

Notes

1. Environment Agency Areas Susceptible to Groundwater Flooding (ASIGWF) data. The Environment Agency states that it shows 'the proportion of each 1km grid square where geological and hydrogeological conditions show that groundwater might emerge...it does not show the likelihood of groundwater flooding occurring'.
2. The Environment Agency Geostore site states that: 'The data should not be interpreted as identifying areas where groundwater is actually likely to flow or pond, thus causing flooding, but may be of use to LLFAs in identifying, for example, where further studies may be useful'.
3. It should be noted that flood risk from other sources is not shown.
