a positive effect, as could the development of brownfield land. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect, as could the site's proximity to designated assets.

5.1127 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1128 Hulme is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Kingsley Holt

Sites (5+ dwellings) - within the infill boundary

KH018

5.1129 The proposed delivery of circa 8 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space and areas of existing employment is likely to have a positive effect. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect, as could the site's proximity to designated assets. The development of greenfield, grade 4 ALC land is likely to have a negative effect, as could the site's proximity to historic assets.

5.1130 Kingsley Holt is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Sites (5+ dwellings) - outside the infill boundary

KH009

5.1131 The proposed delivery of circa 9 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space and areas of existing employment is likely to have a positive effect, as could its location away from historic assets and the development of brownfield land. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect, as could the site's proximity to designated assets.

5.1132 Kingsley Holt is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

ADD007

5.1133 The proposed delivery of circa 52 dwellings is considered to have a significant positive effect. The site's accessibility to areas of existing employment is considered to have a positive effect. However, the site's inaccessibility to services and facilities is likely to have a significant negative effect. Similarly, the site's proximity to designated and historic assets is likely to have a negative effect, as could the development of greenfield, grade 4 ALC land.

5.1134 Kingsley Holt is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Leekbrook**Sites (5+ dwellings) - within the infill boundary****LB006**

5.1135 The site's accessibility to areas of existing employment is likely to have a significant positive effect. Similarly, the proposed delivery of circa 6 dwellings is considered to have a positive effect, as could the site's accessibility to areas of open space and its location away from designated and historic assets. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is likely to have a negative effect.

5.1136 Leekbrook is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Sites (5+ dwellings) - outside the infill boundary**LB011**

5.1137 The site's accessibility to areas of existing employment is likely to have a significant positive effect. Similarly, the proposed delivery of circa 6 dwellings is considered to have a positive effect, as could the site's accessibility to areas of open space and its location away from designated and historic assets. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is likely to have a negative effect.

5.1138 Leekbrook is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes.

LB012

5.1139 The site's accessibility to areas of existing employment is likely to have a significant positive effect. Similarly, the proposed delivery of circa 6 dwellings is considered to have a positive effect, as could the site's accessibility to areas of open space and its location away from designated and historic assets. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is likely to have a negative effect.

5.1140 Leekbrook is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Longsdon

Sites (5+ dwellings) - (partly) within the draft infill boundary (and partly in Green Belt)

LO002

5.1141 The proposed delivery of circa 10 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is likely to have a negative effect, as could the site's proximity to designated and historic assets.

5.1142 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1143 Longsdon is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

LO007

5.1144 The proposed delivery of circa 5 dwellings is considered to have a positive effect, as could the site's accessibility to areas of open space. However, the site is inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is likely to have a negative effect, as could the site's proximity to designated and historic assets.

5.1145 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1146 Longsdon is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new

homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Sites (5+ dwellings) - (mostly) within the current Green Belt

LO021

5.1147 The proposed delivery of circa 13 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is likely to have a negative effect, as could the site's proximity to designated and historic assets.

5.1148 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1149 Longsdon is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Lower Tean

Sites (5+ dwellings) - outside the infill boundary

LT001

5.1150 The proposed delivery of circa 20 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect, as could the development of greenfield, grade 3 ALC land and proximity to historic assets. The site's proximity to designated assets and the inaccessibility of areas of existing employment are likely to have a negative effect.

5.1151 The site adjoins Willowgate (Grade II listed), a heritage impact assessment will be required.

5.1152 Lower Tean is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

LT002

5.1153 The proposed delivery of circa 6 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities which is likely to have a significant

negative effect, as could the development of greenfield, grade 3 ALC land and proximity to historic assets. The site's proximity to designated assets and the inaccessibility of existing employment are likely to have a negative effect.

5.1154 The site is located close to the historic core of the village and there are listed buildings adjacent to the site. Heritage impact assessment will be required.

5.1155 Lower Tean is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Oakamoor

Sites (5+ dwellings) - (access point) within infill boundary

OA026

5.1156 The proposed delivery of circa 11 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which are likely to have a significant negative effect. The site's proximity to designated and historic assets and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1157 Oakamoor is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Sites (5+ dwellings) - outside infill boundary

OA016

5.1158 The proposed delivery of circa 9 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which are likely to have a significant negative effect. The site's proximity to designated and historic assets and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1159 Oakamoor is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

OA030

5.1160 The proposed delivery of circa 23 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which are likely to have a significant negative effect. The site's proximity to designated and historic assets and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1161 The site lies within the area considered to form an important landscape setting to the settlement. Oakamoor is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

OA31

5.1162 The proposed delivery of circa 20 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which are likely to have a significant negative effect. The site's proximity to designated and historic assets and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1163 The site lies within the area considered to form an important landscape setting to the settlement. Oakamoor is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Rudyard

Sites (5+ dwellings) - within current Green Belt

RU016

5.1164 The proposed delivery of circa 13 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space and location away from historic assets are likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which are likely to have a significant negative effect. The site's proximity to designated assets and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1165 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1166 Rudyard is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new

homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

RU020

5.1167 The proposed delivery of circa 14 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which are likely to have a significant negative effect. The site's proximity to historic assets, the ecological value of the site and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1168 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1169 Rudyard is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Rushton Spencer

Sites (5+ dwellings) - within infill boundary

RS005

5.1170 The proposed delivery of circa 7 dwellings is considered to have a positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which are likely to have a significant negative effect. The site's proximity to historic assets, the ecological value of the site and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1171 Rushton Spencer is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Sites (5+ dwellings) - within current Green Belt

RS009

5.1172 The proposed delivery of circa 30 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which are likely to have a significant negative effect. The site's proximity to historic assets, the ecological value of the site and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1173 The Council's Green Belt review did not recommend considering the site for release from the Green Belt.

5.1174 Rushton Spencer is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Potentially suitable sites (5+ dwellings) - outside infill boundary

RS007

5.1175 The proposed delivery of circa 26 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which are likely to have a significant negative effect. The site's proximity to historic assets, the ecological importance of the site and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1176 Rushton Spencer is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

RS015

5.1177 The proposed delivery of circa 12 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which are likely to have a significant negative effect. The site's proximity to historic assets, the ecological value of the site and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1178 Rushton Spencer is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Stockton Brook

Sites (5+ dwellings) - within the current Green Belt

SB014

5.1179 The proposed delivery of circa 10 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space and location away from historic assets are likely to have a positive effect. However, the site is inaccessible to

services and facilities and areas of existing employment which are likely to have a significant negative effect. The site's ecological importance and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1180 The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1181 Stockton Brook is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes.

SB016

5.1182 The proposed delivery of circa 15 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which are likely to have a significant negative effect. The site's proximity to historic assets, ecological value and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1183 The site adjoins Caldon Canal Conservation Area and four listed buildings are within 100m; a heritage impact assessment will be required. The Council's Green Belt Review concluded that the site could be considered for release from the Green Belt if exceptional circumstances can be demonstrated.

5.1184 Stockton Brook is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

ADD08

5.1185 The proposed delivery of circa 40 dwellings is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space and location away from designated assets are likely to have a positive effect. However, the site is inaccessible to services and facilities and areas of existing employment which are likely to have a significant negative effect. The site's proximity to historic assets and ecological value are likely to have a negative effect.

5.1186 The Council's Green Belt review did not recommend considering the site for release from the Green Belt.

5.1187 Stockton Brook is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Whiston**Sites (5+ dwellings) - outside the infill boundary****WH002**

5.1188 The proposed delivery of circa 10 dwellings and proximity to areas of existing employment is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect, as could the site's proximity to designated and historic assets.

5.1189 Previous land use may have caused contamination of the ground and redevelopment may pose a risk to the water environment - a risk assessment is required. Whiston Brook is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

WH009A

5.1190 The proposed delivery of circa 15 dwellings and proximity to areas of existing employment is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space is likely to have a positive effect. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect. The site's proximity to designated and historic assets and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1191 Whiston Brook is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

WH015

5.1192 The site's proximity to areas of existing employment is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space and the proposed delivery of circa 6 dwellings are likely to have a positive effect. However, the site is inaccessible to services and facilities is likely to have a significant negative effect. The site's proximity to designated and historic assets and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1193 Whiston Brook is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

WH016

5.1194 The site's proximity to areas of existing employment is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space and the proposed delivery of circa 6 dwellings are likely to have a positive effect. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect. The site's proximity to designated and historic assets and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1195 Whiston Brook is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

WH018

5.1196 The site's proximity to areas of existing employment is considered to have a significant positive effect. Similarly, the site's accessibility to areas of open space and the proposed delivery of circa 5 dwellings are likely to have a positive effect. However, the site is inaccessible to services and facilities which is likely to have a significant negative effect. The site's proximity to designated and historic assets and the development of greenfield, grade 4 ALC land are likely to have a negative effect.

5.1197 Whiston Brook is defined in the Core Strategy as a smaller village. In line with the proposed development approach no site allocations were proposed as preferred options for consultation in April 2016. An infill boundary was proposed to accommodate delivery of new homes. Similarly no site allocations were proposed as preferred options for consultation in July 2017, however the infill boundary proposal was replaced by a criteria based approach to support sustainable infill development.

Other Areas

Sites (5+ dwellings) - within current Green Belt

OC003 (south of Hulme)

5.1198 The development of brownfield, grade 4 ALC land is considered to have a positive effect, as could the site's accessibility to areas of open space and the proposed delivery of circa 6 dwellings. However, the site is inaccessible to services and facilities and areas of existing employment which are likely to have a significant negative effect. The site's proximity to designated and historic assets are likely to have a negative effect.

5.1199 The Council's Green Belt review did not recommend considering the site for release from the Green Belt. This site was not taken forward as a preferred option for consultation in April 2016.

Sites (5+ dwellings) - outside infill boundary

OC001 (Bolton Copperworks, Froghall) - mixed use

5.1200 The proposed delivery of a mixed use development including the potential for housing, employment, leisure and tourist-related retail and accommodation is considered to have a significant positive effect, as could the site's accessibility to areas of open space and possible contribution to investment in tourism. Re-development of a previously developed site, now under-used, is also considered to have positive effects. However the site is inaccessible to services and facilities which is likely to have a significant negative effect, as is the potential impact on landscape character and heritage assets. Similarly the proximity to a SSSI and SBI and proposals for development on land in Flood Zones 2 and 3 are likely to lead to negative effects.

5.1201 This is a major developed area identified in the Core Strategy and a key opportunity site identified in the Churnet Valley Masterplan. The site is a former copper works, with existing industrial development in the centre of the site adjacent to Froghall Road and the A52, and hard-standing where previous development stood in the north and south of the site.

5.1202 The Extended Phase 1 Habitat Surveys and Local Wildlife Site Assessment (May 2017) considered the majority of the site to be made up of habitats of conservation value at site level only (i.e. hard standing and buildings, scattered trees and scrub, tall ruderal vegetation and amenity grassland). Although relatively small in area, the river Churnet and its tributary were found to be prominent habitat features of the site and to provide excellent connectivity with the surrounding landscape to the north-east, south-east and north-west. For this reason the river habitat was considered to be of importance to conservation at the local level. Similarly, the broad-leaved semi-natural woodland running alongside the Caldon Canal is an important connecting feature with the surrounding landscape and was also considered to be of importance to conservation at the local level. Species recorded on site were common and widespread both at a county and national level. Nevertheless the site has potential to support a number of notable protected species; pond surveys are required for great crested newts; along with surveys for bat roosts, badger and reptiles; whilst otter, water vole and white-clawed crayfish should be surveyed for along the lengths of both watercourses.

5.1203 The site was considered by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016) to be of medium landscape sensitivity. The study found that the site has low visual prominence as it is located at the bottom of a wooded valley. Views of the site are available from the adjacent roads, and from sections of the Caldon Canal. Site-specific landscape mitigation measures could include planting and landscaping adjacent to the canal and roads, and parameters set for building heights.

5.1204 There is one Grade II Listed Building within the site boundary and an additional five Listed Buildings in the 400m buffer. A Conservation Area is adjacent to the northern boundary of the site. The Landscape, Local Green Space and Heritage Impact Study (August 2016) considered that the canal has a close association with the industrial and natural landscape and its setting contributes to its significance. Despite this the study concludes that appropriate development can be mitigated through the setting back of development boundaries from the Listed Building and Conservation Area and through conservation of the Listed Building.

5.1205 There is an opportunity for contribution to the District's Green Infrastructure Network. The site was proposed for inclusion in the preferred option Local Plan July 2017.

OC055 (Blythe Park, Cresswell) - employment use

5.1206 The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the site is located away from designated and historic assets. However, the site is inaccessible to services and facilities, is partially within a flood zone which are both assessed to have a significant negative effect. The development of greenfield, grade 4 ALC land is considered to have a negative effect.

5.1207 Site has outline permission (SMD/2014/0576) for up to 168 dwellings and up to 33,480sqm of Use Class B1, B2 and B8 floorspace.

5.3.1 Gypsy and Traveller site options

TR001: Land south of Uttoxeter Road, Blythe Bridge (BB021)

5.1208 The site has the potential to bring forward a minimum of 8 pitches and meet the identified housing needs of the Gypsy and Traveller communities and this is considered to have a significant positive effect, as is the accessibility of the site to services and facilities and public transport. Similarly, the site's accessibility to areas of existing employment is likely to have a positive effect, as could the site's location away from historic assets. The development of this approx 1ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. However, there is scope that the site could be designated SBI land which would have a significant negative effect and there may be some remaining flood risk which is also likely to have a negative effect.

5.1209 This site was not taken forward as a preferred option for consultation in April 2016.

TR002: Land at 459 Uttoxeter Road, Blythe Bridge (BB087)

5.1210 The site has the potential to bring forward a minimum of 8 pitches and meet the identified housing needs of the Gypsy and Traveller communities and this is considered to have a significant positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect as is the use of a plot currently given to hard-standing. The development of this approx 0.5ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. However, the site's proximity to historic assets is likely to have a negative effect.

5.1211 This site was taken forward as a preferred option for consultation in April 2016.

TR003: Chandni Cottage / Roadhouse cafe, Draycott Road, Blythe Bridge

5.1212 The site has the potential to bring forward approximately 6 pitches and make a contribution towards meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect as is the use of a previously developed plot, although it may entail the loss of an existing building. The development of this approx 0.1ha site is considered sufficient to provide for adequate on site facilities for parking, storage, play and residential amenity. However the potential displacement of a business and the site's proximity to historic assets are likely to have negative effects.

5.1213 This site was not taken forward as a preferred option for consultation in April 2016.

TR004: Disused premises north of Knights of Cheadle / south of A T Moss, off The Green / Dilhorne Road, Cheadle (CH020)

5.1214 The site has the potential to bring forward 6 - 8 pitches and meet the identified housing needs of the Gypsy and Traveller communities and this is considered to have a significant positive effect, as is the site's proximity to areas of existing employment. Similarly, the site's accessibility to services and facilities is likely to have a positive effect, as could its location away from historic assets. The development of this approx 0.5ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. However, the site is partly within a flood zone which is likely to have a significant negative effect. The potential ecological value of the site is also likely to have a negative effect.

5.1215 This site was not taken forward as a preferred option for consultation in April 2016.

TR005: Checkley Rose Cottage

5.1216 The site has the potential to bring forward 3 pitches and contribute to meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. Similarly, the site's accessibility to services and facilities is likely to have a positive effect, as could its location away from historic assets. However the development of this approx 0.08ha site is not considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity and this is likely to have a significant negative effect.

5.1217 This site was not taken forward as a preferred option for consultation in April 2016.

TR006: Cresswell former Railway Station

5.1218 The site has the potential to bring forward 6 - 8 pitches (although this may be reduced following consideration of set off distances from the railway line and roads) and contribute to meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. Similarly, the site's accessibility to services and facilities, and in particular to areas of existing employment, is likely to have a positive effect. The development of this approx 0.25ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity however as the site runs adjacent to the regularly used Stoke to Derby railway line, on-site sound attenuation measures may be required. The site's proximity to historic assets is likely to have a negative effect.

5.1219 This site was not taken forward as a preferred option for consultation in April 2016.

TR007: Fole Dairy, Uttoxeter Road, Fole

5.1220 The site has the potential to bring forward a minimum of 8 pitches meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a significant positive effect. The development of this approx 2ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. However the southern edge of the site is in flood zone 3 and the site is likely to be affected to some degree by flood risk, this is likely to have a significant negative effect.

Similarly the site's inaccessibility to services and facilities, including areas of existing employment, is also likely to have a negative effect, as is the site's proximity to historic assets.

5.1221 This site was not taken forward as a preferred option for consultation in April 2016.

TR008: Farm buildings / land west of 75 Uttoxeter Road , Blythe Bridge

5.1222 The site has the potential to bring forward a minimum of 8 pitches meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a significant positive effect. The development of this approx 0.7ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. The accessibility of the site to services and facilities, including areas of existing employment and public transport is likely to have a positive effect. However the location of this greenfield site within the Green Belt requires further assessment to identify any impact on landscape character.

5.1223 This site was not taken forward as a preferred option for consultation in April 2016.

TR009: Crown Inn premises, Tean Road, Mobberley, Cheadle

5.1224 The site has the potential to bring forward 3 - 4 pitches, making a contribution to meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The accessibility of the site to services and facilities, including areas of existing employment and public transport is likely to have a positive effect. However the development of this approx 0.16ha site is not considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity.

5.1225 This site was not taken forward as a preferred option for consultation in April 2016.

TR010: Waggon and Horses Pub premises, Leek Road, Kingsley Moor

5.1226 The site has the potential to bring forward 6 - 8 pitches, making a contribution to meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 0.2ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. However the location of this brownfield site within the Green Belt requires further assessment to identify any impact on landscape character. Similarly the site's inaccessibility to services and facilities, including areas of existing employment, is also likely to have a negative effect.

5.1227 This site was not taken forward as a preferred option for consultation in April 2016.

TR011: Land adjacent "Rocklands", 92 Draycott Road, Upper Tean

5.1228 The site has the potential to bring forward a minimum of 8 pitches, meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a significant positive effect. The development of this approx 1.2ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. Whilst the site is within 1km of a village centre with some facilities and this is considered to have a positive effect, a lack of access to public transport and the site's

inaccessibility to areas of existing employment are likely to have a negative effect. A small area at the northern boundary of the site is in flood zone 3 and the site is likely to be affected to some degree by flood risk, this is likely to have a significant negative effect.

5.1229 This site was not taken forward as a preferred option for consultation in April 2016.

TR012: Parcel opposite Richmoorhill Farm, Kingsley Road, Cellarhead

5.1230 The site has the potential to bring forward a minimum of 8 pitches, meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a significant positive effect. The development of this approx 0.7ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. However the site's inaccessibility to services and facilities, including areas of existing employment is likely to have a negative effect. The site's proximity to heritage assets and the presence of mature trees are also likely to have a negative effect. In addition, the location of this greenfield site within the Green Belt requires further assessment to identify any impact on landscape character.

5.1231 This site was not taken forward as a preferred option for consultation in April 2016.

TR013: Mobberley Works - northern area, Tean Road, Cheadle

5.1232 The site has the potential to bring forward 6 - 8 pitches, contributing towards meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 0.5ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. The site's accessibility to an area of existing employment is likely to have a positive effect. However part of the site to the west is within flood zone 3 and the site is likely to be affected to some degree by flood risk and this is likely to have a significant negative effect. Also the site's inaccessibility to services and facilities is likely to have a negative effect, as is the presence of mature trees. In addition, the location of this greenfield site within the Green Belt requires further assessment to identify any impact on landscape character.

5.1233 This site was not taken forward as a preferred option for consultation in April 2016.

TR014: Field west of "Bank View", Draycott Road, Upper Tean

5.1234 The site has the potential to bring forward 6 - 8 pitches, contributing towards meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 0.7ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. However the site's inaccessibility to services and facilities (including to areas of existing employment) and isolation from the public transport network is likely to have a negative effect. In addition, the location of this greenfield site within an area considered to be classified as Grade 3 Agricultural Land and where development may lead to prominent intrusion into the countryside, requires further assessment to identify any impact on landscape character and the loss of best and most versatile agricultural land.

5.1235 This site was not taken forward as a preferred option for consultation in April 2016.

TR015: Parcel north of Quabbs Lane, off Forsbrook - Cheadle Road

5.1236 The site has the potential to bring forward around 6 pitches, contributing towards meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 0.2ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity, particularly if the number of pitches delivered is managed accordingly. However the site's inaccessibility to services and facilities (including to areas of existing employment) and isolation from the public transport network is likely to have a negative effect. In addition, the location of this mixed greenfield / brownfield site in the Green Belt requires further assessment to identify any impact on landscape character.

5.1237 This site was not taken forward as a preferred option for consultation in April 2016.

TR016: Former Timber Yard off Draycott Cross Road, Cheadle

5.1238 The site has the potential to bring forward 6 - 8 pitches, contributing towards meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 0.3ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. The site is close to an area of existing employment and its development is not expected to result in the loss of best and most versatile agricultural land, and these are likely to have positive effects. However the site's inaccessibility to services and facilities and isolation from the public transport network are likely to have a significant negative effect. Development for pitches would lead to the loss of employment land and this is also likely to have a negative effect. In addition, the location of this brownfield site in the Green Belt requires further assessment to identify any impact on landscape character.

5.1239 This site was not taken forward as a preferred option for consultation in April 2016.

TR017: Land north west of 113 Leek Road, Cheadle

5.1240 The site has the potential to bring forward 8 pitches and meet the identified housing needs of the Gypsy and Traveller communities and this is considered to have a significant positive effect. The development of this approx 0.8ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. The site is reasonably close to Cheadle facilities and an area of existing employment and this is likely to have a positive effect. However the site's development could result in the loss of best and most versatile agricultural land and this is likely to result in a negative effect. In addition, the location of this greenfield site in the Green Belt requires further assessment to identify any impact on landscape character.

5.1241 This site was not taken forward as a preferred option for consultation in April 2016.

TR018: "The Ark", agricultural building and land off Cheadle Road, Boundary

5.1242 The site has the potential to bring forward 6 - 8 pitches and contribute to meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 0.4ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. There are no known biodiversity or heritage constraints and this is also considered to have a positive effect. However the site's relative inaccessibility to services and facilities,

including areas of existing employment opportunities is likely to result in a negative effect. In addition, the location of this greenfield site in the Green Belt requires further assessment to identify any impact on landscape character.

5.1243 This site was not taken forward as a preferred option for consultation in April 2016.

TR019: Land at ARB Treecare, A521 / Draycott Cross Road, Cheadle

5.1244 The site has the potential to bring forward a minimum of 8 pitches, meeting the identified housing needs of the Gypsy and Traveller communities, and this is considered to have a significant positive effect. The development of this approx 2.5ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. There are no known biodiversity or heritage constraints (although there are some mature trees on site) and this is also considered to have a positive effect. However the eastern portion of the site is in flood zone 2 / 3 and the site is likely to be affected to some degree by flood risk, this is likely to have a significant negative effect. In addition, the location of this largely greenfield site in the Green Belt requires further assessment to identify any impact on landscape character.

5.1245 This site was not taken forward as a preferred option for consultation in April 2016.

TR020: Land between "Serendipity" and Bank House Farm, Leek Road, nr Weston Coyney

5.1246 The site has the potential to bring forward 6 - 8 pitches and contribute to meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 0.4ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. There are no known biodiversity or heritage constraints and this is also considered to have a positive effect, although the site is within 300m of a woodland Site of Biological Importance and further work is needed to identify any potential impacts and mitigation measures. The site's relative inaccessibility to services and facilities, including areas of existing employment opportunities is likely to result in a negative effect. In addition, the location of this greenfield site in the Green Belt requires further assessment to identify any impact on landscape character.

5.1247 This site was not taken forward as a preferred option for consultation in April 2016.

TR021: Land south of Draycott Cross Road industrial estate / north of Commonside Nurseries, Cheadle

5.1248 The site has the potential to bring forward 6 - 8 pitches and contribute to meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 0.7ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. The site is close to an area of existing employment opportunity and this is also considered to have a positive effect. There are no known biodiversity or heritage constraints, although the site has a number of mature trees and is within 100m of a Biodiversity Alert Site, so further work is needed to identify any potential impacts and mitigation measures. The site's inaccessibility to services and facilities including public transport, is likely to result in a significant negative effect. In addition, the location of this greenfield site in the Green Belt requires further assessment to identify any impact on landscape character.

5.1249 This site was not taken forward as a preferred option for consultation in April 2016.

TR022: Between Hands Farm and "The Mount" Petrol Station, off Leek Road, Cellarhead

5.1250 The site has the potential to bring forward 6 - 8 pitches and contribute to meeting the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 0.5ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. There are no known biodiversity or heritage constraints and this is also considered to have a positive effect. However the site's relative inaccessibility to services and facilities, including areas of existing employment opportunities is likely to result in a negative effect. In addition, the location of this greenfield site in the Green Belt requires further assessment to identify any impact on landscape character.

5.1251 This site was not taken forward as a preferred option for consultation in April 2016.

TR023: Land at Anzio Camp, Buxton Road, Blackshaw Moor

5.1252 The site has the potential to bring forward a minimum of 8 pitches and meet the identified housing needs of the Gypsy and Traveller communities and this is considered to have a significant positive effect. The development of this approx 1.25ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. However the site is in close proximity to a heritage asset and an SBI, further assessment is required to identify any effects and possible mitigation measures. The site's inaccessibility to services and facilities, including areas of existing employment opportunities is likely to result in significant negative effects.

5.1253 The site has permission for the erection of extra care housing, live work units, ancillary social centre and facilities building plus change of use to holiday park, under SMD/2014/0683.

5.1254 This site was not taken forward as a preferred option for consultation in April 2016.

TR024: Land and buildings at the New Inn, Leek Road, Longsdon

5.1255 Site granted approval for residential development SMD/2012/0669

TR025: Land at Northern Countryside Works Depot, Salters Lane, Werrington

5.1256 The site has the potential to bring forward 8 pitches and meet the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 0.4ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. It is in close proximity to Werrington centre which has a range of services/facilities access to bus services which is a positive impact There are no known heritage or biodiversity constraints and but some of the buildings on the site may have potential to support nesting birds the impact on these is therefore neutral although the exact impact is unknown. The site is a mix of brownfield and greenfield and is not in agricultural use. It is in the Green Belt and would not lead to a loss of agricultural land. The location of this site in the Green Belt requires further assessment to identify any impact on landscape character.

5.1257 This site was not taken forward as a preferred option for consultation in April 2016.

TR026: Land at Kniveden Hall, Mount Road, Leek

5.1258 This is a large site which has the potential to bring forward 8 pitches and meet the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approximately 2.584ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. It is in close proximity to Leek which has a range of services/facilities employment access to bus services which is a positive impact. There are known biodiversity constraints which have a negative impact although the exact effect is uncertain. The site is brownfield and is not in agricultural use and would not lead to a loss of agricultural land.

5.1259 This site was not taken forward as a preferred option for consultation in April 2016.

TR027: Land/buildings of former Meadows Special School, Tunstead Road Knypersley

5.1260 The site has the potential to bring forward 8 pitches and meet the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 0.4ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. It is in close proximity to Biddulph centre which has a range of services/facilities employment access to bus services which is a positive impact. It has some biodiversity potential although the exact effects are uncertain. There are also listed buildings close to the site both of which lead to a negative impact.

5.1261 This site was not taken forward as a preferred option for consultation in April 2016.

TR028: Land adjacent (west off) Draycott Moor College, Draycott Old Road, Draycott in the Moors

5.1262 This is a small site which has the potential to bring forward some pitches but not all the pitches required to meet the identified needs of the Gypsy and Traveller communities and this is considered to have a negative effect. It is approximately 1.5km from Blythe Bridge which has a range of services/facilities employment access to bus services which is a neutral impact. There are no known biodiversity or heritage constraints, and the site are not in agricultural use would not lead to a loss of agricultural land.

5.1263 This site was not taken forward as a preferred option for consultation in April 2016.

TR029: Land between 11 Whiston Eaves Lane and children's play area, Whiston

5.1264 The site has the potential to bring forward 8 pitches and meet the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 0.8ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. There are some services/facilities in Whiston with a larger range of services/facilities in the nearby centres at Froghall, Oakamoor and Kingsley between 2-3.7km. Access to employment nearby is limited. There is a limited bus service. Overall this has been assessed as having a neutral impact. There are no known biodiversity constraints.

5.1265 This site was not taken forward as a preferred option for consultation in April 2016.

TR030: Land east of Leek High School Playing fields, off Mount Road, Leek

5.1266 This is a large site has the potential to bring forward 8 pitches and meet the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 3.1ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. The site is relatively close to Leek with a range of services /facilities access to public transport and employment opportunities and this is assessed as a positive impact. There are no known heritage or biodiversity constraints.

5.1267 This site was not taken forward as a preferred option for consultation in April 2016.

TR031: Ladderedge SCC Depot, Ladderedge, Leek

5.1268 The site has the potential to bring forward 8 pitches and meet the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 1ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. The site is relatively close to Leek with a range of services /facilities access to public transport and employment opportunities and this is assessed as a positive impact. There are no known heritage or biodiversity constraints on the site but it is next to the Country Park which has biodiversity value.

5.1269 This site was not taken forward as a preferred option for consultation in April 2016.

TR032: Land off Brooklands Way, Leekbrook

5.1270 This is a large site which has the potential to bring forward 8 pitches and meet the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 8.13ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. The site is some distance from to Leek/Cheddleton and services/facilities and employment opportunities, there is a bus but not in close proximity to the site. This is considered to have a negative impact. It has biodiversity importance most of it being within a SBI. In addition, the location of this greenfield site requires further assessment to identify any impact on landscape character.

5.1271 This site was not taken forward as a preferred option for consultation in April 2016.

TR033: Triangular field by Old Quarry Works, Uttoxeter Road, Blythe Bridge

5.1272 The site has the potential to bring forward 8 pitches and meet the identified housing needs of the Gypsy and Traveller communities and this is considered to have a positive effect. The development of this approx 0.44ha site is considered large enough to provide for adequate on site facilities for parking, storage, play and residential amenity. The site is close to Blythe Bridge which has a range of services/facilities including a train station. This is considered to have a positive impact. There are no known biodiversity constraints. . In addition, the location of this greenfield site in the Green Belt requires further assessment to identify any impact on landscape character.

5.1273 This site was not taken forward as a preferred option for consultation in April 2016.

5.4 Appraisal of alternative development approaches for Cheadle

Background

5.1274 Cheadle is the district's smallest town, located 10 miles south east of Leek and 10 miles west of the north Staffordshire conurbation. Cheadle has suffered from under-investment and a poor infrastructure and its town centre has declined in recent years, although a successful Heritage Economic Regeneration Scheme has led to some improvements. Whilst the town has some notable buildings, including St. Giles' RC Church, one of the finest works of the celebrated Victorian architect A W Pugin, the majority of its houses have been built since the First World War. Cheadle is only 4 miles from the A50 Stoke to Derby road that links the M1 and M6 motorways.

5.1275 The adopted Core Strategy sets out Cheadle's role in the District as a significant service centre and market town with scope to be enhanced and strengthened. The identified priorities for the town are to expand its housing market area and range of community provision; creating further employment growth and increasing the diversity of employment opportunities; expanding its retailing centre; and improving environmental quality and accessibility. The Council's Development Capacity Study indicates scope to accommodate further growth that will address issues of under-investment and under-performance, contribute to achieving a more sustainable settlement and help meet the needs of the District.

5.1276 The strategy for Cheadle set out in the adopted Core Strategy is based on taking a comprehensive view of the expansion of the town and programming ahead for the phased release of land and related infrastructure improvements. The Core Strategy notes that this will take the form of urban extensions involving housing and employment development with related leisure and community facilities as part of an overall regeneration and growth strategy.

Selection of alternatives for appraisal - April 2016

5.1277 In identifying sites for inclusion in the Local Plan: Preferred Options Sites and Boundaries (April 2016), a number of reasonable alternative development approaches were considered for Cheadle, in line with the strategy set out above. In the first instance these were:

- Option 1: Northern Focus
- Option 2: South western focus
- Option 3: Scattered approach

5.1278 **Option 1: Northern focus** proposes growth centred on extending Cheadle to the north. This option proposes including the following housing sites within the preferred options (sites and boundaries) Local Plan:

Sites within development boundary	Potential yield (Number new homes)
CH001	240
CH004	45
CH006	36
CH009	16

Sites within development boundary	Potential yield (Number new homes)
CH024	45
CH015	32
CH002A	26
CH002B	42
CH013	50
CH020	42
Other potential sites	
CH073B	114
CH132	80
CH081	110
CH080	80
CH129	120

Table 5.7 Proposed sites comprising Northern Focus

5.1279 Option 2: South Western focus proposes growth centred on extending Cheadle to the south west. This option proposes including the following housing sites within the preferred options (sites and boundaries) Local Plan:

Sites within development boundary	Potential yield (Number new homes)
CH001	240
CH004	45
CH006	36
CH009	16
CH024	45
CH015	32
CH002A	26
CH002B	42
CH013	50
CH020	42
Other potential sites	

Sites within development boundary	Potential yield (Number new homes)
CH085A	150
CH085B	80
CH085C	150
CH085D	115
CH093	165
CH128	28

Table 5.8 Proposed sites comprising South Western Focus

5.1280 Option 3: Scattered approach proposes a spread of growth based on a number of small scale extensions to the periphery of Cheadle. This option proposes including the following housing sites within the preferred options (sites and boundaries) Local Plan:

Sites within development boundary	Potential yield (Number new homes)
CH001	240
CH004	45
CH006	36
CH009	16
CH024	45
CH015	32
CH002A	26
CH002B	42
CH013	50
CH020	42
Other potential sites	
CH132	80
CH128	28
CH075A	50
CH075B	60
CH075C	125
CH081	110

Sites within development boundary	Potential yield (Number new homes)
CH085A	75
CH085D	50

Table 5.9 Proposed sites comprising Scattered Approach

Summary of appraisal findings - April 2016

5.1281 The full SA appraisal matrices recording the detail of the appraisal of each of these options are provided in section 9. The summary of findings is set out below.

Option 1 - Summary of significant effects

5.1282 Sites comprising the option "northern focus" are located both within and outside the existing settlement boundary. The sites are a range of sizes, four are large enough to yield over 100 homes each, a further three are each expected to yield 50 or more homes. This could be expected to help enable the delivery of a range of types and tenures, making a significant contribution to meeting the housing needs of the whole community.

5.1283 A further positive effect of the option is the opportunity it provides for the delivery of a new school. A new school in the north of Cheadle could be expected to ease some pressure on peak time journeys to the existing schools that are concentrated in the south west of the town. This is likely to result in positive effects on the town centre and may help support opportunities for investment in culture and tourism with positive effects on the local economy.

5.1284 All the sites comprising this option could deliver development within 500m of a bus stop and all but three sites are within 1,200m of the town centre with its wide range of key services and facilities. This is likely to result in positive effects on: improving access to jobs, services and facilities (which in turn is likely to advance equality of opportunity), improving access to health care, helping to safeguard the vitality and viability of the town centre, providing support for walking and cycling and reducing the need to travel by car. However sites CH080, CH081 and CH132 are more than 1,200m away from the town centre, so this option could result in existing services and facilities being inaccessible for residents of some new developments.

5.1285 There is potential for the cumulative impacts of development to result in the disturbance of habitats (and their connectedness) and of protected species that could not be reasonably mitigated. The option includes sites CH002a and CH024 which border Cecilly Brook Local Nature Reserve (LNR), one of the most important sites for water voles (a protected species) in Staffordshire. In addition, sites CH002b, CH006 and CH009 are within 100m of the Reserve. CH129 is within 100m of Hales Hall Pool LNR. Sites CH073b and CH081 are within 200m of one of these Local Nature Reserves.

5.1286 This option is also likely to result in the development of sites subject to risk from flooding, the option includes sites CH002a, CH006, CH020, CH080, CH081 and CH132 all of which are partly located within a flood zone 3 area.

5.1287 Dependent on proposal specific information, there is scope that the cumulative impact of development under this option may result in harm or loss to the significance of designated heritage assets. Sites CH009, CH013, CH015, CH024, CH080 and CH081 are

within 400m of one or more grade II listed assets. Site CH015 is within 400m of 24 grade II listed assets; CH013 is within 400m of 38 grade II listed assets and one grade 1 listed asset.

5.1288 Likely negative effects on landscape character have also been identified, sites CH073B, CH080, CH081, CH129 and CH132 are all greenfield sites outside the current development boundary, however none are within the area identified as "important landscape setting to settlement".

5.1289 The option has also been assessed as likely to result in minor negative effects in relation to loss of best and most versatile agricultural land, air quality and greenhouse gas emissions and energy consumption arising from construction and occupation of new developments.

Option 2 - Summary of significant effects

5.1290 Sites comprising the option "south western focus" are located both within and outside the existing settlement boundary. The sites are a range of sizes, five are large enough to yield over 100 homes each, a further two are expected to yield 50 or more homes. This could be expected to help enable the delivery of a range of types and tenures, making a significant contribution to meeting the housing needs of the whole community.

5.1291 A further positive effect of the option is the opportunity it provides for the delivery of a southern link road to help relieve traffic congestion in the town centre. However focusing new development where there is an existing cluster of schools may exacerbate congestion at peak times from concentrating journeys to school into one area of town. Unless the new journeys to school are mainly made on foot, this may result in negative effects on the town centre. All of the sites comprising this option could deliver development within 500m of a bus stop and all but two are within 1,200m of the town centre with its wide range of key services and facilities. This is likely to result in positive effects on: improving access to jobs, services and facilities (which in turn is likely to advance equality of opportunity), improving access to health care, helping to safeguard the vitality and viability of the town centre, providing support for walking and cycling and reducing the need to travel by car. However sites CH093 and CH128 are more than 1,200m away from the town centre, so this option could result in existing services and facilities being inaccessible for residents of some new developments.

5.1292 There is potential for the cumulative impacts of development to result in the disturbance of habitats (and their connectedness) and of protected species that could not be reasonably mitigated. The option includes sites CH002A and CH024 which border Cecilly Brook Local Nature Reserve, one of the most important sites for water voles (a protected species) in Staffordshire. In addition, sites CH002B, CH006 and CH009 are within 100m of the Reserve.

5.1293 This option is also likely to result in the development of sites subject to risk from flooding, the option includes sites CH002A, CH006, CH020 and CH085B all of which are partly located within a flood zone 3 area; and sites CH085A and CH093 that are partly within flood zone 2.

5.1294 Dependent on proposal specific information, the cumulative impact of development under this option may result in harm or loss to the significance of designated heritage assets. Sites CH009, CH013, CH015, CH024, CH085C, CH085D, CH093 and CH128 are within 400m of one or more grade II listed assets. Site CH015 is within 400m of 24 grade II listed assets; CH013 is within 400m of 38 grade II listed assets and one grade 1 listed asset.

5.1295 Likely negative effects on landscape character have also been identified; sites CH085A, B, C and D, CH093 and CH128 are all greenfield sites outside the current development boundary, however none are within the area identified as "important landscape setting to settlement". Sites CH093 and CH128 have been recommended as appropriate to consider for release from the Green Belt under exceptional circumstances.

5.1296 The option has also been assessed as likely to result in minor negative effects in relation to loss of best and most versatile agricultural land, air quality and greenhouse gas emissions and energy consumption arising from construction and occupation of new developments.

Option 3 - Summary of significant effects

5.1297 Sites comprising the option "scattered approach" are located both within and outside the existing settlement boundary. The sites are a range of sizes, three are large enough to yield over 100 homes each, a further six are each expected to yield 50 or more homes. This could be expected to help enable the delivery of a range of types and tenures, making a significant contribution to meeting the housing needs of the whole community.

5.1298 A further positive effect of the option is the opportunity it provides for the delivery of a new school. A new school in the north of Cheadle could be expected to ease some pressure on peak time journeys to the existing schools that are concentrated in the south west of the town. However this option also includes some sites comprising a small scale extension to the south west, where there is an existing cluster of schools and this may contribute to "school run congestion" issues in this part of the town. All of the sites comprising this option could deliver development within 500m of a bus stop and all but three are within 1,200m of the town centre with its wide range of key services and facilities. This is likely to result in positive effects on: improving access to jobs, services and facilities (which in turn is likely to advance equality of opportunity), improving access to health care, helping to safeguard the vitality and viability of the town centre, providing support for walking and cycling and reducing the need to travel by car. However sites CH081, CH128 and CH132 are more than 1,200m away from the town centre, so this option could result in existing services and facilities being inaccessible for residents of some new developments.

5.1299 There is potential for the cumulative impacts of development to result in the disturbance of habitats (and their connectedness) and of protected species that could not be reasonably mitigated. The option includes sites CH002A and CH024 which border Cecilly Brook Local Nature Reserve, one of the most important sites for water voles (a protected species) in Staffordshire. In addition, sites CH002B, CH006 and CH009 are within 100m of the Reserve.

5.1300 This option is also likely to result in the development of sites subject to risk from flooding, the option includes sites CH002A, CH006, CH020, CH81 and CH132 all of which are partly located within a flood zone 3 area; and site CH085A that is partly within flood zone 2.

5.1301 Dependent on proposal specific information, the cumulative impact of development under this option may result in harm or loss to the significance of designated heritage assets. Sites CH009, CH013, CH015, CH024, CH075C, CH081, CH085D, and CH128 are within 400m of one or more grade II listed assets. Site CH015 is within 400m of 24 grade II listed assets; CH013 is within 400m of 38 grade II listed assets and one grade 1 listed asset.

5.1302 Likely negative effects on landscape character have also been identified; sites CH075A, B and C, CH081, CH085A and D, CH128 and CH132 are all greenfield sites outside the current development boundary; sites CH075A, B and C lie in the area identified as "important landscape setting to settlement, where impacts may be most significant. Site CH128 has been recommended as appropriate to consider for release from the Green Belt under exceptional circumstances.

5.1303 The option has also been assessed as likely to result in minor negative effects in relation to loss of best and most versatile agricultural land, air quality and greenhouse gas emissions and energy consumption arising from construction and occupation of new developments

Mitigation measures proposed

5.1304 It is possible that likely significant effects identified via the SA can be mitigated. To assist this, the following measures have been identified during the appraisal of alternative development approaches. These recommendations will be included in the review of policies undertaken as part of Local Plan preparation.

5.1305 Local Plan policies should help to ensure that:

- Good standards of amenity and open space and Green Infrastructure are delivered as part of new housing development.
- The needs of all members of the community can be addressed by helping to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities.
- New developments deliver opportunities to increase take up of sustainable transport choices and improvements to healthy travel networks, including increased opportunities for access to the countryside.
- New developments are well designed, creating safe places and reducing opportunities for anti-social behaviour.
- Developments include appropriate landscaping to aid removal of air pollutants and provide support for the Cheadle Transport Package.
- New developments are directed towards areas of least flood risk and incorporate SuDS wherever possible.
- Impacts on biodiversity are minimised and proposals provide net gains in biodiversity where possible.
- Geologically important sites are afforded protection and enhancement.
- Support is provided for waste minimisation.
- The character of towns / villages; heritage and archaeological assets along with their settings are protected and enhanced.
- The character and appearance of the landscape including historic landscape and other natural assets and resources are protected and enhanced.
- Support is given to sustainable economic growth; tourism and the visitor economy; and the vitality and viability of town and village centres.

Recommended preferred option and options dismissed - April 2016

Options proposed for dismissal	Rationale
<p>Option 1: Northern focus</p>	<p>The option could be expected to:</p> <ul style="list-style-type: none"> • Make a significant contribution to meeting the housing needs of the whole community; • Provide opportunity for delivering a new school in the north of the town where educational facilities are currently lacking; and • Deliver new development within 500m of a bus stop and largely within 1,200m of the town centre, providing good access to services and facilities. <p>However the the cumulative impacts of development could result in:</p> <ul style="list-style-type: none"> • Disturbance of habitats (and their connectedness) and of protected species that could not be reasonably mitigated; • Harm or loss to the significance of designated heritage assets that could not be reasonably mitigated; and • An increase in the risk of flooding. <p>The option would not be expected to help deliver the southern link road.</p>
<p>Option 2: South western focus</p>	<p>The option could be expected to:</p> <ul style="list-style-type: none"> • Make a significant contribution to meeting the housing needs of the whole community; • Provide opportunity to deliver the southern link road; and • Deliver new development within 500m of a bus stop and largely within 1,200m of the town centre, providing good access to services and facilities. <p>However the the cumulative impacts of development could result in:</p> <ul style="list-style-type: none"> • Additional town centre congestion from focusing journeys to school in one part of the town; • Disturbance of habitats (and their connectedness) and of protected species that could not be reasonably mitigated (the effects are less significant than under option 1); • Harm or loss to the significance of designated heritage assets that could not be reasonably mitigated; • Requirement to consider release of sites from the Green Belt; and • An increase in the risk of flooding (the effects are less significant than under option 1). <p>The option would not be expected to help spread location of key sites (such as a new school) to the north of the town.</p>

Options proposed for dismissal	Rationale
Option 3: Scattered approach	<p>The option could be expected to:</p> <ul style="list-style-type: none"> • Make a significant contribution to meeting the housing needs of the whole community; • Provide opportunity for delivering a new school in the north of the town where educational facilities are currently lacking; and • Deliver new development within 500m of a bus stop and largely within 1,200m of the town centre, providing good access to services and facilities. <p>However the the cumulative impacts of development could result in:</p> <ul style="list-style-type: none"> • Town centre congestion from journeys to school arising from small scale extension to the south west where existing schools are located; • Disturbance of habitats (and their connectedness) and of protected species that could not be reasonably mitigated (the effects are less significant than under option 1); • Harm or loss to the significance of designated heritage assets that could not be reasonably mitigated; • Negative impact on the landscape setting to the settlement; • Requirement to consider release of a site from the Green Belt; and • An increase in the risk of flooding (the effects are less significant than under option 1). <p>The option would not be expected to help deliver the southern link road.</p>

Table 5.10 Development approach options dismissed following appraisal

5.1306 Following further work undertaken since April 2016, a fourth alternative development approach was identified and considered, designed to build on the strengths of the three options previously proposed, whilst minimising the cumulative impacts of development identified in each case.

5.1307 Option 4: North-South clusters with small sites scattered through the town proposes two clusters of growth, one to the north and one to the south of Cheadle, with a number of small sites scattered across the town. This option proposes including the following housing sites within the preferred options Local Plan (July 2017):

Sites within development boundary	Potential yield (Number new homes)
Core Strategy Area 1: CH001	240
CH002A	26
CH002B	35

Sites within development boundary	Potential yield (Number new homes)
CH004	45
CH013	51
CH015	32
CH020	42
CH024	45
Other potential sites	
CH132 (with CH001 and school)	80
CH085A	120
CH085B	70
CH085C	125
CH085D	95
CH128	20

Table 5.11 Proposed sites comprising North-South clusters with scattered small sites

Summary of appraisal findings - July 2017

5.1308 The full SA appraisal matrix recording the detail of the appraisal of this fourth option is provided in section 9. The summary of findings is set out below.

Option 4 - Summary of significant effects

5.1309 Sites comprising the option "north-south clusters with small sites scattered through the town" are located both within and outside the existing settlement boundary. The sites are a range of sizes, three are large enough to yield over 100 homes each, a further four are expected to yield 50 or more homes. This could be expected to help enable the delivery of a range of types and tenures, making a significant contribution to meeting the housing needs of the whole community.

5.1310 The option provides opportunity for the delivery of a southern link road to help relieve traffic congestion in the town centre, if required. In addition, enabling a cluster of new development to the south where there are existing school sites whilst also providing land for a new school to the north of the town, is expected to spread journeys to school and help to avoid exacerbating congestion at peak times and this is likely to lead to positive effects on the town centre.

5.1311 All of the sites comprising this option could deliver development within 500m of a bus stop and all but two are within 800m of the town centre with its wide range of key services and facilities. This is likely to result in further positive effects on: improving access to jobs, services and facilities (which in turn is likely to advance equality of opportunity), improving access to health care, helping to secure the vitality and viability of the town centre,

providing support for walking and cycling and reducing the need to travel by car. However sites CH128 and CH132 are more than 1,200m away from the town centre, so this option could also result in existing services and facilities being less accessible for residents of some new developments.

5.1312 This option (in comparison with other previous options) minimises potential for the cumulative impacts of development to result in the disturbance of habitats (and their connectedness) and of protected species that could not be reasonably mitigated. Whilst the option includes sites CH002A and CH024 which border Cecilly Brook Local Nature Reserve, sites CH006 and CH009 (within 100m of the Reserve) are not identified as preferred options.

5.1313 This option is also less likely than previous options considered to result in the development of sites subject to risk from flooding. The option includes sites CH002A, CH020, CH085A and CH85B but small areas of flood zones 2 or 3 at the edge of each site have been excluded from the boundary of each proposed allocation.

5.1314 Dependent on proposal specific information, the cumulative impact of development under this option may lead to harm or loss to the significance of designated heritage assets or their settings. Site CH015 is within 400m of 24 grade II listed assets; CH013 is within 400m of 38 grade II listed assets and one grade 1 listed asset. Potential negative effects on landscape character have also been identified; sites CH085A, B, C and D, CH128 and CH132 are all greenfield sites outside the current development boundary, however none are within the area identified as "important landscape setting to settlement". Appropriate mitigation measures have been identified by the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016). The option has also been assessed as likely to result in minor negative effects in relation to loss of best and most versatile agricultural land, air quality and greenhouse gas emissions and energy consumption arising from construction and occupation of new developments.

Recommended preferred option - July 2017

Option recommended to take forward	Rationale
<p>Option 4: North-south clusters with small sites scattered through the town</p>	<p>The option could be expected to:</p> <ul style="list-style-type: none"> ● Make a significant contribution to meeting the housing needs of the whole community; ● Provide opportunity for delivering a new school in the north of the town where educational facilities are currently lacking; ● Help avoid additional town centre congestion by spreading journeys to school across both the northern and southern areas of the town; ● Provide opportunity to deliver the southern link road if required; ● Deliver new development within 500m of a bus stop and largely within 1,200m of the town centre, providing good access to services and facilities; <p>However the the cumulative impacts of development could result in:</p> <ul style="list-style-type: none"> ● An increase in the risk of flooding (the effects are less significant than under all other options considered).

Option recommended to take forward	Rationale
	<ul style="list-style-type: none"> • Disturbance of habitats (and their connectedness) and of protected species that could not be reasonably mitigated (the effects are less significant than all other options identified) however it is recommended that strategic development site policies require master-planning growth that may impact on the Cecilly Brook Local Nature Reserve in order to manage impact on the LNR and enable achievement of Water Framework Directive objectives; • Negative effects on landscape character (however reasonable mitigation measures have been identified); • Harm or loss to the significance of designated heritage assets (however reasonable mitigation measures have been identified); and • Requirement to consider Green Belt release if exceptional circumstances can be demonstrated.

Table 5.12

Mitigation measures proposed

5.1315 Local Plan policies for strategic development sites in Cheadle should require:

- Mitigation measures identified in the Council's Landscape, Local Green Space and Heritage Impact Study (August 2016).
- Master-planning growth that may impact on the Cecilly Brook Local Nature Reserve in order to manage impact on the Green Infrastructure Network and the LNR to ensure that Local Plan policy requirements can be met for minimising impacts on biodiversity (and providing net gains in biodiversity where possible); and establishing coherent ecological networks that are more resilient to current and future pressures; as well as enabling water quality improvements in line with the Water Framework Directive objectives.

5.5 Appraisal of preferred option policies

Selection of alternatives

5.1316 The Staffordshire Moorlands Core Strategy was adopted in March 2014. The Core Strategy contains a suite of existing policies consistent with the NPPF. However since adoption a number of new or emerging planning policies and regulations of relevance have been introduced. These include:

- The Housing and Planning Act 2016
- Self-Build and Custom House Building Act 2015 and associated Regulations (2016)
- The Town and Country Planning (Brownfield Land Register) Regulations 2017
- Town and Country Planning (Permission in Principle) Order 2017
- Neighbourhood Planning Act 2017
- Housing White paper published February 2017

5.1317 Existing core strategy policies have thus been reviewed as part of the Local Plan preparation process and updated where the evidence base or national planning policy context requires it. For this reason, alternative approaches to delivering policy objectives have not been appraised, the Core Strategy policy has been taken as the most appropriate policy option in the first instance. However the policies, updated as required, have been considered the preferred approach and appraised to identify likely significant effects. Mitigation measures have been identified where appropriate.

5.1318 The following text summarises the outcomes of policy appraisal work carried out between December 2016 and February 2017 and was used to help inform the revision of preferred option policies for preparation of the Local Plan Preferred Options July 2017. The text and policy numbers thus refer to the policy options as at December 2016. An updated appraisal of policies will be carried out and reported on in the next version SA report as work continues on the emerging Local Plan.

Strategic Policies

5.1319 Policy SS1 Development Principles expects development to contribute positively to the social, economic and environmental improvement of the District in partnership with other agencies and services. All proposals for development will be considered in the context of the District-wide spatial strategy. Significant positive effects include the likelihood of improvements to the social and environmental quality of the neighbourhood and improved access to jobs, services and facilities. Policy intent is to secure a mix of types and tenures of quality, affordable homes, including starter homes and this could make a significant contribution to meeting the needs of the whole community. Further positive effects are likely to result from the intentions to maintain the distinctive character of the District's towns and villages and their settings; to protect and enhance the natural and historic environment of the District and to create sustainable, self-sufficient settlements encouraging a strong, prosperous and diverse economy. Whilst no significant negative effects were predicted, a number of policy improvements were identified as follows:

5.1320 Mitigation: The policy could make reference to enhancement of the District's GI network and to the needs of older people, including for extra care provision. The policy should seek to mitigate the impacts of climate change through supporting delivery of renewable and low carbon forms of energy. The location of identified areas of poor air quality should be a factor in considering preferred locations for new development and the delivery of significant soft landscape features should be required to help maximise the removal of air pollutants where necessary. The Policy could refer to strengthening links between rural areas and towns by sustainable forms of transport.

5.1321 Policy SS2 Presumption in favour of Sustainable Development sets out how the Council will work with applicants to facilitate development that improves the economic, social and environmental conditions of Staffordshire Moorlands. Significant positive effects were identified. Since the Policy reflects the presumption in favour of sustainable development set out in the NPPF, no mitigation measures were identified.

5.1322 Policy SS3 Future Provision and Distribution of Development sets out that provision will be made for 6,080 additional dwellings in the plan area during the period 2012 to 2031. Provision will also be made for at least 35 hectares of additional employment land between 2011 and 2031 and for new retail, transport, recreational, community and tourism facilities and services to meet the identified needs of settlements. Significant positive effects include the likelihood of improvements to the social and environmental quality of the

neighbourhood and improved access to jobs, services and facilities. Meeting objectively assessed housing need could make a significant contribution to meeting the needs of the whole community. Provision of new homes will help to enhance the vitality and viability of the District's towns and villages. Lower housing targets would have less of a positive impact on vitality and viability. Provision of new homes and employment land to meet identified need could facilitate the delivery of new employment opportunities or residential development in close proximity to existing employment provision. A lack of new homes to accommodate growth may limit economic development through a fall in the labour force. No mitigation measures were identified.

5.1323 Policy SS4 Strategic Housing Development manages the release of housing land in order to deliver the level and distribution of development set out in other policies. Significant positive effects include helping to meet the housing needs of the whole community through enabling the Plan's objectively assessed housing need to be delivered. Provision of new homes will also help to enhance the vitality and viability of the District's towns and villages. Lower housing targets would have less of a positive impact on vitality and viability and a lack of new homes may limit economic development through a fall in the labour force. No mitigation measures were identified.

5.1324 Policy SS5 Towns identifies Leek, Biddulph and Cheadle as towns, with these settlements accommodating the major proportion of the District's housing, employment and retail needs. Significant positive effects include helping to enhance the vitality and viability of the District's towns through strengthening their role as service centres.

5.1325 Mitigation: Whilst no significant negative effects were predicted, the appraisal notes that the Policy might be improved by including a reference to helping strengthen links between rural areas and towns, including by sustainable forms of transport, to help sustain a vibrant rural economy also.

5.1326 Policy SS6 Leek Area Strategy seeks to consolidate the role of Leek as the principal service centre and a market town and to support its regeneration. Policy intent is to increase the range of available and affordable house types, especially for first time buyers and older people and this is likely to make a significant contribution to meeting the housing needs of the whole community. Further positive effects are likely to result from the intentions to create employment growth and increase the diversity of employment opportunities; strengthen the role of Leek as a principal service and retailing centre for the District and to promote Leek's special character and heritage. Significant positive effects also include the likelihood of improvements to the social and environmental quality of neighbourhoods and improved access to jobs, services and facilities. Whilst no significant negative effects were predicted, a number of policy improvements were identified as follows:

5.1327 Mitigation: The policy should refer to the District's GI Strategy and to strengthening links between rural areas and the town by sustainable forms of transport. The policy should seek to mitigate the impacts of climate change through supporting delivery of renewable and low carbon forms of energy. The policy should also refer to taking opportunities to enhance the character and appearance of the landscape, including the historic landscape, paying particular attention to the quality of the urban / rural interface.

5.1328 Policy SS7 Biddulph Area Strategy seeks to enhance the role of Biddulph as a significant service centre and a market town and to support its regeneration. Policy intent is to increase the range of available and affordable house types, especially for first time buyers, families and older people and this is likely to make a significant contribution to meeting

the housing needs of the whole community. Further positive effects are likely to result from the intentions to create employment growth and increase the diversity of employment opportunities; strengthen the role of Biddulph as a significant service and retailing centre for the District and to improve the image and identity of Biddulph and strengthen its role as a visitor destination. Significant positive effects also include the likelihood of improvements to the social and environmental quality of neighbourhoods and improved access to jobs, services and facilities. Whilst no significant negative effects were predicted, a number of policy improvements were identified as follows:

5.1329 Mitigation: The policy should refer to the District's GI Strategy, in particular to supporting measures to encourage walking and cycling, improving and creating pedestrian and cycle links in the town and to increasing access into the countryside by foot, cycling and horse riding. The policy should seek to mitigate the impacts of climate change through supporting delivery of renewable and low carbon forms of energy. The policy should also refer to taking opportunities to enhance the character and appearance of the landscape, including the historic landscape, paying particular attention to the quality of the urban / rural interface and to increasing tourist opportunities for visitors.

5.1330 Policy SS8 Cheadle Area Strategy seeks to expand the role of Cheadle as a significant service centre and a market town. Policy intent is to increase the range of available and affordable house types, especially for first time buyers and families and this is likely to make a significant contribution to meeting the housing needs of the whole community. Further positive effects are likely to result from the intentions to create employment growth and increase the diversity of employment opportunities; expand the role of Cheadle as a significant service and retailing centre for the District and to improve environmental quality and accessibility. Whilst no significant negative effects were predicted, a number of policy improvements were identified as follows:

5.1331 Mitigation: The policy should refer to the District's GI Strategy and to meeting the needs of older people, including with extra care housing. The policy should seek to mitigate the impacts of climate change through supporting delivery of renewable and low carbon forms of energy. The policy should also refer to taking opportunities to enhance the character and appearance of the landscape, including the historic landscape, paying particular attention to the quality of the urban / rural interface and to increasing tourist opportunities for visitors.

5.1332 Policy SS9 Rural Areas establishes a development requirement for the rural areas defined as larger villages, smaller villages and other rural areas and ensures that development in the rural areas reflects the spatial strategy. Positive effects are noted as follows. The policy categorises villages based on their population, services, facilities and capacity for development and this is likely to contribute to maintaining and strengthening local distinctiveness and sense of place. The policy also seeks to deliver the employment land necessary to provide sufficient local employment opportunities in the villages and to enhance and diversify employment provision at existing employment sites in the rural areas and this is likely to facilitate the delivery of new employment opportunities. Whilst no significant negative effects were predicted, a policy improvement was identified as follows:

5.1333 Mitigation: Option 2 for the policy should make clear that "local" infrastructure includes social infrastructure.

5.1334 Policy SS10 Larger Villages Area Strategy identifies the larger villages and seeks to retain and enhance their role as rural service centres, providing for the bulk of the local housing needs of the rural areas and also for limited employment needs of a scale and

type appropriate to each settlement having regard to local needs, infrastructure capacity and character. Policy intent is to increase the range of available and affordable house types, especially for first time buyers and families and this is likely to make a significant contribution to meeting housing needs. Further positive effects are likely to result from the intentions to enable small scale new employment development and improve the use of existing employment areas; retain and enhance the role of rural areas as rural service centres and to ensure that new development reflects and enhances each village's special character and heritage. Whilst no significant negative effects were predicted, a number of policy improvements were identified as follows:

5.1335 Mitigation: The policy should support environmental enhancements, including the improvement and creation of Local Green Spaces. It should refer to the District's GI Strategy and improving pedestrian and cycle links through the villages and to surrounding towns and villages and into the countryside, as well as to meeting the needs of older people, including with extra care housing. The policy could refer to taking opportunities to enhance the character and appearance of the landscape, including the historic landscape, paying particular attention to the edge of settlements.

5.1336 Policy SS11 Smaller Villages Area Strategy identifies the smaller villages and seeks to ensure these settlements provide only for appropriate development which enhances community vitality or meets a social or economic need of the settlement and its hinterland. Policy intent is to enable new housing development which meets a need, including affordable housing, and this is likely to make a positive contribution to meeting housing needs. Further positive effects are likely to result from the intentions to enable small scale new employment development including live-work units; protect and enable services and facilities which are essential to sustain rural living and to ensure that new development does not undermine the character and life of the settlement. Whilst no significant negative effects were predicted, a number of policy improvements were identified as follows:

5.1337 Mitigation: The policy should support environmental enhancements, including the improvement and creation of Local Green Spaces. It should refer to the District's GI Strategy and improving pedestrian and cycle links through the villages and to surrounding towns and villages and into the countryside, as well as to meeting the needs of older people, including with extra care housing. Policy should seek to ensure that new development reflects and enhances each village's special character and heritage. The policy could also refer to taking opportunities to enhance the character and appearance of the landscape, including the historic landscape, paying particular attention to the edge of settlements.

5.1338 Policy SS12 Other Rural Areas Strategy identifies the other rural areas as comprising the countryside and the green belt outside settlement boundaries and including those small settlements and dispersed developments not identified in policies SS10 and SS11. Policy intent is that these areas will provide only for development which has an essential need to be located in the countryside, supports rural diversification, contributes to sustainability of the rural areas, promotes sustainable tourism or enhances the countryside. Significant positive effects include enhancing and conserving the quality of the countryside, including recognising and conserving the special quality of the landscape in the Peak District National Park, and limiting uses which generate a substantial number of regular trips in areas that are not well served by public transport - as this is likely to help to reduce the number of journeys made by car. Further positive effects are likely to result from encouraging measures which protect and enhance the biodiversity and geological resources, as well as the heritage

of the district. Also, from measures to sustain the rural economy and enhance tourist opportunities. Whilst no significant negative effects were predicted, a policy improvement was identified as follows:

5.1339 Mitigation: The policy should refer to the District's GI Strategy and improving pedestrian and cycle links, including into the countryside, as well as improving opportunities for related leisure activities such as horse riding.

5.1340 Policy SS13 Churnet Valley Strategy manages development according to the aims of the strategy for the Churnet Valley and the Churnet Valley Masterplan SPD. Policy intent is enable the Churnet Valley to provide a strong focus for sustainable rural regeneration across the district and this may help to advance equality of opportunity as well as to enhance the vitality and viability of the area's towns and villages. Further positive effects for health and for reducing the need for car use are likely to result from the intentions to enhance and develop links to strategic footpaths, cycle and horse riding routes and to improve connectivity and accessibility to and within the Churnet Valley by all forms of sustainable transport. In addition support for measures to protect and enhance the biodiversity, landscape character and heritage assets of the valley are all likely to lead to additional positive effects. Whilst no significant negative effects were predicted, a number of policy improvements were identified as follows:

5.1341 Mitigation: Policy should require the protection of notable geological and geomorphological features and should seek to mitigate the impacts of climate change through supporting delivery of renewable and low carbon forms of energy.

5.1342 Policy SS14 Northern Gateway Opportunity Site supports the development of a Regional Investment Site for high quality employment development at this location and in line with the Northern Gateway. This is a large site (the northern area is approximately 19 ha and the southern area is approximately 29 ha) on the south-eastern outskirts of Blythe Bridge. The A50 runs through the middle of the site from the north-west to the south-east. The site as a whole is extensively surrounded by farm land to the east, south and west and by housing and built environment to the north. However, it is effectively isolated from the wider landscape because it is encircled by major roads (the A50 and A521) to the north and east, Cresswell Lane to the south and the Crewe to Derby railway line to the west. The river Blithe runs adjacent to the railway line further to the west. The majority of the site consists of uniform, improved grassland used for pasture. This habitat is common and widespread both locally and throughout the UK. Policy intent is to deliver high quality employment development and this is likely to encourage investment in businesses, people and infrastructure leading to a strengthened and more diversified economy, as well as facilitating the delivery of new employment opportunities. Further positive effects for minimising disadvantages are likely as a result of the site serving a regional need for employment and potentially other community requirements as this may help to advance equality of opportunity and address community need. However potentially significant negative effects on climate change were predicted as the proposal could significantly increase the need to travel by less sustainable forms of transport, increasing road traffic and congestion. Also the site is partially located within a mineral consultation area - bedrock sand. A number of policy improvements were identified as follows:

5.1343 Mitigation: The policy should require measures to improve connectivity and accessibility to the site by sustainable transport means having regard to the GI strategy. The policy should also seek to mitigate the impacts of climate change through supporting delivery of renewable and low carbon forms of energy. Page 527 support measures to enhance,

protect and interpret landscape character. In addition, appropriate consultation will need take place to ensure sand resources are safeguarded from unnecessary sterilisation by non-mineral development.

5.1344 Policy SS15 Planning Obligations and Community Infrastructure Levy provides clarity regarding the Council's approach to developer contributions. The policy could enable the provision of new, or the significant enhancement of existing, community facilities and services and this is likely to make a positive contribution towards community cohesion and the quality of where people work and live. Further positive effects on health and the supply of new homes to meet need were identified, as developer contributions may help to ensure the delivery of an appropriate quantity and quality of open space, sport and recreation facilities and an increase in the supply of affordable homes. No policy improvements were identified.

Sustainable Development Policies

5.1345 Policy SD1 Sustainable Use of Resources sets out a range of measures in relation to the sustainable use of resources and measures to address climate change. These include encouragement to be given to development on previously developed land and a requirement for major developments to demonstrate that consideration has been given to energy efficiency, water conservation, sourcing of construction materials, site orientation and integration of micro-renewables. Significant positive effects on minimising contributions to climate change are predicted to arise from the policy requirement that all development should adapt to climate change and the encouragement for re-use of construction or construction waste materials. Further positive effects are likely to result from the support for development that is located to minimise energy needs as this is likely to result in the location of development in proximity to existing services and facilities. Whilst no significant negative effects were predicted, a policy improvement was identified as follows:

5.1346 Mitigation: Policy should clarify that any remediation of brownfield land should pay particular attention to the need to identify, conserve and enhance biodiversity resources.

5.1347 Policy SD2 Renewable / low-carbon energy gives support to new renewable energy development whilst recognising that the siting and design of all stand-alone renewables installations requires careful consideration to protect the natural and built environment and other amenities. Significant positive effects on minimising contributions to climate change are predicted to arise from the policy intent to meet part of the District's future energy demand through renewable or low-carbon energy sources. Whilst no significant negative effects were predicted, a policy improvement was identified as follows:

5.1348 Mitigation: The policy should clarify that impacts on the landscape includes the historic landscape and other natural assets and resources.

5.1349 Policy SD3 Sustainability Measures in Development supports a number of measures which can improve the sustainability of new or existing development, including exceeding thermal efficiency or water conservation standards, contributing to District Heating networks or the installation of micro-renewables. Significant positive effects on minimising contributions to climate change are predicted to arise from the policy intent to support further carbon- or water-saving measures. No significant negative effects were predicted however a policy improvement was identified as follows:

5.1350 Mitigation: The policy should require all new residential and commercial development where car parking/ garaging is proposed to install a facility to permit the recharge of an electrical battery-powered vehicle.

5.1351 Policy SD4 Pollution seeks to ensure that the effects of pollution (air, land, noise, water, light) are avoided or mitigated. Significant positive effects on improving air quality and soil and land resources are predicted to result. No significant negative effects were predicted.

5.1352 Policy SD5 Flood Risk establishes flood control measures. Significant positive effects on reducing flood risk are predicted to result. Whilst no significant negative effects were predicted, a policy improvement was identified as follows:

5.1353 Mitigation: When considering planning applications the Council should also have regard to the Local Flood Risk Management Strategy; the Policy might also include that where a watercourse is present on a development site, it should be retained or restored into a natural state and enhanced where possible.

Economy and Employment Policies

5.1354 Policy E1 New Employment Development will ensure that there is a choice of sustainably located employment sites, attractive to developers and operators and appropriate to market needs. In order to ensure that the local workforce and businesses benefit from new development, the policy also proposes local labour agreements where appropriate to contribute towards training programmes and employment support and access schemes. Significant positive effects on advancing equality of opportunity; safeguarding the vitality of towns and sustaining a vibrant rural economy are predicted to result. Further positive effects on sustainable economic growth, diversification of the economy and high and stable level of employment were identified. There is potential for negative effects on contribution to climate change arising from policy support for new business developments, as this is likely to result in greater energy use.

5.1355 Policy E2 Employment Allocations ensures allocation of sufficient employment land to support the housing requirement. Significant positive effects on advancing equality of opportunity and safeguarding the vitality of towns are predicted to result. Further positive effects on sustainable economic growth, diversification of the economy and high and stable level of employment were identified. There is potential for negative effects on contribution to climate change arising from the allocation of sites for new business developments, as this is likely to result in greater energy use.

5.1356 Policy E3 Existing Employment Areas seeks to retain existing employment sites where appropriate. Significant positive effects on reducing the number of journeys made by car and advancing equality of opportunity are likely to result from the policy intent to help retain employment sites well served by the public transport network and to support mixed use developments. Further positive effects on sustainable economic growth, diversification of the economy, high and stable level of employment and safeguarding the vitality of towns were identified. There is potential for negative effects on contribution to climate change arising from new business development, as this is likely to result in greater energy use.

5.1357 Policy E4 Tourism and Cultural Development supports the development of the tourist industry with new development proposals to be assessed according to the extent to which they support the local economy and promote the distinctive character and quality of the District. Significant positive effects on encouraging sustainable tourism, cultural heritage and local distinctiveness are likely to result from this. Further positive effects on reducing the number of journeys made by car and advancing equality of opportunity, sustainable economic growth, diversification of the economy, high and stable level of employment and

safeguarding the vitality of towns were identified. There is potential for negative effects on contribution to climate change arising from new development, as this is likely to result in greater energy use.

5.1358 Policy E5 Rural Economy aims to support the rural economy, enable appropriate rural economic diversification and meet the needs of rural communities whilst seeking to protect the countryside from inappropriate development. Significant positive effects on advancing equality of opportunity are likely to result from support for the rural economy. Further positive effects on reducing the number of journeys made by car and sustainable economic growth, diversification of the economy, and high and stable level of employment were identified. There is potential for negative effects on contribution to climate change arising from new development, as this is likely to result in greater energy use.

5.1359 Mitigation: Policy should amend the definition of appropriate development to include avoidance of harm to local landscape character or appearance, including the historic landscape; as well as to non-designated historic assets.

Housing Policies

5.1360 Policy H1 New Housing Development seeks to ensure that an appropriate range of sizes, types and tenures of housing is provided, supporting the provision of flexible accommodation delivered in accordance with the nationally described space standard and to meet accessibility standards set out in the Optional Requirement M4(2) of building regulations. Significant positive effects on ensuring the supply new homes meet local needs including affordable / social / extra care are likely to result from enabling the Plan's objectively assessed housing need to be delivered. Further positive effects on enhancing the vitality and viability of the District's towns and villages and supporting stable levels of employment were identified. There is potential for negative effects on contribution to climate change arising from new development, as this is likely to result in greater energy use. No mitigation measures were identified.

5.1361 Policy H2 Housing Allocations identifies sites as suitable for housing development in order to meet the housing target set out in Policy SS3. Significant positive effects on ensuring the supply of new homes to meet local needs are likely to result from site allocations. Further positive effects on enhancing the vitality and viability of the District's towns and villages and supporting stable levels of employment were also identified. Further detail relating to any predicted impacts on biodiversity, landscape or townscape character is provided in the specific sites appraisals. There is potential for negative effects on contribution to climate change arising from supply of land for new development, as this is likely to result in greater energy use. No mitigation measures were identified.

5.1362 Policy H3 Affordable Housing identifies thresholds for an affordable housing target of 33% in towns and the larger villages; in or on the edge of smaller villages, small schemes for 100% affordable housing will be permitted on suitable rural exception sites; the policy also sets a starter homes target. Significant positive effects on ensuring the supply of new homes to meet local needs are likely to result from provision of affordable housing. Further positive effects on enhancing the vitality and viability of the District's towns and villages and supporting stable levels of employment were also identified. There is potential for negative effects on contribution to climate change arising from new development, as this is likely to result in greater energy use. No mitigation measures were identified.

5.1363 Policy H4 Rural Housing recognises that the re-use of rural buildings for commercial purposes is preferable to that of residential uses and establishes criteria for re-use, the policy also recognises the need to safeguard rural buildings considered to be of particular merit in terms of their contribution to local character or heritage and the need to deliver affordable homes. Positive effects on ensuring the supply of new homes to meet local needs are likely to result from provision of affordable housing, provision of rural housing is also likely to benefit the development of sustainable communities and community cohesion. Further positive effects on helping sustain the rural economy were identified from helping to meet rural housing need. There is potential for negative effects on contribution to climate change arising from new development, as this is likely to result in greater energy use; and from a likely increased use of private transport. Policy improvements were identified as follows:

5.1364 Mitigation: Policy should require housing to remain affordable for successive occupiers in perpetuity and include a requirement for sites to be adequately served by existing services and facilities.

5.1365 Policy H5 Gypsy and Traveller Sites and Sites for Travelling Showpeople sets out the criteria for determination of applications for gypsy and traveller sites or for making future site allocations. Significant positive effects on meeting identified housing need is likely to result from the policy intent to meet the needs of the gypsy, traveller and travelling show people community. Access to accommodation and local services and facilities is likely to lead to further positive impacts on health and well-being for gypsies and travellers and establishing the considerations that will be taken into account for determining applications or future allocations is likely to lead to positive effects on helping ensure community safety and local environmental quality.

Town Centres and Retailing Policies

5.1366 Policy TCR1 Development in the Town Centres seeks to maintain the vitality and viability of town centres by supporting measures that lead to the enhancement and regeneration of the shopping and town centre environment, promoting their tourism potential and maintaining local distinctiveness by supporting proposals that help to retain and attract independent retailers. Significant positive effects were predicted for Improving access to jobs, services and facilities. Further positive effects were identified for maintaining the vitality and viability of the towns, protecting the towns as service centres, promoting sustainable economic growth and diversification of the economy and on supporting high and stable levels of employment.

5.1367 Mitigation: Whilst no significant negative effects were predicted, the appraisal notes that the Policy might be improved by including a reference to helping strengthen links between rural areas and towns, including by sustainable forms of transport, in order to help sustain a vibrant rural economy also. The policy should encourage proposals that deliver high quality public spaces and require active ground floor frontages to be maintained and created within town centres with appropriate town centre uses.

5.1368 Policy TCR2 Primary Shopping Frontages safeguards the retail function at the heart of town centres. Significant positive effects were predicted for maintaining the vitality and viability of the towns, protecting the towns as service centres, promoting sustainable economic growth and supporting high and stable levels of employment. Further positive

effects were identified for tourism as vibrant shopping areas are likely to support the visitor economy. No significant negative effects were predicted although it is likely that new development will result in increased energy use and greenhouse gas emissions.

5.1369 Policy TCR3 Retailing and other Town Centre uses outside Town Centres provides support for local shopping facilities. Significant positive effects were predicted for maintaining the vitality and viability of smaller, local centres, promoting sustainable economic growth and supporting high and stable levels of employment. Further positive effects were identified for improving access to jobs, services and facilities (including by non-car journeys) and tourism, as appropriate support for retailing and other town centre uses outside town centres is likely to result in support for the visitor economy. No significant negative effects were predicted although it is likely that new development will result in increased energy use and greenhouse gas emissions.

Design and Conservation Policies

5.1370 Policy DC1 Design Considerations includes measures to promote locally distinctive, creative and sensitive design solutions to delivering new development, including incorporating sustainable construction techniques and design concepts to reduce the impact of development. Significant positive effects include the likelihood of improvements to the social and environmental quality of neighbourhoods and positive impacts on health and well-being. The policy seeks to promote the maintenance, enhancement, restoration and re-creation of biodiversity and geological heritage where appropriate and this could make a significant contribution to the protection of natural assets, although the significance of effect is dependent on implementation of the policy. Further positive effects are likely to result from the policy intent to deliver well designed development and high quality built environment and public realm as this is likely to lead to investment in business, people and infrastructure, resulting in a strengthened and more diversified economy, more vibrant town and village centres and sustained levels of employment. Whilst no significant negative effects were predicted, a number of policy improvements were identified as follows:

5.1371 Mitigation: Policy should include a requirement for developments to be well integrated for car, pedestrian and cycle use as well as other sustainable transport links. It should also seek to mitigate the impacts of climate change through supporting delivery of renewable and low carbon forms of energy and include a requirement for the creation of healthy environments (to address potential impacts of air pollution). The Policy should require development that secures the effective use of resources, including making best use of existing buildings, and that retains the distinctive character of the landscape (including historic landscape) with any change managed positively.

5.1372 Policy DC2 The Historic Environment seeks to ensure that sites and areas of particular heritage value are safeguarded for the future and where possible enhanced, both for their own heritage merits and as part of wider heritage led regeneration proposals. Significant positive effects include protection and enhancement of the character of towns and villages, as well as heritage assets and their settings and the character of historic landscapes. Further positive effects are likely to result from the policy intent to safeguard the District's historic environment as heritage led regeneration schemes may lead to investment in business, people and infrastructure, resulting in a strengthened and more diversified economy, more vibrant town and village centres and sustained levels of local employment. No significant negative effects were predicted.

5.1373 Policy DC3 Landscape and Settlement Setting seeks to protect and where possible enhance local landscape and the setting of settlements. Significant positive effects include protecting the distinctive character of towns and villages and the character of character / appearance of local landscapes, including historic landscapes and other natural assets. Further positive effects included support for the District's tourism attraction and help to maintain the visitor economy. Whilst no significant negative effects were predicted, a policy improvement was identified as follows:

5.1374 Mitigation: Policy should require that development maintains the biodiversity qualities of any natural or man-made features within the landscape, such as trees, woodlands, hedgerows, walls, watercourses or ponds and that development supports ecological networks in accordance with the GI strategy.

5.1375 Policy DC4 Local Green Spaces seeks to protect those green spaces that are of particular importance to communities. Significant positive effects include benefiting the social and environmental quality of neighbourhoods and protecting the distinctive character of towns and villages. Further positive effects included support for the District's tourism attraction and help to maintain the visitor economy. No significant negative effects were predicted.

Sustainable Communities Policies

5.1376 Policy C1 Creating Sustainable Communities supports proposals which protect, retain or enhance existing community facilities in towns and villages and includes measures to resist proposals that involve the loss of local facilities. There is a requirement to incorporate the infrastructure required as a result of any scheme or to make provision for financial contributions. Significant positive effects for community cohesion, neighbourhood quality and access to services are anticipated from the policy intent to ensure that new development contributes to the creation of safe, livable and mixed communities with good access to jobs and key services including recreation facilities. Further positive effects are likely to arise from new community facilities, particularly in smaller villages and other rural areas contributing to the viability of communities. Creation of sustainable communities is likely to lead to improvements in health and well-being in the long term. No significant negative effects were predicted however a policy improvement was identified as follows.

5.1377 Mitigation: Policy should clarify that community infrastructure includes health services.

5.1378 Policy C2 Sport, Recreation and Open Space provides continued protection from development for existing areas identified for recreational land and buildings including school playing fields and amenity space and supports the provision of new sport, recreation and open space facilities consistent with guidance in the Council's SPD. Significant positive effects for health and well-being and creating and maintaining high quality local neighbourhoods are anticipated and this is also likely to lead to positive effects on townscape quality, helping to maintain the visitor economy. Further positive effects are likely to arise from new recreation facilities, particularly in smaller villages and other rural areas contributing to the viability of communities. Provision of new facilities is also likely to have positive effects on improving access to services in the long term. No significant negative effects were predicted however a policy improvement was identified as follows:

5.1379 Mitigation: Policy should require new sport, recreation and open space facilities to be accessible by a choice of means of transport.

5.1380 Policy C3 Green Infrastructure is supported by a Green Infrastructure strategy and recognises that the District's wide range of existing and potential green infrastructure assets will benefit from a strategic approach ensuring that adequate protection is given to key features; areas are identified where new linkages and assets need to be created and guidance and management is provided for development that may impact on such areas. Significant positive effects on a wide range of SA objectives were identified, including for health and well-being; creating and maintaining high quality local neighbourhoods and improving connectivity to a range of facilities via helping to establish or improve green travel links. Further positive effects on biodiversity and geodiversity are likely to arise from support for the creation of new wildlife habitats; enhancement of existing sites and creating links between them. Use of green infrastructure for effective flood risk and waterways management is likely to result in positive effects on water quality and climate change adaptation. Development of a high quality and multi-functional GI network that attracts visitors and provides recreation opportunities is also likely to have positive effects on sustainable economic growth and diversification of the economy. No significant negative effects were predicted however policy improvements were identified as follows:

5.1381 Mitigation: Policy should require support for improving green travel links to existing and new services and facilities, as well as formal and informal recreation opportunities, and should refer to support for the development of ecological networks in line with the GI strategy. The Policy should also explicitly include geodiversity as a green infrastructure asset.

5.1382 Policy NE1 Biodiversity and Geological Resources establishes a range of measures to protect and enhance biodiversity and geological resources. Significant positive effects on a wide range of SA objectives were identified, including for health and well-being; creating and maintaining high quality local neighbourhoods and biodiversity and geodiversity. Further positive effects are likely to arise from the contribution of habitat protection to effective flood risk and waterways management and climate change adaptation. No significant negative effects were predicted however policy improvements were identified as follows:

5.1383 Mitigation: Because of their importance to the landscape of the Staffordshire Moorlands, the plan should include a specific policy to protect trees, woodlands and hedgerows from loss or deterioration, to ensure the protection of these natural assets outside designated sites. The Biodiversity Opportunity Map should be published alongside the plan.

5.1384 Policy T1 Development and Sustainable Transport supports development which reduces reliance on the private car for journeys, reduces the need to travel generally and helps to deliver more sustainable settlement patterns. Significant positive effects on a wide range of SA objectives were identified, including for health and well-being; creating and maintaining high quality local neighbourhoods; reducing the need to travel by car and increasing access to a range of services and facilities. Further positive effects are likely to arise from reducing the need to travel generally including in relation to air quality, help to support healthy, inclusive and sustainable communities and supporting the visitor economy. No significant negative effects were predicted.

5.1385 Policy T2 Other Sustainable Transport Measures supports measures which promote better accessibility, creates safer roads, reduces the impact of traffic or facilitates highway improvements. Significant positive effects on a wide range of SA objectives were identified, including for health and well-being; creating and maintaining high quality local neighbourhoods; reducing the need to travel by car and increasing access to a range of services and facilities. Further positive effects are likely to arise from seeking improvements

to the existing road, bus and rail networks generally, including in relation to air quality, help to support healthy, inclusive and sustainable communities and supporting the visitor economy. No significant negative effects were predicted.

Cumulative Effects

6 Cumulative Effects

6.1 The SEA Directive requires that the assessment of effects should include “secondary, cumulative, synergistic, short, medium and long-term permanent and temporary effects” (SEA Directive Annex I). The emerging Staffordshire Moorlands Local Plan sets out the spatial principles and overarching criteria that will be applied to development within the plan area over the plan period until 2031. In many instances, given the strategic level of the Plan, it is difficult to be precise about when and in what form the effects will arise, and how one effect might relate to another.

6.2 However, it is possible to draw some broad conclusions about the nature of the effects that the SA has identified:

6.3 Most of the effects will be permanent, in that the Plan aims to deliver development that will last the time. There will inevitably be some temporary and short or medium term effects, particularly during construction, which will vary depending on the nature, scale and form of development, and the specific conditions that will apply during the construction process. Typical effects during construction will include amenity impacts such as noise, traffic generation, dust (air quality), and visual impact. There could also possibly be effects on soils and water resources/quality, although it would normally be possible to mitigate against the most significant effects arising.

6.4 The effects which have been identified in the appraisal of the development strategy and policies, both positive and negative, are likely to increase over time, as the policies in the Plan are rolled out and implemented. For example, the delivery of housing will be phased over the Plan period. This also means that increasing amounts of affordable housing would become available over the same period. Any changes to settlement character, including impacts such as on landscape and townscape, will increase as development is delivered, depending upon the quality of the development delivered.

6.5 The policies within the Plan are assessed for their individual impacts, but there may be collective effects which occur as a result of the policies being implemented in combination. These impacts may be greater than the sum of implementing individual policies.

6.6 The key areas which were identified as having potential cumulative impacts were:

6.7 Climate change - this is related to an increase in population, leading to increasing levels of energy consumption and traffic generation. The provision of energy efficient buildings, accessible services and support for non-car modal journeys also impact on this issue. Climate change in turn can impact on health, flooding and biodiversity.

6.8 Maintaining biodiversity and landscape character can cumulatively impact on health, soil and water quality, opportunities for leisure and recreation, economic growth and the preservation of the character of local communities. In particular, due to the presence of a number of water bodies in areas of proposed growth, Local Plan policies need to mitigate any cumulative implications of new development on local Water Framework Directive compliance and ensure that watercourses do not deteriorate in status, and are retained at, or returned to, their most natural possible condition.

6.9 The table below represents a summary of how the emerging Plan's set of options perform cumulatively against the SA objectives.

SA Objective	Cumulative Effects	Mitigation
<p>1. To improve community cohesion and the quality of where people work and live.</p>	<p>The policies and proposals in the plan provide a strategic approach to delivering options for supporting and delivering high quality development, leisure, recreation and open space in the district, together with new homes and opportunities for new jobs. The delivery of these options will require partnership working within the Council and with other external organisations.</p>	<p>Ensure appropriate community engagement and consultation through the application of policies in the Local Plan and the delivery of new schemes and developments.</p>
<p>2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.</p>	<p>The plan directs new facilities towards appropriate locations in terms of the settlement hierarchy. Facilities are also protected from inappropriate redevelopment for alternative uses. Many of the options have good existing links with the main towns and larger villages and sustainable transport links. Some of the proposals in themselves present opportunities for new and improved sustainable transport links. Cumulatively these aspects of the Local Plan will help to advance equality of opportunity and reduce social exclusion.</p>	<p>Provide measures to include access to facilities through sustainable modes of transport where relevant.</p> <p>Ensure that specific development proposals and schemes are informed by the needs of the local community through consultation and partnership working.</p>
<p>3. To improve health and reduce health inequalities.</p>	<p>The plan provides policies and proposals to support increased access for residents and visitors to open space, green infrastructure and sport and recreation facilities. Cumulatively these will have benefits for health and fitness within the district through increased opportunity for physical activity and connecting with the natural environment with associated mental health benefits. However increased levels of traffic associated with new developments may lead to an increase in transport related air pollution such as nitrogen dioxide and particulates which may exacerbate health problems such as asthma.</p>	<p>Ensure that developments in areas where nitrogen dioxide levels do not meet air quality objectives are required to provide an air quality assessment.</p>
<p>4. To minimise opportunities for crime and reduce the fear of crime.</p>	<p>Opportunities will arise through the design of development schemes and public space to address environmental improvements in the interests of improved public safety and security.</p>	<p>Consider specific issues of safety and security through implementing relevant design measures.</p>

SA Objective	Cumulative Effects	Mitigation
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social / extra care housing.	The policies and proposals in the plan will enable the housing needs of the district to be met to 2031. Policies and options are designed to meet the need for market and affordable housing and the level of housing growth required to support potential employment growth.	Ensure that development proposals meet the assessed housing needs of the district as identified in the 2014 Strategic Housing Market Assessment.
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	The policies and proposals in the plan support improvements to the strategic network of sustainable transport links. The plan also directs new development towards accessible locations in accordance with the spatial strategy. Options are well associated with settlements and where possible link well with sustainable transport routes. Cumulatively these aspects of the Local Plan will help to strengthen links between rural areas and towns and maximise access via sustainable means of transport.	Ensure new developments maximise opportunities to improve access via sustainable modes of transport and contribute to the district's green infrastructure strategy.
7. To minimise contributions to climate change and consider climate change adaptation.	The policies and proposals in the plan support a planned increase in population that is likely to lead to increasing levels of energy consumption and traffic generation with associated negative impacts on climate change. This will need to be mitigated through existing proposed Local Plan policies. The plan includes policies for improving sustainable transport links within the district which will support a modal shift and an associated reduction in transport related greenhouse gas emissions. The plan also protects green infrastructure in the district that provides an existing carbon sink.	Encourage energy efficiency within development schemes. Maximise opportunities for greening and planting within new development schemes. Promote sustainable modes of transport.
8. To improve air quality.	Increased levels of traffic associated with new developments may lead to an increase in transport related air pollution. The plan includes policies for improving sustainable transport links within the district which will support a modal shift	Use of travel plans for new developments to promote sustainable modes of transport.

SA Objective	Cumulative Effects	Mitigation
	and an associated reduction in transport related air pollution.	
9. To reduce flood risk, protect and enhance water sources.	Whilst policies and proposals direct development to areas of lowest flood risk, some development site options are close to areas of flood zones 2 and 3 and flood risk assessments will need to be carried out. Some development site options are close to water courses and as part of the EU Water Framework Directive (WFD) the Local Plan must help ensure such water bodies meet a required status by 2026. Local Plan policies need to mitigate any implications of new development on local WFD compliance and ensure that watercourses do not deteriorate in status, and are retained at, or returned to, their most natural possible condition.	Promote the use of sustainable drainage solutions within schemes. Contribute to addressing the priority issues for the Dove catchment partnership as set out in the December 2015 update to the Humber River Basin District Management Plan.
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	New development proposed within this plan includes options on both greenfield and brownfield land. Whilst the ecological value of site options has been considered in assessment of site options, there may be a cumulative impact of proposals on maintaining biodiversity. The plan recognises the importance of protecting and enhancing the district's natural resources for the benefit of biodiversity and the character and amenity of the area. An associated Habitats Regulations Assessment has tested the plan's policies and proposals on European sites with associated recommendations made for mitigation measures where appropriate. Local Plan policies require consideration of the impact of new development on ecology which should help to conserve biodiversity.	Require ecological surveys and appropriate mitigation for schemes within known areas of potential biodiversity interest.
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and	New development proposed within this plan includes options on both greenfield and brownfield land. Whilst the impact of site options on soil and land resources has been considered in assessment of site options, there may be a cumulative	Direct development away from best and most versatile agricultural land.

SA Objective	Cumulative Effects	Mitigation
enhance geological resources.	impact of proposals on the availability of best and most versatile agricultural land. The plan recognises the importance of protection and enhancement of geological resources.	
12. To minimise the use of non-renewable resources.	The plan directs new development in accordance with the spatial strategy to appropriate locations and provides opportunities for the re-use of previously developed land where appropriate.	Require sustainable construction methods in new schemes, such as waste minimisation, water and energy efficiency.
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	The plan recognises the need to consider the impact of new development on the character of towns and villages as well as heritage and archaeological assets along with their settings.	Require proposals to include appropriate assessment of their impact on designated and non-designated heritage assets and their settings.
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	The plan recognises the need to consider the impact of new development on the character and appearance of the landscape including historic landscape and other natural assets and resources.	Require proposals to include appropriate assessment of their impact on landscape character including the historic landscape.
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	The policies and proposals support enhancement of existing facilities for sustainable tourism and cultural heritage and the provision of new facilities in sustainable locations to serve the local community.	Ensure that proposals contribute to maintaining local distinctiveness.
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	The policies and proposals in the plan support and promote the rural economy, as well as the sustainable development of the three main towns.	Ensure support for the rural economy.
17. To strengthen, modernise and	The plan provides policies and options that support and promote the sustainable	Ensure support for local businesses and those

SA Objective	Cumulative Effects	Mitigation
diversify the District economy, and promote sustainable economic growth	economic growth of the district. Cumulatively these policies will help raise the profile of the district as a destination and an attractive place to live, work and invest.	seeking to locate to the district.
18. To encourage and support a high and stable level of employment	The policies and options in the plan will support existing and new employment opportunities within the district.	New developments should include a commitment to provide employment opportunities for local residents.

Table 6.1 Cumulative performance of proposed options against SA Objectives

Interactions with other Relevant Plans And Projects (Inter-Plan Effects)

6.10 In considering the effects of the Local Plan with other plans and projects, priority has been given to key documents that affect planning and development in the District and its neighbouring authorities. The aim of the analysis of inter-plan effects was to identify how other plans and key projects may affect the sustainability of Staffordshire Moorlands as a District.

6.11 Table 13 summarises key inter-plan cumulative effects.

Plans, programmes or projects	Significant combined effects of Staffordshire Moorlands Local Plan Strategy with other plans, projects or policies
Neighbouring Local Plans (Cheshire East; Macclesfield and Congleton; Newcastle-under-Lyme; Stoke-on-Trent; Stafford; East Staffordshire; High Peak; Derbyshire Dales; Peak District National Park)	Negative
	<ul style="list-style-type: none"> Increased pressures on Green Belt, open/green space and biodiversity assets from recreation, disturbance and direct development. Overall growth in greenhouse gas emissions from a growth in traffic/transport and emissions from the built environment. Potential for a negative cumulative effect on air quality and water through increased atmospheric emissions, water abstraction and water pollution (surface water runoff and consented discharges). These effects along with increased levels of disturbance (recreational activity) have the potential for cumulative negative effects on biodiversity. Increase overall in coverage of impermeable services, with potential contributions to flood risk in the long term.
Local Transport Plan	Positive

Plans, programmes or projects	Significant combined effects of Staffordshire Moorlands Local Plan Strategy with other plans, projects or policies
	<ul style="list-style-type: none"> • Incremental improvements to sustainable transport networks, including walking and cycling. • Reduced congestion, improvements to key roads and junctions.
Neighbourhood Plans (Biddulph; Brown Edge; Checkley; Draycott-in-the-Moors; Leekfrith; Rushton)	<p>Positive</p> <p>Neighbourhood plans must be in general conformity with the strategic policies of the Local Plan. There is the potential therefore for Neighbourhood Plans to contribute to the significant positive and negative cumulative effects identified for the Local Plan. There is also the potential for Neighbourhood Plans to enhance positive effects as well as reduce the negative effects as they can reflect the local environmental conditions and sustainability issues for that area.</p>

Table 6.2 Inter-plan cumulative effects

HRA and EqIA

7 HRA and EqIA

7.1 Introduction

7.1 In addition to Sustainability Appraisal, the emerging Local Plan has been subject to Habitats Regulations Assessment and an Equality Impact Assessment.

7.2 Habitats Regulations Assessment - methodology

7.2 European Directive 92/43/EEC on the Conservation of Natural Habitats and of Wild Fauna and Flora (the Habitats Directive) requires a Habitats Regulations Assessment (HRA) to be undertaken on the Local Plan. In the UK, the Habitats Directive is implemented through the Conservation of Habitats and Species Regulations 2010 (the “Habitats Regulations”).

7.3 The HRA assesses any impacts of the Local Plan against the conservation objectives of sites of European importance for nature conservation in, and outside the plan area, to ascertain whether it would adversely affect the integrity of any sites concerned. These sites, often just referred to as European sites, include Special Areas of Conservation (SACs) and Special Protection Areas (SPAs).

7.4 Staffordshire Moorlands District Council appointed consultants ClearLead Consulting Limited to undertake the HRA requirements for the emerging Staffordshire Moorlands Local Plan. It is important that the sustainability appraisal takes account of HRA findings in order that consideration can be given to mitigating any adverse effects.

7.5 In March 2016 the District Council commissioned an initial HRA screening exercise for the Local Plan. The purpose of screening is to determine whether the plan's policies and proposals could result in likely significant effects on the conservation objectives of any European site. A first screening of the preferred option policies took place in November 2016 to help inform plan preparation. An updated HRA screening of the preferred option policies (to take account of changes since November 2016) was undertaken between 27th June and 29th June 2017. The proposed preferred option development site allocations were screened between 15th and 27th June 2017.

7.6 ClearLead Consulting used the existing HRA report of the adopted Core Strategy and further work on the screening assessment of policies and proposals in the Staffordshire Moorlands emerging Local Plan to prepare a draft Habitats Regulations Assessment report for the Preferred Options Local Plan July 2017. This report can be viewed at:

http://staffsmoorlands.objective.co.uk/portal/local_plan/

7.7 The HRA report July 2017 is also available to view at Council Offices and all district libraries. Consultation on the draft HRA Report takes place alongside consultation on the draft SA Report and the Staffordshire Moorlands Local Plan - preferred options July 2017.

7.8 A further HRA Report will be prepared alongside the publication of the Submission version of the Staffordshire Moorlands Local Plan.

7.3 Habitats Regulations Assessment - Summary of findings

7.9 The proposed preferred option development site allocations were screened between 15th and 27th June 2017. Likely Significant Effects were identified in relation to the following site allocations and European sites:

- Waterhouses (WA004) located approximately 1,950m from the Peak District Dales SAC. Potential for urban effects was identified; and
- Allocated sites on the eastern edge of Leek (LE066, LE140, LE128a, LE142a and b) located between 3.8km and 4.2km from the Peak District SPA and the South Pennine Moors SAC. Potential for recreational effects and air quality effects were identified.

Urban Effects

7.10 Further investigation has been undertaken in relation to potential urban effects resulting from these proposed development sites. Urban effects on European sites typically have an adverse effect on sites within 500m of residential areas (primarily due to cat predation and fire risk due to arson etc). Other urban effects (primarily dog walking from the site to the SPA/SAC) can have an adverse effect on European sites up to 1.6km from residential areas. All development sites identified as preferred options in July 2017 are further than 1.6km from the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC.

7.11 Construction of the proposed sites at Leek and Waterhouses could result in dust deposition on surrounding habitats and localised run-off of pollutants into adjacent watercourses. However coarse particles associated with dust from construction sites falls-out within 200m of the source. No European sites occur within 200m of the proposed development site allocations and therefore no effects on these sites are predicted as a result of construction dust.

7.12 However the proposed housing site at Waterhouses occurs approximately 270m to the north of a watercourse that flows into the River Hamps that flows through the Peak District Dales SAC. There is a small risk that pollutants created during construction could enter this watercourse if construction is not undertaken in accordance with the precautionary measures detailed in CIRIA guidance: Control of water pollution from construction sites: Guidance for consultants and contractors (C532).

7.13 On the basis of the precautionary principle, the HRA therefore concludes that the proposed site allocation at Waterhouses (WA004) could result in an adverse effect on the Peak District Dales SAC.

7.14 Two options for mitigation were suggested:

- Either: Add a policy to the Local Plan for this allocation site which contains a requirement for the development to be constructed in accordance with the precautionary measures detailed in Ciria 2001; or
- Add the following text to the first bullet of Policy NE1 within the Local Plan: "Any development with a potential to adversely affect a European site/s through construction activities should ensure that Ciria construction guidelines are followed including environmental good practice on control of dust and water pollution."

Air Quality and Recreational Pressure

7.15 Likely Significant Effects (LSEs) have been identified in the screening exercise in relation to all employment and housing allocations at Leek in relation to air quality on the Peak District Moors (South Pennine Moors Phase 1) SPA, South Pennine Moors SAC and

the Peak District Dales SAC. In addition, uncertainty was identified in relation to Policy SS11 – Churnet Valley Area Strategy and whether it could contribute to in combination effects on air quality on these European sites.

7.16 Investigation into these issues took place in November / December 2016 because following publication of Preferred Option Sites and Boundaries in April 2016, it was known that allocations may be proposed in these locations. The findings of these investigations will be included within an updated HRA Report but initial findings are summarised here.

7.17 Traffic modelling has been undertaken in relation to air quality and has concluded that the development proposed within Leek and the Churnet Valley alone will not result in adverse effects on the European sites. An in-combination effects study is currently being scoped, in response to advice received from Natural England on 31st May 2017, and this will be undertaken in July 2017 by Staffordshire County Council. The HRA assessment in relation to air quality will therefore be concluded following the forthcoming preferred options consultation.

7.18 It was also identified in the HRA screening undertaken in November 2016 that new housing development in Leek could potentially increase recreational pressure on the Peak District Moors (South Pennine Moors Phase 1) SPA and South Pennine Moors SAC. The closest part of the SAC/SPA (Leek Moss SSSI) is approx. 4km from the western edge of Leek. This has been investigated within the HRA, in respect of effects both alone and in combination with growth in neighbouring areas.

7.19 The HRA notes that estimated increase in visitor numbers to the National Park as a result of the Local Plan including the housing developments in Leek would be very low (0.019% of current visitor days to the park per year). Current recreational pressures are not considered to be impacting on the features of the SPA. The sensitive habitats within the SACs are being adequately protected from damage by mitigation measures implemented by the National Park Authority. It is considered that the management of the estimated increase in visitor numbers to the National Park resulting from the Local Plan, as well as from neighbouring local plans, can be accommodated within the National Park's plans. It is therefore concluded that the growth proposed within Leek and within the plan overall, will not result in adverse effects on the SPA and SAC, both alone and in-combination.

Allocations elsewhere in the Plan Area

7.20 No LSEs have been identified in the updated screening exercise in relation to the site allocations proposed as preferred options in Biddulph and Cheadle.

7.21 No LSEs have been identified in the updated screening exercise in relation to Cannock Chase SAC because no sites proposed for allocation are located within the 15km zone of influence of the SAC.

Updated screening of preferred options policies

7.22 Preferred Options policies were first screened in November 2016, with this screening updated in June 2017 to take account of the emerging nature of plan preparation.

7.23 LSEs were identified in relation to policies SS8 and SS9 and to the Peak District Moors (South Pennine Moors Phase 1) SPA, South Pennine Moors SAC and the Peak District Dales SAC. Policies SS8 and SS9 support appropriate development within villages.

This presents a risk that development could occur in villages close to the Peak District Moors (South Pennine Moors Phase 1) SPA, South Pennine Moors SAC and the Peak District Dales SAC, resulting in adverse effects on the European sites.

7.24 In order to mitigate for these potential LSEs, the HRA report recommends that wording is added to policies SS8 Larger Villages Area Strategy and SS9 Smaller Villages Area Strategy, as follows:

“Any development proposal that might have the potential to affect a European or Ramsar Site must itself be subject to appropriate assessment.”

How suggested mitigation measures have been taken into account in finalising the plan

7.25 The recommended mitigation measures have been incorporated into the Local Plan Preferred Options July 2017.

7.4 Equality Impact Assessment - methodology

7.26 The National Planning Policy Framework (NPPF) (paragraph 70) requires local planning authorities to deliver the social, recreational and cultural facilities and services the community needs. It is considered that the EqIA can help inform this process by understanding the needs of different community groups and how planning policies and decisions can affect them.

Consultation and establishing community needs

7.27 In April 2016 the Council adopted a Statement of Community Involvement (SCI) which sets out how the Council will involve local people, businesses and other stakeholders in the preparation of planning policy documents and sets out the approach to consulting people over planning applications, with a commitment to promoting equal opportunities. The SCI is available at the link below:

<https://www.staffs Moorlands.gov.uk/article/1165/Statement-of-Community-Involvement-SCI>

7.28 The Council adopted its Core Strategy in March 2014. The SA of the Core Strategy can be read at the link below and includes an Equality Impact Assessment of the plan's policies and proposals. The assessment concluded that the adopted Core Strategy will have positive benefits for all through improved access to housing for all groups, and particularly for older, younger and residents with disabilities. It will also have positive benefits for all, and in particular older, younger and residents with disabilities, through improved access to services and facilities in the towns and larger villages. It will also have positive benefits in particular for children/younger people through improved access to play and sports facilities.

https://www.staffs Moorlands.gov.uk/media/341/Core-Strategy-Sustainability-Appraisal-Report-March-2014/pdf/Core_Strategy_Sustainability_Appraisal_Report_March_2014.pdf

7.29 In 2016 Staffordshire Moorlands District Council commissioned consultants Engaging Communities to speak to people about their experiences and needs in relation to the Council's responsibilities under the Equality Duty⁽²⁰⁾ This was a qualitative research project meaning that there were a small number of participants and the findings whilst not statistically analysed, have been analysed by themes.

7.30 Focus groups were used in the first instance to gain insight from members of the protected characteristic groups. The advantage of using focus groups is that it provides an opportunity to explore the attitudes, feelings, beliefs, experiences and reactions of participants in ways that are not feasible with other methods.

7.31 In addition to this, semi-structured interviews were carried out with some participants dependent on their preference. The informal atmosphere of a semi-structured interview can encourage openness from participants and also offer the researcher flexibility to adjust the questions and change direction as the interview progresses.

7.32 There was a focus on five protected characteristic groups: race, religion, disability, sexual orientation and gender reassignment. There was a reluctance amongst two groups in particular, namely race and religion to take part in the research and this means that the findings are more influenced by the other characteristics.

7.33 Building on the EqIA undertaken for the Core Strategy and the work of consultants Engaging Communities, a full EqIA of the Staffordshire Moorlands Local Plan was carried out as part of the SA process. A summary of needs / issues was collated for each of the protected characteristic groups. The community needs identified have been used as the main criteria for assessing the potential impact of the emerging Local Plan policies and proposals.

7.34 The full text can of the Equality Impact Assessment for the emerging Local Plan can be read on the Council's web-site. Its main findings have been summarised in the section below.

7.5 Equality Impact Assessment - Summary of findings

7.35 The needs and issues raised by representatives of protected groups have been grouped and summarised into a number of key themes as follows. In order to address the key equality impacts identified, the Local Plan should:

1. **Housing** - Deliver future housing according to the diversity of local needs, including new homes that are affordable and adaptable as well as extra care housing where needed.
2. **Employment** - Provide access to employment opportunities, from all sectors of the economy and located close to where people live.
3. **Community Safety** - Deliver safe and inclusive communities.
4. **Access to Facilities** - Ensure appropriate levels of community infrastructure, including facilities for health and recreation, that are well located and readily accessible.

7.36 These key equality themes have been used as criteria to assess the potential impact of the policies and objectives in the emerging Staffordshire Moorlands Local Plan. Key findings are:

20 Respecting All: the experiences of five protected characteristic groups under the Equality Duty; Engaging Communities; November 2016

Housing Needs

7.37 Availability of affordable housing is an important issue for all equality strands. Major risks associated with the differential impacts include:

- Deterioration of rural communities as people cannot afford to live in housing and are forced to move out of area.
- Ageing of population as young people / first time buyers cannot afford housing in planning area and are forced to move to neighbouring districts.
- Discrimination against trans-gender community as specific housing needs are not met through availability of social housing.
- Shortage of appropriate housing for elderly residents and disabled people through inflexible housing stock and lack of smaller single storey units.
- Shortage of housing to meet the needs of deprived communities and risk of further disadvantage by not introducing a mixture of housing types and tenures into those deprived areas.

Employment Opportunities

7.38 The availability of local employment opportunities from all sectors of the economy was identified as a key equality issue. The main risks associated with the differential impacts identified include:

- Decline in the financial security of communities through a lack of employment opportunities and access to work for all groups.
- Further financial deprivation resulting in a negative impact on the well-being of residents - putting pressure on social services - through a lack of accessible employment opportunities in deprived areas.
- Marginalisation of people with accessibility needs if employers fail to comply with equalities regulations that require employment opportunities to be accessible to disabled people.

Community Safety

7.39 Community safety is a significant issue for all groups and this highlights the importance of living in inclusive communities for their quality of life. The main risks associated with the differential impacts identified include:

- Marginalisation - if communities are not designed to be inclusive.
- Reduced opportunities for social contact, for older and disabled people in particular, as a result of lack of appropriate local services, or the means of accessing those services and facilities.
- Discrimination from lack of ready access to essential community infrastructure such as that for health care.
- Build up of focused areas of disadvantage from the concentration of particular types of housing, e.g. social rented, resulting in reduced interaction between different sectors of the community.
- Limited social interaction with an associated negative impact upon community cohesion as a consequence of people not feeling safe within their local area.

Access to facilities

7.40 Ensuring appropriate levels of community infrastructure, including facilities for health and recreation, that are well located and readily accessible is a significant issue for all groups. The main risks associated with the differential impacts identified include:

- Increased anti-social behaviour amongst younger members of the community without accessible facilities for sport and recreation and other "things to do".
- Discrimination in terms of physical access to buildings for disabled people. All public buildings including retail development needs to be accessible to wheelchair users and those with poor mobility.
- Isolation of rural communities and elderly residents though requirement for increased reliance on use of a private car, if essential services and facilities are not accessible by walking, cycling or by public transport.

Mitigation measures proposed

7.41 The EqIA report made the following recommendations for improving the policies proposed for inclusion in the Local Plan preferred options July 2017, in order to take account of the assessment findings.

1. **Spatial Vision** - Make a reference to health and the Green Infrastructure Strategy. These would be beneficial due to the ageing population and the District's childhood obesity issue.
2. **Vision for Leek** - Make a reference to open space and the Green Infrastructure Strategy both of which could help to improve health and more specifically the childhood obesity problem in parts of the town.
3. **Vision for Biddulph** - Make a reference to open space and the Green Infrastructure Strategy both of which could help to improve health and more specifically the childhood obesity problem in parts of the town.
4. **Vision for Cheadle** - Make a reference to open space and the Green Infrastructure Strategy both of which could help to improve health and more specifically the childhood obesity problem in parts of the town.
5. **Vision for Rural Areas** - Make a reference to open space and the Green Infrastructure Strategy both of which could help to improve health and more specifically the childhood obesity problem in some rural wards.
6. **Policy SS4 'Strategic Housing Development'** - Ensure that housing requirement is set to address objectively assessed need.
7. **Policy SS6 'Leek Area Strategy'** - Include a reference to reducing levels of deprivation in Leek North, delivering safe and inclusive communities and helping to tackle the childhood obesity problem (e.g. Through implementation of the Green Infrastructure Strategy).
8. **Policy SS7 'Biddulph Area Strategy'** - Make reference to delivering safe and inclusive communities and helping to tackle the childhood obesity problem (e.g. through implementation of the Green Infrastructure Strategy).
9. **Policy SS8 'Cheadle Area Strategy'** - Include reference to the housing needs of older people in Cheadle to reflect baseline information. Include reference to delivering safe and inclusive communities and helping to tackle the childhood obesity problem (e.g. through implementation of the Green Infrastructure Strategy).
10. **Policy SS14 'Northern Gateway Opportunity Site'** - Include reference to the Green Infrastructure Strategy (with its links to health benefits and helping to tackle the obesity problem) within this policy or the relevant site specific policy.

11. **Policy H1 'New Housing Development'** - The policy wording could be made clearer to show that disabled people including wheelchair users will be catered for.
12. **Policy TCR1 'Development in the Town Centres'** - The policy wording could be made clearer to show that disabled people including wheelchair users will taken into consideration in the design of spaces in town centres.

Monitoring Proposals

8 Monitoring Proposals

8.1 This section makes recommendations for the approach to monitoring the sustainability effects of implementing the Staffordshire Moorlands Local Plan.

What the Directive requires:

"Member States shall monitor the significant environmental effects of the implementation of plans or programmes in order, *inter alia*, to identify at an early stage unforeseen adverse effects, and to be able to undertake appropriate remedial action." (Article 10.1)

The Environmental Report should provide information on "a description of the measures envisaged concerning monitoring" (Annex I (i)).

8.2 The SEA Directive requires monitoring of the significant environmental effects of implementing the plan. SA monitoring will cover the significant economic and social effects, as well as the environmental ones.

8.3 The table below sets out proposed measures for monitoring the sustainability effects of implementing the preferred options for the Local Plan. The monitoring measures proposed are linked to the SA process, including the objectives, targets and indicators developed for the SA Framework, the baseline information and key sustainability issues, the likely significant effects expected, and the mitigation measures proposed.

8.4 The monitoring measures proposed focus on the significant sustainability effects that may give rise to irreversible damage (with a view to identifying trends before such damage is caused) and the significant effects where there is uncertainty in the SA and where monitoring would enable preventative or mitigation measures to be taken.

8.5 The policies and objectives of the Local Plan will be delivered in the context of the Development Plan as a whole, and the wider policy framework which sits alongside the planning system. For this reason, monitoring the sustainability effects of implementing the Local Plan will be conducted as part of the overall approach to monitoring the sustainability effects of implementing this and other Planning Documents. Progress will be reported through the Annual Monitoring Report.

8.6 Wherever possible, existing monitoring arrangements, including information collected by outside bodies, have been suggested as a source of indicators.

8.7 The statutory environmental consultees and other stakeholders have already made important contributions as part of this SA, particularly in terms of developing the baseline information and SA Framework. As part of the consultation process relating to this SA report, consultees are invited to make specific comment on the monitoring proposals for the sustainability effects of implementing the Local Plan. In particular to agree the sustainability effects to be monitored and the information to be collected, including by whom and when.

What needs to be monitored?	What sort of information is required?	Indicators	Source of information
Effects on the economy	Success of small businesses. Vitality of town centres.	<ul style="list-style-type: none"> • Employment land supply. • Retail vacancy rates. 	Local Planning Authority. Inter Departmental Business Register, available from ONS at local authority level.
Effects on diversity and abundance of flora and fauna and geological interests	Trends relating to the management and condition of SSSIs and Local Wildlife Sites. Protection of priority habitats and species and geological interests on undesignated sites, both brownfield and greenfield.	<ul style="list-style-type: none"> • Area (ha) of SSSIs and Local Wildlife Sites lost to development requiring planning permission. 	Staffordshire Wildlife Trust. Local Planning Authority.
Effects on climate change	Location of housing and employment development. Amount of renewable energy produced in area. Carbon dioxide emissions. Incorporation of sustainable design features in new development.	<ul style="list-style-type: none"> • Total carbon dioxide emissions. • Amount of renewable energy generation by installed capacity and type. 	Defra publication of local CO ₂ emissions every Autumn. http://www.defra.gov.uk/environment/statistics/globalatmos/galocalghg.htm Local Planning Authority. Staffordshire County Council
Effects on landscape and townscape quality	Impact of development of landscape and townscape character. Development on greenfield sites.	<ul style="list-style-type: none"> • % or areas of historic buildings, sites and areas including locally listed assets affected, whether in 	Historic England. Local Planning Authority.

What needs to be monitored?	What sort of information is required?	Indicators	Source of information
		<ul style="list-style-type: none"> an adverse or beneficial way. % of new and converted dwellings built on previously developed land. 	
Control of flood risk	Location of new development in relation to flood zones.	<ul style="list-style-type: none"> Number of planning applications granted contrary to the advice of the Environment Agency in respect of flood risk. 	Environment Agency
Accessibility of jobs, services and facilities	Access to services for all, including young and older people and those living in rural or remote settlements.	<ul style="list-style-type: none"> New indicator to be developed in consultation with Staffordshire County Council 	Staffordshire County Council
Effects on deprived areas and disadvantaged groups	Local concerns relating to anti-social behaviour. Health inequalities. Community cohesion.	<ul style="list-style-type: none"> Premature (persons under 75 years) all cause standardised mortality ratios. Domestic burglaries per 1,000 households 	ONS Crime Survey for England and Wales

What needs to be monitored?	What sort of information is required?	Indicators	Source of information
Housing which meets local needs	Availability of affordable housing. Housing types, tenures and sizes that meet housing need.	Number of affordable housing completions.	Strategic housing team

Table 8.1 Proposals for monitoring the sustainability effects of implementing the Staffordshire Moorlands Local Plan

Quality Assurance Checklist

9 Quality Assurance Checklist

9.1 The Quality Assurance checklist below has been used to ensure that the requirements of the SEA Directive have been met and fully integrated into the parts of the sustainability appraisal process covered in this document. The Quality Assurance checklist covers both the technical and procedural steps of the sustainability appraisal process and will be updated as further stages are reached; it has been drawn from Appendix 9 of the 2005 ODPM document: A Practical Guide to the Strategic Environmental Assessment Directive, updated with requirements set out in the National Planning Policy Framework.

Quality Assurance	Relevant section
Objectives and context	
The plan or programme's purpose and objectives are made clear.	These will be set out in the non-technical summary and in section 2: Introduction.
Sustainability / environmental issues and constraints, including international and EC environmental protection objectives are considered in developing objectives and targets	SA Scoping Report identified key sustainability issues - these informed development of the SA objectives. See Section 4 of this report.
SA / SEA objectives, where used, are clearly set out and linked to indicators and targets where appropriate.	SA objectives are clearly set out in the Scoping Report and linked to indicators. Also see Section 4 of this report.
Links with other related plans, programmes and explained and policies are identified and explained.	These links are set out in the SA Scoping Report. Also see section 4; the final report will include key elements of the scoping report.
Conflicts that exist between SA/SEA objectives, between SA/SEA and plan objectives, and between SA/SEA and other plan objectives are identified and described.	To be included in the next report.
Scoping	
Consultation bodies are consulted in appropriate ways and at appropriate times on the content and scope of the Environmental Report.	SA Scoping Report was consulted on as part of preparation of the emerging Local Plan.
The assessment focuses on the significant issues.	Key sustainability issues were identified in the Scoping Report and are set out in table 4.2 of section 4 of this report. The key sustainability issues informed development of the SA objectives.
Technical, procedural and other difficulties encountered are discussed; assumptions and uncertainties are made explicit.	Difficulties in collecting data alongside other risks and uncertainties are set out in section 4.2 of this report.

Quality Assurance	Relevant section
Objectives and context	
Reasons are given for eliminating issues from further consideration.	None of the key issues identified were subsequently eliminated - all were considered to remain relevant.
Alternatives	
Realistic alternatives are considered for key issues, and the reasons for choosing them are documented.	The SA has appraised all reasonable alternatives considered through the plan making process. Details are set out in section 5 of this report. The reasons for the selection or rejection of alternatives are also set out in this section of the report.
Alternatives include 'do minimum' and/or 'business as usual' scenarios wherever relevant.	A "do nothing" alternative is discussed in section 5 of this report.
The sustainability/environmental effects (both adverse and beneficial) of each alternative are identified and compared.	All reasonable alternatives considered through the plan making process have been appraised against the SA Framework. The positive and negative effects of each option are identified and compared. Details of appraisals are set out in sections 12 - 16 of this report.
Inconsistencies between the alternatives and other relevant plans, programmes or policies are identified and explained.	No inconsistencies between the alternatives and other relevant plans or policies were identified. The implications of other plans and programmes are set out in the Scoping Report and will be summarised in the next SA report.
Reasons are given for selection or elimination of alternatives.	The reasons for the selection or rejection of alternatives are set out in section 5 of the report.
Baseline information	
The relevant aspects of the current state of the area (including economic, social and environmental aspects) and their likely evolution without the plan have been described.	The current state of the area is set out in the Scoping Report. The likely evolution of the baseline information without the plan is set out in section 5 of this report.
The characteristics of areas likely to be significantly affected are described, including areas wider than the physical boundary of the plan area where it is likely to be affected by the plan.	The characteristics of areas likely to be significantly affected are set out in the Scoping Report.

Quality Assurance	Relevant section
Objectives and context	
Difficulties such as deficiencies in information or methods are explained.	Difficulties in collecting data alongside other risks and uncertainties are set out in section 3 of this report.
Prediction and evaluation of likely significant environmental effects	
Effects identified include the types listed in the Directive (biodiversity, population, human health, fauna, flora, soil, water, air, climate factors, material assets, cultural heritage and landscape), as relevant; other likely environmental / sustainability effects are also covered, as appropriate.	Each of the options, preferred policies and options for site allocation were assessed against the SA Framework which covers the scope of effects listed in the Directive. The SA Framework is set out in section 4 and is linked to SEA topics.
Both positive and negative effects are considered, and the duration of effects (short, medium or long-term), and temporary/permanent effects are addressed	The likely significant effects of options are identified in tables set out in the appendices to this report. Positive and negative effects are considered, and the duration of effects (short, medium or long-term), and temporary / permanent effects are addressed.
Likely secondary, cumulative and synergistic effects are identified where practicable	The likely secondary, cumulative and synergistic effects are identified and set out in section 6 of this report.
Inter-relationships between effects are considered where practicable.	Where relevant inter-relationships between effects are identified and set out in section 6 of this report.
The prediction and evaluation of effects makes use of relevant accepted standards, regulations, and thresholds.	The prediction and evaluation of effects is via the SA Framework which is linked to quantitative indicators.
Methods used to evaluate the effects are described.	The appraisal methodology is explained in section 3 of this report.
Mitigation measures	
Measures envisaged to prevent, reduce and offset any significant adverse effects of implementing the plan or programme are indicated.	Measures envisaged to prevent, reduce and offset any significant adverse effects are identified in section 5 of this report.
Issues to be taken into account in project issues consents are identified.	Appraisal of site options identifies where necessary any issue to be taken into account in project consents. This is set out in appendices to this report.
The Environmental Report	Page 561

Quality Assurance	Relevant section
Objectives and context	
Is clear and concise in its layout and presentation.	The report presents the findings of the Sustainability Appraisal in a clear and concise format.
Uses simple, clear language and avoids or explains technical terms.	Clear language is used wherever possible. Technical terms are explained.
Uses maps and other illustrations where appropriate.	Maps are included at section 17.
Explains the methodology used.	The appraisal methodology is explained in section 3 of this report.
Explains who was consulted and what methods of consultation were used.	Who was consulted and what methods of consultation were used is described in section 11 of this report.
Identifies sources of information, including expert judgement and matters of opinion.	Sources of information are described in the Scoping Report.
Contains a non-technical summary covering the overall approach to the SA/SEA, the objectives of the plan, the main options considered, and any changes to the plan resulting from the SEA.	A non-technical summary will be included at the beginning of the next SA Report.
Consultation	
The SA/SEA is consulted on as an integral part of the plan-making process.	Details of consultations have been set out in section 3 of this report.
Consultation Bodies and the public likely to be affected by, or having an interest in, the plan or programme are consulted in ways and at times which give them an early and effective opportunity within appropriate time frames to express their opinions on the draft plan and Environmental Report.	Details of consultations have been set out in section 3 of this report.
Decision-making and information on the decision	
The environmental report and the opinions of those consulted are taken into account in finalising and adopting the plan or programme.	The findings of the SA and consultation responses have influenced the development of the Local Plan. The consultation responses received through the SA process and how SA findings have been taken into account are presented in Sections 11 and a further section to be included in the next SA Report.

Quality Assurance	Relevant section
Objectives and context	
An explanation is given of how they have been taken into account.	The consultation responses received through the SA process and how SA findings have been taken into account are presented in Sections 13 and 17 of this Report.
Reasons are given for choosing the plan or programme as adopted, in the light of other reasonable alternatives considered.	The reasons for the selection or rejection of alternatives are set out in section 5 of the report.
Monitoring measures	
Measures proposed for monitoring are clear, practicable and linked to the indicators and objectives used in the SEA.	Proposed measures to monitor significant effects are provided in Section 8 of this Report and are clearly linked to SA Objectives.
Monitoring is used, where appropriate, during implementation of the plan or programme to make good deficiencies in baseline information in the SEA.	This will be an ongoing process after adoption of the Local Plan through the Council's Monitoring Review.
Monitoring enables unforeseen adverse effects to be identified at an early stage. (These effects may include predictions which prove to be incorrect.)	Monitoring measures will be part of the ongoing process after adoption of the Local Plan through the Council's Monitoring Review.
Proposals are made for action in response to significant adverse effects.	Proposed measures to monitor significant effects are provided in Section 8 of this Report and are clearly linked to SA Objectives.
National Planning Policy Framework	
Para 165. A sustainability appraisal...should be an integral part of the plan preparation process, and should consider all the likely significant effects on the environment, economic and social factors.	Ongoing, the SA has been an integral part of the plan-making process, helping to inform the development and selection of alternatives as well as the development of preferred policy approaches and the selection of options for site allocation.
Para 167. Assessments should be proportionate, and should not repeat policy assessment that has already been undertaken.	Ongoing, the SA of the Local Plan is proportionate and does not repeat assessment that has been undertaken already.
Para 167. Wherever possible the Local Planning Authority should consider how the preparation of any assessment will contribute to the plan's evidence base.	The SA is presented as part of the evidence base.

Quality Assurance	Relevant section
Objectives and context	
<p>Para 167. The process should be started early in the plan-making process and key stakeholders should be consulted in identifying the issues that the assessment must cover.</p>	<p>The SA process began in 2014 with consultation on the SA Scoping Report.</p>

Table 9.1 Quality Assurance checklist

Next steps

10 Next steps

10.1 This Sustainability Appraisal Report and the process of assessing Local Plan policies and proposals will continue after the results of this public consultation stage have been taken into account. The results of the public consultation will inform the next iteration of the sustainability appraisal.

10.2 These findings will be published in the next stage of the sustainability appraisal that will accompany the Local Plan Submission document. This will also include any additional appraisal work in relation to any significant amendments that may be made to the emerging Local Plan.

Consultation responses

11 Consultation responses

11.1 Consultation with the public, stakeholders and the SEA bodies on the SA Scoping and Initial SA reports has been carried out alongside consultation on the emerging Local Plan as described in Table 3.2.

11.2 Consultation arrangements have included:

- Direct correspondence with SEA bodies.
- Over 5,000 e-mails and 8,000 postcards sent to consultees on the Staffordshire Moorlands consultation database.
- A dedicated web-page on the Staffordshire Moorlands web-site.
- Promotion of the Local Plan consultation and drop in sessions through social media.
- Press notices and releases in local papers.
- Postcards delivered to all residents within SMDC – 48,000 and all Businesses in SMDC – 3,000.
- Site notice at each proposed site allocation within the Local Plan.
- Consultation material available in key public locations.
- Public meetings and drop-in sessions.

11.3 The following consultation responses were received to the Initial SA Report prepared alongside the Staffordshire Moorlands Local Plan Preferred Options Sites and Boundaries April 2016. A total of 45 representations were received from 16 respondents. Summaries of the representations are reproduced here. The full text of representations can be read at the link:

11.4 http://staffsmoorlands-consult.limehouse.co.uk/portal/site_allocations/initial_sa_report

11.5 Responses received to the April 2016 consultation have been incorporated into this draft of the SA report, or have been used to amend the approach taken to the appraisal wherever possible.

Question	Consultee	Response Summary (with response reference)	Action
1. Do you support the overall approach taken to the appraisal of options?	Individual	ISA1: No.	Noted
	Individual	ISA3: Generally supports most of the appraisal and supports the need for more houses. Support for brownfield site development in Cheddleton alongside CD017.	Noted
	Individual	ISA5: No. Objection to appraisal for EN128. Adding 27 homes will not have a positive effect on emissions and traffic. There are flood risk issues. Building on this land cannot be 'overall' positive.	Noted
	Individual	ISA8: No. The council have made it impossible to comment on site allocations in some rural areas.	All representations are welcomed.
	Individual	ISA14: In Cheddleton there are brownfield and infill sites that have been rejected or not considered whilst green belt sites with direct impact on other housing developments and local ecology have been identified in preference.	Site suggestions are welcomed. The SA is part of a wider evidence base supporting site allocations.

Question	Consultee	Response Summary (with response reference)	Action
	Individual	ISA18: No. Existing brown field sites should be used first. Already there are too many empty sites that should be developed first.	The Council is required to meet its housing needs to 2031; as there are not enough brownfield sites to achieve this, both brownfield and green field site options are being considered.
	Individual	ISA22: Looks fine to me. However, would propose we try to reinstate dilapidated houses as part of new stock.	Noted
	Individual	ISA29: Sustainable development is about balancing the social, economic and environmental needs of an area. The assessments give more weight to economic development than the other elements. The appraisal is not balanced and will only lead to ultimate harm in our district.	Assessments use the SA Framework agreed at Scoping Stage to ensure that all elements of sustainability are properly addressed.
	Draycott Parish Council	ISA32: No. The Parish Council does not support the overall approach taken to the appraisal of options. Many of the development options are considered to focus on a small area of the Staffordshire Moorlands - Draycott parish and the neighbouring council at Checkley. No consideration has been given to the knock on effects of development in our parish to neighbouring villages such as Hilderstone and Fulford.	The preferred options Local Plan proposes a pattern of development in line with the spatial strategy set out in the adopted Core Strategy.
	Individual	ISA33: There is an over-riding need for employment opportunities in Leek to support an increase in inhabitants! There are 'brown' sites in the Leek Town boundary and surrounding areas which are NOT included but which are far more suitable!	The Council is required to meet its housing needs to 2031; as there are not enough brownfield sites in Leek to achieve this, both brownfield and green field site options are being considered.
	Natural England	ISA38: Generally yes, though we offer the following comments in order to allow the council to reflect on whether a consistent approach to SA has been achieved at this stage in the process. Eg SA relating to soils, agricultural land classification (ALC) and best and most versatile land appears to err on the side of caution i.e. in this consultation the presence of ALC grade 3 and 4 appear to be taken as an indication that potentially significant environmental effects could arise. Also the methodology in terms of landscape and landscape character impacts may benefit from clarification. A number of the SA judgements appear to acknowledge potential effects on landscape character and in the context of the wider National Character Area (NCA). However despite the ongoing landscape and heritage impact assessment work (the outcome of which is not yet known) the SA score attributed is in some cases 0 (neutral) rather than 'i' denoting the need for further information.	The assessment of potential effects on soils and agricultural land has been re-visited. The Natural England Likelihood of BMV dataset has been used to reappraise preferred option sites against this element of the SA Framework to provide additional detail. SA Objective 14 is to protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources. Hence the appraisal narrative reflects assessment against the various elements of this which includes opportunities to safeguard protected sites and historic landscapes as well as landscape character - and an "overall" judgement is recorded. However the July 2017 SA report provides details of where further information has been provided or may still be required in the site summaries in section 5.

Question	Consultee	Response Summary (with response reference)	Action
	Historic England	ISA44: The revisions in relation to our earlier comments are noted and welcomed, and SA Objectives 13, 14 and 15 in relation to 'cultural heritage' are welcomed. Any remaining references to 'undesigned' assets should be amended to 'non-designated' throughout the document. Site appraisals include uncertain and negative impacts on heritage assets / historic environment but do not offer further information. In addition, 400m has been used as a benchmark for proximity to Listed Buildings. It is not clear how or why this particular distance has been used as a benchmark since the setting of a heritage asset can be impacted upon at longer distances.	Remaining references to 'undesigned' assets have been amended in the July 2017 SA report. This version of the report has been updated to provide feedback from the Council's Landscape, Local Green Space & Heritage Impact Study (August 2016) in the site summaries set out in section 5. The heritage assessment followed the methodology presented in Historic England Advice Note 3 'The Historic Environment and Site Allocations in Local Plans' (2015). The search area was taken as an area of approximately 400m radius from the site boundary to identify designated heritage assets that may be directly or indirectly affected by the proposed allocation. At discretion, assets of high importance beyond this distance were included.
2. Have we correctly identified the main significant effects and potential mitigation measures?	Individual	ISA9: Definitely NOT. Objection to planning approval SMD/2014/0576 for Blythe Park, Cresswell (OC055). Planning officer warned about sustainability issues, flooding and contamination.	Noted
	Individual	ISA15: Objection to CD002 and CD003 on highways grounds.	Noted
	Individual	ISA19: No. Sites LE127, LE128A, LE142A, LE142B are along a small country road popular with pedestrians. Existing traffic levels are dangerous.	Noted. Reflected in assessment against SA Objective 1.
	Individual	ISA23: Looks fine, would prefer Leek employment site to be kept separate.	Noted
	Individual	ISA30: In some cases significant effects have been identified but they have not changed the overall result. In Biddulph, the Phase 1 Habitat Survey identified a number of important wildlife corridors and potential Species Rich Farmland Sites, but non of this information has influenced the consideration of site allocations, or reduced housing numbers on certain sites. I can see no evidence that ecological information provided has been given equal weighting alongside economic impacts in the assessments. The wildlife corridors as a minimum must be protected. In Biddulph, only a tiny proportion of allocated housing numbers are being found within the current town boundary. Where other towns / villages / areas have the space for more development within the town boundary or on brownfield land, this should be pursued first.	SA findings are only part of the evidence base supporting site allocations. The Council is consulting on a strategic green infrastructure network and draft policies in the preferred options Local Plan to protect biodiversity and green infrastructure. The site allocations proposed in July 2017 reflect support for brownfield sites within Biddulph.
	Draycott Parish Council	ISA32: No - expanding Blythe Business Park can only exacerbate many of our local problems with lack of infrastructure and roads. Blythe Business Park is known to be a flood zone. There are potential issues with contamination of the site due to previous occupation and owners.	Noted, site has planning consent

Question	Consultee	Response Summary (with response reference)	Action
	Individual	ISA34: No! Urban sprawl into the beauty spots of Leek is not the answer! Leek needs protection of its historic nature and especially not to sprawl out towards its defining boundary as it opens towards the National Park - This is Leek's biggest "selling point" for Tourism!	SA of development site options includes consideration of significant effects on heritage assets, landscape character and tourism, including opportunity for mitigation measures.
	Natural England	ISA39: Soils and landscape themes need further attention. Up to date information on local wildlife sites (Sites of Biological Interest and Biodiversity Alert Sites in Staffordshire) should be referenced when carrying out the SA.	Please see response to ISA38. The site appraisal summaries set out in section 5 have been updated to include feedback from the Council's 2017 ecology study that considered the scope for 'local wildlife site' (SBI) designation for (any elements of) preferred option sites against Staffordshire Wildlife Trust criteria.
	Environment Agency	ISA45: Impacts on water quality need to be assessed, particularly the cumulative impact to ensure the relevant Water Framework Directive (WFD) waterbodies do not deteriorate in status and listed measures in the River Basin Management Plan (RBMP) are taken into account.	
3. Do you wish to make a comment on the appraisal of one or more specific housing target option(s)?	Individual	ISA6: Objection to assessments for RU016 and RU020. Rudyard is a popular tourist destination. This will not be enhanced by building on the greenbelt surrounding the village. These sites will be clearly visible from the approaches to the village, and the popular paths used by tourists, namely the feeder and railway track approaching Rudyard from Leek.	Noted, no action required with respect to appraisal of housing target options.
	Individual	ISA7: Objection to site BB041. Sewer and drainage infrastructure cannot cope with the existing housing. Caverwall Old Road and surrounding roads cannot cope with the existing volume of traffic.	Noted, no action required with respect to appraisal of housing target options.
	Individual	ISA10: 168 houses passed in Cresswell are not included on Site Allocations plan yet they were passed alongside the OC055 employment development.	Noted, no action required with respect to appraisal of housing target options.
	Individual	ISA20: LE140 is part of the High School and adjacent to the last newly built houses, the construction of which has led to increased flooding. The bottom playing field is now very boggy and unusable.	Noted, no action required with respect to appraisal of housing target options.
	Individual	ISA24: None at present.	Noted
	Draycott Parish Council	ISA32: Why did our parish area which originally looked at a possible 12 homes in Draycott change to 168 houses in Cresswell? We know that the Cresswell planning application has now been approved but local opinion and council comments were largely ignored.	Noted. But no action required with respect to appraisal of housing target options.
	Individual	ISA35: LE142a, LE142b, LE140, LE128a and LE127. It is unnecessary to extend the town boundary into farmland as there are still many available brownfield sites locally. There is a much greater need for jobs / employment in the town. The	The appraisal of development site options considers impacts on economic development, landscape character, health and well-being, including opportunities

Question	Consultee	Response Summary (with response reference)	Action
		town gateway, especially from the National Park, Buxton Road A53, needs rigorous protection from urban sprawl in order to maintain the 'Queen of The Moorlands' identity. The Mount Road is a popular place for walking, cycling, horse-riding and general enjoyment for health and wellbeing. The Special Landscape Area and environs ought to receive the highest priority in its protection. The designation recognises that it is 'special' in nature and cannot be replaced once lost or damaged.	for mitigation. However SA findings are only part of the evidence base supporting site allocations.
	Natural England	ISA40: In the case of the 3 strategic options for Cheadle no clear conclusion appears to have been reached (see answer to Q5 below).	As the Council continues to build its evidence base, the July 2017 SA report includes identification of a preferred approach.
4. Do you wish to make a comment on the appraisal of one or more specific site allocation(s)?	Individual	ISA2: Owns a brownfield plot alongside CD017 and CD019, the development of which would enable more houses to be built in this area. Should not develop green belt land before brownfield land.	Site suggestion noted.
	Individual	ISA 4: There should be no building on CD002 and CD003 green belt land before brownfield sites are used. Puts forward an available brownfield plot to complement the usage of CD017.	Site suggestion noted.
	Individual	ISA11: Objection to OC055 expansion of Blythe Park Industrial Estate, Cresswell.	Noted, site has planning consent.
	Individual	ISA16: CD002 and CD003 are Green belt areas, with established trees and minor waterways. Further ecological surveys are required. The appraisal for CD003 and CD015 is exactly the same, other than the number of properties to be developed. It is therefore not clear why this site has not been chosen over CD003 given fewer objections and less deviation from the village boundary.	SA findings are only part of the evidence base supporting site allocations.
	Individual	ISA21: The Mount area should be kept as a beautiful, natural and accessible area for all the townspeople of Leek.	Noted
	Individual	ISA25: With regards to gypsy and traveller sites. Consider small sites spread throughout the district is best. Not one super-site.	Noted, appraisals have been carried out for all site options.
	Draycott Parish Council	ISA32: Objection to OC055 - far too big a development when the current site is not near capacity, plus the road structures are not in place to accept additional transport. Every road leaving Draycott parish area suffers from pinch points with no viable way to change that fact.	Noted; site has planning consent.
	Individual	ISA36: LE142a, LE142b, LE140, LE128a and LE127. There are a number of 'brown' sites within the town which could be very effectively used for housing development. The proposal to build almost 400 houses off the junction of the A53 as it joins Thorncliffe Road and The Mount Road is a major intrusion into public amenity and is unsupported in terms of additional infrastructure required such as roads, sewers, schools etc.	The Council is required to meet its housing needs to 2031; as there are not enough brownfield sites to achieve this, both brownfield and green field site options are being considered. Infrastructure requirements will be addressed by the emerging Local Plan.
	Natural England	ISA41: Please see our response to the Cheadle options (answer to Q5 below).	Noted

Question	Consultee	Response Summary (with response reference)	Action
5. Do you wish to make a comment on the appraisal of one or more alternative development approaches for Cheadle?	Individual	ISA12: 168 houses in Cresswell not included.	Permissions are included in the housing supply figures.
	Individual	ISA26: With regards to infrastructure. I will leave it to the experts, other than I feel access to road nodes and any associated reduction in the speed limits need to be considered carefully.	Noted
	JMW Planning Limited	ISA28: The south-western option should play a major role in providing the housing that the Council is committed to in the Core Strategy and the owners of sites CH085a-d and CH093 are committed to helping the Council achieve that. These sites are well positioned in relation to existing facilities in the town and for the most part could be reached by a means of transport other than the private motor vehicle. CH093 should come out of the Green Belt given the findings of the Council's study. This is a site that could be developed quickly to provide a mix of housing.	Please see preferred options Local Plan for details of proposed site allocations and strategy in relation to green belt release. Support for south western development approach for Cheadle noted.
	Natural England	ISA42: No clear conclusion is presented regarding the 3 broad options presented (Table 5.6 appears to dismiss all 3). We note that certain environmental assets like the Cecilly Brook Local Nature Reserve (LNR) and its population of water voles appear to be under threat irrespective of which option is chosen. The appraisal would benefit from a clearer narrative in terms of how impacts upon this environmental asset have been assessed. This appraisal outcome highlights the value of early and pro-active consideration of the management options for the LNR and the 'master-planning' of new housing and associated development in Cheadle. Scope may exist for a green infrastructure led project that is designed to 'fit' within the wider development of the town.	These recommendations have been included in updated site summaries included in the July 2017 SA report and can be taken forward through the strategic development site policies included in the preferred option Local Plan. A Strategic GI network report has also been prepared to help guide development site policies and inform the SA.
6. Does this Initial SA Report, together with the SA Scoping Report provide sufficient information at this stage to ensure that an appropriate SA can be carried out of the emerging Staffordshire Moorlands Local Plan?	Individual	ISA13: No. Objection to site OC055. Red listed species ignored. Flood risk assessment not appropriate. Grade II listed building (St Mary's church) not considered; issues with road infrastructure and sustainability.	Noted, site has planning consent.
	Individual	ISA17: It is unclear why certain plots are considered as preferable over others. Eg CD003 vs CD015. The document is vague and does not provide detail about ecological surveys. Many negative effects have been identified for CD003 whilst the appraisal for CD015 seems more positive. CD015 also demonstrates infill which is preferable and adjoins another brownfield site which is left undeveloped currently.	SA findings are only part of the evidence base supporting site allocations. Further evidence with respect to ecological surveys is included in the July 2017 SA report.
	Individual	ISA27: Leek Town boundary looks fine.	Noted
	Individual	ISA31: NO - SMDC is missing a key part of the evidence base referenced in the Core Strategy. A Green Infrastructure Strategy is required to ensure that the wildlife corridors within the District are identified and protected as Visual Open Space.	The Council is consulting on a strategic green infrastructure network and associated draft policies in the preferred options Local Plan.
	Draycott Parish Council	ISA32: No it does not. The scope of the Local Plan may be reasonably documented but really would	Noted. SMDC is supporting the preparation of Neighbourhood

Question	Consultee	Response Summary (with response reference)	Action
		benefit from local input. The council considers that a Local Plan is required for broad planning ideals but SMDC should then consider the needs and observations of Neighbourhood Plans. Local action group and Draycott Parish Council actively opposed the Blythe Park / Cresswell application and yet it still was passed. Now this local area is expected to pick up the problems that will be associated with this awful planning decision. Neighbourhood Planning processes need to be considered with the Scoping Report.	Plans, each of which will consider issues of sustainability.
	Individual	ISA37: Look at brownfield sites for housing.	The Council is required to meet its housing needs to 2031; as there are not enough brownfield sites in Leek to achieve this, both brownfield and green field site options are being considered.
	Natural England	ISA43: Yes, subject to our comments being considered and acted on.	Noted.

Table 11.1 Responses received to consultation on Initial SA Report April 2016

Appraisal of site options

12 Appraisal of site options

12.1 As set out in the Sustainability Appraisal Scoping Report August 2014, each potential site is assessed against the Council's SA Objectives. The SA Framework is reproduced in section 4 of this report and includes the decision making criteria used in carrying out the appraisal of proposals against each of the SA objectives. The definitions of significance used in the appraisals is set out in table 3.5 (in the appraisal methodology section of this report). The findings of the site appraisals are recorded in a series of tables below, with an appraisal summary.

12.2 Where the assessment refers to the findings of the HRA Report, this is the 2014 Report of the Core Strategy. A separate HRA of the Local Plan has been commissioned and its findings will be published separately.

12.3 In some cases it is not considered possible to spatially assess against an objective. Where impact on an objective depends less on the nature or location of a site, and more on the implementation of Local Plan or other policies, a neutral, or "dependent on implementation" assessment is recorded.

12.4 It should be noted that none of the criteria, or the assessment of the sustainability appraisal against these criteria, necessarily prohibits a site from being allocated or being taken forward as a preferred option.

12.1 Leek

Sites (10+ dwellings) – within the Development Boundary

LE022

SA Objective	Assessment Criteria - Does the site (LE022)...?	Commentary on likely nature of effects of site allocation	Overall assessment
SOCIAL			
<p>1. To improve community cohesion and the quality of where people work and live.</p>	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	<p>The site is located within the settlement boundary, albeit on the south east edge. The development of greenfield land adjacent to the open countryside has the scope to reduce the quality of Green Infrastructure of the Town. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	<p>0</p>
<p>2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.</p>	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>The site is located on the edge of the settlement boundary and is within 800m of the town centre and the wide range of key services and facilities that could serve prospective residents of the site. Overall, this site has been assessed as having a positive effect on this Objective.</p>	<p>+</p>
<p>3. To improve health and reduce health inequalities.</p>	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The location of this site, on the edge of the settlement boundary, should provide residents with good access to the open countryside and help to support healthy lifestyles. Similarly, the site is within 1,200m of a GP surgery. It should be noted that the site is in proximity to Leek Moorlands Hospital. However, it should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through, for example, developer contributions. Overall,</p>	<p>+</p>

SA Objective	Assessment Criteria - Does the site (LE022)...?	Commentary on likely nature of effects of site allocation	Overall assessment
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	<p>this site has been assessed as having a positive effect on this Objective.</p> <p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social / extra care housing.	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	<p>Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 16 dwellings, and therefore also provide a quantum of affordable housing on site. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? ● Support the use of public transport? ● Support safe walking and cycling? ● Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>As noted previously, the site is within 800m of the town centre of Leek and a 1,200m from a GP surgery and adjacent to the open countryside which should reduce the need to travel within the town. Similarly, the site is within 500m of a bus stop. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? ● Offer opportunities to increase the use of renewable energy? ● Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	<p>The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 800m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+

SA Objective	Assessment Criteria - Does the site (LE022)...?	Commentary on likely nature of effects of site allocation	Overall assessment
8. To improve air quality.	<ul style="list-style-type: none"> Offer opportunities to minimise emissions of airborne pollutants? Offer opportunities to remove air pollutants (e.g. by trees)? 	<p>The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having a uncertain effect on this Objective.</p>	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Deliver development directed towards areas of least flood risk? Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 	<p>As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.</p>	+
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is over 1,500m from Brough Park Fields (LNR), the nearest designated asset, and, as such, is considered to have no effect on this asset. The Ecological Study (2015) notes that the site has mostly low biodiversity value overall in terms of the species poor grassland area but has some fairly biodiverse areas connected by hedgerows to the south and north. Therefore the site is deemed to have low ecological importance. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a positive effect on this Objective, however the exact effects are uncertain.</p>	+/?
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> Help safeguard the best and most versatile agricultural land? Deliver development that helps to minimise the loss of greenfield land? Offer opportunities to reduce land contamination / instability? Deliver development that helps reduce the amount of derelict land? Offer opportunities to protect notable geological and geomorphological features? 	<p>As noted, this site has been assessed as being on greenfield land. However the land has also been assessed as urban ALC land so development of this site could not result in the loss of best and most versatile land. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-

SA Objective	Assessment Criteria - Does the site (LE022)...?	Commentary on likely nature of effects of site allocation	Overall assessment
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> Offer opportunities to reduce waste generation? Offer opportunities to maximise the re-use of existing buildings? Offer opportunities to increase the use of building materials from sustainable sources? 	As per the previous objective, the development of this site could not enable the re-use or loss of existing buildings. However, there is scope that development could use sustainable materials and increase the demand for local resources. Overall, this site has been assessed as having a neutral effect on this Objective.	0
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non- assets) along with their settings? Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	The site is within 50m of two grade II listed assets and 400m of two more grade II listed assets. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.	-/?
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Deliver development that maximises re-use of brownfield land? Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a neutral effect on this Objective.	0
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? Offer opportunities to help support tourism and the visitor economy? 	The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Similarly, the site is located within the Churnet Valley Area as an area for sustainable tourism and rural regeneration. Overall, this site has been assessed as having a positive effect on this Objective.	+
ECONOMIC			
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed development of a residential site with good access to the town centre of Leek has scope to have a positive effect on the vitality and viability of Leek and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.	+

SA Objective	Assessment Criteria - Does the site (LE022)...?	Commentary on likely nature of effects of site allocation	Overall assessment
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site could encourage investment in people and infrastructure through developer contributions although this could be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.	0
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	The site is not within 1,000m to existing areas of employment within the town or District and, as such, could fail to provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a negative effect on this Objective.	-
<p>Summary of overall assessment and likely significant effects:</p> <p>The proposed delivery of circa 16 dwellings is considered to have a positive effect. The site is also accessible to existing services and facilities which is likely to have a positive effect, as could the site's low ecological importance. However, the development of greenfield land is assessed as having a negative effect, as could the site's proximity to historic assets and the inaccessibility of existing areas of employment.</p>			
<p>Table 12.1 LE037A 001</p>			
SA Objective	Assessment Criteria - Does the site (LE037A)...?	Commentary on likely nature of effects of site allocation	Overall assessment
SOCIAL			

SA Objective	Assessment Criteria - Does the site (LE037A)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>1. To improve community cohesion and the quality of where people work and live.</p>	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	<p>The site is located within the town centre of Leek, although it is also located on the settlement boundary. The redevelopment of this greenfield site could help to improve the social and environmental quality of the town centre. Overall, this site has been assessed as having a positive effect on this Objective.</p>	<p>+</p>
<p>2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.</p>	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>Given the town centre location of this site, it can be considered that the site would be in proximity to a wide range of key services and facilities. It should be noted that the site is in proximity to Leek First School. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	<p>++</p>
<p>3. To improve health and reduce health inequalities.</p>	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The site is within 800m of a GP surgery and could have good access to the open countryside as the site is also on the edge of the settlement boundary. It could be considered that the development of this site could have a positive effect on health. It should be noted that the site is in proximity to Leek Moorlands Hospital. However, it should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through, for example, developer contributions. 5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 28 dwellings, and therefore also provide a quantum of affordable housing on site. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? ● Support the use of public transport? ● Support safe walking and cycling? ● Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	As noted previously, the site is within 800m of the town centre of Leek and a GP surgery and adjacent to the open countryside which should reduce the need to travel within the town. Similarly, the site is within 500m of a bus stop. Overall, this site has been assessed as having a positive effect on this Objective.	+
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? ● Offer opportunities to increase the use of renewable energy? ● Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 800m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a positive effect on this Objective.	+
8. To improve air quality.	<ul style="list-style-type: none"> ● Offer opportunities to minimise emissions of airborne pollutants? ● Offer opportunities to remove air pollutants (e.g. by trees)? 	The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> ● Deliver development directed towards areas of least flood risk? ● Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? ● Offer opportunities to protect, maintain and improve the quality of water resources and help 	As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.	+

SA Objective	Assessment Criteria - Does the site (LE037A)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 		
<p>10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs</p>	<ul style="list-style-type: none"> Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is within 1,000m from Brough Park Fields (LNR), the nearest designated asset, and, as such, is considered to have an effect on this asset. The Ecological Study (2015) notes that the site itself has broadleaved woodland, dense scrub and tall ruderal vegetation which are connected to semi-natural broadleaved woodland and running water habitats, which form an important potentially biodiverse mosaic as part of Ladydale SBI and therefore has been deemed to have ecological importance. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	-/?
<p>11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> Help safeguard the best and most versatile agricultural land? Deliver development that helps to minimise the loss of greenfield land? Offer opportunities to reduce land contamination / instability? Deliver development that helps reduce the amount of derelict land? Offer opportunities to protect notable geological and geomorphological features? 	<p>As noted, this site has been assessed as being on greenfield land. However the land has also been assessed as urban ALC land so development of this site could not result in the loss of best and most versatile land. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> Offer opportunities to reduce waste generation? Offer opportunities to maximise the re-use of existing buildings? Offer opportunities to increase the use of building materials from sustainable sources? 	<p>As per the previous objective, the development of this site could not enable the re-use or loss of existing buildings. However, there is scope that development could use sustainable materials and increase the demand for local resources. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
<p>13. To protect and enhance the character of towns / villages and other heritage and</p>	<ul style="list-style-type: none"> Deliver development that helps ensure the continued protection and enhancement of cultural 	<p>The site is within 150m of two grade II listed assets within the town centre of Leek. Dependent on proposal specific information, there is limited scope that development of this site could lead to the deterioration</p>	-/?

SA Objective	Assessment Criteria - Does the site (LE037A)...?	Commentary on likely nature of effects of site allocation	Overall assessment
archaeological assets along with their settings.	<ul style="list-style-type: none"> and historic heritage assets (designated and non-designated assets) along with their settings? Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	of the setting of these historical heritage assets. It should be noted that the site is within 400m of Leek Conservation Area which has been placed on the Heritage at Risk register by Historic England. Overall, the site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.	
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Deliver development that maximises re-use of brownfield land? Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a neutral effect on this Objective.	0
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? Offer opportunities to help support tourism and the visitor economy? 	The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Similarly, the site is located within the Churnet Valley Area as an area for sustainable tourism and rural regeneration. Overall, this site has been assessed as having a positive effect on this Objective.	+
ECONOMIC			
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed development of a residential site with good access to the town centre of Leek has scope to have a positive effect on the vitality and viability of Leek and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.	+
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site could encourage investment in people and infrastructure through developer contributions although this could be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.	0

SA Objective	Assessment Criteria - Does the site (LE037A)...?	Commentary on likely nature of effects of site allocation	Overall assessment
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> ● Help meet the employment needs of local people? ● Help increase economic activity levels? ● Improve physical accessibility to jobs? ● Support higher income levels for local residents? 	The site is in proximity to existing areas of employment within the town or District and, as such, could provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
<p>Summary of overall assessment and likely significant effects:</p> <p>The proposed delivery of circa 28 dwellings is considered to have a significant positive effect, as could the site's proximity to existing areas of employment. The site is also accessible to existing services and facilities which is likely to have a positive effect. However, the development of greenfield land is assessed as having a negative effect, as could the site's proximity to historic assets and the ecological importance of the site.</p>

SOCIAL			
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	This site is within the existing village boundary of Leek but not within the Draft New Town Boundary for Leek. There is scope, due to the size of this site, that it could enable the enhancement of existing facilities and services within the town and also improve the social and environmental quality of the neighbourhood. Overall, this site has been assessed as having a neutral effect on this Objective.	0
2. To advance equality of opportunity between all persons and eliminate	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due 	The site is located on the edge of the settlement boundary and it is within 800m of the town centre and the wide range of key services and	+

SA Objective	Assessment Criteria - Does the site(LE045)...?	Commentary on likely nature of effects of site allocation	Overall assessment
social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	facilities that can be found here that would serve prospective residents of the site. Overall, this site has been assessed as having a positive effect on this Objective.	
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> Help improve health or access to health facilities? Help promote healthy lifestyles? Help to reduce health inequalities? Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	The location of this site, on the edge of the settlement boundary, should provide residents with good access to the open countryside and adjacent to an area of designated open space and help to support healthy lifestyles. Similarly, the site is within 800m of a GP surgery. However, it should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through, for example, developer contributions. Overall, this site has been assessed as having a positive effect on this Objective.	+
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> Deliver development that reduces actual levels of crime? Deliver development that helps to reduce fear of crime? 	This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.	+
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? Offer opportunities to enable people to meet their needs within their existing communities? Offer opportunities to ensure that people can afford their housing? 	Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 50 dwellings, and therefore also provide a quantum of affordable housing on site. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> Offer opportunities to minimise impacts on existing traffic congestion? Support the use of public transport? Support safe walking and cycling? Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	As noted previously, the site is within 800m of the town centre of Leek and a GP surgery and adjacent to the open countryside this should reduce the need to travel within the town. However, the site is relatively inaccessible at present, although the sites is linked to a number of other sites which could provide access. Overall, this site has been assessed as having a neutral effect on this Objective.	0

SA Objective	Assessment Criteria - Does the site(LE045)...?	Commentary on likely nature of effects of site allocation	Overall assessment
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? ● Offer opportunities to increase the use of renewable energy? ● Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 800m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a positive effect on this Objective.	+
8. To improve air quality.	<ul style="list-style-type: none"> ● Offer opportunities to minimise emissions of airborne pollutants? ● Offer opportunities to remove air pollutants (e.g. by trees)? 	The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> ● Deliver development directed towards areas of least flood risk? ● Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? ● Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? ● Offer opportunities to encourage water efficiency and demand management? 	As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.	+
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> ● Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? ● Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? ● Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	The site borders Brough Park Fields (LNR), a County Site of Biological Interest for its grassland areas. It could be considered that the development of this site could lead to short-term disturbances of this habitat and possibly long term also. This could therefore have an adverse effect on the District's Green infrastructure network. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a significant negative effect on this Objective, however the exact effects are uncertain.	--/?
11. To safeguard the best and most versatile agricultural land; improve	<ul style="list-style-type: none"> ● Help safeguard the best and most versatile agricultural land? 	As noted, this site has been assessed as being on greenfield land. However the land has also been assessed as grade 4 ALC land so	-

18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	The site is within 500m of existing areas of employment within the town or District and, as such, could provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
<p>Summary of overall assessment and likely significant effects:</p> <p>The proposed delivery of circa 105 dwellings is considered to have a significant positive effect, as could the site's proximity to existing areas of employment and services and facilities within the town. However, the development of greenfield land, grade 4 ALC is assessed as having a negative effect, as could the site's proximity to historic assets and the ecological importance of the site given the proximity to Ladydale SBI.</p>			
<p>Table 12.4 LE061 95</p>			
SA Objective	Assessment Criteria - Does the site(LE061)...?	Commentary on likely nature of effects of site allocation	Overall assessment
SOCIAL			
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> Make a positive contribution towards community cohesion? Offer opportunity to improve neighbourhood quality? Offer opportunity to provide open space and support Green Infrastructure? 	As the site is located on the edge of the town centre of Leek it could be considered that the redevelopment of this brownfield site could help to improve the social and environmental quality of the town centre. Overall, this site has been assessed as having a positive effect on this Objective.	+

SA Objective	Assessment Criteria - Does the site(LE061)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 		
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	Given the edge of town centre location of this site, it can be considered that the site would be in proximity to a wide range of key services and facilities. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	The site is within 800m of a GP surgery but has relatively poor good access to the open countryside and areas of open space. It could be considered that the development of this site for could have a positive effect on health. However, it should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through, for example, developer contributions. Overall, this site has been assessed as having a neutral effect on this Objective.	0
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.	+
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 16 dwellings, and therefore also provide a quantum of affordable housing on site. Overall, this site has been assessed as having a positive effect on this Objective.	+
6. To strengthen links between rural areas and towns by sustainable forms	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? 	As noted previously, the site is within 800m of the town centre of Leek and a GP surgery and near to the open countryside which should	+

<p>of transport and reduce the number of journeys made by car.</p>	<ul style="list-style-type: none"> Support the use of public transport? Support safe walking and cycling? Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>reduce the need to travel within the town. Similarly, the site is within 500m of a bus stop. Overall, this site has been assessed as having a positive effect on this Objective.</p>	
ENVIRONMENTAL			
<p>7. To minimise contributions to climate change and consider climate change adaptation.</p>	<ul style="list-style-type: none"> Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? Offer opportunities to increase energy efficiency? Offer opportunities to increase the use of renewable energy? Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	<p>The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However, the site is within 400m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
<p>8. To improve air quality.</p>	<ul style="list-style-type: none"> Offer opportunities to minimise emissions of airborne pollutants? Offer opportunities to remove air pollutants (e.g. by trees)? 	<p>The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.</p>	i/?
<p>9. To reduce flood risk, protect and enhance water sources.</p>	<ul style="list-style-type: none"> Deliver development directed towards areas of least flood risk? Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 	<p>As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.</p>	+
<p>10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs</p>	<ul style="list-style-type: none"> Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? 	<p>The site is within 500m of Cecilly Brook (LNR), the nearest designated asset. It could be considered that development of this site could possibly have an effect on this site, however these could be limited. The Ecological Study (2015) notes that the site has low biodiversity value overall, is set within an urban environment with little connectivity</p>	0

SA Objective	Assessment Criteria - Does the site(LE061)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> ● Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? ● Offer opportunities to help deliver networks of biodiversity and green infrastructure? ● Help safeguard the best and most versatile agricultural land? ● Deliver development that helps to minimise the loss of greenfield land? ● Offer opportunities to reduce land contamination / instability? ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 	<p>to the wider countryside which lowers the biodiversity of the area considerably, so therefore is considered to have low ecological value. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a neutral effect on this Objective.</p> <p>The site has been assessed as being a brownfield site, similarly it is classified as urban ALC land. As such, the development of this site could avoid the loss of best and most versatile agricultural land. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	<p>The development of this brownfield site could enable the re-use of existing buildings within the town centre. Dependent on proposal specific information, there is scope that development could incorporate sustainable materials. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.</p>	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>The site is within 50m of four grade II listed assets and within 100m of 20 grade II listed assets. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. It should be noted that the site is within 400m of Leek Conservation Area which has been placed on the Heritage at Risk register by Historic England. Overall, the site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	-/?
<p>14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? 	<p>The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be limited effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National</p>	+

SA Objective	Assessment Criteria - Does the site(LE061)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> Deliver development that maximises re-use of brownfield land? Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>Character Area. Overall, this site has been assessed as having a positive effect on this Objective.</p>	
<p>15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.</p>	<ul style="list-style-type: none"> Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? Offer opportunities to help support tourism and the visitor economy? 	<p>The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Similarly, the site is located within the Churnet Valley Area as an area for sustainable tourism and rural regeneration. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
ECONOMIC			
<p>16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy</p>	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	<p>The proposed development of a residential site with good access to the town centre of Leek has scope to have a positive effect on the vitality and viability of Leek and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.</p>	+
<p>17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth</p>	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	<p>The development of this site could encourage investment in people and infrastructure through developer contributions although this could be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0

The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a negative effect on this objective.</p>	-

SA Objective	Assessment Criteria - Does the site(LE064) ...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs</p>	<ul style="list-style-type: none"> ● Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? ● Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? ● Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is over 750m from Cecilly Brook (LNR), the nearest designated asset. It could be considered that development of this site could possibly have an effect on this site, however these could be limited. The Ecological Study (2015) notes that the site has fairly low biodiversity overall, with fairly poor connectivity to more biodiverse habitats therefore is attributed low ecological importance. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	<p>0</p>
<p>11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> ● Help safeguard the best and most versatile agricultural land? ● Deliver development that helps to minimise the loss of greenfield land? ● Offer opportunities to reduce land contamination / instability? ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 	<p>As noted, this site has been assessed as being on greenfield land. However the land has also been assessed as urban ALC land so development of this site could not result in the loss of best and most versatile land. Overall, this site has been assessed as having a negative effect on this Objective.</p>	<p>-</p>
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	<p>As per the previous objective, the development of this site could not enable the re-use or loss of existing buildings. However, there is scope that development could use sustainable materials and increase the demand for local resources. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	<p>0</p>
<p>13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.</p>	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>The site is within 400m of three grade II listed assets and a scheduled monument, Brindley's Mill. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	<p>-/?</p>

SA Objective	Assessment Criteria - Does the site(LE064) ...?	Commentary on likely nature of effects of site allocation	Overall assessment
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a neutral effect on this Objective.	0
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> ● Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? ● Offer opportunities to help support tourism and the visitor economy? 	The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Similarly, the site is located within the Churnet Valley Area as an area for sustainable tourism and rural regeneration. Overall, this site has been assessed as having a positive effect on this Objective.	+
ECONOMIC			
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> ● Deliver development that helps to safeguard shops and services in existing centres? ● Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed development of a residential site with access to the town centre of Leek has scope to have a positive effect on the vitality and viability of Leek and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.	+
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> ● Help provide a balanced portfolio of employment land in sustainable locations? ● Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site could encourage investment in people and infrastructure through developer contributions although this could be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.	0
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> ● Help meet the employment needs of local people? ● Help increase economic activity levels? ● Improve physical accessibility to jobs? ● Support higher income levels for local residents? 	The site is within 500m of existing areas of employment within the town or District and, as such, could provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
Summary of overall assessment and likely significant effects:			

SA Objective	Assessment Criteria - Does the site(LE064) ...?	Commentary on likely nature of effects of site allocation	Overall assessment
		The site's proximity to existing areas of employment is considered to be a significant positive effect. Similarly, the site has good accessibility to services and facilities which is likely to have a positive effect. However, the site is located within flood zone 2 which is assessed as being a negative effect. The development of greenfield land is likely to have a negative effect, as could the site's proximity to historic assets and a Local Nature Reserve.	

Table 12.7

SA Objective	Assessment Criteria - Does the site(LE070)...?	Commentary on likely nature of effects of site allocation	Overall assessment
SOCIAL			
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	As the site is located within the town settlement boundary of Leek it could be considered that the redevelopment of this brownfield site could help to improve the social and environmental quality of the town centre. Overall, this site has been assessed as having a positive effect on this Objective.	+
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	The site is located toward the edge of town, it is still within 800m of the town centre and the wide range of key services and facilities that can be found here that could serve prospective residents of the site. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? 	The location of this site should provide residents with good access to the nearby open space and countryside which should help to support	+

SA Objective	Assessment Criteria - Does the site(LE070)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> Help to reduce health inequalities? Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>healthy lifestyles. Similarly, the site is within 800m of a GP surgery. However, it should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through, for example, developer contributions. Overall, this site has been assessed as having a positive effect on this Objective.</p>	
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> Deliver development that reduces actual levels of crime? Deliver development that helps to reduce fear of crime? 	<p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? Offer opportunities to enable people to meet their needs within their existing communities? Offer opportunities to ensure that people can afford their housing? 	<p>Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 22 dwellings, and therefore also provide a quantum of affordable housing on site. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> Offer opportunities to minimise impacts on existing traffic congestion? Support the use of public transport? Support safe walking and cycling? Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>As noted previously, the site is within 800m of the town centre of Leek and a GP surgery and near to the open countryside which should reduce the need to travel within the town. Similarly, the site is within 500m of a bus stop. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? Offer opportunities to increase energy efficiency? Offer opportunities to increase the use of renewable energy? Deliver development is in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	<p>The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 800m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+

SA Objective	Assessment Criteria - Does the site(LE070)...?	Commentary on likely nature of effects of site allocation	Overall assessment
8. To improve air quality.	<ul style="list-style-type: none"> Offer opportunities to minimise emissions of airborne pollutants? Offer opportunities to remove air pollutants (e.g. by trees)? 	<p>The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.</p>	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Deliver development directed towards areas of least flood risk? Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 	<p>As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.</p>	+
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SPAs	<ul style="list-style-type: none"> Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is over 800m away from Brough Park Fields (LNR), the nearest designated asset, and, as such, is considered to have no effect on this asset. The Ecological Study (2015) notes that the site has mostly low biodiversity value overall and is deemed to have low ecological importance overall while being set within an urban environment with little connectivity to the wider countryside. The site is attributed distinct ecological importance as there is potential for buildings and a tree to support roosting bats. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	-/?
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> Help safeguard the best and most versatile agricultural land? Deliver development that helps to minimise the loss of greenfield land? Offer opportunities to reduce land contamination / instability? Deliver development that helps reduce the amount of derelict land? Offer opportunities to protect notable geological and geomorphological features? 	<p>The site has been assessed as being a brownfield site, similarly it is classified as urban ALC land. As such, the development of this site could avoid the loss of best and most versatile agricultural land. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++

SA Objective	Assessment Criteria - Does the site(LE070)...?	Commentary on likely nature of effects of site allocation	Overall assessment
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> Offer opportunities to reduce waste generation? Offer opportunities to maximise the re-use of existing buildings? Offer opportunities to increase the use of building materials from sustainable sources? 	The development of this brownfield site could enable the re-use of existing buildings within the town centre. Dependent on proposal specific information, there is scope that development could incorporate sustainable materials. Overall, this site has been assessed as having a positive effect on this Objective.	+
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	The site is within 400m of three grade II listed assets. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.	-/?
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Deliver development that maximises re-use of brownfield land? Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be limited effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a positive effect on this Objective.	+
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? Offer opportunities to help support tourism and the visitor economy? 	The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Similarly, the site is located within the Churnet Valley Area as an area for sustainable tourism and rural regeneration. Overall, this site has been assessed as having a positive effect on this Objective.	+
ECONOMIC			
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed development of a residential site with access to the town centre of Leek has scope to have a positive effect on the vitality and viability of Leek and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.	+

SA Objective	Assessment Criteria - Does the site(LE070)...?	Commentary on likely nature of effects of site allocation	Overall assessment
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site could encourage investment in people and infrastructure through developer contributions although this could be limited. However, the extent of this effect is uncertain. However, it should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through, for example, developer contributions. Overall, this site has been assessed as having a positive effect on this Objective.</p>	
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	<p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	<p>Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 150 dwellings, and therefore also provide a quantum of affordable housing on site. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? ● Support the use of public transport? ● Support safe walking and cycling? ● Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>As noted previously, the site is within 800m of the town centre of Leek and a GP surgery and adjacent to the open countryside this should reduce the need to travel within the town. However, the site is relatively inaccessible at present, although access could be provided through other allocated sites. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? 	<p>The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 800m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+

SA Objective	Assessment Criteria - Does the site(LE091)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> ● Offer opportunities to increase the use of renewable energy? ● Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 		
8. To improve air quality.	<ul style="list-style-type: none"> ● Offer opportunities to minimise emissions of airborne pollutants? ● Offer opportunities to remove air pollutants (e.g. by trees)? 	The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> ● Deliver development directed towards areas of least flood risk? ● Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? ● Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? ● Offer opportunities to encourage water efficiency and demand management? 	As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.	+
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> ● Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? ● Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? ● Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	The site is within 100m of Brough Park Fields (LNR), the nearest designated asset, and, as such, is considered that development could have an effect on this asset, at least a short term disturbance of this habitat, if not long term. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a significant negative effect on this Objective, however the exact effects are uncertain.	-/?
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> ● Help safeguard the best and most versatile agricultural land? ● Deliver development that helps to minimise the loss of greenfield land? ● Offer opportunities to reduce land contamination / instability? 	As noted, this site has been assessed as being on greenfield land. However the land has also been assessed as grade 4 ALC land so development of this site could not result in the loss of best and most versatile land. Overall, this site has been assessed as having a negative effect on this Objective.	-

SA Objective	Assessment Criteria - Does the site(LE091)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 		
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	As per the previous objective, the development of this site could not enable the re-use or loss of existing buildings. However, there is scope that development could use sustainable materials and increase the demand for local resources. Overall, this site has been assessed as having a neutral effect on this Objective.	0
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	The site is within 50m of one grade II listed assets and 400m of a further three grade II listed assets and a scheduled monument. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. It should be noted that the site is within 400m of Dieu La Cres Abbey which has been placed on the Heritage at Risk register by Historic England. Overall, this site has been assessed as having a significant negative effect on this Objective, however the exact effects are uncertain.	-/?
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a positive effect on this Objective.	+
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> ● Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? ● Offer opportunities to help support tourism and the visitor economy? 	The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Similarly, the site is located within the Churnet Valley Area as an area for sustainable tourism and rural regeneration although its location near to Brough Park Fields (LNR) could detract from this. Overall, this site has been assessed as having a neutral effect on this Objective.	0

SA Objective	Assessment Criteria - Does the site(LE091)...?	Commentary on likely nature of effects of site allocation	Overall assessment
ECONOMIC			
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed development of a residential site with access to the town centre of Leek has scope to have a positive effect on the vitality and viability of Leek and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.	+
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site could encourage investment in people and infrastructure through developer contributions although this could be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.	0
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	The site is within 500m of existing areas of employment within the town or District and, as such, could provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
Summary of overall assessment and likely significant effects:			
The proposed delivery of circa 150 dwellings is considered to have a significant positive effect, as could the site's proximity to services, facilities and existing areas of employment. However, the site's proximity to designated and historic assets is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is assessed as being a negative effect.

SA Objective	Assessment Criteria - Does the site(LE147)...?	Commentary on likely nature of effects of site allocation	Overall assessment
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed development of a residential site with access to the town centre of Leek has scope to have a positive effect on the vitality and viability of Leek and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.	+
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site could encourage investment in people and infrastructure through developer contributions although this could be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.	0
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	The site is within 500m of existing areas of employment within the town or District and, as such, could provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
<p>Summary of overall assessment and likely significant effects:</p> <p>The proposed delivery of circa 25 dwellings is considered to have a significant positive effect, as could the site's proximity existing areas of employment. Similarly, the site is accessible to services and facilities which is likely to have a positive effect. However, the site's proximity to designated and historic assets is likely to have a significant negative effect. Similarly, the development of greenfield land, grade 4 ALC is assessed as being a negative effect.</p>

<p>2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.</p>	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>The site is located on the edge of the settlement boundary and is within 800m of the town centre and the wide range of key services and facilities that can be found here that could serve prospective residents of the site. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>3. To improve health and reduce health inequalities.</p>	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The location of this site, on the edge of the settlement boundary, should provide residents with good access to the open countryside and adjacent to an area of open space should help to support healthy lifestyles. Similarly, the site is within 800m of a GP surgery. However, it should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through, for example, developer contributions. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>4. To minimise opportunities for crime and reduce the fear of crime.</p>	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	<p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate</p>	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? 	<p>Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 70 dwellings, and therefore also provide a quantum of affordable housing on site. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++

SA Objective	Assessment Criteria - Does the site(LE243)...?	Commentary on likely nature of effects of site allocation	Overall assessment
locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 		
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? ● Support the use of public transport? ● Support safe walking and cycling? ● Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	As noted previously, the site is within 800m of the town centre of Leek and a GP surgery and adjacent to the open countryside this should reduce the need to travel within the town. However, the site has limited access t at present, . Overall, this site has been assessed as having a neutral effect on this Objective.	0
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? ● Offer opportunities to increase the use of renewable energy? ● Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 400m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
8. To improve air quality.	<ul style="list-style-type: none"> ● Offer opportunities to minimise emissions of airborne pollutants? ● Offer opportunities to remove air pollutants (e.g. by trees)? 	The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> ● Deliver development directed towards areas of least flood risk? ● Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? ● Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? ● Offer opportunities to encourage water efficiency and demand management? 	As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.	+

SA Objective	Assessment Criteria - Does the site(LE243)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs</p>	<ul style="list-style-type: none"> ● Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? ● Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? ● Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is within 300m of Brough Park Fields (LNR), the nearest designated asset, and, as such, is considered that development could have an effect on this asset, at least a short term disturbance of this habitat, if not long term. The Ecological Study (2015) notes that the site is considered to have low ecological importance overall, however as the site is adjacent to Ball Haye Green Disused Tip SBI, there is potential to support reptile populations within refugia to the north of the site. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	<p>-/?</p>
<p>11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> ● Help safeguard the best and most versatile agricultural land? ● Deliver development that helps to minimise the loss of greenfield land? ● Offer opportunities to reduce land contamination / instability? ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 	<p>The site has been assessed as being a brownfield site, similarly it is classified as urban ALC land. As such, the development of this site could avoid the loss of best and most versatile agricultural land. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	<p>++</p>
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	<p>The development of this brownfield site could enable the re-use of existing buildings within the town centre. Dependent on proposal specific information, there is scope that development could incorporate sustainable materials. Overall, this site has been assessed as having a positive effect on this Objective.</p>	<p>+</p>
<p>13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.</p>	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>The site is within 50m of one grade II listed asset. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. Overall, this site has been assessed as having a significant negative effect on this Objective, however the exact effects are uncertain.</p>	<p>--/?</p>

SA Objective	Assessment Criteria - Does the site(LE243)...?	Commentary on likely nature of effects of site allocation	Overall assessment
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Deliver development that maximises re-use of brownfield land? Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a positive effect on this Objective.	+
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? Offer opportunities to help support tourism and the visitor economy? 	The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Similarly, the site is located within the Churnet Valley Area as an area for sustainable tourism and rural regeneration although its location near to Brough Park Fields (LNR) could detract from this. Overall, this site has been assessed as having a neutral effect on this Objective.	0
ECONOMIC			
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed development of a residential site with access to the town centre of Leek has scope to have a positive effect on the vitality and viability of Leek and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.	+
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site could encourage investment in people and infrastructure through developer contributions although this could be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.	0
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	The site is within 500m of existing areas of employment within the town or District and, as such, could provide sufficient accessible employment opportunities for prospective residents. <p>locations and including affordable / social /extra care housing.</p>	<ul style="list-style-type: none"> Offer opportunities to enable people to meet their needs within their existing communities? Offer opportunities to ensure that people can afford their housing? 		
<p>6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.</p>	<ul style="list-style-type: none"> Offer opportunities to minimise impacts on existing traffic congestion? Support the use of public transport? Support safe walking and cycling? Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>As noted previously, the site is within 800m of the town centre of Leek and a GP surgery and adjacent to the open countryside this should reduce the need to travel within the town. However, the site is relatively inaccessible at present, although access could be provided through other allocated sites. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	<p>0</p>
ENVIRONMENTAL			
<p>7. To minimise contributions to climate change and consider climate change adaptation.</p>	<ul style="list-style-type: none"> Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? Offer opportunities to increase energy efficiency? Offer opportunities to increase the use of renewable energy? Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	<p>The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 400m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	<p>++</p>
<p>8. To improve air quality.</p>	<ul style="list-style-type: none"> Offer opportunities to minimise emissions of airborne pollutants? Offer opportunities to remove air pollutants (e.g. by trees)? 	<p>The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.</p>	<p>i/?</p>
<p>9. To reduce flood risk, protect and enhance water sources.</p>	<ul style="list-style-type: none"> Deliver development directed towards areas of least flood risk? Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 	<p>As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.</p>	<p>+</p>

SA Objective	Assessment Criteria - Does the site(LE259)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs</p>	<ul style="list-style-type: none"> ● Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? ● Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? ● Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is within 100m of Brough Park Fields (LNR), the nearest designated asset, and, as such, is considered that development could have an effect on this asset, at least a short term disturbance of this habitat, if not long term. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a significant negative effect on this Objective, however the exact effects are uncertain.</p>	<p>--/?</p>
<p>11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> ● Help safeguard the best and most versatile agricultural land? ● Deliver development that helps to minimise the loss of greenfield land? ● Offer opportunities to reduce land contamination / instability? ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 	<p>As noted, this site has been assessed as being on greenfield land. However the land has also been assessed as grade 4 ALC land so development of this site could not result in the loss of best and most versatile land. Overall, this site has been assessed as having a negative effect on this Objective.</p>	<p>-</p>
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	<p>As per the previous objective, the development of this site could not enable the re-use or loss of existing buildings. However, there is scope that development could use sustainable materials and increase the demand for local resources. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	<p>0</p>
<p>13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.</p>	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>The site is within 50m of one grade II listed asset and 400m of a further three grade II listed assets and a scheduled monument. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. Overall, this site has been assessed as having a significant negative effect on this Objective, however the exact effects are uncertain.</p>	<p>--/?</p>
<p>14. To protect and enhance the character and appearance of the landscape including historic</p>	<ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? 	<p>The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location</p>	<p>+</p>

SA Objective	Assessment Criteria - Does the site(LE259)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>landscape and other natural assets and resources.</p>	<ul style="list-style-type: none"> ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>of the site, it is considered that there could be effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a positive effect on this Objective.</p>	0
<p>15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.</p>	<ul style="list-style-type: none"> ● Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? ● Offer opportunities to help support tourism and the visitor economy? 	<p>The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Similarly, the site is located within the Churnet Valley Area as an area for sustainable tourism and rural regeneration although its location near to Brough Park Fields (LNR) could detract from this. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
ECONOMIC			
<p>16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy</p>	<ul style="list-style-type: none"> ● Deliver development that helps to safeguard shops and services in existing centres? ● Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	<p>The proposed development of a residential site with access to the town centre of Leek has scope to have a positive effect on the vitality and viability of Leek and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.</p>	+
<p>17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth</p>	<ul style="list-style-type: none"> ● Help provide a balanced portfolio of employment land in sustainable locations? ● Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	<p>The development of this site could encourage investment in people and infrastructure through developer contributions although this could be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
<p>18. To encourage and support a high and stable level of employment</p>	<ul style="list-style-type: none"> ● Help meet the employment needs of local people? ● Help increase economic activity levels? ● Improve physical accessibility to jobs? ● Support higher income levels for local residents? 	<p>The site is within 500m of existing areas of employment within the town or District and, as such, could provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
<p>Summary of overall assessment and likely significant effects:</p>			

SA Objective	Assessment Criteria - Does the site(LE259)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<p>The proposed delivery of circa 50 dwellings is considered to have a significant positive effect, as could the site's proximity to services, facilities and existing areas of employment. However, the proximity to historic assets and a LNR are assessed as being significant negative effects. The development of greenfield land, grade 4 ALC land is assessed as being a negative effect.</p>

SOCIAL			
<p>1. To improve community cohesion and the quality of where people work and live.</p>	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	<p>As the site is located within the town centre of Leek it could be considered that the redevelopment of this brownfield site could help to improve the social and environmental quality of the town centre. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.</p>	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>Given the town centre location of this site, it can be considered that the site would be in proximity to a wide range of key services and facilities. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
<p>3. To improve health and reduce health inequalities.</p>	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The site is within 800m of a GP surgery and a number of areas of open space within the town. The development of this site for employment purposes should also have a positive effect on health. However, it should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through, for example, developer contributions. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+

SA Objective	Assessment Criteria - Does the site(LE073)...?	Commentary on likely nature of effects of site allocation	Overall assessment
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.	+
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	This site has been proposed for employment uses with regards to this assessment. Therefore the development would provide no housing. Overall, this site has been assessed as having a neutral effect on this Objective.	0
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? ● Support the use of public transport? ● Support safe walking and cycling? ● Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	As noted previously, the site is within 800m of the town centre of Leek and a GP surgery and adjacent to the open countryside which should reduce the need to travel within the town. Similarly, the site is within 500m of a bus stop. Overall, this site has been assessed as having a positive effect on this Objective.	+
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? ● Offer opportunities to increase the use of renewable energy? ● Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 400m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a significant positive effect on this Objective.	++

As such, the effect of development of this site against this objective would be mixed. Overall, the site has been assessed as having a neutral effect on this objective.</p>	<p>0</p>
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	<p>As per the previous objective, the development of a brownfield and greenfield, urban ALC site could have a mixed effect on this objective due to the loss of existing buildings but also the scope for use of sustainable materials. Overall, this objective has been assessed as having a neutral effect on this Objective.</p>	<p>0</p>
<p>13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.</p>	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>There are no heritage assets within 400m of the site. Although dependent on proposal specific information, there is limited scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. It should be noted that the site is within 400m of Leek Conservation Area which has been placed on the Heritage at Risk register by Historic England. Overall, this site has been assessed as having a positive effect on this Objective, however the exact effects are uncertain.</p>	<p>+/?</p>
<p>14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be limited effects on the landscape character. Proposal specific information is required to assess the impact upon the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a positive effect on this Objective.</p>	<p>+</p>

SA Objective	Assessment Criteria - Does the site(LE014 & LE015)...?	Commentary on likely nature of effects of site allocation	Overall assessment
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? Offer opportunities to help support tourism and the visitor economy? 	Given the proposed employment use of this site and its location, there is scope that the site could support opportunities for investment in culture and tourism and should have a positive effect on the local economy. Similarly, the site is located within the Churnet Valley Area as an area for sustainable tourism and rural regeneration. Overall, this site has been assessed as having a positive effect on this objective.	+
ECONOMIC			
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed development of an employment site within the town centre has the scope to have a positive effect on the vitality and viability of Leek and the wider District, as new employment could be expected to increase footfall in the nearby town centre. Overall, this site has been assessed as having a significant positive effect on this objective.	++
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site and the proposed employment use of the site could be considered to have a positive effect on businesses and the residents of Leek as it could strengthen and diversify the economy. Overall, this has been assessed as having a significant positive effect on this Objective.	++
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	The site is within 500m of existing areas of employment within the town or District and, as such, could provide sufficient accessible employment opportunities for prospective residents as well as new employment provision on site. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
Summary of overall assessment and likely significant effects:			
The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the accessibility of other services and facilities is likely to have a significant positive effect, as could the proposed delivery of circa 30 dwellings.			

Table 12.17

SA Objective	Assessment Criteria - Does the site(LE067)...?	Commentary on likely nature of effects of site allocation	Overall assessment
SOCIAL			
<p>1. To improve community cohesion and the quality of where people work and live.</p>	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	<p>As the site is located on the edge of the town centre of Leek it could be considered that the redevelopment of this mixed brownfield and greenfield site could help to improve the social and environmental quality of the town centre. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.</p>	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>Regardless of the edge of town centre location of this site, it can be considered that the site would be in relatively proximity to a wide range of key services and facilities. It should be noted that the site is in proximity to Leek High Specialist Technology School and Leek First School. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
<p>3. To improve health and reduce health inequalities.</p>	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The site is within 800m of a GP surgery and a number of areas of open space within the town. The mixed use development of this should also have a positive effect on health, as could the nearby open space area to the east of the site. However, it should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through, for example, developer contributions. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++

SA Objective	Assessment Criteria - Does the site(LE067)...?	Commentary on likely nature of effects of site allocation	Overall assessment
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	<p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	<p>Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 30 dwellings, and therefore also provide a quantum of affordable housing on site. It is acknowledged that the site is proposed as mixed use which may reduce the quantum of housing delivered by this site. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? ● Support the use of public transport? ● Support safe walking and cycling? ● Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>The town centre location of this site means that it is within 500m of a number of bus stops as well as a range of other services and facilities. It could be considered that The site could have a positive effect on walking and cycling given the proximity of open space to the site. Overall, the site has been assessed as having a positive effect on this objective.</p>	+
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? ● Offer opportunities to increase the use of renewable energy? ● Deliver development is in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	<p>The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 800m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
8. To improve air quality.	<ul style="list-style-type: none"> ● Offer opportunities to minimise emissions of airborne pollutants? ● Offer opportunities to remove air pollutants (e.g. by trees)? 	<p>The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.</p>	i/?

SA Objective	Assessment Criteria - Does the site(LE067)...?	Commentary on likely nature of effects of site allocation	Overall assessment
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> ● Deliver development directed towards areas of least flood risk? ● Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? ● Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? ● Offer opportunities to encourage water efficiency and demand management? 	<p>As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.</p>	+
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> ● Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? ● Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? ● Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is over 750m away from Brough Park Fields (LNR) and, as such, is considered to have no effect on this asset. The Ecological Study (2015) notes that the site has mostly low biodiversity value overall, though as there is 1 building present on site that could potentially support roosting bats the site is afforded ecological importance. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	-/?
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> ● Help safeguard the best and most versatile agricultural land? ● Deliver development that helps to minimise the loss of greenfield land? ● Offer opportunities to reduce land contamination / instability? ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 	<p>As noted, this site has been assessed as being both brownfield and greenfield land. As such, the effect of development of this site against this objective would be mixed. Overall, the site has been assessed as having a neutral effect on this objective.</p>	0
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	<p>As per the previous objective, the development of a brownfield and greenfield site could have a mixed effect on this objective due to the loss of existing buildings but also the scope for use of sustainable materials. Overall, this objective has been assessed as having a neutral effect on this Objective.</p>	0

<p>1. To improve community cohesion and the quality of where people work and live.</p>	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	<p>As the site is located on the edge of the town centre of Leek it could be considered that the redevelopment of this brownfield site could help to improve the social and environmental quality of the town centre. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.</p>	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>Given the edge of town centre location of this site, it can be considered that the site would be in relatively proximity to a wide range of key services and facilities. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
<p>3. To improve health and reduce health inequalities.</p>	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The site is within 800m of a GP surgery, however there is limited access to nearby areas of open space within the town. The development of this site for both employment and residential purposes should also have a positive effect on health. However, it should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through, for example, developer contributions. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+

SA Objective	Assessment Criteria - Does the site(LE116)...?	Commentary on likely nature of effects of site allocation	Overall assessment
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.	+
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 21 dwellings, and therefore also provide a quantum of affordable housing on site. It is acknowledged that the site is proposed as mixed use which may reduce the quantum of housing delivered by this site. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? ● Support the use of public transport? ● Support safe walking and cycling? ● Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	The town centre location of this site means that it is within 500m of a number of bus stops as well as a range of other services and facilities. As noted previously, it does have good access to a wide range of services and facilities within the town centre. Overall, the site has been assessed as having a positive effect on this objective.	+
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? ● Offer opportunities to increase the use of renewable energy? ● Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 400m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
8. To improve air quality.	<ul style="list-style-type: none"> ● Offer opportunities to minimise emissions of airborne pollutants? ● Offer opportunities to remove air pollutants (e.g. by trees)? 	The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.	1/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> ● Deliver development directed towards areas of least flood risk? 	As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The	+

SA Objective	Assessment Criteria - Does the site(LE116)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 	<p>development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.</p>	
<p>10. To identify, conserve and enhance biodiversity resources and to test the plans policies and proposals on European Sites and SSSIs</p>	<ul style="list-style-type: none"> Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is over 750m away from Brough Park Fields (LNR) and, as such, is considered to have no effect on this asset. The Ecological Study (2015) notes that the site has mostly low biodiversity value overall and is set within an urban environment which only has scattered trees as a habitat with no connectivity to the wider countryside which lowers the biodiversity potential of the area considerably. However, the presence of two buildings and two trees with potential to support roosting bats warrants the site being attributed ecological importance. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	<p>-/?</p>
<p>11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> Help safeguard the best and most versatile agricultural land? Deliver development that helps to minimise the loss of greenfield land? Offer opportunities to reduce land contamination / instability? Deliver development that helps reduce the amount of derelict land? Offer opportunities to protect notable geological and geomorphological features? 	<p>The site has been assessed as being a brownfield site, similarly it is classified as urban ALC land. As such, the development of this site could avoid the loss of best and most versatile agricultural land. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	<p>++</p>
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> Offer opportunities to reduce waste generation? Offer opportunities to maximise the re-use of existing buildings? Offer opportunities to increase the use of building materials from sustainable sources? 	<p>The development of this brownfield site could enable the re-use of existing buildings within the town centre. Dependent on proposal specific information, there is scope that development could incorporate sustainable materials. Overall, this site has been assessed as having a positive effect on this Objective.</p>	<p>+</p>

SA Objective	Assessment Criteria - Does the site(LE116)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.</p>	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>The site is within 400m of three scheduled ancient monuments, one grade I listed asset, one grade II* listed asset and seventy seven grade II listed assets. It is considered that the development of this site could affect the setting of these assets. It should be noted that the site is within 400m of Leek Conservation Area which has been placed on the Heritage at Risk register by Historic England. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	<p>-/?</p>
<p>14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be limited effects on landscape character. Proposal specific information is required to assess the impact upon the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a positive effect on this Objective.</p>	<p>+</p>
<p>15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.</p>	<ul style="list-style-type: none"> ● Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? ● Offer opportunities to help support tourism and the visitor economy? 	<p>Given the proposed employment use of this site and its location, there is scope that the site could support opportunities for investment in culture and tourism and should have a positive effect on the local economy. Similarly, the site is located within the Churnet Valley Area as an area for sustainable tourism and rural regeneration. Overall, this site has been assessed as having a positive effect on this objective.</p>	<p>+</p>
ECONOMIC			
<p>16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy</p>	<ul style="list-style-type: none"> ● Deliver development that helps to safeguard shops and services in existing centres? ● Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	<p>The proposed development of an employment site within the town centre has the scope to have a positive effect on the vitality and viability of Leek and the wider District, as new employment could be expected to increase footfall in the nearby town centre. Overall, this site has been assessed as having a significant positive effect on this objective.</p>	<p>++</p>
<p>17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth</p>	<ul style="list-style-type: none"> ● Help provide a balanced portfolio of employment land in sustainable locations? ● Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	<p>The development of this site and the proposed employment use of the site could be considered to have a positive effect on businesses and the residents of Leek as it could strengthen and diversify the economy. Overall, this has been assessed as having a significant positive effect on this Objective.</p>	<p>++</p>

SA Objective	Assessment Criteria - Does the site(LE116)...?	Commentary on likely nature of effects of site allocation	Overall assessment
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	The site is within 500m of existing areas of employment within the town or District, notably Barnfields Industrial Estate, and, as such, could provide sufficient accessible employment opportunities for prospective residents as well as new employment provision on site. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
<p>Summary of overall assessment and likely significant effects:</p> <p>The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the accessibility of other services and facilities is likely to have a significant positive effect, as could the proposed delivery of circa 21 dwellings and development of brownfield, urban ALC land. However, the site is in proximity to historic assets and a Local Nature Reserve which is likely to have a negative effect, as could the ecological value of the site.</p>

However the site is within 400m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
8. To improve air quality.	<ul style="list-style-type: none"> Offer opportunities to minimise emissions of airborne pollutants? Offer opportunities to remove air pollutants (e.g. by trees)? 	<p>The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.</p>	1/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Deliver development directed towards areas of least flood risk? Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? 	<p>As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate</p>	+

SA Objective	Assessment Criteria - Does the site(LEZ19)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 	<p>against this. Overall, this site has been assessed as having a positive effect on this objective.</p>	
<p>10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs</p>	<ul style="list-style-type: none"> Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is over 500m away from Brough Park Fields (LNR) and, as such, is considered to have no effect on this asset. The Ecological Study (2015) notes that the site has very low biodiversity value overall with extremely poor connectivity to the wider countryside, is set within an urban environment and only has one tree and species poor amenity grassland with no connectivity to the wider countryside. However, the tree and building have some potential to support roosting bats therefore the site is attributed ecological importance. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	-/?
<p>11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> Help safeguard the best and most versatile agricultural land? Deliver development that helps to minimise the loss of greenfield land? Offer opportunities to reduce land contamination / instability? Deliver development that helps reduce the amount of derelict land? Offer opportunities to protect notable geological and geomorphological features? 	<p>The site has been assessed as being a brownfield site, similarly it is classified as urban ALC land. As such, the development of this site could avoid the loss of best and most versatile agricultural land. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> Offer opportunities to reduce waste generation? Offer opportunities to maximise the re-use of existing buildings? Offer opportunities to increase the use of building materials from sustainable sources? 	<p>The development of this brownfield site could enable the re-use of existing buildings within the town centre. Dependent on proposal specific information, there is scope that development could incorporate sustainable materials. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>13. To protect and enhance the character of towns / villages and other heritage and</p>	<ul style="list-style-type: none"> Deliver development that helps ensure the continued protection and enhancement of cultural 	<p>The site is within 400m of one grade II* listed asset and 10 grade II listed assets. It is considered that the development of this site could affect the setting of these assets. It should be noted that the site is</p>	-/?

SA Objective	Assessment Criteria - Does the site(LE219)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>archaeological assets along with their settings.</p>	<ul style="list-style-type: none"> and historic heritage assets (designated and non-designated assets) along with their settings? Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>within 400m of Leek Conservation Area which has been placed on the Heritage at Risk register by Historic England. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	
<p>14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>	<ul style="list-style-type: none"> Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Deliver development that maximises re-use of brownfield land? Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be limited effects on landscape character. Proposal specific information is required to assess the impact upon the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.</p>	<ul style="list-style-type: none"> Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? Offer opportunities to help support tourism and the visitor economy? 	<p>Given the proposed employment use of this site and its location, there is scope that the site could support opportunities for investment in culture and tourism and should have a positive effect on the local economy. Similarly, the site is located within the Churnet Valley Area as an area for sustainable tourism and rural regeneration. Overall, this site has been assessed as having a positive effect on this objective.</p>	+
ECONOMIC			
<p>16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy</p>	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	<p>The proposed development of an employment site within the town centre has the scope to have a positive effect on the vitality and viability of Leek and the wider District, as new employment could be expected to increase footfall in the nearby town centre. Overall, this site has been assessed as having a significant positive effect on this objective.</p>	++
<p>17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth</p>	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	<p>The development of this site and the proposed employment use of the site could be considered to have a positive effect on businesses and the residents of Leek as it could strengthen and diversify the economy. Overall, this has been assessed as having a significant positive effect on this Objective.</p>	++

SA Objective	Assessment Criteria - Does the site(LE219)...?	Commentary on likely nature of effects of site allocation	Overall assessment
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	The site is within 500m of existing areas of employment within the town or District and, as such, could provide sufficient accessible employment opportunities for prospective residents as well as new employment provision on site. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
<p>Summary of overall assessment and likely significant effects:</p> <p>The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the development of brownfield, urban ALC land is likely to have a significant positive effect. However, the site's proximity to historic assets and some ecological importance is likely to have a negative effect.</p>

SOCIAL			
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> Make a positive contribution towards community cohesion? Offer opportunity to improve neighbourhood quality? Offer opportunity to provide open space and support Green Infrastructure? Risk unacceptable light and noise pollution? Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	As the site is located on the edge of the town centre of Leek it could be considered that the redevelopment of this brownfield site could help to improve the social and environmental quality of the town centre. Overall, this site has been assessed as having a positive effect on this Objective.	+
2. To advance equality of opportunity between all persons and eliminate social	<ul style="list-style-type: none"> Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, 	Given the edge of town centre location of this site, the site would be in relatively proximity to a wide range of key services and facilities. Overall, this site has been assessed as having a significant positive effect on this Objective.	++

SA Objective	Assessment Criteria - Does the site(LE220)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>exclusion by improving access to jobs, services and facilities.</p>	<ul style="list-style-type: none"> ● pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 		
<p>3. To improve health and reduce health inequalities.</p>	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The site is within 800m of a GP surgery, however there is limited access to nearby areas of open space within the town. The development of this site for both employment and residential purposes should also have a positive effect on health. However, it should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through, for example, developer contributions. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>4. To minimise opportunities for crime and reduce the fear of crime.</p>	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	<p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.</p>	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	<p>Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 10 dwellings and could not significantly contribute to housing need in the District. It is acknowledged that the site is proposed as mixed use which may reduce the quantum of housing delivered by this site. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
<p>6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.</p>	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? ● Support the use of public transport? ● Support safe walking and cycling? ● Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>The town centre location of this site means that it is within 500m of a number of bus stops as well as a range of other services and facilities. As noted previously, it does have good access to a wide range of services and facilities within the town centre. Overall, the site has been assessed as having a positive effect on this objective.</p>	+
ENVIRONMENTAL			

SA Objective	Assessment Criteria - Does the site(LE220)...?	Commentary on likely nature of effects of site allocation	Overall assessment
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? Offer opportunities to increase energy efficiency? Offer opportunities to increase the use of renewable energy? Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	<p>The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 400m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
8. To improve air quality.	<ul style="list-style-type: none"> Offer opportunities to minimise emissions of airborne pollutants? Offer opportunities to remove air pollutants (e.g. by trees)? 	<p>The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.</p>	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Deliver development directed towards areas of least flood risk? Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 	<p>As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.</p>	+
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is within 500m Brough Park Fields (LNR) and, as such, there is scope that this site could have an effect upon its setting, albeit limited. The Ecological Study (2015) notes that the site has very low biodiversity value overall with extremely poor connectivity to the wider countryside and is set within an urban environment with no vegetative habitats present on site. The site is however afforded ecological importance due to potential for the building to support roosting bats. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	-/?
11. To safeguard the best and most versatile agricultural	<ul style="list-style-type: none"> Help safeguard the best and most versatile agricultural land? 	<p>The site has been assessed as being a brownfield site, similarly it is classified as urban ALC land. As such, the development of this site</p>	++

SA Objective	Assessment Criteria - Does the site(LE220)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> ● Deliver development that helps to minimise the loss of greenfield land? ● Offer opportunities to reduce land contamination / instability? ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 	<p>could avoid the loss of best and most versatile agricultural land. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	<p>The development of this brownfield site could enable the re-use of existing buildings within the town centre. Dependent on proposal specific information, there is scope that development could incorporate sustainable materials. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>13. To protect and enhance the character of towns / villages and other heritage and geological assets along with their settings.</p>	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>The site is within 50m of two grade II listed assets and within 400m of four scheduled ancient monuments. The site is in proximity to a number of listed buildings including one grade II* listed building and fifty four grade II listed buildings. The Big Mill and the Front Boundary Wall of The Big. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of the historical heritage assets and its setting. It should be noted that the site is within 400m of Leek Conservation Area which has been placed on the Heritage at Risk register by Historic England. Overall, this site has been assessed as having a significant negative effect on this Objective, however the exact effects are uncertain.</p>	--/?
<p>14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be limited effects on landscape character. Proposal specific information is required to assess the impact upon the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+

SA Objective	Assessment Criteria - Does the site (Cornhill)...?	Commentary on likely nature of effects of site allocation	Overall assessment
SOCIAL			
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	As the site is located on the edge of the town centre of Leek it could be considered that the redevelopment of this brownfield site could help to improve the social and environmental quality of the town centre. Overall, this site has been assessed as having a positive effect on this Objective.	+
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	The out of town location of this site means that the key services and facilities could be more than 800m away from the site. However, there is scope that, due to the size of the site, some services and facilities may be provided on site. Overall, this site has been assessed as having a positive effect on this Objective.	+
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	The site is within 1,200m of a GP Surgery and adjacent to an area of open space. This should support healthy lifestyles and well-being for residents and support recreational activity and access to such facilities. However, it should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through, for example, developer contributions. Overall, this site has been assessed as having a positive effect on this Objective.	+
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.	+

SA Objective	Assessment Criteria - Does the site (Cornhill)...?	Commentary on likely nature of effects of site allocation	Overall assessment
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? Offer opportunities to enable people to meet their needs within their existing communities? Offer opportunities to ensure that people can afford their housing? 	Based on the Cornhill Concept Plan within the Churnet Valley Masterplan SPD, it is considered that the site could accommodate circa 244 dwellings and could not significantly contribute to housing need in the District. It is acknowledged that the site is proposed as mixed use which may reduce the quantum of housing delivered by this site. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> Offer opportunities to minimise impacts on existing traffic congestion? Support the use of public transport? Support safe walking and cycling? Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	Given the edge of town location of this site, it is within 500m of a number of bus stops as well as a range of other services and facilities. As noted previously, it does have good access to a wide range of services and facilities within the town centre. Overall, the site has been assessed as having a positive effect on this objective.	++
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? Offer opportunities to increase energy efficiency? Offer opportunities to increase the use of renewable energy? Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 1,200m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a neutral effect on this Objective.	0
8. To improve air quality.	<ul style="list-style-type: none"> Offer opportunities to minimise emissions of airborne pollutants? Offer opportunities to remove air pollutants (e.g. by trees)? 	The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Deliver development directed towards areas of least flood risk? Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? 	Part of the site is located within flood zone 3 and an area which highlights that communities are at risk from fluvial flooding as noted in the SFFA. The development of this could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a significant negative effect on this objective.	--

SA Objective	Assessment Criteria - Does the site (Corthill)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<ul style="list-style-type: none"> Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 	<ul style="list-style-type: none"> Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is within 250m from Ladderedge Country Park (LNR) and, as such, there is scope that this site could have an effect upon its setting. This site has not been subject to an ecology survey, so the exact effects are uncertain. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a significant negative effect on this Objective, however the exact effects are uncertain.</p>	--/?
<p>10. Overall, this site has been assessed as having a positive effect on this Objective.</p>	-
<p>15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.</p>	<ul style="list-style-type: none"> ● Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? ● Offer opportunities to help support tourism and the visitor economy? 	<p>Given the proposed employment use of this site and its location, there is scope that the site could support opportunities for investment in culture and tourism and should have a positive effect on the local economy. Similarly, the site is located within the Churnet Valley Area as an area for sustainable tourism and rural regeneration. Overall, this site has been assessed as having a positive effect on this objective.</p>	+
ECONOMIC			
<p>16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy</p>	<ul style="list-style-type: none"> ● Deliver development that helps to safeguard shops and services in existing centres? ● Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	<p>The proposed development of a mixed use site on the edge of the town centre has the scope to have a positive effect on the vitality and viability of Leek and the wider District, as new employment and residents could be expected to increase footfall in the nearby town centre. Overall, this site has been assessed as having a positive effect on this objective.</p>	++
<p>17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth</p>	<ul style="list-style-type: none"> ● Help provide a balanced portfolio of employment land in sustainable locations? ● Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	<p>The development of this site and the proposed mixed use of the site could be considered to have a positive effect on businesses and the residents of Leek as it could strengthen and diversify the economy. Overall, this has been assessed as having a positive effect on this Objective.</p>	++
<p>18. To encourage and support a high and stable level of employment</p>	<ul style="list-style-type: none"> ● Help meet the employment needs of local people? ● Help increase economic activity levels? 	<p>The site is within 500m of existing areas of employment within the town or District and, as such, could provide sufficient accessible employment opportunities for prospective residents as well as new</p>	++

SA Objective	Assessment Criteria - Does the site (Corrhill)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> ● Improve physical accessibility to jobs? ● Support higher income levels for local residents? 	<p>employment provision on site. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	
<p>Summary of overall assessment and likely significant effects:</p> <p>The development of new employment premises should have a significant positive effect upon the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. Similarly, the proposed delivery of circa 244 dwellings is considered to have a significant positive effect. The site's accessibility to services, facilities and open space is likely to have a positive effect. However, the site's partial location within a flood zone is likely to have a significant negative effect, as could its proximity to designated and historic assets.</p>

SOCIAL			
<p>1. To improve community cohesion and the quality of where people work and live.</p>	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	<p>The site is outside of the settlement boundary of Leek and separate from the town of Leek when considered independently, however other there could be linkages through other allocated sites. The development of this site, a mixed brownfield and greenfield site that is set within the open countryside could be expected to have an effect on Green Infrastructure and environmental quality. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-
<p>2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.</p>	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>As noted, the site is outside of the settlement boundary of Leek and is remote from the town. The site would be within 800m of a wide range of services and facilities but not within 400m of the town centre of Leek. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>3. To improve health and reduce health inequalities.</p>	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The location of this site, outside the edge of the settlement boundary, should provide residents with good access to the open countryside and adjacent to an area of open space which should help to support healthy lifestyles. Similarly, the site is within 1,200m of a GP surgery. However, it should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through,</p>	+

SA Objective	Assessment Criteria - Does the site(LE066)...?	Commentary on likely nature of effects of site allocation	Overall assessment
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	<p>for example, developer contributions. Overall, this site has been assessed as having a positive effect on this Objective.</p> <p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	<p>Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 50 dwellings, and therefore also provide a quantum of affordable housing on site. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? ● Support the use of public transport? ● Support safe walking and cycling? ● Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>As noted previously, the site is within 800m of the town centre of Leek and 1,200m of a GP surgery and within the open countryside which should reduce the need to travel within the town as the site is within 500m of a bus stop. However, the site has limited access to the transport network at present. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? ● Offer opportunities to increase the use of renewable energy? ● Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	<p>The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 800m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
8. To improve air quality.	<ul style="list-style-type: none"> ● Offer opportunities to minimise emissions of airborne pollutants? ● Offer opportunities to remove air pollutants (e.g. by trees)? 	<p>The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.</p>	i/?

SA Objective	Assessment Criteria - Does the site(LE066)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>9. To reduce flood risk, protect and enhance water sources.</p>	<ul style="list-style-type: none"> ● Deliver development directed towards areas of least flood risk? ● Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? ● Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? ● Offer opportunities to encourage water efficiency and demand management? 	<p>As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.</p>	<p>+</p>
<p>10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs</p>	<ul style="list-style-type: none"> ● Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? ● Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? ● Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is more than 1,250m from Brough Park Fields (LNR), the nearest designated asset, and, as such, is considered that development could have no effect on this asset. The Ecological Study (2015) notes that the site consists mainly of common habitats, mixed planted woodland, buildings, amenity grassland and associated gardens, allotments and amenity grassland and the site is fairly isolated with little connectivity to the wider countryside, apart from being located 20m away from LE140. The woodland and habitat mosaic as well as the buildings that could potentially support roosting bats and therefore the whole site has been attributed some ecological value. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	<p>-/?</p>
<p>11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> ● Help safeguard the best and most versatile agricultural land? ● Deliver development that helps to minimise the loss of greenfield land? ● Offer opportunities to reduce land contamination / instability? ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 	<p>As noted, this site has been assessed as being on mixed greenfield and greenfield land. However the land has also been assessed as grade 4 ALC land so development of this site could not result in the loss of best and most versatile land. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	<p>0</p>
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? 	<p>The development of this mixed greenfield and brownfield site could enable the re-use of existing buildings within the town centre.</p>	<p>+</p>

SA Objective	Assessment Criteria - Does the site(LE066)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> Offer opportunities to maximise the re-use of existing buildings? Offer opportunities to increase the use of building materials from sustainable sources? 	<p>Dependent on proposal specific information, there is scope that development could incorporate sustainable materials. Overall, this site has been assessed as having a positive effect on this Objective.</p>	
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and undesignated assets) along with their settings? Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>The site is more than 400m from a listed asset, the nearest asset is circa 450m away from the site to the north west. Dependent on proposal specific information, there is limited scope that development of this site could lead to the deterioration of heritage assets. Overall, this site has been assessed as having a positive effect on this Objective, however the exact effects are uncertain.</p>	+/?
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Deliver development that maximises re-use of brownfield land? Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? Offer opportunities to help support tourism and the visitor economy? 	<p>The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Similarly, the site is located within the Churnet Valley Area as an area for sustainable tourism and rural regeneration although its location adjacent to the open countryside could detract from this. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
ECONOMIC			
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	<p>The proposed development of a residential site with access to the town centre of Leek has scope to have a positive effect on the vitality and viability of Leek and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.</p>	+

SA Objective	Assessment Criteria - Does the site(LE066)...?	Commentary on likely nature of effects of site allocation	Overall assessment
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site could encourage investment in people and infrastructure through developer contributions although this could be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.	0
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	The site is over 1,000m to existing areas of employment within the town or District and, as such, could fail to provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a negative effect on this Objective.	-
<p>Summary of overall assessment and likely significant effects:</p> <p>The proposed delivery of circa 50 dwellings is considered to have a significant positive effect. Similarly, the site is located away from designated heritage assets and has good accessibility to services and facilities which is likely to have a positive effect. However, the ecological value of the site is likely to have a negative effect as well as the inaccessibility of existing areas of employment.</p>

Overall, this site has been assessed as having a neutral effect on this Objective.</p>	
<p>3. To improve health and reduce health inequalities.</p>	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The location of this site, on the border of the settlement boundary, should provide residents with good access to the open countryside and help to support healthy lifestyles. However, the site is in excess of 1,200m of a GP surgery. However, it should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through, for example, developer contributions. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
<p>4. To minimise opportunities for crime and reduce the fear of crime.</p>	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	<p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.</p>	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	<p>Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 20 dwellings, and therefore also provide a quantum of affordable housing on site. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
<p>6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.</p>	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? ● Support the use of public transport? ● Support safe walking and cycling? ● Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>As noted previously, the site is further than 1,200m of the town centre of Leek, which could be expected to increase the need to travel within the town. However, it is adjacent to the open countryside. Similarly, the site is near to the A523 which has a number of bus stops and services serving it. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-

SA Objective	Assessment Criteria - Does the site(LE102)...? ENVIRONMENTAL	Commentary on likely nature of effects of site allocation	Overall assessment
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? ● Offer opportunities to increase the use of renewable energy? ● Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	<p>The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. Similarly, the site is more than 1,200m of the town centre and could increase the need to travel. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-
8. To improve air quality.	<ul style="list-style-type: none"> ● Offer opportunities to minimise emissions of airborne pollutants? ● Offer opportunities to remove air pollutants (e.g. by trees)? 	<p>The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.</p>	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> ● Deliver development directed towards areas of least flood risk? ● Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? ● Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? ● Offer opportunities to encourage water efficiency and demand management? 	<p>As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. However, the SFRA indicates that it is in an area which suggests communities may be at risk from fluvial flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.</p>	+
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> ● Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? ● Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? ● Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is more than 750m from Brough Park Fields (LNR), the nearest designated asset, and, as such, is considered that development could have no effect on this asset. The Ecological Study (2015) notes that the site itself has mostly low biodiversity value overall in terms of area as it consists solely of species poor improved grassland with adjacent semi-natural broadleaved woodland. The site is considered to have ecological importance due to the presence of tree with bat roosting potential and the adjacent broadleaved woodland. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	-/?

SA Objective	Assessment Criteria - Does the site(LE102)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> ● Help safeguard the best and most versatile agricultural land? ● Deliver development that helps to minimise the loss of greenfield land? ● Offer opportunities to reduce land contamination / instability? ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 	<p>As noted, this site has been assessed as being on greenfield land. Similarly, the land has also been assessed as grade 3 ALC land, so development of this site could result in the loss of best and most versatile land. Overall, this site has been assessed as having a significant negative effect on this Objective, however the exact effects are uncertain.</p>	<p>--/?</p>
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	<p>As per the previous objective, the development of this site could not enable the re-use or loss of existing buildings. However, there is scope that development could use sustainable materials and increase the demand for local resources. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	<p>0</p>
<p>13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.</p>	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and undesignated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>The site is adjacent to one grade II listed asset. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of this historical heritage asset and its setting. Overall, this site has been assessed as having a significant negative effect on this Objective, however the exact effects are uncertain.</p>	<p>--/?</p>
<p>14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	<p>0</p>

SA Objective	Assessment Criteria - Does the site(LE102)...?	Commentary on likely nature of effects of site allocation	Overall assessment
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? Offer opportunities to help support tourism and the visitor economy? 	The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Similarly, the site is located within the Churnet Valley Area as an area for sustainable tourism and rural regeneration although its location adjacent to the open countryside could detract from this. Overall, this site has been assessed as having a neutral effect on this Objective.	0
ECONOMIC			
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed development of a residential site has scope to have a positive effect on the vitality and viability of Leek and the wider District, however the Leek town centre is not easily accessible from the site which may reduce the effect on this objective. Overall, this has been assessed as having a neutral effect on this Objective.	0
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site could encourage investment in people and infrastructure through developer contributions although this could be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.	0
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	The site is over 1,000m to existing areas of employment within the town or District and, as such, could fail to provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a negative effect on this Objective.	-
<p>Summary of overall assessment and likely significant effects:</p> <p>The proposed delivery of circa 20 dwellings is considered to have a significant positive effect. However, the development of greenfield, grade 3 ALC land could have a significant negative effect, as could the site's proximity to historic assets. Similarly, the site is relatively inaccessible to services, facilities and areas of existing employment, has some ecological value which is likely to have a negative effect.</p>

Summary of overall assessment and likely significant effects:			
The proposed delivery of circa 95 dwellings is considered to have a significant positive effect. Similarly, the site has low ecological value and good accessibility to services, facilities and areas of employment which is likely to have a positive effect. However, the development of greenfield, grade 4 ALC land and the proximity of the site to historic assets is likely to have a negative effect.

<p>locations and including affordable / social /extra care housing.</p>	<ul style="list-style-type: none"> Offer opportunities to enable people to meet their needs within their existing communities? Offer opportunities to ensure that people can afford their housing? 	<p>site has been assessed as having a significant positive effect on this Objective.</p>	
<p>6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.</p>	<ul style="list-style-type: none"> Offer opportunities to minimise impacts on existing traffic congestion? Support the use of public transport? Support safe walking and cycling? Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>As noted previously, the site is within 800m of the town centre of Leek and 1,200m of a GP surgery and within the open countryside which should reduce the need to travel within the town. Similarly, the site is within 500m of a bus stop. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
ENVIRONMENTAL			
<p>7. To minimise contributions to climate change and consider climate change adaptation.</p>	<ul style="list-style-type: none"> Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? Offer opportunities to increase energy efficiency? Offer opportunities to increase the use of renewable energy? Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	<p>The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However, the site is within 800m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>8. To improve air quality.</p>	<ul style="list-style-type: none"> Offer opportunities to minimise emissions of airborne pollutants? Offer opportunities to remove air pollutants (e.g. by trees)? 	<p>The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.</p>	i/?
<p>9. To reduce flood risk, protect and enhance water sources.</p>	<ul style="list-style-type: none"> Deliver development directed towards areas of least flood risk? Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 	<p>As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.</p>	+

SA Objective	Assessment Criteria - Does the site (LE142A)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs</p>	<ul style="list-style-type: none"> ● Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? ● Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? ● Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is more than 1,000m from Brough Park Fields (LNR), the nearest designated asset, and, as such, is considered that development could have no effect on this asset. The Ecological Study (2015) notes that the site itself has 12 trees with bat potential and is given ecological value as a result, though the site and its species poor grassland is poorly connected to other more biodiverse habitats. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	<p>-/?</p>
<p>11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> ● Help safeguard the best and most versatile agricultural land? ● Deliver development that helps to minimise the loss of greenfield land? ● Offer opportunities to reduce land contamination / instability? ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 	<p>As noted, this site has been assessed as being on greenfield land. However, the land has also been assessed as grade 4 ALC land so development of this site could not result in the loss of best and most versatile land. Overall, this site has been assessed as having a negative effect on this Objective.</p>	<p>-</p>
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	<p>As per the previous objective, the development of this site could not enable the re-use or loss of existing buildings. However, there is scope that development could use sustainable materials and increase the demand for local resources. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	<p>0</p>
<p>13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.</p>	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and undesignated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>The site is within 400m of three grade II listed assets. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	<p>-/?</p>

SA Objective	Assessment Criteria - Does the site (LE142A)...?	Commentary on likely nature of effects of site allocation	Overall assessment
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Deliver development that maximises re-use of brownfield land? Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a neutral effect on this Objective.	0
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? Offer opportunities to help support tourism and the visitor economy? 	The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider District. Similarly, the increased population of both the town and the District may have a positive effect also. The site is located within the Churnet Valley Area as an area of sustainable tourism and rural regeneration although its location adjacent to the open countryside could detract from this. Overall, the site has been assessed as having a neutral effect on this Objective.	0
ECONOMIC			
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed development of a residential site with access to the town centre of Leek has scope to have a positive effect on the vitality and viability of Leek and the wider District, as new residents could be expected to increase football. Overall, this site has been assessed as having a positive effect on this Objective.	+
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site could encourage investment in people and infrastructure through developer contributions although this could be limited. However, the extent of this effect is uncertain. Overall, the site has been assessed as having a neutral effect on this Objective.	0
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	The site is within 1,000m of existing areas of employment within the town and, as such, could provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a positive effect on this Objective.	+
Summary of overall assessment and likely significant effects:

To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> ● Help safeguard the best and most versatile agricultural land? ● Deliver development that helps to minimise the loss of greenfield land? ● Offer opportunities to reduce land contamination / instability? ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 	<p>As noted, this site has been assessed as being on greenfield land. However, the land has also been assessed as grade 4 ALC land so development of this site could not result in the loss of best and most versatile land. Overall, this site has been assessed as having a negative effect on this Objective.</p>	0
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	<p>As per the previous objective, the development of this site could not enable the re-use or loss of existing buildings. However, there is scope that development could use sustainable materials and increase the demand for local resources. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	-/?
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and undesignated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and 	<p>The site is within 400m of two grade II listed assets. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	-/?

SA Objective	Assessment Criteria - Does the site (LE143)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<p>villages and maintain and strengthen local distinctiveness and sense of place?</p> <ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>The site could avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
<p>15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.</p>	<ul style="list-style-type: none"> ● Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? ● Offer opportunities to help support tourism and the visitor economy? 	<p>The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider District. Similarly, the increased population of both the town and the District may have a positive effect also. The site is located within the Churnet Valley Area as an area of sustainable tourism and rural regeneration although its location adjacent to the open countryside could detract from this. Overall, the site has been assessed as having a neutral effect on this Objective.</p>	0
ECONOMIC			
<p>16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy</p>	<ul style="list-style-type: none"> ● Deliver development that helps to safeguard shops and services in existing centres? ● Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	<p>The proposed development of a residential site with access to the town centre of Leek has scope to have a positive effect on the vitality and viability of Leek and the wider District, as new residents could be expected to increase football. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth</p>	<ul style="list-style-type: none"> ● Help provide a balanced portfolio of employment land in sustainable locations? ● Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	<p>The development of this site could encourage investment in people and infrastructure through developer contributions although this could be limited. However, the extent of this effect is uncertain. Overall, the site has been assessed as having a neutral effect on this Objective.</p>	0
<p>18. To encourage and support a high and stable level of employment</p>	<ul style="list-style-type: none"> ● Help meet the employment needs of local people? ● Help increase economic activity levels? 	<p>The site is not within 1,000m of existing areas of employment within the town and, as such, could fail to provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-

SA Objective	Assessment Criteria - Does the site (LE143A)...?	Commentary on likely nature of effects of site allocation	Overall assessment
SOCIAL			
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	<p>The site is outside of the settlement boundary of Leek. The development of this site, a greenfield site that is set within the open countryside could be expected to have an effect on Green Infrastructure and environmental quality. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage 	<p>As noted, the site is outside of the settlement boundary of Leek and is remote from the town. The site would be within 1,200m of a wide range of services and facilities and the town centre of Leek, however this may not effectively serve the needs of prospective residents. Overall,</p>	-

SA Objective	Assessment Criteria - Does the site (LE143A)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>this site has been assessed as having a negative effect on this Objective.</p>	
<p>3. To improve health and reduce health inequalities.</p>	<ul style="list-style-type: none"> Help improve health or access to health facilities? Help promote healthy lifestyles? Help to reduce health inequalities? Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The location of this site, on the edge of the settlement boundary, should provide residents with good access to the open countryside and help to support healthy lifestyles. However, the site is in excess of 1,200m of a GP surgery and is in proximity to one of the most deprived LSOAs in the District, Leek North, which is in the 20% most deprived nationally. It should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through, for example, developer contributions. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
<p>4. To minimise opportunities for crime and reduce the fear of crime.</p>	<ul style="list-style-type: none"> Deliver development that reduces actual levels of crime? Deliver development that helps to reduce fear of crime? 	<p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social / extra care housing.</p>	<ul style="list-style-type: none"> Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? Offer opportunities to enable people to meet their needs within their existing communities? Offer opportunities to ensure that people can afford their housing? 	<p>Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 135 dwellings and therefore also provide a quantum of affordable housing on site. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
<p>6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.</p>	<ul style="list-style-type: none"> Offer opportunities to minimise impacts on existing traffic congestion? Support the use of public transport? Support safe walking and cycling? Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>As noted previously, the site is within 1,200m of the town centre of Leek and a GP surgery and within the open countryside which should reduce the need to travel within the town. Similarly, the site is within 500m of a bus stop. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+

SA Objective	Assessment Criteria - Does the site (LE143A)...?	Commentary on likely nature of effects of site allocation	Overall assessment
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? ● Offer opportunities to increase the use of renewable energy? ● Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However, the site is within 1,200m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a positive effect on this Objective.	+
8. To improve air quality.	<ul style="list-style-type: none"> ● Offer opportunities to minimise emissions of airborne pollutants? ● Offer opportunities to remove air pollutants (e.g. by trees)? 	The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> ● Deliver development directed towards areas of least flood risk? ● Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? ● Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? ● Offer opportunities to encourage water efficiency and demand management? 	As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.	+
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> ● Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? ● Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? ● Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	The site is more than 1,250m from Brough Park Fields (LNR), the nearest designated asset, and, as such, is considered that development could have no effect on this asset. The Ecological Study (2015) notes that the site has fairly low biodiversity value overall but some connectivity to the wider countryside through hedgerows. Overall the site is attributed importance as there are two trees with potential to support roosting bats and a species rich hedgerow. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a neutral effect on this Objective.	0
11. To safeguard the best and most versatile agricultural land; improve versatile agricultural land; improve	<ul style="list-style-type: none"> ● Help safeguard the best and most versatile agricultural land? 	As noted, this site has been assessed as being on greenfield land. However, the land has also been assessed as grade 4 ALC land so	-

Core Strategy Broad Area EM2 Leekbrook

SA Objective	Assessment Criteria - Does the site (EM2)...?	Commentary on likely nature of effects of site allocation	Overall assessment
SOCIAL			
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> Make a positive contribution towards community cohesion? Offer opportunity to improve neighbourhood quality? Offer opportunity to provide open space and support Green Infrastructure? 	The development of this site, a greenfield site outside the development boundary, could be expected to have an effect on the Green Infrastructure and environmental quality. Overall, this site has been assessed as having a negative effect on this Objective.	-

SA Objective	Assessment Criteria - Does the site (EM2)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 		
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	The site is located on the edge of the village, it is within 400m of the village centre but has insufficient services and facilities to meet the needs of the community. It should be noted that Leekbrook does not have a primary or secondary school. Overall, this site has been assessed as having a significant negative effect on this Objective.	--
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	The location of this site should provide employees with good access to areas of open space which should help to support healthy lifestyles. It should be noted that Leekbrook does not have a GP surgery. Overall, this site has been assessed as having a positive effect on this Objective.	+
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.	+
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	This site has been proposed for employment uses with regards to this assessment. Therefore the development would provide no housing. Overall, this site has been assessed as having a neutral effect on this Objective.	0
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? 	As noted previously, the site is within 400m of the village centre of Leekbrook as well as being adjacent to an area of open space which should reduce the need to travel within the village. Similarly, the site	+

SA Objective	Assessment Criteria - Does the site (EM2)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> Support the use of public transport? Support safe walking and cycling? Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>is within 500m of a bus stop. Overall, this site has been assessed as having a positive effect on this Objective.</p>	
ENVIRONMENTAL			
<p>7. To minimise contributions to climate change and consider climate change adaptation.</p>	<ul style="list-style-type: none"> Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? Offer opportunities to increase energy efficiency? Offer opportunities to increase the use of renewable energy? Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	<p>The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However, the site is within 400m of the village centre and could reduce the need to travel. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
<p>8. To improve air quality.</p>	<ul style="list-style-type: none"> Offer opportunities to minimise emissions of airborne pollutants? Offer opportunities to remove air pollutants (e.g. by trees)? 	<p>The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.</p>	i/?
<p>9. To reduce flood risk, protect and enhance water sources.</p>	<ul style="list-style-type: none"> Deliver development directed towards areas of least flood risk? Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 	<p>Part of the site is located within flood zone 3 and an area which highlights that communities are at risk from fluvial flooding as noted in the SFRA. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a significant negative effect on this objective.</p>	--
<p>10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs</p>	<ul style="list-style-type: none"> Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? 	<p>The site is within 1,000m of Combes Valley SSSI, the nearest designated asset, and, as such, is considered to have an effect on this asset. The Ecological Study (2015) notes that the site at the time of survey appeared to have mostly low biodiversity value overall in terms of the marshy grassland area, however given the precautionary</p>	-/?

SA Objective	Assessment Criteria - Does the site (EM2)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> ● Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? ● Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>principle to ecological protection, and given the sub-optimal time of year the survey was carried out, it is recommended that another full floral survey is conducted at an appropriate time of year. The site also has some broadleaved woodland, scrub and riparian vegetation within its boundary, and is adjacent to an important mosaic of semi-natural broadleaved woodland, scrub, a stream and grasslands. Given that the SBI covers the majority of the site, and owing to the ecological importance of a third tier site designated for its ecological assemblage, it is recommended that any future development of this site is considered in line with paras 7, 9, 17, 109, 114 and 117 NPPF; and also in relation to the Council's own Core Strategy Policy NE1. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	-
<p>11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> ● Help safeguard the best and most versatile agricultural land? ● Deliver development that helps to minimise the loss of greenfield land? ● Offer opportunities to reduce land contamination / instability? ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 	<p>As noted, this site has been assessed as being on greenfield land. However, the land has also been assessed as grade 4 ALC land so development of this site could not result in the loss of best and most versatile land. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	<p>As per the previous objective, the development of this site could not enable the re-use or loss of existing buildings. However, there is scope that development could use sustainable materials and increase the demand for local resources. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
<p>13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.</p>	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and undesignated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and 	<p>The site is within 400m from one grade II* listed assets. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of historical heritage assets and their setting. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	-/?

SA Objective	Assessment Criteria - Does the site (EM2)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>	<p>villages and maintain and strengthen local distinctiveness and sense of place?</p> <ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>The site would be within 1,000m from Combes Valley SSSI and could increase external pressures on these sites. Given the location of the site, it is considered that there could be effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-
<p>15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.</p>	<ul style="list-style-type: none"> ● Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? ● Offer opportunities to help support tourism and the visitor economy? 	<p>The proposed employment use of this site provides scope for the development of this site to have a positive effect on investment in culture and tourism within the town and wider district, however this is dependent on proposal specific information. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
ECONOMIC			
<p>16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy</p>	<ul style="list-style-type: none"> ● Deliver development that helps to safeguard shops and services in existing centres? ● Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	<p>The proposed development of an employment site within the town centre has the scope to have a positive effect on the vitality and viability of Leekbrook and the wider District, as new employment could be expected to increase footfall in the nearby town centre. Overall, this site has been assessed as having a significant positive effect on this objective.</p>	++
<p>17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth</p>	<ul style="list-style-type: none"> ● Help provide a balanced portfolio of employment land in sustainable locations? ● Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	<p>The development of this site and the proposed employment use of the site could be considered to have a positive effect on businesses and the residents of Leekbrook as it could strengthen and diversify the economy. Overall, this has been assessed as having a significant positive effect on this Objective.</p>	++
<p>18. To encourage and support a high and stable level of employment</p>	<ul style="list-style-type: none"> ● Help meet the employment needs of local people? ● Help increase economic activity levels? ● Improve physical accessibility to jobs? ● Support higher income levels for local residents? 	<p>The site is proximity to areas of existing local employment provision as well as new employment provision generated by this site. Overall, this site has been assessed as having a significant positive effect on this objective.</p>	++

SA Objective	Assessment Criteria - Does the site (EM2)...?	Commentary on likely nature of effects of site allocation	Overall assessment
Summary of overall assessment and likely significant effects:			
<p>The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. The site's accessibility to open space is likely to have a positive effect. However, the site is relatively inaccessible to services and facilities and the site is located within a flood zone which is likely to have a significant negative effect. The development of greenfield, grade 4 ALC land is assessed as being a negative effect, as could the site's proximity to historic assets and a partial SBI designation.</p>			

Table 12.37

ADD01

Page 740

SA Objective	Assessment Criteria - Does the site (ADD01)...?	Commentary on likely nature of effects of site allocation	Overall assessment
SOCIAL			
10. To improve community cohesion and the quality of life where people work and live.	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	<p>The site is outside of the settlement boundary of Leek. The development of this site, a greenfield site that is set within the open countryside could be expected to have an effect on Green Infrastructure and environmental quality. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>The site is located on the edge of the settlement boundary and is more than 2,000m away from the town centre which could result in existing services and facilities being inaccessible and the needs of prospective residents not being addressed. However, it should be noted that the site is adjacent to Churnet View Middle School. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-

SA Objective	Assessment Criteria - Does the site (ADD01)...?	Commentary on likely nature of effects of site allocation	Overall assessment
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The location of this site, on the edge of the settlement boundary, should provide residents with good access to the open countryside and adjacent to an area of open space should help to support healthy lifestyles. Similarly, the site is within 800m of a GP surgery. However, it should be noted that the supply of health care services and facilities is currently adequate but is expected to be outstripped by future demand which may require additional investment through, for example, developer contributions. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	<p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development could include aspects of good design which could help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	<p>Based on the location and size of this site, it is considered that the site could accommodate circa 25 dwellings, and therefore also provide a quantum of affordable housing on site. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? ● Support the use of public transport? ● Support safe walking and cycling? ● Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>As noted previously, the site is within 800m of the town centre of Leek and a GP surgery and adjacent to the open countryside this should reduce the need to travel within the town. However, the site has limited access to the transport network at present. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? 	<p>The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However the site is within 800m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+

SA Objective	Assessment Criteria - Does the site (ADD01)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> Offer opportunities to increase the use of renewable energy? Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 		
8. To improve air quality.	<ul style="list-style-type: none"> Offer opportunities to minimise emissions of airborne pollutants? Offer opportunities to remove air pollutants (e.g. by trees)? 	The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Deliver development directed towards areas of least flood risk? Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 	As the site is located outside of a flood zone 2 or 3 area it can be considered that the site could not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.	+
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	The site is within 500m of Brough Park Fields (LNR), the nearest designated asset, and, as such, is considered that development could have an effect on this asset, at least a short term disturbance of this habitat, if not long term. This site has not been subject to an ecology survey, so the exact effects are uncertain. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.	-/?
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> Help safeguard the best and most versatile agricultural land? Deliver development that helps to minimise the loss of greenfield land? Offer opportunities to reduce land contamination / instability? 	As noted, this site has been assessed as being on greenfield land. However the land has also been assessed as grade 4 ALC land so development of this site would not result in the loss of best and most versatile land. Overall, this site has been assessed as having a negative effect on this Objective.	-

SA Objective	Assessment Criteria - Does the site (ADD01)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 		
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	As per the previous objective, the development of this site could not enable the re-use or loss of existing buildings. However, there is scope that development could use sustainable materials and increase the demand for local resources. Overall, this site has been assessed as having a neutral effect on this Objective.	0
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and undesignated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	The site is within 400m of a two grade II listed assets. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.	-/?
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	The site would avoid development within 1,000m of protected sites and could reduce external pressures on these sites. Given the location of the site, it is considered that there could be effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a positive effect on this Objective.	+
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> ● Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? ● Offer opportunities to help support tourism and the visitor economy? 	The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Similarly, the site is located within the Churnet Valley Area as an area for sustainable tourism and rural regeneration. Overall, this site has been assessed as having a positive effect on this Objective.	+
ECONOMIC			

SA Objective	Assessment Criteria - Does the site (ADD01)...?	Commentary on likely nature of effects of site allocation	Overall assessment
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> ● Deliver development that helps to safeguard shops and services in existing centres? ● Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed development of a residential site with access to the town centre of Leek has scope to have a positive effect on the vitality and viability of Leek and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.	+
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> ● Help provide a balanced portfolio of employment land in sustainable locations? ● Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site could encourage investment in people and infrastructure through developer contributions although this could be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.	0
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> ● Help meet the employment needs of local people? ● Help increase economic activity levels? ● Improve physical accessibility to jobs? ● Support higher income levels for local residents? 	The site is within 500m of existing areas of employment within the town or District and, as such, could provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
Summary of overall assessment and likely significant effects:			
The proposed delivery of circa 15 dwellings is considered to have a significant positive effect, as could the site's proximity to areas of existing employment. The site's accessibility to areas of open space is considered to have a positive effect. However, the site's proximity to designated and historic assets is likely to have a negative effect, as could the development of greenfield land, grade 4 ALC and the inaccessibility of services and facilities.

Overall, this site has been assessed as having an uncertain effect on this Objective.</p>	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> ● Deliver development directed towards areas of least flood risk? ● Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? ● Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? ● Offer opportunities to encourage water efficiency and demand management? 	<p>As the site is located outside of a flood zone 2 or 3 area it can be considered that the site would not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.</p>	+
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> ● Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? ● Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? ● Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is over 1,250m from both Gannister Quarry SSSI and Biddulph Valley Way (Whitemoor) (LNR), the nearest designated assets, and, as such, is considered to have no effect on these assets. The Ecological Study (2015) notes that the site has potential for protected species to be present due to the mosaic of habitats and habitat structure present, especially as the site is well connected to the wider countryside and on this basis the site is deemed to have ecological value. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	-/?
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> ● Help safeguard the best and most versatile agricultural land? ● Deliver development that helps to minimise the loss of greenfield land? ● Offer opportunities to reduce land contamination / instability? ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 	<p>The site has been assessed as being a brownfield site, similarly it is classified as urban ALC land. As such, the development of this site would avoid the loss of best and most versatile agricultural land. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++

SA Objective	Assessment Criteria - Does the site (BD004) ...?	Commentary on likely nature of effects of site allocation	Overall assessment
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	The development of this brownfield site could enable the re-use of existing buildings within the town centre. Dependent on proposal specific information, there is scope that development could incorporate sustainable materials. Overall, this site has been assessed as having a positive effect on this Objective.	+
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	The site is within 400m of one grade II listed asset. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.	-/?
14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.	<ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	The site would avoid development within 1,000m of protected sites and would reduce external pressures on these sites. Given the location of the site, it is considered that there would be limited effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a positive effect on this Objective.	+
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> ● Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? ● Offer opportunities to help support tourism and the visitor economy? 	The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Overall, this site has been assessed as having a positive effect on this Objective.	+
ECONOMIC			
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> ● Deliver development that helps to safeguard shops and services in existing centres? ● Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed development of a residential site with good access to the town centre of Biddulph has scope to have a positive effect on the vitality and viability of Biddulph and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.	+

SA Objective	Assessment Criteria - Does the site (BD004) ...?	Commentary on likely nature of effects of site allocation	Overall assessment
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The proposed development of a residential site with good access to the town centre of Biddulph has scope to have a positive effect on the vitality and viability of Biddulph and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.	+
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	The site is within 500m of existing areas of employment within the town or District and, as such, would provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
<p>Summary of overall assessment and likely significant effects:</p> <p>The development of urban ALC land on a brownfield site is likely to have a significant positive effect, as could the site's proximity to existing areas of employment. The site should deliver a quantum of housing, circa 15 dwellings which is likely to have a positive effect. The site is located within the settlement boundary and has good accessibility to the services and facilities. However, its proximity to heritage assets would have a negative effect, as would the ecological value of the site.</p>

SA Objective	Assessment Criteria - Does the site (BD016)...?	Commentary on likely nature of effects of site allocation	Overall assessment
SOCIAL			
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> Make a positive contribution towards community cohesion? Offer opportunity to improve neighbourhood quality? Offer opportunity to provide open space and support Green Infrastructure? 	The site is located within the settlement boundary and the redevelopment of this mixed brownfield and greenfield site could help to improve the social and environmental quality of the town centre. Overall, this site has been assessed as having a positive effect on this Objective.	+

SA Objective	Assessment Criteria - Does the site (BD016)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 		
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>Given the town centre location of this site, it can be considered that the site would be in proximity to a wide range of key services and facilities. For example, the site is in proximity to James Bateman Junior High School and Knypersley High School. It should be noted that education facilities and services within the town have adequate supply at present but it is expected to be outstripped by future demand. It should be noted that education facilities and services within the town have adequate supply at present but it is expected to be outstripped by future demand. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The location of this site should provide residents with good access to the nearby open space and countryside which should help to support healthy lifestyles. Similarly, the site is within 800m of a GP surgery. However, it should be noted that this site is adjacent to one of the most deprived LSOAs in Staffordshire Moors, Biddulph East, which is in the most deprived 20% in England. It should be noted that supply for health care services and facilities currently falls short of demand and this is expected to worsen in the future without additional investment. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	<p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development would include aspects of good design which would help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	<p>Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 20 dwellings and therefore also provide a quantum of affordable housing on site. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++

SA Objective	Assessment Criteria - Does the site (BD016)...?	Commentary on likely nature of effects of site allocation	Overall assessment
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? ● Support the use of public transport? ● Support safe walking and cycling? ● Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	As noted previously, the site is within 800m of the town centre of Biddulph and a GP surgery and near to the open countryside this should reduce the need to travel within the town. Similarly, the site is located near to a number of bus stops. Overall, this site has been assessed as having a positive effect on this Objective.	+
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? ● Offer opportunities to increase the use of renewable energy? ● Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However, the site is within 400m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a positive effect on this Objective.	+
8. To improve air quality.	<ul style="list-style-type: none"> ● Offer opportunities to minimise emissions of airborne pollutants? ● Offer opportunities to remove air pollutants (e.g. by trees)? 	The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> ● Deliver development directed towards areas of least flood risk? ● Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? ● Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? ● Offer opportunities to encourage water efficiency and demand management? SA Objective	Assessment Criteria - Does the site (BD059)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>1. To improve community cohesion and the quality of where people work and live.</p>	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	<p>The site is located within the settlement boundary and the redevelopment of this brownfield site could help to improve the social and environmental quality of the town centre. Overall, this site has been assessed as having a positive effect on this Objective.</p>	<p>+</p>
<p>2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.</p>	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>Given the town centre location of this site, it can be considered that the site would be in proximity to a wide range of key services and facilities. For example, the site is in proximity to English Martyrs Catholic Primary School and Kingsfield First School. It should be noted that education facilities and services within the town have adequate supply at present but it is expected to be outstripped by future demand. It should be noted that education facilities and services within the town have adequate supply at present but it is expected to be outstripped by future demand. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	<p>++</p>
<p>3. To improve health and reduce health inequalities.</p>	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The location of this site should provide residents with good access to the nearby open space and countryside which should help to support healthy lifestyles. Similarly, the site is within 400m of a GP surgery. However, it should be noted that the site is within one of the most deprived LSOAs in Staffordshire Moors, Biddulph East, which is in the lowest 20% in the UK. It should be noted that supply for health care services and facilities currently falls short of demand and this is expected to worsen in the future without additional investment. Overall, this site has been assessed as having a positive effect on this Objective.</p>	<p>+</p>
<p>4. To minimise opportunities for crime and reduce the fear of crime.</p>	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	<p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development would include aspects of good design which would help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.</p>	<p>+</p>

SA Objective	Assessment Criteria - Does the site (BD059)...?	Commentary on likely nature of effects of site allocation	Overall assessment
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? Offer opportunities to enable people to meet their needs within their existing communities? Offer opportunities to ensure that people can afford their housing? 	Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 12 dwellings and therefore would not provide a significant quantum of housing to meet identified need. Overall, this site has been assessed as having a neutral effect on this Objective.	0
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> Offer opportunities to minimise impacts on existing traffic congestion? Support the use of public transport? Support safe walking and cycling? Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	As noted previously, the site is within 400m of the town centre of Biddulph and a GP surgery and a number of bus stops but does not have an area of open space or countryside in proximity. Overall, this site has been assessed as having a positive effect on this Objective.	+
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? Offer opportunities to increase energy efficiency? Offer opportunities to increase the use of renewable energy? Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However, the site is within 400m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a positive effect on this Objective.	+
8. To improve air quality.	<ul style="list-style-type: none"> Offer opportunities to minimise emissions of airborne pollutants? Offer opportunities to remove air pollutants (e.g. by trees)? 	The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> Deliver development directed towards areas of least flood risk? Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? Offer opportunities to protect, maintain and improve the quality of water resources and help 	As the site is located outside of a flood zone 2 or 3 area it can be considered that the site would not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage, however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.	+

SA Objective	Assessment Criteria - Does the site (BD059)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 		
10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is over 2,250m from Roe Park Woods SSSI, the nearest designated asset and, as such, is considered to have no effect on these assets. The Ecological Study (2015) notes that the site has mostly low biodiversity value overall, is set within an urban environment with little connectivity to the wider countryside. However as the buildings could potentially support roosting bats the site is given ecological value. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	-/?
11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> Help safeguard the best and most versatile agricultural land? Deliver development that helps to minimise the loss of greenfield land? Offer opportunities to reduce land contamination / instability? Deliver development that helps reduce the amount of derelict land? Offer opportunities to protect notable geological and geomorphological features? 	<p>The site has been assessed as being a brownfield, similarly it is classified as urban ALC land. As such, the development of this site would avoid the loss of best and most versatile agricultural land. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> Offer opportunities to reduce waste generation? Offer opportunities to maximise the re-use of existing buildings? Offer opportunities to increase the use of building materials from sustainable sources? 	<p>The development of this brownfield site could enable the re-use of existing buildings within the town centre. Dependent on proposal specific information, there is scope that development could incorporate sustainable materials. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.	<ul style="list-style-type: none"> Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Offer opportunities to protect and reinforce the character and appearance of the district's towns 	<p>The nearest historical asset is circa 550m south west from the site. Given the distance of the site from this asset, there is limited scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. Overall, this site has been assessed as having a positive effect on this Objective, however the exact effects are uncertain.</p>	+/?

SA Objective	Assessment Criteria - Does the site (BD059)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>	<p>and villages and maintain and strengthen local distinctiveness and sense of place?</p> <ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>The site would avoid development within 1,000m of protected sites and would reduce external pressures on these sites. Given the location of the site, it is considered that there would be limited effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	<p>++</p>
<p>15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.</p>	<ul style="list-style-type: none"> ● Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? ● Offer opportunities to help support tourism and the visitor economy? 	<p>The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Overall, this site has been assessed as having a positive effect on this Objective.</p>	<p>+</p>
ECONOMIC			
<p>16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy</p>	<ul style="list-style-type: none"> ● Deliver development that helps to safeguard shops and services in existing centres? ● Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	<p>The proposed development of a residential site with good access to the town centre of Biddulph has scope to have a positive effect on the vitality and viability of Biddulph and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.</p>	<p>+</p>
<p>17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth</p>	<ul style="list-style-type: none"> ● Help provide a balanced portfolio of employment land in sustainable locations? ● Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	<p>The development of this site could encourage investment in people and infrastructure through developer contributions although this would be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	<p>0</p>
<p>18. To encourage and support a high and stable level of employment</p>	<ul style="list-style-type: none"> ● Help meet the employment needs of local people? ● Help increase economic activity levels? ● Improve physical accessibility to jobs? ● Support higher income levels for local residents? 	<p>The site is within 500m of existing areas of employment within the town or District and, as such, would provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	<p>++</p>

SA Objective	Assessment Criteria - Does the site (BD059)...?	Commentary on likely nature of effects of site allocation	Overall assessment
Summary of overall assessment and likely significant effects:			
The development of urban ALC brownfield land should have a significant positive effect, as should the preservation of the landscape and the site's proximity to existing areas of employment and services and facilities. The site is located within the settlement boundary, and away from historical assets. However, the site's ecological value would have a negative effect.

To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs	<ul style="list-style-type: none"> ● Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? ● Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? ● Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	The site is over 1,750m from Gannister Quarry SSSI, the nearest designated asset and, as such, is considered to have no effect on these assets. The Ecological Study (2015) notes that the site is deemed to have ecological value as the buildings could support roosting bats. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as	-/?

SA Objective	Assessment Criteria - Does the site (BD102)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> ● Help safeguard the best and most versatile agricultural land? ● Deliver development that helps to minimise the loss of greenfield land? ● Offer opportunities to reduce land contamination / instability? ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 	<p>having a negative effect on this Objective, however the exact effects are uncertain.</p> <p>The site has been assessed as being a brownfield, similarly it is classified as urban ALC land. As such, the development of this site would avoid the loss of best and most versatile agricultural land. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	<p>++</p>
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	<p>The development of this brownfield site could enable the re-use of existing buildings within the town centre. Dependent on proposal specific information, there is scope that development could incorporate sustainable materials. Overall, this site has been assessed as having a positive effect on this Objective.</p>	<p>+</p>
<p>13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.</p>	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>The nearest historical asset is circa 500m west from the site. Given the distance of the site from this asset, there is limited scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. Overall, this site has been assessed as having a positive effect on this Objective, however the exact effects are uncertain.</p>	<p>+/?</p>
<p>14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>The site would avoid development within 1,000m of protected sites and would reduce external pressures on these sites. Given the location of the site, it is considered that there would be limited effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	<p>++</p>

SA Objective	Assessment Criteria - Does the site (BD102)...?	Commentary on likely nature of effects of site allocation	Overall assessment
15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.	<ul style="list-style-type: none"> Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? Offer opportunities to help support tourism and the visitor economy? 	The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Overall, this site has been assessed as having a positive effect on this Objective.	+
ECONOMIC			
16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	The proposed development of a residential site with good access to the town centre of Biddulph has scope to have a positive effect on the vitality and viability of Biddulph and the wider District, as new residents could be expected to increase footfall. Overall, this has been assessed as having a positive effect on this Objective.	+
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> Help provide a balanced portfolio of employment land in sustainable locations? Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site could encourage investment in people and infrastructure through developer contributions although this would be limited. However, the extent of this effect is uncertain. Overall, this site has been assessed as having a neutral effect on this Objective.	0
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> Help meet the employment needs of local people? Help increase economic activity levels? Improve physical accessibility to jobs? Support higher income levels for local residents? 	The site is within 500m of existing areas of employment within the town or District and, as such, would provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
<p>Summary of overall assessment and likely significant effects:</p> <p>The development of urban ALC brownfield land should have a significant positive effect, as should the preservation of the landscape and the site's proximity to existing areas of employment and services and facilities and the delivery of circa 42 dwellings. The site is located within the settlement boundary, and away from historical assets. However, the site's ecological value would have a negative effect.</p>			

Table 12.44

BD108

SA Objective	Assessment Criteria - Does the site (BD108)...?	Commentary on likely nature of effects of site allocation	Overall assessment
SOCIAL			
<p>1. To improve community cohesion and the quality of where people work and live.</p>	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	<p>As the site is located within the town settlement boundary of Biddulph it could be considered that the redevelopment of this brownfield site could help to improve the social and environmental quality of the town centre. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.</p>	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>Given the town centre location of this site, it can be considered that the site would be in proximity to a wide range of key services and facilities. For example, the site is in proximity to James Bateman Junior High School and Knypersley High School. It should be noted that education facilities and services within the town have adequate supply at present but it is expected to be outstripped by future demand. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
<p>3. To improve health and reduce health inequalities.</p>	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The location of this site should provide residents with good access to the nearby open space and countryside which should help to support healthy lifestyles. Similarly, the site is within 800m of a GP surgery and is adjacent to national route 55, part of the national cycle network. However, it should be noted that this site is adjacent to one of the most deprived LSOAs in Staffordshire Moors, Biddulph East, which is in the most deprived 20% in England. It should be noted that supply for health care services and facilities currently falls short of demand and this is expected to worsen in the future without additional investment. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+

SA Objective	Assessment Criteria - Does the site (BD108)...?	Commentary on likely nature of effects of site allocation	Overall assessment
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	<p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development would include aspects of good design which would help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	<p>Based on the SHLAA (2015) assessment of this site, it is considered that the site could accommodate circa 12 dwellings and therefore would not provide a significant quantum of housing to meet identified need. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? ● Support the use of public transport? ● Support safe walking and cycling? ● Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	<p>As noted previously, the site is within 800m of the town centre of Biddulph and a GP surgery and near to the open countryside this should reduce the need to travel within the town. Similarly, the site is located near to a number of bus stops. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? ● Offer opportunities to increase the use of renewable energy? ● Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	<p>The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However, the site is within 800m of the town centre and could reduce the need to travel. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
8. To improve air quality.	<ul style="list-style-type: none"> ● Offer opportunities to minimise emissions of airborne pollutants? ● Offer opportunities to remove air pollutants (e.g. by trees)? 	<p>The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.</p>	i/?
9. To reduce flood risk, protect and enhance water sources.	<ul style="list-style-type: none"> ● Deliver development directed towards areas of least flood risk? 	<p>As the site is located outside of a flood zone 2 or 3 area it can be considered that the site would not be subject to risk from flooding. The</p>	+

SA Objective	Assessment Criteria - Does the site (BD108)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? Offer opportunities to encourage water efficiency and demand management? 	<p>development of this site could lead to an increase in wastewater and reduction of natural drainage; however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.</p>	
<p>10. To identify, conserve and enhance biodiversity resources and to test the plans policies and proposals on European Sites and SSSIs</p>	<ul style="list-style-type: none"> Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is over 2,250m from Roe Park Woods SSSI, the nearest designated asset and, as such, is considered to have no effect on these assets. The Ecological Study (2015) notes that the site has mostly low biodiversity value overall, is set within a fairly urban environment with relatively good connectivity to the wider countryside. Nevertheless, as the site has good connectivity to other more biodiverse habitats, suitable reptile habitat and potential to support roosting bats the site is deemed as having ecological importance. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective; however the exact effects are uncertain.</p>	-/?
<p>11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> Help safeguard the best and most versatile agricultural land? Deliver development that helps to minimise the loss of greenfield land? Offer opportunities to reduce land contamination / instability? Deliver development that helps reduce the amount of derelict land? Offer opportunities to protect notable geological and geomorphological features? 	<p>The site has been assessed as being a brownfield, similarly it is classified as urban ALC land. As such, the development of this site would avoid the loss of best and most versatile agricultural land. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> Offer opportunities to reduce waste generation? Offer opportunities to maximise the re-use of existing buildings? Offer opportunities to increase the use of building materials from sustainable sources? 	<p>The development of this brownfield site could enable the re-use of existing buildings within the town centre. Dependent on proposal specific information, there is scope that development could incorporate sustainable materials. This site is also within a Minerals Consultation Area and development of this site would preclude any extraction of the minerals below. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0

SA Objective	Assessment Criteria - Does the site (BD108)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.</p>	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>Both on the site and within 50m of it are six grade II listed assets and one more grade II listed assets within 400m. Dependent on proposal specific information, there is scope that development of this site could lead to the deterioration of these historical heritage assets and their setting. Overall, this site has been assessed as having a significant negative effect on this Objective, however the exact effects are uncertain.</p>	<p>--/?</p>
<p>14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>The site would avoid development within 1,000m of protected sites and would reduce external pressures on these sites. Given the location of the site, it is considered that there would be limited effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	<p>++</p>
<p>15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.</p>	<ul style="list-style-type: none"> ● Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? ● Offer opportunities to help support tourism and the visitor economy? 	<p>The proposed residential use of this site limits the effect that it can have on investment in culture and tourism within the town and wider district. However, the increased population of both the town and District may have a positive effect. Overall, this site has been assessed as having a positive effect on this Objective.</p>	<p>+</p>
ECONOMIC			
<p>16. SA Objective	Assessment Criteria - Does the site (BD071, BD071A, BD106 & BD156)...?	Commentary on likely nature of effects of site allocation	Overall assessment
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> ● Help meet the employment needs of local people? ● Help increase economic activity levels? ● Improve physical accessibility to jobs? ● Support higher income levels for local residents? 	The site is within 500m of existing areas of employment within the town or District and, as such, would provide sufficient accessible employment opportunities for prospective residents. Overall, this site has been assessed as having a significant positive effect on this Objective.	++
<p>Summary of overall assessment and likely significant effects:</p> <p>The site's proximity to services, facilities and existing areas of employment and proposed delivery of circa 265 dwellings should have a significant positive effect. However there is scope that development of this site could have negative effects due to the site's ecological importance and the development of greenfield land.</p>			

Table 12.46

SA Objective	Assessment Criteria - Does the site (BD117)...?	Commentary on likely nature of effects of site allocation	Overall assessment
SOCIAL			
<p>1. To improve community cohesion and the quality of where people work and live.</p>	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	<p>The site is located outside of the existing town boundary and also outside of the draft new town boundary. The development of greenfield land within the open countryside could reduce the quality of the Green Infrastructure of the Town. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-
<p>2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.</p>	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>As noted, the site is located outside of the settlement boundary on the south east edge of Biddulph. The site is more than 1,200m away from the town centre which could result in existing services and facilities being inaccessible. It should be noted that education facilities and services within the town have adequate supply at present but it is expected to be outstripped by future demand. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
<p>3. To improve health and reduce health inequalities.</p>	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The sites location would provide good access to areas of open space and the countryside which could help to support healthy lifestyles. However, the site is more than 1,200m from a GP surgery. It should be noted that supply for health care services and facilities currently falls short of demand and this is expected to worsen in the future without additional investment. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0

SA Objective	Assessment Criteria - Does the site (BD117)...?	Commentary on likely nature of effects of site allocation	Overall assessment
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development would include aspects of good design which would help to minimise crime and the fear of crime. Overall, this site has been assessed as having a positive effect on this Objective.	+
5. To ensure adequate quality and provision of a range of house types to meet local needs in appropriate locations and including affordable / social /extra care housing.	<ul style="list-style-type: none"> ● Offer opportunities to provide an appropriate mix of housing to enable all needs to be met? ● Offer opportunities to enable people to meet their needs within their existing communities? ● Offer opportunities to ensure that people can afford their housing? 	This site has been proposed for employment uses with regards to this assessment. Therefore the development would provide no housing. Overall, this site has been assessed as having a neutral effect on this Objective.	0
6. To strengthen links between rural areas and towns by sustainable forms of transport and reduce the number of journeys made by car.	<ul style="list-style-type: none"> ● Offer opportunities to minimise impacts on existing traffic congestion? ● Support the use of public transport? ● Support safe walking and cycling? ● Offer opportunities to protect and improve access to the natural environment and support Green Infrastructure? 	As noted, the site is more than 1,200m from the town centre of Biddulph and a GP surgery this could be expected to increase the need to travel. However, the site is near to the open country side and an area of open space and a number of bus stops. Similarly, the development of this site may lead to the provision of additional public transport services. Overall, this site has been assessed as having a neutral effect on this Objective.	0
ENVIRONMENTAL			
7. To minimise contributions to climate change and consider climate change adaptation.	<ul style="list-style-type: none"> ● Offer opportunities to reduce emissions of greenhouse gases, particularly CO₂? ● Offer opportunities to increase energy efficiency? ● Offer opportunities to increase the use of renewable energy? ● Deliver development in an accessible location in order to reduce the need for car use and / or encourage sustainable forms of transport? 	The development of this site could lead to an increase in greenhouse gas emissions and energy consumption during both construction and occupation. However, the site is more than 1,200m from the town centre and could increase the need to travel. Overall, this site has been assessed as having a negative effect on this Objective.	-
8. To improve air quality.	<ul style="list-style-type: none"> ● Offer opportunities to minimise emissions of airborne pollutants? ● Offer opportunities to remove air pollutants (e.g. by trees)? 	The outcome of this assessment could be dependent on implementation and site specific detail. Overall, this site has been assessed as having an uncertain effect on this Objective.	i/?

SA Objective	Assessment Criteria - Does the site (BD117)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>9. To reduce flood risk, protect and enhance water sources.</p>	<ul style="list-style-type: none"> ● Deliver development directed towards areas of least flood risk? ● Offer opportunities to reduce risk of flooding e.g. by integration of mitigation measures such as SuDs? ● Offer opportunities to protect, maintain and improve the quality of water resources and help contribute to the objectives of the Water Framework Directive? ● Offer opportunities to encourage water efficiency and demand management? 	<p>As the site is located outside of a flood zone 2 or 3 area it can be considered that the site would not be subject to risk from flooding. The development of this site could lead to an increase in wastewater and reduction of natural drainage; however SuDs could be used to mitigate against this. Overall, this site has been assessed as having a positive effect on this objective.</p>	+
<p>10. To identify, conserve and enhance biodiversity resources and to test the plan's policies and proposals on European Sites and SSSIs</p>	<ul style="list-style-type: none"> ● Enable protection of the district's sites of ecological and nature conservation importance, including the integrity of European sites? ● Deliver development that will help to support meeting Staffordshire Biodiversity Action Plan objectives? ● Offer opportunities to help deliver networks of biodiversity and green infrastructure? 	<p>The site is over 1,500m from Whitfield Valley (LNR), the nearest designated asset, and, as such, is considered to have no effect on this asset. The Ecological Study (2015) notes that the site has very low biodiversity value overall, however as there are two trees with bat roosting potential and species rich hedgerows, on this basis the site has been attributed ecological value. The HRA notes that no direct impacts upon the SPA are predicted from this site. Overall, this site has been assessed as having a negative effect on this Objective, however the exact effects are uncertain.</p>	-/?
<p>11. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.</p>	<ul style="list-style-type: none"> ● Help safeguard the best and most versatile agricultural land? ● Deliver development that helps to minimise the loss of greenfield land? ● Offer opportunities to reduce land contamination / instability? ● Deliver development that helps reduce the amount of derelict land? ● Offer opportunities to protect notable geological and geomorphological features? 	<p>As noted, this site has been assessed as being on greenfield land. However, the land has also been assessed as grade 4 ALC land so development of this site would not result in the loss of best and most versatile land. Overall, this site has been assessed as having a negative effect on this Objective.</p>	-
<p>12. To minimise the use of non-renewable resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to reduce waste generation? ● Offer opportunities to maximise the re-use of existing buildings? ● Offer opportunities to increase the use of building materials from sustainable sources? 	<p>As per the previous objective, the development of this site would not enable the re-use or loss of existing buildings. However, there is scope that development could use sustainable materials and increase the demand for local resources. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0

SA Objective	Assessment Criteria - Does the site (BD117)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p>13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.</p>	<ul style="list-style-type: none"> ● Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? ● Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>The site is more than 400m away from any historical heritage asset, the nearest asset is grade II* listed Knypersley Hall which is circa 650m to the north of the site. Dependent on proposal specific information, there is limited scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. Overall, this site has been assessed as having a positive effect on this Objective, however the exact effects are uncertain.</p>	<p>+/?</p>
<p>14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>	<ul style="list-style-type: none"> ● Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? ● Deliver development that maximises re-use of brownfield land? ● Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>The site would avoid development within 1,000m of protected sites and would reduce external pressures on these sites. Given the location of the site, it is considered that there could be effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a positive effect on this Objective.</p>	<p>+</p>
<p>15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.</p>	<ul style="list-style-type: none"> ● Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? ● Offer opportunities to help support tourism and the visitor economy? 	<p>The proposed employment use of this site provides scope for the development of this site to have a positive effect on investment in culture and tourism within the town and wider district, however this is dependent on proposal specific information. Overall, this site has been assessed as having a positive effect on this Objective.</p>	<p>+</p>
ECONOMIC			
<p>16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy</p>	<ul style="list-style-type: none"> ● Deliver development that helps to safeguard shops and services in existing centres? ● Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	<p>The proposed development of an employment site within the town centre has the scope to have a positive effect on the vitality and viability of Biddulph and the wider District, as new employment could be expected to increase footfall in the nearby town centre. Overall, this site has been assessed as having a significant positive effect on this objective.</p>	<p>++</p>
<p>17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth</p>	<ul style="list-style-type: none"> ● Help provide a balanced portfolio of employment land in sustainable locations? ● Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	<p>The development of this site and the proposed employment use of the site could be considered to have a positive effect on businesses and the residents of Biddulph as it could strengthen and diversify the economy. Overall, this has been assessed as having a significant positive effect on this Objective.</p>	<p>++</p>

SA Objective	Assessment Criteria - Does the site (BD117)...?	Commentary on likely nature of effects of site allocation	Overall assessment
18. To encourage and support a high and stable level of employment	<ul style="list-style-type: none"> ● Help meet the employment needs of local people? ● Help increase economic activity levels? ● Improve physical accessibility to jobs? ● Support higher income levels for local residents? 	The site is proximity to areas of existing local employment provision as well as new employment provision generated by this site. Overall, this site has been assessed as having a significant positive effect on this objective.	++
<p>Summary of overall assessment and likely significant effects:</p> <p>The development of new employment premises should have a significant positive effect on the vitality and viability of the District, strengthen economic growth and support a higher level of employment within the District. However, the greenfield nature of this site and its location outside of the settlement boundary, coupled with its ecological value could have a negative effect.</p>			
<p>Table 12.47 BD076</p>			
SA Objective	Assessment Criteria - Does the site (BD076)...?	Commentary on likely nature of effects of site allocation	Overall assessment
<p align="center">SOCIAL</p>			
1. To improve community cohesion and the quality of where people work and live.	<ul style="list-style-type: none"> ● Make a positive contribution towards community cohesion? ● Offer opportunity to improve neighbourhood quality? ● Offer opportunity to provide open space and support Green Infrastructure? ● Risk unacceptable light and noise pollution? ● Offer opportunity to ensure that occupiers of buildings and spaces have sufficient natural light and appropriate levels of privacy? 	The site is located within the settlement boundary and the redevelopment of this mixed brownfield and greenfield site could help to improve the social and environmental quality of the town centre. Overall, this site has been assessed as having a positive effect on this Objective.	+

SA Objective	Assessment Criteria - Does the site (BD076)...?	Commentary on likely nature of effects of site allocation	Overall assessment
2. To advance equality of opportunity between all persons and eliminate social exclusion by improving access to jobs, services and facilities.	<ul style="list-style-type: none"> ● Deliver development that is likely to help remove or minimise any disadvantages suffered by people due to their age, disability, gender reassignment, marriage / civil partnership, pregnancy / maternity, race, religion / belief, sex and sexual orientation? ● Help to minimise the distance people need to travel to access education, employment, shopping and other key services and facilities. 	<p>Given the town centre location of this site, it can be considered that the site would be in proximity to a wide range of key services and facilities. It should be noted that education facilities and services within the town have adequate supply at present but it is expected to be outstripped by future demand. Overall, this site has been assessed as having a significant positive effect on this Objective.</p>	++
3. To improve health and reduce health inequalities.	<ul style="list-style-type: none"> ● Help improve health or access to health facilities? ● Help promote healthy lifestyles? ● Help to reduce health inequalities? ● Offer opportunities to participate in leisure and recreational activities including access to the countryside? 	<p>The location of this site should provide employees with good access to the nearby open space and countryside which should help to support healthy lifestyles. Similarly, the site is within 400m of a GP surgery and is adjacent to national route 55, part of the national cycle network. It should be noted that supply for health care services and facilities currently falls short of demand and this is expected to worsen in the future without additional investment. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
4. To minimise opportunities for crime and reduce the fear of crime.	<ul style="list-style-type: none"> ● Deliver development that reduces actual levels of crime? ● Deliver development that helps to reduce fear of crime? 	<p>This site is difficult to assess against this objective without proposal specific information. However, it can be considered that new development would include aspects of good design which would help to minimise crime and the fear of crime. To safeguard the best and most versatile agricultural land; improve soil and land resources; and protect and enhance geological resources.	<ul style="list-style-type: none"> Help safeguard the best and most versatile agricultural land? Deliver development that helps to minimise the loss of greenfield land? Offer opportunities to reduce land contamination / instability? Deliver development that helps reduce the amount of derelict land? Offer opportunities to protect notable geological and geomorphological features? 	<p>The site has been assessed as being a mixed brownfield and greenfield site, similarly it is classified as urban ALC land. As such, the development of this site would avoid the loss of best and most versatile agricultural land. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	0
12. To minimise the use of non-renewable resources.	<ul style="list-style-type: none"> Offer opportunities to reduce waste generation? 	<p>The development of this brownfield and greenfield site could enable the re-use of existing buildings. Dependent on proposal specific</p>	0

SA Objective	Assessment Criteria - Does the site (BD076A)...?	Commentary on likely nature of effects of site allocation	Overall assessment
	<ul style="list-style-type: none"> Offer opportunities to maximise the re-use of existing buildings? Offer opportunities to increase the use of building materials from sustainable sources? 	<p>information, there is scope that development could incorporate sustainable materials. This site is also within a Minerals Consultation Area and development of this site would preclude any extraction of the minerals below. Overall, this site has been assessed as having a neutral effect on this Objective.</p>	
<p>13. To protect and enhance the character of towns / villages and other heritage and archaeological assets along with their settings.</p>	<ul style="list-style-type: none"> Deliver development that helps ensure the continued protection and enhancement of cultural and historic heritage assets (designated and non-designated assets) along with their settings? Offer opportunities to protect and reinforce the character and appearance of the district's towns and villages and maintain and strengthen local distinctiveness and sense of place? 	<p>The site is circa 450m away from a historical heritage asset. Although dependent on proposal specific information, there is limited scope that development of this site could lead to the deterioration of the setting of these historical heritage assets. Overall, this site has been assessed as having a positive effect on this Objective, however the exact effects are uncertain.</p>	+/?
<p>14. To protect and enhance the character and appearance of the landscape including historic landscape and other natural assets and resources.</p>	<ul style="list-style-type: none"> Offer opportunities to protect and enhance the character of the landscape and maintain and strengthen local distinctiveness? Deliver development that maximises re-use of brownfield land? Offer opportunities to safeguard protected sites and provide opportunities for the enhancement of the natural environment identified in the NCA profiles? 	<p>The site would avoid development within 1,000m of protected sites and would reduce external pressures on these sites. Given the location of the site, it is considered that there could be effects on landscape character. Proposal specific information is required to assess the impact on the Potteries and Churnet Valley National Character Area. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
<p>15. To encourage further development of sustainable tourism, cultural heritage and local distinctiveness.</p>	<ul style="list-style-type: none"> Offer opportunities to support the development of a vibrant cultural economy and local distinctiveness? Offer opportunities to help support tourism and the visitor economy? 	<p>The proposed mixed use of this site provides scope for the development of this site to have a positive effect on investment in culture and tourism within the town and wider district, however this is dependent on proposal specific information. Overall, this site has been assessed as having a positive effect on this Objective.</p>	+
ECONOMIC			
<p>16. To safeguard the vitality and viability of the District's towns and villages, and create and sustain a vibrant rural economy</p>	<ul style="list-style-type: none"> Deliver development that helps to safeguard shops and services in existing centres? Deliver development that helps to safeguard and improve the retail, leisure and service provision? 	<p>The proposed development of a mixed use site within the town centre has the scope to have a positive effect on the vitality and viability of Biddulph and the wider District, as new employment could be expected to increase footfall in the nearby town centre. Overall, this site has been assessed as having a significant positive effect on this objective.</p>	++

SA Objective	Assessment Criteria - Does the site (BD076A)...?	Commentary on likely nature of effects of site allocation	Overall assessment
17. To strengthen, modernise and diversify the District economy, and promote sustainable economic growth	<ul style="list-style-type: none"> ● Help provide a balanced portfolio of employment land in sustainable locations? ● Help provide opportunities for the creation of new businesses and/or minimise the loss or displacement of existing businesses? 	The development of this site and the proposed mixed use, and associated employment, of the site could be considered to have a positive effect on businesses and the residents of Biddulph as it could strengthen and diversify the economy. Overall, this has been assessed as having a significant positive effect on this Objective.	++
